

A grammar of Japhug

Guillaume Jacques

Comprehensive Grammar Library 1

Comprehensive Grammar Library

Editor: Martin Haspelmath

In this series:

1. Jacques, Guillaume. A grammar of Japhug.

This series grew out of the grammars published in *Studies in Diversity Linguistics*, which are proudly mentioned:

4. Berghäll, Liisa. A grammar of Mauwake.
5. Wilbur, Joshua. A grammar of Pite Saami.
7. Schackow, Diana. A grammar of Yakkha.
8. Liljegren, Henrik. A grammar of Palula.
9. Shimelman, Aviva. A grammar of Yauyos Quechua.
11. Kluge, Angela. A grammar of Papuan Malay.
12. Kieviet, Paulus. A grammar of Rapa Nui.
22. Döhler, Christian. A grammar of Komnzo.
23. Yakpo, Kofi. A grammar of Pichi.

A grammar of Japhug

Guillaume Jacques

Jacques, Guillaume. 2021. *A grammar of Japhug* (Comprehensive Grammar Library 1). Berlin: Language Science Press.

1 Introduction	1
1.1 The Japhug language	1
1.2 The Japhug corpus	2
1.3 Structure of the grammar	4
1.4 Language and culture	4
2 A grammatical sketch	7
2.1 Phonology and word structure	7
2.2 Parts of speech	8
2.3 Nominal morphology	9
2.3.1 Non-attested nominal morphological categories	9
2.3.2 Number	9
2.3.3 Case marking	11
2.3.4 Possession	12
2.3.5 Compounding	15
2.3.6 Derivations	15
2.4 Verbal morphology	16
2.4.1 Overview	16
2.4.2 Indexation	17
2.4.3 Orientation preverbs and TAME	21
2.4.4 Non-finite verb forms	24
2.4.5 Associated motion	28
2.4.6 Voice	28
2.4.7 Denominal derivations	33
2.5 Core and oblique arguments	33
2.5.1 Neutral alignment	34
2.5.2 Nominative-accusative alignment	34
2.5.3 Subjecthood	34

Contents

2.5.4	Objecthood	35
2.5.5	Absolutive-ergative alignment	36
2.5.6	Ditransitive verbs	37
2.6	Word order	37
2.7	Subordination	38
2.7.1	Relative clauses	38
2.7.2	Complement clauses	38
2.7.3	Other subordinate clauses	39
2.8	Remarkable features	41
2.8.1	Consonant clusters	41
2.8.2	Direct-inverse	41
2.8.3	Inflectionalization	42
2.8.4	Prefixal chain	42
2.8.5	Hybrid indirect speech	43
2.8.6	The expression of degree and comparison	44
2.8.7	Japhug morphology and Trans-Himalayan comparative linguistics	45
3	Phonology	47
3.1	Introduction	47
3.2	Consonants	47
3.2.1	Onsets	47
3.2.2	Codas	50
3.3	Vowels and rhymes	52
3.3.1	Vowels	52
3.3.2	Rhymes	54
3.3.3	Historical phonology	55
3.4	Syllabic constraints	57
3.4.1	Rhotic dissimilation	57
3.4.2	Uvular harmony	58
3.5	Neutralization, quasi-neutralization and free variation	59
3.5.1	The contrast between /-oŋ/ and /-aŋ/	59
3.5.2	The contrast between /w/ and /i/ after palatal and alveolo-palatal consonants	60
3.5.3	The contrast between /ɣ/ and /e/ after palatal and alveolo-palatal consonants	65
3.5.4	The contrast between /ɣ/ and /a/	65
3.6	Speech errors and self-corrections	66
3.7	Suprasegmentals	68

3.8	Word structure	68
3.8.1	Wordhood	68
3.8.2	Non-final syllables	70
4	Consonant clusters and partial reduplication	71
4.1	Partial Reduplication	71
4.2	Inventory of consonant clusters	72
4.2.1	Preinitials	72
4.2.2	Medials	87
4.2.3	Summary	99
4.3	Sandhi	104
4.4	Tibetan script-based orthography	105
5	Nominal morphology	107
5.1	Possessive prefixes	107
5.1.1	Possessive paradigm	107
5.1.2	Inalienably possessed nouns	114
5.1.3	Indefinite vs. generic possessor	132
5.1.4	Prenominal modifiers	135
5.2	Unpossessible nouns	137
5.2.1	Place names	137
5.2.2	Colour nouns	140
5.2.3	Other unpossessible nouns	141
5.3	Personal names	142
5.3.1	Vocative	142
5.3.2	Tibetan names	143
5.3.3	Alienably possessed or unpossessible nouns?	144
5.3.4	Personal names and modifiers	145
5.4	Bound state	147
5.4.1	Vowel alternations in non-final members of compounds	147
5.4.2	Other alternations	148
5.4.3	Final member of compounds	151
5.5	Compound nouns	153
5.5.1	Noun-Noun compounds	153
5.5.2	Verb-Verb compounds	156
5.5.3	Noun-Ideophone compounds	158
5.5.4	Adverb-Verb compounds	158
5.5.5	Noun-Verb compounds	159
5.5.6	Verb-Noun compounds	166

Contents

5.6	Noun class prefixes	167
5.6.1	Uvular animal name prefix	167
5.6.2	Velar animal name prefix	167
5.6.3	Uvular plant name prefix	169
5.6.4	Other uses of the uvular class prefix	169
5.6.5	Body part noun prefixes	169
5.7	Nominal derivations	169
5.7.1	Privative	170
5.7.2	Relative location	171
5.7.3	Diminutive	171
5.7.4	Augmentative	173
5.7.5	Derogatory	173
5.7.6	Gentilic	173
5.7.7	Gender	174
5.7.8	Collective	174
5.7.9	Superlative	182
5.7.10	Unattested derivations	183
5.8	Denominal adverbs and postpositions	183
5.8.1	Comitative adverbs	183
5.8.2	Reduplicated perrelative	187
5.8.3	-z suffix	187
5.8.4	s- prefix	187
6	Pronouns	189
6.1	Personal pronouns	189
6.1.1	Honorific plural	191
6.1.2	Personal pronouns as possessive markers	192
6.2	Generic pronouns	192
6.2.1	<i>tuzo</i> ‘one’	192
6.2.2	The generic noun <i>turme</i> ‘person’	194
6.3	Genitive forms	195
6.4	The emphatic use of pronouns	197
6.5	Interrogative pronouns	198
6.5.1	<i>tɛ^{hi}</i> ‘what’	198
6.5.2	<i>ɛu</i> ‘who’	203
6.5.3	<i>t^hɽstuy</i> ‘how many’ and <i>t^hɽjtɕu</i> ‘when’	204
6.5.4	<i>ɲotɕu</i> ‘where’	206
6.6	Indefinite pronouns	208
6.6.1	<i>ci</i> ‘someone’	209

6.6.2	<i>t^huci</i> ‘something’	210
6.6.3	<i>ts^hitsuku</i> ‘whatever’	213
6.6.4	<i>ϕumvϕu</i> ‘whoever, anybody’	214
6.6.5	<i>cisc^hiz</i> ‘somewhere’	214
6.6.6	Interrogative pronouns used as free-choice indefinites	215
6.7	Quantifiers	217
6.7.1	Universal quantifiers	217
6.7.2	Partitive pronouns	218
6.7.3	Distributive pronouns	219
6.8	Identity pronoun	220
6.9	Demonstrative pronouns	223
6.9.1	Anaphoric demonstrative pronouns	223
6.9.2	Medial and cataphoric pronoun	226
6.9.3	Locative forms of the demonstrative pronouns	228
7	Numerals and counted nouns	233
7.1	Plain numerals	233
7.1.1	Numerals 1-10	233
7.1.2	Tens	235
7.1.3	Numerals 11-19 and units	235
7.1.4	Hundred and above	237
7.1.5	Ordinals	238
7.1.6	Tibetan and Chinese numerals	240
7.1.7	Use of the numerals	243
7.2	Approximate numerals	244
7.3	Counted nouns	247
7.3.1	Numeral prefixes	248
7.3.2	Counted nouns in quantifying function	258
7.3.3	Counted nouns and semantic classes	268
7.3.4	Counted nouns and other parts of speech	270
7.4	Measures	276
7.5	Counting time	279
7.5.1	Temporal counted nouns	279
7.5.2	Time ordinals	281
7.5.3	Other derived time adverbs	287
7.5.4	Clock time	287
7.6	Basic arithmetic operations	289
7.6.1	Fractions	290

8	Postpositions and relator nouns	293
8.1	Absolute	293
8.1.1	Intransitive subject	293
8.1.2	Transitive subject	294
8.1.3	Object	294
8.1.4	Sole argument of predicates of natural forces	295
8.1.5	Semi-object	296
8.1.6	Theme	297
8.1.7	Essive	298
8.1.8	Goal	302
8.1.9	Location	302
8.2	Postpositions	303
8.2.1	Independent words vs. clitics	303
8.2.2	Ergative	304
8.2.3	Genitive	313
8.2.4	Locative	323
8.2.5	Comitative	331
8.2.6	Additive	333
8.2.7	Standard marker	334
8.2.8	Exceptive	336
8.2.9	Terminative	337
8.2.10	Egressive	338
8.2.11	Other temporal postpositions	340
8.3	Relator nouns	344
8.3.1	Dative	345
8.3.2	Secutive	348
8.3.3	Deputative	349
8.3.4	Locative relator nouns	351
8.3.5	Temporal relator nouns	361
8.3.6	Semi-grammaticalized relator nouns	363
9	The noun phrase	367
9.1	Noun modifiers and determiners	367
9.1.1	Number	367
9.1.2	Demonstratives	374
9.1.3	Quantifiers	380
9.1.4	Indefinite and definite markers	387
9.1.5	Topic markers	392
9.1.6	Focus markers	400

9.1.7	Identity modifiers	412
9.1.8	Attributes	414
9.2	Noun coordination	420
9.2.1	Coordination or embedded phrase	420
9.2.2	Bare coordination	421
9.2.3	Disjunction	424
9.3	Word order in the noun phrase	425
10	Expressive words and sentence final particles	427
10.1	Ideophones	427
10.1.1	Ideophonic stem morphology	427
10.1.2	Regular derivations	428
10.1.3	Semantic categories	435
10.1.4	Irregularities	436
10.1.5	The phonology of ideophonic roots	438
10.1.6	The genesis of ideophones	442
10.1.7	Syntax of ideophones	445
10.1.8	Discourse function	450
10.2	Other expressive words	451
10.2.1	Interjections	451
10.2.2	Calling and chasing sounds	454
10.2.3	Deonomatopoeic expressive nouns	456
10.3	Speech fillers	457
10.4	Sentence final particles	458
10.4.1	Particles used in commands	458
10.4.2	Particles used in polar questions	460
10.4.3	Hearsay particle	463
10.4.4	Particles expressing epistemic modality	464
10.4.5	Particules expressing speaker attitude	468
11	The structure of the Japhug verb	471
11.1	Introduction	471
11.2	The prefixal chain	471
11.2.1	Outer prefixes	471
11.2.2	Inner prefixes	474
11.2.3	Stress	476
11.2.4	Phonotactic constraints	476
11.3	The suffixal chain	477

Contents

11.4	The peg circumfix	479
11.4.1	Morphology	479
11.4.2	Optionality of the suffixal element	480
11.4.3	Functions of the peg circumfix	480
11.5	Templatic vs. layered morphology	483
11.6	Wordhood	484
11.6.1	Criteria for wordhood	484
11.6.2	Enclitics	485
11.6.3	Bipartite verbs	487
12	Non-concatenative verbal morphology	493
12.1	Onset alternations	493
12.2	Stem alternations	493
12.2.1	Stem II	494
12.2.2	Stem III	495
12.2.3	Frozen <i>-t</i> suffix	498
12.3	Vowel contraction	499
12.4	Partial reduplication in verbal morphology	502
12.4.1	Initial reduplication	502
12.4.2	Verb stem reduplication as secondary exponence	508
12.4.3	Emphatic reduplication	510
13	Negation	513
13.1	Negative prefixes	513
13.1.1	Allomorphy	513
13.1.2	Suppletive negative verbs	515
13.1.3	Verbs requiring the negative prefixes	516
13.1.4	Lexicalized negation	517
13.2	Periphrastic negation	518
13.3	Double negation	519
13.4	Negation and parts of speech other than verbs	521
13.4.1	Nouns	521
13.4.2	Pronouns	521
13.4.3	Adverbs	522
14	Person indexation and argument structure	525
14.1	Introduction	525
14.2	Intransitive verbs	525
14.2.1	The intransitive paradigm	525

14.2.2	Irregular intransitive verbs	529
14.2.3	Semi-transitive verbs	530
14.2.4	Intransitive verbs with oblique arguments	534
14.2.5	Semi-transitive verbs with additional oblique arguments	535
14.2.6	Intrinsically non-singular subjects	535
14.2.7	Invariable intransitive verbs	538
14.3	Transitive verbs	540
14.3.1	The morphological marking of transitivity in Japhug	540
14.3.2	Polypersonal indexation and direction marking	543
14.3.3	The function of the direct/inverse contrast in non-local configurations	564
14.3.4	Transitive irregular verbs	575
14.3.5	Transitive verbs with dummy subjects	577
14.4	Ditransitive verbs	579
14.4.1	Indirective	579
14.4.2	Secundative	581
14.4.3	Causative of transitive verbs	583
14.4.4	Causative of semi-transitive verbs	586
14.5	Labile verbs	586
14.5.1	Transitive-intransitive labile verbs	586
14.5.2	Transitive-intransitive labile verbs with oblique arguments	593
14.5.3	Semi-transitive labile verbs	594
14.5.4	Ditransitive-monotransitive lability	595
14.6	Additional questions on the generic and number indexation	596
14.6.1	Agreement mismatch	596
14.6.2	Generic person vs. 3PL indexation	604
14.7	Person indexation on non-finite predicative words	608
14.7.1	Phatic expressions	608
14.7.2	Exclamative expressions	610
14.8	Historical perspectives	611
14.8.1	Indexation suffixes, pronouns and possessive prefixes	612
14.8.2	The inverse prefix	615
14.8.3	The origin of portmanteau prefixes	616
15	Orientation and associated motion	621
15.1	Orientation preverbs	621
15.1.1	Morphology	621
15.1.2	Orientable verbs	632
15.1.3	The tridimensional system	641

Contents

15.1.4	Extended uses of orientations	652
15.1.5	Lexicalized orientations	662
15.2	Associated motion	682
15.2.1	AM prefixes: morphology	682
15.2.2	Argument of motion	688
15.2.3	Motion verbs and AM prefixes	690
15.2.4	Orientation and AM	691
15.2.5	Round trips	693
15.2.6	The nature of the motion	694
15.2.7	Goal	696
15.2.8	Echo phenomena	698
15.2.9	The verb <i>ru</i> ‘fetch, bring’	701
15.2.10	Associated motion vs. motion verb construction	705
16	Non-finite verbal morphology	713
16.1	Participles	713
16.1.1	Subject participles	714
16.1.2	Object participles	732
16.1.3	Oblique participles	745
16.2	Infinitives	762
16.2.1	Velar infinitives	762
16.2.2	Bare infinitives	774
16.2.3	Dental infinitives	776
16.3	Degree nominals	778
16.3.1	Polarity prefixes	780
16.3.2	Argument structure	780
16.3.3	Nominal predicates	781
16.3.4	Degree construction	782
16.3.5	Complementation	782
16.4	Action nominals and abstract noun	783
16.4.1	<i>tu-</i> action nominals	783
16.4.2	<i>ty-</i> abstract nouns	784
16.4.3	Simultaneous	787
16.4.4	Denominalization of action nominals	788
16.4.5	Lexicalized action nominals	789
16.4.6	Inalienably possessed bare action nominals	791
16.4.7	Action nominal compounds	794
16.5	Other deverbal nouns	797
16.5.1	Nominalization <i>-z</i> suffix	797

16.5.2	Nominalization γ -/x- prefix	799
16.6	Converbs	800
16.6.1	Gerund	800
16.6.2	Purposive	806
16.6.3	Immediate	808
16.6.4	Adverb from finite verb	810
16.7	Defective verbs	811
16.8	Historical perspectives	811
16.8.1	Velar non-finite prefixes	811
16.8.2	Sigmatic non-finite prefixes	814
16.8.3	Dental non-finite prefixes	815
17	Valency-increasing derivations	819
17.1	Introduction	819
17.2	Sigmatic causative	819
17.2.1	Regular allomorphy	819
17.2.2	Irregular allomorphs	822
17.2.3	Lexicalized sigmatic causatives	828
17.2.4	Morphosyntax	830
17.2.5	Semantics of the causative	838
17.2.6	Stative verbs	846
17.2.7	Recursion	847
17.2.8	Compatibility with other derivations	848
17.3	Velar causative	849
17.3.1	Irregular allomorphs	851
17.3.2	Morphosyntax	853
17.3.3	Semantics	856
17.3.4	Compatibilities with other derivations	858
17.4	Applicative	859
17.4.1	The syntactic and semantic functions of the promoted argument	860
17.4.2	Allomorphy	866
17.4.3	Lexicalized applicatives	866
17.4.4	Applicatives and other derivations	868
17.5	Tropative	868
17.5.1	Allomorphy	870
17.5.2	Past imperfective	870
17.5.3	Lexicalized tropatives	871
17.5.4	Compatibility with other derivations	872

Contents

17.5.5	Other tropative constructions	874
18	Valency-decreasing derivations	875
18.1	Passive	875
18.1.1	The interaction of the Passive derivation with Dynamicity and TAME	877
18.1.2	Lexicalized passives	878
18.1.3	Agent demotion	880
18.1.4	Passive from ditransitive verbs	884
18.1.5	Reduplicated passive	884
18.1.6	Compatibility with other derivations	885
18.2	Rogative	887
18.3	Reflexive	888
18.3.1	The reflexive prefix: form and basic function	888
18.3.2	Reflexive vs. anticausative	893
18.3.3	Lexicalized reflexives	895
18.3.4	Reflexive causative	896
18.3.5	Reflexive and autive	900
18.3.6	Reflexive, tropative and applicative	901
18.3.7	Historical origin	902
18.4	Reciprocal	903
18.4.1	Reduplicated reciprocal	903
18.4.2	Reciprocal <i>amu-</i> prefix	910
18.4.3	Reciprocal <i>andzu-</i> prefix	915
18.4.4	Verbs of co-participation	915
18.5	Anticausative	916
18.5.1	Morphology	916
18.5.2	Function	920
18.5.3	Anticausative and dummy subject constructions	922
18.5.4	Collocation	923
18.5.5	Volitionality	924
18.5.6	Compatibility with other derivations	926
18.5.7	Other cases of voicing alternation	929
18.6	Antipassive	929
18.6.1	<i>rx-</i> antipassive	929
18.6.2	<i>sx-</i> antipassive	933
18.6.3	Lexicalized antipassive	934
18.6.4	Antipassive forms of ditransitive verbs	936
18.6.5	Reduplicated antipassive	939

18.6.6	Antipassive and past imperfective	940
18.6.7	The uses of the antipassive derivations	941
18.6.8	Other strategies used to express indefinite patients . . .	946
18.6.9	Compatibility with other derivations	948
18.7	Distributed property	950
18.8	Proprietary	953
18.8.1	Allomorphy	955
18.8.2	Proprietary derivation and generic marking	955

Acknowledgments

This grammar has been written with the help of colleagues, friends and family. I wish to thank in particular:

- Tshendzin 陈珍 and Dpalcan 柏尔青, who taught me Japhug.
- Andzin, Ayang/Kunbzang Mtsho, Tshering Skyid, for telling me stories in Japhug.
- Norbu 罗尔武 and Pengfeng 彭锋, for their help and support during my stays in Mbarkham.
- Jackson T.-S. Sun 孙天心 and Lin Youjing 林幼菁, from whom I have learnt a lot, especially during our time together doing fieldwork in Mbarkham and Chengdu.
- Laurent Sagart, for his invaluable help for preparing my first fieldwork trip, and for teaching me Chinese historical phonology.
- Yang Dongfang 杨东方 and Chang Yueh-chin 张月琴, for their help during my first stay in Mbarkham in 2002, and for introducing me to Tshendzin.
- My former PhD students Lai Yunfan 赖云帆, Gong Xun 龚勋 and Zhang Shuya 章舒娅, for their challenging questions and comments, and for helping recording some of the texts in the corpus.
- Alexis Michaud, Boyd Michailovsky and Séverine Guillaume, without whom I would not have made my Japhug texts available on the Pangloss archive.
- Céline Buret, Rémi Bonnet, Benjamin Galliot, who helped producing several versions of the Japhug-French-Chinese dictionary.
- Alexander Delaporte, for writing a program to add doi links automatically.
- Martin Haspelmath, for accepting this manuscript in the series 'Studies in Diversity Linguistics' and for organizing the evaluation process.

Acknowledgments

- Thomas Pellard and Sebastian Nordhoff, for their guidance with \LaTeX .
- Anton Antonov, Curtis Bartosik and Aimée Lahaussais, each of whom provided detailed corrections on half a dozen chapters.
- the other LSP reviewers: Laura Arnold, Tom Bossuyt, Michael Daniel, Valérie Guérin, Ariel Gutman, Andreas Hölzl, Katarzyna Janic, Seppo Kittilä, Joseph Lovstrand, Lachlan Mackenzie, Bruno Olsson, Bastian Persohn, Yvonne Treis, Jeroen van de Weijer and Ye Jingting 叶婧婷.
- Li Shang 李上, Theo Yeh 葉庭英, Roland Pooth and Marc Miyake, who provided useful corrections on the draft.
- Archi and Mira, for being there.

1 Introduction

1.1 The Japhug language

The Japhug language (local name *kuruskɿt*) is spoken by several thousand speakers in Mbarkhams county (in Chinese *Maerkang* 马尔康), Rngaba prefecture, Sichuan province, China, in the 乡 <xiāng> ‘townships’ of *ɸdurɿt* (གདོང་བརྩུད་ *gdonj.-brɿad*, 龙尔甲 *lóng’ěrjiǎ*), *sarndzu* (གསར་རྫོང་ *gsar.rdzon*, 沙尔宗 *shāěrzōng*) and *tats’hi* (དཱ་ཚེ་ *da.ts’atɿ*, 大藏 *dāzàng*), collectively called *tɿɿp’hu* or *tɿ’ɿp’hu* (from which the name Japhug is taken).¹ All speakers of Japhug are classified as ethnic Tibetans (藏族 *zàngzú*).²

This work focuses almost exclusively on the dialect of *kɿmɿnu* village (干木鸟 *gānmùniǎo*, 32° 12’ 43” N, 101° 57’ 42” E), henceforth written as Kamnyu.

Japhug is one of the four Core Gyalrong languages (Sun 2000a), Tshobdun, Zbu and Situ, represented in Figure 1.1. It is particularly closely related to the West Gyalrongic languages: Khroskyabs, Stau and Tangut (Sun 2000b; Jacques et al. 2017).

Core Gyalrong and West Gyalrongic form the Gyalrongic group (Sun 2000b), itself a subbranch of Burmo-Gyalrongic (Jacques & Michaud 2011) and possibly the larger Tibeto-Gyalrongic group (Sagart et al. 2019).

Japhug is in contact with both Standard Mandarin and a local variety of Sichuanese. Since no study has focused on the Sichuan Mandarin as spoken by Gyalrong speakers in Mbarkham, the present work represents all Chinese words in Standard Mandarin and pinyin (between chevrons), except for highly nativized Chinese words, presented in IPA.

Situ Gyalrong and Amdo Tibetan used to be the two dominant languages in the area, and many speakers of Japhug also have a passive understanding of Situ,

¹The township of Gdongrbyad is however not traditionally included under the name *tɿɿp’hu*, and is referred instead by the term *svɿu*.

²The language can be referred to as 茶堡话 *chápùhuà* in Chinese, reading the character 堡 as *pù* rather than the more usual *bǎo*. In Western languages, the ‘ph’ should be pronounced as a stop rather than labiodental fricative, and the ‘g’ read as a voiceless stop. In French for instance, I call the language [dʒapuk].

1 Introduction

Figure 1.1: A map of Gyalrong languages

and sometimes also of Tshobdun and Zbu. There is no immediate intercomprehensibility between Gyalrong languages, and speakers of Japhug reportedly need several months to acquire basic conversational skills in Tshobdun.³

1.2 The Japhug corpus

With the exception of a chapter in Lin (1993: 468–486) on phonology and a few articles by Lin Youjing (Lin & Luoerwu 2003; Lin 2011) (all on the Tatshi dialect), the available data on Japhug are essentially from my own fieldwork, based on nine trips (July–August 2002, April–July 2003, July–August 2005, July 2010, July–August 2012, April–May 2014, July–August 2015, July–August 2016, May 2018) and constant contact by phone with my main language consultants. Some texts have been recorded with the help of my former PhD students Gong Xun and Lai Yunfan.

A short grammar (Jacques 2008), some texts (Jacques & Chen 2010) and a dictionary (Jacques 2015b) have previously been made available, to which a corpus

³See for example (145) (§8.2.9), (35) (§23.3.6) and (126) (§24.5.3.1), where Tshendzin recounts her experience as a teacher in Tshobdun village, where she had to learn Tshobdun to make herself understood by the pupils' parents.

of transcribed stories on the Pangloss archive (Michailovsky et al. 2014; Michaud et al. 2016) can be added, available on <https://pangloss.cnrs.fr/corpus/Japhug>.

My main consultant is Tshendzin (Chenzhen 陈珍, female, born 1950), a retired schoolteacher (a native speaker of Japhug, bilingual in Sichuan Mandarin since childhood), whose speech and grammaticality judgements are taken as the norm of this grammar.

Stories have also been collected from her husband *χpɿltɕin* Dpalcan 柏尔青, her maternal uncle Andzin, her nephew (sister's child) Ayang/Kunbzang Mtsho, and other Kamnyu people, in particular Tshering Skyid. Most traditional stories are typical of Tibetan folklore and not specific to Japhug-speaking areas, but some procedural texts, descriptions of local plants and animals, as well as accounts of local topography, include unique insight into local culture. In addition, a few conversations have been recorded.

The majority of examples in this grammar (except in the grammar sketch in chapter 2) are taken from texts or conversations rather than elicited. Most of the texts cited are already available on Pangloss. Temporal synchronization between transcription and audio was automatically accomplished using forced alignment (Macaire 2020), and whenever available, a hyperlink to the doi of the segment (Vasile et al. 2020) is provided for each example sentence in the grammar.⁴

In addition, I indicate for all examples a title in ASCII characters: Hill (2017: 305) reports that this citation format is sufficient to find the relevant data.

Conversations are not included in the archive at the moment of writing, but individual sound files of the sentences quoted in this grammar are preserved in a private database. In addition, a certain number of sentences have been noted down during participant observation, and lack recordings.

Since speakers I have worked with only recount a limited number of traditional stories (some of which in any case are from written sources; in particular, the story ‘The fox’ {0004087} told by Kunbzang Mtsho is clearly adapted from the Grimm fairy tale ‘Der goldene Vogel’), I have resorted to translation from Chinese to collect a larger corpus. Tshendzin provided surprisingly idiomatic renderings of various storybooks for children (including Grimm tales, Andersen tales, Liaozhai zhiyi 聊斋志异, Arabian nights and Xiyouji 西游记). These documents are not given the same value as more spontaneous texts, and are systematically indicated by adding the extension “-zh” to the document name. Systematic comparison with the original text is offered whenever any suspicion of calque from

⁴The doi were semi-automatically added using the program *DOI-Mercy* written by Alexander Delaporte. Only the informative part of the URL is indicated. To obtain the complete URL, the string <https://doi.org/10.24397/pangloss-> has to be prefixed to it.

1 Introduction

Chinese exists. However, the immense morphosyntactic difference between Chinese and Japhug makes it necessary to completely rework the structure of the sentences in most cases (see for instance 263, §21.7.1.2), so that even if there is undoubtedly influence from Chinese, even the way Chinese is adapted into Japhug is itself an interesting topic of research.

1.3 Structure of the grammar

Rather than being intended as the final word on Japhug grammar, this book is conceived as a tool for exploring the Japhug corpus and learning the language.

The reader is invited to start with the grammar sketch (chapter 2). The rest of the grammar contains two chapters on phonology (3, §4), five on nouns and noun phrases (5 to 9), eleven on verbal morphology (11 to 21), five on syntax (§22 to 26), as well as a chapter 10 on expressives and another one 27 on kinship.

In writing this grammar I have always preferred to abstain from definite judgement rather than provide incorrect data, and the description remains thus incomplete in many aspects, in particular in accounting for minute semantic differences between similar constructions, or on the grammaticality of borderline sentences (about which speakers sometimes change their mind). There are many points of uncertainty in many aspects of the morphosyntax (and even in some topics of phonology), and further research on finer points of phonology, morphosyntax and historical linguistics are much needed, with additional data from different speakers.

1.4 Language and culture

This work focuses on the grammar of the language, and only contains a single chapter (27, on the kinship system) dedicated to ethnology. However, the corpus that has been collected contains many traditional stories, as well as procedural texts describing the traditional life before massive sinicization. Examples from these texts are found on nearly all the pages of this grammar, and their interest is not purely linguistic. Thus, the section on place names presents a mythological story explaining the origin of a name (79, §5.2.1), the chapter on orientation preverbs contains an account of the traditional living-room/kitchen (§15.1.4.4) and an introduction to weaving (§15.1.4.5), and the section on antipassive derivations includes a passage on rain-calling and mountain tutelary spirits (see example 161, §18.6.7.3). In this sense, traditional culture permeates this grammar from beginning till end.

1.4 Language and culture

Further ethnographical work is necessary, in particular on kinship (Zhang & Fan 2020), traditional houses (Dong 2018), weaving and ethnobotany, and it is hoped that this grammar (together with the dictionary) will make it possible to properly describe local culture through the medium of Japhug rather than Chinese.

2 A grammatical sketch

This chapter offers a short introduction to the phonology and morphosyntax of the Japhug language. It is written for typologists and comparative linguists wanting to get a quick general picture of this language, before delving into the core of the grammar.

Morphosyntactic phenomena are illustrated mainly using simplified elicited examples rather than examples gleaned from texts and conversations as in the rest of the grammar.

2.1 Phonology and word structure

Japhug has 8 vowels (§3.3.1) and 50 consonant phonemes (§3.2.1), which can be combined into more than 400 biconsonantal or triconsonantal clusters in the onset (§4.2). Additional clusters are attested across syllable boundaries (§4.2.3.1). In coda position, only 12 consonants are found, and no clusters are possible: several phonological contrasts are neutralized (§3.2.2).

The IPA-based transcription in this grammar is a spelling system that is not strictly phonological: it uses different symbols to represent the allophones of some phonemes (in particular /w/, §3.2.1, §4.2.1.1). An alternative Tibetan-based orthography for use by native speakers (§4.4) is also provided.

Japhug is very far removed from the isolating, tonal and “monosyllabic” type once considered to be typical of Sino-Tibetan languages. Japhug lacks tonal contrasts (§3.7), and monosyllabic and monomorphemic words are a minority (§11.6). Words of six syllables or more are not rare in the corpus, as shown by the verb form (1) below.

- (1) *a-ky-tu-nu-ryzi-nu*
IRR-PFV-2-AUTO-stay-PL
'May you stay (here).'

Non-final syllables have strong phonotactic constraints at least in the native vocabulary (§3.8.2). The last syllable of verbal and nominal stems generally receives stress (as the syllable *-zi-* in 1, §3.7) and allows the maximal number of vowel and consonant contrasts.

2.2 Parts of speech

Unlike other Trans-Himalayan languages such as Sinitic, where the identification of word classes requires extensive syntactic analysis (von der Gabelentz 1881; Chao 1968), most parts of speech in Japhug can be straightforwardly defined on the basis of morphology.

Japhug has open and closed parts of speech. The three main open parts of speech are *nouns*, *verbs* and *ideophones*.

Nouns can in their turn be subdivided into four classes with different morphological properties. First, inalienably possessed nouns (§5.1.2) require the presence of a possessive prefix (§5.1.1). Second, alienably possessed nouns allow a possessive prefix, but do not require it. Third, counted noun (§7.3) take numeral prefixes (§7.3.1). Fourth, unpossessible nouns cannot be prefixed (§5.2).

Verbs are at the core of Japhug grammar, and have the richest morphology of all parts of speech – no less than nine chapters (from 11 to 21), about half of the grammar, is devoted to verbal morphology. Unlike other Trans-Himalayan languages such as Khaling, whose verbs are a closed class (Jacques et al. 2012), Japhug has a productive system of denominal and deideophonic morphology (§20), allowing a constant creation of new verbs. Apart from a handful of defective verbs (§14.2.2, §14.3.4), all verbs require orientation preverbs (§15.1) in most finite forms, and are the only part of speech compatible with these preverbs. Person indexation morphology (§14.2.1) is also a criterion for identifying verbs, but it is not always applicable since some verbs only occur in 3SG with no indexation affixes (§14.2.7), and since a few predicative words have adopted number indexation suffixes by analogy with verbs (§14.7).

Ideophones (§10.1) can also be distinguished from other parts of speech by specific morphological patterns (§10.1.2).

There is no specific class of “adjective” in Japhug. Words describing properties belong to three different parts of speech: adjectival stative verbs, which can be distinguished from other stative verbs by their ability to undergo the tropative derivation (§17.5), ideophones, and also property nouns, a subclass of inalienably possessed nouns (§5.1.2.7).

Closed parts of speech comprise numerals (§7.1) and pronouns (chapter 6), which also have specific morphology, and invariable words including postpositions (§8.2), determiners (§9.1), adverbs (§22.2, §26.1.1), linkers (§25.1.6, §9.1.5.5), interjections and calling sounds (§10.2) and sentence final particles (§10.4).

2.3 Nominal morphology

This section presents nominal inflection, derivation as well as grammatical categories expressed by syntactic rather than morphological means within noun phrases and postpositional phrases.

2.3.1 Non-attested nominal morphological categories

There is no gender, definiteness, obviation, negation and tense-aspect-modality-evidential inflection or derivation on nouns in Japhug.

The whole category of gender is completely absent from Japhug grammar; there are only suffixes for male and female animals, and even these are borrowed from Tibetan (§5.7.7).

There is no dedicated marker of definiteness (§9.1.4.3), but the aforementioned topic marker *iq^ha* only occurs on definite referents (§9.1.5.2). Indefiniteness can be marked by the indefinite article *ci* (§9.1.4.1) derived from the numeral ‘one’ (§7.1.1).

While an obviative/proximate contrast is reflected by some uses of the inverse prefix in the inflection of transitive verbs (§14.3.3.2), Japhug lacks obviative morphology on nouns (§5.1.1.3), unlike Algonquian languages (for instance Valentine 2001: 183).

Polarity and Tense-aspect-modality-evidentiality, which are prominently encoded by verbal morphology (§13.1, chapter 21), even on nominalized verb forms (§16.1.1.2), are completely absent from nominal morphology, and various types of participial clauses have to be used instead (§5.7.10).

2.3.2 Number

Number can be indicated by the dual *ni* (§9.1.1.1) and plural *ra* (§9.1.1.2) determiners. These determiners are not mutually incompatible with numerals, as shown by (2), where the redundant *ɓnuuz* ‘two’ can be added (these redundant forms, though grammatical, are not very common). The fact that numerals (and other postnominal modifiers, including relative clauses) can be inserted between nouns and number determiners show that they are not analyzable as number suffixes.

- (2) *ɟla* (*ɓnuuz*) *ni*
 male.hybrid.yak two DU
 ‘The two male hybrid yaks’ {0003660#S7}

2 *A grammatical sketch*

Table 2.1: Numeral prefixes of counted nouns

	Numeral	- <i>sji</i> ‘day’	
1	<i>ci</i>	<i>tu-sji</i>	‘one day’
2	<i>ɸnuuz</i>	<i>ɸnu-sji</i>	‘two days’
3	<i>χsum</i>	<i>χsu-sji</i>	‘three days’
4	<i>kuβde</i>	<i>kuβde-sji, kuβdɣ-sji</i>	‘four days’
5	<i>kumŋu</i>	<i>kumŋu-sji, kumŋɣ-sji</i>	‘five days’
6	<i>kutɕɣɣ</i>	<i>kutɕɣ-sji</i>	‘six days’
7	<i>kuɕnuuz</i>	<i>kuɕnu-sji</i>	‘seven days’
8	<i>kuurcat</i>	<i>kuurcɣ-sji</i>	‘eight days’
9	<i>kungut</i>	<i>kungu-sji</i>	‘nine days’
10	<i>sqi</i>	<i>squ-sji</i>	‘ten days’

Some nouns however do have an inflectional number category, expressed by a prefixal paradigm partially illustrated in Table 2.1 (§7.3.1).

This type of nouns corresponds to the category called ‘classifiers’ (Chao 1968: 518, Aikhenvald 2000) (量词 <liàngcí> in Chinese) in works on the grammar of Chinese, Japanese and other languages of East Asia. However, this terminology is particularly clumsy in the case of Japhug. Unlike in languages such as Chinese or Thai, nouns in Japhug do not require a ‘classifier’ to be used with a numeral, as shown by (3)¹ and (4).

- (3) *te^heme ci*
 girl one/INDEF
 ‘A/one girl’

- (4) *te^heme χsum*
 girl three
 ‘Three girls’

When occurring as postnominal modifiers (5), the two main functions of nouns with numerals prefixes are partitive (‘one of the *X*’) and distributive (‘each *X*’) depending on the constructions where they appear (§7.3.2).

- (5) *te^heme tu-rdoɸ*
 girl one-piece
 ‘One of the girls’; ‘Each girl...’; ‘One girl’ {0004053#S36}

¹The numeral *ci* ‘one’ is grammaticalized as an indefinite marker (§9.1.4.1).

In addition, although a handful of ‘classifiers’ are indeed specific to a particular semantic category of nouns (§7.3.3), the generic ‘classifier’ *tu-rdoɣ* ‘one piece’ can be used as modifier with nearly all referents.

For these reasons, this grammar favours the term *counted noun* based on morphology, rather than “classifier” (an extremely marginal function of these words) or “quantifier” (not specific enough, since there are many quantifiers that are not counted nouns, §9.1.3) to refer to nouns with numeral prefixes such as *tu-sɲi* ‘one day’ or *tu-rdoɣ* ‘one piece’.

2.3.3 Case marking

Japhug lacks case inflection, but has a few regular adverbializing derivations (§5.8), whose functions resemble that of oblique cases: the comitative *kʰ-* (§5.8.1) and the perlocative (§5.8.2).

Grammatical relations on noun phrases are encoded by postpositions such as the ergative *ku* (§8.2.2), the genitive *ɣu* (§8.2.3) and the comitative *cʰo* (§8.2.5), as well as relator nouns (§8.3) such as the dative *u-ɕki* or *u-pʰe* (§8.3.1). With the sole exception of the genitive forms of a few pronouns such as *azuɣ* 1SG:GEN (from *azo* ‘1SG’ and *ɣu*, §6.3), the postpositions do not merge phonologically with the previous word. As shown by (6) and (7), they are located at the end of the noun phrase, further away from the head noun than all determiners, including number markers.

- (6) *[[u-pi ni] ku] pɣa nuw pa-mto-ndzi*
 3SG.POSS-elder.sibling DU ERG bird DEM 3→3':AOR-see-DU
 ‘His two elder siblings saw the bird.’

- (7) *[[tuɾme ra] ɣu] nuw-fsapɔɣ*
 person PL GEN 3PL.POSS-cattle
 ‘People’s cattle’

In addition, it is possible to make a pause between the noun and the postposition *ku* or *ɣu* that follows: the postposition can be procliticized to the following word. A considerable number of examples can be found in the corpus (§8.2.1).

While Situ Gyalrong does have locative suffixes (Lin 1993: 325–331), Japhug only uses postpositions (§8.2.4.1) and/or relator nouns (§8.3.4.5) to express location, goal and source of motion. The only traces of the proto-Gyalrong suffixes are the locative postposition *zu*, which was degrammaticalized from a suffix **-s* (§8.2.4.1), and a few isolated lexicalized forms (§8.2.4.4, §8.3.4.5).

2.3.4 Possession

The main nominal morphosyntactic category expressed by an inflectional paradigm in Japhug is possession, encoded by a series of possessive prefixes (§5.1.1).

2.3.4.1 Possessive paradigm

Table 2.2: Possessive paradigms

Person	Prefix	<i>tu-ku</i> ‘head’	<i>k^ha</i> ‘house’
1SG	<i>a-</i>	<i>a-ku</i>	<i>a-k^ha</i>
2SG	<i>ny-</i>	<i>ny-ku</i>	<i>ny-k^ha</i>
3SG	<i>u-</i>	<i>u-ku</i>	<i>u-k^ha</i>
1DU	<i>tçi-</i>	<i>tçi-ku</i>	<i>tçi-k^ha</i>
2/3DU	<i>ndži-</i>	<i>ndži-ku</i>	<i>ndži-k^ha</i>
1PL	<i>ji-</i>	<i>ji-ku</i>	<i>ji-k^ha</i>
2/3PL	<i>nu-</i>	<i>nu-ku</i>	<i>nu-k^ha</i>
indefinite generic	<i>tu-/ty-/ta-</i> <i>tu-</i>	<i>tu-ku</i> <i>tu-ku</i>	<i>k^ha</i> <i>tu-k^ha</i>

The possessive paradigm is nearly the same for all nouns (Table 2.2), but some nouns such as *tu-ku* ‘head’ require a indefinite possessor prefix *tu-*, *ty-* or *ta-* when no definite possessor is present, while other nouns like *k^ha* ‘house’ can occur in bare stem form. The former are *inalienably possessed nouns*, comprising in particular body parts (§5.1.2.3) and kinship terms (§5.1.2.4), while the latter are *alienably possessed nouns*. Some inalienably possessed nouns have been grammaticalized as relator nouns (§8.3) marking the syntactic function of noun phrases. Furthermore, a handful of nouns have become TAME markers (§21.8.3.1).

Possessors are obligatorily indicated by possessive prefixes. An overt possessor can be optionally added. For instance, the meaning ‘my cow’ can be expressed by the noun form *a-nuŋa* with a simple possessive prefix, but this noun can be additionally preceded by the genitive pronoun *ažuy* (8) or even by the absolutive *ažo*.

- (8) (*ažuy*) *a-nuŋa*
 1SG 1SG.POSS-COW
 ‘My cow’

The possessive prefix cannot be elided, even in the case of alienably possessed nouns like *nuŋa* ‘cow’. In (8), removing the *a-* prefix would result in an ungrammatical form (\dagger *azuy nuŋa*).

The phrase expressing the possessor always precedes the possessum. Genitive marking on the possessor is optional: in (9), the genitive postposition *yw* (§8.2.3.1) can be elided.

- (9) [*a-mu* *a-wa* *ni*] (*yw*) *ndzi-nuŋa*
 1SG.POSS-mother 1SG.POSS-father DU GEN 3DU.POSS-cow
 ‘My parents’ cow’

The person and number of the possessive prefix on the possessum is the same as that of the noun phrase or pronoun marking the possessor: in (9) for instance, the third dual possessive prefix *ndzi-* agrees in number with the dual possessor phrase *a-mu a-wa ni*. Number agreement mismatch is only attested in very restricted contexts (§5.1.1.2).

2.3.4.2 Alienabilization

Nouns can only take one single possessive prefix, except when inalienably possessed nouns are turned into alienably possessed nouns (§5.1.2.9), by stacking a definite possessor prefix (any of the prefixes in Table 2.2 except the indefinite ones) on the indefinite possessive form. For instance, the possessed form *u-lu* (10a) of *tx-lu* ‘milk’ without prefix stacking is used when the possessor is the cow *producing* the milk, but the alienabilized possessive forms *u-tx-lu* ‘his/her/its milk, the milk for him/her/it’ (10b) or *a-tx-lu* ‘my milk’ (10c), expressing the person or animal *drinking* the milk as possessor, have a combination of two prefixes.

- (10) a. *nuŋa (yw) u-lu*
 cow GEN 3SG.POSS-milk
 ‘(The/a) cow’s milk’
 b. *lulu (yw) u-tx-lu*
 cat GEN 3SG.POSS-INDEF.POSS-milk
 ‘The milk for the cat (i.e. given to the cat to drink)’
 c. (*azo*) *a-tx-lu*
 1SG 1SG.POSS-INDEF.POSS-milk
 ‘My milk (i.e. for me to drink)’

Stacking of two definite possessor prefixes, or of a numeral prefix with a definite possessor prefix, are not grammatical.

2.3.4.3 Generic possessors

The indefinite possessor prefix has three allomorphs *tu-* (as in *tu-ku* ‘head’), *tr-* (as in *tr-se* ‘blood’) or *ta-* (as in *ta-ma* ‘work’). It has to be distinguished from the generic possessor prefix *tu-* (§5.1.3). Generic possessors are identical with indefinite possessors in the case of inalienably possessed nouns selecting the *tu-* prefix, for instance *tu-ku* can either mean ‘head’ or ‘one’s head’. With inalienably possessed nouns selecting the *tr-* or *ta-* allomorphs, a contrast is found between *tr-se* ‘blood’ and *tu-se* ‘one’s blood’ (11) for instance.

- (11) *qajwsmɯnba kuw tu-se ku-ts^{hi} ɲu*
 leech ERG GENR.POSS-blood IPFV-drink be:FACT
 ‘The leech drinks people’s (i.e. one’s) blood.’

The generic possessor prefix can also occur on alienably possessed nouns, as in *tu-k^{ha}a* ‘one’s house’.

No more than one generic referent is possible per clause, so that if a noun with generic possessor prefix is found in the same clause as a verb with generic indexation, there is obligatory co-reference (§14.3.2.5), as in (12) between the possessor of *tu-rpu* ‘one’s mother’s brother’ (indefinite form *tr-rpu*, §5.1.2.4) and the transitive subject of the verb *tu-ku-ti* ‘one says’ (§14.3.4).

- (12) *tu-rpu yw ur-zab w-cki tce*
 GENR.POSS-mother’s.brother GEN 3SG.POSS-wife 3SG.POSS-DAT LOC
 “a-*lav*” *tu-ku-ti ɲu*
 1SG.POSS-aunt IPFV-GENR-say be:FACT
 ‘One_i calls one_i’s mother’s brother’s wife ‘my aunt’ (i.e. one says ‘my aunt’ to one’s mother’s brother’s wife).’

2.3.4.4 Possessive existential construction

Predicative possession can be expressed by the verb *aro* ‘own’ (§14.2.3, §22.5.2), encoding the possessor as subject, but the most frequent construction involves an existential verb (§22.5.1.2) with the possessum as subject and the possessor marked by a possessive prefix on the possessum, optionally with a genitive phrase (§22.5.2.1). The construction is the same for alienably (13a) and inalienably (13b) possessed nouns.

- (13) a. *kuβba ra yw nuw-nuŋa ku-dyn pɣ-tu*
 noble PL GEN 3PL.POSS-cow SBJ:PCP-be.many IFR.IPFV-exist
 ‘The nobles had many cows.’

- b. *κωββα ra γω nu-tew χsum pjγ-tu*
 noble PL GEN 3PL.POSS-son three IFR.IPFV-exist
 ‘The nobles had three sons.’

In this construction, the existential verbs rarely agree in number with the possessum: in both (13a) and (13b), the singular verb form *pjγ-tu* is by far more commonly used than its plural counterpart (§14.6.1.1).

2.3.5 Compounding

Compounding can be realized by the simple concatenation of noun (or verb) stems.

In compounds comprising two noun stems (§5.5.1), whose order is modifier-modified, no possessive prefixes occur between the nominal stems, even if the second noun is inalienably possessed. For instance, the compound built from *kurru* ‘Tibetan’ and the inalienably possessed *tu-ηga* ‘clothes’ is *kurru-ηga* ‘Tibetan clothes’, rather than †*kurru-tuηga*.

In many cases, the non-final elements of the compound appear in a bound form, the bound state (§5.4), which is characterized by a vocalic change to either *-r* or *-u* (§5.4.1). For instance, compounding *tu-ku* ‘head’ with *tr-rme* ‘hair’ yields *tr-kr-rme* ‘head hair’ with the bound state *kr-* from *-ku*. The compound inherits the allomorph *tr-* of the indefinite possessor prefix of the head of the compound *tr-rme* ‘hair’.

2.3.6 Derivations

Some suffixal nominal derivations come from compounds with a grammaticalized noun as second element, in particular the diminutive suffixes (§5.7.3). The recent origin of these suffixes can be shown by the fact that a free form still co-exists with the corresponding compound in some cases. For instance, the compound *χpuw-pu* ‘little monk’ from *χpuw* ‘monk’ with the diminutive *-pu* occurs in free variation with the phrase (14), in which the main noun is followed by the alienably possessed property noun *w-pu* ‘little one’ (§5.1.2.7) derived from *tr-pu* ‘offspring, young’.

- (14) *χpuw w-pu*
 monk 3SG.POSS-little.one
 ‘(The/a) little monk’

2 A grammatical sketch

Not all suffixal derivations have transparent origins. For instance, the privative *-lu* suffix (§5.7.1) is not related to any independently attested nominal or verbal root. It turns an inalienably possessed noun into a non-possessible one mainly used as postnominal modifier (§9.1.8.1), removing possessive prefixes and subjecting the nominal stem to bound state alternation (*tu-ku* ‘head’ → *kx-lu* ‘headless’).

Prefixal nominal derivations, however, do not originate from elements of compounds, but rather from participial forms of denominal verbs (§20.2.4, §20.2.5).

The social relation collective *kɣndzi-* prefix (§5.7.8.1) occurs on the bare stem of kinship terms and a few other terms of social relationship to indicate a group of people. When the group members are related to each other by a symmetrical relationship (*tx-xtɣɣ* ‘brother’ (of a male) → *kɣndzi-xtɣɣ* ‘group of brothers’), the social relation collective is based on only one nominal stem, but when the relationship is asymmetrical, *kɣndzi-* can be prefixed to two compounded noun stems, as in *kɣndzi-wɣmu-snom* ‘group of siblings’ from *tx-wɣmu* ‘brother’ (of a female) and *tx-snom* ‘sister’ (of a male).

The comitative derivation (§5.8.1) is built by adding the prefixes *kɣ-* or *kɣɣu-* to reduplicated noun stems. It derives an adverb meaning ‘together with X’ which can have scope over the whole clause, or be restricted to a noun phrase. It can apply to both inalienably possessed nouns (*tu-ŋga* ‘clothes’ → *kɣ-ŋgu~ŋga* ‘together with his/her clothes’) or alienably possessed ones (*ɟla* ‘male hybrid yak’ → *kɣ-ɟlu~ɟla* ‘together with the/his/her hybrid yak’). Comitative derivation can preserve the indefinite possessor prefix of inalienably possessed nouns, causing alienabilization (§2.3.4.2, §5.1.2.9). For instance, *tx-rte* ‘hat’ has two comitative forms: *kɣ-rtu~rte* ‘together with his/her hat’ (wearing it) and *kɣ-tx-rtu~rte* ‘together with a/the hat’ (not wearing it).

2.4 Verbal morphology

2.4.1 Overview

Verbs have a considerably more elaborate morphology than all other parts of speech (§11.1). Verbal morphology is strongly prefixal (§11.2), with some vowel contractions (§12.3). Non-concatenative morphology includes stem alternations (§12.2) as well as infixation (§11.2.2, §14.2.2, §19.1.2).

Japhug verbal morphology is considerably more regular than that of other Gyalrong languages, in particular Zbu (Sun 2004; Gong 2018) and Situ (Zhang 2018). Most alternations are productive and predictable, and irregular verbs are limited in number (§14.2.2, §14.3.4).

As illustrated by (15), a verb form can comprise six inflectional prefixes (in blue) arranged in a rigid template (§11.2.1) and several derivational prefixes (in red).

- (15) a^{-6} - $m\gamma^{-5}$ - $y\omega^{-4}$ - $n\omega^{-3}$ - $t\acute{u}^{-2}$ - $w\gamma^{-1}$ - z - $n\gamma$ - re
 IRR⁻⁶-NEG⁻⁵-CISL⁻⁴-PFV⁻³-2⁻²-INV⁻¹-CAUS-DENOM-laughter
 ‘Don’t let him come and make you laugh.’

The suffixal chain (§11.3) only includes inflectional suffixes, with a maximal number of four slots (16).

- (16) $um\gamma^{-6}$ - $p\omega^{-3}$ - $k\omega^{-2}$ - mto - t^{+1} - a^{+2} - $ndzi$ - t^{+3} - ci - t^{+4}
 PROB⁻⁶-AOR⁻³-PEG⁻²-see-PST:TR⁺¹-1SG⁺²-DU⁺³-PEG⁺⁴
 ‘It looks like I have seen the two of them.’

Numerous non-adjacent dependencies (§11.5) are observed across the prefixal and the suffixal chains.

Inflectional verbal morphology encodes person and number of one or two core arguments (chapter 14, §2.4.2.2), orientation (§15.1), associated motion (§15.2), negation (§13.1) and Tense-Aspect-Modality-Evidentiality (chapter 21).

2.4.2 Indexation

All finite verb forms in Japhug have obligatory person indexation. Since the 3SG has zero marking as in many languages of the world (Benveniste 1966b: 227–236), indexation is not conspicuous on intransitive verbs requiring a 3SG subject (§14.2.7), but indirectly observable even on transitive dummy verbs (§14.3.5) due to the presence of stem alternation (§12.2.2).

Transitive and intransitive verbs are clearly distinguished by a series of seven morphological parameters (§14.3.1). Intransitive verbs only index one argument (the intransitive subject, S), and transitive verbs index two arguments (the transitive subject A and the object O). Semi-transitive verbs have intransitive indexation (§14.2.3), but select a second core argument (§8.1.5). Only a handful of verbs are labile, and can be conjugated either transitively or intransitively (§14.5).

2.4.2.1 The intransitive paradigm

Person indexation in Japhug is best introduced with the intransitive paradigm (§14.2.1), since it is considerably smaller than the transitive one. The regular paradigm is illustrated in Table 2.3 with the verb *mbyom* ‘be in a hurry’ in the Factual Non-Past, the only TAME without orientation preverb (§21.3.1).

Table 2.3: The intransitive indexation paradigm

Person	Form	Example
1SG	Σ - <i>a</i>	<i>mbyom-a</i>
1DU	Σ - <i>tçi</i>	<i>mbyom-tçi</i>
1PL	Σ - <i>ji</i>	<i>mbyom-i</i>
2SG	<i>tuu</i> - Σ	<i>tuu-mbyom</i>
2DU	<i>tuu</i> - Σ - <i>ndzi</i>	<i>tuu-mbyom-ndzi</i>
2PL	<i>tuu</i> - Σ - <i>nuu</i>	<i>tuu-mbyom-nuu</i>
3SG	Σ	<i>mbyom</i>
3DU	Σ - <i>ndzi</i>	<i>mbyom-ndzi</i>
3PL	Σ - <i>nuu</i>	<i>mbyom-nuu</i>

The intransitive paradigm has different forms for singular, dual and plural. First persons have dedicated suffixes encoding both person and number; there is no inclusive/exclusive contrast. Second and third person forms are distinguished by the second person *tuu*- prefix (on the historical significance of this prefix, see Jacques 2012a and DeLancey 2014). There is no overt third person marker on intransitive verbs. Number markers are shared by second and third person forms: absence of suffix for the singular, *-ndzi* for the dual and *-nuu* for the plural. Slightly different forms are found in dialects of Japhug other than Kamnyu (§14.8.1). In addition to the paradigm in Table 2.3, a generic person *kuu*- prefix also occurs on intransitive verbs (§14.3.2.5).

A handful of intransitive verbs infix rather than prefix the second person (§14.2.2). It is the only irregularity related to person indexation in intransitive verbs in Japhug.

2.4.2.2 The transitive paradigm

The transitive paradigm is too large to be described in this introductory chapter in its entirety (§14.3.2). Table 2.4 presents the singular forms of the paradigm of the transitive verb *sat* ‘kill’ (a verb lacking stem alternations) in the Factual Non-Past, which are sufficient to illustrate its basic structure. In this table, the columns represent the objects (O), and the rows the subjects (A). The shaded cells indicate configurations with coreferent subject and object, which are expressed by the reflexive derivation (§18.3) and do not belong to the transitive paradigm.

Table 2.4: The transitive paradigm (singular forms) of the non-alternating verb *sat* ‘kill’ in the Factual Non-Past

	1O	2O	3O	3'O
1A		<i>ta-sat</i>	<i>sat-a</i>	
2A	<i>ku-sat-a</i>		<i>tu-sat</i>	
3A	<i>γú-sat-a</i>	<i>tú-wy-sat</i>		<i>sat</i>
3'A			<i>γú-sat</i>	

The comparison of Tables 2.3 and 2.4 shows that the 1SG *-a* suffix and the second person *tu-* prefix have neutral alignment: they can index intransitive subject, transitive subject or object. In the following, the person configurations are referred to by $X \rightarrow Y$, where X represents the subject and Y the object (for instance $1 \rightarrow 3$ means ‘first person subject, third person object’). The eight non-shaded cells of the paradigm in Table 2.4 can be divided into three groups.

First, $1 \rightarrow 3$, $2 \rightarrow 3$ and $3 \rightarrow 3'$ are the *direct* configurations with a third person object, whose forms resemble the 1, 2 and 3 forms of the intransitive paradigm (at least in the Factual Non-Past).

Second, $3 \rightarrow 1$, $3 \rightarrow 2$ and $3' \rightarrow 3$ are the *inverse* configurations, which have the same prefixes or suffixes as the corresponding intransitive and direct forms (at least in this paradigm), but take in addition the inverse prefix *γu-/wy-* (the allomorphy of this prefix is explained in §14.3.2.7).

Third, $1 \rightarrow 2$ and $2 \rightarrow 1$ (without third person) are the *local* configurations (§14.3.2.3). They are characterized by the presence of the portmanteau *ta-* and *ku-* prefixes (§14.8.3) not found in the intransitive paradigm.

The reasons for using the terms “direct” and “inverse” to describe the transitive paradigm are discussed in §14.3.2.8.

When both arguments are third person (§14.3.2.2), there is a contrast between direct $3 \rightarrow 3'$ and inverse $3' \rightarrow 3$ configurations, whose meaning is not entirely straightforward (§14.3.3). The subject of the direct configuration, and object of the inverse one is called *proximate* (3), and the other argument *obviative* (3'). The direct $3 \rightarrow 3'$ configuration is by far the most common one in narratives and conversation. The inverse $3' \rightarrow 3$ is more restricted; it occurs in particular to index a generic subject with a third person object (§14.3.2.5), and also when the subject is inanimate and the object animate (§14.3.3.1).

The majority of transitive verbs (all verbs ending in closed syllables or with front vowels) are non-alternating like *sat* ‘kill’. However, about a third of all transitive verbs (those ending in *-a*, *-u*, *-o* and *-u*) have stem alternation in the *direct*

2 A grammatical sketch

configurations with a singular subject in the Factual Non-Past and a few other tenses (§12.2.2).

Table 2.5: The transitive paradigm (singular forms) of the alternating verb *ɓndu* ‘hit’ in the Factual Non-Past

	1O	2O	3O	3'O
1A		<i>ta-ɓndu</i>	<i>ɓndi-a</i>	
2A	<i>kuu-ɓndu-a</i>		<i>tuu-ɓndi</i>	
3A	<i>ɣú-ɓndu-a</i>	<i>tú-wy-ɓndu</i>		<i>ɓndi</i>
3'A			<i>ɣú-ɓndu</i>	

Table 2.5 illustrates the singular forms of the alternating verb *ɓndu* ‘hit’, which has additional stem *-ɓndi* in the 1SG→3, 2SG→3 and 3SG→3' configurations (with blue colouring), which are thus different from the corresponding intransitive forms.

In the Aorist (§21.5.1.1), a slightly different paradigm is found, illustrated in Table 2.6 with the *ɓndu* ‘hit’. Unlike the Factual Non-Past shown in the previous tables, the Aorist requires an orientation preverb (§15.1.1.1), here the UPWARDS *tx-*. There is no stem alternation marking the direct forms, but all verbs have a different series of preverbs (here *ta-*) in the direct 3→3' forms (§21.5.1.1, §15.1.1.1). In addition, the 1SG→3 and 2SG→3 forms require a *-t* suffix which redundantly encodes both person and tense-aspect (§11.3).

Table 2.6: The transitive paradigm (singular forms) of the verb *ɓndu* ‘hit’ in the Aorist

	1O	2O	3O	3'O
1A		<i>tx-ta-ɓndu</i>	<i>tx-ɓndu-t-a</i>	
2A	<i>tx-kuu-ɓndu-a</i>		<i>tx-tuu-ɓndu-t</i>	
3A	<i>tx-wy-ɓndu-a</i>	<i>tx-tú-wy-ɓndu</i>		<i>ta-ɓndu</i>
3'A			<i>tx-wy-ɓndu</i>	

There is no ambiguity in person indexation in Japhug (unlike for instance in Khaling where 2→1 and 3→1 configurations are identical, Jacques et al. 2012), but there are strong restrictions on number indexation: unless the 1SG suffix is present, only one of the two arguments can be indexed for both person and num-

ber, the subject in direct configurations, and the object in inverse and local configurations. Double number indexation only occurs in forms with the 1SG *-a* suffix, to which additional number suffixes can be added (§14.3.2.6), for instance *yú-ɛndu-a-nu* ‘they will hit me’ (3PL→1SG) where the plural morpheme *-nu*, indexing the number of the subject, follows the 1SG.

2.4.2.3 Person indexation and finiteness

Person indexation markers (including person-indexing stem alternation and orientation preverbs) are not found on participles, infinitives and other non-finite verb forms (chapter 16). A handful of phatic and exclamative words of nominal origin have however developed the ability to take number suffixes (§2.8.3, §14.7). Apart from these, words belonging to parts of speech other than verbs are incompatible with the indexation affixes described in this section.

2.4.3 Orientation preverbs and TAME

This section focuses on morphology. Since the use of the TAME categories involve sometimes subtle semantic nuances, and have to be explained on the basis of examples with a clear context, the discussion of the semantic function of each category is deferred to chapter 21.

2.4.3.1 The morphology of orientation preverbs

The main morphological exponents of tense, aspect, modality and evidentiality (henceforth TAME) in Japhug are the orientation preverbs (§15.1). All regular finite verb forms require *one and only one* preverb (§11.2.1), except the Factual Non-Past (§21.3.1) which does not take any preverb. The stacking of two or more preverbs is ungrammatical. Only a handful of irregular defective verbs are incompatible with orientation preverbs (§14.2.2, §14.3.4).

Preverbs encode one out of seven orientations (Table 2.7), divided into three dimensions: vertical (§15.1.3.1), riverine (§15.1.3.2) and solar (§15.1.3.3), to which an unspecified orientation is added. This tridimensional system is not restricted to verbal morphology: locative relator nouns (§8.3.4.1), egressive postpositions (§8.2.10) and locative adverbs (§15.1.1.4) have similar systems with six orientations, built from morphemes that are historically related to the preverbs.

There are four series of preverbs (Table 2.7 includes two of them, the series A and B) in the Kamnyu dialect, used in different TAME categories (§15.1.1.1). Some dialects of Japhug have a slightly different system (§15.1.1.3).

Table 2.7: Orientation preverbs in Kamnyu Japhug

Dimension	Orientation	A	B
Vertical	Up	<i>tx-</i>	<i>tu-</i>
	Down	<i>pu-</i>	<i>pju-</i>
Riverine	Upstream	<i>lx-</i>	<i>lu-</i>
	Downstream	<i>t^hu-</i>	<i>c^hu-</i>
Solar	Eastwards	<i>kx-</i>	<i>ku-</i>
	Westwards	<i>nu-</i>	<i>ju-</i>
	Unspecified	<i>jx-</i>	<i>ju-</i>

Orientable verbs (§15.1.2) are compatible with all orientations; this includes in particular motion verbs like *yi* ‘come’ and *toɓ* ‘come out’ (§15.1.2.1). With this type of verbs, the preverbs indicate either the absolute direction of the motion (§15.1.3), for instance UPWARDS in (17) or have extended meanings (§15.1.4), such as the illative function (§15.1.4.2) of the UPSTREAM preverb in (18).

- (17) *txɲe tx-toɓ*
 sun AOR:UP-come.up
 ‘The sun rose.’

- (18) *u-ɲguw lx-yi*
 3SG.POSS-in IMP:UPSTREAM-come
 ‘Come in! (for instance, inside a house)’ {0003884#S90}

Non-orientable verbs only select a restricted number of lexically determined orientations, sometimes only one (§15.1.5). For instance, the verb *ndza* ‘eat’ and *mto* ‘see’ require the UPWARDS (§15.1.5.4) and DOWNWARDS (§15.1.5.9) preverbs, respectively.

2.4.3.2 The morphology of TAME categories

There are eleven primary TAME categories, which can be divided into four main groups: Non-Past (Factual Non-Past, Egophoric Present, Sensory, §21.3), Imperfective (§21.2), Past (Aorist, Inferential, Past Imperfective, and Inferential Imperfective, §21.5) and Modal (Irrealis, Imperative, Prohibitive, Dubitative, §21.4) categories.

In the finite TAME categories, the B-type preverbs are found in the Imperfective (§21.2) and the A-type preverbs in the Imperative (§21.4.2.1), the Irrealis (§21.4.1.1) and the Aorist (§21.5.1), though with slightly different vowel contraction rules (§12.3). In the Aorist paradigm of transitive verbs, another series of preverbs (C) is found in the direct 3→3' forms (§2.4.2.2), based on the A-type preverbs but with *-a* vocalism instead of *-u* and *-ɣ* (originating from fusion with another prefix, §15.1.1.3). For instance, the 2PL→3 Aorist of *ndza* 'eat' is *tx-tu-ndza-nuu* (AOR:UP-2-eat-PL 'you_{pl} ate it') with the UPWARDS A-type *tx-* preverb, but the corresponding 3PL→3' form is *ta-ndza-nuu* (AOR:3→3':UP-eat-PL 'they ate it') with the C-type preverb *ta-*. It is the only case when an orientation preverb encodes person in addition to TAME.

The Inferential (§21.5.2) has a series of preverbs (series D) based on series B, but with *-o* and *-ɣ* vocalism instead of *-u* and *-uu*, respectively (§15.1.1.3). For instance, the UPWARDS and DOWNWARDS D-type preverbs are *to-* and *pju-*, corresponding to the B-type *tu-* and *pju-*, respectively (§15.1.1.1).

Five TAME categories neutralize the orientation contrast, and require the same marker for all verbs: the Sensory evidential *juu-* (§21.3.2), from the B-type WESTWARDS preverb (Table 2.7), the Egophoric Present *ku-* (§21.3.3), the Dubitative *ku-* (§21.4.4), from the B-type EASTWARDS preverb, the Past Imperfective *puu-* from the A-type DOWNWARDS preverb (§21.5.3.1, Lin 2011), and the Inferential Imperfective *pjɣ-* from the D-type DOWNWARDS preverb (§21.5.3.1).

In addition to orientation preverbs, TAME categories are marked by several morphological exponents, including stem alternations (§12.2), allomorphy of negative prefixes (§13.1.1) and additional affixes: the Irrealis *a-* prefix (§11.2.1) and the Past transitive *-t* suffix (§11.3).

In the Non-Past, Imperfective and Modal categories (all except Past), transitive alternating verbs have a specific stem in direct configurations with a singular subject (see Table 2.5 above and §12.2.2). Another stem is found in the Aorist of a handful of verbs (§12.2.1).

Some of the primary categories can be combined with the copula *ɲu* 'be' to form periphrastic TAME categories (§21.2.2), for instance the Periphrastic Past Imperfective (§21.5.3.5) illustrated in (19), built from the Imperfective (*tu-ndze-a*, with the B-type UPWARDS preverb *tu-*, the alternating stem *ndze* from *ndza* 'eat' and the 1SG suffix) and the Past Imperfective of the copula *puu-ɲu*.

- (19) *tx-mt^hum* *tu-ndze-a* *puu-ɲu*
 INDEF.POSS-meat IPFV-eat[III]-1SG PST.IPFV-be
 'I was eating meat/I used to eat meat.'

2 *A grammatical sketch*

In addition, primary TAME categories can be combined with prefixes expressing secondary aspectual (§21.6) or modal (§21.7) meanings.

There is a robust contrast between Past and Non-Past tenses in Japhug, but no grammaticalized future tense. Future events in main clauses are mainly expressed by the Factual Non-Past (§21.3.1.2) or the Irrealis (§21.4.1.2).

The tripartite evidential system between Egophoric Present, Sensory (or Testimonial) and Factual observed in the non-past is structurally very similar to that found in some Tibetic languages (Tournadre 2008; Hill & Gawne 2017).

2.4.3.3 *Stative vs. dynamic verbs*

TAME morphology presents a contrast between *stative* and *dynamic* verbs. In the Imperfective (§21.2.6), the Aorist (§21.5.1.3) and the Inferential (§21.5.2.4), stative verbs have an inchoative meaning, different from their meaning in Non-Past tenses.

For example, the verb *zri* ‘be long’ means ‘become long(er)’ in the Imperfective (*tu-zri* IPFV:UP-be.long ‘it becomes longer’) or the Aorist (*tx-zri* AOR:UP-be.long ‘(when) it became longer’). By contrast, in the Sensory (*juu-zri* SENS-be.long ‘it is long’) and the other Non-Past tenses, it retains its basic stative meaning.

Stative verbs also differ from most dynamic verbs in being compatible with Past Imperfective and Inferential Imperfective in all contexts (*puu-zri* PST.IPFV-be.long ‘it was/used to be long’), while dynamic verbs generally require the periphrastic Past Imperfective instead (§21.5.3.5), except in some limited contexts (§21.5.3.4).²

The stative/dynamic contrast is not completely independent from transitivity (§14.3.1). Only *intransitive* stative verbs have a distinctive morphological marking: the *ku-* infinitive appears in some contexts (§16.2.1.1). Transitive stative verbs include in particular verbs derived from adjectival stative verbs by the tropative derivation (§17.5.2).

2.4.4 *Non-finite verb forms*

Finiteness can be defined in Japhug by the ability of a given verb form to occur in the person indexation paradigms (§2.4.2). Non-finite verbs forms cannot take indexation affixes, though some of them can mark the person and number of at most *one* argument by means of possessive prefixes like nouns (§2.3.4.1). The distinction between finite and non-finite verbal forms is categorical: there are

²This criterion is however not absolute, since a few atelic dynamic verbs can occur in the non-periphrastic Past Imperfective (§21.5.3.1).

no intermediate semi-finite forms, unlike in Situ (Sun & Lin 2007) where some participles take person indexation in specific contexts.

The main verb of a complete sentence has to be in a finite form, and non-finite verbs are restricted to subordinate clauses (including relative and complement clauses).

2.4.4.1 Participles

There are three types of participle in Japhug: subject, object and oblique, respectively marked by the prefixes *ku-* (20a), *ky-* (20b) and *sy/z-* (20c). They are fully productive, and only a handful of defective verbs lack participles (§14.2.2, §14.3.4).

- (20) a. *ny-ku-qur*
 2SG.POSS-SBJ:PCP-help
 ‘The one/someone who helps you’
- b. *ny-ky-qur*
 2SG.POSS-OBJ:PCP-help
 ‘The one/someone that you help’
- c. *a-sy-t^hu*
 1SG.POSS-OBL:PCP-ask
 ‘The one whom I ask’

Participles can take a possessive prefix (§16.1.1.1, §16.1.2.1, §16.1.3.3), marking either the subject (20b and 20c) or the object (20a).

Participles can in addition be combined with negative, orientation and associated motion prefixes (§16.1.1.2, §16.1.2.2), as shown by (21).

- (21) *ui-my-pju-ku-nu-fkaβ*
 3SG.POSS-NEG-IPFV:DOWN-SBJ:PCP-AUTO-cover
 ‘The one/those who do(es) not cover it’ (from example 20, §16.1.1.2)
 {0003604#S20}

One of the main function of participles is to build participial relative clauses (§23.2.1). Participial clauses can relativize core arguments (§16.1.1.4, §16.1.2.4) and various oblique arguments and adjuncts (§16.1.1.5, §16.1.2.4, §16.1.3.5, §16.1.3.6, §16.1.3.7).

In particular, the Japhug equivalent of attributive adjectives are adjectival stative verbs in subject participle form (§9.1.8.3, §23.5.1), occurring in generally head-internal (§23.4.3.2) relative clauses as in (22).

2 A grammatical sketch

- (22) *te^heme ku-mpeɾɾ*
girl SBJ:PCP-be.beautiful
'A/the beautiful girl' {0006312#S89}

The subjects of both intransitive (§23.5.1) and transitive (§23.5.2) verbs are relativized by means of a participial relative clause in *ku-*. Subject participles of transitive verbs take an obligatory possessive prefix coreferent with the object (unless another prefix is present) as in (20a) and (23a), while those of intransitive verbs lack possessive prefixes as in (23b),³ except in very restricted cases (§16.1.1.1).

- (23) a. *u-ku-ɾɿt*
3SG.POSS-SBJ:PCP-write
'The one/someone who writes it'
- b. *ku-ɾɿ-ɾɿt*
SBJ:PCP-APASS-write
'The one/someone who writes things, a writer.'

Another important function of participles is to build the purposive complements of motion verbs (§16.1.1.6, §24.4.2.1, §15.2.10), as in (24) (see also 27b in §2.4.5 below).

- (24) *a-ku-ɾtoɓ* *ɟɿ-ɟe*
1SG.POSS-SBJ:PCP-look AOR-come[II]
'S/he came to see me.'

Participles have several additional morphosyntactic functions, presented in §24.4.2.

2.4.4.2 Infinitives and converbs

The infinitives in *ku-* and *kɿ-*, called “velar infinitives” in this grammar, serve as the citation forms of verbs (§16.2.1.4). They occur in some complement clauses as in (25) (§16.2.1.5, §24.2.1) and also serve as converbs (§16.2.1.7, §25.4.2). They are easily confused with subject or object participles (§16.2.1.1).

- (25) *kɿ-taɓ* *ɾga-a*
INF-weave like:FACT-1SG
'I like to weave.'

³The verb *ɾɿ-ɾɿt* in (23b) is the antipassive derivation (§18.6.1) from *ɾɿt* ‘write, draw’ (23a).

In addition to velar infinitives, two other types of infinitives are attested: the bare (§16.2.2) and the dental (§16.2.3) infinitives. These forms are only used in the complement clauses of a handful of verbs such as *za* ‘begin’ (§24.2.2, §24.5.6, §24.5.1.3). Bare and dental infinitives are in complementary distribution (§14.3.1): the former is found with transitive verbs (26a), and the latter with intransitive ones (26b).

- (26) a. *u-ndza* *to-za*
 3SG.POSS-BARE.INF:eat IFR:UP-start
 ‘S/he/it started eating it.’
- b. *tu-rʃaʁ* *pjʏ-za*
 INF:II-dance IFR:DOWN-start
 ‘S/he started dancing.’

In this construction (and a few other ones), the complement-taking verb takes the orientation that is lexically selected by the verb in the complement clause (§24.3.5), for instance UPWARDS like *ndza* ‘eat’ in (26a) and DOWNWARDS like *rʃaʁ* ‘dance’ in (26b). In addition to the infinitives, three converbs are attested: the reduplicated gerund *sr-* (§16.6.1) expressing temporal simultaneity (§25.3.4.2), the purposive converb (§16.6.2, §25.5.4) and the converb of immediate subsequence (§16.6.3, §25.3.3.2), which stands out in having a perfective meaning ‘as soon as ...’ (for instance *pju-tu-mto* ‘as soon as X saw Y’) while selecting the B-type preverbs which usually mark Imperfective and Non-Past tenses. Despite the existence of these converbs, temporal (§25.3), manner (§25.4) and causal (§25.5) subordinate clauses mainly select finite verb forms in Japhug narratives and conversations.

2.4.4.3 Other nominalizations

Several productive abstract nominalizations are found in Japhug. The degree nominals (§16.3), combining a *tu-* with a possessive prefix coreferent with the subject (for example *a-tu-mtsʉr* 1SG-NMLZ:DEG-be.hungry ‘my degree of hunger’), are highly common and occur in degree and equative constructions (§26.1.2).

Action nominals (§16.4.1) and abstract nouns (§16.4.2) can be formed by prefixation of *tu-* and *tr-*, for instance the noun *tu-rʃaʁ* ‘dance’ from the intransitive verb *rʃaʁ* ‘dance’, and *tr-mtsʉr* ‘hunger’ from *mtsʉr* ‘be hungry’. These derivations are not rare, but not fully productive either. The *tu-* and *tr-* prefixes here are not analyzable as indefinite possessor prefixes with which they are homophonous (§5.1.1), as they cannot be replaced by definite possessor prefixes.

2.4.5 Associated motion

Japhug and other Gyalrong languages stand out in Trans-Himalayan by having a system of associated motion clearly different from orientation markers (Jacques et al. 2021). Unlike Arandic (Koch 1984) or Tacanan (Guillaume 2009), the category of associated motion in Japhug only comprises two different prefixes (§15.2.1) marking either cislocative or translocative motion of the subject (§15.2.2) prior to the action expressed by the verb root.

Although associated motion prefixes (27a) seems at first glance semantically similar to motion verbs with a purposive clause (27b), there are systematic differences between these two constructions (§15.2.10), both in terms of presuppositions (§15.2.10.1) and in syntactic constraints of relativization (§15.2.10.6).

- (27) a. *c-tɣ-χtuw-t-a*
 TRAL-AOR-buy-PST:TR-1SG
 ‘I went and bought it.’
- b. *w-kuw-χtuw* *jɣ-ari-a*
 3SG.POSS-SBJ:PCP-buy AOR-go[II]-1SG
 ‘I went to buy it.’

2.4.6 Voice

2.4.6.1 Overview

The rich and redundant morphological expression of transitivity (§14.3.1) and the rarity of labile verbs (§14.5) in Japhug are correlated with a highly productive system of voice derivations, treated in chapters 17, 18 and 19. There are eleven fully productive valency-changing prefixes,⁴ summarized in Table 2.8, to which a certain number of non-productive derivations such as the applicative *nu-* (§17.4) and the anticausative (§18.5) can be added.

All productive voice derivations are marked by prefixes (§11.2.2). Only fossil traces of derivational suffixes are found (in particular the applicative *-t*, §19.7.2). The anticausative is marked not by a prefix, but by an alternation whereby unvoiced obstruents are converted into their voiced prenasalized counterparts (see §18.5.1).

There are, in addition, productive verbal derivations that do not change valency, such as the autive *nu-* (§19.1) and the distributed action derivation (§19.4).

⁴These derivations are not fully productive in the sense that they can be applied to any verb (since there are transitivity and semantic restrictions on their uses), but in the sense that some recent loanwords can be subjected to them.

Table 2.8: Productive valency-changing verbal derivations in Japhug

Voice	Prefix	Section
Sigmatic causative	<i>su(ɣ)-/z-</i>	§17.2
Velar causative	<i>ɣɣ-</i>	§17.3
Tropative	<i>nɣ(ɣ)-</i>	§17.5
Passive	<i>a-</i>	§18.1
Reciprocal	<i>a-</i> +reduplication	§18.4.1
Reflexive	<i>zɣɣ-</i>	§18.3
Antipassive	<i>rɣ-</i>	§18.6.1
	<i>sɣ-</i>	§18.6.2
Proprietary	<i>sɣ-</i>	§18.1
Facilitative	<i>ɣɣ-</i>	§18.9.1
	<i>nuyuu-</i>	§18.9.2

The following sections present a representative sample of voice derivations and their main morphosyntactic functions.

2.4.6.2 Causative

There are two productive causative derivations, the sigmatic causative (which has four productive allomorphs *su-*, *suy-*, *s-* and *z-* depending on the phonological and morphological context, §17.2.1) and the velar causative *ɣɣ-* (from *wɣɣ-*, a form still found in some Japhug dialects).

The latter is restricted to a subset of stative verbs. Some stative verbs are compatible with both causative derivations: for instance *zbaɣ* ‘be dry’ can be causativized as both *ɣɣ-zbaɣ* or *su-zbaɣ*. The semantic contrast between the two causatives in this context remains unclear (§17.3.3.2).

The sigmatic causative is the most productive derivation in Japhug. It is compatible with intransitive, transitive and even ditransitive verbs (§14.4.3), and has a wide range of meanings (§17.2.5), from coercion (§17.2.5.2) as in (28) to indirect causation (§17.2.5.6).

- (28) *rɣɣlpu ku u-ma nu mk^hɣrmaŋ ra tu-z-nɣme*
king ERG 3SG.POSS-work DEM people PL IPFV-CAUS-do[III]
pjɣ-ŋu
IFR.IPFV-be
‘The king used to make the people do work for him.’ {0006248#S5}

2 A grammatical sketch

The sigmatic causative is also used to mark instruments (§17.2.5.8), for example in (29), where the instrument *taqaβ* ‘needle’ receives ergative marking (§8.2.2.4) like a causee (§8.2.2.6): the construction literally means ‘s/he made the needle sew the clothes’.

- (29) *ki taqaβ ki ku tu-ŋga c^hγ-su-tswβ*
DEM.PROX needle DEM.PROX ERG INDEF.POSS-clothes IFR-CAUS-sew
‘S/he sewed the clothes with this needle.’

In addition to the productive causatives, there are irregular causative forms (§17.2.2, §17.3.1), some of which co-exist with their regular counterparts, but with a more lexicalized meaning. For instance, the verb *ts^hi* ‘drink’ has the irregular causative *jts^hi* ‘give to drink’ (§17.2.2.5) as opposed to the regular one *su-ts^hi* ‘make drink, drink with’.

The sigmatic causative prefix can be combined with nearly all other derivational prefixes (§17.2.8). It can precede the velar causative, as in *z-γ-mpja* ‘heat up X with Y, make/let Y heat up X’ from *γ-mpja* ‘heat up’, causative of *mpja* ‘be warm’.

It is also the only prefix that can occur more than once in a single verb form,⁵ as shown by examples such as *su-su-spoβ* ‘make a hole with’ from *su-spoβ* ‘make a hole’, causative of the intransitive verb *spoβ* ‘have a hole’ (§17.2.7).

2.4.6.3 Troptive

The troptive *ny-* prefix (§17.5), like a causative derivation, turns an intransitive verb into a transitive, but its meaning differs: the added argument is not a causer, but an experiencer feeling/perceiving the state expressed by the base verb. For instance, the troptive of *mpɕɣr* ‘be beautiful’ is *ny-mpɕɣr* ‘find beautiful’, with the experiencer encoded as subject and the stimulus (corresponding to the intransitive subject of the base verb) as object, as shown by (30).

- (30) *ɲu-ta-ny-mpɕɣr*
SENS-1→2-TROP-be.beautiful
‘I find you very beautiful.’

The troptive can be used to define *adjectives* as a sub-class of stative verbs: only adjectival stative verbs can undergo this derivation, unlike for example existential verbs and copulas (§22.5).

⁵A double reciprocal form is attested (§18.4.2.5), but not with the same reciprocal prefixes.

2.4.6.4 Antipassive

When the object of a morphologically transitive verb (thus excluding labile verbs in intransitive conjugation, §14.5) is non-overt, it is necessarily interpreted as definite (§22.1.2.1). For instance, example (31a) can only be used if the referent that has been sewn has been previously mentioned or is retrievable from the context, and cannot be understood as ‘sewed something’ with an indefinite object. To express this meaning, several strategies are possible, including the antipassive *rx-* derivation (§18.6.1).

- (31) a. *te^heme nuu kuu c^hγ-tʂuβ*
 girl DEM ERG IFR-sew
 ‘The girl sewed it.’
- b. *te^heme nuu c^hγ-rx-tʂuβ*
 girl DEM IFR-APASS-sew
 ‘The girl sewed / did sewing.’

The *rx-* turns a transitive verb into an intransitive one, whose only argument is semantically the agent, but does not take ergative marking (31b).

2.4.6.5 Reflexive and reciprocal

Japhug has a dedicated reflexive prefix *zyγ-* (§18.3), different from other valency-decreasing derivations. The reflexive verb is conjugated intransitively, as shown by (32)⁶

- (32) *t^huu-zyγ-rku-a*
 AOR:DOWNSTREAM-REFL-put.in-1SG
 ‘I put myself (in the bag).’

The reflexive is frequently combined with the sigmatic causative (§18.3.4) to express an unintentional indirect causation affecting oneself (33).

- (33) *tγ-zyγ-suu-mpca-a*
 AOR-REFL-CAUS-scold-1SG
 ‘I got myself scolded.’

⁶If the verb in (32) were transitive, a past transitive *-t* suffix would be inserted (§11.3, §14.3.2.1) and the expected form would be †*t^huu-zyγ-rku-t-a*.

2 *A grammatical sketch*

The reciprocal derivation (§18.4.1), entirely different from the reflexive, is built by prefixing *a-* and reduplicating the verb stem (§4.1). For instance the transitive verb *rqoɓ* ‘hug’ yields *a-rqu~rqoɓ* ‘hug each other’. Reciprocal verbs generally require a non-singular intransitive subject, and can also select a comitative postpositional phrase (§8.2.5).

2.4.6.6 *Autive*

The autive *nu-* (§19.1) is a highly productive derivation, which does not affect verbal transitivity unlike the previous ones (§19.1.1).

Its most basic function is self-affectedness or autobenefactive (§19.1.3). In particular, the autive on transitive verbs taking a inalienably possessed object can be used to specify that the subject and the possessor of the object are coreferent (34a), whereas the absence of the autive is generally interpreted as indicating the absence of coreference (34b). This is not an absolute syntactic rule, however, since the Autive has additional unrelated uses (see below and §19.1.4, §19.1.5) which can interfere with this particular function.

- (34) a. *uʒo kuw w-sroɓ ko-nu-ri*
3SG ERG 3SG.POSS-life IFR-AUTO-save
‘S/he_i saved his/her_i own life.’
b. *uʒo kuw w-sroɓ ko-ri*
3SG ERG 3SG.POSS-life IFR-save
‘S/he_i saved his/her_j life.’

Another function of the Autive is to indicate spontaneous or non-volitional actions (§19.1.4), occurring for example by mistake, as illustrated by the minimal pair between (35a) and (35b).

- (35) a. *tx-rye puw-nu-prat-a*
INDEF.POSS-necklace AOR-AUTO-break-1SG
‘I broke the pearl necklace (by mistake).’
b. *tx-rye puw-prat-a*
INDEF.POSS-necklace AOR-break-1SG
‘I broke the pearl necklace (on purpose).’

The third main function of the Autive is to express permansive aspect (§19.1.5).

2.4.7 Denominal derivations

Verbalizing denominal (chapter 20) and deideophonic (§20.9) derivations are rich and productive in Japhug.

A considerable number of denominal prefixes can be identified. Some of them have a well-identifiable meaning, for instance the propriative *ayu-* (§20.2.4) deriving verbs meaning ‘having a lot of *X*’ or ‘producing a lot of *X*’ (such as *ayulu* ‘producing a lot of milk’ (of a cow) from *tx-lu* ‘milk’) or the similitive *aru-* (§20.2.2). For the prefixes *ru/r-* (§20.4), *mu/r-* (§20.7) and *yu/r-* (§20.5), several different functions have to be postulated, since these prefixes can derive both intransitive (§20.4.1, §20.7.1, §20.5.1) and transitive (§20.4.2, §20.7.2, §20.5.2) verbs.

Some denominal derivations occur in pairs (§20.7.3, §20.4.3). For instance, when a noun has both *ru/r-* and *nu/r-* denominal verbs, the former is usually dynamic intransitive, and the latter transitive, as illustrated by the pair comprising the intransitive verb *rx-ma* ‘do (some) work’ and its transitive counterpart *nr-ma* ‘do (a work)’, both from the noun *ta-ma* ‘work’.

Denominal derivations compete with light verb constructions to turn nouns into predicates (§20.1.2, §22.4). For instance, the meaning ‘tell lies, cheat’ from the noun *k^hramba* ‘lie’ can be expressed either by a collocation with the light verb *βzu* ‘make’ (§22.4.2.1) or by the denominal verbs *ruk^hramba* ‘tell lies’ (§20.4.1, intransitive) and *nuk^hramba* ‘cheat’ (§20.7.2, transitive).

An important proportion of voice prefixes originate from the reanalysis of denominal derivations from bare nominalized forms (§20.10), most clearly in the case of the *rx-* antipassive (§20.10.1, Jacques 2014b).

When applied to noun-verb compounds (§5.5.5, §16.4.7), denominal derivations can serve to build incorporating verbs (§20.13.1). For instance, the intransitive verb *yusup^hut* ‘cut firewood’ is derived by the prefix *yu-* (§20.5.1) from the compound *sup^hut* ‘firewood cutting’, itself made from the bound state *su-* of the noun *si* ‘wood’ compounded with the transitive verb *p^hut* ‘take out, cut’, ‘cut’. A tripartite contrast exists between the basic transitive construction (*si + p^hut*), a light verb construction combining *βzu* ‘make’ with the corresponding action nominal compound (*sup^hut + βzu*) and the denominal incorporating verb *yu-sup^hut*, all three meaning ‘cut firewood’ (§20.13.4).

2.5 Core and oblique arguments

The morphosyntactic properties of arguments can be studied from the point of view of flagging (§8, §8.2, §8.3) and indexation (§14.2, §14.3.2), but also relativiza-

2 A grammatical sketch

tion (§23.5) and coreference restrictions between complement and matrix clauses (§24.2).

Core arguments are defined as those that are indexed by the verb morphology. In the case of intransitive verbs (§14.2), the only argument indexed on the verb is the *intransitive subject*, but the argument structure of intransitive verbs can contain up to two additional oblique arguments (§14.2.5). Morphologically transitive verbs index two arguments (including in some cases a dummy one, §14.3.5). Although there are no different morphological slots for transitive subjects and objects (§2.4.2.2, §14.3.2.8), the transitive paradigm contains no ambiguity in person configurations (§14.3.2), and the person of the agentive and patientive core arguments can always be clearly identified in finite verb forms. The core argument indexed like the agentive argument of verbs of action such as *sat* ‘kill’ or *ɛndu* ‘hit’ (as in §2.4.2.2) is called *transitive subject*, and the other one is the *object*.⁷

Outside of verb indexation, the three basic core arguments (intransitive subject, transitive subject and object) are encoded in various ways, and present different types of alignments.

2.5.1 Neutral alignment

Person indexation affixes in general have neutral alignment: for instance the 1SG suffix *-a* indexes the subject of intransitive verbs, and is also found in 1SG→3, 3→1SG and 2→1SG configurations (§2.4.2.2, §14.3.2.8).

The absence of strict coreference restrictions between matrix and subordinate clauses in some categories of complement clauses (§24.2.1.2, §24.5.6.1, §24.2.3.2) and in manner (§25.4.2) and temporal clauses (§25.3) could be interpreted as a type of neutral alignment, but it appears that the neutralization in those cases is not limited to the three core arguments: there can also be complete absence of coreference, or coreference with an oblique or a possessor of an argument.

2.5.2 Nominative-accusative alignment

2.5.3 Subjecthood

Nominative-accusative alignment appears in several unrelated constructions in Japhug.

The first piece of evidence for this type of alignment in Gyalrong languages to have been proposed (Sun 2003) is the fact that the *ku-* (subject) participle

⁷The term *object* in this grammar is restricted to this particular core argument, to the exclusion of all object-like patientive arguments.

(§16.1.1.4) is the only form that can be used to relativize both intransitive (§23.5.1) and transitive subjects (§23.5.2). However, the *ku-* participles are not exclusively used to relativize intransitive and transitive subjects: they can also relativize possessors of intransitive subjects (§23.5.10), and are the only option to do so, resulting in ambiguities (see examples 176 and 177 in §22.5.2.1).

The fact that nearly all labile verbs are subject-preserving (§14.5.1.3) could also be adduced as evidence of nominative-accusative alignment, but the existence of a handful of object-preserving labile verbs (§14.5.1.4) makes it less compelling.

Clearer cases of constructions where strict nominative-accusative alignment is observed include associated motion and complementation.

First, the argument performing the motion encoded by the associated prefixes (§15.2.1) is always the intransitive subject in the case of intransitive verbs, and the transitive subject in the case of transitive ones (§15.2.2), and can never be the object, a possessor of the subject or any oblique argument (but it can be the causee of a causative verb).

Second, several subtypes of complement clauses require coreference between the (intransitive or transitive) subjects of the complement clause and that of the main clause, in particular bare and dental infinitives (§24.2.2.2).

2.5.4 Objecthood

While evidence for *subjects* independent from person indexation can be identified, evidence for *objects* (as opposed to other non-subject arguments in absolutive form, §8.1.5, §8.1.6, §8.1.8) is more elusive.

In subject participles of transitive verbs, the object is marked by a possessive prefix (§16.1.1.1), obligatorily if no other prefix (of orientation, negation or associated motion) is present, as in (36b).

- (36) a. *spjaŋku nuu ku ɕa ɲu-ndze*
 wolf DEM ERG meat SENS-eat[III]
 ‘The wolf eats meat.’
- b. *u-ku-ndza*
 3SG.POSS-SBJ:PCP-eat
 ‘The one/someone who eats it’

However, possessive prefixes on subject participles cannot be used as evidence for objects outside of finite indexation, as they can mark other grammatical functions. For example the verb *rga* ‘like’ is conjugated intransitively as shown by (37b): its subject *spjaŋku* has no ergative marking, and no stem alternation is

2 A grammatical sketch

observed on the verb (a form like †*ɲuu-rgɛ* would be expected if this verb were transitive as in 36a, §12.2.2.1, §14.3.1). However, in addition to its subject, this verb takes an absolutive argument (*ɕa* ‘meat’ in 37a) that cannot be indexed: the *semi-object*. This argument is also marked as a possessive prefix on the subject participle like a real object, as in (37b).

- (37) a. *spjaŋkuu nuu ɕa ɲuu-rga*
wolf DEM meat SENS-like
‘The wolf likes meat.’
b. *uu-kuu-rga*
3SG.POSS-SBJ:PCP-like
‘The one/someone who likes him/her/it.’

Moreover, objects do not have any relativization construction that is specific to them. They can be relativized by object participial relatives (§16.1.2.4) and finite relatives (§23.2.2), but these categories of clauses can also be used to relativize semi-objects (§23.5.4.1, §16.1.2.5) and other participants such as goals (§23.5.5.2, §23.5.5.1) and possessors of objects (§23.5.10). For instance, headless participial clauses relativizing the object of *ndza* ‘eat’ (38a) or the semi-object of *rga* ‘like’ (38b) have the same structure.

- (38) a. *a-ky-ndza*
1SG.POSS-OBJ:PCP-eat
‘[The things] that I eat.’
b. *a-ky-rga*
1SG.POSS-SBJ:PCP-like
‘[The things] that I like.’

2.5.5 Absolutive-ergative alignment

Although the terms “absolutive” (§8.1) and “ergative” (§8.2.2) are used in this grammar to refer to flagging, Japhug does not display perfect absolutive-ergative alignment in case marking.

Absolutive form (absence of postposition or relator noun) does indeed serve to mark intransitive subjects (§8.1.1) and objects (§8.1.3) by default, and transitive subjects normally take the ergative *kuu* postposition (§8.2.2.1). However, both absolutive (§8.1.5, §8.1.7, §8.1.8) and ergative forms (§8.2.2.4, §8.2.2.7) have many functions other than marking core arguments. In addition, there is some fluidity in the use of the ergative postposition: some intransitive subjects can also be

marked by it (§8.2.2.3), in particular due to anticipation of a transitive verb in the following clauses (§8.2.2.2).

The clearest evidence of absolutive-ergative alignment in Japhug is found in generic person indexation (§14.3.2.5): generic intransitive subjects and objects are both indexed by *ku-*, while generic transitive subjects are marked by the inverse *wy-* (§14.3.2.8).

In addition, in local configurations (§14.3.2.3), the fact that the suffix closest to the verb stem indexes the object (like an intransitive subject) can also be analyzed as ergative alignment in this sub-part of the indexation system.

There are no cases of syntactic pivot with exclusive neutralization of intransitive subject and object in complementation or relativization.

2.5.6 Ditransitive verbs

Most ditransitive verbs have indirective alignment (§14.4.1): the theme is indexed (treated as the object of a monotransitive verb), and the recipient marked with the genitive (§8.2.3) or the dative (§8.3.1). There are however a few highly common verbs such as *mbi* ‘give’ which have secundative alignment (§14.4.2) and index the recipient.

Causativized transitive verbs have a different indexation pattern: either the causee or the patientive argument is indexed as object, depending on factors such as person hierarchy (§14.4.3).

2.6 Word order

Japhug has a strict verb-final order, with only a limited number of exceptions: right dislocated constituents (§22.1.3), only a few adverbs, particles (§10.4) and ideophones (§10.1.7) can occur postverbally (§22.2.7).

When both the subject and the object of a monotransitive verb are overt as in (39), the former is placed by default before the latter (§22.1.1.2). For ditransitive verbs, the order between theme and recipient is not rigid (§22.1.1.3, §22.1.1.5).

- (39) *lulu nuw kuw pya nuw to-ndza*
 cat DEM ERG bird DEM IFR-eat
 ‘The cat ate the bird.’

Noun phrases have by default (Demonstrative)-Noun-Adjective-Numeral-Demonstrative order (§9.3) as illustrated by (40).

2 A grammatical sketch

- (40) (*ku*ki) *tɕ^heme ku-mpɕɣr* *χsum kura*
DEM.PROX girl SBJ:PCP-be.beautiful three DEM:PL
'These three beautiful girls'

2.7 Subordination

2.7.1 Relative clauses

Japhug lacks relative pronouns, and most relative clauses are participial (§23.2.1). Finite relative clauses are also attested (§23.2.2).

Most arguments and adjuncts are relativizable, though there are constraints on relativizability (§23.5.12).

In the text corpus, an important proportion of relative clauses are headless (§23.4.1). When the head noun is overt, it is either internal to the relative clause (§23.4.3) or follows it (§23.4.2), depending in part on the syntactic function of the relativized element and on the type of relative clause.

Example (41) illustrates a head-internal finite relative: the relativized object *pya* 'bird' is located between the transitive subject *lulu nu ku* and the finite verb (an object participle *tv-ky-ndza* (AOR-OBJ:PCP-eat) would also be possible to express the same meaning), at the position it would normally occupy in the corresponding independent sentence (see 39 above).

- (41) [*lulu nu ku pya ta-ndza*] *nu*
cat DEM ERG **bird** AOR:3→3'-eat DEM
'The **bird** that the cat ate'

In (42) on the other hand, the relative clause precedes the relativized transitive subject *lulu* 'cat'.

- (42) [*pya w-tv-ku-ndza*] *lulu nu*
bird 3SG.POSS-AOR-SBJ:PCP-eat **cat** DEM
'The **cat** that ate the bird'

2.7.2 Complement clauses

Complement clauses in Japhug (chapter 24) occur in intransitive subject (43a, §24.5.8), object (43b, §24.5.3.4) and semi-object (43c, §24.5.3.5) functions. There are also complement-taking nouns (43d, §24.6).

- (43) a. [*k^hramba k_Y-βzu*] *m_Y-pe*
 lie INF-make NEG-be.good:FACT
 ‘Telling lies is bad.’
- b. *u_{ZO} kw* [*k^hramba k_Y-βzu*] *m_Y-spe*
 3SG ERG lie INF-make NEG-be.able[III]
 ‘S/he is not able to tell lies.’
- c. [*u_{ZO} kw k^hramba k_Y-βzu*] *m_Y-n_{YZ}*
 3SG ERG lie INF-make NEG-dare
 ‘S/he does not dare to tell lies.’
- d. [*k^hramba k_Y-βzu*] *a-βjiz* *m_Y-yi*
 lie INF-make 1SG.POSS-wish NEG-come:FACT
 ‘I do not want to tell lies.’

As shown by (43c), when the complement-taking verb is semi-transitive (and thus morphologically intransitive, §14.2.3), the verb in the complement clause is transitive and they share their subjects, the subject can take ergative case following the verb in the complement clause rather than absolutive (§24.2.1.1).

Not all complements are infinitive clauses as in (43) (§2.4.4.2, §24.2.1). Some verbs are also compatible with finite complements (§24.2.3) as in (44), with subject coreference.

- (44) [*pjuw-ta-suxcɛyt*] *pjuw-spe-a*
 IPFV-1→2-teach SENS-be.able[III]-1SG
 ‘I am able to teach you.’

Verbs of speech also take reported speech clauses (§24.2.5), which present morphosyntactic properties different from regular finite complements (§24.2.5.2).

Aside from complement clauses proper, various complementation strategies are also found, including relative clauses in core argument function (which resemble, and can even be ambiguous with, complement clauses, §24.4.1), participial clauses (§24.4.2), action nominals (§24.4.3) and simple coordination (§24.4.4).

2.7.3 Other subordinate clauses

Subordinate clauses other than relative and complement clauses (treated in chapter 25) tend to be expressed by finite clauses headed by a relator noun or a postposition. For instance, clauses of temporal precedence (§25.3.2.1) require a finite verb in the Imperfective regardless of the TAME category of the verb in the main clause (§21.2.3) followed the postposition *ɕun_{gu}* ‘before’ (§8.2.11) as in (45).

2 *A grammatical sketch*

- (45) [*c^hu-sta-nu* *cunɣu*] *tce*, *uzo c^hɣ-rɣru*
 IPFV-wake.up-PL before LNK 3SG IFR-get.up
 ‘S/he got up before they had woken up.’ {0006065#S35}

Converbial clauses do exist (§16.6), but are all in competition with a finite clause type. For instance, the immediate converb (§16.6.3) illustrated in (46a) has a corresponding construction (46b) with a finite verb in the Aorist (§25.3.3.2).

- (46) a. *tu-tu-tob*
 IPFV:UP-IMM:CONV-come.out
 b. *tx-tob* *cimuma*
 AOR:UP-come.out immediately.after
 ‘As soon as it comes out / immediately after it has come out’

Some finite clauses not followed by postpositions or relator nouns still have clues of a subordinate status. In particular, periphrastic TAME constructions involving an Imperfective verb (§21.2) and a copula (§21.2.2), when they occur in chains, tend to elide the auxiliary in the non-final clauses (§25.1.3), resulting in constructions like (47), where the first clause *cɣr tce tu-rɣma* ‘it is active during the night’ is incomplete (lacking the auxiliary *ɲu-ɲu*), and the copula *ɲu-ɲu* has scope over the two clauses preceding it (see also 10, §21.2.2, for a example of the same type with more than ten clauses sharing a single auxiliary).

- (47) *lulu nu*, [*cɣr tce tu-rɣma*], *ɲi tce ku-nu-rɣu* *ɲu-ɲu*
 cat DEM night LOC IPFV-work day LOC IPFV-AUTO-lie.down SENS-be
 ‘The cat, active during the during the night, sleeps during the day.’
 {0003576#S33}

We also find a special type of serial verb construction expressing manner (§25.4.1), in which the verb in the manner clause (with a simulative verb §25.4.1.2 or a deideophonic verb §25.4.1.1) shares the same TAME, subject (and often object) as the verb in the other clause. In (48) for example, *stu* ‘do like’ and the *ɣtci* ‘wash’ are in Aorist 1SG→3SG form (§21.5.1.1) and share *a-ɲga* ‘my clothes’ as object (the demonstrative *ki* is semi-object, §14.4.2).

- (48) *a-ɲga* *nu ki* *tx-stu-t-a* *tce*

nu-ɣtci-t-a
 AOR-wash-PST:TR-1SG
 ‘I washed my clothes like this.’

2.8 Remarkable features

After this overview of the core features of Japhug grammar, this section presents a selection of topics of particular interest to linguistic typology and comparative grammar in Japhug.

2.8.1 Consonant clusters

The Kamnyu dialect of Japhug has over four hundred consonant clusters in onset position (§4.2, Jacques 2019c), whose internal structure can be studied through alternations in reduplication patterns (§4.1, Jacques 2007).

In addition to the size of the inventory, which in itself is significant, because Japhug is one of the languages with the greatest number of clusters in the Trans-Himalayan family. Only Khroskyabs boasts more clusters, (Lai 2017: 101). The system of clusters presents two main points of interest.

First, syllable onsets in Japhug are rich in clusters violating the *sonority sequencing principle* (SSP, §4.2.3.2, Blevins 1995: 210), and in particular present cases of SSP-infringing clusters without corresponding SSP-compliant equivalents. For instance, the SSP-infringing clusters /rm-/ and /rt-/ are relatively common, while †/mr-/ and †/tr-/ are unattested (except across syllables, §4.2.3.1) due to a series of sound changes (§4.2.1.9, §4.2.2.4).

Second, some of these clusters are of considerable antiquity, as they appear to be preservations from proto-Trans-Himalayan (Jacques 2015c; Zhang et al. 2019), and thus of considerable importance for the reconstruction of syllable structure in this family in general (Hill 2019: 212) and in Old Chinese in particular (Gong & Lai 2017).

2.8.2 Direct-inverse

Direct-inverse systems, while relatively well-attested in languages of the Americas (Zúñiga 2006), are very rare in the Old World. Japhug and the other Gyalrong languages (DeLancey 1981; Sun & Shidanluo 2002; Jacques 2010a; Gong 2014) are in fact the only languages in Eurasia to have a near-canonical direct-inverse indexation system (§14.3.2.8, Jacques & Antonov 2014), in particular with a direct-inverse contrast in both mixed (§14.3.2.1) and non-local domains (§14.3.3).⁸

⁸Inverse-like phenomena are observed in Japanese (Koga & Otori 2008), Circassian (Arkadiev 2017) and some Trans-Himalayan languages, especially Kuki-Chin and Northern Naga (Konnerth & DeLancey 2019), but the inverse morphemes in these languages are in the process of being grammaticalized, and still retain a cislocative meaning, whereas the inverse *wɣ-* in

2 A grammatical sketch

Moreover, Japhug is unique among Gyalrong languages in lacking inverse marking in the local 2→1 configuration (§14.3.2.3, §14.8.3, Jacques 2018b), and possibly the only known language to use the inverse marker as the sole marker of *generic transitive subject* (§14.3.2.5).

2.8.3 Inflectionalization

While person indexation is one of the defining properties of verbs in Japhug (§2.4.2), a handful of expressions of nominal origin have acquired the ability to take dual *-ndzi* and plural *-nu* indexation suffixes by analogy with imperative verb forms (§14.7).

For instance, the phatic expression *sɿrma* ‘good night’ (§14.7.1) has the dual *sɿrma-ndzi* ‘good night (to both of you)’ when addressing two people. This unusual phenomenon has parallels in Indo-European (Viti 2015: 113–114).

2.8.4 Prefixal chain

Japhug, like other Gyalrong languages, has a large prefixal template (§11.2), allowing more than seven or eight prefixes in a row (example 15, §2.4.1), while the suffixal chain is much more restricted (§11.3). It is among the rare strongly prefixal languages with strict verb-final order, alongside Ket (Werner 1997) and Athabaskan (Rice 2000).

While the verb-final word order is relatively ancient,⁹ there is evidence that the part of the prefixal chains in Gyalrongic languages have been recently innovated, either through grammaticalization and integration of verb roots from serial-verb constructions (Jacques 2013b), or the absorption of adverbs or clause-final particles occurring immediately before the verb into the verbal word (§21.5.4, §21.7.1.3; see also Lai accepted on Khroskyabs).

Japhug also has a few bipartite verbs, made from two verb stems with identical TAME and person indexation cliticized to each other and with elision of either the suffixal chain of the first verb as in (49), the prefixal chain of the second verb, or both (§11.6.3, Jacques 2018a).

Japhug is dedicated to the expression of person indexation. Kiranti languages also have direct-inverse systems (in particular Bantawa and Puma, see Doornenbal 2009 and Bickel, Gaenszle, et al. 2007), but the distribution of inverse and direct markers in these languages is much less transparent than in Gyalrong (Jacques & Antonov 2014).

⁹Reconstructing word-order is a notoriously difficult task, but there is no positive reason to assume any other order at least for the common ancestor of Tibeto-Gyalrongic languages (Sagart et al. 2019).

 IRR-PFV-2-try.hard(1)=IRR-PFV-2-try.hard(2)-PL
 ‘Do your best/try hard.’

2.8.5 Hybrid indirect speech

Reported speech in Japhug frequently presents mismatches in person indexation, with the main verb representing the point of view of the subject of the complement-taking verb, and the nouns and possessive prefixes that of the current speaker.

For instance, in (50a), the verb *rtob* has 1PL indexation, reflecting the point of view of the transitive subject of the complement-taking verb *tuu-nuu-suso-nuu* ‘you think, you want’ (the daughters-in-law, the addressee). On the other hand, the 2PL possessive prefixes on *nu-p^hama* ‘your parents’ and the other nouns correspond to the point of view of the father-in-law (the current speaker) – a 1PL possessor would be expected in the reported speech clause if no shift of point of reference had taken place, as in (50b).

Three different translations of the Japhug sentence are proposed in (50a), the first in direct speech, the second in indirect speech (with shift toward the current speaker) and the third as a merger of the two (agrammatical in English), directly reflecting the original *hybrid indirect speech* (§24.2.5.2).

2.8.7 Japhug morphology and Trans-Himalayan comparative linguistics

The rich verbal and nominal morphology of Japhug and other Gyalrongic languages comprises both archaisms and innovative features illustrating interesting grammaticalization pathways.

Among innovations, many voice prefixes (§11.2.2) have been created through reanalysis of denominal derivation (§20.10). The clearest case of an innovating voice marker is the antipassive *rx-* (§18.6.1): irregular forms provide direct evidence that it originated from the intransitive denominal *rx-* (§20.4.1) applied to deverbal nouns (§20.10.1.1, Jacques 2014b). Other representative innovations include the reflexive *ɣɣ-* from an incorporated pronoun (§18.3.7, Jacques 2010b), the associated motion prefixes grammaticalized from motion verbs (§15.2.1, Jacques 2013b), the orientation preverbs from locational adverbs or nouns (§15.1.1.4) and the comitative adverbs (§5.8.1, Jacques 2017d). While Japhug did innovate many affixes, it also preserves morphological archaisms which go further back than proto-Gyalrongic, some potentially even up to proto-Trans-Himalayan.

The antiquity of person indexation in Gyalrongic (§14.8.1) and the rest of Trans-Himalayan is a notoriously controversial topic (Bauman 1975; DeLancey 1989; LaPolla 1992; van Driem 1993b), but in any case, a paradigm comprising a second person prefix with suffixes for first person and number of third and second person should at least be reconstructed back to the common ancestor of Gyalrongic, Kiranti and probably Jinghpo (Jacques 2012a; DeLancey 2014; Jacques 2016e).

In a few cases, archaic morphology only remains as lexicalized traces in Japhug, in particular the applicative *-t* suffix, very prominent in Kiranti (Michailovsky 1985; Jacques 2015a) for instance, which is only attested in two verbs (§19.7.2), or the nominalization *-z* (§16.5.1) suffix, which has cognates in Tibetan and Chinese (Jacques 2003; 2016c).

In other cases, derivational processes that only exist as traces in most of the family are still productive in Japhug and other core Gyalrong languages, in particular the sigmatic denominal and causative prefixes (§20.3, §17.2, Sagart & Baxter 2012; Jacques 2015d), velar (§16.8.1) and sigmatic (§16.8.2) nominalization prefixes (Jacques 2014d; Konnerth 2016; Jacques 2019b), and the dental indefinite possessor prefix of inalienably possessed nouns (§5.1.3, §5.1.2).

Gyalrong data is particularly relevant to the debate regarding the voicing alternation in Old Chinese and other Trans-Himalayan languages (Handel 2012). Old Chinese and many other languages have pairs of verbs with a voicing contrast correlated with transitivity, in which the unvoiced verb is transitive and the

voiced one intransitive. It is not obvious which one is the derived form, and the direction of derivation is still being debated (Sagart & Baxter 2012; Mei 2012).

Japhug and other Northern Gyalrong languages (Jacques 2004: 411–412, Gong 2018: 271) however provide a crucial piece of evidence showing that the directionality was from the transitive verb to the intransitive one (§18.5.1.2), confirming evidence from unrelated sources (Sagart 2003): the Tibetan borrowing $\chi t\gamma r$ ‘scatter’ (from གཏོར *gtor* ‘scatter’) has an intransitive counterpart འབྲེལ *ʼmɔɣr* ‘be scattered’ (§18.5.1) with prenasalized onset without equivalent in Tibetan. This intransitivizing derivation can be described as anticausative (§18.5.2). There is further evidence that the prenasalization alternation comes from a nasal prefix, very probably a lexicalization of the autive *nuu-* prefix (§19.1.7), whose spontaneous function (§19.1.4) is very close to that of anticausative verbs. Evidence for autive derivation only exists in Gyalrongic (Lai 2017: 357–368, Gong 2018). However, the presence of traces of the anticausative derivation as voicing alternations in various branches of Trans-Himalayan, for instance in Kiranti (Jacques 2015a), Old Chinese (Sagart & Baxter 2012) or Tibetan (Jacques 2012b), implies that the autive derivation by extension must also be of proto-Trans-Himalayan age, and thus represents a unique archaism of Gyalrongic.

The richness and high productivity of morphology in Japhug and other Gyalrong languages, comparable with that of Sanskrit in Indo-European or Meskwaki in Algonquian, offer a framework to explore the fossil morphology of other Trans-Himalayan languages, in particular those belonging to the Burmo-Gyalrongic and Tibeto-Gyalrongic branches (Jacques & Michaud 2011; Sagart et al. 2019), but also potentially for the family as a whole.

Commenting on the irregularity of correspondences between Tibetan, Old Chinese and Burmese, Hill (2019: 212) concludes that “the phonetic influence of defunct morphology will one day explain these complicated correspondences, but this possibility will manifest only when more languages, particularly archaic languages such as those of the Rgyalrong and Kiranti branches, are brought within purview.” One of the aims of this grammar is precisely to provide comparativists with sufficient data on this language to make it systematically usable in Trans-Himalayan etymological research, in the hope that this field can one day reach the degree of sophistication of Indo-European (Fellner & Hill 2019).

3 Phonology

3.1 Introduction

Japhug syllables follow the template (C)(C)(C)V(C) with initial clusters containing at most three consonants, and at most one consonant in the coda. Given the complexity of possible onsets, it is not practical to provide an exhaustive list of possible syllables in the language (unlike Naish languages for instance, see Michailovsky & Michaud 2006). However, onsets and rhymes can be listed exhaustively.

This chapter, partly based on previous publications (in particular Jacques 2004 and Jacques 2019c), presents the inventory of consonants and vowels, offers a focused discussion on syllabic structure and quasi-neutralization, and describes suprasegmental phenomena and speech errors. The complete inventory of consonant clusters is listed and analyzed in §4.2 in the following chapter.

This chapter does not treat the phonology of loanwords from Chinese (except highly nativized ones). Non-nativized Chinese loanwords are represented in this grammar in pinyin (even though this system is an imperfect way of rendering Sichuanese Mandarin) between angled brackets.

3.2 Consonants

3.2.1 Onsets

There are fifty consonantal phonemes in Japhug (Table 3.1). All can occur as simple onsets. Stops and affricates have a four-way contrast between voiceless unaspirated, voiceless aspirated, voiced and prenasalized series.

The voiced fricatives /ɣ/ and /ʁ/ should be classified as non-nasal sonorants (§4.2.2), alongside the glides /j/ and /w/, the lateral /l/ and the rhotic /r/.

Table 3.2 provides examples of each of these phonemes, followed whenever possible by the vowel /u/. Among these consonants, four are only attested in borrowings from Tibetan and/or ideophones: /ʂ/, /dz/, /dʒ/ and /g/.

The phoneme /w/ is realized as a fricative [f] or [ɸ] before voiceless obstruents and as [v] or [β] before voiced ones, and can also be fricativized when it occurs as

3 Phonology

coda. In the orthography used in this work, it is transcribed as <f> when followed by an voiceless stop, affricate or fricative, and as <β> when followed by a voiced one (§4.2.1.1), or in coda position (§3.2.2).

As in many languages of the Tibetan area, the /r/ is a trilled retroflex voiced fricative [ɽ] in onset position, sometimes realized as a simple voiced fricative [z]. It is devoiced to [ʂ] (with neutralization of the contrast with /s/) when followed by a voiceless consonant in clusters (§4.2.1.4).

The prenasalized voiced stops and affricates /mb/, /nd/, /ndz/, /ndʒ/, /ndʒ/, /ɲj/, /ŋg/ and /ŋg/ all have voiceless and voiceless aspirated counterparts such as /mp^(h)/, /nt^(h)/, /nts^(h)/, /ntɕ^(h)/, /ntʂ^(h)/, /ɲc^(h)/, /ŋk^(h)/ and /ŋq^(h)/ (§4.2.1.9). Yet, there are several pieces of evidence showing that the prenasalized voiced stops and affricates are of a different nature from the prenasalized voiceless ones.

First, the former can appear in clusters preceded by fricatives or non-nasal sonorants, as in /zɱbr/, /jndʒ/ or /rŋgl/, while the latter cannot. Clusters such as * /zɱp^(h)r/, * /jntʂ^(h)/ or * /rŋq^(h)l/ are not permitted in Japhug. Clusters of this type may have existed, but have been removed by voicing the stop/affricate (§18.5.7).

Second, the uvular voiced prenasalized /ŋg/ has no simple voiced counterpart * /g/, a fact which therefore precludes analyzing /ŋg/ as a cluster /n + g/.

There is a three-way contrast between /tɕ/, /c/ and /k/ before the front vowel /i/, as shown by the triplet comprising the correlative additive focus marker tɕi

Table 3.2: Examples of the consonant phonemes

/p/	/w-pu/	‘its young’	/tɕ/	/w-tɕu/	‘his boy’

/ndʒ/	/ndʒunbu/	‘guest’	/χ/	/χuɾχu/	‘having big nostrils’
/ʂ/	/ʂuŋʂuŋ/	‘clear’	/ʂ/	/naŋʂu/	‘shirt’
/r/	/ru/	‘temporary place’ (nomads)	/h/	/hanumi/	‘a little’

‘also’ (§9.1.6.2), the highly polyfunctional *ci* ‘one’ (§6.6.1, §6.8, §6.7.2, §9.1.7, §7.1.1, §9.1.4.1 and §22.2.1) and the demonstrative *ki* ‘this’ (§6.9).

The palatal stops /c/, /c^h/, /j/ and /ɲɲ/ cannot be analyzed as velar+/j/ clusters, as a clear contrast exists between the palatal series and velar stops followed by /j/ (§4.2.2.2), in minimal pairs such as *ɲɔ* ‘have damages’ and *ŋgio* ‘slip’, ‘glide’.¹ That the onsets /ɲɲ-/ and /ŋgi-/ have a different syllabic structure is confirmed by their reduplication patterns (§4.1): while in the former the palatalization is present on the reduplicant *pu-nɾ-ɲɲu~ɲɔ* ‘have damages everywhere’ (in the distributed action derivation, §19.4), in the latter the /j/ is not reduplicated as *pu-nɾ-ŋgu~ŋgio* ‘he slipped everywhere’.

The alveolo-palatal affricates /tɕ/, /tɕ^h/, /dʒ/ and /ndʒ/ are also contrastive with dental affricates+*j* clusters, as shown by the minimal pair *ndziab* ‘be tight’

¹The grapheme <*i*> represents an allophone of /j/ in medial position with dental and dorsal initials (§4.2.2.2).

3 Phonology

(of knot) vs. *ndzax* ‘swim’ (§4.2.2.2). There is also a contrast with dental stops+*j*, though no good minimal pairs can be found due to the rarity of these clusters.

The attested contrasts between coronal affricates and dorsal stops with and without the *j* medial are illustrated in Table 3.3 in combination with the vowel /o/.

Table 3.3: Palatalization contrasts in coronal and dorsal onsets

Onset	Example
/ts/	<i>tʰtsoʊ</i> ‘Potentilla anserina’
/tsj/	<i>tʰ-mtsioʊ</i> ‘beak’
/tʃ/	<i>tʃoʊ</i> ‘add water’
/tʃj/	<i>mtʃoʊ</i> ‘be sharp’
/c/	<i>co</i> ‘valley’
/k/	<i>ko</i> ‘prevail over’
/kj/	<i>kio</i> ‘cause to glide’
/q/	<i>rqoʊ</i> ‘hug’
/qj/	<i>qioʊ</i> ‘vomit’

The voiceless lateral /ʎ/ (realized by some speakers as a postaspirated lateral [lʰ]), is a marginal phoneme in Japhug, which does not appear in clusters (except heterosyllabic ones, as in /cuɣlaj/ ‘symptom in which the oral cavity becomes white’) and is very rare in the native vocabulary. Yet, its phonemic status is justified by the fact that it contrasts with /lɣ/. There are no minimal pairs contrasting the two, but the contrast can be indirectly illustrated by examples such as *alxaj* ‘not properly put’ (of clothes) and *lxulxi* ‘thick and cumbersome’ on the one hand, and *tʰt* ‘become old’ and *tʰndzi* ‘ghost’ on the other hand.

3.2.2 Codas

The inventory of consonants in coda position in Japhug is more restricted than in initial position. In particular, the voicing and aspiration contrasts are neutralized in codas.

Only twelve consonants out of fifty appear as codas: /-p/, /-w/, /-m/, /-t/, /-z/, /-n/, /-l/, /-r/, /-j/, /-ɣ/, /-ŋ/, /-ʁ/. The stop /-p/ is restricted to a few ideophones (§10.1.5.2), and is found neither in the inherited non-ideophonic vocabulary nor in Tibetan loanwords, except as the first element of the heterosyllabic cluster

/pt/ in the word /sqap.tuɣ/ ‘eleven’ (§4.2.3.1). The codas /-n/, /-l/ and /-ŋ/ are extremely rare (but not entirely absent) in the non-ideophonic native vocabulary.

A list of possible combinations between codas and vowels in Japhug is described in §3.3.2.

In word-final position, codas are voiced when followed by a word beginning with a voiced consonant or a vowel, but are devoiced in phrase-final position, before a pause or before a voiceless segment (even across word boundaries, §4.3). In isolation, word-final /-z/, /-r/, /-j/, /-ɣ/ and /-ɸ/ in particular are realized as [s], [r̥], [j̥], [x] and [χ], respectively. The coda /-ɸ/ can also be realized alternatively as pharyngealization of the preceding vowel.

Since the voicing contrast between the voiceless fricatives /s/, /x/, /χ/ and the voiced ones /z/, /ɣ/, /ɸ/ is neutralized in coda position, it could seem better to argue that the fricative codas, whatever their phonetic realization, are archiphonemes {s,z}, {x,ɣ} and {χ,ɸ}, and that any discussion of their underlying voicing is futile (Hill 2016). However, in the case of Japhug at least, some morphophonological rules are easier to describe if one assumes that fricative codas are underlyingly voiced.²

First, when the 1SG -a suffix is added to a verb stem ending in a fricative coda, that coda is resyllabified, becoming the onset of the syllable with a as rhyme. In these cases, the voiced allophone always surfaces (§14.2.1.1): for instance the 1SG→3SG Imperfective of *ntɕ^hoz* ‘use’ is *tu-ntɕ^hóz-a*, syllabified as /tu.ntɕ^ho.za/. If one were to assume that the fricative coda -z were voiceless or underspecified for voicing, a context-specific voicing rule would have to be assumed to have taken place, since *Ūsa* is a permissible sequence in Japhug, as in *pjɣ-wy-sat* IFR-INV-kill (see for instance example 36 in §20.4.2). It is more economical to assume that -z and the other fricative codas are underlyingly voiced, and become devoiced in the same contexts as the sonorants.

Second, the locative postposition *zu* (§8.2.4.1) is the result of the degrammaticalization of the locative *-s suffix still attested in *Situ* (§8.2.1). The fact that it has a voiced, rather than an voiceless onset, suggests that the fricative was voiced when it was a suffix.

²I owe the idea that final -z is voiced to Sun (2005), where a similar analysis is implicitly proposed about Tshobdun.

3.3 Vowels and rhymes

3.3.1 Vowels

3.3.1.1 Vowel phonemes

Japhug has eight vowel phonemes, listed in Table 3.4. The mid-open unrounded vowels /ɤ/ and /e/ are only marginally contrastive: /ɤ/ does not occur in word-final open syllables except in unaccented clitics (like the additive *nɤ*, §8.2.6), and /e/ only occurs in the last (accented) syllable of a word. They are clearly contrastive only with the coda /-t/ (§3.3.2).

Table 3.4: List of vowels in Japhug

Vowel	Example	Meaning
/a/	/qala/	‘rabbit’
/e/	/qale/	‘wind’
/i/	/juli/	‘flute’
/ɤ/	/lɤpuɣ/	‘radish’
/u/	/ruɽu/	‘medicine’
/y/	/qajy/	‘fish’
/o/	/lo/	UPSTREAM
/u/	/tɤlu/	‘milk’

Not all speakers of Kamnyu Japhug have a phoneme /y/ in the native vocabulary. Even for those speakers, it is only attested in the word ‘fish’ and the verbs derived from it. It nevertheless contrasts with /u/ and /o/, as shown by the quasi-minimal pairs /qajy/ ‘fish’, /wajɽ/ ‘earthquake’ and /juli/ ‘flute’. Other speakers pronounce ‘fish’ with a medial /w/ as /qajwi/. However, [y] is found in the speech of all Japhug speakers in Chinese loanwords such as 洋芋 <yángyù> ‘potato’.

3.3.1.2 Vowel assimilation

When followed by a syllable containing a rounded vowel (/u/ or /o/), the back unrounded vowels /u/ and /ɤ/ optionally undergo rounding harmony to [u] and [o], respectively. For instance, /ɣɤzu/ ‘exist (sensory)’ (§22.5.1.2) is generally pronounced as [yozu], and the reduplicated form *tu~tu-dɤn* ‘more and more’ (§12.4.1.4) is realized as [tutudɛn].

The phoneme /ɾ/ in prefixes tends to be pronounced more open as [ɐ] when followed by a syllable whose main vowel is /a/, making it sometimes difficult to perceive the contrast, for instance between *ta-ma* ‘work’ and *ɾa-ma* ‘mother’ (honorific). In the verbal system, the 1SG *-a* suffix triggers obligatory regressive assimilation $\text{ɾ} \rightarrow a$ on the preceding syllable (see Table 14.2, §14.2.1.1).

3.3.1.3 Synizesis

While no true diphthongs exist in Japhug, when the 1SG *-a* suffix is added to a verb stem ending in an open syllable, the two syllables undergo synizesis (§14.2.1.1). When the verb stem contains the mid vowels /-e/ and /-o/, they become the corresponding high vowels /-i/ and /-u/ due to merging with *a*, and the contrasts between /e/ and /i/ on the one hand, and *o* and *u* on the other hand, are neutralized. For instance, *tso-a* [tsua] ‘I understand’ and *βze-a* [βzia] ‘I (will) do it’ are homophonous with *tsu-a* ‘I have time’ and *βzi-a* ‘I (will) be drunk’, respectively. Three pseudo-diphthongs are thus attested: *ia* (from *e-a* and *i-a*), *ua* (from *o-a* and *u-a*) and *uaa* (from *u-a*).

Synizesis results in syllables homophonous to the rhymes *-wa* and *-ja* in clusters ending in *-w-* (§4.2.2.1) or *-j-* (§4.2.2.2) followed by the vowel *-a*. For instance, *aro-a* ‘I own’ (§14.2.3) is homophonous with *a-rwa* ‘my tent’ (§4.2.2.1).

Apart from synizesis, two other types of vowel contraction are found in Japhug. First, verb stems with initial *a-* have specific conjugation patterns, where initial *a-* merges with the immediately preceding prefix following rules that are not completely trivial (§12.3). Second, the 1SG *-a* suffix merges with *-a* stems as *a*, without vowel lengthening in Kamnyu Japhug (§14.2.1.1).³

3.3.1.4 Zero onset

There are strong phonotactic restrictions on vowel-initial stems and words in Japhug.

In word-initial position, only *a-* and *u-* are found. These vowels can merge with previous open syllables (§4.3), and no glottal stop appears, unlike in many Trans-Himalayan languages such as Khaling (Jacques et al. 2012). Phonetic [u-], [o-], [i-] do appear in word-initial position, but are preferably analyzed as /wu-/, /wo-/ and /ji-/ with a glide.

The only possible stem-initial vowel in verbal stems is *a-* (§12.3). It is relatively common due to the fact that it appears in many derivational prefixes (§20.2, §18.1,

³However, vowel lengthening is found in some dialects, such as that of Sarndzu.

3 Phonology

§18.4, §18.7). Stem-initial *a-* undergoes vowel contraction with all preceding prefixes. By contrast, stem-initial *wu-* or *ji-* (for instance, *wum* ‘gather’ and *ji* ‘plant’) never merge with preceding prefixes.

In noun stems, initial *a-* also exists and interacts with prefixes (§5.1.1.1), but is considerably rarer.

Comparison with other Gyalrongic languages indicates that word-initial *a-* and *w-* (in the native vocabulary, excluding loanwords and interjections) are secondary. Word-initial *w-* is only attested in a few interjections (such as *utɕ^hutɕ^hu*, §10.2.1) and in the third possessive prefix (§5.1.1). The form †*ɣuu-* (homophonous with the inverse prefix, §14.3.2.7) would be expected, and the unexpected form *w-* in Japhug might be due to false segmentation in sandhi (§5.1.1.5). Word-initial *a-* originates mainly from **ɲa-* (Jacques & Chen 2007), due to loss of the simple initial **ɲ-* in non-stressed syllables (including *wuma* ‘real, really’ from *ɛːɛv ɲo.ma* ‘real, true’, but excluding monosyllabic verb stems such as *ɲu* ‘be’ and *ɲa* ‘buy on credit, owe’).

3.3.2 Rhymes

There are strong phonotactic constraints on possible rhymes in Japhug. Table 3.5 lists all attested rhymes; the coda */-w/* is transcribed as *-β* in the orthography used in this grammar.

Table 3.5: List of possible rhymes in Japhug

<i>/w/</i>	<i>/p/</i>	<i>/m/</i>	<i>/t/</i>	<i>/n/</i>	<i>/z/</i>	<i>/l/</i>	<i>/r/</i>	<i>/j/</i>	<i>/ɣ/</i>	<i>/ŋ/</i>	<i>/ʁ/</i>
<i>/a/</i>	<i>/aw/</i>	<i>/ap/</i>	<i>/am/</i>	<i>/at/</i>	<i>/an/</i>	<i>/az/</i>	<i>/al/</i>	<i>/ar/</i>	<i>/aj/</i>	<i>/aŋ/</i>	<i>/aʁ/</i>
<i>/e/</i>			<i>/et/</i>								
<i>/i/</i>			<i>/it/</i>			<i>/il/</i>					
<i>/ɣ/</i>	<i>/ɣw/</i>		<i>/ɣm/</i>	<i>/ɣt/</i>	<i>/ɣn/</i>	<i>/ɣz/</i>	<i>/ɣl/</i>	<i>/ɣr/</i>	<i>/ɣj/</i>	<i>/ɣŋ/</i>	
<i>/u/</i>	<i>/uw/</i>	<i>/up/</i>	<i>/um/</i>	<i>/ut/</i>	<i>/un/</i>	<i>/uz/</i>	<i>/ul/</i>	<i>/ur/</i>	<i>/uj/</i>	<i>/uŋ/</i>	<i>/uʁ/</i>
<i>/y/</i>			<i>/yt/</i>								
<i>/o/</i>			<i>/om/</i>	<i>/ot/</i>	<i>/on/</i>	<i>/oz/</i>	<i>/ol/</i>	<i>/or/</i>	<i>/oj/</i>	<i>/oŋ/</i>	<i>/oʁ/</i>
<i>/u/</i>			<i>/ut/</i>			<i>/uz/</i>		<i>/uj/</i>			

The only coda attested with all vowels is */-t/* (Table 3.6). Among these rhymes, */-et/* and */-yt/* are only attested in verb forms with the past transitive *-t* suffix (§11.3, §21.1.3, §14.3.2.1), which occurs in word-final position only in 2SG→3 forms.

In closed syllables with an alveolo-palatal or a palatal consonant preceding the vowel, */u/* is fronted and its contrast with */i/* is neutralized (§3.5.2.1). It is

Table 3.6: Examples of closed syllable rhymes in /-t/

Vowel	Rhyme	Example	Meaning/Gloss
/a/	/at/	/tʁtʷsʁlat/ <i>tʁ-tu-su-ʁla-t</i>	‘you boiled it’ AOR-2-CAUS-boil-PST:TR
/e/	/et/	/tʁtʷnʁmʁlet/ <i>tʁ-tu-nʁmʁle-t</i>	‘you did it’ AOR-2-do-PST:TR
/i/	/it/	/tʁtʷʁlit/ <i>tʁ-tu-ʁli-t</i>	‘you reimbursed it’ AOR-2-reimburse-PST:TR
/ʁ/	/ʁt/	/jʁtʷlʁt/ <i>tʁ-tu-lʁt</i>	‘you threw it’ AOR-2-release
/ʊ/	/ʊt/	/tʰʊtʷplʊt/ <i>tʰu-tu-plʊt</i>	‘you destroyed it’ AOR-2-destroy
/y/	/yt/	/lotʷznʊqajyt/ <i>lo-tu-z-nu-qajy-t</i>	‘you let him fish’ IFR-2-DENOM-fish-PST:TR
/o/	/ot/	/nʊtʷsʁwlot/ <i>nu-tu-sʁβlo-t</i>	‘you took care of him’ AOR-2-take.care-PST:TR
/u/	/ut/	/pʊtʷnʁlut/ <i>pu-tu-nʁ-lu-t</i>	‘you milked it’ AOR-2-DENOM-milk-PST:TR

only maintained before /-t/ in forms with the past transitive *-t* suffix. For instance, we find the minimal pair /tʁ-tu-cʊ-t/ ‘you opened it’ (AOR-2-open-PST) and /lʁ-tu-cit/ ‘you moved’ (AOR-2-move).

With the coda /-j/, the contrasts between /ʊ/ and /i/ on the one hand, and /ʁ/ and /e/ on the other hand, are neutralized. The rhyme /-aj/ is realized as [ej] or [æj].

3.3.3 Historical phonology

Some notions of Japhug historical phonology are useful to account for the gaps in the distribution of rhymes (§3.3.2) as well as some vowel alternations (§12.2.2.1).

Comparison of inherited vocabulary between Japhug and extra-Gyalrongic languages shows that the codas **-l*, **-n* and **-ŋ* have been lost in the native vo-

3 Phonology

cabulary (Table 3.7). Words with these codas are either borrowed from Tibetan or have an ideophonic origin.

Table 3.7: Loss of *-l, *-n and *-ŋ in Japhug

Japhug	Other languages
<i>qaɕpa</i> ‘frog’	ཟལ་པ་ <i>sbal.pa</i> ‘frog’
<i>trɣpa</i> ‘snow’	Dulong <i>tu</i> ³¹ <i>wǎn</i> ⁵³ ‘snow’ (Sun 1982)
<i>turmu</i> ‘dusk’	མུན་པ་ <i>mun.pa</i> ‘darkness’
<i>tu-mtsʰi</i> ‘liver’	མཚེན་པ་ <i>mtɕʰin.pa</i> ‘liver’
<i>pyo</i> ‘spin’	འཕང་མ་ <i>ʰphaŋ.ma</i> ‘spindle’
<i>mto</i> ‘see’	མཚོང་ <i>mtʰoŋ</i> ‘see’
<i>zri</i> ‘be long’	རིང་པོ་ <i>rij.po</i> ‘long’
<i>tr-rmi</i> ‘name’	མིང་ <i>mij</i> ‘name’

The proto-Gyalrong rhyme *-aŋ corresponds to Japhug -o (Situ -o, Tshobdun -i, Zbu -œ, Jacques 2004: 228–231); this correspondence is also found in some early loanwords. A secondary -aŋ rhyme has been created from several sources (§3.5.1), most importantly Tibetan borrowings postdating the sound change *-aŋ → -o.

A chain shift has taken place, as Proto-Gyalrong *-o has regularly changed to -u and *-u to -uu (Jacques 2004: 239).

In closed syllables, rounded vowels have become unrounded in the native vocabulary. In the earliest layer of Tibetan loanwords, -od, -or, -ob, -ol and -os correspond to -ɣt, -ɣr, -ɣβ, -ɣl and -ɣz, respectively, but are unchanged in the later layers (Table 3.8).

This sound change did not affect rhymes with uvular codas: proto-Gyalrong *-oq remained -oɕ.

The rhymes *-aj, *-oj and *-uj on the other hand have merged as -e, -e and -i, respectively. These vowel fusions occurred before *-o → -u, as shown by the -u / -e alternation in Stem III (§12.2.2.1, Jacques 2004: 357, Jacques 2008: 234), which is cognate to the “transitivity marker” -jə in Tshobdun (Sun 2003: 496), as illustrated in Table 3.9.

After this sound change had removed all -j codas, secondary -oj and -uj rhymes were later analogically created by the addition of the locative *-j suffix to stems in -o and -u. A handful of examples remain in Japhug (§8.2.4.4). The origin of the rhyme -aj in Japhug is an unsolved problem, and may be due to contextual vowel breaking (Gong Xun, p.c.).

Table 3.8: Unrounding of vowels in Tibetan loanwords

Japhug	Tibetan
<i>mtɕ^hɣtk^ho</i> ‘house shrine’	མཚོད་ཁང་ <i>mtɕ^hod.k^haj</i> ‘shrine, chapel’
<i>pjɣl</i> ‘go around, cross, avoid’	བྱོལ་ <i>b^hol</i> ‘turn away’
<i>χtɣr</i> ‘scatter’	གཏོར་ <i>gtor</i> ‘scatter’
<i>slɣβk^haj</i> ‘school’	སློབ་ཁང་ <i>slob.k^haj</i> ‘school’
<i>tuokrɣz</i> ‘discussion’	གྲོས་ <i>gros</i> ‘discussion’
<i>yot</i> ‘warm light’	འོད་ <i>fiod</i> ‘light’
<i>k^hanjkot</i> ‘architect’	ཁང་བཞོན་ <i>k^haj.bkod</i> ‘founding a house’
<i>nor</i> ‘make a mistake’	མྱོར་ <i>nor</i> ‘make a mistake’
<i>spoz</i> ‘incense’	སློབ་ <i>spos</i> ‘incense’

Table 3.9: Sound changes and stem III alternation in Japhug

Stem I	Proto-form	Stem III	Proto-form	meaning
<i>ndza</i>	* <i>ndza</i>	<i>ndze</i>	* <i>ndza-j</i>	‘eat’
<i>rku</i>	* <i>rko</i>	<i>rke</i>	* <i>rko-j</i>	‘put in’
<i>βlu</i>	* <i>plu</i>	<i>βli</i>	* <i>plu-j</i>	‘burn’

The only other closed rhymes with *o* in the native vocabulary are *-oz*, which originates from **-ajs*, as in *soz* ‘morning’, and *-ot* (in the case of verb stems in *-o* with the past transitive *-t* suffix, §11.3).

3.4 Syllabic constraints

3.4.1 Rhotic dissimilation

The rhotic coda *-r* cannot co-occur with a rhotic or a retroflex consonant in the onset: syllables of the type †*CrVr*, †*rCVr* or †*tɕVr* are not attested. However, a *-r* preinitial can be preceded by a syllable containing a /r/ or a retroflex fricative or affricate in its onset, in reduplicated forms such as *rdardul* ‘dust, dirt’ (§5.7.8.2), or a compound like *qromni* ‘red ant’ (§5.4.3.2). Since the /r/ sounds in /rda.rdul/ and /qro.ni/ are heterosyllabic, they do not violate the rhotic dissimilation constraint (§4.2.3.1).

3.4.2 Uvular harmony

Velars and uvulars do not coexist well within the same syllable in Japhug. There are no syllables of the type †QCV_ʷ or †KCV_ʷ (where K and Q represent any velar and uvular initial consonant, respectively): the onset and the coda have to be both velars, or both uvulars. Thus, syllables such as *qraʷ* ‘ploughshare’ and *kryʷ* ‘shear, mow’ are possible, but not †*kraʷ* or †*qryʷ*.

With preinitials and medial consonants, the constraint depends on the context. Several cases have to be distinguished.

First, the uvular coda /-ʷ/ is compatible with the velar medial /-ɣ-/ , as shown by examples such as *pyaʷ* ‘turn over’ (§4.2.2.5); the opposite case is not attested, but given the relative rarity of medial /-ʷ-/ , this may be accidental.

Second, the uvular preinitial /-ʷ-/ is attested before velar initials in some Tibetan loanwords, such as *ɣgra* ‘enemy’ (§4.2.2.4, from Tibetan དག ངག་ *dgra* ‘enemy’). The Tibetan preinitial *d-* normally corresponds to *r-* before velars, but the expected †*rgra* would have violated the rhotic dissimilation rule (§3.4.1).

Third, a uvular preinitial with the velar medial /-ɣ-/ is only found in the dialectal word *tu-ɣpyi* ‘thigh’ (§4.2.2.5).

These constraints do not apply across syllables, as shown by words such as *kóʷmuʷ* ‘only after’, in which the /-ʷ/ is the preinitial of the second syllable.

The discrimination of uvulars and velars is due to a recent sound change that occurred in Japhug and affected both native words and Tibetan loanwords, viz. the uvularization of velar initial consonants in syllables with uvular /-ʷ/. This sound change explains for instance why Japhug words such as *tu-q^hoɣpa* ‘organs, state of mind’ (phonologically /q^hoʷ.pa/ with internal sandhi) from Tibetan ཁོག་པ་ *k^hoɣ.pa* ‘insides’⁴ has a uvular /q^h-/ corresponding to a velar /k^h-/ in Tibetan: dorsal codas (transcribed as -g) are realized as uvulars after *a* and *o* in most Tibetan varieties (Gong 2016a), so that a correspondence of Tibetan -ag and -og to Japhug /-aʷ/ and /-oʷ/ is expected. At an earlier stage, *tu-q^hoɣpa* has probably been borrowed as **tu-k^hoʷpa* and the sound law *VELAR → UVULAR /_Vʷ applied to it like in the rest of the vocabulary. In Tshobdun, there is a doublet of loanwords corresponding to the same Tibetan etymon: *o-k^hoɣpe* ‘its abdominal cavity’ (Sun & Blogros 2019: 413) without uvularization and *o-q^hɔɣpe* ‘her heart’ (Sun & Blogros 2019: 704) with uvularization.

An older example of uvular harmony is found in the noun *q^haq^hu* ‘behind the house’ from *k^ha* ‘house’ and *u-q^hu* ‘after, behind’: this word has a Tshobdun exact cognate *q^hɔq^hu* (Sun & Blogros 2019: 172), showing that the assimilation occurred in the common ancestor of the two languages.

⁴See §5.1.2.3 for an account of the prefix *tu-*.

3.5 Neutralization, quasi-neutralization and free variation

The present section discusses four particularly thorny problems of synchronic Kamnyu Japhug phonology, which are the source of uncertainty in some transcriptions. They involve quasi-neutralization and interdialectal contact, which constitute challenging problems for phonologists (see Michaud 2006).

3.5.1 The contrast between /-oŋ/ and /-aŋ/

Inherited Japhug words never have final *-ŋ* (in particular, proto-Gyalrong **-aŋ* shifts to *-o*, see §3.3.3). Words with this coda belong to four groups: Tibetan loanwords, ideophones, borrowings from other Gyalrong varieties (in the case of *rkaŋ* ‘be strong’, the corresponding inherited Japhug etymon is *rko* ‘be hard’) or function words with irregular syllable fusion (*koŋla* ‘really’ from *kuŋula*, see §22.2.4).

Despite some minimal pairs (*caŋ* ‘dammed wall’ vs. *coŋ* ‘damage, loss’ from ཇའ་ *g’aŋ* ‘dammed wall’ and ཇའ་ *g’oŋ* ‘loss’, respectively), the contrast between /-oŋ/ and /-aŋ/ in Kamnyu Japhug has some degree of instability: some words in /-oŋ/ and /-aŋ/, but not all, allow free variation between the two pronunciations. This free variation is presumably due to influence from neighbouring dialects of Japhug such as that of Rqakyo, where words with /-oŋ/ and /-oŋ/ in Kamnyu are pronounced with a more open vowel.

Words with stable *-aŋ* in final syllable include *rkaŋ* ‘be strong’, *fsaŋ* ‘fumigation’, *k^hurt^haŋ* ‘administrative position’, *mk^hyrmaŋ* ‘people’, *praŋk^haŋ* ‘cave’, *rjaŋ* ‘be ancient’. In non-final position, stable *-aŋ* is found in particular in words whose final syllable contains /a/, as in *fsraŋma* ‘protecting deity’ (as opposed to unstable *fsroŋ* / *fsraŋ* ‘protect’, see Table 3.10).

Words with stable *-oŋ* in the final syllable include *coŋtca* ‘timber’ (as opposed to *caŋβzu* / *coŋβzu* ‘carpentry’ with unstable rhyme), *koŋla* ‘really’, *p^hoŋ* ‘bottle’, *qumdroŋ* ‘wild goose’, *βmbronŋ* ‘wild yak’ or *tu-phoŋbu* ‘body’.

Table 3.10 presents a list of words with unstable /-oŋ/ / /-aŋ/, mostly loanwords from Tibetan, coming either from rhymes in /a/+nasal or from rhymes in rounded vowel+nasal. It also includes the egressive postpositions with *caŋ-* as first element such as *coŋtaŋ* / *caŋtaŋ* ‘up from’ (see §8.2.10).

For all these words, the orthography used in this work and in the corpus generalizes the *-aŋ* variant, which is considered by Tshendzin to be more “correct”.

3 Phonology

Table 3.10: Words with free variation between /-oŋ/ and /-aŋ/ in Kamnyu Japhug

/-aŋ/ variant	/-oŋ/ variant	Etymology
<i>raŋri</i> ‘each’	<i>roŋri</i>	རང་རེ <i>raŋ.re</i> ‘each’
<i>fsraŋ</i> ‘protect’, ‘save’	<i>fsroŋ</i>	བཟུངས་ <i>bsruŋs</i> ‘save’
<i>tʂaŋka</i> ‘(gold, silver) coin’	<i>tʂoŋka</i>	ཐམ་ཀ <i>tam.ka</i> ‘coin’
<i>ɕaŋ-</i> ‘egressive’	<i>ɕoŋ-</i>	

3.5.2 The contrast between /u/ and /i/ after palatal and alveolo-palatal consonants

The contrast between /u/ and /i/ is partially or completely neutralized after palatals (/c/, /c^h/, /j/, /ɲj/, /ɲ/ and /j/) and alveolo-palatal (/tʂ/, /tʂ^h/, /dʂ/, /ndʂ/, /ɕ/, /ʐ/) consonants in some contexts.

In stressed open syllables, in particular in word-final position, the contrast between /u/ and /i/ is nevertheless very clear after all consonants. The existence of minimal pairs such as *cu* ‘stone’ and *ci* ‘one’ or the stem alternations between *ndʂu* (stem I) and *ndʂi* (stem III) in the paradigm of the verb *ndʂu* ‘accuse’ (§12.2.2), show that this contrast is not neutralized after palatal and alveolo-palatal consonants in this context.

The contrast between /u/ and /i/ is completely neutralized in most closed syllables and near-neutralized in unstressed syllables, including verbal suffixes, prefixes, and non-final elements of compounds. Each of these contexts is extensively discussed below.

3.5.2.1 Neutralization in closed syllables

In closed syllables, the contrast between /u/ and /i/ is almost completely neutralized after palatals (/c/, /c^h/, /j/, /ɲj/, /ɲ/ and /j/) and alveolo-palatal (/tʂ/, /tʂ^h/, /dʂ/, /ndʂ/, /ɕ/, /ʐ/) consonants. The archiphoneme {u,i} is realized as [u] before -ɣ, -β (and the rare -p), and as [i] before -m, -r, -n and -l, as shown by Table 3.11. In the orthography adopted in the present work, the archiphoneme {u,i} is transcribed as *u* in all these contexts.

The proof that the underlying phoneme is /u/ rather than /i/ is provided by the rhyme reduplication of *mtɕur* ‘turn’ in the distributed action form *nɣmtɕurlur* ‘turn in all directions’ (§19.4.2.1): if /i/ had been the underlying vowel, a form such as †[nɣmtɕirlir] would have been expected.

3.5 Neutralization, quasi-neutralization and free variation

Table 3.11: Realizations of the archiphoneme {ʉ,i} following palatal and alveolo-palatal consonants in close syllables

Coda	Example	Realization
-β/-p	<i>c^huβ</i> ‘ideophone of an object breaking’	[c ^h ʉβ]
-ɣ	<i>rɣuɣ</i> ‘run’	[rɣʉɣ]
-m	<i>jum</i> ‘be nice (of weather)’	[jim]
-n	<i>jaftɕun</i> ‘stirrup’	[jaftɕin]
-r	<i>mtɕur</i> ‘turn’	[mtɕir]
-l	<i>rɲul</i> ‘wither’	[rɲil]

The contrast between /ʉ/ and /i/ used to be neutralized before the codas -z and -t, with the archiphoneme {ʉ,i} realized as [i]. However, new rhymes -*ut* and -*uz* contrasting with -*it* and -*iz* have been reintroduced by the transitive 1/2SG→3 past suffix -*t* or -*z* (depending on the dialect of Japhug, see §11.3, §21.1.3).

Minimal pairs between open syllable -*u* stem verbs taking the -*t* suffix (such as /tɣ-tu-cu-t/ ‘you opened it’ AOR-2-open-PST) and -*it* stem verbs (/lɣ-tu-cit/ ‘you moved’ AOR-2-move) can easily be found (§3.3.2). Even if this contrast is extremely marginal and restricted to this morphological context, /ʉ/ and /i/ cannot be considered to be neutralized before -*z* or -*t* (depending on the dialect of Japhug).

3.5.2.2 Non-final elements of compounds

In compounds and other polysyllabic stems, the contrast between /ʉ/ and /i/ is very difficult to perceive in non-final open syllables with palatal or alveolo-palatal consonant onsets, and my main consultant Tshendzin has, during our decade-long collaboration, expressed conflicting views about whether a contrast does or does not exist in this context.

While there are no minimal pairs only distinguished by the /ʉ/ vs. /i/ contrast in non-final syllables after palatal or alveolo-palatal consonants, it now seems clear that some words are consistently pronounced with *u* rather than *i* in this context. This unstable contrast, which does not carry much information load, is likely to differ at the idiolectal level. The orthography used in this work reflects a normalization based on Tshendzin’s judgements (rechecked several times).

3.5.2.2.1 tɕ^hi° vs. tɕ^hu° Many nouns in Japhug have tɕ^hi° or tɕ^hu° as first element, in particular due to words of Tibetan origin containing མྱ tɕ^hu ‘water’ or

3 Phonology

མཚུ *mtɕ^hu* ‘lip’. The variant *tɕ^hi°* is found in the great majority of these words. In some cases like *tɕ^hira* ‘water jar’ (from མུ་ར་ *tɕ^hu.ra* ‘water container’), I have used an etymologizing transcription with *u* (*tɕ^hura*) in previous works (in particular Jacques 2015b), but changed my mind after careful rechecking (using for instance the stems I and III of the verb *tɕ^hu* ‘gore, stab’ for comparison).

The variant *tɕ^hu°* is essentially restricted to words with a cluster with a uvular or a labial fricative as first element (such as *rtɕ^huɕju* ‘caterpillar’, *tɕ^huɕpri* ‘salamander’, *tɕ^huɕbroɕ* ‘type of tsampa’), but also found in *tɕ^humɣuɣ* ‘water hole’ (from མུ་མིག་ *tɕ^hu.mig* ‘water hole’) and *tɕ^huzu* ‘type of weaving tool’.

The noun *tu-mtɕ^hi* ‘mouth’ (from མཚུ *mtɕ^hu* ‘lip’) has an unexpected *i* (the expected form would be †*mtɕ^hu*). It is possible that it was extracted from a compound (like *tu-mtɕ^hirme* ‘moustaches’) where /u/ and /i/ are neutralized as [i], and that this phonetic variant was then reinterpreted as an independent root.

3.5.2.2.2 *ndzi°* vs. *ndzu°* Compounds with *ndzi°* or *ndzu°* as non-final element are not common, but social relation collective nouns (§ §5.7.8.1) containing the prefix *kyndzi-*, are particularly numerous. Words with the variant *ndzu°* are very rare: the two verbs *ndzurput* ‘be numb’ and *andzuɕri* ‘protect each other’ (with the rare reciprocal prefix *andzu-/andzi-* of denominal origin, see §20.2.5), and the nouns *ndzurwuz* ‘*Sonchus* sp’ and *ndzummu* ‘*Angelica*’ (minimal pair with *ndzi-nuu* ‘their breast’, see § §3.5.2.4).

3.5.2.2.3 *ci°* vs. *cu°* Compounds comprising *cu* ‘stone’ or the root of *tu-ci* ‘water’ as non-final element are common, and the majority of these words have the variant *ci°*, even when the noun comes from *cu* ‘stone’ (for instance *ciɕciɕ* ‘stony earth’). Exceptions include *curmbu* ‘stone heap’, *scuɕzuɣ* ‘appearance’ (from མུ་གཟུགས་ *sk'e.gzugs* ‘physical appearance’) and *ɣrcuq^hluɕ* ‘making noise (of water when agitated)’.⁵

3.5.2.2.4 *c^hi°* vs. *c^hu°* Nouns with *c^hi°* or *c^hu°* include in particular Tibetan loanwords in ལྷ་ *k^hi* ‘dog’. The form *c^hi°* occurs in most cases (for instance *c^hiɣju* ‘rabies’ from ལྷ་སྐྱོ་ *k^hi.sm'o* ‘rabies’), but exceptions include *c^humu* ‘female dog’, *c^hurdom* ‘roaming dog’ and *nuc^hura* ‘keep guard’ (rechecked using the minimal pair *c^hi* ‘be sweet’ vs. *tx-c^hu* ‘wedge’).

⁵This verb is a denominal verbalization from a noun-ideophone compound (§5.5.3).

3.5 Neutralization, quasi-neutralization and free variation

3.5.2.2.5 *ji°* vs. *ju°* Words containing the status constructus of *ju* ‘bamboo’ can have either the vowel /i/ (as *jispixt* ‘person making bamboo baskets’) or /u/ (*jumgom* ‘bamboo tweezers’). Other words in *ji°* include *jiga* ‘tortuous path’ and its derived forms.

The root of *tu-rju* ‘fortune’ commonly occur as first element of compounds, and have the vowel /u/, as in *rjurrom* ‘coveting other people’s fortune’. The syllable *-rju-* also occurs as the status constructus of *tr-rjit* ‘child’ in the word *trrjusti* ‘only child’.

3.5.2.2.6 *ji°* vs. *ju°* Compounds with non-final *ju°* are extremely rare, limited to the two Tibetan loanwords *juyi* ‘writing’ (from ཇི་གེ *ji.ge* ‘letter’) and *pjurru* ‘coral’ (from བྱུ་རུ *b’u.ru* ‘coral’).

3.5.2.3 Verbal prefixes and reduplicated forms

The vowels /u/ and /ɤ/ are by far the most common ones in prefixes in Japhug. In the case of verbal prefixes with palatal and alveolo-palatal onsets, the same phonological problem as in compounds (§ 3.5.2.2) is observed, namely the question whether the contrast between /u/ and /i/ has been neutralized or not, and whether the vowel should be transcribed as *i* rather than as *u*.

The prefixes in which this problem arises are few, and are exhaustively listed in Table 3.12. For prefixes in *ɕV-* and *c^hV-*, testing the vowel is possible using minimal pairs (*ɕu* ‘who’ vs. *ɕi* ‘polar interrogative’ and *c^hi* ‘be sweet’ vs. *tr-c^hu* ‘wedge’ as in § 3.5.2.2.4). For *pjV-* and *jV* prefixes, comparison is possible with the first syllable of the nouns *juyi* ‘writing’ and *pjurru* ‘coral’ (§ 3.5.2.2.6).

The main consultants on the basis of whose expertise this work has been written have presented conflicting judgments regarding the nature of the vowel in these prefixes. After some hesitation, Tshendzin considers it to be *i* for all of these prefixes (for instance, she considers the vowel of *pjurru* ‘coral’ to be different from that of *pju-yi* ‘he comes down’). I nevertheless keep here the orthographic ‘etymological’ transcription with the vowel *u* for three reasons.

First, the contrast is marginal, if existent at all, for most speakers, and given the limited number of prefixes affected, it is possible to automatically change the transcription from *u* to *i* only in these prefixes without loss of information (this can be necessary for instance as a pre-treatment for the purposes of automatic transcription training).

Second, the prefixes in Table 3.12 are affected by vowel fusion (§12.3) and coalescence with the inverse prefix *-wɣ* (§14.3.2.7) like other prefixes in *Cu-*, and

3 Phonology

these morphophonological phenomena are easier to state by assuming the underlying vowel *u* for all prefixes.

Third, the assimilation from *u* to *i* following palatal and alveolo-palatal consonants appears to be general in the morphology of the language, including partially reduplicated forms, whose rhyme is replaced by *-u* (§4.1). For instance, Tshendzin judges that the reduplicant here transcribed as *-ɕu-* of the reduplicated form *nyɕuuɕe* ‘go around’ (from *ɕe* ‘go’) to be phonetically closer to *ɕi* ‘polar interrogative’ than to *ɕu* ‘who’. Adopting a transcription with *i* in the prefixes in Table 3.12 would therefore only make sense if reduplicated forms of syllables with palatal and alveolo-palatal consonants are also transcribed with *i* (thus *nyɕiɕe* instead of *nyɕuuɕe*). However, such an orthography would cause unnecessary problems when automatically researching for reduplicated forms in the corpus. Since also in this case the pronunciation of the grapheme *u* as /i/ is completely predictable, and could be corrected automatically without difficulty, I choose to keep an etymological transcription.

Table 3.12: Verbal prefixes with palatal or alveolo-palatal onsets and high unrounded vowels

Prefix	Function	Reference
<i>pju/i-</i>	Orientation prefix, B-type, downwards	§15.1.1.1
<i>c^hu/i-</i>	Orientation prefix, B-type, downstream	§15.1.1.1
<i>juu/i-</i>	Orientation prefix, B-type, westwards; sensory	§15.1.1.1
<i>ju/i-</i>	Proximative	§21.6.2
<i>ɕu/i-</i>	translocative associated motion	§ §15.2.1.2
<i>ɕu/i-</i>	apprehensive	§ §21.7.1
<i>ɕu/i-</i>	causative	§17.2.2.1
<i>ɕu/i-</i>	denominal	§20.3.2

In other words, in the transcription adopted in this work I transcribe the contrast between *u* and *i* before palatal and alveolo-palatals when non-predictable (in noun and verb stems), but neglect it and use *u* throughout in verbal prefixes and reduplicated syllables.

3.5.2.4 Verbal suffixes and possessive prefixes

A few unstressed verb suffixes have alveolo-palatal onsets and high unrounded vowels: the dual indexation suffixes 1DU *-tɕi* and 2/3DU *-ndzi* (§14.2.1.1, §14.3.2.1)

3.5 Neutralization, quasi-neutralization and free variation

and the suffix *-ci* (§11.4). It is clear that these suffixes originally had a schwa-like vowel rather than a front vowel as in most Gyalrong languages (see §14.8.1), but here too Tshendzin considers the vowel of these suffixes to be /i/ rather than /ɯ/ (the suffix *-ci*, for instance, according to her resembles *ci* ‘one’ more than *cu* ‘stone’), and since no vowel fusion or other phenomena takes place with these suffixes (unlike verbal prefixes), using an etymological notation would have been an unnecessary complication.

In the prefixal possessive paradigm (§ 5.1.1), we also find a series of prefixes with palatal and alveolo-palatal onsets and high unrounded vowels: 1DU *tçi-*, 1PL *ji-* and 2/3DU *ndzi-*. Unlike verbal prefixes, but like the verbal indexation suffixes, possessive prefixes in the Kamnyu dialect of Japhug never undergo vowel fusion and remain invariable. The vowel is phonologically /i/, as shown by the minimal pair between *ndzumu* ‘Angelica’ and the dual possessive *ndzi-nuu* ‘their_{du} breast’ (§ 3.5.2.2.2). For these reasons, I prefer a phonological (with *-i*) rather than etymological (with *-u*) transcription for these prefixes.

3.5.3 The contrast between /ɣ/ and /e/ after palatal and alveolo-palatal consonants

The vowels /ɣ/ and /e/ in Kamnyu Japhug contrast in very few contexts. In word-final stressed open syllables, only /e/ is found, /ɣ/ being attested only in clitics and unstressed final syllables in words such as *kunɣ* ‘also, even’. In closed syllables, /e/ is only found with the coda *-t/* in the past 2SG→3 of transitive *-e* stem verbs (§3.3.2); the word-final *-et* vs. *-ɣt* are the only cases where /ɣ/ and /e/ are clearly contrastive.

In non-final open syllables, there are no examples of minimal pairs involving a contrast between /ɣ/ and /e/. Phonetic [e] is clearly heard after palatal and alveolo-palatal consonants when the vowel of the following syllable is /e/, for instance in words such as *tç^heme* ‘girl’ or *sɣɣyele* ‘extend (limbs)’, but in other contexts I generally transcribe *ɣ* throughout, except when the word is an obvious compound whose elements are recognized by the speakers (for instance *tçet^ha* ‘later’, ‘soon’ from *tçe* ‘then’ and *t^ha* ‘later’).

3.5.4 The contrast between /ɣ/ and /a/

The contrast between /ɣ/ and /a/, while clear in most contexts, is difficult to perceive in unstressed syllables when followed by a uvular (in particular when followed by a cluster with a uvular preinitial) and in syllables containing *a* (due to regressive assimilation of height, §3.3.1.2).

3 Phonology

In slow syllable-by-syllable pronunciation, Tshendzin makes it clear that some unstressed syllables preceding a uvular have /a/ rather than /ɤ/. This concerns the indefinite possessor prefix in words such as *ta-bi* ‘younger sibling’, *ta-bruu* ‘horn’, *ta-bri* ‘dirt’, *ta-bjuβ* ‘shadow’, *ta-bruum* ‘light, shadow’, *ta-χpi* ‘shape, model’, *ta-brɣt* ‘charcoal’, *ta-bɣaz* ‘soot’ and *ta-ba* ‘free time’ (§ 5.1.2), and the fossilized prefix in nouns such as *taqaβ* ‘needle’. The noun *tr-bar* ‘wing’, however, has *tr-* rather *ta-*.

Another context where the variant *ta-* is found is with the *m-* initial nouns *ta-ma* ‘work’ and *ta-mar* ‘butter’. Note that a contrast exists with the honorific noun *tr-ma* ‘mother’ (§5.1.2), showing that the two allomorphs *tr-* and *ta-* are synchronically contrastive in the Kamnyu variety at least for some speakers.

With some verbal prefixes, in particular the antipassive prefixes *rx-/ra-* and *sɣ-/sa-* (§18.6), the propriative *sɣ-/sa-* (§18.8) and the tropative *nx(ɣ)/-na-* (§17.5.1) and several denominal prefixes), the *a* allomorph is found where followed by a stem with a uvular preinitial. For instance, the antipassive of *χtu* ‘buy’ is *raχtu* ‘do shopping’ with the variant *ra-* rather than *rx-*. Not all prefixes in *ɣ* present this alternation: for instance, the causative, facilitative and denominal prefixes *ɣɣ-* never have a variant †*ɣa-*.

However, in the case of orientation preverbs (§15.1.1.1) and other inflectional prefixes, no such phonologically determined alternation is found. For instance, the A-type preverb *tr-* UPWARDS remains unchanged when preceding stems with a uvular preinitial as in *tr-χtu-t-a* (AOR-buy-PST:TR-1SG) ‘I bought it’, where the prefix *tr-* is different from the corresponding C-type preverb *ta-* in *ta-χtu* (AOR:3 →3’-buy) ‘he bought it’.

3.6 Speech errors and self-corrections

The Japhug corpus, being exclusively an oral one, contains many speech errors, and immediate self corrections by the speakers, which have been systematically transcribed. Table 3.13 presents examples of phonological errors that are followed by self-corrections in the corpus.

Phonological errors can result in the replacement of a word by a similar-sounding one (as in the case of *sqi* ‘ten’ for *sq^{hi}* ‘tripod’), but more often by a non-sense form. Errors generally involve one phonological feature at a time, including aspiration, nasality and place of articulation, especially the contrast between dental and alveolo-palatal affricates, and that between uvular and velars. A more puzzling replacement is that of /χ/ by /r/ (*saxaβ* → *sara*) despite the absence of any common phonological feature between these two phonemes.

3.6 Speech errors and self-corrections

Table 3.13: Examples of self-corrections in the Japhug corpus

Erroneous form	Correct form	Error type	Reference
[sqi] ‘ten’	<i>sq^{hi}</i> ‘tripod’	aspiration	(160703 poucet3) {0006107#S47}
[tuʂŋʁʁ]	<i>tu-skʁɾma</i> ‘one cent’	nasal/oral	(150825 baishe zhuan-zh) {0006342#S69}
[ts ^h o-]	<i>tɕ^horzi</i> ‘jar’	dental/alveolo-palatal	(160703 araR) {0006101#S48}
[tɕ ^h ʉr-]	<i>ts^hʉrʃun</i> ‘often’		(160630 abao-zh) {0006197#S107}
[sara-]	<i>saxaɕ</i> ‘it is extremely...’	rhotic/uvular	(160712 smAG) {0006073#S20}
[qapri] ‘snake’	<i>qapi</i> ‘white stone’		(160630 poucet2) {0006155#S2}
[ʉmŋo]	<i>ʉ-jmŋo</i> ‘his dream’	yod metathesis	(160630 abao-zh) {0006197#S109}
[pɣka]	<i>pɣka</i> ‘squash’		(150827 mengjiangnv-zh) {0006290#S15}
[ʉɁri]	<i>ʉ-Ɂru ʉ-ntsi</i> ‘one of her horns’	vowels	(160715 nWNa) {0006067#S10}
[pɣɣjmŋɣt]	<i>pɣɣjmŋɣt</i> (unidentified species of plant)	insertion	(140505 sWjno) {0003919#S21}

3 Phonology

The phoneme /j/ is particularly prone to metathesis, either within initial clusters (*ujmŋo* → *umŋo*, with fusion of /j/ and /ŋ/ as /ɲ/, see §4.2.1.9), or across vowels (*pɣjka* → *pjɣka*).

3.7 Suprasegmentals

Unlike all other Gyalrong languages, including Tshobdun (Sun 2005), Situ (Lin 2012) and Zbu (Gong 2018), Japhug has no tonal contrasts. However, there is morphologically determined stress. Phonological words only have one stress, which is located by default on the final syllable of the word (§3.8.1, §11.6.1).

The personal agreement suffixes (§14.2.1, §11.3) and the peg suffix *-ci* (§11.4) never receive stress, and their vowels are optionally devoiced. For instance, *tr-ndza-t-a* ‘I ate it’ (AOR-eat-PST-1SG) is realized as [trɲdzátə] or [trɲdzátá]. Stress can be antepenultimate in the case of verb forms with two suffixes as in *to-k-ɣmu-rpú-ndzi-ci* ‘they bumped into each other’ (IFR-PEG-RECIP-bump-DU-PEG).

There are only three verbal prefixes which can attract stress: the inverse *-wɣ-* (§14.3.2.7), the negative Sensory *múj-* (§13.1.1, §21.3.2.1), and the interrogative *ui-* (§21.7.4.1). Outside of verbal morphology, the only other process that affects stress is the comitative adverb derivation (§5.8.1). Some ideophones have emphatic stress on the first syllable (§10.1.5.4), but it is not phonologically distinctive.

A few function words have penultimate stress: *kúɲɣ* ‘also’ (§9.1.6.1), *cínɣ* ‘not even one’ (§9.1.6.4), *nóɣmuɯz* and *kóɣmuɯz* ‘only after’ (§8.2.11).

3.8 Word structure

3.8.1 Wordhood

Although no native expression exists to designate ‘words’ in Japhug (as in the immense majority of the world’s languages, Dixon & Aikhenvald 2002), speakers have an intuitive notion of a minimal unit which can be the object of metalinguistic discourse, as opposed to prefixes and suffixes.

The intuitive notion of ‘word’ can be correlated with some phonological and morphological criteria.

The clearest phonological criterion for wordhood is stress. Stress is by default word-final, and words have at most one stress. Most function words, including linkers (§25.1.6), determiners (§9.1), postpositions (§8.2) and even relator nouns (§8.3) lack stress (unless they receive special emphasis). In example (1), the

stressed syllables are indicated by an acute accent, and the unstressed function words by a grave accent.

- (1) *tɕè bɜxmî cî pɟɜ-tú-ndzî tɕè tɜ-rzáβ̂ nù ɬamú*
 LNK couple INDEF IFR.IPFV-exist-DU LNK INDEF.POSS-wife DEM ANTHR
pɟɜ-rmí. tɜ-tɕú̂ nù ts^huráĵ pɟɜ-rmí.
 IPFV.IPFV-be.called INDEF.POSS-SON DEM ANTHR IPFV.IPFV-be.called
 ‘There was a couple, the wife was called Lhamo, and the man Tshering.’
 (28-qajdoskAt) {0003718#S2}

There are only three groups of exceptions to word-final stress placement (for instance the unstressed suffix *-ndzi* in 1), as seen in the previous section (§3.7). Given its predictability, stress is not noted in the transcription employed in this grammar, except on stress-attracting prefixes.

Among the morphological criteria for wordhood (§11.6), the scope of partial reduplication can be employed, at least for the word classes that allow it. Initial reduplication, almost exclusively restricted to verb forms (§12.4.1), applies to the *first syllable of the word* almost without exception.⁶ In the case of verbs, several additional morphological tests converge to indicate the same left boundary. For the right boundary of the words, partial reduplication is less useful, as it only applies to stems (§12.4.2): inflectional suffixes are never reduplicated.

Inflectional suffixes (§11.3), in particular person indexation suffixes (§14.2.1.1, §14.2.1.2), do present clitic-like properties, since they are not stressed, and are outside the scope of reduplication. However, these morphemes cannot be isolated, follow a rigid order, have non-adjacent dependencies with verbal prefixes (§11.4), and no external element can be inserted between them. Moreover, the 1SG marker *-a*, despite being unstressed when following consonant-final verb stems, undergoes fusion with vowel-final stems (§3.3.1.3), causing vowel mergers. The verbal word in Japhug is thus slightly larger than the prosodic domains of stress and partial reduplication (Schiering et al. 2010).

There are, however, three problems challenging the notion of ‘word’ in Japhug: cliticized sentence final particles (§11.6.2), bipartite verbs (§11.6.3) and prenominal attributes (§9.1.8.2) when they receive no stress. These issues are discussed in more detail in the relevant sections.

⁶The only exception is the reduplicated subject participle *ku~ku-tu* of the existential verb *tu* ‘exist’, which can take (non-reduplicated) possessive prefixes, but this may be a lexicalized form (§12.4.1.5).

3.8.2 Non-final syllables

Putting aside function words, monosyllables are considerably less common than polysyllables in Japhug; in particular, verbs can be monosyllabic only in one form of their paradigm (3SG Factual Non-past, §21.3.1.1), and inalienably possessed nouns are always at least disyllabic (§5.1.2).

The stem-final syllable (excluding inflectional suffixes), in addition to having stress by default, is also generally the part of the word with the maximum of phonological contrasts. Since polysyllabic roots are rare, non-final syllables are in the immense majority of cases either prefixes or compound roots.

Prefixes have strong phonotactic constraints: with the sole exception of some orientation preverbs (§15.1.1.1). Their main vowels are always /u/ (including [i] in contexts where the contrast is neutralized or quasi-neutralized §3.5.2), /ɤ/ and /a/, and they cannot have aspirated or plain voiced consonants. Specific classes of prefixes have even stricter constraints: productive nominalization prefixes can only be obstruents (§16) and verbal derivation prefixes (Chapters 17, 18, 19 and 20) can only contain nine consonants: /m/, /n/, /s/, /z/, /ɕ/, /ʒ/, /r/, /j/ and /y/ (a subset of the consonants that occur as preinitials, §4.2).

Roots occurring as non-final elements of compounds do not have such stringent constraints on consonants, but due to a process of rhyme reduction (bound state, §5.4.1), most vowels are converted to either /u/ or /ɤ/.

Hence, in non-final syllables, the vowels are mostly restricted to /a/, /u/, or /ɤ/, the latter two being subject to rounding by vowel harmony (§3.3.1.2) or assimilation with /w/ (§4.2.1.1, §4.2.2.4, §14.3.2.7). An example of a typical Japhug word is the verb form /atɣtuwzɣyɣzɔ/ (2), which has a vowel other than /a/, /u/, or /ɤ/ only in the last syllable.

- (2) *a-tɣ-tuw-zɣyɣ-zɔ*
 IRR-PFV-2-REFL-CAUS-be.light
 ‘Make yourself light.’ (from 59, §18.3.4.1)

Vowels other than /a/, /u/, or /ɤ/ in non-final syllables of verb and noun stems are only found in four cases. First, there is a handful of synchronically unanalyzable polysyllabic nominal and verbal stems with /o/, /u/ or /i/ in non-final syllables, for instance *ngoɕna* ‘spider’, *juli* ‘flute’ or *nupodudi* ‘tickle’. Second, compounds whose first element does not undergo bound state can preserve any vowel (for instance *qrombuu* ‘anthill’ from *qro* ‘ant’ and *rmbuu* ‘heap up’). Third, Tibetan loanwords, especially in the most recent layers (§3.3.3), are not subject to the phonotactic constraints of native nouns and allow any combination of vowels (for instance *loŋbutɕ^{hi}* ‘elephant’ from ལྷ་རྩེ་ཆེ་ *glan.po.tɕ^{he}* ‘elephant’).

4 Consonant clusters and partial reduplication

4.1 Partial Reduplication

A useful test to analyse and classify clusters is partial reduplication (Jacques 2007), a very productive process which can be applied to both verb and noun stems and has a variety of morphosyntactic functions depending on the position of the syllable affected by reduplication.

Partial reduplication of the first syllable of the verbal complex can mark the protasis of a conditional construction (§12.4.1.2), iterative coincidence (§12.4.1.3), degree incrementation (§12.4.1.4) and totalitative relativization (§12.4.1.5). When the target of partial reduplication is the last syllable of the verb, it can indicate emphasis (§12.4.1.6, §12.4.3), and also serve as a secondary exponent (§12.4.2) of several derivational processes, such as reciprocal (§18.4.1), distributed action (§19.4), auto-evaluative (§19.5), attenuative (§19.6), as well as some non-finite verb forms (gerund §16.6.1 and purposive converb §16.6.2). Outside of verbal morphology, we find partial reduplication in comitative adverbs (§5.8.1), perlative (§5.8.2) and collectives (§5.7.8.2). There are in addition a few sporadic cases of full reduplication (§19.7.11, §18.6.5).

When partial reduplication is applied to a syllable, the rhyme of the reduplicated syllable is changed to /u/ in the reduplicant (other types of partial reduplication are treated in §19.4.2). This vowel can undergo rounded assimilation to [u] when the base syllable has the main vowel /u/ or /o/ (§3.3.1.2).

Some clusters are only partially copied: when the last consonant of a cluster is one of the non-nasal sonorants (/r/, /l/, /j/, /w/, /ɣ/ or /ʁ/), and the preceding consonant is neither a non-nasal sonorant nor a sibilant or alveolo-palatal fricative, the sonorant is deleted, as in the gerund of *mbyom* ‘be in a hurry’, which yields *sɣ-mbu~mbyom* (example 245, §16.6.1.3) instead of †*sɣ-mbyu~mbyom*, or the emphatic form *k^hu~k^hro* from *k^hro* ‘much’ (§26.1.1.2), instead of †*k^hru~k^hro*.

However, in *some* of the clusters ending in a non-nasal sonorant, but whose penultimate consonant is either a non-nasal sonorant, a sibilant (/s/, /z/) or an

4 Consonant clusters and partial reduplication

alveolo-palatal fricative (/ç/, /z/), the final sonorant is not deleted in partial reduplication. For instance, the emphatic reduplication of the infinitive of *açxyri* ‘be quick’ is *ku-xçxyru~ryi* (1), not †*ku-xçxyru~ryi*, and the perlativ (§5.8.2) of *tx-jroβ* ‘trace’ is *u-jru~jroβ* ‘following X’s trace’, not †*u-jru~jroβ*.

- (1) *ku-xçxyru~ryi* *zo, tu-suu-mteur ηgrxl*
 INF:STAT-EMPH~be.quick EMPH IPFV-CAUS-turn be.usually.the.case:FACT
 ‘It makes it turn very quickly.’ (18-NGolo) {0003530#S130}

However, in the cluster *rj-* for instance, the glide *j* is deleted, as in the negative gerund *masxyruju* ‘quietly, in secret’ from *arju* ‘speak’ (§16.6.1.2). A precise inventory of the clusters with sonorant deletion is provided in §4.2.2 and §4.2.3.

Partial reduplication is crucial in analyzing and classifying consonant clusters. Sonorants that undergo deletion when partial reduplication is applied are henceforth designated as *medial* consonants (corresponding to the terms 介音 <jièyīn> ‘medial’ in the Chinese phonological tradition and །དོགས་ཅན་ *dogs.tçan* ‘attached letter’ in the Tibetan one) and do not belong to the same phonological constituent as the rest of the onset.

4.2 Inventory of consonant clusters

Japhug counts at least 423 clusters in syllable onset position: 319 clusters with two consonants and 104 with three consonants.¹ In addition, there are additional types of consonant clusters across syllable boundaries (§4.2.3.1) and secondary clusters due to vowel fusion (§3.3.1.3), which are too numerous to be systematically surveyed. While the number of clusters in Japhug is considerably smaller than that of Khroskyabs, which counts as many as 757 (Lai 2017: 101), it is still much richer than most languages in the Trans-Himalayan family.

In the following discussion, phonemes or clusters found exclusively in ideophones (§10.1) or Tibetan loanwords are systematically indicated, in order to bring out the phonotactics of inherited Japhug vocabulary. For each cluster, an example is provided; in the case of verb roots, the base stem is indicated, rather than a conjugated form (unlike what was done in Jacques 2019c).

4.2.1 Preinitials

This section deals with consonant clusters whose last consonant is not one of the six non-nasal sonorants (/r/, /l/, /j/, /w/, /ɣ/ or /β/) and thus cannot contain a medial consonant.

¹A few new clusters have been discovered since the article Jacques (2019c) was written.

Clusters of this type have a limited number of possible consonants in first position: /w/, /s/-/z/, /ɕ/-/ʑ/, /l/, /ʂ/-/r/, /j/, /x/-/ɣ/, /χ/-/ʁ/, /n/, /m/ and the homorganic nasal, to which must be added a few clusters in stop+/ɕ/. These consonants, which correspond to both མོན་འཇུག་ *sjon.ʹdzug* ‘prefixed letter’ and མགོ་ཅན་ *mgo.tʂan* ‘superscript letter’ in Tibetan traditional grammar, are referred to as *preinitial*. The last consonant of these clusters is called the *initial* (མིང་གཞི་ *min.gzi* ‘radical letter’ in Tibetan). The following sections list clusters by preinitial, and in each table present them by place and mode of articulation of the initial. Clusters with three consonants are dealt with separately.

It is striking that (except in the stop+ɕ- clusters, which are secondary, §4.2.1.10), all preinitials are either sonorants or fricatives. There are no stop preinitials in Japhug, unlike in Situ, which allows labial and velar stops (Zhang 2016: 44). The preinitial stops *p*- and *k*- in Situ regularly correspond to Japhug /w-/ and /x/ɣ-/ or /χ/ʁ-, suggesting that a general rule of preinitial fricativization took place in Japhug (Jacques 2004: 273).

4.2.1.1 /w/+C clusters

Table 4.1 lists all consonant clusters in Japhug with /w/ as first element not ending in a non-nasal sonorant.

The phoneme /w/ has fricativized allophones when occurring as first member of a consonant cluster (§3.2.1), transcribed here as *f*- before unvoiced obstruents, and *β*- before all voiced consonants. It does not appear before nasal or prenasalized segments, due to a nasalization rule **wN*- → *mN*-, attested notably in the irregular *m*- allomorph of the *ɣʁ*- causative (§17.3.1). It cannot be followed by any of the labial consonants: for instance †*fp*- and †*βb*- are not acceptable onsets. Some clusters with /w/ + voiced obstruents (*βz*- and *βg*-) are only attested in Tibetan loanwords.

Clusters with three consonants whose first element is /w/ and the last one is not a sonorant are all restricted to Tibetan borrowings (verb forms with the past tense *b*- prefix, for example *βzɣur* from བསྐྱེད་ *bsgʷur* ‘change’) except for /wxt/, which is realized as [x^wt] with a labiovelarized fricative, rounding the preceding unrounded vowels /u/ and /ɤ/: the participle *ku-wxti* ‘the big one’ is realized as [kux^wti]. Not all speakers maintain the contrast between /wxt/ and /xt/; the verb *wxti* ‘be big’ is the only item with this cluster.

Non-segmental realizations of /w/, limited to vowel rounding, are also found in the group *wɣr*- (treated in §4.2.2.4) and the inverse prefix *wɣ*- (§14.3.2.7).

4 Consonant clusters and partial reduplication

Table 4.1: List of consonant clusters with /w/ as a first element (15+8); clusters only found in Tibetan loanwords are shaded in light grey.

/t/	/wt/	<i>u-ftaʁ</i> ‘sign’
/d/	/wd/	<i>βdwt</i> ‘demon’
/ts/	/wts/	<i>ftsɔʁ</i> ‘female hybrid yak’
/ts ^h /	/wts ^h /	<i>fts^{hi}</i> ‘feel better’
/s/	/ws/	<i>fsaŋ</i> ‘fumigation’
/z/	/wz/	<i>βzaŋsa</i> ‘friend’
/tɕ/	/wtɕ/	<i>ftɕaʁ</i> ‘summer’
/tɕ ^h /	/wtɕ ^h /	<i>ftɕ^{hur}</i> ‘put vertically’, ‘pour down’
/ɕ/	/wɕ/	<i>fɕaʁ</i> ‘repent’
/ʐ/	/wʐ/	<i>βʐaʁ</i> ‘buzzard’

/c/	/wc/	<i>tu-fcaʁ</i> ‘dorsal mat’
/ɟ/	/wɟ/	<i>βɟi</i> ‘chase’
/k/	/wk/	<i>fka</i> ‘be full’
/g/	/wg/	<i>βgoz</i> ‘prepare’
	/wxt/	<i>wxti</i> ‘be big’
	/wst/	<i>fstuŋ</i> ‘take care of’, ‘serve’
	/wrt/	<i>frtɣŋ</i> ‘be trustworthy’
	/wsk/	<i>fskɣʁ</i> ‘turn around’
	/wzg/	<i>βzgɣʁ</i> ‘delay’
	/wzd/	<i>βzdu</i> ‘collect’
	/wzɟ/	<i>βzɟuʁ</i> ‘change, correct’
	/wɽɟ/	<i>βɽɟaŋ</i> ‘stretch tight’ (skin)

4.2.1.2 Sibilant+C clusters

Table 4.2 lists all consonant clusters with a sibilant fricative /s/ or /z/ as first element not ending in a non-nasal sonorant.

The contrast between /s/ and /z/ is neutralized before obstruents: we find *s-* before unvoiced stops, fricatives and affricates and *z-* before voiced ones (including prenasalized stops). With nasals, a contrast is found between *sm-* and *sn-* on the one hand, and their voiced counterparts *zm-* and *zn-* on the other hand. The latter are only found in morphologically complex nouns or verbs, as several sibilant prefixes. These include the causative (§17.2.1.1), the oblique participle (§16.1.3.1), the gerund (§16.6.1.1) and the abilitative (§19.3) prefixes, all of which have *z-* al-

4.2 Inventory of consonant clusters

/ɲ/	/sɲ/	<i>sɲaŋne</i> ‘fasting’
/k/	/sk/	<i>skɣm</i> ‘ox’
/k ^h /	/sk ^h /	<i>ɣsk^hi</i> ‘pan’
/g/	/zg/	<i>zga</i> ‘sauce’
/ŋg/	/zŋg/	<i>ak^hɣzŋga</i> ‘call’
/ŋ/	/sŋ/	<i>sŋaβ</i> ‘curse’
/q/	/sq/	<i>sqamnuz</i> ‘twelve’
/q ^h /	/sq ^h /	<i>sq^hi</i> ‘tripod’

lomorphs when prefixed to polysyllabic stems whose first syllable has a single sonorant followed by a vowel. In particular, *zmaq^hu* ‘cause to be late’ and *znɣja* ‘find X a shame’ in Table 4.2 are the causative derivations of *maq^hu* ‘be after’, ‘be late’ (§20.6) and *nɣja* ‘be a shame’ (§17.2.5.9), respectively.

Before non-nasal sonorants, a voicing contrast is attested between /sj-/ vs. /zj-/ (§4.2.2.2), /sl-/ vs. /zl-/ (§4.2.2.3), /sr-/ vs. /zr-/ (§4.2.2.4) and /sy-/ vs. /zy-/ (§4.2.2.5).

The sibilant preinitials are compatible with all stops, but do not occur with affricates, whether dental, alveolo-palatal or retroflex, except in heterosyllabic clusters (§4.2.3.1). The loanword *koxtɕuun* ‘brocade’ from གོས་ཚེན་ *gos.tɕ^hen* ‘brocade’

4 Consonant clusters and partial reduplication

suggests that a sound change $*st\zeta- \rightarrow xt\zeta-$ has removed all instances of sibilant+alveolo-palatal clusters.

The aspiration contrast in unvoiced stops and affricates is not neutralized after the *s-* preinitial, as shown, for instance, by the minimal pair *st^hoʁ* ‘push’, ‘press’ vs. *stoʁ* ‘broad bean’.

4.2.1.3 /l/+C clusters

There are considerably fewer clusters with an /l/ preinitial than with other preinitials. These clusters are listed in Table 4.3. They contain a high proportion of ideophones and Tibetan loanwords, as the genuine proto-Gyalrong $*l-$ preinitial has changed to *j-* in most contexts (§4.2.1.6).

Table 4.3: List of consonant clusters with /l/ as a first element (17+1); light grey shading indicates clusters only attested in Tibetan loanwords, and dark grey clusters only found in ideophones.

/p/	/lp/	<i>tu-lpɣy</i> ‘one piece’
/m/	/lm/	<i>ɾɿlmuz</i> ‘straw covering the balcony’
/t/	/lt/	<i>ltɣβ</i> ‘fold’
/t ^h /	/lt ^h /	<i>lt^humumi</i> ‘coming slowly (sleep)’
/d/	/ld/	<i>lduyi</i> ‘bharal’
/n/	/ln/	<i>lni</i> ‘wither’
/ts/	/lts/	<i>ɕɿltsaʁ</i> ‘leather coat’
/ts ^h /	/lts ^h /	<i>lts^hɿlts^hɿt</i> ‘small and weak’
/tɕ/	/ltɕ/	<i>ɾɿltɕaʁ</i> ‘horse whip’
/tɕ ^h /	/ltɕ ^h /	<i>ltɕ^hɿltɕ^hɿt</i> ‘hanging’ (of fluffy objects)
/dʒ/	/ldʒ/	<i>ldʒaŋku</i> ‘green’
/dz/	/ldz/	<i>ldʒaŋldʒaŋ</i> ‘hanging’ (big object)
/c/	/lc/	<i>lcuylcuy</i> ‘drenching’
/c ^h /	/lc ^h /	<i>tu-lc^huy</i> ‘one section’ (of a bag)
/ŋ/	/lŋ/	<i>lŋɿlŋɿt</i> ‘hanging’ (fruit)
/x/	/lx/	<i>lxɣβlxɣβ</i> ‘thick’ (clothes)
/q/	/lq/	<i>lqɿɿlqɿt</i> ‘toddling’
	/lpɕ/	<i>qalpɕa</i> ‘open’ (fern leaf)

A possible example of an additional cluster /lŋ-/ is found in the verb *mundzu-lŋuz* ‘doze off’, but both /nu.ndzu.l.ŋuz/ and *nu.ndzu.lŋuz* are possible syllabifications.

The cluster $lp\zeta$ -, only attested in $qalp\zeta a$ ‘open’ (of fern leaf), is discussed further in §4.2.1.10.

4.2.1.4 /r/+C clusters

Table 4.4 lists all consonant clusters not ending in a non-nasal sonorant with the rhotic /r/ or its unvoiced counterpart, the retroflex fricative /ʂ/, as first element.

The contrast between /r/ and /ʂ/ is almost completely neutralized in preinitial position, the former occurring with voiced obstruents, and the latter with unvoiced ones. The symbol *r* is used in the orthography employed in this grammar for the archiphoneme {r,ʂ} preceding obstruents, except in the group $\mathcal{S}\mathcal{X}$ -.

However, a contrast between /r/ and /ʂ/ is found before sonorant initials, in particular with the palatal nasal (/ʂŋ-/ vs. /rŋ-/), the velar nasal (/ʂŋ-/ vs. /rŋ-/) and the velar fricative (/ʂɣ-/ vs. /rɣ-/ see §4.2.2.5).

When preceding sonorants, /r/ is initial when occurring before *w* and *j* (§4.2.2.1, §4.2.2.2), but preinitial in *rl*-, *ry*- and *rx*- (§4.2.2.3, §4.2.2.5, §4.2.2.6).

There is one case of a preinitial *r* apparently originating from a rhotacized sibilant, in the verb form *arnɣlum* ‘be caved in’ (§4.2.2.3, §19.7.9).

4.2.1.5 Alveolo-palatal+C clusters

Table 4.5 lists all consonant clusters with an alveolo-palatal fricative /ç/ or /ʒ/ as preinitial and not ending in a non-nasal sonorant.

As in the case of the sibilant preinitials *s*- and *z*-, the voicing contrast between /ç/ and /ʒ/ is neutralized in preinitial position before obstruents, the former occurring when followed by unvoiced stops, fricatives and affricates, and the latter when followed by voiced ones.

A voicing contrast is attested between /çn-/ and /ʒn-/ , but the latter only occurs when the *z*- allomorph of the translocative prefix (§15.2.1.2) precedes the A-type *nuu*- or C-type *na*- ‘westward’ orientation preverbs (§15.1.1.1), as in examples (97) (§9.1.5.2) and (4) (§11.2.2).

Before non-nasal sonorants, the voicing contrast is attested between /çl-/ vs. /ʒl-/ (§4.2.2.3, also only with the translocative prefix), /çr-/ vs. /ʒr-/ (§4.2.2.4) and /çɣ-/ vs. /ʒɣ-/ (§4.2.2.5).

Unlike sibilant preinitials, alveolo-palatal preinitials are compatible with affricates of all places of articulation, even alveolo-palatal affricates in the cluster $\zeta t\zeta$ - found in the noun *sɣtɕtɕuɣ* ‘strap’ (to carry children). There is evidence, however, that $*\zeta ts^h$ - dissimilated to jts^h - in the irregular causative *jts^hi* ‘give to drink’ (§4.2.1.6, §17.2.2.5).

4 Consonant clusters and partial reduplication

Table 4.4: List of consonant clusters with /r/ and /s/ as a first element (35+0)

/p/	/s̥p/	<i>tu-rpa</i> ‘axe’
/p ^h /	/s̥p ^h /	<i>rp^hʁβrp^hʁβ</i> ‘flapping wings’
/mb/	/rmb/	<i>armbat</i> ‘be near’
/m/	/rm/	<i>rmʁβja</i> ‘peacock’
/t/	/s̥t/	<i>rtalu</i> ‘horse year’
/t ^h /	/s̥t ^h /	<i>u-pʁrt^hʁβ</i> ‘between’
/d/	/rd/	<i>rdʁstax</i> ‘stone’
/nd/	/rnd/	<i>rnde</i> ‘find’
/n/	/rn/	<i>rnaʁ</i> ‘be deep’
/ts/	/s̥ts/	<i>rtsot</i> ‘vengeance’
/ts ^h /	/s̥ts ^h /	<i>rts^hom</i> ‘have a crack’ (bucket)
/dz/	/rdz/	<i>rdzardza</i> ‘insolent’
/ndz/	/rndz/	<i>rndzʁkʁŋe</i> ‘shade of the mountain’
/s/	/s̥s/	<i>rsuβrsuβ</i> ‘hairy’
/z/	/rz/	<i>tu-rzuʁ</i> ‘one section’
/tɕ/	/s̥tɕ/	<i>nurtɕa</i> ‘tease’
/tɕ ^h /	/s̥tɕ ^h /	<i>rtɕ^huʁβju</i> ‘caterpillar’
/ndz̥/	/rndz̥/	<i>cirndzi</i> ‘sand’
/ɕ/	/s̥ɕ/	<i>rɕuβrɕuβ</i> ‘rough’
/ʒ/	/rʒ/	<i>tx-rʒaβ</i> ‘wife’
/c/	/s̥c/	<i>tx-rcov</i> ‘mud’
/c ^h /	/s̥c ^h /	<i>u-rc^harc^hʁβ</i> ‘interstice’
/ʝ/	/rʝ/	<i>rʝav</i> ‘dance’
/ɲʝ/	/rɲʝ/	<i>rʝavlo</i> ‘bolt’
/ɲ/	/s̥ɲ/	<i>s̥ɲovs̥ɲov</i> ‘long and thin’
	/rɲ/	<i>rɲaŋ</i> ‘be ancient’
/k/	/s̥k/	<i>rko</i> ‘be hard’
/k ^h /	/s̥k ^h /	<i>tx-rk^hom</i> ‘feather rachis’
/g/	/rg/	<i>rga</i> ‘like’
/ŋg/	/rŋg/	<i>rŋgʁm</i> ‘hard piece’
/ŋ/	/rŋ/	<i>tu-rŋa</i> ‘face’
/q/	/s̥q/	<i>rqov</i> ‘hug’
/q ^h /	/s̥q ^h /	<i>tx-rq^hu</i> ‘hull, skin’
/ŋg/	/rŋg/	<i>cirngo</i> ‘Anisodus tanguticus’
/χ/	/s̥χ/	<i>s̥χuʁχi</i> ‘with big nostrils’

Table 4.5: List of consonant clusters with /ç/ and /ʒ/ as a first element (18+0)

/p/	/çp/	çpɑʁ 'be thirsty'
/p ^h /	/çp ^h /	çp ^h ʁt 'patch' (vt)
/mb/	/ʒmb/	ʒmbʁʁ 'ulcer'
/m/	/çm/	çmi 'mix'
/t/	/çt/	çte 'contaminate'
/t ^h /	/çt ^h /	çt ^h uz 'turn towards'
/d/	/ʒd/	ʒduyʒduy 'strong, tough'
/n/	/çn/	çnat 'heddle'
	/ʒn/	ʒ-nu-çar 'go and look for it'
/ts/	/çts/	ɲʁjçtsɑ 'foreman'
/tç/	/çtç/	sʁçtçuy 'strap' (to carry children on the back)
/tç/	/çtç/	çtçɑŋlɑŋ 'hanging and swinging'
/k/	/çk/	çkom 'muntjac'
/k ^h /	/çk ^h /	çk ^h o 'spread'
/g/	/ʒg/	ʒgɑʁ 'exactly'
/ŋg/	/ʒŋg/	ʒŋgu 'cross river'
/ŋ/	/çŋ/	çŋɑʁçŋɑʁ 'bright yellow'
/q/	/çq/	çqʁjʁ 'cross-eyed'
/q ^h /	/çq ^h /	çq ^h alob 'latch'
/NG/	/ʒNG/	ʒNGulob 'walnut'

There are two examples of alveolo-palatal preinitials followed by a palatal segment: *ʒn-* and *çc^h-*, but they are not stable and hence not included in Table 4.5. They only occur when the *ʒ-* and *ç-* allomorphs of the translocative prefix are found before the B-type *nu-* and *c^hu-* or the D-type *ɲʁ-* and *c^hʁ-* 'westward' and DOWNSTREAM orientation preverbs. These clusters are always in free variation with *ʒn-* and *sc^h-*, respectively, which are considerably more common (Table 15.10, §15.2.1.2), since the translocative prefix generally undergoes a palatal dissimilation rule to a dental fricative *s-* or *z-* when it precedes a palatal consonant. The non-dissimilated clusters *çc^h-* and *ʒn-* are extremely rare: the former is only attested in one single example in the corpus (2), and the second in a handful of verb forms (see for instance 178, §15.2.1.2). These non-dissimilated forms are undoubtedly due to analogical levelling, which generalized the alveolo-palatal allomorphs of the translocative.

4 Consonant clusters and partial reduplication

- (2) *a-t^hur-γ<nur>k^hu* *cti* *ma azo*
 IRR-PFV:DOWNSTREAM-<AUTO>call be.AFF:FACT LNK 1SG
ε-c^hur-zγγ-βde-a *cti* *ma*
 TRAL-IPFV:DOWNSTREAM-REFL-throw-1SG be.AFF:FACT LNK
 ‘Let her call [me], I am going to throw myself (in the river).’ (22-qajdo)
 {0003596#S53}

Secondary clusters with alveolo-palatal preinitials are created by prefixes with the shape *ε-* or *z-*, including allomorphs of the translocative as mentioned above (§15.2.1.2), but also irregular causatives (§17.2.2.3, §17.2.2.4) and perhaps lexicalized oblique participles (§16.1.3.10).

4.2.1.6 /j/+C clusters

Table 4.6 lists all consonant clusters with the semi-vowel /j/ as first element not ending in a non-nasal sonorant. It cannot precede alveolo-palatal obstruents and palatal stops.

Table 4.6: List of consonant clusters with /j/ as a first element (12+1)

/p/	/jp/	<i>jpum</i> ‘be thick’
/m/	/jm/	<i>jmut</i> ‘forget’
/t/	/jt/	<i>ajtu</i> ‘accumulate’
/nd/	/jnd/	<i>sɣjndɣt</i> ‘be cute’
/n/	/jn/	<i>jnom</i> ‘be flexible’
/ts/	/jts/	<i>tx-jtsi</i> ‘pillar’
/ts ^h /	/jts ^h /	<i>jts^hi</i> ‘give to drink’
/tɕ ^h /	/jts ^h /	<i>qajts^ha</i> ‘Aegyptius monachus’
/ndz/	/jndz/	<i>jndzɣz</i> ‘be thick’ (powder)
/k/	/jk/	<i>tx-jkuz</i> ‘secret’
/ŋ/	/jŋ/	<i>tx-jŋoβ</i> ‘hook’
/q/	/jq/	<i>jqu</i> ‘be able to lift’
/χ/	/jχ/	<i>ajχoβ</i> ‘be flat’ (belly)
	/jmŋ/	<i>tu-jmŋo</i> ‘dream’

Most of these clusters violate the sonority sequencing principle (§4.2.3.2), but those that are attested in verb roots (such as *jpum* ‘be thick’) can occur in word-initial position in the Factual Non-Past (§21.3.1).

Comparison with Zbu reveals that one of the sources of the Japhug *j*-preinitial is proto-Gyalrong **l*- (Jacques 2004: 271–272): for instance *jm̄ut* ‘forget’, *tx-jtsi* ‘pillar’, *tx-jme* ‘tail’ and *tu-jm̄ŋo* ‘dream’ correspond to Zbu *lm̄ât*, *wt̄tsiʔ*, *-lm̄éʔ* and *-lm̄áʔ*, respectively (Gong 2018: 43; 53; 288). In other cases, *j*- comes from a dissimilated coronal fricative, as in *jts^hi* ‘give to drink’ (§17.2.2.5) and perhaps *jqu* ‘be able to lift’ (§19.3.1).

The group *jm̄ŋ*- in *tu-jm̄ŋo* ‘dream’ has two preinitials /j/ and /m/. The labial nasal is the ancient initial (as shown by the Zbu cognate *-lm̄áʔ*), and the nasal velar arose as a trace of proto-Gyalrong vowel velarization **lma^hŋ* → **jm̄yo* → *-jm̄ŋo* (Jacques 2004: 44; on velarized vowels in proto-Gyalrong, see §4.2.2.5).

When preceding sonorants, /j/ is preinitial in all cases: *kw*-, *jl*-, *jr*-, *jɣ*-, *jb*- and *rw*- (§4.2.2.1, §4.2.2.3, §4.2.2.4, §4.2.2.5, §4.2.2.6).

4.2.1.7 Velar+C clusters

Table 4.7 lists all consonant clusters with the velar fricatives /x/ and /ɣ/ as preinitial and not ending in a non-nasal sonorant.

Velar preinitials are not compatible with dorsal (velar and velar) initial consonants, but are attested with all other places of articulations. The complementary distribution between *x* (before unvoiced segments) and *ɣ* (before voiced segments, including obstruents and nasals) is complete, and the voicing contrast can be considered to be completely neutralized in preinitial position.

Comparison with Situ shows that some of these velar fricative preinitials originate from velar presyllables **kə*- (Jacques 2014b: 6). Two non-productive prefixes are sources of velar+C clusters: the animal velar prefix (§5.6.2) and the lexicalized participle *x/ɣ*- prefix (§16.5.2). Another source of secondary velar preinitials is the intrusive *ɣ* found as element of some derivation prefixes, including the *suɣ*- (§17.2.1.4) and *ɕuɣ*- (§17.2.2.2) allomorphs of the causative, the *nuɣ*- allomorph of the applicative (§17.4.2), the *nrɣ*- allomorph of the tropative (§17.5.1) and the *srɣ*- allomorph of the proprietive (§18.8.1).

In addition, the velar preinitial in some counted nouns like *tu-xpa* ‘one year’ is due to a *fausse coupe* (§7.3.1.7).

4.2.1.8 Uvular+C clusters

Table 4.8 lists all consonant clusters with the uvular fricatives /χ/ and /ʁ/ as first element and not ending in a non-nasal sonorant. They cannot precede velars except in heterosyllabic clusters (§4.2.3.1).

4 Consonant clusters and partial reduplication

Table 4.7: List of consonant clusters with /x/ and /ɣ/ as a first element (23+0)

/p/	/xp/	<i>tu-xpa</i> ‘one year’
/mb/	/ɣmb/	<i>tu-ɣmba</i> ‘cheek’
/m/	/ɣm/	<i>tu-ɣmaz</i> ‘wound’
/t/	/xt/	<i>xtut</i> ‘wild cat’
/t ^h /	/xt ^h /	<i>xt^hom</i> ‘put horizontally’
/d/	/ɣd/	<i>ɣdɾso</i> ‘species of grub’
/nd/	/ɣnd/	<i>ɣnda</i> ‘ram’
/n/	/ɣn/	<i>ɣnɾsqi</i> ‘twenty’
/ts/	/xts/	<i>xtsɾɕna</i> ‘tip of the shoe’
/ts ^h /	/xts ^h /	<i>xts^hum</i> ‘be thin’
/s/	/xs/	<i>xsar</i> ‘goral’
/z/	/ɣz/	<i>ɣzu</i> ‘monkey’
/tɕ/	/xtɕ/	<i>xtɕi</i> ‘be small’
/tɕ ^h /	/xtɕ ^h /	<i>xtɕ^hut</i> ‘can contain’
/ndʒ/	/ɣndʒ/	<i>ɣndʒɾβ</i> ‘disastrous fire’
/ɕ/	/xɕ/	<i>xɕaj</i> ‘grass’
/ʒ/	/ɣʒ/	<i>ɣʒo</i> ‘bee’
/tʂ/	/xtʂ/	<i>nɾxtʂu</i> ‘bring in passing’
/ʂ/	/xʂ/	<i>xʂɾxʂɾt</i> ‘long and thin’
/c/	/xc/	<i>xcat</i> ‘be many’
/c ^h /	/xc ^h /	<i>tɾlx^hc^hi</i> ‘fresh milk’
/ʃ/	/ɣʃ/	<i>ɣʃaβ</i> ‘churn’
/ɲ/	/ɣɲ/	<i>u-ɣnaβ</i> ‘disaster’

The voicing contrast between /ɣ/ and /ʁ/ is only attested before sonorants: a handful of ideophones have the cluster /ɣɲ/ contrasting with /ʁɲ/. Uvular preinitials are particularly common in Tibetan loanwords, where they correspond to the *g-* and *d-* *sjon*.² *dzug*. The voiced fricative /ʁ/ is more often realized as an epiglottal [ʕ] in this context.

Some uvular preinitials come from the reduced allomorphs *ɣ-* and *ʁ-* of the uvular animal prefix *qa-* (§5.6.1).

4.2 Inventory of consonant clusters

Table 4.8: List of consonant clusters with /χ/ and /β/ as a first element (25+0)

/p/	/χp/	χpi ‘story’
/p ^h /	/χp ^h /	taχp ^h e ‘slap’
/b/	/βb/	βbβbβbβ ‘thick and big’
/mb/	/βmb/	βmbuum ‘be concave’
/m/	/βm/	βmaβ ‘army’
/t/	/χt/	χtβma ‘offerings’
/t ^h /	/χt ^h /	naχt ^h β ‘seize the opportunity’
/d/	/βd/	βduy ‘umbrella’
/nd/	/βnd/	βndβr ‘be scattered’ (anticausative)
/n/	/βn/	βnaβna ‘both’
/ts/	/χts/	χtso ‘it is clean’
/ts ^h /	/χts ^h /	χts ^h χts ^h yt ‘small and active’
/ndz/	/βndz/	βndzβr ‘cut’ (with scissors)
/s/	/χs/	χsβr ‘gold’
/z/	/βz/	βzβ ‘be careful’
/tɕ/	/χtɕ/	χtɕoŋ ‘rheumatism’
/ɕ/	/χɕ/	χɕu ‘be strong’
/z/	/βz/	βzuumu ‘young man’
/tɕ/	/χtɕ/	χtɕuɪdzɑ ‘butter tea’
/ɕ/	/χɕ/	χɕβχɕβt ‘light (clothes)’
/c/	/χc/	χcoŋkroŋ ‘cross-legged (sitting)’
/c ^h /	/χc ^h /	χc ^h a ‘right’
/ɣ/	/βɣ/	βɣa ‘completely’
/ŋɣ/	/βŋɣ/	βŋɣiβŋɣi ‘enormous’
/ɲ/	/χɲ/	χɲβχɲβr ‘without energy’
	/βɲ/	βɲβrpa ‘steward (monastery)’

4 Consonant clusters and partial reduplication

4.2.1.9 Nasal+C clusters

The Tables 4.9 and 4.10 list all consonant clusters with a nasal consonant as preinitial and without medial consonant.

Unlike the previous preinitials, nasals can never be directly followed by any non-nasal sonorant: groups such as **mj-*, **mw-*, **mr-*, **ml-*, **my-* and **mʁ-* are not attested in onset position (they are, however, found as heterosyllabic clusters, §4.2.3.1). This gap is due to a combination of two sound changes.

First, the medials **j* and **ɣ* were nasalized when preceded by a nasal, so that pre-Japhug **mj-* and **my-* became *mɲ-* (in *tu-mɲa* ‘arrow’, compare *མདའ་ mda* ‘arrow’ from **mla*, Hill 2019: 18) and *mŋ-* (in *tu-jmŋo* ‘dream’, see §4.2.1.6), respectively.

Second, pre-Japhug **mr-* became *mbr-* by epenthesis, as shown by *mbro* ‘horse’, *mbro* ‘be high’ and *mbri* ‘cry, sing’ (in Burmese *mrañh*, *mrañ?* and *mraññ*, Hill 2019: 60;259).

Additionally, nasal preinitials cannot be followed by any fricative. As in Tibetan (Li 1933), this absence is due to the conversion of post-nasal fricatives to the corresponding affricates, as in *tu-mts^{hi}* ‘liver’ (from **m-si*, Burmese *asaññh*, Hill 2019: 56).

Table 4.9: List of consonant clusters with a homorganic nasal as first element (14+1)

/p/	/mp/	<i>mpu</i> ‘be soft’
/p ^h /	/mp ^h /	<i>mp^hul</i> ‘reproduce’
/t/	/nt/	<i>ntaβ</i> ‘be stable’
/t ^h /	/nt ^h /	<i>nt^hɣβ</i> ‘be caught between’
/ts/	/nts/	<i>nts^u</i> ‘always’
/ts ^h /	/nts ^h /	<i>nts^hɣr</i> ‘neigh’ (of horse)
/tɕ ^h /	/ntɕ ^h /	<i>ntɕ^hoz</i> ‘use’
/tʂ/	/ntʂ/	<i>ntʂ^u</i> ‘weed with a hoe’ (vt)
/c/	/ɲc/	<i>ɲcɣr</i> ‘press’
/c ^h /	/ɲc ^h /	<i>ɲc^hoʁ</i> ‘shrink’
/k/	/ŋk/	<i>ŋke</i> ‘walk’
/k ^h /	/ŋk ^h /	<i>ŋk^hor</i> ‘arrive’
/q/	/ŋq/	<i>nqa</i> ‘be difficult’
/q ^h /	/ŋq ^h /	<i>nq^hi</i> ‘be dirty’
	/mpɕ/	<i>mpɕɣr</i> ‘be beautiful’

While voiced stops and affricates with homorganic prenasalization are monophonemic (§3.2.1), unaspirated and aspirated ones (Table 4.9) are better analyzed as clusters. All places of articulation are possible, from labial ($mp^{(h)}$ -) to uvular ($nq^{(h)}$ -). The special case of $mp\zeta$ - is discussed in §4.2.1.10.

Two non-homorganic prenasalized preinitials are also attested, /m-/ before all places of articulation except labials (where m - corresponds to the homorganic nasal preinitial), and n - before (voiced) labials and velars (Table 4.10). When preceded by /m/ or /n/, the contrast between plain voiced and prenasalized voiced stops and affricates is neutralized; for instance the b in nb - stands for the archiphoneme {b,mb}. In the case of the cluster $m\zeta$ -, since the prenasalized phoneme /NG/ lacks a plain voiced counterpart (§3.2.1), the only analysis possible is /mNG-/. In the orthography used in this grammar, the simplified (but non-ambiguous) transcription $m\zeta$ - is used.

The other nasal phonemes /ɲ/ and /ŋ/ are not attested as preinitials: for instance, clusters such as † ηp - or † ηt - are prohibited.

Some m - preinitials come from the nasalization of *w- before nasal or prenasalized stops (as in the irregular causative $m\eta no$ ‘prepare’ from ηno ‘be prepared’, see §17.3.1), a sound law accounting for the absence of preinitial /w/ in this context (§4.2.1.1). This sound law does not operate across syllables (§4.2.3.1), and heterosyllabic clusters with a non-nasalized coda $-\beta$ followed by a nasal do exist.

Some n - preinitials originate from former *t- before nasal or prenasalized stops, as in $tu-n\eta a$ ‘debt’ (§4.2.1.9; see also Jacques 2014b). Another source is a reduced n - allomorph of denominal nu - (as in $n\zeta go$ ‘be ill’ from the noun $tu-\eta go$ ‘disease’, §20.7.1).

4.2.1.10 Stop+ ζ clusters

A handful of onsets have an unvoiced stop followed by ζ , including $k\zeta$ - (as in $k\zeta ilu$ ‘year of the dog’ from $\text{ལྷོ་ལོ} k^{h\zeta}i.lo$ ‘year of the dog’, $p\zeta$ -, ($tup\zeta i$ ‘flax’) as well as $lp\zeta$ - (§4.2.1.3) and $mp\zeta$ - (§4.2.1.9). These clusters, found in both native vocabulary and borrowings from Tibetan, mainly originate from the combination of aspirated stops p^h and k^h with the medial $-j$.

Evidence that these groups should not be synchronically analyzed as /k^hj-/ and /p^hj/ underlyingly comes from two facts. First, the groups $p^h j$ - and $k^h j$ - are otherwise attested (§4.2.2.2). Second, the clusters (C)(p|k) ζ - are not affected by partial reduplication; for instance $mp\zeta \nu r$ ‘be beautiful’ is reduplicated as $mp\zeta u \sim mp\zeta \nu r$ (see for instance 302, §21.8.3.2), not † $mp^h u \sim mp\zeta \nu r$ as would have been expected if $mp\zeta \nu r$ were really †/mp^hj νr /.²

²In addition, $mp\zeta \nu r$ ‘be beautiful’ is probably borrowed from $\text{མཚོ་ལོ་པོ} mt\zeta^{h\zeta}or.po$ ‘handsome’, so that the analysis as /mp^hj/ is wrong even historically.

4 Consonant clusters and partial reduplication

Table 4.10: List of consonant clusters with a non-homorganic nasal as first element (24+0)

/t/	/mt/	<i>tx-mtu</i> ‘knot’
/t ^h /	/mt ^h /	<i>mt^hu</i> ‘spell’
/nd/	/md/	<i>mda</i> ‘be the time’
/n/	/mn/	<i>mna</i> ‘be better’, ‘heal’
/ts/	/mts/	<i>tx-mtsu</i> ‘button’
/ts ^h /	/mts ^h /	<i>mts^hɣm</i> ‘hear’
/ndz/	/mdz/	<i>mdzadi</i> ‘flea’
/tɕ/	/mtɕ/	<i>mtɕoɖ</i> ‘be sharp’
/tɕ ^h /	/mtɕ ^h /	<i>tx-mtɕ^ho</i> ‘wedge’
/ndʒ/	/mdʒ/	<i>tu-mdʒu</i> ‘tongue’
/tʂ/	/mtʂ/	<i>mtʂɣk^hoz</i> ‘bib’
/ndʒ/	/mdʒ/	<i>mdʒuɕuɣ</i> ‘bedbug’
/c/	/mc/	<i>txmcar</i> ‘tongs’
/c ^h /	/mc ^h /	<i>tu-mc^hi</i> ‘gall’
/ɲj/	/mɲj/	<i>tu-mja</i> ‘jaw’
/ɲ/	/mɲ/	<i>mɲɣm</i> ‘species of tree’
/k/	/mk/	<i>tu-mke</i> ‘neck’
/k ^h /	/mk ^h /	<i>mk^hɣz</i> ‘be expert’
/ŋg/	/mg/	<i>tu-mga</i> ‘advantage’
/ŋ/	/mŋ/	<i>mɲɣm</i> ‘feel pain’
/ŋG/	/mG/	<i>tamgom</i> ‘clamp’
/mb/	/nb/	<i>anbaɖ</i> ‘hide’
/m/	/nm/	<i>tx-nmaɖ</i> ‘husband’
/ŋg/	/ng/	<i>ngut</i> ‘be strong’, ‘be resistant’
/ŋ/	/nŋ/	<i>nŋo</i> ‘lose’

4.2.2 Medials

This section deals with consonant clusters whose last consonant is one of the six non-nasal sonorants (/r/, /l/, /j/, /w/, /ɣ/ or /ʁ/). These sonorants can either be medials (§4.1) or initials, depending on whether they are deleted when the cluster is partially reduplicated. They are always medials when the preceding consonant is not one of the possible preinitials (§4.2.1). Clusters ending in a non-nasal sonorant whose penultimate element is a possible preinitial (sibilant/alveolo-palatal fricative or non-nasal sonorant)³ are referred to as *ambiguous clusters*, as they need to be systematically tested with partial reduplication to determine the phonological status of the final sonorant (initial or medial).

The secondary clusters with medial glides created by the effect of synzesis (§3.3.1.3) with the 1SG suffix *-a* (§14.2.1.1) are not included in the listing below, even though what is transcribed as *Ce|i-a* and *Co|u-a* in the orthography is homophonous with *Cja* and *Cwa*, respectively. Including them would have the effect of introducing an enormous number of secondary and predictable clusters. In addition, synzesis of *Cu-a* generates the [uɣ] allomorph of /w/, constituting a seventh glide not found in the vocabulary.

4.2.2.1 C+/w/ clusters

Table 4.11 lists all clusters ending in /w/. Clusters of this type are very rare, as a combination of two sound changes have removed all instances of proto-Gyalrong *Cw. First, the labiovelars, still preserved in Zbu, have merged with plain velars (for instance *nuŋa* ‘cow’, Zbu *ŋwé?*, Gong 2018: 40), and the remaining instances of *w have become *ɣ* (as in *tu-ɕɣa* ‘tooth’ from *-ɕwa, §4.2.2.5).

There are no clusters with labial consonants followed by *w*, but there is a triple contrast between *hw-*, *ɣw-* and *xw-*: it is the only context where minimal pairs between the glottal /h/, the uvular /ɣ/ and the velar /x/ unvoiced fricatives can be found.

The combination of cluster-final /w/ with the rhyme *-a* is homophonous with the result of synzesis of the 1SG *-a* with verb stems in *-o* and *-u*; for instance, the 1SG possessive *a-rwa* ‘my tent’ is not distinguishable from *aro-a* ‘I own’ (§3.3.1.3). Both are phonetically realized as [arwa].

Clusters in *w* are mainly found in ideophones and Chinese loanwords (including nativized ones such as *kwitsut* ‘cupboard’ from 柜子 <guǐzi> ‘cupboard’ with

³Nasal sonorants cannot directly precede non-nasal sonorants in syllable onset position, due to a series of sound changes (§4.2.1.9), so they are not possible preinitials when the initial is a non-nasal sonorant.

4 Consonant clusters and partial reduplication

Table 4.11: List of consonant clusters ending in /w/ (10+0)

/d/	/dw/	<i>dwaŋdwaŋ</i> ‘out of his head’
/z/	/zw/	<i>zwxr</i> ‘mugwort’
/l/	/lw/	<i>lwxz</i> ‘become sick again’
/r/	/rw/	<i>rwa</i> ‘yak felt tent’
/s/	/sw/	<i>aɣuɣswaŋ</i> ‘be a match’
/j/	/jw/	<i>jwajwa</i> ‘very thin’
/k/	/kw/	<i>kwitsut</i> ‘cupboard’
/x/	/xw/	<i>xwxrnrwxr</i> ‘rotating quickly’
/χ/	/χw/	<i>χwxr</i> ‘Hor’ (place name)
/h/	/hw/	<i>hwxrhwxr</i> ‘wide-mouthed’

a mysterious coda *-t*). The only native clusters with *w* as final element are *jw-* (as in *tx-jwaɕ* ‘leaf’) and *zw-* (*zwxr* ‘mugwort’), where the *w* comes from the lenition of a voiced labial stop (Jacques 2004: 325–329).

In ambiguous clusters, cluster-final *-w-* is a medial consonant in /zw/ and /lw/, as shown by the distributed action derivation (§19.4) *nr-zu~zwxr* ‘burn everywhere’ and *nr-lu~lwɔɕ* ‘spill everywhere’ from *zwxr* ‘burn’ and *lwɔɕ* ‘spill’ (not †*nr-zwu~zwxr* or †*nr-lwu~lwɔɕ*).

In *jw*, the labial glide is initial, as it is not deleted in reduplication, for example in the comitative adverb *kɣ-jwu~jwaɕ* ‘together with (its) leaves’ (§5.8.1) from *tx-jwaɕ* ‘leaf’. The cluster *rw* is intriguing, as it presents two alternative reduplication patterns. The labial glide is treated as initial in the distributed action derivation *nr-rwu~rwxr* ‘dig everywhere’ from *rwxr* ‘dig’ (not †*nr-ru~rwxr*), but in the comitative derivation, *rwa* ‘yak felt tent’ can either be reduplicated as *kɣ-ru~rwa* or *kɣ-rwu~rwa* ‘together with the felt tent’.

4.2.2.2 C+/j/ clusters

Tables 4.12 and 4.13 list all clusters ending in /j/. This glide can follow consonants of all places of articulation except palatals, alveolo-palatals and retroflex consonants (other than /r/). In the orthographical system used in this grammar and previous publications on Japhug, /j/ is transcribed as <j> after /ɸ/, /ʏ/, labial consonants and dental fricatives, and as <i> after velar and uvular stops, as well as dental stops and affricates and /l/.

In ambiguous clusters, cluster-final /j/ is medial when following /r/, /l/ and /s/ (/rj-/, /lj-/ and /sj-/), and initial when preceded by /w/, /ʏ/ and /ɸ/ (/wj-/,

Table 4.12: List of biconsonant clusters ending in /j/ (20)

/p/	/pj/	<i>pjalu</i> ‘year of the cock’
/b/	/bj/	<i>bjubjuj</i> ‘hanging in great number’
/mb/	/mbj/	<i>mbjom</i> ‘be fast’
/w/	/wj/	<i>tɕ^hiβja</i> ‘duck’
/d/	/dj/	<i>dioβdioβ</i> ‘evenly mixed’
/nd/	/ndj/	<i>ndiɾndiɾt</i> ‘gracious’
/ts/	/tsj/	<i>tsiaŋnɾtsiaŋ</i> ‘very tall, moving’
/ndz/	/ndzj/	<i>ndziaɕ</i> ‘be tight’ (knot)
/s/	/sj/	<i>sjaŋnɾsjaŋ</i> ‘shaking one’s head’
/z/	/zj/	<i>zjaŋzjaŋ</i> ‘big’
/l/	/lj/	<i>qaliaɕ</i> ‘eagle’
/r/	/rj/	<i>tu-rju</i> ‘word’
/k/	/kj/	<i>kio</i> ‘cause to glide’
/k ^h /	/k ^h j/	<i>k^huk^hju</i> ‘oval’
/ŋg/	/ŋgj/	<i>ŋgio</i> ‘slip’, ‘glide’
/ɣ/	/ɣj/	<i>tu-ɣjɾn</i> ‘one time’
/q/	/qj/	<i>qiaβ</i> ‘be bitter’
/q ^h /	/q ^h j/	<i>q^huuq^huu</i> ‘blunt (colour)’
/NG/	/NGj/	<i>ngia</i> ‘come loose’
/ɸ/	/ɸj/	<i>ɸjit</i> ‘think of’, ‘miss’, ‘remember’

/ɣj-/ and /ɸj-/).

There is in addition a highly unstable cluster *ɟj-* when the alveolo-palatal allo-morph of the translocative prefix (§15.2.1.2) precedes the ‘unspecified’ orientation preverbs. As in the case of the other palatal preverbs, the dissimilated dental allo-morph *z-* is more commonly found (§4.2.1.5, §15.2.1.2). There is no example with *ɟj-* in the corpus, and all instances of this cluster come from elicitation of verb forms with the translocative.

Clusters with velar stops+/j/ and dental affricates+/j/ are clearly distinctive with palatal stops (*kio* ‘cause to glide’ vs. *co* ‘valley’, cf. Table 3.2.1, §3.3) and alveolo-palatal affricates (*ndziaɕ* ‘be tight’ (of knot), ‘be deep’ (of colour), ‘be completed’ vs. *ndzab* ‘swim’). There are no perfect minimal pairs between alveolo-palatal affricates and dental stop+/j/ clusters, as they are very rare and restricted to a handful of ideophones, but quasi-minimal pairs such as *ndiɾndiɾt* ‘gracious’ and *ndzɾβ* ‘be burned’ (§18.5.1) suffice to establish the reality of this phonological contrast.

4 Consonant clusters and partial reduplication

Aspirated velar and labial stops followed by /j/ are rare, since pre-Japhug **k^hj-* and **p^hj-* have changed to *kɕ-* and *pɕ-*, respectively (§4.2.1.10). This sound change, however, did not affect the cluster *sp^hj-* (Table 4.13), and new instances of */k^hj-/* have been created from interjections.

The combination of cluster-final /j/ with the rhyme *-a* is homophonous with the result of synzesis of the 1SG *-a* with verb stems in *-e* and *-i*.

Table 4.13: List of triconsonantal clusters ending in /j/ (18)

/wsj/	<i>tɣ-fsjit</i> ‘whistle’
/wzj/	<i>βzjoz</i> ‘learn’
/spj/	<i>spjaŋku</i> ‘wolf’
/sp ^h j/	<i>sp^hjar</i> ‘spread out to dry’
/stj/	<i>stiaŋɳstiaŋ</i> ‘jumping’
/sq ^h j/	<i>sq^hiar</i> ‘stretches’
/lt ^h j/	<i>lt^hɣlt^hɣt</i> ‘well-ironed (clothes)’
/lbj/	<i>lbjuɮbjuɮ</i> ‘hanging’
/ʂpj/	<i>rpju</i> ‘turn sour’ (milk)
/rmbj/	<i>tɣ-rmbja</i> ‘flash of lightning’
/ʂtsj/	<i>rtsiaɕ</i> ‘be steep’ (road)
/ʂq ^h j/	<i>tɣ-rq^hioɕ</i> ‘groove’
/rŋɕj/	<i>arɳrŋɕioɕ</i> ‘be grooved’
/χtsj/	<i>χtsiu</i> ‘bushel’
/χpj/	<i>χpjɳt</i> ‘observe’
/χsj/	<i>u-χsjuɮ</i> ‘slough’
/mpj/	<i>mpja</i> ‘be warm’
/mtsʃj/	<i>tɣ-mtsioɕ</i> ‘beak’
/ŋqj/	<i>nqiaβ</i> ‘dark side of the mountain’

In triconsonantal groups, /j/ can co-occur with all preinitials except velar and alveolo-palatal fricatives and itself (Table 4.13).

A group *ɕpj-* with alveolo-palatal preinitial does exist, but it is not completely stable. It only occurs when the *ɕ-* allomorph of the translocative prefix (§15.2.1.2) precedes the B-type *pju-* or the D-type *pjɳ-* DOWNWARDS preverbs (§15.1.1.1), as in examples such as (117) (§8.2.4.2). It is in free variation with *spj-* in this context, as the translocative has another *s-* allomorph when preceding *pj-* and *c^h-* (§15.2.1.2). For instance in (3) we find *s-pju-lɳt-mu* instead of *ɕ-pju-lɳt-nu* (the more common form).

- (3) *tusqar tu-ndo-nuw tce, qrombu nuw-car-nuw tee nuwe*
 tsampa IPFV-IPFV-take-PL LNK anthill IPFV-look.for-PL LNK DEM:LOC

 ‘[Faithful Buddhist people] take tsampa_i, look for an anthill_j and spill it;
 there_j.’ (26-qro) {0003682#S71}

4.2.2.3 C+/l/ clusters

Tables 4.14 and 4.15 list all clusters ending in /l/. The lateral sonorant cannot follow retroflex affricates, dental stops and alveolo-palatal affricates.

Table 4.14: List of biconsonant clusters ending in /l/ (18)

/p/	/pl/	<i>plut</i> ‘destroy’
/mb/	/mbl/	<i>mbhut</i> ‘be destroyed’
/w/	/wl/	<i>βlu</i> ‘burn’
/ts/	/tsl/	<i>tsluytshuy</i> ‘completely wrapped up’
/s/	/sl/	<i>sloɔ</i> ‘dig’ (with snout)
/z/	/zl/	<i>tu-zloɔ</i> ‘one time’
/ɕ/	/ɕl/	<i>ɕlu</i> ‘plough’
/ʒ/	/ʒ/	<i>ʒ-lo-ru</i> ‘s/he went and looked upstream’
/r/	/rl/	<i>rlaɔ</i> ‘disappear’
/c/	/cl/	<i>clɑŋclɑŋ</i> ‘round and smooth’
/j/	/jl/	<i>jla</i> ‘male hybrid yak’
/k/	/kl/	<i>klukhuy</i> ‘stiff’
/g/	/gl/	<i>glɔyglɔy</i> ‘pressed’
/ŋg/	/ŋgl/	<i>cunghuy</i> ‘pestle’
/ɣ/	/ɣl/	<i>ɣle</i> ‘knead, rub’
/q/	/ql/	<i>qlut</i> ‘break’ (vt)
/q ^h /	/q ^h l/	<i>q^hlu</i> ‘naga’
/ŋg/	/ŋgl/	<i>nglut</i> ‘break’ (vi)
/ɸ/	/ɸl/	<i>tu-ɸla</i> ‘forearm’

The cluster *ʒl-* is only attested when the translocative prefix occurs before UPSTREAM preverbs (§15.2.1.2). In the clusters with the fricative /s/ or a sonorant as first element (/sl/, /wl/, /jl/, /rl/, /ɣl/ and /ɸl/), /l/ is initial. For instance,

4 Consonant clusters and partial reduplication

the distributed action derivation (§19.4) of *sloB* ‘dig’ and *yle* ‘knead, rub’ are *nx-shu~sloB* ‘dig everywhere with snout’ *nx-ylu~yle* ‘rub again and again’ (not †*nx-suu~sloB* and †*nx-yuu~yle*), and the comitative adverb (§5.8.1) from *jla* ‘male hybrid yak’ is *kʷ-jlu~jla* ‘together with his/her/their hybrid yak(s)’ (not †*kʷ-ju~jla*).

On the other hand, /l/ is medial in /ɕl/, as shown by the fact that the verb *ɕlu* ‘plough’ has the distributed action derivation *nx-ɕuu~ɕlu* ‘plough everywhere’ (not †*nx-ɕlu~ɕlu* as would have been expected if /l/ were initial).⁴ The groups /zl/ and /ʒl/ are not found in words that can be subjected to partial reduplication, and their status is undecidable at the present moment.

Table 4.15: List of triconsonantal clusters ending in /l/ (12)

/scl/	<i>sclɑŋsclɑŋ</i> ‘bald’
/sql/	<i>sqlum</i> ‘collapse’
/sq ^h l/	<i>asq^hlu</i> ‘be concave’
/ɕpl/	<i>ɕploBɕploB</i> ‘round and smooth’
/ɕkl/	<i>ɕkliɕkli</i> ‘round and stiff’
/ɕql/	<i>ɕqluβnɕqluβ</i> ‘walking in the water’
/ɕq ^h l/	<i>ɕq^hlɔt</i> ‘disappear’
/rɱgl/	<i>arɱglum</i> ‘be caved in’
/χpl/	<i>χploBχploB</i> ‘round like a ball’
/ɕŋjl/	<i>ɕŋjliɕŋjli</i> ‘big and tall’
/mql/	<i>mqlɑB</i> ‘swallow’
/mgl/	<i>tu-mgla</i> ‘one step’

In triconsonantal clusters (Table 4.15), the medial /l/ co-occurs with dental, alveolo-palatal and uvular fricatives, as well as /r/ and /m/. The only word with a preinitial /r/ and a medial l, *arɱglum* ‘be caved in’, derives from *sqlum* ‘collapse’ by prenasalization alternation (§19.7.9): the *r*- originates here from rhotacism of *s*- (through *z).

4.2.2.4 C+/r/ clusters

The Tables 4.16, 4.17 and 4.18 list all clusters ending in /r/. The rhotic sonorant can follow all places of articulations except retroflex fricatives and affricates.

⁴In Jacques (2004: 25:59), I claimed that /ɕl/ could be reduplicated either with or without deletion of /l/, but I have not been able to confirm my earlier data and it may have been an error.

4.2 Inventory of consonant clusters

Table 4.16: List of consonant clusters with two elements ending in /r/ (26)

/p/	/pr/	<i>pri</i> ‘bear’
/p ^h /	/p ^h r/	<i>k^hɣp^hru</i> ‘spraying water with the mouth’
/b/	/br/	<i>brubrur</i> ‘having pimples’
/mb/	/mbr/	<i>mbrɔt</i> ‘break’ (vi)
/w/	/wr/	<i>βrɔβ</i> ‘attach to’
/d/	/dr/	<i>dronɔron</i> ‘big and dirty’
/ts/	/tsr/	<i>tsri</i> ‘be salty’
/ndz/	/ndzr/	<i>ndzri</i> ‘wring’
/s/	/sr/	<i>sruun</i> ‘cotton’
/z/	/zr/	<i>zru</i> ‘sunny side of the mountain’
/tɕ/	/tɕr/	<i>tɕruɣnɣtɕruɣ</i> ‘crunching’
/ç/	/çr/	<i>çri</i> ‘leak’
/ʒ/	/ʒr/	<i>ʒru</i> ‘be strong’
/c/	/cr/	<i>cruɣcruɣ</i> ‘in a mess’
/c ^h /	/c ^h r/	<i>c^hrɣβc^hrɣβ</i> ‘messy and dirty’
/ʝ/	/jɾ/	<i>ʝruɣʝruɣ</i> ‘gurgling’
/j/	/jr/	<i>tr-jrɔβ</i> ‘trace’
/k/	/kr/	<i>krɣ</i> ‘shear, mow’
/k ^h /	/k ^h r/	<i>k^hro</i> ‘much’
/g/	/gr/	<i>gruβgruβ</i> ‘matsutake’
/ŋg/	/ŋgr/	<i>ŋgrɔl</i> ‘be usually the case’
/ɣ/	/ɣr/	<i>ɣro</i> ‘suffocate’
/q/	/qr/	<i>qro</i> ‘pigeon’
/NG/	/NGr/	<i>NGrɔβ</i> ‘be torn’
/ʁ/	/ʁr/	<i>ʁrulu</i> ‘hornless’

4 Consonant clusters and partial reduplication

In the ambiguous clusters with a sonorant as first element (/wr/, /jr/, /yr/ and /br/), /r/ is initial, as shown by the perlativ *u-jru~jroβ* ‘following X’s trace’ (§5.8.2), the emphatic participle *ku-wyru~wyrum* ‘very white (one)’ (98, §5.5.1.2) and the reciprocal *a-zγγβru~βre* ‘respect each other’ from *zγγβre* ‘respect’.

By contrast, in ambiguous clusters with a coronal fricative as first element (/sr/, /zr/, /ɕr/, /ʒr/), /r/ is medial, as illustrated by the emphatic participles *ku-zu~zri* ‘very long (one)’ (in 100, §23.5.10.1), *ku-zu~zru* ‘very strong (one)’ and *ku-γγsu~γsrui* ‘very handsome (one)’ (4).⁵ Tshendzin rejects reduplication of these clusters without deletion: †*ku-zru~zri* and †*ku-zru~zru* are not grammatical.

- (4) *βzuiuw ku-zu~zru zo ku-γγsu~γsrui zo*
 young.man SBJ:PCP-EMPH~strong EMPH SBJ:PCP-EMPH~handsome EMPH
ɲɣ-k-γβzu-ci
 IFR-PEG-become-PEG
 ‘(The fox) became a strong and handsome young man.’ (2012 qachGa)
 {0004087#S183}

The /w/ preinitial in the group *wyr-* is not realized as a separate segment (§4.2.1.1). It is an orthographic device used to indicate that the preceding back unrounded vowels /u/ and /ɤ/ turn into their rounded counterparts when adjacent. For instance, reduplicated participle *ku-wyru~wyrum* ‘very white (one)’ is phonetically realized as [kuɣruɣrum].

An extra-short *svarabhakti* vowel can be heard in some clusters with *-r-* medial, in particular after coronal affricates and dorsal stops. For instance, *c^hɣ-kro* ‘s/he distributed it’ can be realized as [c^hɣkǎro].

The retroflex affricates originate at least in part from clusters of dental stops followed by *r*; direct evidence for the sound change **tr-* → *tʂ-* comes from alternations between /tʂ/ and /r/, as that between the numeral *kutʂɣ* ‘six’ and *sqaprɣ* ‘sixteen’ (§7.1.3) and between *tʂu* ‘road’ and *ftɕɣru* ‘path in the middle of the fields’ is a compound of *ftɕar* ‘summer’ and *tʂu* ‘road’ (§5.4.3.2). The gap in the system caused by this sound change has been filled by some ideophones in *dr-* (§10.1.5.1); the only non-ideophone with a cluster of this type is *qumdronj* ‘crane’, whose onset can either be analyzed as /dr/ or as /ndr/, as the contrast between /d/ and /nd/ is neutralized due to assimilation with the /m/ coda of the preceding syllable.

In triconsonantal clusters (Tables 4.17 and 4.18), the medial /r/ is compatible with all preinitials except itself.

⁵Reduplication of the simple /sr/ cluster in the comitative adverb *kɣ-su~srui* ‘together with (its) cotton wool’ (§5.8.1) confirms that /r/ is medial in /sr/, not only in /ɕsr/.

4.2 Inventory of consonant clusters

Table 4.17: List of consonant clusters with three elements ending in /r/ with a non-nasal preinitial (32)

/wkr/	<i>fkruuz</i> ‘be greedy’
/wɣr/	<i>wyrum</i> ‘be white’
/wsr/	<i>fsraŋ</i> ‘protect’
/spr/	<i>spruskuu</i> ‘reincarnated’
/zbr/	<i>zbrilu</i> ‘year of the snake’
/zibr/	<i>sɣzmbriu</i> ‘anger’ (vt)
/st ^h r/	<i>st^hruβ</i> ‘dangling (of snot)’
/scr/	<i>scrɔβscrɔβ</i> ‘very small’
/zɣr/	<i>zɣraŋzɣraŋ</i> ‘soft and bloated’
/skr/	<i>skraskra</i> ‘impolite’
/sk ^h r/	<i>tuu-sk^hru</i> ‘body’
/zgr/	<i>zgrawa</i> ‘leather sack’
/sqr/	<i>sɣsqra</i> ‘limit’
/ɕpr/	<i>aɕpruum</i> ‘be badly sewed’
/ɕibr/	<i>ɕmbri</i> ‘willow’
/ɕtr/	<i>ɕtraŋɕtraŋ</i> ‘long and soft’
/zdr/	<i>zdraŋzdraŋ</i> ‘long and soft’
/ɕkr/	<i>ɕkrɣz</i> ‘oak’
/zgr/	<i>zgruuy</i> ‘certainly’
/zŋgr/	<i>zŋgri</i> ‘star’
/ɕqr/	<i>ɕqraβ</i> ‘be intelligent’
/zŋgr/	<i>zŋgro</i> ‘Jew’s harp’
/jkr/	<i>jkruut</i> ‘congeal’
/jtsr/	<i>jtsraβ</i> ‘delay departure’
/xpr/	<i>ɣɣxpra</i> ‘dispatch’
/ɣpr/	<i>tɕ^huɣpri</i> ‘salamander’
/ɕibr/	<i>taɕmbra</i> ‘jump’ (of horse)
/ɣsr/	<i>ɣɣɣsru</i> ‘be handsome’
/ɕzr/	<i>ɕzraŋɕzraŋ</i> ‘dishevelled’
/ɣcr/	<i>ɣcuɣcri</i> ‘thin, diluted’
/ɕɣr/	<i>ɕɣuɕɣri</i> ‘fat and soft’
/ɕgr/	<i>ɕgra</i> ‘enemy’

4 Consonant clusters and partial reduplication

Table 4.18: List of consonant clusters with three elements ending in /r/ with a nasal preinitial (9)

/ɲcr/	<i>ɲcuɲcri</i> ‘thin, diluted’
/ŋk ^h r/	<i>ŋk^hruli</i> ‘screw’
/ngr/	<i>ngruβ</i> ‘accomplish’
/nqr/	<i>u-nqra</i> ‘broken one’

/mp ^h r/	<i>mp^hrumu</i> ‘divination’
/mk ^h r/	<i>mk^hroj</i> ‘be reincarnated’
/mgr/	<i>mgrun</i> ‘treat’, ‘invite’
/nbr/	<i>nbras</i> ‘loosen the earth’ (vt)

4.2.2.5 C+/ɣ/ clusters

The Tables 4.19 and 4.20 list all clusters ending in /ɣ/. The velar fricative can follow all places of articulations except retroflex affricates, velars and uvulars.

In ambiguous clusters, the /ɣ/ is initial in /zɣ/ and when preceded by a non-nasal sonorant (/wɣ/, /jɣ/, /lɣ/ and /rɣ/, as illustrated by the distributed action derivation (§19.4) *nx-lyu~lya* ‘dig everywhere’ from *lya* ‘dig’ (not †*nx-lu~lya*). The velar sonorant is medial in /ɕɣ/, as shown by the comitative adverb (§5.8.1) *kɕ-ɕu~ɕya* ‘together with its teeth’ (not †*kɕ-ɕyu~ɕya*) from *tu-ɕya* ‘tooth’.⁶ The group /zɣ/ cannot be tested with partial reduplication.

Cluster-final *y* is secondary, and has at least three proto-Gyalrong origins.

First, it comes from proto-Gyalrong medial *-w-, as in *lya* ‘dig’ (Situ *rwā*, Huang & Sun 2002) or *tu-tya* ‘one span’ (Situ *tə-təwá*; the Tibetan cognate མཚོ *mt^ho* ‘span’ underwent Laufer’s law, Jacques 2009; Hill 2011b). Most *-w- medials in the inherited vocabulary have undergone this sound change (except after dorsals, where they have disappeared), and the present *w* medials are secondary (§4.2.2.1).

Second, it originates from the lenition of velar stops in clusters with two stops in proto-Gyalrong, as in *pya* ‘bird’ (from **pk-*, see Cogtse Situ *pká*, Huang & Sun 2002).

Third, it is a secondary trace of velarized vowels (Jacques 2004: 231), as in *trɣpyom* ‘ice’ (from **tw-lpa^yŋ*, see Zbu *talvámʔ*, Gong 2018: 13).

In triconsonantal clusters (Table 4.20), medial *y* can occur with all preinitials except velar fricatives and the labial *w-* and *m-*, a further clue of its diachronic origin from **w*. Combinations /-w.Cɣ-/ are possible, however, in heterosyllabic clusters (§4.2.3.1), as in the noun *laβzyi* ‘steamed turnip’.

⁶In Jacques (2004: 59), I claimed that /ɕɣ/ could be reduplicated either with or without deletion of /ɣ/, but in my more recent data only the variant with deletion is attested.

4.2 Inventory of consonant clusters

Table 4.19: List of consonant clusters with two elements ending in /ɣ/
(25)

/p/	/pɣ/	<i>pya</i> ‘bird’
/p ^h /	/p ^h ɣ/	<i>p^hyo</i> ‘flee’
/b/	/bɣ/	<i>subyi</i> ‘species of bush’
/mb/	/mbɣ/	<i>mbyaβ</i> ‘turn over’ (vi)
/w/	/wɣ/	<i>βya</i> ‘mill’
/t/	/tɣ/	<i>tu-tya</i> ‘one span’
/t ^h /	/t ^h ɣ/	<i>t^hye</i> ‘acorn’
/d/	/dɣ/	<i>dɣɾdɣɾ</i> ‘dumb’
/nd/	/ndɣ/	<i>ndɣɾndɣɾ</i> ‘shaking’
/ts/	/tsɣ/	<i>tsyi</i> ‘rot’
/ndz/	/ndzɣ/	<i>tu-ndzɣi</i> ‘fang’
/s/	/sɣ/	<i>sya</i> ‘rust’
/z/	/zɣ/	<i>zyut</i> ‘arrive’

/ɲɕ ^h ɣ/	<i>ɲɕ^hɣɔ</i> ‘birchbark’

4.2.2.6 C+/ɸ/ clusters

Clusters with ɸ as last element are listed in Table 4.21. The uvular fricative is medial only in a handful of clusters with dental or alveolo-palatal affricates, where it contrasts with ɣ, as shown by the minimal pair *tu-ndzɸi* ‘collar bone’ vs. *tu-ndzɣi* ‘fang’.

In ambiguous clusters, with the dental fricative /zɸ/ and non-nasal sonorants (/wɸ/, /lɸ/, /rɸ/ and /jɸ/), /ɸ/ is always initial, as illustrated by *rɣɸɸu~ɸɸa* from *rɣɸɸa* ‘roar’, *ku-ɸɸu~ɸɸom* ‘very rough (one)’ from *ɸɸom* ‘be rough’ and *ku-ɣɸu~ɸu* ‘very bent (one)’ from *ajɸu* ‘be bent’.

One of the origins of cluster-final ɸ is the result of the lenition of the uvular stop *q in double stop clusters, as in *ɸɸa* ‘prevail, win’ (from *pɣq-, Jacques 2004: 330, as shown by the Situ cognate *pkâ*, Huang & Sun 2002: 603).

Table 4.21: List of consonant clusters ending in /ʁ/ (8)

/w/	/wʁ/	βka ‘prevail, win’
/ndz/	/ndzʁ/	tu-ndzβi ‘collar bone’
/z/	/zʁ/	zβɣŋciu ‘sling’
/l/	/lʁ/	lβa ‘gunny bag’
/tɕ/	/tɕʁ/	tɕβuuznɣtɕβuuz ‘crunchy’
/tɕ ^h /	/tɕ ^h ʁ/	tɕ ^h βuuznɣtɕ ^h βuuz ‘crunchy’
/r/	/rʁ/	rβom ‘be rough’
/j/	/jʁ/	ajβu ‘be bent’ (of legs, trees etc)

4.2.3 Summary

Table 4.22 summarizes the numbers of clusters identified in §4.2.1 and §4.2.2. Since in ambiguous clusters (§4.2.2) partial reduplication is not always available to determine whether the final non-nasal sonorant is medial or initial, no attempt is made at distinguishing between [initial+medial] and [preinitial+initial] clusters in this table.

Clusters with four elements can appear at least at the phonetic level if the last syllable of a verb stem with a triconsonantal onset undergoes synizesis with the 1SG *-a* suffix (§3.3.1.3). The denominal verb γɣjmŋo ‘dream of’ (§20.5.2) from the noun *tu-jmŋo* ‘dream’ (§4.2.1.6) provides examples like *piɣ-wy-γɣ-jmŋo-a* (1FR-INV-DENOM-dream-1SG) ‘s/he dreamed of me’ realized as [pjó.ɣe.jmŋwa] with a complex onset [jmŋw] comprising four segments.

Attested ambiguous clusters are listed in Table 4.23. Grey shading indicates phonotactically impossible combinations, due in particular to the constraints against the combination of velars and uvulars (§4.2.2.5, §4.2.2.6), and against the combination of alveolo-palatals with /j/ (§4.2.1.6, §4.2.2.2). Orange colour indicates [initial+medial] clusters, whose final sonorant is removed in partial reduplication. Blue colour marks [preinitial+initial] clusters, whose final sonorant is unaffected by reduplication. Clusters left in white are those for which partial reduplication cannot be tested. The cluster *rʁ* has two possible reduplication patterns (§4.2.2.1) and is thus left unmarked.

Even though some of the clusters cannot be subjected to testing with partial reduplication, the data in Table 4.23 suggest the following rules:

- If the first element of the ambiguous cluster is an alveolo-palatal fricative (/ç/, /ʒ/), the following sonorant is *medial*.

4 Consonant clusters and partial reduplication

Table 4.22: Count of consonant clusters

Table 4.23: Ambiguous clusters

	/w/	/j/	/r/	/l/	/ɣ/	/ʁ/
/ç/			/çr/	/çl/	/çɣ/	/çʁ/
/ʒ/			/ʒr/	/ʒl/	/ʒɣ/	
/s/		/sj/	/sr/	/sl/	/sɣ/	
/z/	/zw/	/zj/	/zr/	/zl/	/zɣ/	/zʁ/
/l/	/lw/	/lj/			/lɣ/	/lʁ/
/r/	/rw/	/rj/		/rl/	/rɣ/	/rʁ/
/w/		/wj/	/wr/	/wl/	/wɣ/	/wʁ/
/j/	/jw/		/jr/	/jl/	/jɣ/	/jʁ/
/ɣ/		/ɣj/	/ɣr/	/ɣl/		
/ʁ/		/ʁj/	/ʁr/	/ʁl/		

- If the first element of the ambiguous cluster is a glide (/w/, /j/) or a dorsal sonorant (/ɣ/, /ʁ/), the following sonorant is *initial*.
- If the first element of the ambiguous cluster is a dental fricative (/s/, /z/), the rhotic /r/ or the lateral /l/, the following sonorant is *medial* if it is a glide or /l/, and it is *initial* if it is the rhotic or a dorsal sonorant.

4.2.3.1 Heterosyllabic clusters

In addition to the clusters attested in onset position described in this chapter, another type of consonant clusters is found whenever a closed syllable is in non-final position in the word. These heterosyllabic clusters, whose first element is the coda of the first syllable, present considerably fewer phonotactic constraints than onset clusters.

The most obvious difference is the fact that, while a strict prohibition against having the same segment as preinitial and a medial is observed in onset clusters, this constraint does not apply in heterosyllabic ones. For instance, the noun *tɕ^hɣr-pru* ‘rain shelter’, a compound from Tibetan མཚོ་ *tɕ^har* ‘rain’ and the native word *tɕpru* ‘rain shelter’, has the sequence *-r.pr-*, which would be completely impossible as syllable onset (§3.4.1).

The phoneme /w/, realized as *-β* in coda position (§3.2.2), does not become an unvoiced fricative when followed by an unvoiced obstruent in the next syllable, as in the noun *slɣβk^haŋ* ‘school’, which is not realized as †*slɣfk^haŋ* as would have been expected if the /w/ were in preinitial position (§4.2.1.1). The coda *-β* is generally deleted when it precedes labial stops, especially the voiced /b/ in ideophones. For instance, the pattern II ideophone (§10.1.2.2) from the root *|bɣβ|* is *bɣbɣβ* ‘stubborn, bulky’; the alternative realization *bɣβbɣβ* is also possible.

Unlike /w/ in preinitial position (§4.2.1.9), the coda *-β* does not assimilate with nasals or prenasalized onsets that follow it. For instance, the coda *-β* in the last syllable of verb stems is not nasalized by the dual *-ndzi* or plural *-nu* indexation suffixes (§14.2.1.2): *pju-fkaβ-nu* (IPFV-cover-PL) ‘they cover it’ (example 163, §15.1.5.11) cannot be realized as †[pjɪfkámnɯ]. The same is true in noun compounds; for example *jlɣβndzu* ‘weft stick’ from *tu-jlɣβ* ‘weft’ and *ndzu* ‘stick’.

A puzzling cluster *-p.t-* is observed in the numeral *sqaptuy* ‘eleven’ (§7.1.3). The *-p-* is a linking element between the bound form *sqa-* ‘ten’ and the following numeral, also found in other Gyalrongic languages (Jacques 2017c), but its expected form would be the preinitial *f-* (from /w/) in this position. It is better analyzed as the coda of the first syllable.

The dental /t/, which exists as coda (§3.2.2), but not as preinitial (§4.2.1), is attested in heterosyllabic clusters followed by unvoiced labial or velar stops, mainly

4 Consonant clusters and partial reduplication

in Tibetan loanwords such as *rgyɽpu* ‘old man’ (from རྒྱུ་པོ་ *rgad.po* ‘old man’) or *mtɕ^hɽtk^ho* ‘house shrine’ (on which see §3.3.3). In compounds, the coda /t/ is either lost in non-final syllables (§5.4.2.2), or nasalizes to [n] if the following segment is a nasal sonorant or a prenasalized obstruent (§5.4.2.1), in particular with the dual *-ndzi* and plural *-nu* indexation suffixes (§14.2.1.2), so that even heterosyllabic clusters with /t/ a first element are infrequent.

Exceptions to the loss of *-t* before coronal stops and affricates do exist, however, for instance *tvɕp^hɽtta*, the name of a type of sewing method, compound of *tv-ɕp^hɽt* ‘patch (n)’ (§16.4.6) with the verb *ta* ‘put’ (§22.4.2.6). In this noun, a geminated *-t.t-* occurs across syllable boundaries.

While dental fricative preinitials cannot precede affricates (§4.2.1.2), the coda /z/ does occur before the dental affricate *ts^h-* in the cluster *-s.ts^h-* in *mbrɽsts^hi* ‘rice gruel’ (from *mbrɽz* ‘rice’ and *tuts^hi* ‘rice gruel’), assimilating in voice (§5.4.2.1).

The preinitial /j/ is not compatible with palatal and alveolo-palatal initials (§4.2.1.6), but the coda /j/ can precede those segments across syllable boundary, as in *qajzmbɽv* ‘ear of wheat’ from *qaj* ‘wheat’ and *zmbɽv* ‘ear’ (of corn).

The velar coda /ɣ/ is generally deleted before velar stops, even in reduplicated ideophones. For instance, the pattern II ideophone (§10.1.2.2) from the root [gɽɣ] ‘curved; moving with difficulty’ is *gɽɽɽɽ*, though *gɽɽgɽɽ* is also possible. There is only one example of *ɣ* preceding a uvular segment even across syllable boundaries: the sigmatic causative *suɽɽv* ‘cause to hatch’ from *v* ‘hatch’ (§17.2.1.4). The Tibetan form འབྲུག་གློག་ *brug.glog* ‘thunder and lightning’ would have been expected to yield †*mbruy.vloɕ* in Japhug, but we find instead *mbruɽloɕ* (in dialects other than Kamnyu) or *mbyuɽloɕ* ‘thunderstorm’ in Kamnyu with irregular metathesis of *ɣ* and *r*.

The uvular /ʁ/ can surface before velar and uvular stops in heterosyllabic clusters (unlike when it occurs as preinitial, §4.2.1.8), as in *taɕki* ‘up and down’ (§5.5.2.2; realized as [taɕki]) and *q^hoɕq^hoɕ* ‘ingot’. The uvular coda is deleted, however, in the compound *paskɽɽ* ‘pig to be fattened’ from *pav* ‘pig’ and *skɽɽ* ‘fatten’ (pig), avoiding the non-attested cluster *-ʁ.sk-*.

When preceding unvoiced obstruents, the fricative codas /z/, /ɣ/ and /ʁ/ assimilate in voice and are converted to [s], [x] and [ʁ], respectively (§5.4.2.1).

Onset clusters with nasal preinitials followed by non-nasal sonorants have been completely eliminated by a series of sound changes detailed in §4.2.1.9. However, the nasal codas /m/, /n/ and /ŋ/ can occur before syllables with *l-*, *r-*, *j-*, *w-*, *ɣ-* or *ʁ-* as onset. For instance, we find *-n.l-* in *srunloɕ* ‘ring’, *-m.ɣ-* (instead of *-mbr-*) in *nɽtsumɽut* ‘take away and bring back’ (from *tsum* ‘take away’ and *yut* ‘bring’, §20.12), *-n.r-* in *smɽnrɽy* ‘medicinal plants’ (from མཐུན་རིགས་ *smar.rigs* ‘type of materia medica’) or *-m.j-* (instead of *-mŋ-*) in *zumju* ‘barrel handle’ (compound

of *zum* ‘bucket’ and *u-ju* ‘its handle’, from མཚམ་ *zom* ‘bucket’ and རྩུབ་ *ju.ba* ‘handle’, respectively). These clusters, although heterosyllabic, are reduplicated as a whole when partial reduplication is applied, as in the comitative adverb (§5.8.1) *kʰ-srunlu~nloʂ* ‘together with his/her ring’ from *srunloʂ* ‘ring’ (instead of †*kʰ-srunlu~loʂ*, an incorrect form).

More complex clusters with a nasal as first element are found when the second member of the compound has a complex onset, for instance *-n.rʒ-* in *ʧɕunrʒi* ‘Yama’ (from གཤེན་རྗེ་ *gcin.rdze* ‘Yama’, the Buddhist god of the underworld) and *-m.xts^h-* in *jpumxts^hum* ‘thickness’ (a compound noun derived from *jpum* ‘be thick’ and *xts^hum* ‘be thin’, §5.5.2.2).

Some heterosyllabic clusters are avoided by insertion of an anaptyctic vowel /u/, in particular in Tibetan loanwords. For instance, རེས་སྐྱུག་ *sems.sdug* ‘sadness, worry’ is borrowed as *sumuzduy* ‘worry’ instead of expected †*sumzduy*, with the *u* breaking the cluster *-m.-zd-*.

The anaptyctic vowel can be /i/ if the cluster in the second syllable has a palatal or alveolo-palatal preinitial. For instance, *ɕom* ‘iron’ and *tx-ʒhoʂ* ‘hook’ are compounded as *ɕxmihoʂ* ‘iron hook’, in which the preinitial /j/ is converted to /i/.

4.2.3.2 The sonority sequencing principle in Japhug

A considerable amount of work in phonology supports the idea that the segments of the world’s languages follow a universal scale of sonority (for instance Venne-mann 1988; Blevins 1995; see Ohala 1990 for an opposing view). Several versions of this sonority hierarchy have been proposed, for instance (§5) (Parker 2002: 235).

- (5) low vowels > mid vowels > high vowels > /ə/ > glides > laterals > flaps > trills > nasals > /h/ > voiced fricatives > voiced stops > voiceless fricatives > voiceless stops and affricates

The notion of sonority is invoked in particular to account for observed generalizations in the structure of consonant clusters: in many languages, clusters follow the so-called *sonority sequencing principle* (SSP, Blevins 1995: 210):

- (6) ‘Between any member of a syllable and the syllable peak, a sonority rise or plateau must occur.’

According to this hierarchy, in onset clusters, sonorants are expected to be closer the syllable nucleus than obstruents (*krV* is favoured over *rkV*), and glides to be closer to the nucleus than any other consonant (*mjV* is preferred over *jmV*).

4 Consonant clusters and partial reduplication

Japhug, like other Gyalrongic languages (see in particular Sun 2000b and Lai 2017: 73), is rich in SSP-infringing clusters.

For instance, the 17 biconsonantal clusters with /j/ as first element (13 in §4.2.1.6 and 5 in §4.2.2) all contravene the SSP except for /jw/. Moreover, some of these clusters, such as /jtɕʰ/, /jm/ and /jŋ/, have no SSP-compliant counterpart: †/tɕʰj/, †/mj/, and †/ŋj/ are not attested as syllable onsets (though the last two can occur across syllables, §4.2.3.1).

A certain number of SSP-compliant clusters have been removed by specific sound changes, in particular *mj- → mj-, *mr- → mbr- (§4.2.1.9) and *tr- → tɕ- (§4.2.2.4).

4.3 Sandhi

Word boundaries in Japhug can be defined by a combination of criteria, including stress (§3.7) and also morphology in the case of verbs (§11.6.1), but they are not completely impenetrable from a phonological point of view: some sandhi phenomena, including assimilation and resyllabification, do occur across word boundaries.

First, the codas /-z/, /-r/, /-ɣ/, /-ʁ/ can assimilate in voicing to the following consonant (§3.2.2), as in heterosyllabic clusters (§4.2.3.1).

Second, the coda /-t/ is nasalized when directly followed by a nasal or prenasalized segment, and tends to drop when followed by a dental, alveolo-palatal and retroflex segment. In (§7) for example, the *-t* coda of *rumtɕʰɣt* ‘offering to the mountain’ drops before the translocative prefix and that of *lɣt* merges with the following affricate *tɕ*.

- (7) *rumtɕʰɣt* *s-cʰúr-wy-lɣt* *tɕe*
 mountain.offering TRAL-IPFV:DOWNSTREAM-INV-release LNK
ɲuu-pʰɣn
 SENS-be.efficient
 ‘If you go and make offerings to the mountain (god), it will solve (your problem).’ (Lobzang) {0003370S#S27}

These rules are optional, and it is possible to find examples in the corpus where they do not take place. For instance, in (§8), the coda *-t* of *to-lɣt* is clearly audible even before *r*.

- (8) *turpa ci* *to-lɣt* *ri*
 axe once IFR-release LNK
 ‘He wielded his axe, but ...’ (140430 jin e-zh) {0003893#S37}

Third, when a [preinitial+initial] cluster is preceded by an open syllable, the preinitial can be resyllabified as coda of the previous syllable. In (§9) for instance, the preinitial χ - of $\chi c^h o \nu e$ ‘right and left’ becomes the coda of *-rna* and voices to [ʁ], and yields a sequence [-rɲʁ.c^ho-]. This type of phenomenon is considerably rarer than the previous ones.

- (9) *u-rna* $\chi c^h o \nu e$ *zo* *ko-sti*.
 3SG.POSS-ear left.and.right EMPH IFR-plug
 ‘He plugged both hid left and his right ears.’ (140514 huishuohua de niao-zh) {0003992#S183}

Fourth, when a word ending in open syllable precedes a vowel-initial word (§3.3.1.4), the initial vowel *a-* and *u-* of the latter very commonly merge with the final vowel of the former. For instance, the sentence in (§10) is realized as [amuxtsa:punɲu]: the *u-* prefix is elided by merging with the preceding *u*, and the *-a* rhyme of *u-xtsa* merges with the *a-* prefix of the following word, yielding a phonetically long [a:].

- (10) *a-mu* *u-xtsa* *a-pu-ŋu* *pu-ra*
 1SG.POSS-mother 3SG.POSS-shoe IRR-IPFV-be SENS-be.needed
 ‘Let (me take this) shoe (as a present) for my mother.’ (tWxtsa 2003)

External sandhi is not represented in the transcription used in this grammar.

4.4 Tibetan script-based orthography

The IPA orthography chosen to write Japhug in this grammar is probably not viable for use by native speakers, and an alternative writing system based on Tibetan script is preferable. Fortunately, it is relatively easy to transcribe Japhug into Tibetan script.

Concerning the vowels (§3.3.1), /i/, /u/, /e/ and /o/ can be represented using the གི་གུ་ *gi.gu*, འབའ་ཀྱུ་ *zabs.k'u*, འགེང་བུ་ *"gref.bu* and ན་རོ་ *na.ro* symbols, respectively. The vowel /ɤ/, being very common word-internally, can be taken as base vowel of the aksharas. As for /w/, the Old Tibetan གི་གུ་ལོག་ *gi.gu.log* can be employed. Finally, the /a/ can be represented by the long vowel symbol འ་རྩུང་ *fa.tɕ^huŋ*.

A few consonants found in Japhug do not have Tibetan equivalents. The letter ལ་ *w* can be reserved for the velar fricative /ɣ/. The uvulars can be differentiated from the velars by the ཚ་རྩུག་ *ts^ha.rtags*, for instance ཀ་ /q/, འག་ /NG/ and ལ་ /ʁ/. In coda position however, the contrast between /ɣ/ and /ʁ/ does not need to be

5 Nominal morphology

This chapter focuses on possessive prefixes, compounding and noun derivations.

It does not discuss flagging, number and quantification, as these grammatical categories are expressed by independent words or clitics, such as postpositions and noun modifiers, and are treated in chapters 8 and 9.

Nominalization (including lexicalized deverbal nouns) and denominal verbalization are treated in chapters 16 and 20, respectively.

The morphology of counted nouns (quantifiers, time nominals) is discussed in §7.3, and that of nouns of location in §8.3.4.

5.1 Possessive prefixes

Nouns in Japhug can be divided into four main subclasses, *inalienably possessed* nouns, *alienably possessed* nouns, *unpossessible* nouns and *counted* nouns, depending on the type of prefixes they can take. The present section focuses on the first two, the ones that are compatible with possessive prefixes. Unpossessible nouns are treated in §5.2, and counted nouns in §7.3 in another chapter.

5.1.1 Possessive paradigm

The paradigm of possessive prefixes in Japhug is shown in Table 5.1. It presents obvious commonalities with the personal pronouns (§6.1) and the indexation suffixes (§14.8.1). Table 5.1 includes comparative data on the dialect of Tatshi (from Lin & Luoerwu 2003, Lin 2011 and personal communication), which differs from Kamnyu in having non-palatalized forms in the dual prefixes.

In this paradigm, the contrast between second and third person is neutralized in the dual and plural, while it is preserved in pronouns and person indexation.

The *indefinite possessor* prefixes *tu-/tʁ-/ta-* only occur on inalienably possessed nouns (§5.1.2.1). The syntactic function of these prefixes corresponds to that of the “absolute” suffix in Nahuatl (“suffixe absolu” in Launey 1994: 207). The *indefinite possessor* prefixes saturate the possessive prefixal slot, just like antipassive prefixes (§18.6) saturate the object function of transitive verbs. They do

5 Nominal morphology

Table 5.1: Possessive prefixes in Japhug

Person	Kamnyu dialect	Tatshi dialect
1SG	<i>a-</i>	<i>a-</i>
2SG	<i>ny-</i>	<i>na-</i>
3SG	<i>u-</i>	<i>ə-</i>
1DU	<i>tçi-</i>	<i>tsə-</i>
2/3DU	<i>ndzi-</i>	<i>ndzə-</i>
1PL	<i>ji-</i>	<i>ji-</i>
2/3PL	<i>nu-</i>	<i>nə-</i>
indefinite	<i>tu-/tɣ-/ta-</i>	<i>tə-/ta-</i>
generic	<i>tu-</i>	<i>tə-</i>

not mark that the noun is indefinite,¹ but rather indicate that it lacks a definite possessor, when the possessor is unknown or irrelevant.²

Possessive prefixes other than the indefinite possessor prefixes are collectively referred to as “definite possessor prefixes”. The semantic difference between indefinite and generic possessors is discussed in §5.1.3.

The vowel contrast /u/ vs. /ɣ/ vs. /a/ on the indefinite possessor prefixes is lexically determined (§5.1.2.1). This contrast is neutralized on definite possessor prefixes, which all have the same form regardless of the noun. This neutralization is an innovation: in Situ, the vowel contrast is present on all possessive prefixes (Lin 1993: 168–169),³

Stacking of possessive prefixes is not allowed in Japhug, with the exception of the combination of a definite possessor prefix with an indefinite possessor prefix *tu-* or *tɣ-* to turn an inalienably possessed noun into an alienably possessed one (see §5.1.2.9).

The only irregularities in possessive morphology are found with *a-* initial nouns (§5.1.1.1).

¹On the various strategies to express definiteness in Japhug, see §9.1.4 and §9.1.4.3.

²A reviewer suggests the term “neutral” instead, but I find it not specific enough, and “absolute” is to be avoided for obvious reasons, in a language with numerous constructions following ergative-absolutive alignment (§2.5.5).

³Prins (2016: 118–119) analyzes the vowel as part of the nominal root.

5.1.1.1 *a-* initial nouns

Unlike verbs (see §12.3), nouns whose stem begins with a *a-* are extremely rare in Japhug. Nevertheless, as is the case with verbs, the vowel *a-* merges with any prefixed element, so that nouns of this type do not have regular possessive forms. The only noun in *a-* to commonly receive possessive prefixes is *araʁ* ‘liquor’ (a loanword from ཇའ་རག་ *ʔa.rag* ‘liquor’). Its possessive forms are highly anomalous: 1SG *aʒɣ-araʁ*, 2SG *nyʒɣ-ny-araʁ* and 2PL *nuzɣ-nu-araʁ* (as in 1), combining the pronoun in *bound state* (§5.4) followed by the possessive prefix, which takes over the initial *a-*.

- (1) *nuzɣ-nu-araʁ* *ú-ra*
 2PL-2PL.POSS-liquor QU-be.needed:FACT
 ‘Do you need liquor?’ (elicited)

To account for these forms, it is necessary to assume that the initial *a-* was re-analyzed as a 1SG possessive prefix. However, this analysis did not occur directly. The expected 1SG possessive form **a-araʁ* (1SG.POSS-liquor) would automatically yield **a-araʁ* by vowel fusion (following the rule described in §12.3). The resulting 1SG **a-araʁ* then became the pivot for the analogical reshaping of the rest of the paradigm, from which for instance **ny-araʁ* (2SG.POSS-liquor) was generated (replacing putative earlier forms such as **ny-araʁ* **/naraʁ/*). Due to homophony with the base noun *araʁ*, the 1SG pronoun *aʒo* was systematically added and **aʒo a-araʁ* underwent morphological fusion to the attested *aʒɣ-araʁ*, followed by the rest of the possessive paradigm.

5.1.1.2 The expression of possession

Possession cannot be expressed without a possessive prefix on the possessee, except for a handful of constructions where a pronoun occurs instead (§6.1.2).

Possessive prefixes can be used on nearly any noun (except the unpossessed nouns, see §5.2), including recent borrowings from Chinese (or quasi-code switching), as 老家 *lǎojiā* ‘native place’ in (2). They also occur on several non-finite verbal forms, including participles (see §16.1.1.1 and §16.1.2.1), bare infinitives (§16.2.2) and degree nominals (§16.3).

- (2) *aʒo yu a-<laojia>* *yu u-lycu* *nure ri*

 IPFV-stay-PL be:FACT
 ‘They live in a place upstream from my old house.’ (14-siblings)
 {0003508#S215}

5 Nominal morphology

In the case of first or second person possessors, it is possible to have simply a possessive prefix on the noun, (*a-ɣni* ‘my friend’, *a-mbro* ‘my horse’ and *a-ɣgra* ‘my enemy’ in 3), a personal pronoun and a possessive prefix (same person and number, as in 4) or even a pronoun, the genitive clitic *ɣu* and a possessive prefix as in (2) (§8.2.3.1).

- (3) *a-ɣni* *ci* *tuw-tuw-ɣu* *nɣ*, *a-mbro*

 IPFV:WEST-INV-take.away-1SG can:FACT
 ‘My horse is Norbu Rinpoche, he can make me cross one yojana per day.’
 (2003 smanmi2)

It is possible to have a first singular possessive preceded by a first plural pronoun, as in (5) (see §14.6.1 for other examples of person mismatch involving 1PL pronouns).

- (5) *izo a-mu* *nɣ* *t^hamt^ham kɣrcɣsqaptɣy t^hu-azyut ɣu*.
 1PL 1SG.POSS-mother DEM NOW 81 AOR-teach be:FACT
 ‘My mother is now 81.’ (2010-histoire09-2)

In the case of a possessee shared by the speaker and the addressee, the 1SG possessive is the preferred form. For instance, a couple of parents or grandparents talking to each other about their son or their grandchild more often use *a-tɕu* ‘my son’ or *a-ɣe* ‘my grandchild’ than a 1DU or a 2SG possessor such as *tɕi-ɣe* ‘our grandchild’ or *nɣ-ɣe* ‘your grandchild’, as I have noticed by participant observation. Nevertheless, the use of other possessive prefixes than 1SG in such contexts is not agrammatical, and systematically occurs in texts translated from Chinese (by calquing), as in (6).

- (6) *tɕi-tɕu* *ɲu-sɣzdɣɣpa*,
 1DU.POSS-son SENS-be.pitiful
 ‘Our poor son!’ (150831 renshen wawa-zh) {0006418#S15}

5.1.1.3 Definiteness and obviation

Nouns with a definite possessor in Japhug can be indefinite, unlike in most languages of Europe. They can occur with an indefinite determiner (example 3 above). With a quantifier such as *tu-rdoβ* ‘one piece’ as in (7), a noun with a definite possessor is interpreted as referring to a certain number of persons out of a group (‘one of his X’).

- (7) *ty-tɕu* *nu* *ku* *u-zda* *tu-rdoβ* *u-p^he* *to-ti*,

 ‘The boy told one of his companions, and that one another one, and [in this way] they informed each other.’ (2012 Norbzang) {0003768#S70}

Unlike in Algonquian languages, but like in Mapudungun (Haude & Zúñiga 2016), inverse marking on the verb (§14.3.2.2) is *not* required if the subject is a possessed noun whose possessor is also object of the same sentence, as shown by example (8) where the direct form *na-βde* appears. In other words, nouns with a third person possessor are not automatically *obviative* (see Jacques 2010a and §14.3.3.2 for additional discussion).

- (8) *u-rzaβ* *nu* *ku* *na-βde*
 3SG.POSS-wife DEM ERG AOR:3→3’-throw.away

5.1.1.5 The form of the 3SG possessive prefix

Japhug differs from other Gyalrong languages (Table 5.2, data from Sun & Shidanluo 2002, Gong 2014) in that the third person possessive prefix is *not* homophonous with the inverse prefix (§14.3.2.7, §14.3.2.8).

Table 5.2: The form of the 3SG possessive prefix in Gyalrong languages

	3SG.POSS	inverse
Japhug	<i>u-</i>	<i>yu-/-wy-</i>
Tshobdun	<i>o-</i>	<i>o-</i>
Zbu	<i>wə-</i>	<i>wə-</i>
Situ	<i>və-</i>	<i>və-</i>

Independently of the question of whether these two prefixes could be historically related (Sansò 2014), it is probable that Japhug is innovative here.

In the same way as the inverse prefix *yu-* has an allomorph transcribed as *-wy-* when preceded by another prefix, realized as vowel rounding in most cases (§14.3.2.7), there is a possible trace of a vowel rounding allomorph of the possessive prefix in the linker *núndza* ‘for this reason’ (§25.5.1).

This linker originates from a phrase combining the demonstrative *nu* ‘that’ (on which see §6.9.1, §9.1.2 and §9.1.5.4) with the 3SG possessed form of the noun *u-ndza* ‘cause’ (§25.5.2). The form *núndza* possibly reflects earlier **nu-w-ndza*, **-w-* being a frozen allomorph of the 3SG possessive prefix in non-initial position.

There is a possible trace of the expected allomorph †*yu-* (from proto-Gyalrong **wə-*) in the noun *yufsu* ‘friend’, etymologically ‘his equal’; the inalienably possessed noun *u-fsu* ‘of the same size’, which shares the same root, has a regular possessive prefix that is coreferent with the standard of comparison (as in 15 with the 3PL; see §26.3.1.3 on this construction). The alienably possessed noun *yufsu*

5 Nominal morphology

‘friend’ is thus possibly a lexicalized equivalent of *u-fsu* ‘of the same size’ (used in one of the equative constructions, §26.3.1.3), whose 3SG prefix was frozen before the change from **ɣu-* to *u-* occurred.

- (15) *turme ku-mbro ra nu-fsu jamar tu-zyut ma*
person SBJ:PCP-be.high PL 3PL.POSS-equal about IPFV-reach apart.from
mɣ-c^ha

NEG-can:FACT

‘It can only grow about as high as a tall human.’ (15-babW) {0003512#S4}

Furthermore, additional evidence for the idea that the third person prefix contained **w-* comes from the etymology of the reflexive prefix *ɣɣ-*, which is argued to originate from the third person pronoun (§18.3.7).

It remains unclear why the regular allomorph of the third person possessive is *u-* rather than expected †*ɣu-*. A possible explanation could be false segmentation, due to reanalysis with the genitive marker *ɣu*, since the genitive can optionally occur between the possessor and the possessee, as in (16). A pre-Japhug form such as **qaɕpa ɣu-pu* could have been misanalyzed as *qaɕpa ɣu u-pu* due to vowel fusion sandhi (§4.3), and a new allomorph *u-* extracted from such constructions.⁶

5.1.2 Inalienably possessed nouns

5.1.2.1 Morphology

Inalienably possessed nouns differ from alienably possessed ones in that they require the presence of a possessive prefix. Unless when used with the indefinite possessor prefixes, inalienably possessed nouns are not formally distinguishable from alienably possessed ones; for instance, *a-pi* ‘my elder sibling’ and *a-mbro* ‘my horse’ both take the 1SG *a-* prefix and no direct clue indicates that the first noun is inalienably possessed and that the second one is alienably possessed.

The citation form however differs between inalienably and alienably possessed nouns: the former must take an indefinite possessor prefix (or in some cases a 3SG *u-*), while the latter can occur without possessive prefix, as for instance *tx-pi*

⁶The weakness of this hypothesis is that some Japhug dialects have *ku* rather than *ɣu* as their genitive marker.

‘elder sibling’ (with the indefinite *tx-*; the bare root *†pi* is not a correct form) vs. *mbro* ‘horse’ (without prefix).

Inalienably possessed nouns are divided into four classes depending on their citation form. The indefinite possessor prefix has three allomorphs (*tu-*, *tx-*, *ta-*) whose distribution is not completely predictable on the basis of phonology or semantics (though some generalizations are provided below). In addition, some inalienably possessed nouns only take definite possessor prefixes. The contrast between these four classes is neutralized when the noun takes a definite possessor prefix (unlike in Situ, see Lin 1993: 168–169 and Prins 2016: 118–119).

The most common allomorph of the indefinite possessor prefix is *tu-*. Inalienably possessed nouns selecting this allomorph, such as *tu-jax* ‘hand, arm’, have identical indefinite and generic possessor forms (see §5.1.3).

The allomorph *tx-* is also very common, in particular with kinship terms and some body parts (see §5.1.2.3 and §5.1.2.4). The form *ta-* is a phonological variant of *tx-*, occurring mainly with nouns whose stem begins with a uvular such as *ta-bru* ‘horn’ or *ta-bi* ‘younger sibling’. The contrast between /x/ and /a/ in this prefix is very difficult to perceive before uvulars with some speakers (see §3.5.4), and the transcription adopted in this grammar (and the online corpus and dictionary) is based on the slow syllable-by-syllable pronunciation of these words by Tshendzin. Two inalienably possessed nouns, however, *ta-ma* ‘work’ and *ta-mar* ‘butter’, have the *ta-* allomorph with an initial *m-*, probably originally due to vowel assimilation (§3.3.1.2, §3.5.4).

The minimal pair between *tx-ma* ‘mother’ and *ta-ma* ‘work’ shows that this vowel contrast, however marginal, is distinctive, and that even if the two allomorphs *tx-* and *ta-* were originally phonologically conditioned, it is no longer the case in Kamnyu Japhug.

Some inalienably possessed nouns never occur with indefinite possessor prefixes, for instance *u-tʰox* ‘ground’ is only attested with the 3SG *u-* prefix (see §5.1.2.11). In some cases, the indefinite possessor form is difficult to elicit and in case of doubt the third singular form is given in the dictionary Jacques (2015–2016) (for instance *u-mdox* ‘colour’). Future research may reveal an indefinite possessor form for some of these nouns.

When denominal verbs are derived from inalienably possessed nouns, the vocalism of the denominal prefix tends to be the same as that of the indefinite possessor prefix (for instance *tx-βju* ‘mattress’ → *nɣβju* ‘use as a mattress’, not *†muβju*), though there are exceptions (*tu-rpax* ‘shoulder’ → *mɣrpax* ‘carry on the shoulder’), as discussed in §20.6.

By analogy with several non-finite verb forms, in particular the subject participle of transitive verbs and the bare infinitive, which index one argument (the

5 Nominal morphology

object) by a possessive prefix (§16.2.2), the possessors of inalienably possessed nouns are considered to be *core arguments*, while those of alienably possessed nouns are treated as *adjuncts*. In other words, inalienably possessed nouns have a valency of 1 like intransitive verbs, while alienably possessed nouns have a valency of 0.⁷ The indefinite possessor prefix can be viewed as a valency-decreasing device, the nominal equivalent of passive and antipassive derivations, especially given its use in the alienabilization of inalienably possessed nouns (see §5.1.2.9). Wider implications of the assumption that possessors of inalienably possessed nouns are core arguments are explored in §24.6.

5.1.2.2 Inalienabilization

Derivation from alienably possessed to inalienably possessed nouns is not common in Japhug. An interesting case is that of *u-ble* ‘reputation’, which originates from the alienably possessed *qale* ‘wind’ with a reduced form *ɣ-* of the class prefix *qa-*, as some second members of compounds (see §5.4.3.2 and §5.6).

Conversion of counted nouns (§7.3) to inalienably possessed nouns is a regular process (§7.3.4.1).

5.1.2.3 Body parts

The great majority of body parts are inalienably possessed nouns with the indefinite possessor *tu-*. These include native words, but also borrowings from Tibetan such as *tu-q^hoɣpa* ‘organs, state of mind’ from Tibetan རྩོམ་པ་ *k^hog.pa* ‘innards’ (see §3.4.2 on the phonology of this word).

Among body parts, inalienably possessed nouns selecting the prefix *tr-* are mainly liquids from the body such as *tr-se* ‘blood’, *tr-spu* ‘pus’ and *tr-lu* ‘milk’ (though some liquids also take the prefix *tu-*, for instance *tu-ɕtɕi* ‘sweat’), hair (*tr-rme* ‘hair’, *tr-kɣrme* ‘head hair’ and some animal body parts (*tr-jme* ‘tail’, *tr-ŋkuu* ‘pig skin’, *tr-rk^hom* ‘feather rachis’).

Parts of plants on the other hand mainly have the prefix *tr-*, as *tr-jwaɣ* ‘leaf’, *tr-tsru* ‘sprout’, *tr-zrɣm* ‘root’ etc.

Alienably possessed nouns are rare among body parts. Some nouns with the *qa-* class prefix (see §5.6) such as *qame* ‘mole’ and *qambyo* ‘earwax’ referring to physical defects or excretions from the body are alienably possessed nouns. A similar situation is observed in Koyukon Athabaskan, where nouns ‘denoting certain temporary or abnormal parts of the body’ are also alienably possessed

⁷On nominal valency and inalienability, see also Gutman (2018: 30-31).

noun (Thompson 1996: 660), though in Koyukon this subclass is considerably larger than in Japhug.

The compound *tuciste* ‘amniotic sac’ from *tu-ci* ‘water’ and *tr-ste* ‘bladder’ has a *tu-* which is originally an indefinite possessor prefix (see §5.1.2.11), but which has become frozen after being integrated into a compound (§5.1.2.10), as can be shown by (17).

- (17) *u-tuciste* *c^hy-ndzyaβ*
 3SG.POSS-amniotic.sac IFR-ACAUS:squeeze.out
 ‘Her waters have broken.’ (elicited)

5.1.2.4 Kinship terms

The great majority of kinship terms select the indefinite possessor prefix *tr-* or *ta-* (see chapter 27 for a description of the kinship system). The only kinship terms in *tu-* are *tu-me* ‘daughter’ (but this form is not attested in the text corpus) and *tulxt* ‘second sibling’; however, the *tu-* prefix in the latter word has become non-analyzable and this word has become an unpossessible noun (see §5.2).

There are other unpossessible nouns among kinship terms, including *wo~~t~~aβ* ‘(bad) stepmother’, which derives from *tr-~~t~~aβ* ‘mother’s sister’ by replacing the possessive prefix with an unidentified element *wo-*, and the social relation collectives (§5.7.8.1). Being a unpossessible noun, *wo~~t~~aβ* ‘(bad) stepmother’ cannot take possessive prefixes, and the forms of *tr-~~t~~aβ* ‘mother’s sister’ are used instead (*a-~~t~~aβ* can mean ‘my (bad) stepmother’).

Kinship terms do not commonly occur with the indefinite possessor prefix. For those denoting spouses, forms with the indefinite prefix are found in the expression ‘look for a wife/husband’, as in (18).

- (18) ‘*noj tu-ce?*’ *to-ti*, ‘*azo tr-rzaβ* *u-ku-car*

 ‘She said: ‘Where are you going?’; He said: ‘I am looking for a wife.
 Where are you going?’; She said ‘We are looking for a husband.’
 (2003-kWBRa)

5 Nominal morphology

Kinship terms⁸ also occur with the indefinite possessor prefix to talk about family relationships in abstract terms, as in (19) (see also 56 below). Note that in this example the verb is in the generic transitive subject form (§14.3.2.5). The kinship terms in this sentence cannot take the generic possessor prefix *tu-*, since only one argument in a given sentence can be generic (§14.6.2). If the generic possessor forms (*tu-rpuu* ‘one’s maternal uncle’ and *tu-ftsau* ‘one’s sister’s child’) were used instead, the meaning would be different (‘One’s uncle cannot marry one’s nephew’), as it would include the speaker as a potential possessor.

- (19) *tx-rpuu* *c^ho* *tx-ftsau* *ni ci kú-wy-pa*

 NEG-INF:STAT-be.possible SENS-be
 ‘Maternal uncles and sister’s children cannot marry each other.’ (140427
 kWmdza stWnmW) {0003844#S14}

Some kinship terms have an extended meaning when they take the indefinite possessor prefix: they can alternatively be used to denote a class of humans based on gender and age. The noun *tx-tɕu* ‘son’ also commonly means ‘boy’ or even ‘male human’ (regardless of age). The nouns *tx-wa* ‘father’ and *tx-mu* ‘mother’ can denote older people without reference to their children; translations such as ‘old man’ and ‘old lady’ are more appropriate in these cases, for instance in (20). The same applies to *tx-wuu* ‘grandfather’ and *tx-wi* ‘grandmother’.

5.1.2.5 Relator nouns

Relator nouns are a subset of inalienably possessed nouns which have been grammaticalized as quasi-adpositions and compensate for the relative dearth of postpositions in Japhug (§8.2). Some are used to express basic grammatical relations (such as the dative, §8.3.1), as well as most locative and temporal relations with noun phrases and subordinate clauses (§8.3.4, §25.3.4.1). A list of relator nouns and a detailed account of their functions is presented in §8.3.

⁸The glosses used to describe kinship terms are explained in chapter 27 (Table 27.1).

5.1.2.6 Complement-taking nouns and relativizers

Inalienably possessed nouns can take nominalized or finite clauses as prenominal modifiers. When the head inalienably possessed noun is at the same time an argument or an adjunct inside its modifying clause, that clause is considered to be a prenominal relative (§23.4.2). The generic inalienably possessed noun *u-spa* ‘material’ is in the process of becoming a relativizer when occurring with a prenominal relative (§23.2.4). In other Gyalrongic languages, such as Khroskyabs (Lai 2017: 519), former generic nouns have become fully grammaticalized as relativizers (see §16.1.3.10, §23.2.4).

When the head noun is not a participant of the clause, the modifying clause is a complement clause (§24.6, see Jacques 2016a: 239–241). Inalienably possessed nouns selecting complement clauses include for instance *u-skʷt* ‘language, noise’ or *u-ɸjiz* ‘wish’ (§24.6.3).

The inalienably possessed noun *u-mdoɕ* ‘colour’ (from Tibetan མདོག *mdog* ‘colour’) has been further grammaticalized from a complement-taking noun to a sentence-final particle marker of epistemic modality ‘it looks like...’ (§21.8.3.1).

5.1.2.7 Property nouns

Property nouns are a subclass of inalienably possessed nouns that designate (mainly in a derogatory fashion) an entity that possesses a particular characteristic. They generally follow another noun as in (21) and (22), but not exclusively (25). In the /noun+property noun/ phrase, the latter is the syntactic head but semantically modifies the former (see §9.1.8 on the various attributes found in the noun phrase).

- (21) <penzi> *u-pu*, *ɣlanpʰɣn u-pu* *jamar pu-wxti*

 SBJ:PCP-exist not.exist:FACT
 ‘Now there is nothing [there], apart from some ruins and old walls.
 (140522 tshupa) {0004053#S58}

5 Nominal morphology

These phrases can be turned into compounds made of the first noun and a quasi-suffix corresponding to the property noun. All diminutive and derogatory suffixes described in §5.7.3 and §5.7.5 (Table 5.3) have corresponding property nouns. In the case of *sylapp^hɣn u-pu* from example (21) for instance, it is possible to say *sylapp^hɣn-pu* ‘little basin’ as one word. In some cases the non-final element is in bound state, as in *k^hɣnqra* ‘ruin’ from *k^ha* ‘house’ and *u-nqra* ‘broken one’, a form which occurs in (23), in the same text as (22) (referring to the same house). The opposite however is not always possible; for instance, lexicalized diminutives like *staxpu* ‘pea’ from *stox* ‘broad bean’ cannot be turned into a phrase with *u-pu* ‘little one’ as second element.

- (23) *tce nuu tytsovsta nuunu k^hɣnqra cti t^ham tce kuu-ryzi*

 not.exist:FACT
 ‘Now Tatsogsta (‘the place of silverweed’) is a house in ruins, nobody lives there.’ (140522 tshupa) {0004053#S56}

Property nouns are not necessarily always contiguous to the noun that they follow. In (24), the indefinite determiner *ci* (§9.1.4.1) redundantly occurs both after the constituent *ɣzuu kuu-xtɕu~xtɕi* (a relative clause, §9.1.8.3) and the property noun *u-pu* ‘the little one’. The nouns *ɣzuu* and *u-pu* are thus separated by the participle *kuu-xtɕu~xtɕi* and the determiner *ci*.

 INDEF SENS-be.AFF
 ‘Oh, this is [just] a little monkey.’ (18-04-28 xiyouji01-zh) {0006111}

The property nouns *u-do* ‘old one’ and *tr-mbe* ‘old thing’ differ in that the former one is used for living things (including animals and plants), while the second occurs with inanimate objects. The quasi-suffix *-rqu* is mainly used in *tu-cirqu* ‘cold water’.

The noun *u-jlu* ‘uncooked’ (used in particular with *stox* ‘broad bean’) has become grammaticalized as a restrictive focus marker (§9.1.6.5).

Property nouns are not commonly used with an indefinite possessor prefix; in attested examples, it is always *tr-*. Their origins are diverse: *u-pu* ‘little one’ derives from *tr-pu* ‘offspring, young’ (see §5.7.3), while *tr-mbe* ‘old thing’, *u-k^he*

Table 5.3: Property nouns and corresponding quasi-suffixes

Property Noun	Suffix
<i>u-pu</i> ‘little one’	- <i>pu</i> diminutive
<i>u-nqra</i> ‘broken one’	- <i>nqra</i> derogatory
<i>u-do</i> ‘old one’	- <i>do</i>
<i>tx-mbe</i> ‘old thing’	- <i>mbe</i>
<i>u-k^{he}</i> ‘something nasty’	
<i>u-rqu</i> ‘cold thing’	- <i>rqu</i> other
<i>u-xso</i> ‘empty, normal’	
<i>u-jlu</i> ‘something uncooked’	
<i>u-maŋ</i> ‘in big groups’	
<i>u-rkoz</i> ‘something special’	

‘something nasty’ and *u-do* ‘old one’ originate from *mbe* ‘be old’, *k^{he}* ‘be stupid’ and *do* ‘be old (of plants)’ by deverbal derivation (§16.4.6). The property noun *u-maŋ* ‘in big groups’ derives from *maŋ* ‘be many’, itself from Tibetan མང་ *maŋ* ‘many’. Some *tx-* prefixed nouns of verbal origin like *txk^{he}* ‘idiot, fool’ (from *k^{he}* ‘be stupid’) may come from former property nouns.

The property noun *u-xso* ‘empty, normal’ is related to the verb *so* ‘be empty’; it originally comes from its subject participle (the regular form *ku-so* ‘empty’ is still attested) with loss of vowel and fricativization of the velar participle prefix (see §16.5.2). It had no corresponding quasi-suffix, but does appear as second element in some compounds (see for instance §5.7.8).

The most common meaning of *u-xso* is ‘normal, usual, common’, a meaning already very different from the base verb. It occurs both before and after the noun with which it is linked (compare 25 and 26). It is also used adverbially, meaning ‘usually’ or ‘without doing anything’ (27).

The obsolete property nouns **u-te* ‘big’ is not productive, but traces of it are still attested in some compounds (§5.7.4).

5.1.2.8 Exclamative inalienably possessed nouns

A small class of inalienably possessed nouns in Japhug occur as exclamative verbless nominal predicates (§22.3), sometimes with the sentence final particle *nu* (§10.4.5). This class includes degree nominals (§26.1.2.1), as well as the non-derived *tu-scawa* ‘poor *X*’ and *tu-k^{hi}* ‘lucky *X*’.

The inalienably possessed noun *tu-scawa* ‘poor *X*’ only occurs in the exclamative constructions, as in (29) and (30). In example (29), the possessive prefix is coreferent with the entities that experience suffering (the pigs).

- (29) *tsuku ku pavndza nu-nu-p^hut-nu nu-ηu ri, pav ra*

5.1.2.9 Alienabilization

It is possible to turn an inalienably possessed noun into an alienably possessed one by adding a definite possessor prefix before the indefinite one; this is the only case of possessive prefix stacking in Japhug. This process is very productive, and better illustrated by minimal pairs; the following examples involve the inalienably possessed nouns *tu-ci* ‘water’, *tx-lu* ‘milk’ and *tx-muj* ‘feather’.

5 Nominal morphology

The noun *tu-ci* ‘water’ with a definite possessor (*u-ci* ‘its juice/water’) refers either to the juice of a plant, or to water in which a plant has been soaked as in (34)

 ‘The younger boy’s feather fell back on the ground again.’ (140510
 sanpian yumao) {0003947#S65}

As the examples above show, alienabilized inalienably possessed nouns occur to refer to disconnected or severed body parts, for instance body parts removed from an animal that are used or owned by a human or another animal on which they do not grow. They are also used for bodily fluids that have left the body, or also clothes that are not worn but held in the hand. Similar phenomena are observed in other Gyalrong languages (see Sun 1998: 140 on Tshobdun).

The referent marked by the possessive prefix can be beneficiary as in (37) or possessor as in (39). Alienabilization is also observed with pronominal modifiers (§5.1.4), in compounding, when the indefinite possessor prefix of an inalienably possessed noun is preserved in the final member of the compound (see §5.4.3.1), in comitative adverbs derived from inalienably possessed nouns (§5.8.1) and in conversion from inalienably possessed noun to counted noun (§7.3.4.1). A related

5 Nominal morphology

phenomenon is also the optional neutralization of possessive prefixes in relative clauses (§23.3.4).

A lexicalized way of alienabilizing nouns is by compounding with a generic possessor. For instance, *pyɣmuj* ‘feather’ is an alienably possessed noun built from the bound state of *pya* ‘bird’ with the inalienably possessed noun *tx-muj* ‘feather’. Here the first element of the compound *pyɣ-* saturates the inalienable possessor without need to use the prefix *tx-*.

5.1.2.10 Frozen indefinite possessors

Alienably possessed nouns with a disyllabic root whose first element is *tu-* or *tx-*, with the exception of loanwords such as *tursa* ‘grave’ (from ཏུར་ས་ *dur.sa* ‘grave’), are mainly ancient inalienably possessed nouns whose indefinite possessor prefix *tu-* has become frozen and reanalyzed as part of the root. Comparison with other Gyalrong languages can demonstrate that such reanalysis took place in Japhug.

For instance, the noun *turme* ‘person’ is alienably possessed in Japhug (as shown by examples such as 40), but in the Situ language the 3SG form of *tə-rmî* ‘man’ is *wə-rmî* (Lin 2009: 183;197), showing that *tə-* is the indefinite possessor prefix, cognate of Japhug *tu-*.

- (40) *ci nu tx-tɕu nu ɣawo, nunu azo a-turme nu*
 one DEM INDEF.POSS-boy DEM INTERJ DEM 1SG 1SG.POSS-man DEM
a-pu-ŋu ndɣre, nu u-tu-pe nu
 IRR-IPFV-be LNK DEM 3SG-NMLZ:DEG-be.good FSP
 ‘That boy, if only he could be my man, it would be so nice.’ (2014-kWLAG)

This shift may be due to the fact that the 3SG form is used in Situ in constructions where the non-possessed form is preferred in Japhug, such as in prenominal relatives (Lin 2009: 190), and was therefore less prone to lexicalization. The stem *-rme* of *turme* ‘person’ is still attested as second element of compounds like *tu-pɣrme* ‘one year of life’ (whose first element *pɣ-* is related to the stem of *tu-xpa* ‘one year’, §7.3.1.7).

The noun *txjmxɣ* ‘mushroom’ is alienably possessed, but the stem *jmxɣ-* appears as first element of compounds such as *jmxɣni* ‘russula’, suggesting that it was formerly inalienably possessed and occurred without its indefinite possessor prefix in this compound (see §5.4.2.4). The status of *txjmxɣ* ‘mushroom’ as a former inalienably possessed noun is less surprising if one takes into account the likely etymological relationship with Chinese 帽 *mawH* ‘hat’ (from **mʰuk-s*; etymology suggested by L. Sagart; see also the Tibetan cognate རྩལ་ *rmog* ‘helmet’,

Zhang et al. 2019). If the noun for ‘mushroom’ in Japhug and other Gyalrongic languages comes from ‘hat’ (cf Breton *tog touseg* ‘toad hat’ for ‘mushroom’), it is expected that it would become an inalienably possessed noun (like *tr-rte* ‘hat’), and for the indefinite possessor *tr-* to become frozen after the noun ceases to be a term for head covers.

5.1.2.11 Unusual inalienably possessed nouns in Japhug

While it is crosslinguistic expected that nouns of body parts or kinship terms are inalienably possessed, we also find in Japhug inalienably possessed nouns denoting natural entities such as *tu-ci* ‘water’, *tu-mu* ‘sky, weather’ or *u-tʰoɣ* ‘ground’, a highly unusual fact. There is no grand insight about Gyalrong *Weltanschauung* to be gained from this observation however; explanations should be sought in the etymology of these words, and solved on an item per item basis.

The noun *tu-ci* ‘water’ also means ‘juice’ or ‘water in which *X* has been soaked’ with a definite possessor, as was seen in §5.1.2.9. Cognates are found in Core Gyalrong languages, but not in West Gyalrongic (Stau *ɣrə* and Wobzi Khroskyabs *jdâ*, Jacques et al. 2017: 610) or elsewhere in the family, and it is therefore a good candidate for a Core Gyalrong lexical innovation.

Japhug has a transitive verb *ci* ‘pour completely’ (of grains or liquids), from which a bare action nominal **u-ci* ‘(liquid/grain) that has been poured out’ could have been regularly derived (see §16.4.6; similar to *u-ndzu* ‘instruction, advice’ from *ndzu* ‘educate’ in example 41 below). The meaning ‘water’ would then be trivial narrowing of the meaning of this noun ‘water poured out’, then replacing the older term for ‘water’ still preserved in West Gyalrongic. Bare action nominals being inalienably possessed nouns (§16.4.6), the form of *tu-ci* ‘water’ accounted for by this etymology.

The stative verb *aci* ‘be wet’ is then derived, after the semantic narrowing, from the noun *tu-ci* ‘water’ by denominal derivation (§20.2.1) – despite superficially looking like a passive of *ci* ‘pour completely’ (of grains or liquids) (§18.1), it is only indirectly derived from it.

Concerning *tu-mu* ‘sky, weather’, it superficially resembles a noun with non-analyzable *tu-* prefixal element, but the status of this element as an indefinite possessor prefix can be ascertained with rare examples such as (41). In addition, note the compound *kundzarmu* ‘type of rain’ contains the root *-mu* as its last syllable (see a precise definition of this noun and a discussion of its etymology in 51, §16.1.1.7).

5 Nominal morphology

- (41) *u-ndzu* *mɣ-ku-sɣŋo* *u-mu*

mbut
 ACAUS:take.off:FACT
 ‘Those who do not listen to advice from other people do not end well.’
 (‘their sky falls’) (elicited)

There is no clear explanation of how this noun come have become inalienably possessed, but I propose here a tentative etymology. Cognates of *tu-mu* ‘sky, weather’ are attested elsewhere in the Trans-Himalayan family, but mainly in languages that poorly preserve presyllables (for instance Yongning Na *mɣʔ*, Michaud 2017: 132). Yet, in Rawang, among the conservative languages, has a word *dvmø* ‘celestial being’ (LaPolla & Poa 2001: 13), with the same vowel correspondence to Japhug /-u/ as *sharø* ‘bone’ with *ɕɣru* ‘bone’. Moreover, the name *ɕɕ* *dmu*, attested in Tibetan texts to refer to a type of divinity, is probably related to the Gyalrong etymon for ‘sky’ (Stein 1961: 63–64) and provides additional support for the antiquity of a dental presyllables in this etymon.

If *dvmø* and *ɕɕ* *dmu* are indeed cognate with Japhug *tu-mu* ‘sky, weather’,⁹ this noun may originally have been disyllabic, and its first syllable reinterpreted as indefinite possessive; the form *u-mu* ‘his sky’ in (41) would then be a backformation, an idea compatible with its very marginal character.

The Japhug noun *u-tʰoɕ* ‘ground’ cannot take any possessive prefix other than 3SG *u-*, not even the indefinite possessor prefix. It has no known cognates in other Gyalrongic languages, but it is a perfect match for a Tibetan word with the shape *tʰog* (compare the other borrowed noun *tʰoɕ* ‘thunder’ from Tibetan *ཐོག་* *tʰog* ‘thunder’). Two etymologies accounting for the possessive prefix on *u-tʰoɕ* can be proposed. On the one hand, it could be a bare action nominal (§16.4.6) from the transitive verb *tʰoɕ* ‘stamp on’. On the other hand, it could alternatively be a borrowing from Tibetan, a hypothesis requiring a four step scenario.

First, Japhug borrowed the Tibetan relator noun *ཐོག་ཏུ་* *tʰog(tu)* ‘on’ as *u-tʰoɕ* *‘on’ (not attested), adding a third person possessive prefix like all relator nouns (see §8.3). This relator noun was in competition with the existing native equivalent *u-taɕ* ‘on, above’.¹⁰

⁹Another potential cognate could be Rawang *muq* ‘sky, thunder’, but the final glottal stop transcribed *-q* is from a former **-k*, and this word is better compared to Situ *ta-rmök* ‘thunder’ (Zhang 2016: 73)

¹⁰It is not surprising in Japhug to have several competing relator nouns for the same functional slot; the same is true of the dative *u-ɕki* and *u-pʰe*, see §8.3.1.

Second, it became restricted to the collocation **sytɕ^ha u-t^hoɕ zu* ‘on the ground’ (not attested), with the native locative *zu* and the noun of Tibetan origin *sytɕ^ha* ‘earth’.

Third, the tautological collocation **sytɕ^ha u-t^hoɕ zu* ‘on the ground’ was reduced to *u-t^hoɕ zu* ‘on the ground’ (attested).

Fourth, the noun *u-t^hoɕ* ‘ground’ was created by backformation from the locative phrase *u-t^hoɕ zu* ‘on the ground’. The fact that the locative postposition /zu/ is always optional (§8.2.4.1) made this step less unlikely. Thus, Japhug possibly attests an example of degrammation (see Norde 2009: 135) from a relator noun meaning ‘on’ (with or without motion) to a common noun meaning ‘ground’.

The etymologies discussed above suggest that inalienably possessed nouns referring to natural phenomena in Japhug were created by unrelated pathways.

5.1.2.12 Adverbial inalienably possessed nouns

Some inalienably possessed nouns can be used adverbially (§22.2). In this function, the possessive prefix can be neutralized to indefinite possessor or third singular possessor, as *u-stu* ‘truth, truly’ in (42), but in some cases it can also be coreferent with an argument, and different inalienably possessed nouns display different alignment patterns.

- (42) *koŋla u-stu zo a-puu-tu-rx-βzjoz, <zuoye>*
 really 3SG.POSS-truth EMPH IRR-PFV-2-ANTIP-study homework
a-puu-tu-βze,
 IRR-PFV-2-do[III]
 ‘Study seriously, do your homework.’ (conversation 140501)

The prefix of the inalienably possessed noun *u-stu* ‘truth, truly’ can be coreferent with the singular or the transitive subject (like the 2SG prefix *nr-* in 43), but never with the object, thus displaying an accusative alignment.

- (43) *nxzo nx-stu zo u-puu-ku-nu-rga-a nx,*
 2SG 2SG.POSS-really EMPH QU-IPFV-2→1-APPL-like-1SG LNK
 ‘If you really love me,...’ (150907 yingning-zh) {0006264#S136}

On the other hand, *u-βra* ‘it is X’s turn to...’ presents a neutral alignment pattern: the possessive prefix can be coreferent with the intransitive subject, the object (as in 44), or the transitive subject (45).

5 Nominal morphology

- (44) *icq^ha nɣ-zda nuw puw-sat-a ɲu tce, t^ham tce*

- (45) *nɣj nɣ-βra tɣ-ndze*
 2SG 2SG.POSS-turn IMP-eat[III]
 ‘It is your turn to eat.’ (elicited)

Thus, the alignment pattern of each adverbial inalienably possessed noun must be specified.

5.1.2.13 Biactantial inalienably possessed nouns

A few inalienably possessed nouns, such as words designating speech or presents, select more than one argument, and can be considered to be the nominal equivalent of ditransitive verbs (if alienably and inalienably possessed nouns are compared to intransitive and transitive verbs, respectively, §5.1.2.1). Since only one argument however is marked by a possessive prefix on the noun (possessive prefix stacking is not possible except for alienabilization, see §5.1.2.9) a choice has to be made as to which of the two arguments, the speaker/giver or the addressee/recipient, is marked on the noun.

The possessive prefix of inalienably possessed noun *tx-pyro* ‘present’ always marks the giver; the recipient of the present (which is optional) receives genitive case.

For instance, in (46) the genitive pronoun *nɣzuw* encodes the recipient, and the 1SG possessive prefix on the noun is coreferent with the subject of the main verb. In (47), the recipient is not overt, and the 2SG prefix on the noun is again coreferent with the transitive subject of *yut* ‘bring’.

- (46) *nɣzuw a-pyro t^hi ju-yut-a ra?*
 2SG:GEN 1SG.POSS-present what IPFV-bring-1SG be.needed:FACT
 ‘What present should I bring for you?’ (140504 huiguniang-zh)

- (47) *nɣzo duwpa puw-tuw-tu ma li nɣ-pyro jɣ-tuw-yut!*
 2SG hardship PST.IPFV-2-exist LNK again 2SG.POSS-present AOR-2-bring
 ‘Thank you, you brought another present [for me].’ (elicited)

Other biactantial nouns use possessive prefixes to indicate the recipient rather than the agent. For instance, the inalienably possessed noun *rx-rkuz* ‘parting present’ (a rare example of *-z* nominalization suffix in Japhug, see §16.5.1) always marks the recipient, as in (48), never the agent – the form *nr-rkuz* ‘your parting present’ with 2SG possessive prefix can only mean ‘a parting present for you’, not ‘the parting present you give to me/him’.

- (48) *kuuki nr-rkuz ηu*
 DEM:PROX 2SG.POSS-parting.present be:FACT
 ‘This is a parting present for you.’ (28-smAnmi) {0004063#S248}

In other cases, the alignment of possessive prefixes on an inalienably possessed noun depends on the particular construction where it appears. For instance, the inalienably possessed noun *tu-tɕ^ha* ‘information, news’ (about someone) marks the recipient when used with the verbs *k^ho* ‘give’ or *tu* ‘exist’, but has neutral alignment in other contexts. In (49), the indirective verb *k^ho* ‘give’ (§14.4.1) does not index the recipient, whose only mark is the possessive prefix on *a-tɕ^ha* ‘news for me’. Changing the prefix to the third singular *u-* to refer to the subject here would be ungrammatical (see however §2.8.5 and §24.2.5.2 on hybrid indirect speech).

- (49) *a-tɕw kw a-tɕ^ha mu-na-k^ho.*
 1SG.POSS-SON ERG 1SG.POSS-news NEG-AOR:3→3’-give
 ‘I have not heard from my son.’ (‘My son did not give me any response.’)
 (elicited)

However, in other constructions, there are no such constraints on the use of possessive prefixes on *tu-tɕ^ha* ‘information, news’ (about someone): for instance, with the verb *yut* ‘bring’ (§24.6.3.2) in (50), although the recipient is second person dual, *u-tɕ^ha* takes the 3SG prefix, coreferent with the preceding complement clause (using second person singular *nr-tɕ^ha* here would be ungrammatical).

 ‘Don’t cry, I will go up there, ask whether your parents will scold you and come back to tell you.’ (2003-kWBRa)

5 Nominal morphology

Alignment effects are also found with alienably possessed nouns. For instance, the alienably possessed *skurma* ‘present’ can also optionally take a possessive prefix, which is always coreferent with the recipient, not with the agent, as shown by (51), where *ny-mu yu u-skurma* means ‘a present (sent) to your mother’ and *a-skurma* can only mean ‘a present sent to me’ (from a text explaining the meaning difference between *skurma*, *tx-pyro* and *tx-rkuz*).¹¹

‘When I prepare something for your mother and you take it to her, [I can say] ‘I sent a present to you mother’, if your mother prepares something and you bring it [to me], it is ‘a present sent to me.’ (def-skWrma)

Other inalienably possessed nouns of this type include *tu-nja* ‘debt’ (§16.4.6, used with the verbs *ɬso* ‘pay’, *ɬob* ‘come out’ and *sti* ‘block’), which select as possessor the person owing money (rather than the one to whom one owes money), and *u-p^hup^hu* ‘alms’, whose possessor is the person receiving alms (example 78, §19.4.1).

5.1.3 Indefinite vs. generic possessor

The generic possessive prefix *tu-* is formally identical to the indefinite possessor prefix of some inalienably possessed nouns, but must be strictly distinguished from it. Five criteria can be used to determine if a *tu-* prefix is generic, rather than indefinite.

First, generic possessors are coreferent with the generic argument indexed on the verb, by the prefix *ku-* for intransitive subject and object and the inverse prefix *wyu-* for transitive subject (§14.3.2.5): there can only be one generic argument in a given clause (see also 15, §6.2.1).

¹¹Japhug has three words that can be translated as ‘present’: *tx-pyro* is used for presents one give to the recipient in person, *tx-rkuz* is a parting present one gives before a person leaves a place, and *skurma* is a present given with the help of a third party.

For instance, in (52), we know that the *tu-* prefixes in *tu-mtɕ^{hi}* ‘one’s mouth’ and *tu-ɕya* ‘one’s teeth’ are generic and not indefinite possessors because they refer to the same generic human as the transitive subject of the verbs *p^hut* ‘take out, cut’ and *ndza* ‘eat’ in the previous clause, marked by the inverse prefix (§14.3.2.5).

 IPFV-CAUS-be.black be:FACT
 ‘One can pluck it and eat it, but it causes one’s mouth and teeth to become black.’ (11-qarGW) {0003480#S58}

Second, the generic possessor prefix appears on alienably possessed nouns, as in example (53) with *tu-k^ha* ‘one’s house’ and *tu-laɣtɕ^ha* ‘one’s things’, the generic forms of *k^ha* ‘house’ and *laɣtɕ^ha* ‘thing’.

 CAUS-be.dirty:FACT
 ‘(Flies) land everywhere, shit and make one’s houses and things dirty.’ (25 akWzgumba) {0003632#S56}

Third, the generic *tu-* occurs on inalienably possessed nouns that normally select the *tv-* indefinite possessor prefix, such as *tu-rjit* ‘one’s child’ and *tu-rpu* ‘one’s maternal uncle’ in examples (54) and (55), by contrast with the citation forms *tv-rjit* ‘child’ and *tv-rpu* ‘mother’s brother’.

 ‘If you are the maternal uncle’s son, (and I am the nephew) I have to
 address [you] as ‘my uncle.’ (140425 kWmdza)

Fourth, in the case of inalienably possessed nouns whose indefinite possessive is *tu-*, such as *tu-mte^{hi}* ‘mouth’, the indefinite and generic forms are homophonous, but are nevertheless distinguishable. In the case of a generic form the generic pronoun *tuzo* ‘one’ (§6.2.1) can always be added as in (57).

- (57) *tuzo syz ku-mna, ku-vzuɣtso ra a-pu-ŋu ny, tuzo*

 ‘If [one gets this disease after using the bowl of] someone who is cleaner
 than oneself, the [pimple] will appear on one’s upper lip.’ (25-khArWm)
 {0003644#S9}

Additionally, a generic noun such as *turme* ‘person’ can occur as possessor of a noun with a generic possessive prefix as in (58). This usage is similar to that found in other generic constructions.

- (58) *turme yu tu-ca u-mdob tsa asu-ndo*

ku-fse
 SBJ:PCP-be.like
 ‘It has a little the colour of human flesh.’ (14-sWNgWJu) {0003506#S91}

Fifth, possessed case markers such as the dative *u-ɕki* (§8.3.1) do not have indefinite possessive forms, and therefore if prefixed in *tu-*, it will always mark a generic possessor, as in (59) – such forms are often preceded by the generic pronoun *tužo* ‘one’ anyway.

5.1.3.1 The generic possessor as a first person marker

As in the generic verbal forms (§14.6.1.4, §14.6.2), the generic possessive prefixes can be used as an indirect way to express first person singular or plural. In example (60) the generic as first person and the first person are used in two contiguous clauses, both referring to the narrator.¹²

- (60) *tce tu-mu tu-wa ra tu-rkuu*
 LNK GENR.POSS-mother GENR.POSS-father RA NEG:SENS-stay-PL

 LNK 1SG 1SG.POSS-grandmother INDEF PST.IPFV-exist
 ‘My parents were not by my side, but I had a grandmother [to take care of me].’ (2010-09)

5.1.3.2 Comparative perspectives

Indefinite and generic possessive dental stop prefixes are found in all Gyalrong languages (Sun 1998), but only indirect traces thereof exist in Khroskyabs (Lai 2017: 155).

Outside of Gyalrongic, potential cognates of these prefixes include the ‘relational prefix’ *tə-* in Ao (Coupe 2007: 84–85, as first noticed by Wolfenden 1929: 141–142) and some *d-* or *g-* prefixes in body parts in Tibetan (see Jacques 2014d).

5.1.4 Prenominal modifiers

When prenominal modifiers occur with inalienably possessed noun, this head noun can either take a 3SG possessive prefix, or undergo alienabilization (§5.1.2.9).

¹²On the phrase *tu-mu tu-wa* in (60), see §9.2.2.2.

5 Nominal morphology

Thus in (61) we find $\chi s\gamma r$ *tx-sno* ‘golden saddle’ with the indefinite possessor prefix *tx-*; $\chi s\gamma r$ *ui-sno* with the 3SG possessive prefix is also attested in the same text. Neutralization of possessors of alienably possessed nouns is also attested in relative clauses (§23.3.4).

- (61) $\chi s\gamma r$ *tx-sno* *t^ha-nuu-ta* *nuu-ŋu*,
gold INDEF.POSS-saddle AOR:3→3’-put SENS-be
‘He harnessed the golden saddle (on the horse).’ (2003 qachGa)
{0003372#S50}

However, when the whole modifier+head noun complex is possessed, the possessor is rarely marked by a possessive prefix on the head noun; rather, the prefix occurs on the leftmost noun of the phrase, as in (62), where the 1SG prefix *a-* occurs on the modifier $\chi s\gamma r$ ‘gold’, and alienabilization of the head noun *tx-rte* ‘hat’ (compare with the form *a-rte* ‘my hat’ when no prenominal modifier is present).

- (62) *a-rte*, *a-χsγr* *tx-rte* *ra kuuŋ nyzuŋ*
1SG.POSS-hat 1SG.POSS-gold INDEF.POSS-hat PL also 2SG:GEN

IPFV-give[III]-1SG be.possible:FACT
‘I will even give you my hat, my golden hat.’ (140429 qingwa wangzi-zh)
{0003890#S53}

When the head noun is an alienably possessed noun, it is not usual either to strand the modifier and the following noun by putting a possessive prefix on the latter. The possessor is normally indicated by a possessive prefix on the leftmost word. For instance in (63) the 2SG prefix *nγ-* occurs on the modifier $\chi s\gamma r$ ‘gold’.

- (63) *nγ-χsγr* *k^htutsa nuura* *ku-kuu-suu-ntc^hoz-a*
2SG.POSS-gold bowl DEM:PL IPFV-2→1-CAUS-use-1SG
‘Let me use your golden bowl.’ (140429 qingwa wangzi-zh) {0003890#S132}

However, we do find cases with a stranded NP modifier when the possessor on the head noun is first or second person, as in (64), where the prenominal modifier $\chi s\gamma r$ ‘gold’ does appear before the possessive prefix *a-*.¹³ This construction, though rarer, is considered to be acceptable by native speakers. Other examples are found with unpossessible modifiers (§5.2.1).

¹³The alternative form *a-χsγr kumtc^hu* is possible to express the same meaning, and does occur in the same text.

- (64) *nunu a-kumtc^{hu}, χsvr a-kumtc^{hu} nu^{nu} kχ-yut a-pu-tu-c^{ha}*

q^{he},
 LNK
 ‘If you can bring my toy, my golden toy back...’ (140429 qingwa
 wangzi-zh) {0003890#S51}

Note that unlike the inalienably and alienably possessed noun modifiers discussed above, *pronominal* pronominal modifiers (§6.8) do not take possessive prefixes that have scope over the head noun. For instance, with the modifier *kumaɁ* ‘other’, the possessive prefix must appear on the following noun, as second person *nχ-* on *slama* ‘student’ in (65).

- (65) *kumaɁ nχ-slama ci tu-tu-ndχm ju-tu-yut ú-ŋu*
 other 2SG.POSS-student INDEF IPFV-2-take[III] IPFV-2-bring QU-be:FACT
 ‘So you are bringing other students of yours?’ (conversation)

5.2 Unpossessible nouns

In addition to inalienably and alienably possessed nouns seen in the previous sections, Japhug also has a category of unpossessible nouns, which includes names of places and ethnic groups (as in Koyukon Athabaskan, Thompson 1996: 651), colour terms of Tibetan origin and some derived nouns like the ‘social relation collectives’ (§5.7.8.1). With the exception of colour terms (§5.2.2), these nouns can modify other nouns and are one of the three classes of ‘property words’ (corresponding to the adjectives of Standard Average European), alongside adjectival stative verbs (§2.2) and property nouns (§5.1.2.7).

5.2.1 Place names

Place names (*mbark^{hom}* ‘M Barkham’, *kχmŋu* ‘Kamnyu’ etc) and names of ethnic groups (such as *kurru* ‘Tibetan’ or *kupa* ‘Chinese’), like personal names, cannot take possessive prefixes when used independently. They can only be used with independent pronouns as in (66) or (72) below.

- (66) *izora ji-p^{he} kχmŋu nu^{tcu} <xiaoxue> <yinianji>*
 1PL 1PL.POSS-DAT TOPO DEM:LOC primary.school first.grade

 second.grade AOR-read-1SG
 ‘I studied the first and second grade of primary school at our place in
 Kamnyu.’ (140501 tshering skyid) {0003902#S12}

In (71) however, the modifier *faguo* ‘France, French’ (from Chinese) cannot be compounded with *tx-rmi* ‘name’ and cannot take possessive prefixes. This is a rare example where a noun modifier can be stranded from the stem of the head noun by a definite possessor prefix (§5.1.4).

Place names followed by the plural *ra* designate the people living in the place (72), even without *-pu* suffixation (§5.7.6). Example (72) also shows that in this usage, it is possible to use a personal pronoun in apposition as in *izo kymnyu ra* ‘we Kamnyu people’.

- (72) *izo kymnyu ra kwi tɕʰuχpri tu-ti-j ɲu. rcaqo ra cʰo mɲi*

5.2.2 Colour nouns

Colour names of Tibetan origin, such as *ldzan^hku* ‘green’ from ལྗང་གུ་ *ldzan.gu* ‘green’, *ɛmɣrsmuy* ‘dark red’ from དམར་སྐྱུག་ *dmar.smug* ‘dark red’ or *k^hatoβ* ‘variegated’ from ལ་རྟོག་ *k^ha.dog* ‘colour, multicolour’ designate objects or animals with a particular

colour. To serve as predicates, they need an existential verb (80), like participles of adjectival stative verbs of colour (81).

- (80) *u-muj nura wuma zo mpcyr, k^hatoɓ zo*

 multicolour.lace IPFV-GENR-say
 ‘[The laces] that are made of multicoloured thread are called *snalŋact^hɣβ*.’
 (30-rkAsnom) {0003754#S32}

The adjectival stative verbs in *aru-* derived from them (for instance *aruldzaŋkuu* ‘be green’, see §20.2.2) are as common as the colour nouns, and their participles are generally used as noun modifiers instead of the colour nouns.

5.2.3 Other unpossessible nouns

Unpossessible nouns other than proper names and colour terms include nouns occurring as postnominal modifiers like *tulxt* ‘second sibling’¹⁴ as in (83), and privative nouns in *-lu* described in (§5.7.1).

¹⁴In *tulxt* ‘second sibling’ the *tu-* element in this word is originally an indefinite possessor prefix, but has become lexicalized.

5 Nominal morphology

- (83) *nu-me tulyt nu ɲɣ-mbi-nu*
3PL.POSS-daughter second.sibling DEM IFR-give-PL
'They gave him their second daughter.' (2002 qaCpa)

Numerals under 99 are also unable to take possessive prefixes and serve as postnominal modifiers (§7.1.1), and can be considered to be a subclass of impossible nouns.

5.3 Personal names

This section focuses on three topics: the absence of vocative forms, the Tibetan origin of personal names, and their use with pronouns and possessive prefixes.

5.3.1 Vocative

Unlike other Gyalrong languages, Japhug does not have specific vocative forms for personal names and kinship terms. In Tshobdun, Sun (1998: 133) and Sun (2005: 53) reports that personal names in the vocative have stress retraction. The same is found in Khroskyabs (Lai 2017: 153). In Situ, inalienably possessed nouns have their possessive prefixes replaced by *a-* in vocative forms (Nagano 2003: 471, Prins 2016: 177).

In Japhug, due to the almost complete loss of contrastive stress (§3.7) and the fact that the 1SG possessive prefix has the form *a-* (§5.1.1) unlike in Tshobdun and Situ (where it is *ɲa-/ɲə-*), there is no specific vocative form for either personal names or kinship terms.

A prefix *a-* does occur in the familiar form of personal names (reminding of Lin's 1993: 162 description of this prefix as a 爱称 'pet name' marker), but not exclusively in vocative use as in example (84) where we see the name *acɣβ* as transitive subject, familiar form of a Tibetan name with *scɣβ* as second element (see §5.3.2 below).

- (84) *ku-lɣy acɣβ nu ku, u-p^huŋgu nutcu*
SBJ:PCP-graze Askyabs DEM ERG 3SG.POSS-fold.of.clothes DEM:LOC

pebble.from.flint INDEF AOR:3→3'-put.in SENS-be
'The shepherd Askyabs put a pebble in the folds of his clothes (to avoid forgetting what he had to told the king).' (Kunbzang)

Since similar *a-* prefixes exist in Tibetan and Chinese, and since personal names are exclusively borrowed from one of these languages (there are no clear remnants of native personal names in Japhug), it is likely that the familiar form of the names was also borrowed.

5.3.2 Tibetan names

Speakers of Japhug generally have Tibetan names (*kuuru u-rmi* or *kuuru-rmi*, §5.2.1), and in addition a Chinese official name which may or may not be related to the Tibetan one (see 69 §5.2.1 on the use of ethnic or countries names as prenominal modifiers with the inalienably possessed noun *tr-rmi* ‘name’). Buddhist or Bonpo monks are also given religious names (in Japhug *χpuun u-rmi*, see 85).

- (85) *tce χpuun u-rmi nuu, azo a-rmi nu stɣnbijima*
 LNK monk 3SG.POSS-name DEM 1SG 1SG.POSS-name DEM ANTHR

 AOR-INV-give.name-1SG-PL
 ‘They gave me the name Bstanpa’i nyima as my monk name.’ (160721
 XpWN) {0006181#S36}

In one traditional story, we find an example of person names based on Japhug words as in (86), but it looks so strange that the narrator felt it necessary to specify that these are people’s names.

- (86) *zryntɕur turme ci pjɣ-tu, tupɕi ku-rmi ci*
 mung.bean person INDEF IFR.IPFV-exist flax SBJ:PCP-call INDEF
pjɣ-tu, turme nu-rmi ju-ŋu nɣ
 IFR.IPFV-exist people 3PL.POSS-name SENS-be SFP
 ‘There was [a lady] was called ‘Mung bean’, and [another one] called
 ‘Flax’, these are names of people.’ (zrAntCW)

Names used by Japhug speakers are not markedly different from those found in other Tibetan areas. Lady names often include the suffixes *ltɕɣm*, *rcit* or *mtsʰu*, (from ལྷམ་ *ltɕam* ‘lady, sister’, རྣམ་ *skʰid* ‘happy’ and མཚོ་ *mtsʰo* ‘lake’), and there are also non-gender specific suffixes like *scɣβ* (from རྣམ་ *skʰabs* ‘protector’, for instance *tsʰuraj scɣβ* from མཚོ་རིང་རྣམ་ *tsʰe.rɨŋ.skʰabs* ‘p.n.’).

Many Tibetan names have alternative readings reflecting different reading traditions belonging to more than two layers (see §3.3.3 and Jacques 2004: 83–200 on the layers of Tibetan borrowings in Japhug). For instance, some people with the Tibetan name འཕྲིན་ལས་ *ʰpʰrin.las* ‘Karma’ are called *mpʰrulɣz* (with preservation

of the coda), other *mp^hruli* (with Amdo-type change to -i). The names however tend to have non-Amdo phonological features even for people of the younger generation. For instance, the name ཀུན་དགའ་ *kun.dga* ‘Ānanda’ is pronounced *kuŋga* without assimilation of the dental nasal to a velar nasal, and ཀུན་བཟང་ *kun.bzarŋ* ‘Sarvabhadrā’ is *kumuβzarŋ* with an anaptyctic vowel (§4.2.3.1).

5.3.3 Alienably possessed or unpossessible nouns?

Personal names superficially look like unpossessible nouns, as they do not usually occur with possessive prefixes, even when taking placenames as modifiers, as in *taβdo χpɿltɕin* ‘Dpalcan from Taqrdō’ (see 92 in §5.3.4)

Personal names commonly occur preceded by kinship terms which, being inalienably possessed nouns (§5.1.2.4), have a possessive prefix as in (87).

- (87) *a-nmaβ χpɿltɕin*
 1SG.POSS-husband ANTHR
 ‘My husband Dpalcan.’ (heard in context)

It is considered impolite to address someone from an older generation than oneself without adding a kinship term – for instance, the author of this grammar, being much younger, has to address the aforementioned Dpalcan as *a-βyo χpɿltɕin* with the 1SG form of *tr-βyo* ‘father’s brother’.

Although personal names rarely occur with possessive prefixes, there is no grammatical constraint against it. There is one such example in the whole corpus, in a conversation where a clarification was needed. Tshendzin asks about Dpalcan, younger brother of Tshering Sgrolma, but she does not understand at once, because Tshendzin’s husband is also called Dpalcan; thus Tshendzin says (88c) with the possessed form *nuu-χpɿltɕin* ‘your_{pl} Dpalcan’ to disambiguate between the two.

Given the existence of such forms, personal names are treated as a subclass of alienably possessed nouns rather than as unpossessible nouns. Only plural forms (*ji-χpɿltɕin* ‘our Dpalcan’, *zara nu-χpɿltɕin* ‘their Dpalcan’ etc) are attested.

5.3.4 Personal names and modifiers

Proper nouns are more often than not used without demonstratives and determiners (see §9.1.4.4). However, examples of person or place names taking the postnominal distal determiners *nu* or *numu* (§9.1.2) are not rare (89 and 90).

5.4 Bound state

The term *bound state* refers to the non-autonomous form of (mainly nominal, but also verbal and adverbial) roots occurring as non-final element of compounds.¹⁵

In Gyalrongic languages including Japhug, nominal compounds generally exhibit modifier-head order. Thus, the form undergoing bound state alternation in Japhug is often the modifier noun,¹⁶ except in Noun-Verb compounds where the second element is an adjectival stative verb.

This section presents the various types of alternations attested for first or other non-final members of compounds, in particular vowel alternation (the most common type). Additionally, exceptional changes to the final members of compounds are discussed in §5.4.3.

5.4.1 Vowel alternations in non-final members of compounds

Regular bound state in Japhug applies to open syllables, following the correspondences in Table 5.4.

Table 5.4: Regular bound state in Japhug

Base	SC	Example
/-a/	/-ɤ/	<i>βɣɤsni</i> ‘mill axle’ from <i>βɣa</i> ‘mill’ + <i>tu-sni</i> ‘heart’
/-e/	/-ɤ/	<i>tɕ^hemɤpu</i> ‘little girl’ from <i>tɕ^heme</i> ‘girl’ + <i>u-pu</i> ‘little one’
/-o/	/-ɤ/	<i>mbrɤsno</i> ‘horse saddle’ from <i>mbro</i> ‘horse’ + <i>tɣ-sno</i> ‘saddle’
/-u/	/-ɤ/	<i>tɣ-kɣrme</i> ‘head hair’ from <i>tu-ku</i> ‘head’ + <i>tɣ-rme</i> ‘hair’
/-i/	/-w/	<i>smuɣot</i> ‘light of the fire’ from <i>smi</i> ‘fire’ + <i>ɣot</i> ‘warm light’

Table 5.4 shows that vowels other than /i/ shift to /ɤ/, and /i/ to /w/.

In a few cases, /u/ can also alternate with /w/, as in *ɣɣtɕu-* which occurs in the expression *ɣɣtɕuikɣti* + *k^hu* ‘be obedient’ (more details on this form are provided in §6.6.6), the bound state of *ɣotɕu* ‘where’.

¹⁵The term *status constructus* or *construct state* is also used in Gyalrongic linguistics (Jacques 2012d, Lai 2017: 163–164, Gates & Kim 2018) to describe the same phenomenon, but I decided to follow the advice of a reviewer and to change it to avoid confusion with works such as Creissels (2006a), Creissels (2017a) or Gutman (2018: 30) in which ‘construct form’ refers to a specific form that is obligatory on the head noun in specific noun-modifier constructions (including with a possessive marker).

¹⁶In addition, in Japhug the possessed forms of nouns do not show morphological alternations (§5.1.1) with the only exception of *qale* ‘wind’ (§5.1.2.2).

5 Nominal morphology

The vowel /i/ also alternates with /ɣ/ in bound state, as in *qapryftsa* ‘centipede’ from *qapri* ‘snake’ and *tv-ftsa* ‘sister’s child’ or *tu-mɣmɣas* ‘astragalus’ from *tu-mi* ‘foot, leg’ and *tu-mɣas* ‘eye’.

Nouns ending in /-u/ never have a bound state form that is different from the base form, as for instance *tumuɣas* ‘slug’ from *tu-mu* ‘sky, weather’ and *pas* ‘pig’.

Vowel alternation in closed syllables is very rare, and affects only a few stems with /o/ as the main vowel (Table 5.5). The bound state *ɕɣm-* of *ɕom* ‘iron’ occurs in a few other nouns, but the form *stav-* (with internal sandhi to *stavχ-*, cf. §5.4.2.1) from *stov* ‘broad bean’ is unique.

Table 5.5: Irregular bound state in closed syllable stems

Base	SC	Example
/-ov/	/-av/	<i>stavpuu</i> ‘pea’ from <i>stov</i> ‘broad bean’ + <i>u-puu</i> ‘little one’
/-om/	/-ɣm/	<i>ɕɣmts^hov</i> ‘iron nail’ from <i>ɕom</i> ‘iron’ + <i>tvts^hov</i> ‘nail’

5.4.2 Other alternations

Apart from the regular vowel changes described above, four types of alternations are observed in non-final member of compounds: internal sandhi, coda loss, reduced forms and loss of the possessive prefix.

5.4.2.1 Internal sandhi in compounds

First, the first element of a cluster undergoes internal sandhi (§4.2.3.1, §4.3), with voicing and nasal assimilation as in Table 5.6.

There are cases of irregular internal sandhi attested only in lexicalized compounds. For instance *janntsɣrpa* ‘one-handed axe’ from *tu-jav* ‘hand, arm’, *u-ntsi* ‘one of a pair’ and *tu-rpa* ‘axe’, showing a rule /v/ → /ŋ/ / _ [+nasal] which is not productive in the language (as shown by words such *tu-javndzu* ‘finger’, also with *tu-jav* ‘hand, arm’ as first element).

5.4.2.2 Loss of codas in compounds

Coda loss is not a regular process in first elements of compounds. The following is a list of some of the most representative examples.¹⁷

¹⁷Further examples can be found in numerals (see §7.2 and §7.3.1).

Table 5.6: Internal sandhi in compounds

Type	Example	
Nasal assimilation	/t/ → /n/ / _ [+nasal]	<i>ts^hɣnmu</i> ‘ewe’ from <i>ts^hɣt</i> ‘goat’ + <i>mu</i> ‘female’
Voicing assimilation	/ɣ/ → /x/ / _ [-voiced]	<i>zruɣpu</i> ‘little louse’ from <i>zruy</i> ‘louse’ + <i>u-pu</i> ‘little one’
	/ʁ/ → /χ/ / _ [-voiced]	<i>tu-jaxpa</i> ‘palm’ from <i>tu-jax</i> ‘hand, arm’ + <i>pa</i> ‘down’
	/z/ → /s/ / _ [-voiced]	<i>mbrɣsts^hi</i> ‘rice gruel’ from <i>mbrɣz</i> ‘rice’ + <i>tu^hts^hi</i> ‘rice gruel’

- Loss of /-β/:
nqiaβ ‘dark side of the mountain’ + *zwɣɣ* ‘mugwort’ → *nqiazwɣɣ* ‘*Artemisia* sp.’
- Loss of /-t/:
xtuut ‘be short’ + *ɣɣi* ‘be long’ → *xtuɣɣi* ‘length’ (n)
ts^hɣt ‘goat’ + *ta-bru* ‘horn’ → *ts^hɣbru* ‘goat horn’
- Loss of /-z/:
qarts^haz ‘deer’ + *tu-ndzi* ‘skin’ → *qarts^hɣndzi* ‘deer hide’
- Loss of /-r/:
zwɣɣ ‘mugwort’ + *wɣrum* ‘be white’ → *zwɣɣrum* ‘*Artemisia* sp.’
ɕɣɣ ‘night’ + *u-χcɣl* ‘center’ → *ɕɣχcɣl* ‘middle of the night’
- Loss of /-ɣ/:
ɣɣmɣɣ ‘mushroom’ + *-sti* ‘alone’ → *ɣmɣɣsti* ‘species of mushroom’
tu-mt^hɣɣ ‘waist’ + *ɣɣɣβ* ‘attach’ → *tu-mt^hɣɣɣβ* ‘waistline of the trousers’
(where one can tuck things in)
- Loss of /-ʁ/:
ɕoʁ ‘buckwheat’ + *wɣrum* ‘be white’ → *ɕɣɣrum* ‘type of buckwheat’
paʁ ‘pig’ + *ɣ-qa* ‘paw, root’ → *pɣqa* ‘stuffed pig feet’

5 Nominal morphology

With the exception of the loss of *-t*, which is relatively common, the other cases are rare and cannot be predicted by any rule based on phonology (the presence of a cluster in the following element is irrelevant, for instance). Some of them occur with other alternations in the second syllable (cf §5.4.3.2).

5.4.2.3 Reduced forms

A handful of nouns have reduced bound state forms when occurring as the first member of a compounds.

The noun *nuŋa* ‘cow’ corresponds to the syllable *ŋɣ-* in the compounds *ŋɣnuu* ‘udder’ (with *tu-nuu* ‘teat’ as second element), *ŋɣqe* ‘cow dung’ (with *tu-qe* ‘shit, dung’) and *ŋɣlitɕasmbuum* ‘dung beetle’ (on which see §5.4.3.2), which would be the regular bound state from a stem *ŋa-*. The apparent ‘loss’ of a *nu-* element is due to the fact that the noun *nuŋa* ‘cow’ is itself an ancient compound comprising *tu-nuu* ‘teat’ as first element (‘bovid with udders’).

In the case of *k^huna* ‘dog’, we find the bound state *k^hu-* in the compounds *k^hundzi* ‘dog skin’ (with *tu-ndzi* ‘skin’ as second element), *k^hudo* ‘old dog’ (see §5.7.5), *k^huts^hoɕ* ‘hunting with dogs’ (probably a noun-verb compound with *ts^hoɕ* ‘attach’, see also the related incorporating verb in §20.13.1) and a few plant names such as *k^hulu* ‘Euphorbia helioscopia’ (a possessive compound meaning ‘(the plant) having dog milk’ – referring to its toxic juice, see §5.5.1.2) and *k^hurts^hɣz* ‘Polygonum sp.’ (‘dog lung’; the second element is *tu-rts^hɣz* ‘lung’). Unlike *nuŋa* ‘cow’, whose reduced bound state corresponds to the second syllable, the syllable *k^hu-* corresponds to the first syllable of *k^huna* ‘dog’, which must also be an obscured compound. The etymology of the element *-na* is unclear.

5.4.2.4 Loss of possessive prefix

Some inalienably possessed or alienabilized nouns lose their possessive prefix (or frozen indefinite possessive *tu-/tɣ-*, see §5.1.2.10), as for instance the noun *jmɣrtax* ‘weevil’, which comes from *tɣ-jme* ‘tail’ and *artax* ‘be forked’ (‘forked tail’).¹⁸ Its first element *tɣ-jme* ‘tail’ loses the prefix *tɣ-* and undergoes regular vowel alternation.

Similar examples are particularly common with *tu-xtsa* ‘shoe’, as mainly parts of the shoes are referred to by alienably possessed noun compounds with *xtsɣ-* as first element (*xtsɣɕna* ‘tip of the shoe’, *xtsɣrku* ‘sides of the shoe’ etc).

In some derivations that originate from compounds, such as the privative (§5.7.1) or the derogatory (§5.7.5), the indefinite possessor prefix is also removed.

¹⁸The verb *artax* ‘be forked’ itself is denominal from *tɣ-rtax* ‘branch’ (§20.2.1).

5.4.3 Final member of compounds

Morphological changes affecting the last members of compounds are less common than those on the first members. The only productive morphological alternation in this context is the loss of possessive prefix when the last member is an inalienably possessed noun.

5.4.3.1 Loss of possessive prefix

In compounds with an inalienably possessed noun as final element, the indefinite possessor prefix is lost as a rule, as in for example in the plant name *k^hunajme* ‘*Setaria viridis*’ from *k^huna* ‘dog’ and *tr-jme* ‘tail’.¹⁹

Exceptions are very few. They include compounds whose second element is itself a compound, such as *lvndzitr^hl^hts^has* ‘*Delphinium* sp.’ from *lvndzi* ‘ghost’ and *tr^hl^hts^has* ‘milk filter’; the second element is from *tr-lu* ‘milk’ in bound state and *ts^has* ‘sieve’. In *lvndzi-tr-l^h-ts^has* (ghost-*indef.poss*-milk-sieve), the indefinite possessor prefix *tr-* has become frozen when the compound *tr^hl^hts^has* ‘milk filter’ was formed, and is therefore not subject to deletion.

Another exceptional example is *u-qatabru* ‘hoof’ from *tr-qa* ‘paw, root’, ‘root’, ‘bottom’ and *ta-bru* ‘horn’, perhaps because the second element was perceived as being alienabilized, meaning ‘the horn-like thing on the foot’; in alienabilized possessive forms, definite possessor prefixes are stacked onto the indefinite possessive instead of replacing it, see §5.1.2.9).

5.4.3.2 Alternations

Morphophonological alternations affecting last members of compounds are very rare in Japhug.

Internal sandhi influencing the second member of a compound rather than the first occur when a root ending in /-ʁ/ is followed by a cluster with a velar fricative as first element. Thus, the incorporating verb *am^hnaχts^hum* ‘be petty’ is the denominal of a lost compound **m^hnaχts^hum* comprising *tu-m^hnaʁ* ‘eye’ as first element and *xts^hum* ‘be thin’: the combination of -ʁ + *xts^h-* yields -*χts^h-*.

Several cases of alternations in the last member are found with animal nouns with the uvular class prefix *qa-*, which has a variant /*χ*-/ʁ-/ in this context in some compounds (see §5.6.1 and §5.6.4).

¹⁹The absence of the bound state *k^hu-* is indicative in this case of a later loanword, perhaps calqued from Chinese 狗尾草 <gǒuwěicǎo> ‘*Setaria viridis*’.

5 Nominal morphology

Other alternations are restricted to specific lexical items, which are discussed below one by one (*რეგვბ* ‘attach’, *ყური* ‘be red’, *ტუ* ‘road’ and *თუ-ყლი* ‘excrement, dung’).

The inalienably possessed noun *თუ-მ^hყრეგვბ* ‘waistline of the trousers’ (a noun whose meaning is better explained by an example sentence like 96) is a compound of the noun *თუ-მ^hყ* ‘waist’ with the transitive verb *რეგვბ* ‘attach’, which appears as a uvularized allomorph *-რეგვბ* not attested elsewhere: it is unclear why uvularization took place in this word (dissimilation with the coda /-ყ/ of the previous root is unlikely).

 ‘When it is time to drink, he inserts his straw [into the jar] and drinks from it, and when he does not drink any more, he takes it out and tucks it back into his trousers.’ (30-tChorzi) {0003760#S35}

The noun *ფცყრუ* ‘path in the middle of the fields’ is a compound of *ფცარ* ‘summer’ and *ტუ* ‘road’ (such paths are made during summer to allow workers to work in the field without damaging the crops, see a definition in 87 in §16.1.3.6). The first element *ფცყ-* is the bound state of *ფცარ* (with loss of final consonant) and the form *-რუ* for the second member of the compound is a clue that *ტუ* comes from earlier **t-ro* with a dental stop+/r/ cluster changing to a retroflex affricate (see §4.2.2.4 and §7.1.3) – the **t-* element being prefixal (perhaps a fossilized indefinite possessor prefix).

The noun *ყმყყნი* ‘russula’ clearly derives from *ყყმყყ* ‘mushroom’ and *ყური* ‘be red’, but while the loss of the *ყყ-* prefix can be explained (see §5.1.2.10), the form of the second element (without *r-* preinitial) is a mystery. The form *-ნი* (without *ყუ-*, a prefix possibly of denominal origin, §20.5.1) is found in *ყრონი* ‘red ant’ with *ყრო* ‘ant’ as first element (a late innovation specific to the Kamnyu dialect). The compound *ყყლიტყაშბუმ* ‘dung beetle’, with the irregular bound state *ყყ-* (see §5.4.2.3) of the noun *მუყა* ‘cow’, contains a syllable *-ლი* clearly derived from the inalienably possessed noun *თუ-ყლი* ‘excrement, dung’.²⁰

²⁰The second part of the noun *-ტყაშბუმ* contains *აშბუმ* ‘be concave’.

The examples above show that most of the forms with an irregular second member also present some irregularity in the first member of the compound.

5.5 Compound nouns

Nominal compounds in Japhug can be build by compounding nouns, but also verbs, adverbs and ideophones. In this section, compounds are first classified by the part of speech of their elements, and then by the semantic relationship between these elements.

5.5.1 Noun-Noun compounds

Noun-Noun compounds can be divided in three classes: Determinative, possessive and coordinative compounds.

5.5.1.1 Determinative compounds

In determinative (or endocentric) compounds, the two elements either have a genitival or an attributive relationship.²¹ Modifier-Head order is by far the most common, but Head-Modifier is found in some compounds based on postnominal modifiers.

While genitive phrases are followed by a noun with a third person possessive prefix (§8.2.3.1), in the corresponding compounds the possessive prefix is deleted (except the indefinite possessor prefix in exceptional examples, see §5.4.3.1).

In this type of compounds, the first element is most commonly in bound state if derived from a word ending in open syllable, both for highly lexicalized compounds *qaɕpɣrnoɔ* ‘wild strawberry’ (‘frog’s brain’, from *qaɕpa* ‘frog’ and *tu-rnoɔ* ‘brain’) and more transparent ones (*jlɣndzi* ‘hybrid yak hide’ from *jla* ‘male hybrid yak’ and *tu-ndzi* ‘skin’).

Among determinative compounds, we commonly find nouns denoting locations and places or ethnic names such as *kuuru* ‘Tibetan’ and *kupa* ‘Chinese’ (as in *kupaŋga* ‘Chinese-style clothes’ or *kupastaɕpuu* ‘soja’ (with *staɕpuu* ‘pea’, on which see §5.4.1).

Some compounds comprise elements that are themselves compounds. For instance, the first element *suŋgu* ‘forest’ in *suŋgurmɣβja* ‘lophophorus’ (with *mɣβja* ‘peacock’) and *suŋgupɣjka* ‘type wild squash’ (with *pɣjka* ‘squash’) is a compound

²¹I use this term to encompass both the traditional notions of *karmadhāraya*- and *tatpuruṣa*:- since pre-nominal modifiers are not easily distinguishable from possessors, this distinction would not be practical.

5 Nominal morphology

from *si* ‘tree’ and *u-ŋgu* ‘inside’, and its original meaning was presumably ‘among the trees’.²²

Compounds also exist with specific placenames such as *tɕ^hitɕun* ‘Chuchen’, for instance in *tɕ^hitɕun paχci* ‘pear’ (with *paχci* ‘apple’ as second element), a noun which can undergo denominal derivation to *nutɕ^hitɕunpaχci* ‘collect pears’ (§20.1.2), showing that the place name modifier has been integrated.²³

In addition to nouns, participles also occur in determinative compounds. They are found both as first or second element of the compound, and both subject participles in *ku-* (§16.1.1.7) and oblique participles in *sɣ-* (§16.1.3.10) are attested.

For instance, the compound *ɕɣsɣŋɕɣt* ‘crossroad’ combines the bound state of *ɕsu* ‘road’ and the oblique participle *u-sɣ-ŋɕɣt* ‘place where X part ways’ from *nunɕɣt* ‘part ways’.²⁴ The obsolete noun *sɣqɣɕ^ha* ‘alcohol offered to one’s guests’, comprises the oblique participle *u-sɣ-qru* of the verb *qru* ‘greet, welcome, receive’ and the noun *c^ha* ‘alcohol’ (see other examples in §16.1.3.10).

Compounds with the participle of a transitive verb as their second element do not necessarily derive from a genitival construction, though they might be superficially similar to compounds of this type. For instance *qalekuts^hi* ‘species of kite’ comes from *qale* ‘wind’ and the participle *u-ku-ts^hi* ‘blocking (it)’ (§16.1.1) of the transitive verb *ts^hi* ‘block’; the phrase *qale u-ku-ts^hi* (wind 3SG.POSS-SBJ:PCP-block) ‘blocking the wind’ is more properly a headless participial relative (§23.4.1, §16.1.1.7), and is more similar to Object-Verb compounds (§5.5.5.2).

Only a handful of Head-Modifier determinative compounds are attested. Most of these are the lexicalized versions of nouns followed by post-nominal modifiers (§5.2). A good example of such compounds is provided by *ɕmbrukɣlu* ‘willow that does not grow high’ from *ɕmbri* ‘willow’ and the privative form *kɣlu* ‘headless’ (§5.7.1) of *tu-ku* ‘head’), a name explained in (97).

²²The noun *sunngu* ‘forest’ is better translated as ‘wild’ when occurring as prenominal modifier or first member of compounds.

²³I am indebted to Gong Xun for this observation.

²⁴This intransitive verb itself is the anticausative of *qɣt* ‘separate’, with an additional *nu-* prefix, §18.5.1.2.

ku-me ky-ti pu-ŋu. ky-lu nu u-ku
 SBJ:PCP-not.exist INF-say SENS-be headless DEM 3SG.POSS-head
ku-me ky-ti pu-ŋu.
 SBJ:PCP-not.exist INF-say SENS-be

‘Its new twigs cannot grow very long, and look like they have been sawed short, therefore it is called ‘headless willow’. ‘Headless’ means ‘without head.’ (07-Zmbri) {0003438#S30}

The counted noun *tu-pyrme* ‘one year of life’ attests a different type of Head-Modifier determinative compound. It comes from *tu-xpa* ‘one year’ and *turme* ‘person’ (see §7.3.1.7 on the alternation between *-xpa* and *-pyr-*, and §5.1.2.10 on the *tu-* prefix in ‘man’), and originally meant ‘man’s year (of life)’. Despite this meaning, the modifier ‘man’ appears as the second element. Unlike ‘headless willows’ (97), in this case the modifier would not be postnominal in the corresponding noun phrase.

5.5.1.2 Possessive compounds

Possessive (or exocentric) compounds (*bahuvrihi-*) are uncommon in Japhug, and tend to be synchronically obscure. All known examples appear to have Modifier-Head order, and are plant names.

The name *k^hulu* ‘*Euphorbia helioscopia*’ combines the reduced bound state of *k^huna* ‘dog’ (§5.4.2.3) with *tx-lu* ‘milk’. It presumably means ‘(having) dog milk’, a reference to a whitish toxic liquid that comes from it (98).

The compound *kunguttɣrtsɣ* 'Leonurus', from the numeral *kungut* 'nine' and the noun *ɣ-rtsɣ* 'stairs', can be analyzed as meaning '(plant having) nine stairs', referring to the nodes on the stalk of this plant. The Numeral-Noun order in this compound is remarkable, since numeral normally follow the noun (see §7.1.7, §9.3) but similar to some quantifiers (§9.1.3). The same Numeral-Noun order is found in the more complex compound *kunguttɣrq^hɣŋgaɤ* 'Lonicera sp.' discussed in §5.5.5.

5.5.1.3 Coordinative compound

Coordinative compounds are uncommon in Japhug, and are formally indistinguishable from the previous classes. In this type of compounds, both elements are heads.

This class includes the traditional traditional *dvandva*-, which are semantically intrinsically collectives, for instance *c^hɣmt^hum* 'food and drinks' from *c^ha* 'alcohol' and *ɣ-mt^hum* 'meat', *sɲiɣɣ* 'night and day' from *tu-sɲi* 'one day' and *ɣɣ* 'night' and *ɣc^hoɤe* 'right and left' from *ɣc^ha* 'right' and *ɤe* 'left', the latter two being mainly used as adverbs.

An even rarer type of coordinative compound are the appositive compounds, the only clear example of which is *kurrɣukuɣndzur* 'harvestman', a noun built from two subject participles, from the transitive verbs *rɲu* 'parch' and *ɣndzur* 'grind'. The two elements of the compound refer to the actions supposedly performed by that type of chelicerate ('the parcher-grinder') like the participial form of a bipartite verb (§11.6.3).

The compound *qajusmɣnba* 'leech', from *qaju* 'worm' and *smɣnba* 'doctor', is possibly interpretable as an appositive compound 'bug acting as a doctor' or 'doctor who is a bug', since its meaning is clearly not 'doctor treating bugs'.

5.5.2 Verb-Verb compounds

There are two types of Verb-Verb nominal compounds in Japhug, action nominals (involving transitive action verbs) and degree nouns (with adjectival stative verbs).

5.5.2.1 Action nominals

Action nominals built from two verb roots are not common in Japhug. Some of these action nominals are made from verbs with complementary or near-identical meanings, for instance *joββzur* ‘tidying up’ from *joβ* ‘raise’ and *βzur* ‘move’. This noun occurs in a light verb construction as in (100). The denominal compound verb *ryjoββzur* ‘tidy up’ has a meaning verb close to this construction (§20.12).

- (100) *joββzur tɣ-βzu-t-a*
 tidying.up AOR-do-PST:TR-1SG
 ‘I did some tidying up.’ (elicited)

Another type of verb-verb action nominals are made from verbs with opposite meanings, for instance *βkɣnɣo* ‘winning and losing’ from *βka* ‘prevail, win’ and *nɣo* ‘lose’, which is used with existential verbs as in (101).²⁵

- (101) *βkɣnɣo maŋe-ndzi*
 winning.and.losing not.exist:SENS-DU
 ‘One cannot decide who [of the two of them] is winning and who is losing.’

At an earlier stage, such compound action nominals may have been common, as is suggested by the existence of denominal compound verbs without a corresponding noun, such as *raχtutsye* ‘do business’ (from *χtu* ‘buy’ and *ntsye* ‘sell’, §20.7.2 on the *-n-* element).

5.5.2.2 Nouns of dimension

The productive way of building degree nouns in Japhug is by adding the prefix *tu-* to an adjectival stative verb (§16.3), but an alternative formation involves the compounding of two antonymic verbs or location adverbs, such as *jpumxts^hum* ‘thickness’ from *jpum* ‘be thick’ and *xts^hum* ‘be thin’. All known examples are listed in Table 5.7 (note that whenever possible, the first member of these compounds is in bound state).

In the case of *xtɕuxte* ‘size’, the second element *xte* is a variant also found in the derived verb *muxte* ‘be the majority’, probably the relic of a former **i/e* alternation still observed in the verb *yi* ‘come’ (§12.2.1.1).

²⁵ A similar compound *fqó-nɣət* with identical meaning is found in Tshobdun (Sun & Blogros 2019: 295).

Table 5.7: Nouns of dimension

Compound	First verb	Second verb
<i>jpumxts^hum</i> ‘thickness’ (diameter)	<i>jpum</i> ‘be thick’	<i>xts^hum</i> ‘be thin’
<i>jaɁmba</i> ‘thickness’ (of a sheet)	<i>jaɁ</i> ‘be thick’	<i>mba</i> ‘be thin’
<i>xturŋji</i> ‘length’	<i>xtut</i> ‘be short’	<i>rŋji</i> ‘be long’
<i>xtɕuxte</i> ‘size’	<i>xtɕi</i> ‘be small’	<i>wxti</i> ‘be big’

Locational adverbs/nouns can also be compounded to express the three spatial dimensions encoded by verbal morphology and locative markers (§15.1.3, §22.2.6): *taɁki* ‘up and down’ from *taɁ* ‘up’ and *aki* ‘down’, *lot^hi* ‘upstream and downstream’ from *lo* ‘upstream’ and *t^hi* ‘downstream’ and *kundi* ‘east and west’ from *ku* ‘east’ and *ndi* ‘west’. An example of the use of these nouns can be found in (93), §5.3.4 above.

Nouns of dimension can further derive denominal verbs in *a-* meaning ‘of unequal X’ (§20.2.1).

5.5.3 Noun-Ideophone compounds

Nominal compounds comprising an ideophone (§10.1.1) are rare. Three examples are attested.

First, the noun *mciruɁbruɁ* ‘person whose saliva drips continuously’ is built from the inalienably possessed *tu-mci* ‘saliva’ (§5.6.5) and the reduplicated ideophonic root $|ruɁ|$, found in the pattern III form (§10.1.2.3) *ruɁbrɁruɁ* meaning ‘dripping (drop by drop) continuously’ (§10.1.4) and the deideophonic verb *ɣr-ruɁbruɁ* ‘drip continuously’. The collocation of *tu-mci* with both the ideophone and its derived verb is commonly attested (see example 62, §21.3.2.3).

Second, the bird name *jaɁmɣɣzdoɁzdoɁ* contains the bound state form of *tu-jaɁmu* ‘thumb’ and the pattern II ideophone *zdoɁzdoɁ* meaning ‘small and active’.

Third, the name of the mushroom *salaboŋboŋ* ‘puffball’ contains the pattern II ideophone *boŋboŋ* ‘ovoid’. The first part of this word is obscure.

5.5.4 Adverb-Verb compounds

Adverb-Verb compounds are relative marginal. Compounds with *kuzya* ‘a long time’ in bound state *kuzyɣ-* followed by a verb are however attested, as *kuzyɣ-ɕar* ‘searching for a long time’ from the verb *ɕar* ‘search’ in (102). These compounds are studied in more detail in §16.4.7 (see also Jacques 2016a: 252).

5.5.5 Noun-Verb compounds

Noun-Verb compounds include three main types, Subject-Verb, Object-Verb and Adjunct-Verb compounds. Participles or other nominalized verbs forms are treated in sections 5.5.1, but criteria to distinguish between ambiguous forms in cases of homophony between noun and verb are provided in §5.5.2.

5.5.5.1 Subject-Verb compounds

Subject-Verb compounds occur exclusively with intransitive verbs, mainly adjectival stative verbs. The noun is generally in bound state (see Table 5.8). Based on their semantics, three types of subject-verb compounds can be distinguished: attributive, possessive and action nominals.

Table 5.8: Examples of attributive Subject-Verb compound nouns

Compound	Base Noun	Verb
<i>txcxjxax</i> ‘black barley’	<i>txci</i> ‘barley’	<i>jxax</i> ‘be black’
<i>txcxjxrum</i> ‘white barley’		<i>wjxrum</i> ‘be white’
<i>mts^halxjxax</i> ‘black nettle’	<i>mts^halu</i> ‘nettle’	<i>jxax</i> ‘be black’
<i>mts^halxjxrum</i> ‘white nettle’		<i>wjxrum</i> ‘be white’
<i>qartsujxax</i> ‘cold winter’	<i>qartsu</i> ‘winter’	<i>jxax</i> ‘be black’
<i>pxcxjxax</i> ‘Pucrasia macrolopha’	<i>pxa</i> ‘bird’	
<i>txmtujxax</i> ‘deadlock’	<i>tx-mtuu</i> ‘knot’	

Attributive Subject-verb compounds are equivalent to a relative clause comprising a stative verb and its subject (§9.1.8.3, §16.1.1.4). If the nominal and verbal elements are represented as *N* and *V*, an attributive *NV* compound means ‘*N* which is *V*’. They are common with stative verbs of colour such as *jxax* ‘be black’ or *wjxrum* ‘be white’ as in Table 5.8.

The compounds in Table 5.8 are highly lexicalized; in the case for instance of *pxcxjxax* ‘Pucrasia macrolopha’, this bird is not even black as the speakers themselves point out (103).

SENS-be.beautiful LNK SBJ:PCP-exist PL SENS-be.brilliant EMPH
‘The *Pucrasia macrolopha* is of course also a bird (like the previous ones we talked about), but it is not black, it is beautiful, its feathers are very beautiful and those that are there (visible) are iridescent.’ (23-pGAYaR)
{0003626#S80}

More complex NV compounds of this type are found, such as *tu*-*jaɔ**ndzu**mɣpa*-*ɣɔɔ* ‘middle finger’ from *tu*-*jaɔ**ndzu* ‘finger’ and *mɣpa**ɣɔɔ* ‘be in the middle’ (itself a denominal verb from *u*-*ɣɔɔ* ‘center’).

In such compounds, some stative verbs occur with a -x- element in individual forms. This is the case of *tv**tv**ɣc^hi* ‘fresh milk’ from *tv*-*lu* ‘milk’ and *c^hi* ‘be sweet’. It is possible that this velar fricative represents the remnant of a participle prefix *ku*-. This -x- is however present in the causative (§17.2.1.4) and the tropative (*nɣc^hi* ‘find sweet’, §17.5.1) derivations.

Possessive NV compounds are equivalent to a participial relative with the possessor of the subject as the relativized element (§23.5.10): In other words, a possessive NV means ‘(person/animal/entity) whose *N* is *V*’. Examples are considerably fewer than the previous ones.

Table 5.9 illustrates a few Noun-Verb compounds based on the verb *a**ɣa* ‘lacking a piece’, ‘have a hole’, which surfaces as -*ɣa* with elision of the *a*- prefix.²⁶ Among these examples, *ɔ**ɣɣa* ‘person lacking a tooth’ and *mɣftɔ**u**ɣa* ‘whose ear has ten holes’²⁷ are possessive compounds, while *t**ɣɣa* ‘chuckhole’ and *tu*-*ja**m**ɣa* (虎口 <hǔkǔ> ‘space between thumb and index’ are possessive compounds.

A particularly interesting Noun-Verb possessive compound is the plant name *ku**ng**u**tt**ɣ**r**q^h**ɣ**n**g**a**ɔ* ‘Lonicera sp.’, which comprises three elements: the numeral

²⁶It is however alternatively possible that the verb *a**ɣa* is denominal from an unattested inalienably possessed noun *-*ɣa* ‘hole, chip, notch’, and that the compounds in Table 5.9 are also from that lost noun.

²⁷The compound *mɣftɔ**u**ɣa* occurs exclusively as postnominal modifier (§9.1.8.1) in the fixed expression *q**a**l**a* *mɣftɔ**u**ɣa* ‘the rabbit with ten holes in his ear’, a trickster character found in traditional stories.

Table 5.9: Possessive compound nouns in *-χα*, derived from the verb *αχα* ‘lacking a piece’

Compound noun	First element
<i>εγχα</i> ‘person lacking a tooth’	<i>εγχ-</i> ← <i>tu-εγα</i> ‘tooth’
<i>μηφτεωχα</i> ‘whose ear has ten holes’	<i>μηχ-</i> ← <i>tu-rna</i> ‘ear’
	<i>φτεω-</i> ← Tib. <i>བཅུ</i> <i>btεu</i> ‘ten’
<i>τσηχα</i> ‘chuckhole’	<i>τση-</i> ← <i>τσu</i> ‘road’
<i>tu-jαβμηχα</i> ‘space between thumb and index’	<i>tu-jαβμη-</i> ← <i>tu-jαβmu</i> ‘thumb’

kungut ‘nine’, the inalienably possessed noun *τρ-ρq^hu* ‘hull, skin’ and the intransitive verb *ngαβ* ‘peel, shed skin’ (anticausative of *qαβ* ‘peel’, see §18.5.1). This compound is to be parsed [*kungut-τρρq^hχ-*][*ngαβ*] from a morphological point of view, as its meaning is ‘(plant) whose nine skins shed off’ as is explained in the text excerpt in (104): the first element *kungut-τρρq^hχ-*²⁸ corresponds to the intransitive subject of *ngαβ* ‘peel, shed skin’.

- (104) *kunguttτρρq^hχngαβ w-rmi kuwa nunu tεndyre,*

 ‘As for the name of the *Lonicera* sp., [it is because] it has a lot of skins that shed off, one after the other, and after one has shed off, another one grows again inside.’ (14-sWNgWJu) {0003506#S66}

Yet, from a phonological point of view, the form should rather be parsed as [*kungut-*][*τρρq^hχ-ngαβ*], as the phonological integration between *τρρq^hχ-* in bound state and the following verb root is stronger than that between the numeral *kungut* ‘nine’ and the rest, as shown by the preservation of the final *-t* with a rare heterosyllabic geminate (§4.2.3.1).

Additional less obvious examples of possessive compounds include *εμηστι* ‘person with a stuffy nose’ (from *tu-ενα* ‘nose’ and *asti* ‘be blocked’, see the discussion

²⁸Note that this compound has Numeral-Noun order as in other examples (see §5.5.1.2).

5 Nominal morphology

in §5.5.5.2) and *ɕnaβndzɣi* ‘snotty-nosed kid’ (from *tu-ɕnaβ* ‘snot’ and a verbal root *-ndzɣi* attested in *nɣndzɣi* ‘have (snot)’).

Action nominals NV compounds are rare with intransitive verbs. Examples include *pyɣmbri* ‘bird song’ from *pya* ‘bird’ and the intransitive *mbri* ‘cry, sing’ or *snuɣɿaβ* ‘harming people’ from *tu-sni* ‘heart’ and *ɿaβ* ‘be black’ (§20.13.1).

5.5.5.2 Object-Verb compounds

Object-Verb nominal compounds in Japhug are very productive, and can be classified into two main types: actor *OV* compounds, and action *OV* compounds.

Actor *OV* compounds are common in names of trades, animals and even plants, such as *ɿɿulɕi* ‘silversmith’, *βɿɿru* ‘miller’, *zruyndza* ‘praying mantis’ and *tɿtɕu-βraβ* ‘burdock’. The first of these examples, from the Tibetan loanword *ɿɿul* ‘silver’ and the labile verb *ɕi* ‘forge’, requires little explanation. Some compounds present significant morphological alterations, as *βɿɿru* ‘miller’, which comes from the bound state of *βya* ‘mill’ and the non-reduplicated form of the verb *ruru* ‘guard’ (§19.7.11). In addition, some compounds of this type do not make much sense without some cultural background; as an illustration of how the Japhug corpus can be used to better understand the origin of these compounds, I discuss below the latter two nouns.

The compound *zruyndza* ‘praying mantis’ derives from *zruy* ‘louse’ and *ndza* ‘eat’, and literally means ‘louse eater’, a descriptive term based on the feeding habits of that insect, as described in (105).

The nouns *tytɕuβɾaβ* ‘burdock’ from (*ty-tɕu* ‘son, boy’ and *βɾaβ* ‘attach to’) and *tɕ^hemeβɾaβ* ‘little burdock’ (with *tɕ^heme* ‘girl’ as first element) literally mean ‘attaching boys/girls’; an explanation for these names from local folklore is provided in (106).

The object-verb compound *t^hɣlwɣɕtɕat* ‘sparing earth’ (107), from *t^hɣlwa* ‘earth’ and the transitive *ɕtɕat* ‘spare’, occurs as postnominal modifier (§9.1.8.1) of the noun *qandze* ‘earthworm’, semantically equivalent to a post-nominal subject relative clause *t^hɣlwa u-kuu-ɕtɕat* (earth 3SG.POSS-SBJ:PCP-spare). This is the only case of a Noun-Verb compound in which both the subject and the object of the base verb are overt.

(25-akWzgumba) {0003632#S125}

Like actor *OV* compounds, action nominal compounds comprise a nominal root and a transitive verbal root. The nominal root in bound state corresponds to the object of the verb, as in the compound *c^hɣts^hi* ‘alcohol drinking’ from *c^ha* ‘alcohol’ and *ts^hi* ‘drink’. This class of nouns, which occur in light verb constructions and serve as bases for incorporating denominal verbs (§20.13.1), is discussed in §16.4.7 and §24.4.3.3.

Not all compounds whose second element originates from a transitive verb are Object-Verb (or Adjunct-Verb) compounds. Two potentially ambiguous cases must be pointed out.

First, there are Noun-Noun compounds whose second element is a bare action nominal, deriving from a transitive verb (see §16.4.6), but which loses its possessive prefix as is usual in compounding (§5.4.3.1). In such cases the resulting Noun-Noun compound is not formally distinguishable from a Noun-Verb compound, and only the meaning can be used to differentiate between the two classes. For instance, the plant name *tʂɣcp^hɣt* ‘plantain’ has the bound state of *tʂu* ‘road’ as a first element, while its second part *-cp^hɣt* can be interpreted as either directly from the verb *cp^hɣt* ‘patch’ (‘road patcher’) or from the derived noun *tr-cp^hɣt* ‘patch (n)’ (a piece of fabric used to patch worn clothes) (‘road patch’). In this particular case, the second interpretation is more likely, and hence *tʂɣcp^hɣt* ‘plantain’ is better analyzed as a Noun-Noun compound.

Second, when the second element of a Noun-Verb compound is a *a-* passive verb (see §18.1), the *a-/ɣ-* prefix is absorbed by the first element of the compound and becomes invisible. In the resulting form, the second element superficially looks similar to the transitive verb. For instance, the noun *ɕnɣsti* ‘person with a stuffy nose’ appears to derive from *tu-ɕna* ‘nose’ and the transitive verb *sti* ‘block’. However, semantics rules out such a derivation: it is a possessive compound whose literal meaning is ‘whose nose is blocked’ (see §5.5.5.1), and cannot be interpreted as ‘(person) blocking noses’, the expected meaning of an Object-Verb compound. Since the passive *asti* ‘be blocked’ of *sti* ‘block’ is well-attested, as shown by (108), it is better to analyze *ɕnɣsti* ‘person with a stuffy nose’ as a Subject-Verb possessive compound (§5.5.5.1) derived from that passive form.

- (108) *maka nŭ-wy-cwy-mu mu-pjɣ-c^ha ma mu-pjɣ-mts^hɣm*

5.5.5.3 Adjunct-Verb compounds

Adjunct-Verb compounds are action nominals (§16.4.7). Like other action nominal compounds, they can undergo denominal derivation to become incorporating verbs (§20.13.1).

Adjunct-Verb compounds typically take body parts or locative nouns as first element, as *zgruɬ^hu* ‘nudge’ and *kɣɬ^hu* ‘headbutt’, which combine the body parts *tu-zgru* ‘elbow’ and *tu-ku* ‘head’ with with the verb *tɬ^hu* ‘gore, stab’ as second element. Here the body parts cannot be analyzed as objects: the object of *tɬ^hu* ‘gore, stab’ is the person being gored/hit, not the part of the body one uses, as shown by the 1SG indexation on the verb in (109).

- (109) *mbala ku tɣ-wy-tɬ^hu-a*
 bull ERG AOR-INV-stab-1SG
 ‘The bull gored me.’ (elicited)

These compounds are used with the light verb *ɣt* ‘release’ as in (110). Additional examples are discussed in §16.4.7 and §20.13.1 and §20.13.4.

- (110) *zgruɬ^hu tɣ-lat-a*
 nudge AOR-throw-1SG
 ‘I nudged [him].’ (elicited)

The incorporating denominal verbs *suzgruɬ^hu* ‘give a nudge’ or *nɣkɣɬ^hu* ‘give a headbutt’, ‘gore’ are considerably more common than light verb constructions with compound action nouns such as (110).

The compound *mɳaɰmtsav* ‘grasshopper’ from *tu-mɳaɰ* ‘eye’ and *mtsav* ‘jump’ is obscure, but unlikely to be a possessive compound ‘whose eyes jump’, and should rather be analyzed as an adjunct compound (maybe ‘jumping with (big) eyes’, as if from a comitative adverb like *kɣmɳuɰmɳaɰ* ‘with eyes’ §5.8.1). If this analysis is correct, *mɳaɰmtsav* is the only example of actor Adjunct-Verb compound.

5.5.6 Verb-Noun compounds

Verb-Noun compounds are extremely rare in Japhug, as they are in general in Trans-Himalayan languages other than Chinese.

Adjectival stative verbs nearly always occur as second element in compounds with a noun (§5.5.5.1), but the opposite order is attested in *sɣŋaβdi* ‘unpleasant smell’ from *tx-di* ‘smell’ and *sɣŋaβ* ‘be unpleasant’ (on which see §20.3.1) a noun which can occur with the intransitive verb *mnɣm* ‘smell’ as in (111).

- (111) *sɣŋaβ-di* *zo* *ɲu-mnɣm*
 be.unpleasant-smell EMPH SENS-smell
 ‘There is an unpleasant smell.’ (elicited)

A possible example of Verb-Noun compound with a transitive verb is *ndzɣpri* ‘brown bear’, comprising *pri* ‘bear’ and *ndza* ‘eat’ – as shown by (112) from a text about bears, it is considered by some native speakers of Japhug as a man eater, though this explanation could be folk-etymology. Note that this compound is also anomalous in that when transitive verbs are used in compounds with a noun, that noun is either an object (§5.5.5.2) or adjunct (§5.5.5.3), never the subject.

- (112) *tce ndzɣpri* *kɣ-ti* *nɯ* *tce* *turme tu-kɯ-ndza*

 ‘The one called *ndzɣpri* (‘the eating bear’), it eats people.’ (21-pri)
 {0003580#S91}

We find several examples of nominal compounds whose structure is *tx*-+Verb +Noun, where the verb is an adjectival stative verb. This category includes *txqi-aβjmɣy* ‘*Lactarius* sp.’, literally ‘bitter mushroom’, from the noun *txjmɣy* ‘mushroom’ (see §5.1.2.10 concerning the lost of *tx*-) and the verb *qiaβ* ‘be bitter’, or *txmbextsa* ‘type of shoes’ from *tu-xtsa* ‘shoe’ and *mbe* ‘be old’. These should not be analyzed as Verb-Noun compounds however, as the first element originates from a nominalized form of the verb (either a property noun deriving from a verb (§16.4.6) in indefinite possessor *tx*- form (§5.1.2.7) or a *tx*- abstract noun, §16.4.2): they are rather a subtype of Noun-Noun compounds.

The same applies to compounds whose first element comes from a participle, such as *kɣrŋijmɣy* ‘type of mushroom’ from *txjmɣy* ‘mushroom’ with the subject participle *ku-xrŋi* ‘green one’ /*kɣrŋi*/ from the verb *arŋi* ‘be green’ (see additional examples in §16.1.1.7). Note that the compounding order is unexpected, as participles of adjectival stative verbs generally follow the noun (§9.1.8.3).

5.6 Noun class prefixes

Noun class prefixes are prefixal elements that occur in some nouns, whose root cannot occur on its own, except for a few rare exceptions (such as *qapyxmtuumtu* ‘hoopoe’ discussed in §5.6.1). Uvular *qa-/χ-/ʁ-* and velar *ku-/x-/ɣ-* prefixes are attested, and occur on animal names, plant names and nouns referring to traditional objects. Additional body part class prefixes, in particular *m-* are also present in Japhug.

Dental prefixal elements such as *tv-* or *tu-* are very common, but are better interpreted as frozen indefinite possessor prefixes (see §5.1.2.10), rather as noun class prefixes.

5.6.1 Uvular animal name prefix

The uvular animal prefix has a basic form *qa-* (Table 5.10) and a reduced allomorph *χ-/ʁ-*, attested in a few names like *ʁmbroŋ* ‘wild yak’, *rtɕ^huʁju* ‘caterpillar’ and *tɕ^huχpri* ‘salamander’.

Note that *ʁmbroŋ* ‘wild yak’ is a borrowing from Tibetan འཕྱི་ *broŋ* ‘wild yak’, a fact that possibly suggests that the *χ-/ʁ-* prefix has some degree of productivity (see Jacques 2014d).

The noun *qapyxmtuumtu* ‘hoopoe’ is clearly a compound containing the bound state of *pya* ‘bird’ and the reduplicated form of the noun *u-mtu* ‘crest’, to which the class prefix *qa-* has been added. The origin of this compound is still transparent to native speakers (see 85, §25.5.2).

The allomorph *qa-* is reduced to its non-syllabic variants *χ-/ʁ-* when the prefixed noun occurs as the second member of a compound. The nouns *tɕ^huχpri* ‘salamander’ and *rtɕ^huʁju* ‘caterpillar’ are examples of this reduction. The former is a compound of *tɕ^hu-* (a syllable borrowed from Tibetan མུ་ *tɕ^hu* ‘water’) and *-χpri*, a variant of *qapri* ‘snake’. The latter comprises the syllable *rtɕ^hu-*, bound state of the unprefixed root of *turtɕ^hi* ‘type of vegetable (酸酸菜)’, and the second *-ʁju* is the reduced variant of *qaju* ‘worm’.

5.6.2 Velar animal name prefix

While most nouns beginning in *ku-* are frozen participles (see §16.1.1.7), there is a residue of forms which cannot be analyzed as deverbal nouns: no corresponding verb root is attested, and moreover some of them have cognates elsewhere in the family. Table 5.11 presents animal names that are not derivable from any verb root, and appear to bear a *ku-* class prefix, which is to be distinguished from the

5 Nominal morphology

Table 5.10: Animal name *qa-* prefix

<i>qac^hya</i> ‘fox’	<i>qandze</i> ‘earthworm’
<i>qaçyi</i> ‘big fly’	<i>qandzi</i> ‘anadromous fish’
<i>qaçpa</i> ‘frog’	<i>qandzyi</i> ‘falcon’
<i>qajdo</i> ‘crow’	<i>qajni</i> ‘mole’
<i>qajts^ha</i> ‘Aegyptius monachus’	<i>qapar</i> ‘dhole’
<i>qaju</i> ‘worm’	<i>qapy^hmtumtu</i> ‘hoopoe’
<i>qay</i> ‘fish’	<i>qapri</i> ‘snake’
<i>qala</i> ‘rabbit’	<i>qarma</i> ‘crossoptilon’
<i>qalias</i> ‘eagle’	<i>qarts^haz</i> ‘deer’
<i>qambalula</i> ‘butterfly’	<i>qarts^hi</i> ‘cricket’
<i>qambruu</i> ‘male yak’	<i>qazo</i> ‘sheep’
<i>qamtçuur</i> ‘shrew’	

uvular one. Among these words, *kurtsy^h* ‘snow leopard’ has a Tibetan cognate གཟིག་ *gzig* ‘leopard’ with a *g-* preinitial, which is possibly related to the *ku-* prefix in Japhug.

Table 5.11: Animal name *ku-* prefix

<i>kuçpaz</i> ‘marmot’
<i>kujka</i> ‘pyrrhocorax’
<i>kumu</i> ‘Tetraogallus tibetanus’
<i>kup^hz</i> ‘type of bug’
<i>kurtsy^h</i> ‘snow leopard’
<i>kurji</i> ‘beast’
<i>kurnuu</i> ‘mite’

There is a handful of nouns with reduced allomorphs *y-*, *x-* or even metathesized as *βy-* in some words, corresponding to *kə-* in Situ (see the phonological discussion in Jacques 2014b: 6), including *xçiri* ‘weasel’, *xtut* ‘wild cat’, *yzuu* ‘monkey’, *yni* ‘flying squirrel’, *βyuz* ‘badger’ and *βy^hza* ‘fly’. The same allomorphy is observed between the subject participle *ku-* (§16.1.1) and the nominalization prefixes *x-/y-* (§16.5.2).

5.6.3 Uvular plant name prefix

Some plant names have a uvular class prefix *qa-*, including both cultivated and wild plants (and even plant parts), such as *qac̣ti* ‘peach’, *qaỵỵi* ‘oat’, *qamp^hoɤ* ‘oak leaves’, *qandzi* ‘type of fir’, *qazmbri* ‘vine’, *qawuz* ‘edelweiss’ and many others.

5.6.4 Other uses of the uvular class prefix

In addition to animal and plants names, the class prefix *qa-* appears on some tools (*qajo* ‘earthen pot’, *qase* ‘leather rope’, *qaṛrt* ‘rake’, *qapi* ‘white stone’), names of periods of the year (*qartsu* ‘winter’, *qartsỵβ* ‘harvest’), materials (*qandzi* ‘tin’, *qambut* ‘sand’) or natural forces like *qale* ‘wind’.

The reduced form *ɤ-* of the class prefix occurs with the noun *qale* ‘wind’ in some compounds such as *akuɤ^hoɤle* ‘east wind’ and the abstract inalienably possessed noun *u-ɤle* ‘reputation’ (and the verbs derived from it, such as *raɤle* ‘be polite’).

5.6.5 Body part noun prefixes

The identification of class prefixes in body parts mainly rests on comparative evidence. Other Trans-Himalayan languages that preserve clusters such as Tibetan have in some names for body parts cluster that do not match those found in Japhug, for instance *མཁྲིས་པཎ* *mk^hris.pa* ‘bile’ and *སྐྱེ* *ske* ‘neck’ corresponding to the Japhug inalienably possessed nouns *tu-ɕkrut* ‘bile’ and *tu-mke* ‘neck’ (see §5.1.2.3), suggesting that body part class prefixes such as *ɕ-* and *m-* have been added to these words in Gyalrongic and Tibetan independently.

Apart from the *m-* and *ɕ-/ɤ-* class prefixes, some alienably possessed body parts such as *qambyo* ‘earwax’ have a *qa-* prefix (§5.1.2.3).

5.7 Nominal derivations

Nominal derivations pale compared to the rich verbal (§11.2.2) and even ideophonic (§10.1.1) derivations in Japhug. There is little derivational prefixation in nouns (aside from the collective *kyndzi-* prefix and derivational uses of class prefixes, as seen in §5.6 above), and nearly all of the suffixes or quasi-suffixes involved in these derivations are traceable to inalienably possessed nouns that are still attested in the language, and have thus nearly no antiquity.

5.7.1 Privative

The suffix *-lu* can be combined with the bound state form of body part nouns, without possessive prefix, to derive a noun meaning ‘...less’, ‘without ...’ that can be used as a modifier (§5.2). Examples attested in the corpus are indicated in Table 5.12, but this derivation appears to be productive.

Table 5.12: Privative *-lu* suffix

Base Noun	Privative form
<i>ta-Ɂru</i> ‘horn’	<i>Ɂru^hlu</i> ‘hornless’
<i>tɁ-jme</i> ‘tail’	<i>jmɁlu</i> ‘without tail’
<i>tu-jaw</i> ‘hand, arm’	<i>jawlu</i> ‘missing a hand’
<i>tu-ku</i> ‘head’	<i>kɁlu</i> ‘headless’

These privative forms can modify other nouns, and are placed after the nouns and before determiners such as demonstratives or numerals, as in (113) and (114).

- (113) *zɁni yw ftsob Ɂru^hlu ci ta-rku-nu Ɂu-Ɂu*
 3DU GEN female.hybrid.yak hornless INDEF AOR:3→3’-put.in-PL SENS-be
 ‘They gave them a hornless female yak (to take with them back to the husband’s home.’ (2005-stod)

Privative nouns are systematically glossed in Japhug with possessor participial relatives in *ku-me* ‘not having’ (§23.5.10.1), as in (114) (see also example 97 from §5.5.1.1).

- (114) *tce kuju jmɁlu nu^hnu tu^hrme Ɂu-Ɂu, u-jme ku-me*

 ‘The ‘tailless animal’ is the man, and ‘he becomes crazy’, [when the crow says] that [people] became crazy, it means that they are sowing seeds.’ (22-qajdo) {0003596#S46}

The noun *ɣejlu* ‘left-handed’ is not a privative noun deriving from *ɣe* ‘left’, but rather a compound comprising the property noun *u-jlu* (§5.1.2.7) as second element, in its grammaticalized meaning as a restrictive focus marker (§9.1.6.5), literally meaning ‘only (with) left (hand)’.

5.7.2 Relative location

The prefix *maŋ-* can be used to derive nouns referring to the position of the referent on either the vertical, the riverine or the solar dimensions (§15.1.3), which are encoded in verbal morphology, postpositions, relator nouns and locative adverbs (§8.2.10, §8.3.4.1, §22.2.6). These nouns are homophonous with corresponding verbs of relative location (§15.1.3.4).

Table 5.13: Nouns of relative location and corresponding locative adverbs

Locative adverb	Noun of location
<i>taɣ</i>	<i>maŋtaɣ</i> ‘the one on the upper side’
<i>pa</i>	<i>maŋpa</i> ‘the one on the lower side’
<i>lo</i>	<i>maŋlo</i> ‘the one upstream’
<i>tʰi</i>	<i>maŋtʰi</i> ‘the one downstream’
<i>ku</i>	<i>maŋku</i> ‘the one on the east side’
<i>ndi</i>	<i>maŋndi</i> ‘the one on the west side’

The nouns of relative location can either occur as postnominal attributes, but can also (less commonly) be used their own as illustrated by (115).

5.7.3 Diminutive

There are four diminutive formations in Japhug, with the quasi-suffixes *-pu*, *-tsa*, *-tɕu* and *-li*.

5 Nominal morphology

The most productive is the *-pu* suffixation. This transparent suffix comes from the noun *tx-pu* ‘offspring, young’ (from Tibetan བྱ *bu* ‘son’). A diminutive formation based on the same noun also exists in Tibetan (Uray 1952, Hill 2014b: 627); whether the diminutive formation was independently innovated, or was borrowed from Tibetan is a question that needs to be further investigated. It is also attested in Situ (Zhang 2016, Lai 2017: 151).

Earlier diminutives are formed with the bound state of the noun, for instance *tɕ^hemɣpu* ‘little girl’ from *tɕ^heme* ‘girl’, *staxpu* ‘pea’ from *stox* ‘broad bean’, or *k^huzɣpu* ‘puppy’ from a non-attested form **k^huza*, probably itself the *-tsa* diminutive of *k^huna* ‘dog’, borrowed from a Situ dialect.

More recent diminutives are directly formed with the base form, such as *qa-pripu* ‘little serpent’. This formation is extremely productive, and applies to plants, animals and even objects as in (116).

- (116) *tɕe srunlox-pu ci jɣ-k^ho tɕe*
 LNK ring-DIM INDEF IFR-give LNK
 ‘He handed him a little ring.’ (2011-4-smanni)

The suffix *-pu* is recursive: examples of doubly suffixed nouns are found in the corpus, as in (117) for instance.

- (117) *ɬyndzi-pu-pu nuɾa ku, u-p^hoŋbu nuɾa ko-sylɣu-nu ri,*

 ‘The little demonlings put back his body together, but...’ (150909
 xifangping-zh) {0006408#S89}

Suffixation with *-pu* is the fused variant of the property noun construction with *u-pu* ‘little one’ described in §5.1.2.7.

A diminutive that is common to all Gyalrongic languages is the suffix *-tsa/-za* (Situ *-tsa* or *-za* (Lin 1993: 163), Khroskyabs *-ze / -zə / -za, -tsi* (Lai 2017: 158), Stau *-zə*), found in fossilized forms in nouns such as *k^hutsa* ‘bowl’ and *βɣɾza* ‘fly’,²⁹ but still visible in diminutive forms like *paɽtsa* ‘piglet’ (from *paɽ* ‘pig’). It originates from the noun ‘son’ that is lost in Japhug but still attested in Situ and Khroskyabs (Wobzi *zɪ* ‘young man’).

In Japhug the *-tsa* diminutive is not very productive; it applies to some nouns that already have a *-pu* diminutive such as *stoxtsa* ‘name of plant’ from *stox* ‘broad bean’ (besides *staxpu* ‘pea’).

²⁹The noun *βɣɾza* ‘fly’ is cognate to Brag-dbar *kəvɔs*, Khroskyabs *jvazá* (Zhang 2016, Lai 2017: 156) and originates from proto-Gyalrong **kɔs-tsa* (Jacques 2008: 53).

The third diminutive suffix *-tɕu*, like the two preceding ones, originates from a noun meaning ‘offspring’, *tx-tɕu* ‘son’, and requires bound state.

It is used for animals (*kumpyɾtɕu* ‘sparrow’ from *kumpya* ‘fowl’) or inanimate objects (*k^hɾtɕu* ‘little house’ from *k^ha* ‘house’ or *lɔɾtɕu* ‘little gunny bag’ from *lɔa* ‘gunny bag’). It occurs in some lexicalized forms such as *mbrutɕu* ‘knife’.³⁰

The suffix *-li* is the least productive of all diminutive formations, and the only one that cannot be traced to an existing noun. It appears in *tɕ^hemɾli* ‘little girl’ (a synonym of *tɕ^hemɾpu* ‘little girl’) and in *rgali* ‘young cow’.

5.7.4 Augmentative

A handful of nouns, some of Tibetan origin, have an augmentative form in *-te*, originally from a property noun **u-te* ‘big’ (related to the verb *wxti* ‘be big’).

Augmentatives include *tɕyomte* ‘cultivated xanthoxylum’ (from *tɕyom* ‘xanthoxylum’), *tujite* ‘big field’ (from *tu-ji* ‘field’, name of several fields in Kamnyu), *tɕ^hute* ‘big river’ (from *ɕ*: *tɕ^hu* ‘water, river’) and the possessive compound *ɲgute* ‘person with a big head’ (with *ɲgu-* from Tibetan *རྒྱུ* ‘go’ ‘head, top’; this stem is not attested in Japhug as an independent word).

5.7.5 Derogatory

There are three derogatory quasi-suffixes in Japhug, deriving designations of old or broken things: *-do* and *-mbe* ‘old X’ and *-nqra* ‘broken X’. These suffixes are the fused variants of the property nouns *u-nqra* ‘broken one’, *u-do* ‘old one’ and *tx-mbe* ‘old thing’ (see §5.1.2.7).

The suffixes *-do* and *-mbe*, like their corresponding property nouns, differ in that the former occurs with animals and plants (*nuŋa-do* ‘old cow’, *ɾɾɾɾpu-do* ‘old king’), while the latter is used for inanimate objects.

In a few cases, the suffixed noun is in bound state (as *k^hɾnqra* ‘ruin’ from *k^ha* ‘house’ and *-nqra*, or *k^hudo* ‘old dog’ (from *k^huna* ‘dog’ and *-do*, see §5.4.2.3). When the suffixed noun is inalienably possessed, addition of a derogatory suffix does not turn it into an alienably possessed noun, as in *tu-rcɾmbe* ‘old jacket’ from *tu-rcu* ‘jacket’ and *-mbe*.

5.7.6 Gentilic

The gentilic suffix *-pu* derives from the same noun *tx-pu* ‘offspring, young’ from which the diminutive *-pu* ultimately originates (see §5.7.3). It is used to derive

³⁰The root of this noun is metathesized from **mbur*; its cognates have a *-tsa* diminutive in Situ (Brag-dbar *mbəɾtsiē*, Zhang 2016: 228) and Khroskyabs (Wobzi *bəɾzē*, Lai 2017: 115).

5 Nominal morphology

nouns referring to inhabitants of a certain place, and occurs without bound state. For instance, from the village names of *kɔmɲuu* (the village whose speech is described in this grammar) and *snarndi* (a village in Tshobdun), one derives *kɔmɲuu-pu* ‘person from Kamnyu’ and *snarndipu* ‘person from Snarndi’ (see the text 26-tshubdWnpW in the corpus). Given the high productivity of this derivation, these nouns are not indicated in the dictionary, as it would unnecessarily inflate the number of entries.

An alternative way to refer to the inhabitants of a place is by adding the plural *ra* to it (§5.2.1).

5.7.7 Gender

There is no morphological expression of gender in Japhug. For animals, the nouns *p^hu* ‘male’ and *mu* ‘female’ (from Tibetan ཤོ *p^ho* ‘male’ and མོ *mo* ‘female’) can be used on their own (as in 118) or occur as second member of compounds, as *kumɲap^hu* ‘rooster’ and *kumɲamu* ‘hen’ from *kumɲya* ‘fowl’, or *lulɔmu* ‘female cat’ from *lulu* ‘cat’, with bound state of the first noun.

- (118) *tvk^he pyxtɕu ndɔre p^hu mu saχsvl*
stupid bird:DIM on.the.other.hand male female be.clear:FACT
‘The male and the female of the ‘stupid bird’, as opposed [to the birds
previously discussed], are easy to distinguish.’ (23-scuz) {0003612#S42}

The suffixes *-pa* and *-mu* (from Tibetan *-pa* and *-mo*, respectively) also occur for a handful of nouns, some of Tibetan origin (*srunmu* ‘rākshasī’ from སྲིན་མོ་ *srin.mo* ‘rākshasī’) but also some local names such as *ngarpa* ‘male one quarter yak hybrid’ vs. *ngarmu* ‘female one quarter yak hybrid’.

The noun *paβɲu* ‘boar’ from *paβ* ‘pig’ has a suffix *-ɲu* that is not found in any other word.

For some farm animals, a lexical distinction is made between male and female animals (see Table 5.14).

5.7.8 Collective

While Japhug lacks number inflection, there are several collective derivations: the social relation collective, reduplicated collectives and the *dvandva* collective.

Table 5.14: Lexical distinction of male and female animals

Male	Female
<i>qambruu</i> ‘male yak’	<i>gra</i> ‘female yak’
<i>jla</i> ‘male hybrid yak’	<i>ftsoʁ</i> ‘female hybrid yak’
<i>mbala</i> ‘bull’	<i>nuŋa</i> ‘cow’
<i>zraβ</i> ‘buck’	(<i>ts^hɣnmu</i> ‘ewe’)

5.7.8.1 Social relation collective

The first type of collective is a noun prefixed in *kyndzi-* and built either from kinship or social relation terms (which can be either inalienably or alienably possessed nouns), designating a group of people linked to one another by a specific relation.³¹

Two types of social relation collectives should be distinguished: reciprocal and non-reciprocal collectives.

Reciprocal collectives (Table 5.15) are derived from nouns designating a relationship in which all members of the group call each other by the same term: these can be non-kinship terms like ‘companion’ or ‘friend’ or kinship terms like *tr-sq^haj* ‘sister’ (of a female) (§27.2.2.1).

Non-reciprocal collectives (Table 5.16) are based on nouns designating unequal relationships, in which the members designate each other by different terms, in particular kinship terms involving relatives from different generations or different gender. Aside from kinship terms, groups comprising farm animals and their owners can also be formed by the same process from the name of the animal, as *kyndzimbrow* ‘horseman and his horse’ and *kyndziftsoʁ* ‘female hybrid yak and its owners’ (see example 120 below).

Non-reciprocal collectives are either formed from one of the two nouns, which can be either from the lower (*kyndziye* ‘grandparents and grandchildren’) or the higher generation (*kyndzini* ‘paternal aunt and her nephews’), or by a combination of two kinship terms, the first of which, in some cases, undergoes changes to the point of being barely recognizable (*kyndzipɣmdu* ‘paternal uncle and his nephews’).³²

³¹There is some doubt about whether this prefix should be transcribed as *kyndzu-* or *kyndzi-*. See §3.5.2.2 on the question of the contrast between /l/ and /ɯ/ following palatals and alveolo-palatals in non-final syllables.

³²In the case of *kyndziwɣtas* ‘maternal aunt and her nephews’, the origin of the element *-wɣ-* is not identifiable.

Table 5.15: Reciprocal social relation collectives

Collective	Base noun
<i>kʏndziɣuɟsu</i> ‘friends’	<i>ɣuɟsu</i> ‘friend’
<i>kʏndziβzaŋsa</i> ‘friends’	<i>βzaŋsa</i> ‘friend’
<i>kʏndziɕaχpu</i> ‘friends’	<i>ɕaχpu</i> ‘friend’
<i>kʏndzikumdza</i> ‘relatives’	<i>kumdza</i> ‘relative’
<i>kʏndzirya</i> ‘neighbours’	<i>ɾɿ-ɾya</i> ‘neighbour’
<i>kʏndzislamaχti</i> ‘classmates’	<i>slamaχti</i> ‘classmate’
<i>kʏndzisiq^haj</i> ‘sisters’	<i>ɾɿ-sq^haj</i> ‘sister’ (of a female)
<i>kʏndzimɿtsa</i> ‘mother’s sister’s children’	<i>ɾɿ-mɿtsa</i> ‘mother’s sister’s child’
<i>kʏndzixɾɿuχti</i> ‘friends (between males)’	<i>xɾɿuχti</i> ‘friend (between males)’
<i>kʏndzitiɕ^hemɿχti</i> ‘friends (between female)’	<i>tiɕ^hemɿχti</i> ‘friend (between female)’
<i>kʏndzixɾɿɿ</i> ‘brothers’	<i>ɾɿ-xɾɿɿ</i> ‘brother’ (of a male)
<i>kʏndziχti</i> ‘companions’	<i>tu-χti</i> ‘companion’
<i>kʏndzizda</i> ‘companions’	<i>tu-zda</i> ‘companion’

The collective nouns can be used as normal nouns and take flagging, numerals and other modifiers, as in (119).

- (119) *kʏndzi-xɾɿɿ* *χsum* *pjɿ-tu-nu*
 COLL-brother three IFR.IPFV-exist-PL
 ‘There were three brothers.’ (07-deluge) {0003426#S2}

Social relation collectives are also found in Situ and Tshobdun (Sun 1998: 107), where they have optional reduplication; in Japhug, partial reduplication (as in §5.7.8.2) is used by some speakers, as *kʏndziftsuftsoɕ* ‘female hybrid yak and its owners’ in example (120), from a story by Kunbzang Mtsho.

- (120) *kʏndzi-ftsɿ-ftsɿ* *χsum nu*, *ts^huɿts^huɿ* *ku-pa*
 COLL-female.yak.hybrid three DEM IDPH(II):in.order INF:STAT-AUX

 AOR:EAST-AUTO-COME.out-PL SENS-be
 ‘[The girl, her husband] and their female hybrid yak crossed [the large river] without damage.’ (2003 Kunbzang)

The lists in Tables 5.15 and 5.16 comprise most common social relation collectives, but are by no means complete lists. For instance, next to *kʏndzirpuftsa*

Table 5.16: Non-reciprocal social relation collectives

Collective	Base noun
<i>kʸndziye</i> ‘grandparents and grandchildren’	<i>tx-ye</i> ‘grandchild’
<i>kʸndziwi</i> ‘siblings’	<i>ta-bi</i> ‘younger sibling’
<i>kʸndzime</i> ‘parents and daughter’	<i>u-me</i> ‘daughter’
<i>kʸndzini</i> ‘paternal aunt and her nephews’	<i>tx-ji</i> ‘father’s sister’
<i>kʸndzimbro</i> ‘horseman and his horse’	<i>mbro</i> ‘horse’
<i>kʸndzislama</i> ‘master and disciple’	<i>slama</i> ‘student’
<i>kʸndzijla</i> ‘male hybrid yak and its owners’	<i>jla</i> ‘male hybrid yak’
<i>kʸndziftsoʋ</i> ‘female hybrid yak and its owners’	<i>ftsoʋ</i> ‘female hybrid yak’
<i>kʸndzipaʋ</i> ‘pig and its owners’	<i>paʋ</i> ‘pig’
<i>kʸndziqazo</i> ‘sheep and its owners’	<i>qazo</i> ‘sheep’
<i>kʸndzits^hʸt</i> ‘goat and its owners’	<i>ts^hʸt</i> ‘goat’
<i>kʸndzirpuftsa</i> ‘maternal uncle and his nephews’	<i>tx-rpu</i> ‘mother’s brother’ (1) <i>tx-ftsa</i> ‘sister’s child’ (2)
<i>kʸndziwɣtaʋ</i> ‘maternal aunt and her nephews’	<i>tx-taʋ</i> ‘mother’s sister’ (2)
<i>kʸndzipɣmdu</i> ‘paternal uncle and his nephews’	<i>tx-βyo</i> ‘father’s brother’ (1) <i>tx-mdu</i> ‘brother’s child’ (2)
<i>kʸndziwɣmusnom</i> ‘brother and sisters’	<i>tx-wɣmu</i> ‘brother’ (of a female) (1) <i>tx-snom</i> ‘sister’ (of a male) (2)

‘maternal uncle and his nephews’ from *tx-rpu* ‘mother’s brother’ and *tx-ftsa* ‘sister’s child’, the terms *kʸndzirpu* ‘maternal uncle and his nephews’ and *kʸndziftsa* ‘nephew with his maternal uncles and aunts’ are also possible though less common. However, some combinations are considered incorrect. For instance, Tshendzin considers that †*kʸndzirzaʋ* (from *tx-rzaʋ* ‘wife’) is only found in children’s language (*nu tx-pɣtso ra ku tu-ti-nu ŋgrɣl* ‘children talk like that’), as the correct term is *ɣzɣmi* ‘husband and wife’ from Tibetan བཟའ་མི་ *bza.mi* ‘husband and wife’.

There is in addition an irregular collective *kɣtsa* ‘parents and children’, with the same element *-tsa* found in some diminutives (see §5.7.3), from an earlier word for ‘child’.

It can be used without any preceding noun as in (121), but more commonly serves as the modifier of a kinship term, as in (122) (note also *tx-tɕu kɣtsa* ‘father and son’ and *tɕ^heme kɣtsa* ‘mother and daughter’ from *tx-tɕu* ‘son, boy’ and *tɕ^heme* ‘girl’).

 ‘There was a mother and her son.’ (tWJo 2012) {0004089#S4}

Like comitative adverbs (§5.8.1), it is clear that social relation collectives originate from participles of denominal verbs. The only example of the verbal denominal *andzɯ-* derivation from which they originate is *andzɯrya* ‘be neighbours’ from the inalienably possessed noun *tx-rya* ‘neighbour’ (§20.2.5). The social relation collective *kɣndzɯrya* ‘neighbours’ can thus be analyzed as the participle of this verb *kuw-ɣndzɯrya*.

However, since the *andzi-* denominal derivation attested only in this single example, from a synchronic point of view it is better to consider this collective formation as a strictly nominal derivation.

5.7.8.2 Reduplicated collectives

The reduplicated collectives are built using partial reduplication. There are three different patterns.

First, some nouns allow standard partial reduplication with *-u* in the reduplicated syllable (§4.1) expressing a vague collective. This reduplication can apply to loanwords from Tibetan, such as *ɣsuw~ɣsɣr* ‘things in gold’ and *rɣu~rɣul* ‘things in silver’ from *ɣsɣr* ‘gold’ and *rɣul* ‘silver’ (Tibetan གསེར་ *gser* ‘gold’ and དུལ་ *dɣul* ‘silver’).

- (123) *a-ɣsuw~ɣsɣr ra, a-rɣu~rɣul ra mɣ-ra kuw*
 1SG.POSS-COLL~gold PL 1SG.POSS-COLL~silver PL NEG-be.needed:FACT ERG
com rɣyskɣt u-taɕ tu-ɕe-a ɣu
 iron stairs 3SG.POSS-on IPFV:UP-go-1SG be:FACT
 ‘I don’t need things in gold or silver, I will go up the iron stairs.’ (not the golden or silver stairs, 2005-Kunbzang)

Some nouns, which only appear in a reduplicated form are presumably ancient collectives, like *k^hrambaχtuχtɤm* ‘lies’ from a possible non-reduplicated form **k^hrambaχtɤm* (from ངམ་པ་གྲམ་ *k^hram.pa.gtam* ‘deceiving words’).

Second, we find some reduplicated collectives with the vowel /a/, not /u/, in the replicated syllable. There are only a few examples, as shown in Table 5.17, but several of them are borrowings from Tibetan. In one case, *fɕafɕɤt* ‘words’, the base word is a transitive verb (*fɕɤt* ‘tell’).

Table 5.17: Collective noun derivation

Base form	Collective	Tibetan
<i>rdul</i> ‘dust’	<i>rdardul</i> ‘dust, dirt’	རྩལ་ <i>rdul</i> ‘dust’
<i>tu-ntɕ^hur</i> ‘fragment’	<i>u-ntɕ^hantɕ^hur</i> ‘fragments’	
<i>u-zur</i> ‘side’	<i>u-zarzur</i> ‘sides’	ཟུར་ <i>zur</i> ‘side, corner’
<i>u-rku</i> ‘side’	<i>u-rkarku</i> ‘sides’	
<i>fɕɤt</i> ‘tell’	<i>fɕafɕɤt</i> ‘words’	བཤད་ <i>bɕad</i> ‘explain, tell’

Reduplicated collective nouns in *a-* can be used without a number clitic, as in (124), but they often appear with the *ra* ‘plural’ as in (125).

- (124) *znɤryama nu mt^ha u-kɤcu ŋu. tce numutcu*

 (2002 tWsqr)

The noun *rgargun* ‘old person’ has the form of a collective noun as those in Table 5.17, but it is commonly used with singular or dual referents (as in 126). It

5 Nominal morphology

could be analyzed as the collective form of a loanword from Tibetan རྒྱ་པོ་ *rgan.po* ‘old person’, though the expected form would have been †*rga-rgyn*.

- (126) *rgarguan ni ky-fstun puu-ra*
 old.person DU INF-serve PST.IPFV-be.needed
 ‘She had to take care of two old people.’ (14-siblings) {0003508#S33}

A third reduplicated collective derivation is only attested by one example, the form *qajuqaja* ‘all kinds of worms’ (see 127) which derives from *qaju* ‘worm’ by reduplicating the whole word and changing the last rhyme to /-a/, a reduplication template reminiscent of that found in Khroskyabs (see Lai 2013, Lai 2017: 22–24).

- (127) *tu-ci u-ŋgu qajuqaja t^hamtɕxt, suŋgu yu u-rudas*

 ‘All the creatures in the water, the small and big animals of the forest,
 and also the birds have to be protected.’ (160703 jingyu) {0006169#S43}

A fourth type of collective has the vowel *-e* in the reduplicated syllable. It is attested in the noun *u-ɣoɣe* ‘all kinds of diluted drinks’ from *u-ɣo* ‘diluted drink’ (derived from the verb *ɣo* ‘rinse’).

5.7.8.3 Dvandva collective

The *dvandva* collective is derived from two nouns, the first one in bound state followed by the element *-lɣ-* and then by the second noun stem without a possessive prefix. All known forms, some of which have Tshobdun cognates,³³ are listed in Table 5.18.

Among the examples in Table 5.18, *u-kɣlɣjme* ‘head upside down’ and *kumɣ-lɣxo* ‘useless’, ‘in vain’ are mainly used adverbially. The first one mostly occurs with verbs such as *ɕt^huz* ‘turn towards’ and *ru* ‘look at’ at, as in (128).³⁴

³³The nouns *tu-mɣlɣjaɕ* ‘limbs’ and *u-kɣlɣjme* ‘head upside down’ correspond to *o-kolbjmv* ‘head and tail’ (Sun & Blogros 2019: 533) and *o-melbja* ‘limbs’, respectively (Sun & Blogros 2019: 276).

³⁴See a definition of this noun in (150), §16.2.1.4.

Table 5.18: Dvandva collectives

Collective	First noun	Second Noun
<i>tu-kxlʔmɲaɓ</i> ‘facial features’	<i>tu-ku</i> ‘head’	<i>tu-mɲaɓ</i> ‘eye’
<i>tu-mxlʔjaɓ</i> ‘limbs’	<i>tu-mi</i> ‘foot, leg’	<i>tu-jaɓ</i> ‘hand, arm’
<i>u-kxlʔjme</i> ‘head upside down’	<i>tu-ku</i> ‘head’	<i>ɬɣ-jme</i> ‘tail’
<i>kumxlʔxso</i> ‘useless’	<i>ku-me</i> ‘not existing’	<i>u-xso</i> ‘empty, normal’

 IPFV:DOWN-INV-turn.towards
 ‘One rinses the churning bucket very clean, and put it upside down at its place, the opening down.’ (30-macha) {0003746#S62}

The noun *kumxlʔxso* ‘useless’, ‘superfluous’, combines the subject participle of *me* ‘not exist’ with the property noun *u-xso* ‘empty, normal’ (a lexicalized participle, whose uses and etymology are described in §5.1.2.7). It can be used as predicate with a copula (129), but often occurs in adverbial use meaning ‘in vain’, ‘for nothing’ or ‘doing nothing’ as in (130).

ku-tu-rɣzi-ndzi mɣ-jɣ
 IPFV-2-stay-DU NEG-be.allowed:FACT
 ‘Do your homework, don’t stay there doing nothing.’ (conversation, 14-05-10)

The *-lɣ/-la-* element found in collective *dvandva*-s is also attested in approximate numerals (§7.2) and in adverbs such *tuxpaɬɣskɣr* ‘the whole year’ (from *tu-xpa* ‘one year’ and *fskɣr* ‘turn around’) and *rtsuɕaŋlaŋmtɕɣt* ‘all the plants’ (from

5 Nominal morphology

rtsuɕaŋ ‘plant’ and *t^hamtɕɤxt* ‘all’, respectively from Tibetan རྩུ་ཤིང་ *rtsi.ɕiŋ* ‘plant’ and རྩུ་མས་ཅད་ *t^hams.tɕad* ‘all’). Another possible trace of this *lx-* element is found in the adverb *lxq^hɣtɣmbɣt* ‘(distance of) several mountain ranges’ (131), which contains the noun *tɣmbɣt* ‘mountain’ and perhaps the bound state *q^hɣ-* from *u-q^hu* ‘after, behind’.

- (131) *ji-pɣrt^hɣβ* *lxq^hɣtɣmbɣt* *tu*
 1PL.POSS-between several.mountains exist:FACT
 ‘There is a distance of several mountain ranges between us.’ (elicited)

Another linking morpheme *-mɣ-* instead of *-lx-* is found in the possessed noun *u-ŋgumɣpɕi* ‘the inside and the outside’ from the locative relator nouns *u-ŋgu* ‘inside’ and *u-pɕi* ‘outside’ (the latter from Tibetan ཕྱི་ *p^hi* ‘outside’, §8.3.4.2).

5.7.9 Superlative

While there is no adjectival superlative derivation in Japhug (the available constructions to express this meaning are described in §26.4), we find nevertheless a derivation applied to locative nouns (§8.3.4), expressing the furthest location. As shown in Table 5.19, it is built by adding an element *-ɕu-* followed by a complete copy of the root of the noun without bound state alternation or partial replication; the resulting noun is still an inalienably possessed locative noun. Example (132) illustrates the use of one of these forms.

Table 5.19: Superlative noun derivation

<i>tu-ku</i> ‘head’, ‘top’	<i>u-kuɕuuku</i> ‘the highest place’
<i>tɣ-qa</i> ‘paw, root’, ‘bottom’	<i>u-qaɕuqa</i> ‘the deepest place’

5.7.10 Unattested derivations

The only negative morphology possible on Japhug nouns is the privative derivation (§5.7.1). Negative prefixes only occur verbs (§13.1), and the only way to express non-privative negation on nouns is by using a relative clause (§13.4.1). There is no nominal tense derivation corresponding to the English prefix *ex-*. This meaning can only be expressed by participial relatives with the past imperfective participle of the copula *pu-ku-ŋu* (133) (§16.1.1.2).

- (133) *u-nmaβ* *pu-ku-ŋu*
 3SG.POSS-husband PST.IPFV-SBJ:PCP-be
 ‘Her ex-husband (the one who used to be her husband).’ (several attestations)

In addition, although it is possible to derive abstract nouns from verbs (§16.3, §16.4.2, §16.4.7), there is no direct way of deriving an abstract noun from a noun. There is however an indirect way of doing it by building a denominal verb, and then to subjecting it to a nominalizing derivation. For instance, from the inalienably possessed *tx-mdzu* ‘thorn’, the proprietive verb *ayu-mdzu* ‘be thorny, have a lot of thorns’ can be derived (§20.2.4) and its (productive) degree noun *u-tu-ɣyu-mdzu* ‘its degree of thorniness’ is well attested in the degree construction (§26.1.2.1) as shown in (134).

- (134) *u-tu-ɣyu-mdzu* *saχaβ*
 3SG.POSS-PROP:DENOM-thorn be.extremely:FACT
 ‘It is very thorny (its degree of having thorns is extreme).’ (18-NGolo)
 {0003530#S70}

5.8 Denominal adverbs and postpositions

5.8.1 Comitative adverbs

Comitative adverbs are productively derived from nouns. Their meaning is ‘having *X*’, ‘together with *X*’, ‘including *X*’ or in the case of clothes or covers ‘wearing *X*’.

Comitative adverbs are built by partially reduplicating the last syllable of the noun stem (following the morphophonological rules in §4.1) and prefixing either *kʰ-* or *kɣyu-*. This derivation applies to native words and loanwords from Tibetan.

5 Nominal morphology

From instance, *χεϛlmuy* ‘glasses’ (from Tibetan རྩེལ་མིག་ *cel.mig* ‘glasses’) yields *kʻ-χεϛlmuy~lmuy* or *kʻyuu-χεϛlmuy~lmuy* ‘together with glasses; wearing glasses’.³⁵

No semantic difference between the comitative adverbs in *kʻ-* and those in *kʻyuu-* has been detected: Both are fully productive and can be built from the same nouns. As argued in Jacques (2017d), the *kʻyuu-* form is inherited (from proto-Gyalrong **kɔwə-*), while *kʻ-* is borrowed from Tshobdun *ko-*, the exact cognate of *kʻyuu-* (Sun 1998: 107). The prefix *kʻyuu-* and its Tshobdun cognate *ko-* both originate from the participle *ku-* (§16.1.1) of the proprietive *ayuu-* denominal derivation (§20.2.4.4), attesting a PROPRIETIVE ⇒ COMITATIVE grammaticalization pathway (Jacques 2017d). When the base noun is inalienably possessed, it is possible to build a comitative adverb with the indefinite possessor prefix or with the bare stem. For instance, from *tx-rte* ‘hat’ one can derive both *kʻ-rtuu~rte* / *kʻyuu-rtuu~rte* ‘with his/her hat’ and *kʻ-tx-rtuu~rte* / *kʻyuu-tx-rtuu~rte* ‘with a/the hat’ with the indefinite possessor prefix *tx-*. These two sets of forms have different meanings: the former *kʻ-rtuu~rte* / *kʻyuu-rtuu~rte* mean ‘wearing one’s hat’ (example 135), while the latter *kʻ-tx-rtuu~rte* / *kʻyuu-tx-rtuu~rte* imply that the subject is not wearing the hat (136); preserving the indefinite possessor in the derived form alienabilizes the inalienably possessed noun (see §5.1.2.9).

- (135) *kʻyuu-rtuu~rte zo k^ha u-ŋgu lɣ-tuu-ye*
 COMIT-hat EMPH house 3SG-inside AOR-2-come[II]
 ‘You came inside the house wearing your hat.’ (You were expected to take it off before coming in, elicited)

 thing COMIT-INDEF.POSS-hat EMPH AOR:3→3’-take
 ‘He took the hat along with the other objects.’ (Not wearing it, elicited)

The alienabilized comitative adverb *kʻtylulu* ‘with milk’ (from *tx-lu* ‘milk’) is used as postnominal modifier in ‘milk tea’ (137). The inalienably possessed form *kʻtlulu* ‘with its milk’ is only compatible with the animal producing the milk (or in the case of a plant producing a milk-like juice).

- (137) *tɕ^ha kʻ-tx-lu~lu*
 tea COMIT-INDEF.POSS-milk
 ‘Milk tea.’ (30-Com) {0003736#S92}

³⁵Note that reduplication applies across morpheme boundaries, as the coda of *χεϛl* ‘glass’ (from རྩེལ་ *cel* ‘glass’) is reduplicated with the following syllable.

Comitative adverbs can be used as sentential adverbs, with scope over the whole sentence (examples 135, 136).

They also occur as noun modifiers (as in 137 above), and either follow (137, 138) or precede (142, 140) the noun that they modify.

- (138) *tx-sno kʻj-ju~jaʃ nu lu-ta-nu*
 INDEF.POSS-saddle COMIT-hand DEM IPFV-put-PL
 ‘(Then), they put the saddle with its handles.’ (30-tAsno) {0003758#S68}

The noun modified by a comitative adverb can have various syntactic functions in the clauses, including object (137, 138, 140), intransitive subject (139, 142) or even transitive subject (141). This last option is not attested in the text corpus, but speakers have no trouble producing sentences of this type.

- (139) *kʻ-snu~sno zo kʻ-rŋu*
 COMIT-saddle EMPH AOR-lie.down

 ‘The owl’s head looks a little like that of a cat, apart from the fact that it has a beak, it looks very much like a cat with its ears.’ (22-pGAKhW) {0003594#S7}

5 Nominal morphology

- (143) *li βzɯ kʻ-mtɕʰu~mtɕʰi ci nu ɲu-fse*
 again mouse COMIT-mouth INDEF DEM SENS-be.like
 ‘[The bat’s] mouth is like that of a mouse.’ (literally ‘It looks like a mouse with its mouth.’ 25-qarmWrwa) {0003648#S11}

Comitative adverbs connected to a noun can occur before the indefinite article *ci* ‘a’ as in (143), but this article can also be repeated on both the noun and the adverb, as in (§9.1.4.1).

- (144) *tce ɲɿkrɯ ci kʻ-rɯ-ri ci ɲɿ-ɲo,*
 LNK rake INDEF COMIT-thread INDEF IFR-borrow
 ‘He borrowed a rake with a thread.’ (140427 qala cho kWrtsAG)
 {0003852#S56}

Nouns incorporated into comitative adverbs lose their nominal status and cannot be determined by relative clauses (including attributive adjectives), numerals or demonstratives. In a sentence such as 145 for instance, the attributive participial relative [*ku~ku-ɲɿn*] ‘all the ones who are evil’ does not determine *kɻɯ-ɲkʰu~ɲkʰor* ‘with his subjects’, a syntactic structure which would correspond to the translation ‘with all his evil subjects’. Rather, it determines the head noun together with the comitative adverb *ɲɿɿɿpu kɻɯ-ɲkʰu~ɲkʰor* ‘the king with his subjects’, which implies the translation given below.

- (145) *ɲɿɿɿpu kɻɯ-ɲkʰu~ɲkʰor ku~ku-ɲɿn zo to-ndo tce,*

 TOTAL~SBJ:PCP-PROP-fear EMPH IFR-take.away LNK
 ‘She took the king and his subjects, all the evil ones, in the beginning she took them to nice places, but later she took them to fearful places.’
 (2012 Norbzang) {0003768#S341}

Other denominal adverb formations are also attested in Japhug, but are described in the sections on time nominals (§7.5.2) and locational nouns (§8.3.4) in other chapters.

5.8.2 Reduplicated perlicative

Partial reduplication of nouns, in addition to the reduplicated collectives (§5.7.8.2), can also derive location adverbs such as *tʂuʂu* ‘along the road’ from *tʂu* ‘road’ with a perlicative meaning, as in (146). A similar use of the reduplication appears in Zbu, but with an additional *kə-* prefix (Gong 2018: 114).

- (146) *c^ha ra tʂu~tʂu kú-wy-nu-ts^hi tce*
 alcohol PL path~PERLATIVE IPFV-INV-AUTO-drink LNK
 ‘One drinks alcohol along the way [back home].’ (2010-histoire10)

Other examples of perlicative include *u-jru~jroʂ* ‘following X’s trace’ from *tr-jroʂ* ‘trace’ (see example 76, §19.4.1).

5.8.3 -z suffix

The postposition *ʂaz* ‘while ... still’, which is mainly used in a particular type of temporal clause (§25.3.4.3), probably originates from the inalienably possessed noun *tr-ʂa* ‘free time’ with the fossil locative suffix *-z* (related to the locative postposition *zu*, §8.2.4.1) cognate to Situ *-s* (Lin 1993: 330–331).

5.8.4 s- prefix

The adverbs *st^huci* ‘so much’ (§26.3.1.4) and *st^hamtʂɛrt* ‘so much’ are derived from the indefinite pronoun *t^huci* ‘something’ (§6.6.2) and the universal quantifier *t^hamtʂɛrt* ‘all’ (§9.1.3.1) by what appears to be an *s-* prefix.

They are attested in derived forms such as *kust^huci* ‘this much’ and *must^huci* ‘that much’ (§26.1.1.3) with the prefixed demonstrative stems *ku-* and *nu-* (§6.9).

The standard marker *staʂ* ‘compared with’ and its variant *sustaʂ* (§8.2.7) are clearly related to the locative relator noun *u-taʂ* ‘on, above’ (§8.3.4.3). The prefix *s-* is doubled as *su-* in the form *sustaʂ*.

The ultimate origin of the prefix *s-* in the adverbs and postpositions above is unclear, but it could be the result of the degrammaticalization of the locative *-z* suffix (§5.8.3; this suffix eventually became the locative postposition *zu*, §8.2.4.1) and subsequent procliticization to the following host. For instance, in the case of *staʂ*, the hypothesized process would be:³⁶

1. *X-z (*u*)-taʂ (Suffix)

³⁶The symbol X represents a noun phrase. The forms are presented in their Japhug orthography for convenience, but at the stage when this reanalysis happened, the actual pronunciation of the forms in question was probably different.

5 *Nominal morphology*

2. **X zə = taʁ* (Procliticization)
3. *X staʁ* (monosyllabicization and reanalysis as a postposition)

6 Pronouns

6.1 Personal pronouns

The pronominal system of Japhug distinguishes singular, dual and plural. Alongside free pronouns, a system of pronominal prefixes is used not only to express possession on nouns (§8.2.3.1), but also appears in various non-finite verb forms (§16.1.1.1, §16.1.2.1, §16.1.3.3, §16.2.2, §16.4.6). These prefixes do not distinguish the second and the third person in the dual and plural forms; their use is described in §5.1.1.

Table 6.1: Pronouns and possessive prefixes

generic	<i>tu-</i>	<i>tuʒo</i>	–

Free pronouns and possessive prefixes are remarkably similar in Kamnyu Japhug. In this dialect, all the pronouns except the third person dual and plural are formed by adding the root *-ʒo* to the corresponding possessive prefix. In the eastern Japhug dialects (represented by Tatshi in Table 6.1), the 1SG *ŋa* and 3SG *mi* pronouns differ from the corresponding possessive prefixes (the former is possibly borrowed from Situ *ŋā*).

6 Pronouns

The first and second person singular pronouns *azo* and *nyzo* also have the shorter monosyllabic forms *aj* and *nyj*, respectively. These short forms are considerably less common in stories (in the reported speech of the characters), but appear frequently in free conversations.

Japhug lacks any inclusive/exclusive distinction, unlike other Gyalrongic languages such as Tshobdun, Situ or Khroskyabs (see Sun 1998, Lin 1993: 177, Prins 2016: 92, Lai 2017: 170). Example (1) shows the dual pronoun *tcizo* ‘we (dual)’ in inclusive use (it is clear from the context that the son tells his mother to come with him), and (2) illustrates the same pronoun in exclusive use. Similar pairs of examples can be found with the first plural pronoun *izo* ‘we (plural)’ and its variants.

- (1) *a-mu* *tcet^ha tcizo kunɣ ce-tci*

 (smanmi4.82-83)

In some contexts, demonstrative pronouns rather than person pronouns are used to refer to a third person, even human (see §6.9).

Personal pronouns are not used as head of relative clauses (as in Chinese 的你 <... de nǐ > ‘you who are ...’), though there are case of relativization of first or second person possessor, as in (4) (§23.5.10.1).

- (4) *azo nuu [a-mu ku-me] ηu-a tce tce*
 1SG DEM 1SG.POSS-mother SBJ:PCP-exist be:FACT-1SG LNK LNK
 ‘I am someone who does not have a mother.’ (2003Nyimawodzer2)

Personal pronouns can take determiners, in particular the demonstrative *nuu* as in (4), numerals (§7.1.7) and can also precede a noun in apposition, in expressions such as *izo kuruu* ‘we, Tibetans’ (5) or *nyzo qacpa* ‘you frog’ in (6).

- (5) *izo kuruu tce pyjka tu-nuu-ti-j ηu tce,*

 ‘Who will give you a wife, you frog.’ (2002 qaCpa)

The relationship between the pronouns and the following noun is not necessarily appositional; for instance, in (7), despite the absence of possessive prefix on the borrowing 土汉族 <tùhànzú> ‘local Chinese’, the meaning of *izora* <*tuhanzu*> is ‘the local Chinese living among us’ rather than ‘We local Chinese’.

- (7) *izora <tuhanzu> ra kuw, <qingyang> tu-ti-nuu ηu.*
 1PL local.Chinese PL ERG bharal IPFV-say-PL be:FACT
 ‘The local Chinese among us call it “qingyang”.’ (20-xsar) {0003568#S41}

As in most languages with polypersonal indexation, pronouns (especially first and second person pronouns) are never obligatory, and a finite verb form without overt argument NPs is a perfectly well-formed sentence (§22.1). Overt pronouns are obligatorily overt as core arguments only when focalized (§22.1.2.3).

Japhug presents a very common subtype of split ergativity: the ergative *kuw* being obligatory on transitive subject third person pronouns (except in the case of the emphatic use of pronouns, §6.4) but optional on first and second person pronouns (§8.1.2 and §8.2.2.1).

6.1.1 Honorific plural

The second plural pronoun *nuzo* can be used as honorific pronoun, as in (8), where the addressee is unambiguously singular.

- (8) *utyz nuzo te^{hi} u-ruy tu-ηu-nuu?*
 actually 2PL what 3SG.POSS-race 2-be:FACT-PL
 ‘Actually, which type of being are you?’ (2003 smanmi)

6 Pronouns

This pronoun correlates with plural honorific indexation *-nu* (§14.6.1.2). Note that the plural *ra* also occurs as a honorific marker on nouns (§9.1.1.3).

6.1.2 Personal pronouns as possessive markers

Personal pronouns occur instead of possessive prefixes (§5.1) as first member of compounds with the adverbs *-suso* ‘as *X* wish’ (from the verb *suso* ‘think’), as in example (9) and *-sti* ‘*X* alone’.

- (9) *a-zda* *ra zara-suso* *tu-nu-nɣkɯŋke-nu*

SENS-be.possible
‘The other [snakes] can go here and there as they wish.’ (The divination
2002) {0003364#S43}

The noun *-bra* ‘it is *X*’s turn to’ can either take a regular possessive prefix, or a pronoun in bound state form as in (10), where the bound form *nɣzɣ-* occurs instead of *nɣzo* ‘2SG’.

- (10) *wortc^{hi} nɣzɣ-bra* *a-tɣ-tu-ti* *ra*
please 2SG.POSS-turn IRR-PFV-2-say be.needed:FACT
‘It is your turn to say it.’ (2014-kWLAG)

These constructions are discussed in more detail in §5.1.2.12 and §22.2.2.4.

6.2 Generic pronouns

6.2.1 *tuzo* ‘one’

The generic pronoun *tuzo* ‘one’ has the same morphological structure as personal pronouns as seen in the previous section, combining the generic possessive prefix *tu-* with the pronominal root *-zo*. Note that this generic possessive has to be strictly distinguished from the homophonous indefinite possessor prefix *tu-* (see §5.1.3). It has a rare plural variant *tuzɣra* ‘one’ (see §14.6.1.3, example 166).

In Japhug, sentences have at most one generic human referent (§5.1.3). If this referent is core argument, the verb has generic indexation (*ku-* for intransitive subject and object and *wɣ-* for transitive subject, as in the following example, §14.3.2.5). The generic argument can be realized as the generic pronoun *tuzo* as in (11) or by a generic noun (such as *turme* ‘person’, §6.2.2).

- (11) *tu-zda* *pjú-wy-z-γtca*, ***tuzo*** *ntsur*

 ‘If one considers that one’s companion is wrong, and always considers
 himself to be right even if one is wrong, there is can be no good result.’
 (IWlu) {0003361#S80}

The generic pronoun can occur before a noun with the generic possessive as in *tuzo tu-skvt* ‘one’s language’ in example (12); this contributes to disambiguating between the indefinite possessive and the generic possessive in the case of inalienably possessed nouns (thus on its own *tu-skvt* can mean either ‘a language’ or ‘one’s language’).

- (12) *tcendvre tuzo tu-skvt* *zara yu-suvcvt* *ju-ra*,
 LNK GENR GENR.POSS-language 3PL INV-teach:FACT SENS-be.needed
zara nu-skvt *tuzo ku-suvcvt* *ju-ra*

 ‘One has to teach them one’s language, and they have to teach you their
 language.’ (150901 tshuBdWnskAt) {0006242#S28}

When occurring in A function, the generic pronoun *tuzo* obligatorily receives the ergative *ku* as in (13) (note that in example 12, although the generic referent is A in the first clause, *tuzo* does not take ergative because it is a determiner of *tu-skvt*).

- (13) *tuzo ku tu-χti* *pjú-wy-nu-car* *ku-maβ* *ku*,

 ‘One’s father’s sister’s children have to call oneself “my maternal uncle” if one is a boy, “my maternal aunt” if one is a girl.’ (140425 kWmdza03) {0003787}

As examples (11) to (14) illustrate, generic agreement between pronoun, possessive prefix and verb indexation is very systematic. Examples of 1PL indexation with generic pronouns or vice-versa are, however, attested (§14.6.1.3).

Due to the constraint against more than one generic argument per clause (§5.1.3), the only case that the generic pronoun can appear two times in the same clause occurs in reflexive constructions (§18.3), as in (15).

- (15) *tuzo ku tuzo tu-ku-nu-zyx-βri ra*

6.2.2 The generic noun *turme* ‘person’

The noun *turme* ‘person’, also attested to express indefinite humans (§6.6.1) or in the meaning ‘someone else’ (§6.8), can occur as a marker of generic person, as in (16).

- (16) *turme kuny tu-wy-ndza sna.*
 people also IPFV-INV-eat be.good:FACT
 ‘It is also good for people to eat.’ (12-Zmbroko) {0003490#S29}

In this function, *turme* ‘person’ can be indexed on the verb by either generic person (as in 16) or 3PL markers, a question explored in more detail in §14.6.2.

There is a slight difference of usage between *turme* ‘person’ and *tužo* ‘one’ in clauses with a generic argument. Both can be followed by a noun or a case marker taking the generic possessive prefix, as in (17) and (18).

- (17) *turme tu-fsu cantax tu-mbro mx-c^ha.*

 {0003518#S18}

However, *turme* ‘person’ as a generic noun can alternatively be used with a possessee or a case marker with the third person singular *u-* prefix, as in (19), while this option does not exist for *tužo* ‘one’.

- (19) *turme u-fsu jamar tu-βze c^ha.*
 people 3SG-equal.to about IPFV-do[III] can:FACT
 ‘It can grow about the size of a person.’ (12-ndZiNgri) {0003488#S4}

6.3 Genitive forms

The form of pronouns and personal prefixes undergoes few morphophonological changes in combination with postpositions and relational nouns. However, in combination with the genitive postposition *γu* (cf §8.2.3), some personal pronouns have special forms indicated in Table 6.2.

While some degree of variation exists with dual and plural pronouns (for instance the regular *izo γu* is found alongside *izxy* and *izyra γu*), for the singular pronouns only one form is attested.

- (20) *azuy ndza ηu ci, nzyuy ndza ηu, aj*

Table 6.2: Pronouns and possessive prefixes

Free pronoun	Genitive	
<i>azo</i>	<i>azuy</i>	1SG
<i>nyzo</i>	<i>nyzuy</i>	2SG
<i>uzo</i>	<i>uzxy</i>	3SG
<i>tcizo</i>	<i>tcizxy</i>	1DU
<i>ndzizo</i>	<i>ndzizxy</i>	2DU
<i>zmi</i>	<i>zmiyu</i>	3DU
<i>izo</i>	<i>izxy, izxyra yu</i>	1PL
<i>nuzo</i>	<i>nuzxy, nuzxyra yu</i>	2PL
<i>zara</i>	<i>zaray, zara yu</i>	3PL

In the genitive forms of the pronouns, the vowel of the genitive marker is generally dropped, and the pronominal root *-zo* undergoes vowel change to *-zuy* (in the case of first and second person) and *-zxy* (in other forms). Note that *zaray* is the only case of the rhyme /ay/ in Japhug.

When genitive pronouns occur as determiners of nouns (including in the possessive existential construction, §22.5.2.1), these nouns almost always take a possessive prefix coreferent with the genitive pronoun, as in (21).

- (21) *tcizxy tci-t^hyfkxlyyi tu-ckat pu-tu tce, nu*

6.4 The emphatic use of pronouns

In addition to their referential and anaphoric functions, pronouns in Japhug can be used in an emphatic way in combination with the emphatic particle *zo* (§26.1.1.5), as in (24).

- (24) *azo uzo zo kɣ-mto muw-pu-rɲo-t-a.*
 1SG 3SG EMPH INF-see NEG-AOR-experience-PST:TR-1SG
 ‘I never saw it itself.’ (24-kWmu) {0003618#S7}

In combination with the autive *nu-* on the verb, pronouns express the meaning ‘do *X* on one’s own’ (§19.1.3). In the case of transitive verbs, third person pronouns in this function does not take the ergative even if the referent is the transitive subject (example 25, where *tɣɣt* ‘take out’ is transitive, §22.4.2.3).

- (25) *tce lu-nu-ryji-nu tce, nuw-kɣ-ndza nurra zara*

6.5 Interrogative pronouns

The interrogative pronouns in Japhug are indicated in Table 6.3. These pronouns are used in independent interrogative clauses (28), in subordinate clauses (29), and also in correlatives (30) (§23.2.5), and also occur to express non-specific referents (these uses are described in § 6.6.6, after the indefinite pronouns).

- (28) *tce mɣzu tɕ^hi pu-ŋu?*

 (19-rNamoN) {0003552#S22}

In addition to these pronouns, some indefinite pronouns are also marginally used in questions, see for instance (87) in §6.6.2.

6.5.1 *tɕ^hi* ‘what’

The interrogative pronoun ‘what’ considerably varies across Japhug dialects. In Kamnyu we find *tɕ^hi*, apparently borrowed from Tibetan *tɕ^hi*. Neighbouring dialects of Gdongbrgyad area have either *ts^hi* (in Mangi) or *t^hi* (in Rqaco), which represents the original Gyalrongic root for this interrogative pronoun (cognate with Tibetan མེ *tɕ^hi* ‘what’ and Limbu *the*). Even in the Kamnyu dialect, the form

Table 6.3: Interrogative pronouns

<i>tɕ^hi</i> ‘what’
<i>ɕu</i> ‘who’
<i>t^hɣstuy</i> ‘how many’
<i>t^hɣjtɕu</i> ‘when’
<i>ŋotɕu</i> ‘where’, <i>ŋoj</i> ‘where’
<i>tɕ^hindza</i> ‘why’

ts^hi- is directly attested in the indefinite *ts^hitsuku* ‘whatever’ (§6.6.3). Mangi Japhug shares with Kamnyu the sound change **t^hi* → *ts^hi* which also affects the verb *ts^hi* ‘drink’ (this sound change occurred after the pronoun **t^hi* underwent bound state alternation to *t^hu-* and was used to build the indefinite pronoun *t^huci* ‘something’, see §6.6.2). Note that Kamnyu Japhug *tɕ^hi* ‘what’ is homophonous with the noun *tɕ^hi* ‘tree-trunk stairs’ attested for instance in example (31) – the readers of Japhug texts have to be aware of this potential ambiguity.

- (31) *ɕom yɟu ku-mbu~mbro zo, u-ymbaj zu tɕ^hi*

The Eastern dialects of Gsardzong and Datshang have *xto* instead, a word of unknown etymology; these dialects, which share many additional morphosyntactic and phonological commonalities, can be collectively referred to as “Xtokavian”.

In the Kamnyu dialect, *tɕ^hi* ‘what’ is by far the most common interrogative pronoun in the corpus. In interrogative clauses, it can be used to ask about objects, non-human animals (32) and names of persons (33), and can occur as prenominal determiner meaning ‘what (type of)’ as in (34).

 (07-paXCi) {0003430#S7}

6.5.2 *ɕu* ‘who’

The interrogative pronoun *ɕu* ‘who’ occurs in questions about the identification of a human referent. It can occur in all syntactic roles, and does not have special ergative or genitive forms (see examples 51 and 52). It is the probable cognate of a etymon widespread in the Trans-Himalayan family (for instance, Tibetan ལུ *su* ‘who’).

- (50) *ma-tu-nuqaʁy ma ɕu tu-ŋu mɿ-xsi*

 ‘Whom should I give [her] to (in marriage)?’ (140508 benling gaoqiang de si xiongdi-zh) {0003935#S218}

The pronoun *ɕu* ‘who’ can be used in one context with non-human referents, when asking about which object (out of two or more) has the highest value as to a property described by the main verb, as in (53); in this construction, the verb receives non-singular indexation (§14.6.1.3), such as the dual *-ndzi* in this example.

6 Pronouns

Concerning the use of the ergative *ku* in this sentence see §8.2.7, §26.2.1 and Jacques (2016b).

Forms related to *ɕu* ‘who’ in Japhug include the indefinite pronoun *ɕumɣɕu* ‘whoever, anybody’ (6.6.4) and *ɕuŋarura* ‘each better than the other’.

6.5.3 *t^hɣstuy* ‘how many’ and *t^hɣjtɕu* ‘when’

To ask about precise quantities, *t^hɣstuy* ‘how many’ (or ‘how much’) occurs rather than *tɕ^hi jamar* as seen above (§43).

- (54) *nyzo t^hɣstuy tu-k^hɣm?*
 you how.much 2-give[III]:FACT
 ‘How much [money] do you give [for it]?’ (Bargaining)

It can be used for any countable quantity, including for people, as in (55).

 ‘How many [people] are you in the village?’ (conversation)

The pronoun *t^hɣstuy* has a conjunct form *t^hɣstui-* when used with counted nouns, including Chinese borrowings (§7.3.1.4). For instance, in (56) and (57), it occurs with the classifiers *X-maɣ* ‘size of shoes’ (from Chinese 码 *mǎ*), and in (57) with the non-nativized form of 点 <diǎn> ‘hour’ (the same meaning can be expressed without borrowing from Chinese, as in 59).

- (56) *ny-xtsa nuu t^hɣstui-maɣ tu-tu-ɲge ɲu*

'How could this be possible?' (qajdoskAt 2002) {0003366#S32}

This sentence is used to express indignation (as in Chinese 哪有这样的道理?).¹

6.6 Indefinite pronouns

Japhug has a handful of indefinite pronouns, indicated in Table 6.4. They do not form a complete paradigm, and other constructions, in particular generic nouns

¹In the story from which it is quoted, the husband says this sentence after his wife, quoting the words of a raven, says that she will have luck, not her husband, who thus reacts in anger.

and free relatives occur to express meanings for which no indefinite pronoun exists (see §23.7).

There are no negative indefinite pronouns, and indefinite pronouns are almost never under the scope of negation (except in translations from Chinese). They also never occur as standard of comparison.²

Table 6.4: Indefinite pronouns

<i>ci</i> ‘one’, ‘someone’
<i>t^hu^hci</i> , <i>t^hut^hɣci</i> ‘something’
<i>ts^hitsuku</i> ‘whatever’
<i>ɕumɣɕu</i> ‘whoever, anybody’
<i>cisc^hiz</i> ‘somewhere’

6.6.1 *ci* ‘someone’

There is no indefinite pronoun ‘someone’ in Japhug, but the numeral *ci* ‘one’, which has many additional functions (indefinite article, modifier and partitive pronoun §9.1.4.1, §6.8, §6.7.2, §9.1.7, §7.1.1 and §22.2.1), can express this meaning as in (76) and (77).

- (76) *u-lycu* *nutɕu qazo kytsa* *ci, ci ku*
 3SG.POSS-upstream DEM:LOC sheep parent.and.child INDEF one ERG
kɣ-ntsye *t^ha-ɣut* *ɲu-ɲu*.
 OBJ:PCP-sell AOR:3→3’-bring SENS-be
 ‘Upstream from there, [there was] a ewe and her young, that someone had brought them to sell.’ (2003 kandZislama)

- (77) *tu-xpa tɕe ci ku tu-rdoɓ pjɣ-sat*.
 one-year LNK one ERG one-piece IFR-kill
 ‘One year, someone killed one [wild goose].’ (22-qomndroN)
 {0003598#S37}

This use of *ci* is rare. The preferred construction to express the meaning ‘someone’ involves the combination of the generic noun *turme* ‘person’ with the indefinite *ci*.

²Examples such as ‘In Freiburg the weather is better than anywhere in Germany’ (Haspelmath 1997: 2) would not be expressible with an indefinite pronoun.

6.6.2 *t^huci* ‘something’

The indefinite pronoun *t^huci* ‘something’ derives from the bound state of the proto-Japhug pronoun **t^hi* ‘what’ (see §6.5.1 above) with the indefinite determiner and numeral *ci* ‘one’. Note that vowel alternation bleeds the sound change /**t^hi/* → /*ts^hi/*, otherwise a form such as †*ts^huci* would have been expected. Its reduplicated form *t^hut^hyci* has an irregular vocalism /*ɤ/* (†*t^hut^huci* would have been expected instead).

It can designate specific referents, whose nature is known to the speaker but unknown to the addressee (as in 78),³.

- (78) *tu-nuusman-a jɣɣ ri, mɣzɯ u-ftcaka tsuku*
 IPFV-treat-1SG be.possible:FACT but yet 3SG.POSS-manner some

 (150901 tshuBdWnskAt) {0006242#S17}

The non-reduplicated form *t^huci* occurs in a correlative construction with the form *muuci* to mean 'this and that', an expression that is used especially in reporting speech from another person when the speaker does not want to bother reporting in details the exact words that have been said.

- (84) *t^huci nɣme-a ra, muuci nɣ-me-a*
 something do[III]:fact-1SG be.needed:FACT something do[III]:fact-1SG
ra
 be.needed:FACT
 'I have to do this and that (so I cannot do X).' (elicited)

6 Pronouns

The pronoun *t^huci* ‘something’ can also occur as head of a relative clause as in (80) above with the relative *t^huci k^hutsa ku-fse* ‘something which is like a bowl’. This use is most common in texts translated from Chinese, with the indefinite article *ci* ‘one’ (§9.1.4.1) following relative clause, as in (85).

- (85) *laχci ci pjw-βzjoz-a, t^huci a-kγ-spa ci*

 SBJ:PCP-greish SBJ:PCP-be.like INDEF be:FACT LNK
 ‘[Silver] is white with a little greyish colour.’ (30-Com) {0003736#S173}

The reduplicated form of the indefinite pronoun *t^hut^hγci* can be used as an interrogative pronoun, as in (87). This construction is similar in meaning to Chinese 一些什么 <yīxiēshénme> ‘what kinds of things’, and is attested in particular with the verbs *tī* ‘say’ and *ra* ‘be needed’. By using this form, the speaker implies that the addressee necessarily knows the answer to the question. For instance, in (87), a sentence from a text enumerating the mountain names in Kamnyu, the names had been written before hand on a piece of paper, and I was reading them one by one to Tshendzin; given the fact that the name had been written down, it was obvious that I necessarily knew the answer to that question (on the use of the Inferential in this example, see §21.5.2.3).

- (87) *nw u-pa t^hut^hγci to-ti-a?*
 DEM 3SG.POSS-down something IFR-say-1SG
 ‘What did I say after that?’ (140522 Kamnyu zgo) {0004055#S69}

There are very marginal examples of *t^huci* ‘something’ used as an indefinite prenominal determiner (§9.1.4.2).

The pronoun *t^huci* ‘something’ can take various modifiers, for instance the identity modifier *kumar* ‘other’ (§9.1.7) as in (88).

- (88) *ki mbro ki ɲu-kɣ-ntsye tce, [kumaɁ t^huci]*
 DEM:PROX horse DEM:PROX IPFV-INF-sell LNK other something
ɲu-kɣ-sɣndu to-nuukrɣz-ndzi
 IPFV-INF-exchange IFR-discuss-DU
 ‘They discussed about selling their horse, and exchanging it for something else.’ (150822 laoye zuoshi zongshi duide-zh) {0006298#S41}

No example of *t^huci* with topic markers contributing to mark definiteness such as *nu* or *iɕq^ha* (§9.1.4.3) have been found in the corpus.

6.6.3 *ts^hitsuku* ‘whatever’

The pronoun *ts^hitsuku* ‘whatever’ combines the interrogative pronoun *ts^hi* ‘what’ (replaced by *tɕ^hi* ‘what’, a borrowing from Tibetan, in Kamnyu Japhug, but still attested in Mangi village, see §6.5.1 above) with the mid-scalar quantifier *tsuku* ‘some’ (see §9.1.3.2; also found as a partitive pronoun, §6.7.2). Unlike *t^huci* ‘something’, is not used for specific referents. Example (89) illustrates its most common use. The variant form *t^hitsuku*, without the sound change **t^hi* → *ts^hi*, is also used by speakers of the Kamnyu dialect.

‘Even like that, she supports herself with a staff in one hand, and with the other hand she does all kinds of things, makes their food, she makes food for the animals.’ (14-siblings) {0003508#S49}

As other indefinite pronouns, *ts^{hi}tsuku* ‘whatever’ is not normally used with negation, but such sentences do occur in the corpus in translations from Chinese, as (91). They are not idiomatic Japhug, and only marginally grammatical.

 (150902 qixian-zh) {0006258#S90}

6.6.4 *ɕumɣɕu* ‘whoever, anybody’

There is no indefinite pronoun for human referents ‘somebody’ in Japhug corresponding to *t^huci* ‘something’ – a generic noun with the indefinite determiner *ci* ‘one’ such as *turme ci* ‘a man’ is used instead. There is nevertheless a free choice pronoun *ɕumɣɕu* ‘whoever, anybody’ (see Haspelmath 1997: 48–52 on the differences with universal quantifiers), which, however, is not very common. As example (92) shows, it can take the ergative *ku*, and the verb receives plural indexation (§14.6.2).

(92) *tɕaχkɣr k^huɬsa nu bo t^ham q^{he} ɕumɣɕu ku ku-nu-ntɕ^hoz-nu*

6.6.5 *cisc^hiz* ‘somewhere’

The indefinite pronoun *cisc^hiz* ‘somewhere’ comprises the indefinite *ci* ‘one’ and the approximate locative (*s*)*c^hiz* (see §8.2.4.2). It occurs with or without the loca-

tive postposition *ri*, as in (93) and (94). It can refer to static location, or motion from or towards a direction.

- (93) *cisc^hiz, tyts^hob ur-taβ kur-fse, ty-jtsi ur-taβ*

6.6.6 Interrogative pronouns used as free-choice indefinites

Non-specific free-choice (Haspelmath 1997: 48) indefinite referents can be expressed by interrogative pronouns in Japhug. Constructions where this function is attested include correlatives (§23.2.5), as in (95) and universal concessive conditionals (§25.2.3.3) as in (96).

- (95) *a-pururu, [ɲotcu ly-tur-rɲgu zo q^he], nuutcu*

 IPFV-burn-PL LNK
 ‘Whenever there is need to make fumigations, they burn it.’ (15-YaBrWG)
 {0003516#S28}

This meaning also occurs in infinitival subordinate clauses, in particular in the expression *t^hi ky-c^ha* ‘do whatever X can to Y’, as in example (97).

- (97) *[t^hi ky-c^ha] zo c^hu-p^hut-nu,*
 what INF-can EMPH IPFV-remove-PL
 ‘People do whatever they can to remove [this plant].’ (12-Zmbroko)
 {0003490#S116}

6 Pronouns

In both correlative relatives and universal concessive conditionals, the interrogative pronoun often occurs with verb with partial reduplication on the last syllable of the stem and/or the autive *nu-* prefix (§19.1.4, §25.2.3.3).

With *tɕ^{hi}* ‘what’, this construction expresses the meaning ‘whatever; no matter what’ in intransitive subject (98), object (99) or semi-object (100, see §14.4.2) functions.

- (98) *lú-wy-sti tɕe tɕe nu u-ŋgu [tɕ^{hi} pu-nu-ŋu~ŋu] nu*

Universal concessive conditionals are found with the pronoun *ɲotɕu* 'where', with the meaning 'no matter where, wherever' (location or direction from or to), as in (104). This free-choice indefinite meaning of *ɲotɕu* is also found in the delocutive expression *ɲɾɕukɾti + k^hu* 'be obedient', where the interrogative pronoun occurs in bound state form *ɲɾɕu-* with the infinitive of *ti* 'say' (§16.2.1.9).

- (104) *[ɲotɕu nú-wɣ-tu~ta] zo kuɣɣz ju-βze*

 'Bugs will grow wherever you put [the meat].' (28-kWpAz) {0003714#S21}

No example of multiple partitive use of interrogatives (as in French *qui apportait un fromage, qui un sac de noix*, Haspelmath 1997: 177) is attested in the data at hand; mid-scalar quantifiers such as *tsuku* 'some' occur instead as partitive pronouns (§6.7.2).

6.7 Quantifiers

6.7.1 Universal quantifiers

Several quantifiers meaning 'all' exist in Japhug (§9.1.3.1). Among them, *krɯsufse* 'all' can be used in the meaning 'everybody', as in example (105).

6 Pronouns

- (105) *kʏsʉfse kuw zo ta-nuw maʋ*
 all ERG EMPH put:FACT-PL not.be:FACT
 ‘Not everybody puts it.’ (160706 thotsi) {0006133#S21}

The less common form *mjuururi* ‘everybody, each person’ (from Tibetan མི་རེ་རེ *mi.re.re* ‘each man’ also serves as a universal quantifier, as in (106).

- (106) *mjuururi kuw ‘nuunu juw-pe’ ntsuw to-ti-nuw*
 everybody ERG DEM SENS-be.good always IFR-say-PL
 ‘Everybody said ‘It is nice!’ (140521 huangdi de xinzhuang)
 {0004047#S192}

There are several words meaning ‘everywhere’, such as *awndundɿt* ‘everywhere’, but they are treated as adverbs rather than pronouns (§22.2.2.2).

6.7.2 Partitive pronouns

The mid-scalar quantifier *tsuku* ‘some’ is used both as a noun determiner (§9.1.3.2) and as a partitive pronoun, taking case markers and determiners. This construction expresses a meaning close to that obtained by combining a relative clause with an existential verb (‘there is someone who...’, §22.5.1.2), as can be seen in (107) where both constructions are used one after the other.

- (107) *tsuku kuw zgri tu-ti-nuw ŋu, tsuku kuw murkuj*
 some ERG plant.name IPFV-say-PL some ERG plant.name IPFV-say-PL
tu-ti-nuw ŋu. murkuj tu-kw-ti tci

 ‘Some call it *zgri*, some call it *murkuj*; there are people who call it *murkuj*,
 and also people who call it *zgri*.’ (19-qachGa mWntoR) {0003546#S154}

The quantifier *tsuku* ‘some’ used as a pronoun generally refers to humans in the corpus, but (108) shows that it can also denote plants for instance.

- (108) *tsuku ɲaʋ, tsuku aqarŋurŋe,*
 some be.black:FACT some be.light.yellow:FACT
 ‘Some are black, some are light yellow.’ (140505 stonka mWntoR)
 {0003917#S5}

Numerals (in particular *ci* ‘one’) and also counted nouns (§7.3.2) can be used without head noun with a partitive meaning ‘one of (a group)’ as in (109) and (110).

- (109) *ci yu tɣ-tɕu, ci yu tɕ^heme tu~tɣ-tu nɣ,*

 QU-be.possible:FACT
 ‘Could one of you bring me some water?’ (150904 zhongli-zh)
 {0006348#S47}

6.7.3 Distributive pronouns

The pronoun *zaka* ‘each his own’ and its variant *zakastaka* ‘each his own’ occur as pronouns, especially as possessors in an possessive existential construction. It can be correlated with a third singular *u-* (112) or a third plural *nu-* (113) prefix on the possessum.

- (112) *tce nunu li qazo nu ku-ɲaβ tu,*
 LNK DEM again sheep DEM SBJ:PCP-be.black exist:FACT

 SBJ:PCP-be.blueish exist:FACT LNK DEM each.his.own 3SG.POSS-colour
tu ma
 exist:FACT LNK

‘There are black sheep, white ones, reddish ones, blueish ones, each has his own colour (they come in all types of colors).’ (05-qaZo) {0003404#S58}

- (113) *li zaka nu-rmi tu,*
 again each.his.own 3PL.POSS-name exist:FACT
 ‘Each have their own names.’ (150903 tWmNu) {0006280#S10}

The pronoun *zaka* is built by combining the bound state of the pronominal root *-zo* (§6.1) with the root *-ka* found in the distributive modifier *tuka* ‘each’ (which follows possessums, see §9.1.3.3).

6.8 Identity pronoun

The words *kumaɞ* ‘other’ and *kuɽte* ‘other’ occur as pronominal determiners (see §9.1.7, also for a discussion on the etymology of the former), but it can also be used as a pronoun and take determiners as in (114).

- (114) *ma kumaɞ nura aj miɽj-suɽsal-a ri, tɻk^hepɻɽɽu nu*
 LNK other DEM:PL 1SG NEG:SENS-recognize but bird.sp DEM

 recognize:FACT-1SG

‘The other ones I don’t recognize them, but the *tɻk^hepɻɽɽu* bird, I do recognize it.’ (23-scuz) {0003612#S43}

The interpretation of both *kumaɞ* ‘other’ and *kuɽte* ‘other’ can be locative ‘somewhere else’ as in (115), when the main verb (*ta* ‘put’ in this example) selects a goal or a locative adjunct (since locative noun phrases are often unmarked, §8.1.8, §8.1.9).

- (115) *kumaɞ/kuɽte nu-tu-ta-t ɲu u-maɞ?*
 other AOR-2-put-TR:PST be:FACT QU-not.be:FACT
 ‘Did you put it somewhere else?’ (elicited1)

Adding the indefinite determiner *ci* ‘one’ is necessary in this context to convey the meaning ‘something else’:

- (116) *kumas/kuqte ci nu-tu-ta-t ηu u-maβ?*
 other INDEF AOR-2-put-TR:PST be:FACT QU-not.be:FACT
 ‘Did you put something else?’ (elicited1)

Example (117) illustrates that both *kumas* and *kumas ci* can occur in the meaning ‘another one’ in some contexts (here with the verb *car* ‘search’).

- (117) *χsu-sηi mχ-ku-tsu q^he li kumas ci ju-γut q^he,*

 ‘I would spend an entire night from dusk till dawn sitting in someone else’s animal yard.’ (2010-histoire09)

6.9 Demonstrative pronouns

There are two basic demonstratives in Japhug, the proximal *ki* ‘this’ and the distal one *nu* ‘that’, which also occur as demonstrative determiners (see §9.1.2). Table 6.5 illustrates the various demonstrative pronouns that are derived from these basic forms, with reduplicated and emphatic forms. There is in addition a cataphoric pronoun *nyki*, discussed in §6.9.2.2.

Plural and dual forms, as in the case of determiners, are formed by adding *-ra* and *-ni* suffixes (§9.1.1) to the demonstrative root, which undergoes bound state change /i/ → /u/ in the case of proximal demonstratives. Plural forms are given in the table; dual forms are attested but rare and can be predicted (*kuni* ‘these two’ etc).

Table 6.5: Demonstrative pronouns

	Base form	Reduplicated	Emphatic
Proximal, singular	<i>ki</i>	<i>kuki</i>	<i>ukuki</i>
Distal, singular	<i>nu</i>	<i>numu</i>	<i>unumu</i>
Proximal, plural	<i>kura</i>	<i>kukura</i>	<i>ukukura</i>
Distal, plural	<i>nura</i>	<i>numura</i>	<i>unumura</i>

The distal demonstratives, being the default forms, are simply glossed as DEM in the examples: only proximal demonstratives are explicitly marked as such in the glosses.

6.9.1 Anaphoric demonstrative pronouns

The basic demonstratives *ki* and *nu* are less often used as pronouns than the other ones (they mainly occur as determiners). They nevertheless do occur in all syntactic functions, including object (in particular with the verb *ti* ‘say’, as in 124,

6 Pronouns

where it refers to words that have been previously told to another animal), and semi-object (in particular with the verb *stu* ‘do like’ as in 125).

- (124) *li nuu to-ti ri,*
 again DEM IFR-say LNK
 ‘[Gesar] said the same thing to the [snow leopard].’ (gesar)

 3SG.POSS-mother DEM IPFV-hug LNK DEM:PROX IPFV-do.like[III] LNK
 ‘It hugs its mother like that.’ (19-GzW) {0003536#S29}

The distal demonstratives *nuu* and *numu* serve as anaphoric pronouns with any type of referent, including humans, but also abstract concepts, inanimate objects or plants as in (126), though as mentioned in §6.1, third person pronouns such as *užo* ‘he’ can also have inanimate antecedents.

- (126) *tš^ha ky-nuu-ta ty-ra, smi ky-βlu ty-ra*

 ‘When they need to boil tea, to make a fire or smoke tobacco, people
 light up the fire with it.’ (15-babW) {0003512#S209}

When a third person mentioned in a discussion is present, the pronoun *užo* ‘he’ is not the optimal way of referring to him/her, and a proximal demonstrative, in particular the reduplicated *kuki* ‘this’, is used instead. It can occur to present someone to someone else (127) (note that a similar usage exists in Western languages such as English in the same context) and even to talk about the actions of this person, as in (128) and (129).

- (127) *kuki a-slama ŋu*

The emphatic demonstrative pronouns (which are also used as determiners, §9.1.2) are built by combining the reduplicated forms of demonstratives with the third person possessive prefix *u-*. They are about fifty times less common than corresponding reduplicated forms, but their function is essentially the same. In (130), *ununu* is an anaphoric pronoun whose antecedent is present in the immediately preceding clause.

- (130) *tce u-rq^hu* *ku-fse* *ci* *γɣzu* *tce, ununu ku*

6.9.2 Medial and cataphoric pronoun

6.9.2.1 Medial demonstrative

In addition to the proximal and distal demonstratives, there is a considerably rarer medial demonstrative *nyki*, in examples such as (132) and (133), which means ‘your place, near you’, as opposed to ‘here’.

- (132) *kutɕu ko-qanwu p^hoɕp^hoɕ zo, nyki*

nwu-k^hɣm je
IMP-give SFP
‘I give [you] these [toys], give me that one.’ (2012 Norbzang) {0003768#S116}

The medial demonstrative *nyki* can be historically analyzed as a combination of the proximal demonstrative *ki* with the second person possessive *ny-*. However, equivalent dual or plural forms such as †*ndziki* or †*nuuki* are impossible (the equivalent meaning can only be expressed with the dative, using a form such as *ndziɔ ndzi-p^he* ‘at your_{du} place’, §8.3.1).

6.9.2.2 Cataphoric pronoun

In addition to its function as a medial demonstrative (§6.9.2.1), the demonstrative *nyki* also occurs to express cataphoric reference. It occurs especially when the speaker hesitates and uses it as a filler, followed by a clause with the same verb (examples 134 and 135) or just with the same auxiliary (136).

 ‘And your cows, are they (still) like that, you let them out of the pen (in
 the morning), and they come back home on their own (in the evening)?’
 (taRrdo conversation)

It is also used when the speaker alerts the addressee that a long description follows as in (137), as in English ‘(he said) the following’. Given the fact the Japhug is strictly verb-final and has pre-verbal complements (§22.1.1), this is a strategy employed to avoid relegating the main verb to the end of the description.

The pronoun *nɣki* is also used as a determiner (§9.1.2) and the speech filler *nɣkinu* (§10.3) derives from the combination of *nɣki* with the determiner *nuu*. There are no plural or dual forms of *nɣki*, but it can be combined with dual or plural determiners as in (138).

- (138) *tce nɣki nuura, mk^hɣrmaŋ ra ɲjɣ-rususo-nu tce,*

 {0006338#S132}

It is likely that the cataphoric demonstrative use of *nɣki* derives from its function as a medial demonstrative, suggesting the historical pathway in (139).

- (139) 2SG+DEM:PROX ⇒ DEM:MEDIAL ⇒ DEM:CATAPHORIC ⇒ SPEECH FILLER

6.9.3 Locative forms of the demonstrative pronouns

The locative postposition *tɕu* (§8.2.4.1) can be combined with the demonstrative pronouns *nuu* and *ki* and their reduplicated and emphatic forms, as shown in Table 6.6.

The locative pronouns in *-tɕu* can be followed by the postposition *zuu* as in (140), but not by the locative *ri*.

- (140) *mbrosta ci tu tce, nuɬtɕu zuu mbro nuu*
 stable INDEF exist:FACT LNK DEM:LOC LOC horse DEM
a-ja.
 PASS-keep.attached:FACT
 ‘There are stables (in this palace), and the horse is kept there.’ (140507 jinniao-zh) {0003931#S170}

The proximal demonstrative *ki* undergoes bound state (§5.4) alternation and changes to *ku-* when combined with the locative postposition *tɕu* (§8.2.4.1), with further assimilation to [u] due to the regressive vowel assimilation (§3.3.1.2) when followed by *-tɕu*.

In addition to the locative pronouns in *-tɕu*, there is an entirely parallel series of pronouns in *-re*; this suffix is probably unrelated to the locative postposition *ri*, and may rather reflect the plural marker *ra* (which can be used to mark vague location, see §9.1.1.2) with the proto-Gyalrong locative suffix **-j* and regular vowel fusion (§8.2.4.4). These locative pronouns are much less commonly used in the corpus than those of the *-tɕu* series.

Table 6.6: Locative demonstrative pronouns

	Base form	Reduplicated	Emphatic
PROX.SG	<i>kutɕu</i>	<i>kukutɕu</i>	–

The forms *nutçu* and *numutçu* following a noun phrase result from the fusion of the postnominal demonstrative determiners *nu* and *numu* with the locative postposition *tçu* (§8.2.4.1), and are not to be analyzed as locative pronouns.

7 Numerals and counted nouns

7.1 Plain numerals

This section describes the morphology of cardinal and ordinal numerals in Japhug. Unlike some other languages of the Sino-Tibetan family, which have vigesimal features or subtractive numerals (Mazaudon 2002), Japhug has a strict decimal system.

In addition to plain numerals, Japhug has a system of numeral prefixes (§7.3.1) which occur on a specific type of nouns, *counted nouns*, discussed in §7.3.

7.1.1 Numerals 1-10

The basic numerals from one to ten are indicated in Table 7.1. The corresponding numeral prefixes are discussed in §7.3.1.1.

Some dialects of Japhug other than the Kamnyu variety use *try* ‘one’ instead. In calculations (see §7.6), the generic counted noun *tu-rdov* ‘one piece’ (§7.3.2) with the numeral prefix ‘one’ (§7.3.1) is used instead of *ci* ‘one’ to express the number ‘one’.

Apart from *ci* ‘one’ and *sqi* ‘ten’, these numerals have clear cognates in languages outside of the Gyalrongic group, even in Tibetan and Chinese; Table 7.1 includes the Tibetan equivalent of these numerals (the numerals that are *not* cognate with their Japhug equivalents are indicated between brackets) and the Japhug pronunciation of these Tibetan words in borrowed words (see §7.1.6.1, in particular Table 7.4).

The numerals from 2 to 9 have a prefix, uvular χ -/*v*- in ‘two’ and ‘three’ and velar *ku*- from ‘four’ to ‘nine’. These prefixes do not appear in some derived forms such as the numbers 11-19 (Table 7.1.3 below) or approximate numerals (§7.2).

The numeral *vuuz* ‘two’ is etymologically related to the dual postnominal determiner *ni* (§9.1.1.1). The latter lacks the uvular prefix and the sibilant suffix, but the vowel difference is expected, as after adding the suffix */*-s/*, the proto-Gyalrong rhyme **-is* regularly yields Japhug *-uuz*. The adverb *vuavta* ‘both’ (§9.1.1.1) is also probably related, though its morphological relationship with *vuuz* ‘two’ does not fit any known pattern.

7 Numerals and counted nouns

The superficial resemblance between *ɸmuuz* ‘two’ and *kuɸnuuz* ‘seven’ could suggest the existence of a former quinary system. However, the fact that these two numerals have different vowels in Situ (Cogtse *kəniēs* ‘two’ and *kəɸnəs* ‘seven’, from Huang & Sun 2002) makes this assumption less likely; it is in any case irrelevant to the synchronic grammar of Japhug.

Unlike the other numerals in Table 7.1, the free numeral *χsum* ‘three’ is identical to the form found in compound loans such as *kumtɕ^hoχsum* ‘triratna’ from དཀོན་མཚོག་གསུམ་ *dkon.mtɕ^hog.gsum* ‘triratna’. Therefore, one cannot exclude the possibility that it is a borrowing from Tibetan གསུམ་ *gsum* ‘three’ that replaced the native numeral ‘three’ (which was cognate to the Tibetan form, and phonetically similar to it). In this hypothesis, the alternative forms *-fsum* and *fsu-* for ‘three’ found in the numerals 11-19 (§7.1.3) and tens (§7.1.2) could be remnants of the native numeral. Alternatively, it is possible that the native word and the borrowing are true cognates, and happen to have the same form by coincidence.

The numeral *kuungut* ‘nine’ has a coda *-t* which is not found in the cognates of this numeral in Situ and languages outside of Gyalrongic, suggesting analogical spreading of the coda from *kurcat* ‘eight’. This innovation is shared by all Northern Gyalrong languages: Tshobdun has *kənⁿgət* (Sun & Blogros 2019) and Zbu *kənⁿgət* (Gong 2018: 130). The same analogy independently occurred in the Siyuewu dialect of Khroskyabs, where ‘nine’ is *ŋəɗ* (Lai 2017: 174).

Table 7.1: Basic numerals in Japhug and Tibetan

	Native Japhug	Tibetan	Tibetan loanwords in Japhug
1	<i>ci</i> or <i>tvɣ</i>	གཅིག་ <i>gtɕig</i> ‘one’	<i>χtɕuɣ</i>
2	<i>ɸmuuz</i>	གཉིས་ <i>gnis</i> ‘two’	<i>ɸniz</i>
3	<i>χsum</i>	གསུམ་ <i>gsum</i> ‘three’	<i>χsum</i>
4	<i>kuɸde</i>	བཞི་ <i>bzi</i> ‘four’	<i>βzi</i>
5	<i>kumju</i>	ལྔ་ <i>lɲa</i> ‘five’	<i>rɲa</i>
6	<i>kuɸɣɣ</i>	དྲུག་ <i>drug</i> ‘six’	<i>tɕuɣ</i>
7	<i>kuɸnuuz</i>	(བདུན་ <i>bdun</i> ‘seven’)	<i>βdun</i>
8	<i>kurcat</i>	བརྒྱད་ <i>brɣad</i> ‘eight’	<i>βɣrt</i>
9	<i>kuungut</i>	དགུ་ <i>dgu</i> ‘nine’	<i>rgu</i>
10	<i>sqi</i>	(བཅུ་ <i>btɕu</i> ‘ten’)	<i>ftɕu</i>

Numerals from 1 to 99 are a subclass of unpossessible nouns (§5.2), and cannot take possessive prefixes; they differ in this regard from the higher numerals (§7.1.4, §7.2).

7.1.2 Tens

The numerals for tens (Table 7.2) are relatively straightforward. With the exception of *γnr̥sqi* ‘twenty’ and *fsusqi* ‘thirty’, they are predictable by combining *sqi* ‘ten’ with the corresponding numeral prefix (§7.3.1). The numeral *kuṅgusqi* ‘ninety’ is ambiguous, as the same form can also mean ‘nine or ten’ (see Table 7.5).

The element *γnr̥-* in *γnr̥sqi* ‘twenty’ is related to the numeral *βmuz* ‘two’, but has a velar *γ-* prefix instead of the uvular *β-*, and has a different vowel. The adverb *βnabna* ‘both’ is also relatable, but the alternations are not explainable from a synchronic point of view.

Table 7.2: Tens

10	<i>sqi</i>
20	<i>γnr̥-sqi</i>
30	<i>fsu-sqi</i>
40	<i>kuβd̥r̥-sqi</i>
50	<i>kum̥γr̥-sqi</i>
60	<i>kut̥s̥r̥-sqi</i>
70	<i>kuçnr̥-sqi</i>
80	<i>kurcr̥-sqi</i>
90	<i>kuṅgu-sqi</i>

Other numerals under one hundred are built by combining the tens in Table 7.2 (removing the *-sqi* element) with the units in Table 7.3. For instance, 37 can be obtained by putting together *fsusqi* ‘thirty’ and *sqaç̣muz* ‘seventeen’ as *fsu-sqaç̣muz*.

7.1.3 Numerals 11-19 and units

The numerals 11-19, listed in Table 7.3, serve as the basis for indicating units in all following numerals between 21 and 99, by replacing the *-sqi* element of the tens (Table 7.2) by the appropriate form. As an example of how to build numerals above 19 with a unit 1-9, Table 7.3 illustrates the formation of the numerals 21 to 29 from *γnr̥sqi* ‘twenty’.

The numerals 11-19 present three morphological changes in comparison with the basic numerals 1-9.

First, the form *sqi* ‘ten’ alternates with *sqa-*. The origin of this Ablaut is unknown, though it could be a type of bound state (§5.4); some Gyalrongic languages, such as Khroskyabs have a similar alternation (Lai 2017: 175–176).

Table 7.3: Numerals 11-19 and 21-29

10	<i>sqi</i>	20	<i>ynrsqi</i>
11	<i>sqa-p-tuy</i>	21	<i>ynr-sqa-p-tuy</i>
12	<i>sqa-m-nuz</i>	22	<i>ynr-sqa-m-nuz</i>
13	<i>sqa-f-sum</i>	23	<i>ynr-sqa-f-sum</i>
14	<i>sqa-βde</i>	24	<i>ynr-sqa-βde</i>
15	<i>sqa-mju</i>	25	<i>ynr-sqa-mju</i>
16	<i>sqa-p-rxy</i>	26	<i>ynr-sqa-p-rxy</i>
17	<i>sqa-ɕnuuz</i>	27	<i>ynr-sqa-ɕnuuz</i>
18	<i>sqa-rcat</i>	28	<i>ynr-sqa-rcat</i>
19	<i>sqa-ngut</i>	29	<i>ynr-sqa-ngut</i>

Second, the velar *ku-* and uvular *χ-/ɸ-* prefixes found in the base numerals are lost in all numerals 11-19.

Third, a labial element /p/ (*sqaptuy* ‘eleven’, *sqaprxy* ‘sixteen’), /m/ (*sqamnuz* ‘twelve’), or /w/ (*sqafsum* ‘thirteen’) is inserted between the *sqa-* and the following numeral root. It does not occur in seventeen, eighteen and nineteen (which already have a cluster), fourteen and fifteen (which have a cluster with a labial as first element).

The form *sqaptuy* ‘eleven’ contains an ablauted form of *txy* ‘one’ as second element. The cluster *-pt-* in this word is the only case in the language of a /p/ followed by an obstruent (§4.2.3.1).

In *sqamnuz* ‘twelve’, the labial linker is nasalized by the following *n*. This is not a synchronic rule: for instance, a noun *ɕnaβndzyi* ‘snotty-nosed kid’ has *β* allomorph of /w/ before a prenasalized obstruent (§5.5.5.1). However, there are other cases of nasalization of labial consonants to /m/ before nasal or prenasalized consonants in Japhug (see §17.3.1).

In *sqaprxy* ‘sixteen’, not only the prefix *ku-* is lost, the *tɕ* affricate of the base form *kutɕxy* ‘six’ is replaced by /r/, preceded by the linking element *-p-*. This /tɕ/ ~ /r/ alternation is evidence for a sound change **tr-* → /tɕ/ (§4.2.2.4). The numeral *kutɕxy* ‘six’ contains two etymological prefixes, *ku-* and a prefix **t-* that has fused with the root as *-tɕxy*. This **t-* prefix is possibly related to the *d-* of its Tibetan cognate ངཉལ་ *drug* ‘six’.

The numeral prefixes corresponding to the numerals between 11 and 99 are discussed in §7.3.1.2.

7.1.4 Hundred and above

There are two ways of expressing numbers above 99 in Japhug. First, the noun-like numeral *yurza* ‘hundred’ can occur on its own or be followed by another numeral to express a number between 101 and 199, as in (1).

- (1) *azo kw-fse kw-ɣc^huic^ha zo ɛzumw yurza kuwcat*
 1SG SBJ:PCP-be.like SBJ:PCP-be.capable EMPH young.man hundred eight
ra
 need:FACT
 ‘I need one hundred and eight able young men like me.’ (Norbzang)
 {0003768#S16}

The numeral *yurza* ‘hundred’ cannot be combined with single digit numerals to express numbers between 200 and 900. The counted noun¹ *tuu-ri* ‘one hundred’ is used for this purpose, as in 2. The two suppletive roots for hundreds are shared with Pumi (the numeral *ɕi* ‘hundred’ vs. the counted noun *-ɕej*, see Daudey 2014: 101; evidence for cognacy with *yurza* and *tuu-ri* is presented in Jacques 2017c).

- (2) *χsu-ri jamar ndɣre tu-nw ko, tu-tup^hu nw*
 three-hundred about LNK exist:FACT-PL SFP one-hive DEM
 ‘There are about three hundred of them in one hive.’ (26-GZo)
 {0003668#S48}

Numerals above the hundreds are all borrowed from Tibetan: *stojtsu* ‘thousand’, *k^hrutsu* ‘ten thousands’, *mbumχtxr* ‘hundred thousands’ originate from ལྷོ་མོ་ *stoj.ts^ho* ‘thousand’, ལྷོ་མོ་ལྷོ་མོ་ *k^hri.ts^ho* ‘ten thousands’ and འབྲུག་ལྷོ་མོ་ *m^hbum.t^her* ‘hundred thousands’, respectively. Like other numerals, they are postnominal, as shown by (3).

- (3) *ngocna yw nw, w-pw stojtsu tu tu-ti-nw*
 spider GEN DEM 3SG.POSS-young thousand exist:FACT IPFV-say-PL
pw-ŋu. qaɣw yw nw, k^hrutsu tu tu-ti-nw pw-ŋu.
 SENS-be fish GEN DEM ten.thousands exist:FACT IPFV-say-PL SENS-be
 ‘People say that spiders have a thousand offspring, and fishes ten thousands.’ (26-mYaRmtsAR) {0003674#S111}

The numerals thousand and above can take other numerals as multiplicative modifiers, as in (4), where *kutɕɣy* ‘six’ follows *stojtsu* ‘thousand’ to express ‘six thousand’. This use illustrates the difference between the numerals *stojtsu* ‘thousand’ and above with *yurza* ‘hundred’, as when the latter is followed by a numeral,

¹Counted nouns are nouns that take an obligatory numeral prefix (§7.3).

7 Numerals and counted nouns

as *yurza kurcat* ‘one hundred and eight’, it can only be in additive, not multiplicative, relation to it (see example 1 above). The multiplicative numeral modifier to *stoŋtsu* ‘thousand’ cannot be preposed (Tshendzin says of a combination like †*kutʂʂy stoŋtsu* that *nu mx-sytso* ‘it does not make sense’).

- (4) *rɲul tu-xpa tce stoŋtsu kutʂʂy jarma ɲu-fsoβ ɲu-c^ha*
 money one-year LNK thousand six about IPFV-earn SENS-can
 ‘He can earn about six thousand [renminbi] per year.’ (14-siblings)
 {0003508#S159}

To have an additive interpretation, the comitative *c^ho* ‘and, with’ (or *c^hondyre* ‘with’) is used as in (5) and (6).

- (5) *stoŋtsu ci c^ho kutʂʂy-ri*
 thousand one COMIT six-hundred
 ‘One thousand six hundred (1600).’ (elicited)
- (6) *stoŋtsu ci c^hondyre kutʂʂy*
 thousand one COMIT six-hundred
 ‘One thousand and six (1006).’ (elicited)

In (7), a multiplicative modifier *sqi* ‘ten’ following *k^hruitsu* ‘ten thousands’ is used instead of *mbumχtɻr* ‘hundred thousands’. The latter numeral, although known to native speakers, is hardly ever used in speech.

- (7) *u-kɻ-nuikon nunu, rʃɻlk^hɻβ k^hruitsu sqi pɻ-tu.*
 3SG.POSS-OBJ:PCP-rule DEM country ten.thousands ten IFR.IPFV-exist
 ‘There were a hundred thousand countries under his rule.’ (140518 jinyin
 chengbao-zh) {0004028#S12}

Unlike numerals under 100, *yurza* ‘hundred’ and above are alienably possessed nouns and can take a third person possessive prefix *u-* to express an approximate number (§7.2).

7.1.5 Ordinals

There are no native ordinal numbers in Japhug, even for ‘first’, which is expressed by combining the superlative *stu* ‘most’ (§26.4.1) with the subject participle (§16.1.1) of the verb *mɻku* ‘be first’ (§20.6). This minimal participial relative *stu ku-mɻku* (§23.5.1) can be used as prenominal modifier as in (8), but most commonly occurs adverbially as in (9).

- (8) *stu ku-mʸku tu-xpa nu ɲu-rumuntov ma, nu ma*
 most SBJ:PCP-be.first one-year DEM IPFV-have.flower LNK DEM apart.from
u-mat me
 3SG.POSS-fruit not.exist:FACT

 DEM 3SG.POSS-after LNK bird AOR-be.born-1SG
 ‘First, my elder sister killed me, and then I was reborn as a bird.’
 (2005-stod-kunbzang)

With counted nouns (§7.3), it is strictly prenominal, and the counted noun can be converted to an inalienably possessed noun (§7.3.4.1); for instance, the noun phrase (10) can be used instead of *stu ku-mʸku tu-xpa* in (8). The phrase *stu ku-mʸku* does not occur postnominally.

- (10) *stu ku-mʸku u-xpa*
 most SBJ:PCP-be.first 3SG.POSS-year
 ‘The first year’ (elicitation based on 8)

There is no specific word meaning ‘last’ in Japhug either, and the participial relative *stu ku-maq^hu* with the subject participle (§16.1.1) of *maq^hu* ‘be after’ is used instead; as in the case of *stu ku-mʸku*, counted noun to inalienably possessed noun conversion is possible, and for instance both (11) and (12) exist.

- (11) *stu ku-maq^hu tu-sɲi*
 most SBJ:PCP-be.after one-day
- (12) *stu ku-maq^hu u-sɲi*
 most SBJ:PCP-be.after 3SG.POSS-day
 ‘The last day’ (elicited)

Given the absence of native ordinals, Chinese ordinals are used (§7.1.6.2). Tibetan ordinals are only attested for names of months (§7.1.6.1) and even this use is disappearing, as they are being replaced by their Chinese equivalents.

Unlike many languages of the Sino-Tibetan family, the system of birth-order ordinals is very rudimentary. The eldest son is simply called *stu ku-wxti* ‘the one who is the biggest’ as in (13).

7 Numerals and counted nouns

- (13) *u-rjit stu ku-wxti nu runtc^hun ṭsoma rmi*
 3SG.POSS-child most SBJ:PCP-be.big DEM ANTHR ANTHR be.called:FACT

The only dedicated birth-order ordinal is *tulxt* ‘second sibling’ (see §5.1.2.4 and §5.2.3). The inalienably possessed noun *u-pa* ‘(the one) below’ can be used to designate any following sibling, and the youngest sibling is designated by the superlative form of the participle of *xṭei* ‘be small’ (see example 14, which illustrates all these terms).

7.1.6 Tibetan and Chinese numerals

In addition to the native numerals presented above, Tibetan and Chinese numerals commonly occur in Japhug stories and conversations.

7.1.6.1 Tibetan numerals

In Japhug, Tibetan numerals (see Table 7.1 above) are mainly used in fixed expressions.² Some of these expressions exclusively comprise Tibetan words, for instance *lusḳṛr χ̣ṭcuɣniz* ‘twelve year cycle’ from ལོ་སྐར་ *lo.sḳar* ‘year of the cycle’ and བཅུ་གཉིས་ *bṭcu.gnis* ‘twelve’. Other compounds combine Tibetan numerals with Japhug roots, for instance the possessive compound *rnafṭcuɣa* ‘having ears with ten holes’ from *tu-rna* ‘ear’ (or Tibetan རྩ་ *rna* ‘ear’, the form is ambiguous between cognate and borrowing), the numeral *fṭcu-* (from བཅུ་ *bṭcu* ‘ten’) and the verb *α̣χa* ‘lacking a piece’, which appears as postnominal modifier in the name of a trickster character *qala rnafṭcuɣa* ‘the rabbit with ten holes in his ears’.

²Only a minority of Japhug speakers are fluent in Amdo or other Tibetic languages, so that Tibetan loanwords in Japhug, and in particular numerals, cannot be considered to be code-switching.

The Japhug form *-χtɕuɣ-* of the Tibetan numeral གཅིག *gtɕig* ‘one’ occurs in compounds, but is not attested as an independent word; however, it is possible that it used to exist in Japhug at an earlier stage of the language (though perhaps not as a numeral), as the stative verb *naχtɕuɣ* ‘be the same’ is a denominal derivation based on this numeral (§9.1.7, §20.7.1).

The Tibetan ordinal numbers up to ten (and the cardinal numbers for ‘eleven’ and ‘twelve’), indicated in Table 7.4, can be used for months names (Tournadre & Suzuki 2021: #406). This usage is not attested in conversations, but does occur in texts when speakers consciously try to avoid using Chinese words. In example (15), Tshendzin first used the Chinese 三月份 <sānyuèfèn> ‘third month’ and then corrected it to its Tibetan equivalent.

- (15) <sanyuèfèn> *jamar zlawā χsumba jamar tce ci c^hu-rɣpu*,
 third.month about month third about LNK one IPFV-have.young
 ‘It bears young once in the third month.’ (21-IWLU) {0003576#S61}

Table 7.4: Tibetan ordinals used in Japhug

	Japhug	Tibetan
1	<i>taŋbu</i>	དང་པོ་ <i>daŋ.po</i> ‘first’
2	<i>ɣnispa</i>	གསུམ་པ་ <i>gnis.pa</i> ‘second’

 ‘It bears young once in the ninth month.’ (21-IWLU) {0003576#S63}

7 Numerals and counted nouns

In traditional stories of Tibetan origin, complete noun phrases in Tibetan including numerals can be found. For instance, in (17), the numeral $\chi sumrjat\text{ʂ}uw\text{yft}\text{c}u$ from གསུམ་བརྒྱ་དྲུག་བརྒྱ གསུམ་བརྒྱ་འདུག་བརྒྱ *gsum.brg¹a.drug.btcu* ‘three hundred sixty’ occurs with the noun *pja* (from Tibetan རྩ་ *b’a* ‘bird’; not normally used in Japhug except in compounds) and the adverb *mundzamuχtcuwy* ‘all kinds’ (from མི་འདྲ་མི་གཞིག་ *mi.ⁿdra.mi.gtciḡ* ‘diverse, different’, §9.1.3.5).

- (17) *pja mundzamuχtcuwy, χsumrjatʂuwyftcu ku pyymbri*

ɲcyɲɲɲcyɲt zo to-lyt-nu,
 IDPH.III:very.noisy EMPH IFR-throw-PL
 ‘Three hundred sixty birds of all kinds sung bird songs.’ (2003 smanmi)

7.1.6.2 Chinese numerals

Chinese numerals are ubiquitous in Japhug, and many younger people (born after 1990) have trouble counting above twenty, even if they otherwise speak Japhug fairly fluently. Even the most fluent speakers use Chinese numerals (with their appropriate Chinese classifiers) when speaking normally.

In examples (18) and (19), from a text describing the hamlets in the township of Gdong-brgyad, the Chinese expressions 全乡 <quánxiāng> ‘the whole township’, 三千多人 <sānqiānduōrén> ‘three thousand people and a little more’ and 两个小队 <liǎnggèxiǎodui> ‘two groups’ (with the generic classifier 个 <gè> ‘CL’) are used instead of Japhug native numerals and quantifiers to count the number of people in the area. Note the use of the Cultural Revolution term 小队 <xiǎodui> ‘team, group’ as a counting unit. The use of Chinese here is due to the fact that administration-related counting, even in villages, is done in Chinese.

- (18) *nunu vduɲɲt <quanxiang> nunu <sanqianduoren>*

 Kamnyu DEM two.groups apart.from not.exist:SENS
 ‘In Kamnyu there are only two *xiaodui*.’ (140522 RdWrJAt) {0004061#S111}

Given the absence of ordinal numerals in Japhug (§7.1.5), Chinese expressions with the ordinal marker 第 /dì/ are used instead. In example (20), the Chinese phrase 第一名 <diyīmíng> ‘the first (in a competition)’ occurs, directly followed by the participial clause *stu ku-mɿku* ‘the first one’.

- (20) *tce βzɯ nu ku <diyīmíng> tce stu ku-mɿku pjɿ-mʃa.*
 LNK mouse DEM ERG first LNK most SBJ:PCP-be.first IFR-take
 ‘The mouse obtained the first place.’ (150826 shier shengxiao-zh)
 {0006284#S96}

7.1.7 Use of the numerals

Japhug numerals can occur on their own when counting (*ci, βnuɯz, χsum, kuβde...*) or be used as postnominal attributive modifiers (§9.3). The noun can be elided when the context is clear, especially when the same referent occurs in the previous proposition as in (21) with *u-rjit* ‘her children’ and (22) with 菜 <cài> ‘dish’. In this case the numeral constitutes the head of the noun phrase.

- (21) *u-rjit kungut tɿ-tu ri, kutɿɿy nu-si*

 ‘We used to order three dishes, and the four of us would eat [the] three [of them].’ (140501 tshering skyid) {0003902#S90}

Numerals can also be modifiers of dual and plural pronouns as in (23). Since pronouns are never obligatory in Japhug (§22.1.2), it is also possible to use a bare numeral in core argument function with first or second person indexation on the verb, as in (22), where the verb *tu-ndza-j* ‘we eat’ of the second proposition has the 1PL -j suffix indexing the transitive subject, coreferent with the ergatively-marked phrase *kuβde nu ku* ‘the four’ (standing for *izo kuβde nu ku* ‘the four of us’).

- (23) *tce izo kuβde nu tuturca ku-ryzi-j tce,*
 LNK 1PL four DEM together IPFV-stay-1PL LNK
 ‘The four of us were living together.’ (140501 tshering skyid)
 {0003902#S84}

Numerals can be used in collocations with two light verbs: the intransitive verb *pa* ‘pass *X* years’ (§22.4.1.4) and the transitive verb *ndo* ‘take’ (§22.4.2.4).

The numeral *ci* ‘one’ occurs in many additional functions: as an identity pronoun ‘the other one’ (§6.8), as a partitive pronoun ‘one of them’ (§6.7.2), as an indefinite article ‘a, one’ (postnominal, §9.1.4), as an identity modifier ‘the other *X*’ (prenominal, §9.1.7) and as an adverb meaning ‘once, one time, a little’ (§22.2.1).

7.2 Approximate numerals

To express an approximate number, it is possible in Japhug to use the adverb *jamar* ‘about’ (from Tibetan ཡར་མཚུང་ *jar.mar* ‘about, up and down’ and/or to combine adjacent numerals in a row as in (24).

- (24) *tu-k^hyl nuɬcu ɸnuɬz, χsum kuβde jamar ku-ndzov.*
 one-place DEM:LOC two three four about IPFV-ANTICAUS:attach
 ‘In each place [the flowers] are attached in [groups] of about two, three or four.’ (16-RIWmsWsi) {0003520#S9}

However, Japhug also has five morphological devices to build approximate numerals (Tables 7.5 and 7.6).

First, for numerals under seven (Table 7.5), one can build approximate numerals by prefixing a *la-* or *lx-* element to one (or two) numeral root(s). Not all possibilities are attested (for instance there is no such approximate numeral †*lxɬɬɬɬ* derived from only *kuɬɬɬɬ* ‘six’). Prefixation of *la-* / *lx-* occurs with other morphological changes: (i) loss of the velar *ku-* prefix (but not the uvular one in ‘two’ and ‘three’, §7.1.1) (ii) loss of the *m-* preinitial in *lxɲu* ‘about five’, but not of the **t-* prefix of *kuɬɬɬɬ* (§7.1.3) in *lxɲɬɬɬɬ* ‘five or six’ (otherwise †*lxɲɬɬɬɬ* would be found). The *la-* / *lx-* prefix is probably historically related to the *-lx-* element found in *dvandva* collectives (§5.7.8.3).

Above ‘seven’, the *lx-* prefix seem to have some productivity, as in example (25) from a story translated from Chinese, it is found in the form *lx-k^hruɬsu-sqi*, which translates 数十万 <shùshíwàn> ‘several hundred thousands’. The normal way to express this meaning in contemporary Japhug would be direct borrowing from Chinese (§7.1.6.2), and this *Augenblicksbildung* was introduced to avoid using a Chinese word.

- (25) <zhanghan> *ky-ti nuɳɳu ku ʋtaʋmi ly-k^hruɳtsu-sqi jamar*

zo to-ndo.
 EMPH IFR-take
 ‘The [general] called Zhang Han took several hundred thousand soldiers.’
 (hist160721 pofuchenzhou-zh)

Second, some approximate numerals are built by compounding two numeral roots (in some cases with the *la-* / *ly-* prefix, Table 7.5). The first numeral undergoes bound state vowel change (§5.4), with loss of the codas *-z* and *-t* (§5.4.2.2). In the case of *ɕɳɳcat* ‘seven or eight’ (illustrated by example 26), the form *ɕɳɳ-* is irregular (†*ɕɳɳu-* would be expected instead). Note that in this list *kuɳgusqi* ‘nine or ten’ is ambiguous: this form can also mean ‘ninety’ (see Table 7.2).

- (26) *uzo nuɳɳu ɕɳɳcat ci tɣ-ky-suɳpa jamar zo*

<i>kuɳgusqi</i> ‘nine or ten’	<i>kuɳgut</i> ‘nine’ <i>sqi</i> ‘ten’

7 Numerals and counted nouns

Third, for tens (Table 7.6), approximate forms can be formed using the same rule as tens from 40 to 90 (§7.1.2), by combining the bound state of the unit numeral with the root *sqi* ‘ten’, for instance *lɣɳɳsqi* ‘about fifty’ from *lɣɳu* ‘about five’ like *kumɳɳsqi* ‘fifty’ from *kumɳu* ‘five’. These approximate numerals are rare and not attested in the non-elicited corpus.

Fourth, an alternative way of producing approximate tens is to add the numeral prefix *tu-* (§7.3.1) to a ten, as for instance *tuɳɳɳsqi* ‘about twenty’ from *ɳɳɳsqi* ‘twenty’ (see example 27).

- (27) *tuɳɳɳsqi jamar tuturca ju-yi-nuu ɳɳɳɳl*
 about.twenty about together IPFV-come-PL be.usually.the.case:FACT
 ‘They come in groups of about twenty individuals.’ (23-qapGAmtWmtW)
 {0003608#S98}

Table 7.6: Approximate numerals in Japhug (tens)

Approximate Numeral	Base Form
<i>tuɳɳɳsqi</i> ‘about twenty’	<i>ɳɳɳsqi</i> ‘twenty’
<i>tuɳɳsusqi</i> ‘about thirty’	<i>ɳɳsusqi</i> ‘thirty’
<i>tuɳkuβdɳɳsqi</i> ‘about forty’	<i>kuβdɳɳsqi</i> ‘forty’
<i>tuɳkumɳɳsqi</i> ‘about fifty’	<i>kumɳɳsqi</i> ‘fifty’
<i>tuɳkutuɳɳsqi</i> ‘about sixty’	<i>kuɳɳsqi</i> ‘sixty’
<i>tuɳkuɳɳsqi</i> ‘about seventy’	<i>kuɳɳsqi</i> ‘seventy’
<i>tuɳkuɳɳsqi</i> ‘about eighty’	<i>kuɳɳsqi</i> ‘eighty’
<i>tuɳkungusqi</i> ‘about ninety’	<i>kungusqi</i> ‘ninety’
<i>lɣɳɳsqi</i> ‘about fifty’	<i>lɣɳu</i> ‘about five’
<i>lɣɳɳɳsqi</i> ‘fifty or sixty’	<i>lɣɳɳɳɳ</i> ‘five or six’
<i>ɳɳɳsqi</i> ‘seventy or eighty’	<i>ɳɳɳcat</i> ‘seven or eight’

Fifth, in the case of numerals above 99, approximate numerals are built by prefixing a third singular possessive *u-* prefix, as *u-ɳɳɳza* ‘several hundreds’ (28), *u-stoɳtsu* ‘several thousands’ (29) and higher numerals.

- (28) *u-ɳɳɳza, ɳɳɳ-ri jamar ndɳɳre tu-nuu ko,*

7.3 Counted nouns

The term *counted nouns* designates a subclass of nouns that differs from inalienably possessed (§5.1.2), alienably possessed and unpossessible nouns (§5.2) in that they require a numeral prefix, whose paradigm is described in (§7.3.1). No other part of speech is compatible with these prefixes.

For instance, the counted noun *-xpa* ‘year’ occurs in (30) with the prefix *χsu-* ‘three’. It is not possible to express the same meaning by combining the bare stem of the noun *-(x)pa* with the corresponding numeral *χsum* ‘three’ (something like †*xpa χsum* or †*pa χsum* would be ungrammatical).

- (30) *χsu-xpa*
 three-year
 ‘Three years’

In this grammar, counted nouns are cited using the form with the numeral prefix ‘one’ (*tu-xpa* in the case of ‘year’).³

Numeral prefixes are bound forms historically derived from free numerals (§7.3.1.7). These bound forms strictly precede the nominal stem, unlike free numerals, which generally *follow* the nouns they modify (§7.1.7).⁴

Only a highly restricted number of nominal stems can take numeral prefixes. For instance, the alienably possessed *mbro* ‘horse’ or the inalienably possessed *tr-pi* ‘elder sibling’ are not compatible with numeral prefixes. To express the meanings ‘three horses’ or ‘three brothers’, one cannot add the numeral prefix *χsu-*: forms such as †*χsu-mbro*, †*χsu-tr-pi* or †*χsu-pi* would be unintelligible. Instead, one must use the free numeral *χsum* ‘three’ (§7.1.7) as in (31).

³One reviewer pointed out that this choice may be infelicitous, but in my opinion it is preferable in order to avoid confusion with other subclasses of nouns, in particular in the case of conversion from inalienable and alienable nouns to counted nouns (§7.3.4).

⁴However, the numeral+noun order is attested in some compounds (§5.5.1.1, §5.5.1.2).

7 Numerals and counted nouns

- (31) *mbro* χ *sum*
horse three
'Three horses'

A handful of alienably and inalienably possessed nouns can be *converted* to counted nouns and thus take numeral prefixes, but always with a semantic narrowing (§7.3.4.1, §7.3.4.2).

The class of “counted nouns” in this grammar is similar to what have elsewhere in the literature been described as ‘classifiers’ (in Chinese 量词 *liàngcí* “measure words”). The morphology-based term “counted noun”, independent of meaning and function, is preferred over “classifier” because it is highly contestable that classification is indeed the main function of this class of words (see for instance François 1999, and §7.3.3).

7.3.1 Numeral prefixes

In this section, numeral prefixes are described following several categories (1-10, 11-99, approximate numerals and prefixes derived from nouns) and irregular forms are discussed in a separated subsection (§7.3.1.5). A final subsection presents historical hypotheses to account for the numeral prefixal paradigm and its relationship to that of other Gyalrongic languages.

7.3.1.1 Numeral prefixes between 1 and 10

The paradigm of regular numeral prefixes from 1 to 10 in Kamnyu Japhug is indicated in Table 7.7. The prefixes are derived from the corresponding numeral by bound state (§5.4), with loss of the coda and vowel alternation. Vowel alternation is optional for *kuɸde* ‘four’ and *kumŋu* ‘five’.

Note that the forms of the numeral prefixes differ in some cases from the corresponding numeral prefixes in tens (cf. Table 7.2), compare *kuɸnu-sji* ‘seven days’ with *kuɸnɣ-sqi* ‘seventy’.

7.3.1.2 Numeral prefixes between 11 and 99

Above ten, numeral prefixes present some variation. Table 7.8 shows the most common forms of the numeral prefixes between 11 and 20 (from which all numerals between 11 and 99 can be generated following the rules described in §7.1.2), but many cases without vowel alternation or with preservation of the codas *-z* (32) or *-y* (34) are attested, as in (32) for instance.

Table 7.7: 1-10 regular numeral prefixes in Japhug

Numeral	Free form	-sji 'day'
1	<i>tɿɣ</i>	<i>tu-sji</i>
2	<i>ɸnuuz</i>	<i>ɸnu-sji</i>
3	<i>χsum</i>	<i>χsu-sji</i>
4	<i>kuβde</i>	<i>kuβde-sji, kuβdɿ-sji</i>
5	<i>kumŋu</i>	<i>kumŋu-sji, kumŋɿ-sji</i>
6	<i>kutɿɿɣ</i>	<i>kutɿɿ-sji</i>
7	<i>kuçnuuz</i>	<i>kuçnu-sji</i>
8	<i>kurcat</i>	<i>kurcɿ-sji</i>
9	<i>kungut</i>	<i>kungu-sji</i>
10	<i>sqi</i>	<i>squ-sji</i>

- (32) *ma u-me* *kunɿ ɣnɿsqamnuuz-pɿrme t^hu-azyut.*
 LNK 3SG.POSS-daughter also twenty.two-year.old AOR-reach
 'Even his daughter is now twenty-two.' (14-siblings) {0003508#S284}

Table 7.8: 11-20 numeral prefixes in Japhug

Numeral	Free form	-sji 'day'
11	<i>sqaptuɿ</i>	<i>sqaptu-sji</i>
12	<i>sqamnuuz</i>	<i>sqamnu-sji</i>
13	<i>sqafsum</i>	<i>sqafsum-sji</i>
14	<i>sqaβde</i>	<i>sqaβde-sji</i>
15	<i>sqamŋu</i>	<i>sqamŋu-sji</i>
16	<i>sqaprɿɿɣ</i>	<i>sqaprɿ-sji</i>
17	<i>sqaçnuuz</i>	<i>sqaçnu-sji</i>
18	<i>sqarcat</i>	<i>sqarcɿ-sji</i>
19	<i>sqangut</i>	<i>sqangu-sji</i>
20	<i>ɣnɿsqi</i>	<i>ɣnɿsqu-sji</i>

In example (33), we observe the two alternative forms *-squ-* and *-sqi-* for the tens in the same sentence. While for the numeral ten only the prefix *squ-* (or its variant *sqɿ-*, see Table 7.10 below) is found, for tens between 20 and 90 vowel

7 Numerals and counted nouns

alternation is optional and there is free variation between the two forms. In the corpus, we find 15 examples of *-sqi-* and 14 of *-squ-*, suggesting that both are about equally common.

- (33) *tu-p^htu nu tce rcanu, li, fsusqi-ldza jamar,*

 ‘[Eggs] need twenty-two days to hatch; people say ‘They hatch in
 twenty-two days’ but mine only hatch after twenty two days.’ (150819
 kumpGa) {0006388#S32}

7.3.1.3 Approximate numeral prefixes

Approximate numerals also have corresponding prefixal forms. Table 7.9 presents the forms attested in the corpus.

By far the most commonly used approximate numeral prefix is *labnu-X*, whose meaning is not ‘one or two’ as could have been expected from the use of the *lx-/la-* prefix in the other examples, but ‘a few’ (see example 35 – life expectancy of goats and sheep is much above two years).

Table 7.9: Approximate numeral prefixes in Japhug

Approximate Numeral	Approximate Numeral Prefix
<i>laβnuuz</i> ‘a few’	<i>laβnu-</i>
<i>lxβdelxɣu</i> ‘four or five’	<i>lxβdelxɣu-</i>
<i>lxɣu</i> ‘about five’	<i>lxɣu-</i>
<i>lxɣɣtɣɣ</i> ‘five or six’	<i>lxɣɣtɣɣ-, lxɣɣtɣɣɣ-</i>
<i>ɕɣɣcat</i> ‘seven or eight’	<i>ɕɣɣɣ-</i>

- (35) *ts^hyt qazo numu tce laβnu-xpa ma c^hu-mdu*

 ‘Goats and sheep only live for a few years, and then become old.’
 (05-qaZo) {0003404#S128}

Just like approximate numbers can also be expressed by juxtaposition of numerals (§7.2), it is possible to juxtapose counted nouns (the same counted noun with contiguous numeral prefixes, as in 36), or to combine a numeral with a counted noun whose numeral prefix is contiguous to it, as in (37).

- (36) *tce numu xsu-zum kuβde-zum jamar ku-xt^hut tu.*

 ‘Each time the tractor brings [firewood], it can move about twenty or thirty loads (the size a person can carry on his back).’ (140430 tWfku)
 {0003898#S22}

Additionally, the paucal meaning can be expressed by converting the counted noun into an inalienably possessed noun with a third person possessive prefix and reduplication of the noun stem (see §7.3.4.1).

7 Numerals and counted nouns

7.3.1.4 Other numeral prefixes

In addition to the numerals mentioned above, all higher and compound numerals, an interrogative pronoun and a participle form can appear as prefixes of counted nouns.

The numerals above 99 (§7.1.4) occur as numeral prefixes without vowel alternation, as *yurza-xpa* ‘a hundred years’ and *stojtsu-xpa* ‘a thousand years’ (from *yurza* ‘hundred’ and *stojtsu* ‘thousand’).⁵

The prefixal form of hundreds based on the counted noun *tu-ri* ‘one hundred’ have double numeral prefixes, such as *χsu-ri-xpa* ‘three hundred years’ in (38).

- (38) *tcendyre χsu-ri-xpa tx-tsu tce, li kujju*
LNK three-hundred-year AOR-pass LNK again oath
pu-ta-t-a tce,
AOR-put-TR:PST-1SG LNK
‘Three hundred years passed, and I made another oath.’ (140512 yufu yu mogui-zh) {0003973#S87}

In the case of complex numerals, such as the very common *yurza kurcat* ‘one hundred and eight’, only the last one undergoes bound state, as in (39) and (40), where we find *yurza* as a separate phonological word followed by the counted noun with the numeral prefix *kurcx-* (from *kurcat* ‘eight’).

- (39) *commbri yurza kurcx-jom, [...] comts^hob*
iron.chain hundred eight-length.of.two.outstretched.arms ... iron.nails
yurza kurcx-ldza ra
hundred eight-long.object be.needed:FACT
‘[I] need a chain of one hundred and eight fathoms, and one hundred and eight nails.’ (2003 tWxtsa)
- (40) *yurza kurcx-ydyt qapri nu a-tx-ce ra*
hundred eight-section snake DEM IRR-PFV:UP-go be.needed:FACT
‘May the snake be cut into hundred and eight sections!’ (2012 Norbzang) {0003768#S243}

⁵Even in the absence of vowel alternation, the prefixal status of these numerals is shown by three pieces of evidence: (i) the fact that they combine with non-free elements like the stem *-xpa* ‘year’, which require a numeral prefix, (ii) the absence of stress and (iii) the inability to pause or insert any element in between, except in the case of speech errors.

The interrogative pronoun *t^hɣstuy* ‘how many’ has the prefixal form *t^hɣstui-* with counted nouns (§ 6.5.3).

The subject participle *ku-ɣntɕ^hu* of the stative verb *antɕ^hu* ‘be many’, has the prefixal form *kɣntɕ^hu-*, as in (41). This prefix is very common in the corpus.

- (41) *tce numu kɣntɕ^hu-tupw ɣw nu-tursa u-sta ɲu-ŋu*
 LNK dem many-household DEM 3PL.POSS-grave 3SG.POSS-place SENS-be
ma
 LNK
 ‘It is the grave-place of many families.’ (140522 kAmYW tWji)
 {0004055#S91}

It is however not possible to convert any noun, pronoun or quantifier into a numeral prefix; with other words, it is necessary to convert the counted noun to an inalienably possessed noun, with a third singular *u-* prefix instead of the numeral prefixes, see §7.3.4.1.

The nouns *tu-sla* ‘one month’ and *tu-xpa* ‘one year’ can be used with a numeral prefix *kɣɣɣ-* not attested with other counted nouns (see §7.5.1).

7.3.1.5 Irregular forms

A handful of counted nouns, in particular *tx-rzab* ‘one night’, have an alternative paradigm with /ɣ/ instead of *u* in the prefixes, as shown by the forms *ɲɣ-rzab* ‘two nights’ and *χsɣ-rzab* ‘three nights’ in (42).

- (42) *ɲɣ-rzab jamar, χsɣ-rzab jamar to-tsu tce tɕendɣre c^ha*
 two-night about three-night about IFR-pass LNK LNK alcohol

 3SG.POSS-smell IPFV-have.a.smell SENS-be
 ‘After two or three nights, one can smell the smell of alcohol.’ (160703 araR) {0006101#S39}

The complete paradigm of this noun is presented in Table 7.10.

There is however some degree of variation, and using the regular paradigm is not considered erroneous. In the corpus, the numeral ‘one’ form *tu-rzab* ‘one night’ is more common than *tx-rzab*, possibly because of the homophony with the inalienably possessed noun *tx-rzab* ‘time’ found in examples such as (44). For other numerals, the forms in Table (7.10) are considerably more common than the regular ones. In addition, the *ɣ* vocalism is also found with other numeral prefixes such as the interrogative (*t^hɣstɣ-rzab* ‘how many nights’).

7 Numerals and counted nouns

Table 7.10: Irregular numeral prefixes in Japhug

Numeral	Free form	-rʒaʁ ‘night’

 ‘After some time/as time went on, [those people] had ploughed many
 broad fields for them, and chopped a lot of timber.’ (2002 qajdoskAt)
 {0003366#S115}

Apart from *tx-rʒaʁ* ‘one night’, counted nouns following the paradigm in Table (7.10) are very rare. The counted nouns *tu-tya* ‘one span’ and *tu-rtsɣ* ‘one storey’ have the irregular forms *χsx-tya* ‘three spans’ and *χsx-rtsɣ* ‘three storeys’ (competing with regular *χsu-tya* and *χsu-rtsɣ*) as in (45), but not for other numeral prefixes.

- (45) *nw χsɣ-tʃa kuβde-tʃa jamar tu-rɲji c^ha.*
 DEM three-span four-span about IPFV-be.long can:FACT
 ‘It can grow three or four spans long.’ (14-sWNgWJu) {0003506#S181}

Another unrelated irregularity concerns the counted noun *tu-ɣɲɲ* ‘one time’: free variation between *-ɲɲ* and *-ɣɲɲ* is observed for the numerals ‘two’ and ‘three’ (both *χsu-ɣɲɲ* ‘three times’ and *χsu-ɲɲ* are attested).

A similar case is observed with counted noun *tu-xpa* ‘one year’: the form *-xpa* is obligatory for one to three (*βnu-xpa* ‘two years’, *χsu-xpa* ‘three years’), but for ‘four’ on, both stems *-xpa* and *-pa* are attested (both *squ-xpa* ‘ten years’ and *squ-pa* ‘ten years’ are possible, though the former is more common), including for approximate numerals (*ɕnɣɕɣ-pa* ‘seven or eight years’).

The counted noun *tu-zloɕ* ‘one time’ (see §7.6 on its use) is attested in (46) with the special form *ɣnu-zloɕ* ‘two times’ whose first element is a numeral prefix form *ɣnu-* influenced by the Tibetan numeral གཉིས་ *gnis* ‘two’ (in Japhug pronunciation *ɣɲiz-*). The regular form *βnu-zloɕ* ‘two times’ also exists.

- (46) *a-zda yw ku-fse ɣnu-zloɕ nw tu-ndze-a*
 1SG.POSS-companion GEN SBJ:PCP-be.like two-times DEM IPFV-eat[III]-1SG
ɲu-tʃaŋ
 SENS-be.fair
 ‘It would be fair if I had two times as much to eat as the other one.’
 (140426 lv he luozizh) {0003816#S9}

The stem *-zloɕ* looks like a blend from the two Tibetan words མཚོག་ *zlog* ‘turn around’ and མཚོ *zlo* ‘repeat’. Tibetan numerals are generally post-nominal, but pre-nominal numerals also exist as in ཉིས་ལྔ་ *nis.lɔɔ* ‘two times’.

7.3.1.6 Distributed numeral prefixes

The distributed form of counted nouns is built by reduplicating the numeral ‘one’ prefix *tu-*, as *tu-tu-rdoɕ* from the generic counted noun *tu-rdoɕ* ‘one piece’ (see §7.3.3) in example (47).

- (47) *zurwizɣri q^he, tce tu-tu-rdoɕ nw ɲu-zɣɣ-qɣr-nw q^he*
 progressively LNK LNK one-one-piece DEM IPFV-get.separated-PL LNK
 ‘Progressively, some of them get separated [from the herd].’ (20-RmbrnN)
 {0003560#S55}

7 Numerals and counted nouns

Example (48) with *tu-tu-xpa* ‘some years’ from *tu-xpa* ‘one year’ clearly illustrates the functional difference with approximate numerals (§7.2 and §7.3.1.3), as the meaning of the distributed counted noun cannot be translated here as ‘a few years’ – the years when the income is good are not necessarily contiguous in time.

- (48) *tu-tu-xpa tce a-pw-pe tce, k^hru^{tsu} u-ro*
 one-one-year LNK IRR-IPFV-be.good LNK ten.thousand 3SG.POSS-excess
jamar pu-fsoβ pu-c^ha
 about IPFV-earn SENS-can
 ‘Some years if [his income] is good, he can earn more than ten thousands [renminbi].’ (14-siblings) {0003508#S161}

An alternative distributed form involves partial reduplication of the stem of the counted noun and replacing the numeral prefix by a third singular possessive *u-*, as in the conversion from counted noun to inalienably possessed noun (§7.3.4.1). In (§49), the counted noun *tu-p^hu* ‘one tree’ is changed to *u-p^hu~p^hu* ‘some trees’. The other distributed form *tu-tu-p^hu* could also be used in the same context without meaning difference.

- (49) *zgoku ku-mbro tce, ckryz ku-wxti ra nu*
 mountain NMZL:S/A-be.tall LNK oak NMZL:S/A-be.big PL DEM
u-rc^hyβ ri u-p^hu~p^hu zo tu tce
 3SG.POSS-between LOC 3SG.POSS-PART~tree EMPH exist:FACT LNK
 ‘On high mountains, among big oaks, there are some [of these little trees].’ (16-CWrNgo) {0003518#S168}

This distributed form puts emphasis on the non-contiguousness and spread over distribution of the entities designated by the reduplicated counted noun: in (§49) for instance, its presence implies that the little trees are not clustered, but rather scattered among the oaks.

Distributed counted nouns can also be repeated to put even more emphasis on the scattered distribution (see §7.3.2.3).

7.3.1.7 Historical perspectives on the numeral prefixal paradigm

Most non-Tibetan languages of Western Sichuan/Northern Yunnan have counted nouns (generally called ‘classifiers’, see §7.3.3) with numeral-counted noun order (see for instance Zhang 2014, Michaud 2017: 163–194). It is striking that among the quasi-isolating languages (Lolo-Burmese, Naish), numeral prefix paradigms

are commonly a pocket of irregular morphology (Bradley 2005, Michaud 2011); this is also true in some Hmong-Mien languages (see Gerner & Bisang 2010).

By contrast, while Japhug and the other Gyalrong languages have a richer morphology in general, the numeral prefixal paradigms are, with only few exceptions (§7.3.1.5), suspiciously regular. The historical interpretation of this observation is not completely straightforward (Jacques 2017c), but in any case counted nouns are morphologically like determinative compounds (§5.5.1.1) with a numeral as first element, undergoing bound state in the case of more integrated numerals (some of the numerals under 100, see §7.3.1.1, §7.3.1.2 and §7.3.1.3) and immune from it in the case of higher numerals (§7.3.1.4).

One morphological alternation common to all numeral prefixes under 10 is the loss of the codas, otherwise a rare phenomenon in noun compounds (see §5.4.2.2). For numerals above 10, there is some degree of free variation in the preservation of the codas (see for instance example 34 p.250); the forms preserving codas are rarer, and may be ongoing analogical levelling.

Even in the case of lower numerals, there are indirect traces of the former existence of codas, in particular in irregularities (§7.3.1.5). A few counted nouns like *tu-xpa* ‘one year’ and *tu-ɣjɣn* ‘one time’ have velar fricative preinitials *x-/ɣ-* which are lacking in some forms of the paradigm.

In the case of *tu-xpa* ‘one year’, note the alternative stem *-pa* (*squ-xpa* ‘ten years’ vs. *squ-pa* ‘ten years’), the time ordinals (§7.5.2), the adverb *pakuku* ‘every year’ and the verb *pa* ‘pass *X* years’ (see example 118, §22.4.1.4) from which the counted noun *tu-xpa* ‘one year’ is historically derived. Cognates of this root *-pa* appear in other Burmo-Gyalrongic languages such as Naish (Jacques & Michaud 2011) but are restricted to time ordinals, and do not occur as counted nouns. Even in the closely related Stau language, time ordinals such as *javə* ‘last year’ and *pəvə* ‘this year’ have a root *-və* cognate to Japhug *-pa*, but the corresponding counted noun *e-fku* ‘one year’ has a different root which left no trace in the Gyalrong languages. The generalization of the *-pa* root to the counted paradigm is probably a common Gyalrong innovation (see §7.3.4.3).

A possible explanation for this *x-/ɣ-* element is that it originates from the coda of the numeral ‘one’ (although replaced by *ci* ‘one’, this former numeral is still found in the element *-tuy* in *sqaptuy* ‘eleven’) through false segmentation (**tuuk-pa* → **tu-kpa* → **tu-xpa* ‘one year’) and subsequent generalization to the whole paradigm.⁶ It is not an example of *x-/ɣ-* nominalization (§16.5.2).

⁶Note that since proto-Gyalrong **kp-* regularly yields *βy-* with metathesis (Jacques 2004: 272), this false segmentation must have occurred *after* the **kp- → βy-* sound change, which is not shared with other Gyalrong languages.

7.3.2 Counted nouns in quantifying function

This section discusses the use of counted nouns in quantifying function, as noun modifiers, head of a noun phrase or a sentential quantifier.

The main functions of counted nouns include partitive, distributive, restrictive and iterative meanings.

7.3.2.1 Partitive

When occurring as postnominal modifiers, most counted nouns are essentially *partitive* in meaning, referring to a certain number of individuals from a group, and are not used to express indefiniteness (§7.3.2.7): the polyfunctional determiner *ci* ‘one’ (§9.1.4.1) occurs instead in this meaning.

Thus, a phrase such as *turme tu-rdoβ* combining the noun *turme* ‘person’ with the generic counted noun *tu-rdoβ* ‘one piece’ (see §7.3.3 on counted noun selection) is generally either to be translated as a partitive ‘one of them’ as in (50).

- (50) *turme βnuuz pjɣ-tu tce, turme tu-rdoβ nu rcanu,*

 SBJ:PCP-be.intelligent one-piece even PST.IPFV-not.exist SENS-be
 ‘He had four sons, but not even one of them was smart like him.’ (2005 tAwa kWcqraR)

The partitive meaning is found in particular when counted nouns modify mass nouns, such as *paβɕa* ‘pork’ in (52).

- (52) *pakuku zo pavca tu-rdoᵛ, q^he tce tce stoᵛ*
 every.year EMPH pork one-piece LNK LNK LNK broad.bean
c^hu-γut,
 IPFV:DOWNSTREAM-bring
 ‘Every year, he would bring a piece of pork and broad beans.’ (140501
 tshering skyid) {0003902#S34}

7.3.2.2 Distributive

Counted nouns can also have a distributive meaning ‘each of them’ when another numeral or counted noun occurs in the same clause, indicating that each of the members of the group performs the same action, the verb can either receive plural (as in 53 and 43) or singular indexation (example 54). This is a particular case of fluid number indexation (§14.6.1).

- (53) *tce tce turme tu-rdoᵛ kuu k^huna vnuuz χsum jamar tu-ndo-nu*

 people one-piece ERG drinking.straw one-CL IPFV-AUTO-take[III]
 ‘Each person takes one straw.’ (30-tChorzi) {0003760#S33}

Counted noun with a collective meaning (§7.3.3.2) such as *tu-tupuu* ‘one household’ also frequently have a partitive meaning, especially when combined with a numeral.

- (55) *tce tu-tupuu tce, u-qazo kuβdysqi, kumᵛysqi jamar*

pu-tu.
 PST.IPFV-exist
 ‘Each household used to have about forty or fifty sheep.’ (160712 smAG)
 {0006073#S23}

Temporal counted nouns such as *tu-sji* ‘one day’ (§7.5.1) are generally repeated when used in distributive function in the meaning ‘every (day)’ (§7.3.2.3). However, in combination with other counted nouns, they can mean ‘per ...’ as in (56), even without repetition.

7 Numerals and counted nouns

 one-day LNK one-bowl about one-CL ERG IPFV-drink SENS-can
 ‘One [cat] can drink about one bowl of milk per day.’ (21-IWLU)
 {0003576#S44}

When no other numeral or counted noun is present, the modifier of Tibetan origin *raŋri* ‘each’ (from རང་རྩི *raŋ.re* ‘each’; see also §9.1.3.3) can be used to specify the distributive meaning as in (57).

- (57) *tu-tu^øu raŋri yu, nu-mbro pju-tu...*
 one-household each GEN 3PL.POSS-horse IFR.IPFV-exist
 ‘Each household used to have horses etc.’ (150820 kAnWCkat)

Counted nouns can have a combined distributive and partitive meaning ‘each one of their...’, such as *tu-ntsi* ‘one of a pair’ in (58).

- (58) *tce tce^heme ra ku nu-xpu^m tu-ntsi ka-ta-nu,*
 LNK girl PL ERG 3PL.POSS-knee one-of.a.pair AOR:3→3’-put-PL

 ‘[Each of] the girls (in their group) put one of their knees, the boys put their two knees [as a support for the tea kettle].’ (2005-stod-kunbzang)

7.3.2.3 Repetition of counted nouns

Repeating a counted nouns with the same numeral prefix has either a distributive or a distributed meaning.⁷

Example (59) illustrates the distributive meaning (‘each’, ‘each single’, ‘one by one’) of counted noun repetition with an individual counted noun (*tu-ldza* ‘one long object’) and also a partitive counted noun (*tu-spra* ‘one handful’). Repeated counted nouns of measure can be used to refer to the unit in which a whole mass of elements (here the hemp stalks) is divided into (‘into bundles’, ‘bundle by bundle’).

- (59) *tsymu nu tce tu^øŋya tu-wy-lyt tce, [...] tu-ldza*
 hemp DEM LNK sickle IPFV-INV-throw LNK one-long.object
tu-ldza ju-wy-p^hut tce tce nu^øu li tu-spra
 one-long.object IPFV-INV-pluck LNK LNK DEM again one-handful

⁷If the numeral prefixes are different however, an approximate numeral interpretation results, see §7.3.1.3.

tu-spra tú-wy-xtɛr.

one-handful IPFV-INV-tie

‘As for hemp, one uses a sickle and cuts [the stalks] one by one and then ties them into bundles.’ (14-tasa) {0003510#S50}

The distributive meaning also occurs with repeated temporal counted nouns, as in (60).

- (60) *tce tu-xpa tu-xpa tu-łob q^he tce qartsu tce pjw-k^hru*
 LNK one-year one-year IPFV-come.out LNK LNK winter LNK IPFV-be.dry
cti.

be.AFF:FACT

‘It grows every year (i.e. it is an annual plant), and dies in winter.’ (140512 tAzraj) {0003971#S10}

Alternatively, rather than juxtaposing counted nouns, coordinating them with the additive *ny* (§8.2.6) as in (62) also results in a distributive meaning.

- (61) *tce nuŋa ndɣre w-pu nu tu-rdoɓ ny tu-rdoɓ*
 LNK COW TOP.ADVERS 3SG.POSS-offspring DEM one-piece ADD one-piece

ku-rɣzi-nu ŋu tce
 IPFV-stay-PL be:FACT LNK

‘Swallows are always in pairs.’ (03-mWrmWmbjW) {0003382#S49}

Repeated counted nouns also express a distributed meaning as in (63). Like the distributed numeral prefixes (§7.3.1.6), this construction indicates that the entities referred to by the counted nouns are scattered more or less homogeneously.

7 Numerals and counted nouns

- (63) *tu-rdoᵛ tu-rdoᵛ ku-fse tu-łoᵛ ŋu ma*

 not.exist:SENS
 ‘This type of mushroom grows] one by one [in isolation], not one next to
 the other (clustered together), not in patches.’ (24-zwArqhAjmAG)
 {0003630#S76}

7.3.2.4 Restrictive

The only context where the phrase *turme tu-rdoᵛ* consistently means ‘one person’ is in restrictive constructions (‘only one person’) with the exceptive postposition *ma* ‘apart from’ (§8.2.8), as in (65). In negative restrictive constructions with *cinɣ* ‘(not) even one’, individual counted nouns with the numeral *tu-* ‘one’ also occur as in (66).

- (65) *t^ham turme tu-rdoᵛ ma me*
 now people one-piece apart.from not.exist:FACT
 ‘Now there is only one person [in that place].’ (140522 tshupa)
 {0004053#S35}
- (66) *qartsu tɛ u-jwaᵛ tu-mpcar cinɣ u-ku*

ku-ndzoᵛ me.
 SBJ:PCP-ANTICAUS:attach exist:FACT
 ‘In winter, not even one leaf [remains] on it.’ (11-mYAm) {0003474#S33}

As illustrated by the following pair of examples (from a similar episode in two traditional stories), in this construction both noun+individual counted noun (67)⁸ or plain numeral (68) can occur.

- (67) *turme bnur-rdov ma mane-tci tce,*
 people two-piece apart.from not.exist:SENS-1DU LNK
kx-ynundzɣuqɣr mɣ-nu-c^ha-tci,

 AOR-AUTO-spread-1DU be.AFF:FACT FSP
 ‘Instead of guns like you have, we (only) had one staff, and we laid it over [the river to walk on it as a bridge].’ (2003 Kunbzang)

Individual counted nouns can also express a combination of partitive and restrictive meaning, ‘just X of them’, as in (71).

⁸The 1DU suffix on the existential verb *mane-tci* is a case of partitive indexation (§14.6.1.3).

7 Numerals and counted nouns

- (71) *tu-rdoᵛ ma-pú-wy-sat ra ma tce rcanu,*

 ‘One should not just kill one of them, otherwise it will look for it for years,
 its mate will search and search for it.’ (22-qomndroN) {0003598#S34}

Another type of restricted meaning is, in the case of mass nouns such as *rdystaᵛ* ‘stone’, the meaning ‘in one piece’ as in example (72), with the individual counted nouns *tu-ldza* ‘one long object’ or *tu-rdoᵛ* ‘one piece’ (the storyteller hesitates between the two) occurring here not as noun modifier, but as nominal predicates with the participle of the copula *nu* ‘be’ (§22.5.1.1). In this example, *tu-rdoᵛ* is in this analysis a noun phrase on its own.

- (72) *rdystaᵛ tu-ldza, tu-rdoᵛ ku-nu ku yfu*

 smanmi2)

Unlike languages such as Chinese, where the meaning ‘alone’ can be expressed by the numeral ‘one’ with a quantifier (一个人 <yīgèrén> ‘one person, alone’), this meaning is not normally conveyed by counted nouns in Japhug, but rather by the adverbial root *-sti* ‘alone’ (see §22.2.2.4).

7.3.2.5 Sentential quantifying function

Some counted nouns, rather than being used as postnominal quantifiers, can have scope over the whole sentence. Two constructions can be distinguished: the iterative/semelfactive construction, in which the counted nouns designate the number of time that an action takes place, and the pseudo-object construction.

Only a minority of counted nouns can be used in the iterative/semelfactive construction. This group includes temporal counted nouns like *tu-yjɿn* ‘one time’ (§7.5.1), counted nouns derived from verbs (§7.3.4.3) such as *tu-tɿtɿ^hu* ‘hitting

with the hoe one time’ (from *tɕ^hu* ‘gore, stab’) and *tu-tɕfskɿr* ‘one turn’ (from *fskɿr* ‘turn around’) or from ideophones (§7.3.4.4) such as *tu-tɕxur* ‘one turn’.

Semelfactive counted nouns can either be used as objects of an auxiliary verb, mainly *lyt* ‘release’ (§22.4.2.2), as in (73) and (74), or as sentential quantifiers (§7.3.2.5), as in (75) with the intransitive verb *mtɕur* ‘turn’.

- (73) *qab kɿntɕ^hu-tɕtɕ^hu to-lyt*

ŋu.
be:FACT
‘It turns several times on the right, and several times one the left.’ (150826
qro kWnWkhABGa) {0006362#S5}

In the pseudo-object construction, counted nouns semantically related to the *patient* of the main verb (even in intransitive constructions lacking an object) occur to express the meaning ‘not even one ...’ (in a negative construction) or ‘a few...’. This construction is most clearly illustrated with intransitive verbs. In examples (76) and (77), the intransitive verbs with *rundzɿts^hi* ‘have a meal’ and *ruɕmi* ‘speak’ cannot take overt object noun phrases (they are not semi-transitive, see §14.2.4), but occur here with counted noun quantifiers referring to the non-overt patients (the food in 76 and the words in 77), which would be the object of the corresponding transitive verbs *ndza* ‘eat’ and *ti* ‘say’.

- (76) *tɕ-ɸɿtso ra tu-mu u-xɕɿt ku*
INDEF.POSS-child PL NMLZ:action-be.afraid 3SG.POSS-strength ERG

(160704 poucet4-v2) {0006097#S52}
- (77) *ɸabnu-ŋka ruɕmi-tɕi*
few-word speak:FACT-1DU
‘Let us speak a few words.’ (elicited)

7 Numerals and counted nouns

In these examples, adding an overt noun would be ungrammatical, and the quantifiers *tu-tu-kur cinx zo* ‘not even one mouthful’ and *labnu-ŋka* ‘a few words’ cannot be analyzed as objects. Rather, they are sentential adverbs, whose grammatical status is comparable to that of temporal counted nouns (§7.5.1).

7.3.2.6 Other

We also find examples of counted nouns without partitive, distributive, restricted or iterative meaning.

This is the case in particular for counted nouns with a collective meaning, denoting a group of entities whose quantity can be precise (*tu-tɕ^ha* ‘one pair’) or unspecified (*tu-box* ‘one group’, *tu-tupuu* ‘one household’ or *tu-tup^hu* ‘one hive’). In (78) for instance, *ɓnu-tupuu* means ‘two households’, not ‘two of the households’ or ‘each of the households’. Note also the plural (rather than dual) indexation on the verb *tu-nuu*, showing the inherent collective meaning of the counted noun *tu-tupuu* ‘one household’. Plural indexation here is optional (§14.6.1.1). In this example, *ɓnu-tupuu* is *not* a modifier of the placename *tavrdo*: this placename is an absolutive locative adjunct (§8.1.9).

- (78) *t^ham tavrdo ɓnu-tupuu tu-nuu*
 now placename two-household exist-PL
 ‘Now there are two households in Tarrdo.’ (140522 tshupa) {0004053#S19}

This number quantification meaning is also attested with non-collective counted nouns. For instance, in (79), *χsu-ldza* ‘three (long objects)’ occurs in the same context as the numerals *ci* ‘one’ and *χsum* ‘three’. In (80) likewise, it is clear from the context that neither a partitive, distributive, nor restrictive interpretation is possible.

- (79) *tɕendyre tɕ-tɕuu nuu kuu tyɲi ci na-car xɕɲndzu*
 LNK INDEF.POSS-son dem ERG staff one AOR:3→3’-search twig

 ‘There, on the side of the road, there was a tree.’ (The divination 2002)
 {0003364#S10}

However, this function is not very widespread in native texts.

In texts translated from Chinese or elicited material however, this usage is very common, as speakers will easily calque the Chinese noun+classifier construction. In example (81) for instance *qajy tu-ldza* ‘one fish’ is very probably calqued from Chinese 一条鱼 *yī-tiáo yú* (one-CL fish).⁹

- (81) *qajy tu-ldza c^hondɣre qac^hɣa ci pɣ-mto ɲu-ŋu*
 fish one-long.object COMIT fox one IFR-see SENS-be
 ‘He saw a fish and a fox.’ (140505 xiaohaitu-zh) {0003921#S40}

Future studies on the use of counted noun as quantifiers should be therefore exclusively based on texts not translated from Chinese and conversation, not on translations and elicitation.

7.3.2.7 Definiteness

In Japhug, counted nouns are not specifically used to mark indefiniteness; they can even occur with demonstratives such as *nu* ‘that’ in noun phrases with a definite referent. In (82) and (83) for instance, the bowl of oil and the tree in question were mentioned earlier in the the story and are clearly definite.

7.3.3 Counted nouns and semantic classes

This section presents the semantic restrictions on the use of particular counted nouns. It also discusses the cases of nouns that are compatible with several counted nouns.

7.3.3.1 Non-collective counted noun

The counted noun *tu-rdox* ‘one piece’ can occur as postnominal modifier with a considerable variety of nouns, designating people, animals, inanimate objects, including mass nouns; it is the counted noun by default.

A minority of nouns select other individual counted nouns referring to specific shapes: *tu-ldza* ‘one long object’, *tu-mpɕar* ‘one leaf’ and *tu-p^hu* ‘one tree’.

The counted noun *tu-ldza* ‘one long object’, like Chinese 一条 <yitiáo> ‘one long object’ or 一根 <yigēn> ‘one long object’, occurs in the corpus with nouns belonging to the following semantic categories:

- Stick-like objects: *u-ru* ‘its stalk’, *tr-zrɣm* ‘root’, *trɣi* ‘walking stick’, *taqaβ* ‘needle’, *tumŋa* ‘arrow’, *dɣrβu* ‘fern’ or *ndzu* ‘stick’, ‘chopsticks’ (ex. 84)
- Limbs, hair and other protruding body-parts: *tu-mi* ‘foot, leg’, *tr-kɣrme* ‘head hair’, *tr-muj* ‘feather’, *ta-βru* ‘horn’.
- Limbless animals: *qapri* ‘snake’, *qajy* ‘fish’
- Towers: *ɣju* ‘watchtower’

(84) *tci-xɕyndzu* *χsu-ldza* *pwi-tu* *tce*
 1DU.POSS-twign three-long.object PST.IPFV-exist LNK
 ‘We had three twigs.’ (2003 Kunbzang)

The counted noun *tu-mpɕar* ‘one leaf’ occurs with flat objects, including tree leaves (with *tr-jwax* ‘leaf’ as in 85), sheets of cloth (with *raz* ‘cloth’) and snowflakes (with *trjpa* ‘snow’).

- (85) *u-jwəv nu vnu-mpcar ma me tce*
 3SG.POSS-leaf DEM two-leaf apart.from not.exist:FACT LNK
 ‘It only has two leaves.’ (16-CWrNgo) {0003518#S176}

The counted noun *tu-mpcar* ‘one leaf’ can also refer to money (in present-day China, bank notes are by far more common than coins even for small amounts of money), meaning ‘one renminbi’.

The counted noun *tu-phu* ‘one tree’ occurs with the generic noun *si* ‘tree’ or names of particular species.

7.3.3.2 Collective counted noun

Most nouns referring to humans and animals can occur with the counted noun *tu-bov* ‘one group’. However, the collective counted noun *tu-juv* ‘one pack’ appears to be exclusively used with horses. Its only attestations in the corpus (for instance 86) are found in a translated text.

- (86) *li nu jamar ki a-ju-tu-ce tce, tceŋdɤre nutcu tce,*

 more horse one-herd exist:FACT LNK
 ‘Continue going again for about that distance, and there will be a pack of horse.’ (150824 kelaosi-zh) {0006276#S193}

7.3.3.3 Multiple counted nouns

Some nouns are compatible with more than one counted noun postnominal modifier, with different connotations. For instance *zgo* ‘mountain’ can be used with the generic counted noun *tu-rdov* ‘one piece’ as in (87), but also with *tu-ldza* ‘one long object’ as in (88) in the meaning ‘mountain range’ and also with *tu-trɤmbaj* ‘one side’ to mean ‘mountain face’.

- (87) *nu-k^ha u-rku zgo tu-rdov pu-ri*

 ‘[As for the placename] Rngukata, there are also two mountain ranges.’
 (140522 Kamnyu zgo) {0004059#S62}

7 Numerals and counted nouns

In other cases, the change of counted noun does not entail a radical semantic contrast. For instance, the noun *si* ‘tree’, while generally used with *tu-p^{hu}* ‘one tree’, is also attested with the counted noun *tu-ldza* ‘one long object’, as in (89), without clear semantic difference.

- (89) *maka rɔxstax c^{ho} si rcanu tu-ldza cinx*

7.3.4 Counted nouns and other parts of speech

This section presents the derivations from other parts of speech (including other nominal classes, such as inalienably and alienably possessed nouns) into counted noun, and from counted noun into other classes.

7.3.4.1 Counted nouns and inalienably possessed nouns

Counted nouns and inalienably possessed nouns stand out among other nouns in having an obligatory prefix. Since the citation form of both classes of nouns – the numeral ‘one’ prefix *tu-* and the indefinite possessor prefixes *tu-/tɣ-* – are homophonous, it is not unexpected that conversion occurs between the two classes.

Given the fact that numeral prefixes are a closed class (see §7.3.1 and in particular §7.3.1.4), when one needs to use a quantifier without numeral prefix equivalent, it is necessary to convert the counted noun into an inalienably possessed noun in third person singular form, with the quantifier before it. In example (90), the quantifier *nu t^hamtɕɣt* ‘that many’ cannot be converted to a prefix, and therefore the counted noun *tu-tup^{hu}* ‘one type’ is converted to an inalienably possessed noun in 3SG possessive form *u-tup^{hu}*.

- (90) *tce paβ tu-ɣjɣn pjú-wɣ-ntɕ^{ha} nu nu t^hamtɕɣt u-tup^{hu}*

ju-ɬoβ ra
 IPFV-come.out be.needed:FACT
 ‘Each time one kills a pig, one will get that many types [of foodstuff from it].’ (05-paR) {0003400#S89}

Similarly, in (91), the more complex phrase *yurza u-ro* ‘more than one hundred’ with the emphatic *zo* occurs with the 3SG prefix.

- (91) *yurza u-ro zo u-tupui tu-j*
 hundred 3SG.POSS-excess EMPH 3SG.POSS-household exist:FACT-1PL
 ‘There are more than one hundred households of us.’ (22-kumpGatCW)
 {0003590#S29}

Example (92) illustrates a third case of conversion from counted noun to inalienably possessed noun: a third singular possessive on the converted counted noun indicates here indefinite number, which makes it possible to specify the quantity as the predicate (*pjx-k-ɣntɕ^hu-ci* ‘they used to be many’) instead of the numeral prefix (*kɣntɕ^hu-tupui* ‘many households’, see §7.3.1.4).

- (92) *kuucunɣu nu, u-tupui pjx-k-ɣntɕ^hu-ci nx,*
 former.time DEM 3SG.POSS-household IFR.IPFV-PEG-be.many-PEG SFP
 ‘In former times, the households [there] were many.’ (140522 tshupa)
 {0004053#S67}

Conversion from counted noun to inalienably possessed noun is also observed when a prenominal demonstrative or adnominal clause is present, as in (93) and (94). Conversion is however not obligatory, as shown by (95) (see additional examples in §7.1.5).

- (93) *nu u-xpa nu taxpa wuma pjx-pe*

 LNK DEM one-day DEM NEG-IFR-defeat
 ‘On that day, he failed in his attempt [to force her to take him with her].’
 (02-deluge2012) {0003376#S68}

Finally, in the case of counted nouns expressing body-based units of length, conversion to an inalienably possessed noun has a very specific meaning. These

7 Numerals and counted nouns

units have a value that depends on the person of reference (few pairs of people have exactly the same handspan). The possessive prefix serves to indicate the person whose body part serves as the reference as in *a-tya* ‘my handspan’ in (96). It is the only case that a counted noun converted to inalienably possessed noun can take a possessive prefix other than 3SG.

- (96) *kuw-zri nura, tu-tya ma kuki caŋtaŋ*
 SBJ:PCP-be.long DEM:PL one-span apart.from DEM.PROX up.from
mɣ-zri, azo a-tya jamar ci ma me.

 ‘As for its length, it is at most one handspan, only the length of my handspan.’ (28-tshAwAre) {0003722#S50}

Conversion from inalienably possessed noun to counted noun also exists, but is very marginal in Japhug. When inalienably possessed nouns are converted to counted nouns referring to a quantity, they are alienabilized (§5.1.2.9) and the numeral prefixes are added to the noun stem with its indefinite possessor prefix. For instance, the counted noun *tu-tu-kur* ‘one mouthful’ (example 76 p.265) or *tu-tɣ-ste* ‘one bladder of’ (97) are derived from the body part inalienably possessed nouns *tu-kur* ‘mouth’ and *tɣ-ste* ‘bladder’.

- (97) *tce ɓduɣpanaχpu ɣu w-me ɣu nu, tu-ci*
 LNK ANTHR GEN 3SG.POSS-daughter GEN DEM INDEF.POSS-water

 ‘They gave to Gdugpa Nagpo’s daughter a bladder full of water and a clay figurine (to take with her on the road, as her dowry).’ (2003 smanmi2)

Direct conversion from inalienably possessed noun to counted noun without alienabilization is rarer, and it is not always obvious whether the inalienably possessed noun, or the counted noun is primary. For instance, the counted noun *tu-qiu* ‘one half’ (see §7.6.1) is likely to have been derived from the inalienably possessed noun *w-qiu* ‘half’, but the other directionality cannot be excluded.

Clearer cases is provided by the inalienably possessed *w-mdoɓ* ‘colour’ (from Tibetan མདོག *mdog* ‘colour’), which derives a counted noun with the numeral prefix *kɣntɕ^hu-* ‘many’ (on which see §7.3.1.4) in (98), and the native inalienably possessed noun *tɣ-ɓar* ‘wing’ from which the counted noun *tu-ɓar* ‘the length of one arm’ originates (§7.4).

- (98) *tceri kʏntɕ^hu-tuɸ^hu, kʏntɕ^hu-mdov ʏʒzu.*
 but many-types many-colour exist:SENS
 ‘There are many types [of the mushrooms called *tuqeɟmɿɿ*], and with
 many colours.’ (24-zwArqhAjmAG) {0003630#S47}

7.3.4.2 Counted nouns and alienably possessed nouns

Alienably possessed nouns designating containers can be converted to a partitive counted nouns by adding the numeral prefixes to the noun stem. For instance, the noun *k^hutsa* ‘bowl’ has a corresponding counted noun *tu-k^hutsa* ‘one bowl’ as in (99).

- (99) *tu-kri tu-k^hutsa pɟɿ-tu*
 INDEF.POSS-oil one-bowl IFR.IPFV-exist
 ‘They had one bowl [full] of oil.’ (140501 mdzadi) {0003905#S6}

The same is true of nouns borrowed from Tibetan and Chinese such as *p^hoŋ* ‘bottle’ (from 瓶 <ping> ‘bottle’). As an alienably possessed noun, *p^hoŋ* designates the bottle itself (not its content), and takes postnominal numerals (as in 100).

- (100) *p^hoŋ kuβde ʏʒzu*
 bottle four exist:SENS
 ‘There are four bottles.’ (elicited; can refer for instance to empty bottles)

Converted to a counted noun *tu-p^hoŋ* ‘one bottle’ it refers to the quantity of liquid contained in a bottle, and typically follows a mass noun as in (101).

- (101) *c^ha kuβde-p^hoŋ pɟɿ-k-ɿ-ta-ci.*
 alcohol four-bottle IFR.IPFV-PEG-PASS-put-PEG
 ‘There were four bottles [full] of alcohol.’ (140510 sanpian sheye-zh)
 {0003945#S49}

The derivation process is quite productive, and potentially new counted nouns meaning ‘a ... full of’ can be derived from any alienably possessed noun if a meaning can be made out of it, as in *tu-co* from *co* ‘valley’ in (102), which means in this particular context ‘an entire valley full of ...’.

PST.IPFV-exist SENS-be
‘There was one valley entirely for each species of animals, like one valley full of horses, one valley full of sheep.’ (2005 Kunbzang)

7.3.4.3 Counted nouns and verbs

The derivation of verbs into counted nouns and that of counted nouns into verbs are both productive processes in Japhug.

Counted nouns of verbal origin are either built by adding a numeral prefix to the verb stem (as *tu-fkur* ‘one load’ from *fkur* ‘carry on the back’) or to the verb stem with an additional prefix *tx-* (*tu-txrmbu* ‘one heap’ from the transitive verb *rbu* ‘heap up’, §16.4). Note also the simultaneous action nominal with two prefixes *tu-tu-*, which can be analyzed as involving a counted noun derived from a verb (§16.4.3).

Most deverbal counted nouns are from transitive verbs, but examples from intransitive verbs are also found. For instance, in (103) the counted noun *tu-ts^hoz* ‘one complete set’ (from the stative intransitive verb *ts^hoz* ‘be complete’) translates Chinese 一整套 <yīzhěngtào> ‘one complete set’.

- (103) *nuwu ku iq^ha rɲul ku tu-ŋga*
DEM ERG the.mentioned silver ERG INDEF.POSS-clothes

‘[The bird] threw her a complete set of clothes that had been made in silver.’ (140504 huiguniang-zh) {0003909#S106}

Deverbal counted nouns are either partitive counted nouns (§7.3.2.1), designating a quantity of objects resulting from the action of the verb (for instance *tu-fkur* ‘one load’ or *tu-txrtsuy* ‘one pile’ from *rtsuy* ‘pile up’ as in 104) or semelfactive counted nouns (§7.3.2.5), referring to the number of time an iterative/semelfactive action takes place (such as *tu-txtɕ^hu* ‘hitting with the hoe one time’ from *tɕ^hu* ‘gore, stab’).

- (104) *ɕʏru nu ɸnu-tʏrtʃuɣ to-βzu-ndzi tce*
 bone DEM two-pile IFR-make-DU LNK
 ‘They had make two piles from the bones.’ (2002nyimavodzer)
- (105) *qɑɸ tu-tʏtɕ^hu ta-lʏt*
 hoe one-hitting.with.hoe AOR:3→3’-throw
 ‘He used the hoe one time.’ (2003 qachGa) {0003372#S86}

There also are more lexicalized and synchronically less obvious examples of counted nouns derived from verbs. For instance the temporal counted noun *tu-xpa* ‘one year’ originates from the intransitive verb *pa* ‘pass X years’ illustrated in (106) (see also example 118 in §22.4.1.4 and the account of the *-x-* element in *tu-xpa* proposed in §7.3.1.7).

- (106) *k^ha na-βde nu sqamnuz to-pa tce*
 house AOR:3→3’-leave DEM twelve IFR-pass.X.years LNK
 ‘Twelve years had passed since she had left home.’ (150828 huamulan-zh)
 {0006396#S127}

Since Situ, Zbu and Tshobdun all have cognates of *tu-xpa* ‘one year’, this non-trivial derivation must have occurred at the time of their common ancestor, but not earlier. Other Burmo-Gyalrongic languages, even Horpa and Khroskyabs (Jacques et al. 2017) have a root related to Japhug *pa* ‘pass X years’ for time ordinals (§7.5.2), but not for the corresponding counted noun.

Derivation of transitive verbs from counted nouns with the denominal prefix *rɣ-* is well-attested, for instance *rɣtya* ‘measure by handspan’ from *tu-tya* ‘one span’. A complete list of these verbs and the various meanings of this derivation is presented in §20.4.2.

7.3.4.4 Counted nouns and ideophones

Deideophonic counted nouns are quite common, and belong to all major functional categories described above. In the following discussion, ideophones (§10.1) are by default cited in pattern II (§10.1.2.2), though other patterns are mentioned in some cases where appropriate.

The collective counted nouns *tu-boɸ* ‘one group’ and *tu-ɣuɣ* ‘one pack’ originate from the ideophonic roots found in *boɸboɸ* ‘in group, in order’ and *ɣuɣɣuɣ* ‘in great number (of long objects)’, respectively. The presence of plain voiced initial stops in these roots is a clue to their ideophonic origin (§10.1.5.1).

7 Numerals and counted nouns

The semelfactive/iterative counted noun *tu-tɣxur* ‘one turn’ comes from the ideophonic root of *xurxur* ‘round’ (pattern III *xurnɣxur* ‘turning around’) with an additional prefix *tɣ-*. This prefix is possibly the trace of an intermediate stage as an inalienably possessed noun, with a two-step derivation IDEOPHONE → inalienably possessed noun → counted noun.

Direct derivation from ideophone to semelfactive counted noun is also attested, for instance *tu-tum* ‘one period of sleep’ (107) from the root in *tumtum* ‘have a nice sleep’ without the *tɣ-* prefix.

- (107) *li tuʃsyk^ha tce tu-tum pjɣ-nuɣzɔβ tce li u-jmɲo*

7.4 Measures

Measures of size, weight and volume are mainly expressed by counted nouns, though some unpossessible nouns are also found.¹⁰ Most of these words are falling out of use, and being replaced by Chinese words, or calques from Chinese.

Table 7.11 presents the counted nouns used in Japhug for measures of lengths. The obsolete forms are indicated in brackets. The counted nouns *tu-tya* ‘one span’ and *tu-jom* ‘the length of two outstretched arms’ are very commonly used in narratives and conversations (their Chinese equivalents are 一拏 <yǐzhǎ> ‘one span’ and 一庹 <yītūo> ‘the length of two outstretched arms’, respectively). There are two ways to measure the handspan, *ndzɔβtya* ‘length between the thumb and the forefinger’ and *ɲaβtyi* ‘length between the thumb and the middle finger’; these nouns are followed by the *tu-tya* when one wants to specify which of the measures one chooses, as in *ɲaβtyi tu-tya*. The counted noun *tu-ɣar* ‘the length of one arm’ (related to *tɣ-ɣar* ‘wing’) is less common than the other ones in Table 7.11 but attested for instance in (108).

 {0003520#S115}

Table 7.11: Units of length

<i>tuu-tya</i> ‘one span’
(<i>tuu-k^ha</i> ‘one foot’)
<i>tuu-bar</i> ‘the length of one arm’
<i>tuu-yom</i> ‘one fathom’ (the length of two outstretched arms)
(<i>tuu-tumuna</i> ‘one mile’)

The counted noun *tuu-tumuna* ‘one mile’ derives from the *tuu-* actional nominal (§16.4.1) of the verb *nuna* ‘rest’, designating a milestone on the road indicating travellers’ resting places (at regular intervals). Distances are counted now however only in kilometers using Chinese (including Chinese numerals), as for instance the expression 三公里 <sāngōnglǐ> ‘three kilometers’ in (109).

- (109) *a-pi tc^heme nunuu mbarkhom uu-rkuu*

 ‘My elder sister came to Xiaoshuigou, three kilometers from Mbarkham.’
 (140501 tshering skyid) {0003902#S39}

Not all nouns of measure are counted nouns. In traditional stories, the unpossessible noun *χπαχτς^hyt* ‘yojana’ from Tibetan དཔག་མཚན་ *dpag.ts^had* ‘yojana’ occurs to designate a mythical measure of distance taken from Indian sources. Numerals are indicated as postnominal numeral modifiers as in (110).

In the traditional society, cereals were more often measured by volume (using containers of various size) than by weight, an action called *ɕtɕo* ‘measure by scooping’. Table 7.12 presents the known units of volume.¹¹ Among them, *χtsiu* ‘bushel’ and *ɕpyo* ‘ten bushels’ occurs as either alienably possessed or counted nouns. The relationship between the units of volume is described in (112).

Table 7.12: Units of volume

<i>tu-χtsiu</i> ‘one bushel’
<i>tu-ɕpyo</i> ‘ten bushels’
<i>tu-yna</i> ‘thirty bushels’
<i>tu-po</i> ‘one dou’

 one pound was sixteen ounces.’ (140515 rJama) {0004006#S2}

7.5 Counting time

7.5.1 Temporal counted nouns

Japhug has native counted nouns for time durations related to solar and lunar cycles: *tu-xpa* ‘one year’, *tu-sla* ‘one month’, *tu-sŋi* ‘one day’, *tx-rʒaʂ* ‘one night’ (also used to express 24 hours). There are no native concepts for ‘weeks’ or ‘ten days’; the expression of hours is presented in §7.5.4. Other temporal counted nouns include *tu-mɲuɕsi* ‘one lifetime’ (from ʂi.ʂ mi.ts^he ‘human life’), *tu-tuɕɕur-tɕ^haʂ* ‘one generation’ and *tu-rzuɣ* ‘one section’, ‘one instant’, and *tu-skɤrma* ‘one minute’ (from Tibetan ʂkar.ma ‘star, minute’)

The temporal counted nouns *tu-sŋi* ‘one day’ and *tx-rʒaʂ* ‘one night’ are commonly used in apposition with the same numeral prefix to express the meaning ‘X days and X nights’, as in (114).

- (114) *χsuu-sŋi χsɤ-rʒaʂ zo pʃɤ-rɤzi*
 three-day three-night EMPH IFR.IPFV-stay
 ‘He stayed there for three days and three nights.’ (2011-13-qala)

To express the meanings corresponding to English ‘after’ or ‘later’ with a time span, the idiomatic way in Japhug is to use verbs such as *tsu* ‘pass (of time)’, as shown by example (115) and (116). Note that *tsu* ‘pass (of time)’ is a semi-transitive verb (§14.2.3) whose semi-object is the time period expressed by the counted noun, and whose subject is the person affected by the passing of time (see for instance 116 with 1SG indexation).

¹²This may be an ancient calque from 斤 <jīn> ‘pound’, which also meant ‘axe’ in Old Chinese. Apart from *tu-turpa* ‘one pound’, all technical terms related to weighing are from Tibetan (including *rʃama* ‘scales’ and *skɤr* ‘weigh’).

7 Numerals and counted nouns

 (21-mdzadi) {0003578#S51}

7.5.2 Time ordinals

Japhug has two series of time ordinals, one for days (Table 7.13) and another one for years (Table 7.14). In the following discussion, I adopt Michailovsky’s (2003)

¹³These two counted nouns are also compatible with the approximate numeral prefix *lawmu-* ‘a few’ as in *lawmu-sla* ‘a few months’ and *lawmu-xpa* ‘a few years’ (§7.2).

7 Numerals and counted nouns

notations: $D^{-\alpha}$ ‘ α day(s) ago’, $D^{+\beta}$ ‘in β day(s)’, $Y^{+\gamma}$ ‘ γ year(s) ago’, $Y^{+\delta}$ ‘in δ year(s)’.

Table 7.13: Japhug day ordinals

Day	Time ordinal expression
-2	<i>jufcundzi</i> ‘two days ago’, ‘the other day’
-1	<i>jufcuar</i> ‘yesterday’
0	<i>jisŋi</i> ‘today’
+1	<i>fso</i> ‘tomorrow’
+2	<i>fsɔndi</i> ‘the day after tomorrow’
+3	<i>q^hɔndi</i> ‘in three days’
+4	<i>ɲɔndi</i> ‘in four days’
+5	<i>βzindi</i> ‘in five days’
+6	<i>pɔtsɔndi</i> ‘in six days’

The Japhug system has relatively few ordinals for past days and years (some Kiranti languages have terms for up to D^{-6} and Y^{-4} , as shown by Michailovsky 2003), but stands out by having six ordinals for future years (no Kiranti languages has more than D^{+6} and Y^{+4} in Michailovsky’s 2003 data). However, the D^{+5} *βzindi* ‘in five days’, D^{+6} *pɔtsɔndi* ‘in six days’ and the corresponding year ordinals Y^{+5} and Y^{+6} are not used any more in day-to-day speech even by the eldest speakers.

The D^0 to D^{-2} and Y^0 to Y^{-2} ordinals have a prefix *ji-/ju-/ja-*, which is probably of demonstrative origin. This prefix also occurs in the derived ordinals *juymuur* ‘this evening’ and *juxɕo* ‘this morning’ (see Tables 7.15 and 7.16 below), as well as in some frozen adverbs, such as *ɲɔxts^hi* ‘this time’ (from *tu-xts^hi* ‘one time’) and *jinde* ‘these days’. Cognates of this prefix are found in other time ordinals elsewhere in Gyalrongic. In the case of *yuijpa* ‘this year’, this prefix surfaces as a preinitial *-j-* to the root *-pa* ‘year’ (see §7.3.1.7 on the etymology of this noun). The *yu-* (from **wə-*) prefix may be cognate to the prefix *pə-* in *pəvə* ‘this year’ and *pəŋɔ* ‘today’ in Stau.

The expressions *jufcundzi* ‘two days ago’ and *japandzi* ‘two years ago’, which are based on the D^{-1} and Y^{-1} forms with a suffix *-ndzi*, can be analyzed as time ordinals (D^{-2} and Y^{-2} , respectively), as in (123).¹⁴

¹⁴This suffix *-ndzi* is not attested elsewhere, but is probably related to the syllable *-ri* of the relator noun *u-ɛɽri* ‘before, in front of’, from an earlier **-n-ri* with epenthesis (**-ndri*) and fricativization of the resulting **dr* cluster.

Table 7.14: Japhug year ordinals

Year	Time ordinal expression

 ‘Last year, it did not buy a lot [of edible fern]. The year before, up there
 (in Kamnyu), Lhalcam collected some.’ (conversation, 14.05.10)

However, in many cases, they have less specific meanings such as ‘a few days ago’ and ‘a few years ago’, as shown by (124), referring to an event that had occurred more than one week before.¹⁵

- (124) *juɬɕuɛndzi pu-tu-χcu-ndzi ma, a-ŋga*
 last.days AOR-2-be.strong-DU LNK 1SG.POSS-clothes

 ‘Thank you both for the other day, the clothes that you have sent me,
 the shoes are very nice, I wear them, they are my size.’ (conversation,
 15.04.18)

¹⁵This use reminds of the English expression ‘a couple of days ago’, which can mean up to a week ago.

7 Numerals and counted nouns

Even the Y^{-1} ordinal *japa* ‘last year’ can have a less specific meaning if combined with *dal* ‘early’ and the locative *ri* as *japa dal ri* ‘a few years ago’ as in (125). No other time ordinal can be used with *dal* ‘early’ or other modifiers.

- (125) *japa dal ri, ftear ri smbyuzzun yszu ju-ti-nui ma*
 last.year early LOC summer LOC solar.eclipse exist:SENS SENS-say-PL SFP
 ‘A few years ago, they said there was a solar eclipse during summer.’
 (29-RmGWzWn2) {0003730#S24}

The day ordinals from D^{+2} to D^{+5} contain a suffix *-ndi*, which attaches to the bound state forms of *fso* ‘tomorrow’ in D^{+2} *fsyndi* and *u-q^hu* ‘after, behind’ in D^{+3} *q^hyndi*. The D^{+5} form *βzi^hndi* contains the bound state *βzu-* of the Japhug pronunciation *βzi* of the Tibetan numeral བཞི *bzi* ‘four’ (see §7.1.1), presumably meaning ‘the fourth day after tomorrow’.

Year ordinals from Y^{+2} to Y^{+5} (Table 7.14) are built by simply adding the root *-pa* ‘year’ (see §7.3.1.7 and § 7.3.4.3) to the bound state of the corresponding day ordinals D^{+2} to D^{+5} . The Y^{+1} time ordinal *fsaq^he* ‘next year’ comes from the bound state of *fso* ‘tomorrow’, and the second element may be from the counted noun *u-q^hu* ‘after, behind’ followed by the locative suffix **-j* with regular vowel fusion (§8.2.4.4).

Table 7.15: Morning ordinals

Day	Morning ordinal
-2	<i>jufcundziso^z</i> ‘the morning of two days ago’
-1	<i>jufcuso^z</i> ‘yesterday morning’
0	<i>juxc^o</i> ‘this morning’
+1	<i>fsoso^z</i> ‘tomorrow morning’
+2	<i>fsyndiso^z</i> ‘in two days in the morning’
+3	<i>q^hyndiso^z</i> ‘in three days in the morning’

In addition, there are morning ordinals (Table 7.15) which derive from the corresponding day ordinals by adding the noun *soz* ‘morning’ (with the exception of *juxc^o* ‘this morning’), and the evening and night ordinals (Table 7.16) which are built by adding the bound form *-mur* (found in *tu-ymur* ‘one evening’ and *murkurku* ‘every evening’). These ordinals are not attested after D^{+3} , though the forms could be built easily; note the absence of bound state, except for D^{-1} , where *jufc^ur* ‘yesterday’ loses its coda, as in *jufcuso^z* ‘yesterday morning’.

Note the isolated *q^huj* ‘this afternoon’ Table 7.16), which can refer to the time period between noon and the night (including the early evening).

As shown by (126), it is also possible to combine day ordinals with other time nouns such as *turmu* ‘dusk’ to indicate particular moments of previous or future days.

- (126) *juŋcundzi-mur* *ny-pi* *ku-wxti* *ur-taβ*

Table 7.16: Evening ordinals

Day	Evening	Night
-2	<i>juŋcundzimur</i> ‘the evening of two days ago’	
-1	<i>juŋcūmur</i> ‘yesterday evening’	<i>juŋcūɣr</i> ‘yesterday night’
0	<i>q^huj</i> ‘this afternoon’, <i>juɣmur</i> ‘this evening’	
+1	<i>fsomur</i> ‘tomorrow evening’	
+2	<i>fsɣndimur</i> ‘in two days in the evening’	
+3	<i>q^hɣndimur</i> ‘in three days in the evening’	

Time ordinals can be used either on their own as (123), (124) or (126) above, or be followed by the linker *tce* as in (127). They are never used with the locative postpositions *ri*, *zu*, or *tɕu* (which are used to mark some temporal adjuncts, §8.2.4.1), except for the D^{-1} , S^{-2} , Y^{-1} and Y^{-2} ordinals which can occur with *ri*, as in (128).

Time ordinals can be converted to inalienably possessed nouns with the third singular prefix *u-* to change the reference time from the present to a point of time in the past or a to hypothetical time reference. For instance, from *fso* ‘tomorrow’ one can build *u-fso* ‘the next day’ or *u-fsosɿ* ‘the next day’ (by adding the counted noun *tu-sɿ* ‘one day’), as in (129), (130) or (131).

7.5.3 Other derived time adverbs

Japhug has a series of distributive adverbs meaning ‘every/each *X*’ (Table 7.17). These adverbs are derived from time nominals (mainly counted nouns, but also alienably possessed nouns like *soz* ‘morning’) by adding a suffix *-ku* and then applying partial reduplication (§4.1). If the nominal root has a coda such as that of *-mur* ‘evening’ (as in *tu-ymur* ‘one evening’), this coda is resyllabified and undergoes reduplication together with the suffix, as in the form *murkurku* ‘every evening’ (not †*murkuku*).

The /w/ of the preceding syllable tends to become [u] due to vowel assimilation (§3.3.1.2); since vowel assimilation always occurs in the forms without a reduplicated cluster, the transcriptions *spikuku* ‘every day’ and *pakuku* ‘every year’ are used in this grammar (Table 7.17) instead of the more phonological representations /spikuuku/ and /pakuuku/.

These adverbs are commonly used with the emphatic marker *zo*, as in (132).

- (132) *murkurku zo kyntɕ^hab a-pi u-p^he*
 every.evening EMPH street 1SG.POSS-elder.sibling 3SG.POSS-DAT
ku-nɣpɣri ju-ɣi-a, ... pu-ŋu.

 ‘Every evening, if would go in the town at my elder brother’s home to have supper and...’ (140501 tshering skyid) {0003902#S110}

This morphological derivation is not productive, and cannot be used with any other temporal counted noun, even *tu-sla* ‘one month’ – the distributive modifiers *raŋri* ‘each’ or *ruri* ‘each’ are used instead (§9.1.3.3).

Table 7.17: Distributive time adverbs

Time nominal	Adverb
<i>soz</i> ‘morning’	<i>soskuskuku</i> ‘every morning’
<i>tu-ymur</i> ‘one evening’	<i>murkurku</i> ‘every evening’
<i>tu-sŋi</i> ‘one day’	<i>spikuku</i> ‘every day’
<i>tu-xpa</i> ‘one year’	<i>pakuku</i> ‘every year’

7.5.4 Clock time

Japhug has a series of words borrowed from Tibetan that can be used to refer to hours and minutes. The alienably possessed *tuts^hot* ‘time, hour, clock’ from

7 Numerals and counted nouns

Tibetan དུས་ཚེན་ *dus.ts^hod* ‘time, hour’ (note that *tu-* here is not a prefix, but represents the Tibetan syllable དུས་ *dus* ‘time’), if directly followed by a numeral (or the generic counted noun *tu-rdov* ‘one piece’) refers to hours, as in examples (133) and (134).

 {0006133#S50}

To ask about clock time, the interrogative pronoun *t^hystu^y* ‘how many’, ‘how much’ occurs with the verb *zyut* ‘arrive’ as in (136) (see also §6.5.3).

- (136) *nyki nu tu^hts t^hystu^y ko-zyut?*
 DEM:DISTAL DEM hour how.many IFR-reach
 ‘At your place, what time is it?’ (conversation, 14.12.24 – the question refers to the time lag between Paris and Mbarkham)

These expressions, although used in the everyday language in Japhug, are calqued from Chinese since they follow modern time counting units and are all recent. Another calque from Chinese includes *tu-t^huly^h* ‘one unit of tobacco’ as in (137), from the expression 一斗烟的功夫 <yī dòu yān de gōngfū> ‘time of one unit of tobacco’.

- (137) *t^hamaka tu-tcułʎβ ky-sko u-raŋ jamar*
 tobacco one-tobacco.unit INF-smoke 3SG.POSS-time about
ɲu-ra
 SENS-be.needed
 ‘One needs about the time of a tobacco smoke.’ (elicited)

7.6 Basic arithmetic operations

Although Japhug lacks an elaborate mathematical vocabulary, is it possible to express at least the basic arithmetic operations without recourse to Chinese.

The counted noun *tu-rdoɓ* ‘one piece’ is used instead of the numeral *ci* ‘one’ in calculations (see 138 below).

Additions are expressed by the construction in (138) and (139),¹⁶ with the verb *ta* ‘put’ (or alternatively, *ɲɲju* ‘add’) and the locative noun *u-taɓ* ‘on, above’, literally ‘If one puts Y on the top of X, it makes Z’ corresponding to $X + Y = Z$.

- (138) *kumŋu u-taɓ tu-rdoɓ ɲjúr-wy-ta tce kuitʂyɪ tu-βze*

 ‘As for the expression ‘seven eight’ [that your father in law has told] you, seven plus eight equals fifteen, [it means that] you go back [to your husband’s home] in fifteen days.’ (2005 tAwa kWcqrR)

In the case of subtractions, the main verb is *tɕɪt* ‘take out’ combined with the downstream orientation preverb (the preverb *c^hu-* in 140, §15.1.4.2). The minuend (*tu-rdoɓ* in 140) is the object of *tɕɪt* ‘take out’, and the subtrahend (*kumŋu* in 140)

¹⁶The form *kuɕnu-kurcat* (with the numeral prefix *kuɕnu-* on the numeral *kurcat* ‘eight’) in example (139) is part of a riddle in the story, and is not a normal way to express additions in Japhug.

7 Numerals and counted nouns

is encoded with the relator noun *u-ŋgu* ‘inside’ (§8.3.4.4). Alternatively, the verb *suxtɕʰaɕ* ‘make diminish’, causative of *tɕʰaɕ* ‘diminish’ (§17.2.1.4) can also occur (selecting the DOWNWARDS orientation). The construction is exactly the same as in (140), replacing *cʰú-wy-tɕɣt* by *pjú-wy-suxtɕʰaɕ*.

- (140) *kuɯŋu u-ŋgu tu-rdoɕ cʰú-wy-tɕɣt tɕe kuβde ma*

ɲu-me ɲu
 IPFV-not.exist be:FACT
 ‘If one takes out one from five, only four remain = five minus one equals four’ (gram140505 math, elicitation)

Japhug is rarely used for multiplication. The counted noun *tu-zloɕ* ‘one time’ can convey a multiplicative meaning as in example (141). Note that this counted noun of Tibetan origin has two alternative forms for ‘two times’, the regular *ɲtu-zloɕ* and the hybrid form *ɣɲu-zloɕ* with an irregular numeral prefix that seems influenced by the Tibetan numeral གཉིས་ *gnis* ‘two’ (see §7.1.6.1, §7.3.1.5). Divisions are treated in the section on fractions (§7.6.1).

- (141) *kuŋgɯt nu ɕsum yu ɕsu-zloɕ ɲu*
 nine DEM three GEN three-time be:FACT
 ‘Nine is three times three.’ (gram140505 math, elicitation)

7.6.1 Fractions

Japhug does not have specific names for fractions other than *u-qiu* ‘half’. This inalienably possessed noun has no prefixal form, and to express the meaning ‘half a X’, the only available construction is the one illustrated in (142) and (143), combining a counted noun with the numeral prefix ‘one’, the genitive *yu* and *u-qiu* ‘half’.

- (142) *tu-ɣom yu u-qiu jamar*

 ‘(Some women had thirteen or fifteen children) Between each of them,
 there was only one year and a half or two years.’ (140426 tApAtso
 kAnWBdaR, 89; see the preceding sentence in example 55 in §9.1.3.2)

For more complex fractions, the counted nouns *tu-tuɕur* ‘one part’, *tu-tɣsum* ‘one part’ or *tu-tukro* ‘one part’ are used. Two related constructions are possible; in the following discussion, *X* represents the numerator, *Y* the denominator (the fraction $\frac{X}{Y}$).

The first one is a noun phrase with the structure *Y-tuɕur u-ɣgu X-tuɕur*, literally ‘*X* parts among *Y* parts’, illustrated by example (147). This may be a calque of the Chinese construction *Y分之X* (*Y-fēn zhī-X*) literally ‘*X* of *Y* parts’, a way of expressing fractions attested from Han dynasty documents (Anicotte 2015) to standard Mandarin.

7 Numerals and counted nouns

- (147) *kumŋu-tuɕur u-ŋɠu* *χsu-tuɕur*
 five-part 3SG-inside three-part
 $\frac{3}{5}$ = ‘Three parts among five parts.’ (elicited)

An alternative possibility is to use the auxiliary verb *lɤt* ‘release’ as in (148), but such construction is biclausal (the second clause lacks a verbal predicate, §22.3).

- (148) *χsu-tuɕur tú-wɣ-lɤt* *tce tu-tuɕur*
 three-part IPFV-INV-release LNK one-part
 $\frac{1}{3}$; literally ‘Making three parts, one part.’ (elicited)

Divisions can be expressed using the constructions in (149a) and (149b).

- (149) a. *sqi nuw kumŋu-tuɕur tú-wɣ-lɤt* *tce, ɓnuwz nɣ ɓnuwz*
 ten DEM five-part IPFV-INV-release LNK two LNK two
ɲú-wɣ-βzu *k^hu*
 IPFV-INV-make be.possible:FACT
- b. *sqi nuw kumŋu-tukro ɲú-wɣ-lɤt* *tce, ɓnuwz nɣ ɓnuwz*

 IPFV-INV-transform be.possible:FACT
- $\frac{10}{5}$ = 2; literally ‘Making 5 parts out of 10, one can make them in sets of two’.

In these examples, the numerator is a left-dislocated numeral followed by the determiner *nuw*, the denominator a counted noun serving as object of *lɤt* ‘release’ as in the fraction in (148), and the result of the computation is indicated by a distributive repetition of the numeral with the additive postposition *nɣ* (§7.3.2.3).

8 Postpositions and relator nouns

Japhug is particularly poor in case-marking morphology, and grammatical relations are indicated by verbal morphology (treated in Chapter 14) combined with postpositions and relator nouns.¹ In this chapter, I first present the various possible functions of bare (absolute) noun phrases, and then describe the uses of all postpositions and relator nouns in combination with noun phrases. Some postpositions and relator nouns also occur in various types of subordinate clauses (§25.1.1).

8.1 Absolute

In Japhug *absolute* refers to the bare form of a noun phrase, without postposition, relator noun or locative suffix. This form is used for intransitive subject, object and various other grammatical functions described in this section, in particular goals and some locative phrases, for which locative postpositions (§8.2.4) and relator nouns (§8.3.4) are optional.

8.1.1 Intransitive subject

The only argument of morphologically intransitive and syntactically monoactantial verbs, the intransitive subject (S), is in absolute form and is indexed on the verb, as *tɕ^heme nura* ‘the women’ with plural indexation in (1).

- (1) *tɕ^heme nura t^hu-sta-nu*
woman DEM:PL AOR-wake.up-PL
‘The women woke up.’ (2005 Norbzang)

Apparent examples of ergative *ku* with third person intransitive subjects are due to the effect of long distance ergative marking (§8.2.2.2), due to bracketing issues between main clause and complement clause (§24.3.2) or to errors, as in example (2): the intransitive *sta* ‘wake up’ only takes an absolute argument

¹Word order also plays a minor role (§22.1).

8 Postpositions and relator nouns

(as in 1 above), and the ergative *ku* is preceded and followed by pauses, reflecting the hesitation of the narrator. As an isolated sentence, the use of ergative is considered to be agrammatical in this example.

- (2) *nui jamar kóvmwz nui luilu nui, /ku/, c^hʔ-sta.*
DEM about only.then DEM cat DEM ERG IFR-wake.up
(150826 shier shengxiao) {0006284#S146}

Some morphologically intransitive verbs have a second argument, which can be either absolutive (semi-objects §8.1.5 or goals §8.1.8) or oblique (dative with *ru* ‘look at’, genitive with *ra* ‘be needed’ and existential verbs §8.2.3.2, comitative with *naχtɕuy* ‘be the same’ §8.2.5), but in all these cases the argument indexed on the verb is always in absolutive form.

The intransitive subject can only be relativized using subject participial relatives (§23.5.1).

8.1.2 Transitive subject

The transitive subject (A argument) is usually marked by the ergative postposition *ku* (§8.2.2). The ergative is optional with first and second person pronouns in transitive subject function, as shown by examples such as (3), where *mtó* ‘see’ is a transitive verb. The use of ergative on these pronouns is however possible, especially in the case of contrastive focalization (§8.2.2.1).

- (3) *azo nui muu-puu-mto-t-a ri nui uu-sji wuma zo*
1SG DEM NEG-AOR-see-TR:PST-1SG LNK DEM 3SG.POSS-day really EMPH
puu-γyndzo
PST.IPFV-be.cold
‘I did not see it (the eclipse), but on that day it was very cold.’
(29-RmGWzWn2) {0003730#S23}

Third person transitive subjects are obligatorily marked with the ergative *ku* (§8.2.2.1). Apparent counterexamples in the corpus are due to the emphatic use of third person pronouns (§6.4), or to errors involving hesitations.

8.1.3 Object

Morphologically transitive verbs (§14.3.1) take an object (O argument) in absolutive form, indexed by the verb morphology (§14.3.2). For instance *tsuku turme ra* ‘some people’ in (4) has no case marking, and is coreferent with the plural

indexation on *kú-wy-mtsuy-nuu* ‘they are stung’ (with inverse marking, §14.3.2.8). Only absolutive phrases can be indexed as objects; there are no verbs in Japhug indexing a postpositional phrase other than an ergatively marked transitive subjects.

- (4) *tsuku turme ra kú-wy-mtsuy-nuu tce múj-ɸduy,*
 some people PL IPFV-INV-bite-PL LNK NEG.SENS-be.serious
 ‘Some people, when they are stung [by bees] are fine.’ (26-ndzWrnaR)
 {0003678#S61}

Objects (like semi-objects, §8.1.5) can be relativized by object participial relatives or by finite relatives (like semi-objects, goals §8.1.8 and locative phrases §8.1.9).

Most transitive verbs have a strict requirement on the semantic role of the object. However, speakers can in limited cases select an object with a different role with stylistic effect. For instance, the verb *zmbri* ‘play’ (an instrument), ‘make noise with’ normally takes a object a musical instrument or any other noise-making implement (§17.2.2.4), as in (5a). However, in the next sentence of the same story (5b), this verb appears with the phrase *u-mu c^ho ndzi-kɣ-ndza kɣ-ts^hi ku-du~dɣn* ‘a lot of food and drink for (him) and his mother’ as object, a resultative construction: the direct object is not the instrument used to make the noise, but rather the boon obtained by making noise with the wish-granting *p^hantsut* ‘plate’.

8.1.4 Sole argument of predicates of natural forces

While some verbs referring to natural forces are intransitive (*nmu* ‘shake (of earthquakes)’), §19.7.1), most are morphologically transitive auxiliary verbs (mainly *lɣt* ‘release’, *βzu* ‘make’, *ta* ‘put’ and *rku* ‘put in’), used in collocation with a noun in absolutive form, as in (6) and (7).

8 Postpositions and relator nouns

The presence of the progressive *asu-* prefix in (6) and of the C-type Aorist *ta-* preverb (§15.1.1.1) in (7) show that these verbs are morphologically transitive (§14.3.1). The noun in these collocations is also relativized like a direct object (§23.5.4).

- (6) *tu-mu nu-ʌsu-lyt*

 ‘When there is wind suddenly before [the barley] is fully ripe, it presses them [on the ground, and it cannot grow any more].’ (25-cWXCWz)
 {0003636#S41}

However, these constructions have intransitive-like properties: no ergatively marked argument can occur, they are in dental infinitive rather than bare infinitive form when used with phasal complement-taking verbs (see 186, §16.2.3 and §24.2.2.1), and they are relativized like intransitive subjects (§23.5.3.4).

8.1.5 Semi-object

Some morphologically intransitive verbs in Japhug can take a second absolutive argument (§14.2.3, Jacques 2016d: 4–5, Jacques 2016a: 224). The verb *rga* ‘like’ is such an example; in (9) the intransitive subject *paβ ra* ‘pigs’ and *nuŋa* ‘cow’ are in absolutive form, with 3PL indexation on the verb for the first. The second argument *ciŋgo* ‘*Anisodus tanguticus*’ is topicalized. In (9), the subject is topicalized, and the second argument *nu* ‘that’ appears just before the verb, in absolutive form (in this particular case, the 1SG indexation suffix merges with the verb stem in the Kamnyu dialect, §3.3.1.3).² This second argument is called *semi-object*.

²The semi-transitive *rga* ‘like’, though it can take an overt object as in (9), tends to be used more often with complement clauses or left-dislocated objects, the applicative *nurga* ‘like’ being preferred with definite objects, §17.4.1.

 interior.decoration QU-SENS-2-understand
 ‘Do you understand [the word] ‘interior decoration’?’ (12-BzaNsa)
 {0003484#S82}

Semi-objects are relativized either with object participles in *kɣ-* (§16.1.2.4) or with finite relative clauses (§23.2.2, §23.5.4.1). Semi-objects are also found in some triactantial verbs. In particular, the theme of secundative verbs is a type of semi-object (§8.1.6).

8.1.6 Theme

There are both secundative and indirective ditransitive verbs in Japhug (§14.4). In the case of indirective verbs, the theme is the object, while the recipient being marked with an oblique case, as in example (11) with the verb *k^ho* ‘give’, ‘pass over’. With this type of verbs, the theme is relativized in exactly the same way as the object of a monotransitive verb (§14.4.1) and is indexed on the verb.

- (11) *w-mu* *w-cki* *tɣtsu nw ɲɣ-k^ho.*
 3SG.POSS-mother 3SG.POSS-DAT lamp DEM IFR-give
 ‘He gave the lamp to his mother.’ (140511 alading-zh) {0003953#S161}

With secundative verbs, the recipient is the object and appears in absolutive form, with object indexation. The theme of these verb is also in the absolutive, as *a-me* ‘my daughter’ in (12).

8 Postpositions and relator nouns

- (12) *a-me ta-mbi ra*
 1SG.POSS-daughter 1→2-give:FACT be.needed:FACT
 ‘I will give you my daughter.’ (28-smAnmi) {0004063#S281}

The theme of a secundative verb cannot be indexed by the verb morphology. In (13), the theme is the numeral *ɓnuuz* ‘two’, but dual indexation on *nuu-ta-mbi* ‘I gave X to you’ is not possible, as the form *nuu-ta-mbi-ndzi* (AOR-1→2-give-DU) can only mean ‘I gave X to both of you’, the number referring to the recipient and not the theme (§14.4.2).

- (13) *mɣ-ta-mbi ma ɓnuuz nuu-ta-mbi ri, nɣzo c^hɣ-tu-ɕɣɣz*

cti tce
 be.AFF:FACT LNK
 ‘I won’t give her [my youngest daughter] to you, as I gave you two [of my daughters], and you sent them back.’ (2002 qaCpa)

However, the theme of a secundative verb is relativized like the object of a monotransitive verb (§16.1.2.4, §23.5.4.2), and it can be considered as a sub-type of semi-object (§8.1.5).

8.1.7 Essive

Essive noun phrases are not arguments of the sentence, but are used to indicate ‘the property of fulfilling the role of an N’ (Creissels 2014: 606; Jacques 2016a: 225).

In Japhug, bare noun phrases without any case marker can be interpreted as essive adjuncts, such as *nɣ-rzaβ* ‘your wife’ in (14) and *nɣ-kumtɕ^hu* ‘your toy’ (15). These adjuncts are neither recipients (in both examples the recipient is 2SG, encoded as object of the ditransitive verb *mbi* ‘give’, §14.4.2) nor themes (in 14 the theme is *ji-me* ‘our daughter’, and it serves as object of the indirective *k^ho* ‘give’, §14.4.1; in 15 the theme is non-overt).

- (14) *ji-me nuu nɣ-rzaβ nuu-k^ho-tci je, nuu-ta-mbi*

 2SG.POSS-toy IPFV-1→2-give
 ‘I give it to you as a toy.’ (28-kWpAz) {0003714#S166}

Since essive adjuncts are formally indistinguishable from absolutive arguments such as objects and intransitive subjects, some sentences may appear to be ambiguous. In (16), the noun *turme* ‘person’ could be interpreted as the subject, and the phrase *kuuki stu ku-xtci ki* as a topic.

- (16) *kuuki stu ku-xtci ki turme juw-pe tce*
 DEM.PROX most SBJ:PCP-be.small DEM.PROX person SENS-be.good LNK
 ‘The smallest one is very nice as a person.’ (31-deluge) {0004077#S122}

That *turme* here is not the subject can be seen if one chooses a first or second person form: in (17), the noun *turme* is still present despite 2SG indexation on the verb. This piece of evidence demonstrates that the analysis as essive adjunct is the only possible one.

- (17) *nxzo turme wuma juw-tu-pe*
 2SG person really SENS-2-be.good
 ‘You are very nice as a person.’ (elicited)

It is common to have a related word as essive and as the subject or object which it refers to. In (18), for instance, the inalienably possessed noun *tu-yli* ‘dung’ occurs as both intransitive subject of the verb *pe* ‘be good’ (with 3SG possessive prefix) and as essive adjunct, in the latter in the specialized meaning ‘fertilizer’. Note that the essive adjunct is closer to the verb than the oblique phrase in *u-taʁ* (§22.1.1.1).

The essive adjunct can be either closer to the verb than the core argument it refers to, as in (112), (18) and (19) above, or further away as in (20), where the intransitive subject of *mx-ra* ‘is not needed’, *ɲɯl* ‘silver’, occurs between the verb and the essive *u-p^hu* ‘as its price’.

- (20) *azɯɣ u-p^hu ɲɯl mx-ra,*

{0003919#S21}

Some verbs, like *syrtsi* ‘count as’ (§17.2.8), have an essive argument (rather than adjunct), which is not indexed on the verb and receive no case marking, as shown by (23), where the essive argument is *a-tɕu* ‘my son’.

- (23) *azo a-tɕu tu-ta-nu-syrtsi ɲu*
1SG 1SG.POSS-son IPFV-1→2-AUTO-consider.as be:FACT
‘I consider you as my son.’ (elicited)

The transitive verb *wum* ‘gather’ can also select an essive argument different from the object when used in the meaning ‘take as a student’, as in (24).³ In this example the object is 1SG, and the essive is the noun *nx-slama*, with a possessive prefix coreferent with the subject. The verb *wum* in this meaning requires the orientation EASTWARDS in its centripetal function (see example 92, §15.1.4.3).

- (24) *wortc^{hi} zo azo nx-slama ku-kuw-wum-a*
 please EMPH 1SG 2SG.POSS-student IPFV-2→1-gather-1SG
 ‘Please take me as your student.’ (150907 laoshandaoshi-zh) {0006398#S35}

Verb ellipsis may explain the presence of essive noun phrases with verbs that are not usually used with adjuncts of this type. For instance, in (25), the nouns *pyxtcu* ‘bird’ and *tx-mdzu* ‘thorn’ are not objects (there 1SG object indexation on both *pú-wy-suu-sat-a* and *t^hú-wy-suu-sat-a*) and are analyzable as essive adjuncts ‘me, as a bird/thorn’, ‘while I was a bird/thorn’.⁴

- (25) *a-pi kuw nura pu-fse tce, pyxtcu ri*

 ‘Your elder sister was like that, she had me killed [while I was a] bird, and had also me killed [while I was a] thorn.’ (2005 Kunbzang)

The presence of these adjuncts in this particular context is probably due to the ellipsis of *tx-sci-a* ‘I was born’, an intransitive verb which takes essive noun phrases with the meaning ‘be reborn as, be reincarnated as’ as in (26).

- (26) *nu u-q^hu tce pyxtcu tx-sci-a, nu u-q^hu tce*

 INDEF.POSS-thorn AOR-be.born-1SG LNK
 ‘After that I was reborn as a bird, and after that I was reborn as a thorn.’
 (2003 Kunbzang)

³This expression is similar to Chinese 收……为徒 <shōu ... wéitú> ‘take as a disciple’, where 收 *shōu* has the same meaning as *wum* ‘gather’, and where the essive is overtly marked by 为 *wéi*.

⁴This example comes from a story where the main character was repeatedly killed by her sister, and reborn several times, first as a bird, and then as a thorn, as describe in (25), from another version of the same story.

8.1.8 Goal

Motion verbs (*ce* ‘go’, *yi* ‘come’, *toɤ* ‘come out’ etc), manipulation verbs (*yut* ‘bring’, *tsum* ‘take away’ etc) and some perception verbs (like *ru* ‘look at’) have arguments referring to the location towards which the action is directed. These arguments are not indexed in the verb morphology (in particular, motion verbs are intransitive, see §14.2.4). They can be marked with locative postpositions (§8.2.4.1) or dative (§8.3.1), but also occur in absolutive form, as *turme-k^ha* ‘other people’s house’ in (27).

- (27) *tce nuw-mɤrɤzɑβ q^he tce turme-k^ha jɤ-ari cti q^he*
 LNK AOR-marry LNK LNK people-house AOR-go[II] be.AFF:FACT LNK
 ‘She married and went to [live in] other people’s (her in laws’) house.’
 (14-siblings) {0003508#S9}

Goals can be relativized (§23.5.5) using oblique participial relatives (§16.1.3.5) or finite relatives (§23.5.5.1), but not object participial relatives except in a very restricted context (§23.5.5.2), unlike most absolutive arguments.

8.1.9 Location

In addition to goals, absolutive noun phrases expressing a static location are found in Japhug, in particular with the verb *rɤzi* ‘stay’ as in (28). Locative postpositions can also occur, but are optional (§8.2.4.1).

- (28) *tce pjuw-sɤ-suxɕat-a puw-ɲu tce, rɤqɑcɔ puw-rɤzi-a,*

 TOPO PST.IPFV-stay-1SG
 ‘When I was teaching, I lived in Rqakyo and in Tshobdun.’ (150819
 kumpGa) {0006388#S2}

Absolutive locative phrases are also found with some transitive verbs, as *nuw-mt^hɤɣ* ‘their waist’ with *rɤɤβ* ‘attach’ in (29).

- (29) *turme ra kuw nuw-mt^hɤɣ juw-rɤɤβ-nuw.*
 people PL ERG 3PL.POSS-waist IPFV-attach-PL
 ‘People attach [badger skin] around their waist (as a remedy for
 rheumatism).’ (27-spjaNkW) {0003704#S126}

Oblique participial relatives (§16.1.3.5, §23.5.5.1) or finite relatives (§23.5.5.1) are used to relativize these absolutive locative phrases.

8.2 Postpositions

Postposition are invariable words which necessarily follow a noun phrase, and specify the syntactic function of that noun phrase, be it core argument or adjunct. They cannot be used on their own, and at the very least require a demonstrative pronoun such as *nu* (§6.9.1).

Although their uses have commonalities with relator nouns (§8.3), they differ from those in lacking a possessive prefix. Postposition stacking is rare; only two cases exist: the sequence of locative postpositions *tɕu zuu* and *tɕe* (§8.2.4.1) and also the case of genitive postpositional phrases used in the meaning ‘the one from/of ...’ (with an elided head noun), as in (30), where the genitive *yuu* is followed by the comitative (§8.2.5).

- (30) *tce pɿjka yuu c^ho wuma zo naɣtcuɿ.*
 LNK pumpkin GEN COMIT really EMPH be.similar:FACT
 ‘Its [little thorn-like things] are like those of the pumpkin.’ {0003518#S55}

8.2.1 Independent words vs. clitics

Since other Gyalrongologists, in particular Sun (1998; 2014a), treat the postpositions in related languages as clitics rather than as independent words as is done in the present work, a justification of the present analysis is necessary.

In Japhug, the postpositions *kuu* ‘ergative’ (§8.2.2) and *yuu* ‘genitive’ (§8.2.3) do have some clitic-like characteristics: they cannot be used without a preceding noun phrase (or a subordinate clause, §25.1.1), are unstressed, and in the case of the genitive have special irregular forms with pronouns (§6.3).

However, a pause can occur between these postpositions (31) and the noun phrase they follow. For instance, in example (31), a two second pause (with an inspiration) is found between the phrase *nuŋa ra* and the following ergative *kuu*.

- (31) *tce turtɿsi nuu pɿú-wy-βzu tce, nuŋa ra, kuu*

 xifangping-zh) {0006408#S28}

Such cases are by no means exceptional; at least 54+35 examples of ergative and genitive preceded by a pause are attested in the corpus (they can be found by searching *ku* or *ɣu* preceded by a comma). Most of these cases are found in sentences where the speaker hesitates, and are especially common in texts translated from Chinese.

The same is true of all postpositions studied in this section. Examples of pause between the noun phrase and the following postposition can be found for most of them, for instance (33) for the locative *zu* (§8.2.4.1).

- (33) <bageda> *kɣ-ti* *nuuutcu, zu, nɣkinu,*
 TOPO OBJ:PCP-say DEM:LOC LOC FILLER
 ‘In the [place] called Baghdâd...’ (140515 facaimeng-zh) {0004000#S2}

8.2.2 Ergative

The ergative *ku*, like genitive *ɣu*, is borrowed from Tibetan (Jacques 2016b) and shares with the Tibetan ergative the functions of marking transitive subject, instrument and cause. It has however a series of specific functions not found in Tibetic languages, such as that of comparee (§8.2.2.7), distributive (§8.2.2.8), and oblique argument (§8.2.2.10) marker. It is homophonous with the orientation adverb *ku* EASTWARDS (§22.2.6).

Although postpositional phrases in *ku* have a different syntactic status depending on the various sub-functions of this marker (as can be shown with tests like relativization), *ku* is glossed as ERG in all cases.

The postposition *ku* does not appear in combination with the additive focus marker *kumɣ* ‘also, even’ (§9.1.6.1), regardless of its function.

8.2.2.1 Transitive subject

The core function of *ku* is marking the subject of morphologically transitive verbs. Ergative is obligatory on third person transitive subjects as in (34), and

is agrammatical on objects and intransitive subjects, except in the case of long distance ergative (§8.2.2.2) and some semi-transitive verbs (§8.2.2.3). Apparent counterexamples are speech errors (§8.1.1).

- (34) *tceri u-tɛw nu ku nu pjɣ-suχsvl*
 LNK 3SG.POSS-SON DEM ERG DEM IFR-recognized
 ‘But the son realized it (that she was a rākshasī).’ (28-smAnmi)
 {0004063#S19}

Transitive subjects in the ergative most often precede the object as in (34), but can also follow it as in (35), an example illustrating a third person inanimate (*tusqar ku* ‘tsampa’) acting on first/second person (§14.3.2.1).

- (35) *nyzo tusqar ku nyki nu t^hu-túr-wy-stu cti tce,*

 ‘And like that, she sent me letters, and I sent her letters.’ (12-BzaNsa)
 {0003484#S24}

Transitive subjects are relativized using subject *ku-* participial relative clauses, the participle taking a possessive prefix coreferent with the object (§16.1.1.1).

8.2.2.2 Long distance ergative

Postpositional phrases in *ku* referring to the subject of a transitive verb can be stranded from their verb by another clause with an intransitive verb.

In (38), for instance, the clause *nu ma u-kɣpa pjɣ-me q^he* ‘she had no other way’ separates the subject *txɕime nu ku* ‘the princess’ from the main verb *to-ti* ‘she said’; note the presence of a pause and of the filler *nxkinu* after the transitive subject. The transitive subject here also happens to be coreferent with the possessor of *u-kɣpa* ‘her method, her way’ in the standing clause, resulting in a surface case mismatch.

- (38) *tɕendɣre txɕime nu ku, nxkinu, nu ma u-kɣpa*

 IFR-say SENS-be
 ‘The young lady had no other way but to say “yes, yes, yes”’. (140428 mu
 e guniang-zh) {0003880#S86}

Similarly in (39), the minimal clause *jo-ɣi* ‘he came’ consisting of a single verb occurs between the subject *icq^ha rɣɣtpu nu ku* ‘the old man’ and the rest of the main clause *ɣndzi numu jo-ts^hi* ‘he stopped the demon’.

- (39) *icq^ha rɣɣtpu nu ku, jo-ɣi tɕe, nxki, ɣndzi*
 the.aforementioned old.man DEM ERG IFR-come LNK FILLER demon
numu jo-ts^hi
 DEM IFR-block
 ‘The old man came and stopped the demon.’ (140512 fushang he
 yaomo1-zh) {0003969#S59}

Here the intransitive subject of *jo-ɣi* ‘he came’ and the transitive subject of *jo-ts^hi* ‘he blocked him’ happen to be coreferent. If analyzed superficially, (39) could seem to be an example of ergative appearing on an intransitive subject. In isolation, however, without context, a clause such as †*rɣɣtpu nu ku jo-ɣi* is not considered to be correct by native speakers, showing that it is preferable to analyze *jo-ɣi* as an incision in this context rather than forming a constituent with the preceding postpositional phrase in *ku*.

8.2.2.3 Intransitive subject

Genuine examples of intransitive subjects with ergative appear to be nevertheless attested at least with some semi-transitive verbs like *tso* ‘know, understand’ as in (40). It is optional and much less common than the absolutive form.

- (40) *ɕw ku tso ma*
 who ERG understand:FACT LNK
 ‘Who would know.’ (150909 xiaocui-zh) {0006386#S59}

Ergative marking on the subject of reflexive verbs (which are morphologically intransitive, §18.3) is also attested for marking emphasis, with the same pronoun preceding and following the ergative (for instance *tuʒo ku tuʒo* in example 15, §6.2.1).

8.2.2.4 Instrumental

In addition to marking the transitive subject, the postposition *ku* occurs on instruments, as in (41). It is possible to find examples with postpositional phrases in *ku*, one corresponding to the subject and the other one to the instrument, as in (42). No good examples of instruments in *ku* are found with an intransitive main verb in the corpus (only manner or causal adjuncts are found, §8.2.2.5).

- (41) *w-pw nu w-lu ku c^hw-su-χse ʒw-ŋu.*

 ‘If the king washes his body with this, he will find it even nicer.’ (140514 xizajiang he lifashi-zh) {0003996#S83}

When an instrument in *ku* occurs in a clause, the main verb generally takes the causative prefix as in (41) and (42), as if the instrument were a type of causee – it differs from a causee however in that in the case of the latter the postposition *ku* is optional (§8.2.2.6). Causative marking in clauses with instruments is optional, and one can find the two constructions with or without the causative marker side by side in the same narrative, as shown by examples (43) and (44).

8 Postpositions and relator nouns

- (43) *qarts^haz ur-ndzi kuw c^hur-βzu-nur tce, nur stu kuw-zru.*
 deer 3SG.POSS-hide ERG IPFV-do-PL LNK DEM most SBJ:PCP-precious
 ‘They make [shoes] with deer hide, it is the most precious [type of skin].’
 (30-mboR) {0003748#S46}

pu-ηu nu-ηu,
 PST.IPFV-be SENS-be
 ‘The son went every day to fell trees, they sold [the wood], and they fed their bellies this way.’ (2003 tWxtsa)

Instruments differ from transitive subjects in that they are relativized using oblique participles in *sr(z)*- (§16.1.3) rather than subject participles.

8.2.2.5 Manner and cause

Postpositional phrases in *kuw* can also describe the manner in which an action takes place, or its cause. Manner adjuncts in *kuw* are generally formed with abstract nouns (§16.4.2) as *tx-mqe* ‘verbal fight’ and *tx-ndut* ‘dispute’ in (46) and *txηym* ‘pain’ in (47). Unlike instruments, manner adjuncts do not trigger the addition of a causative prefix on the main verb, and are fully compatible with intransitive verbs.

- (46) *kumpya c^ho k^huna ni li tx-mqe*
 chicken COMIT dog du again INDEF.POSS-verbal.fight
tx-ndut kuw jo-yi-ndzi tce,
 INDEF.POSS-dispute ERG IFR-come-DU LNK

 (150826 shier shengxiao-zh) {0006284#S119}

- (47) *tyŋym kuw pjur-si jur-ra.*
 pain ERG IPFV-die SENS-be.needed
 ‘[The animal that is devoured alive by the lions] dies in pain.’ (20-sWNgi)
 {0003562#S45}

Causal adjuncts, like manner adjuncts, also take the postposition *kuw* without causative form on the verb, as in (48). The inalienably possessed noun *u-ndza* ‘cause’ in particular is often used with the ergative to specify a cause (49).

- (48) *k^ha u-brum nuw kuw tce tce jur-yɛcu*
 house 3SG.POSS-shade DEM ERG LNK LNK SENS-be.COOL
 ‘Due to the shade of the buildings, [this road] is not exposed to the heat of the sun.’ (conversation 2014-05-10)

 butterfly DEM DEM 3SG.POSS-cause ERG later RH.Q-die:FACT SFP
 ‘The butterfly might die because of that.’ (150818 muzhi guniang)
 {0006334#S189}

Various subordinate clauses with finite or non-finite verbs are also made with the postposition *kuw* (see §25.5 and §25.6.1.2 for instance).

8.2.2.6 Causee

Causative verbs in *su(y)-/z-* derived from transitive verbs have three arguments: causer, causee and object (§14.4.3, §17.2.4.2). The causer is treated as the transitive subject, and is marked with the ergative. The causee can also receive ergative marking as *qapri kuw-ɲaβ nuw kuw* ‘the black snake’ in (50) and *kuw-wyrum nuw kuw* ‘the white one’ (51). The most common word order is to put the causee before the object as in (50), but the opposite order is also attested as in (51).

- (50) *li mdaβzuy ci to-lyt tce, tceɲɲɛ, nyki, qapri*
 again bow one IFR-release LNK LNK filler snake
kuw-ɲaβ nuw kuw kuw-wyrum nunuw lo-su-qioβ tce

tce ɲɛ-su-ykylɛt.
 LNK IFR-CAUS-detach

‘He shot an arrow and caused the black snake to vomit the white one, and separated it [from the other one].’ (28-smAnmi) {0004063#S100}

8 Postpositions and relator nouns

- (51) *to-lyt tce tčendyre nunu qapri ku-ɲaβ nu,*
 IFR-release LNK LNK DEM snake SBJ:PCP-be.black DEM
ku-wyrum nu ku lo-su-qioβ tce ɲɣ-su-ta.
 SBJ:PCP-be.white DEM ERG IFR-CAUS-vomit LNK IFR-CAUS-put
 ‘He shot [an arrow] and caused the white one to vomit the black snake
 and to release it.’ (28-smAnmi) {0004063#S94}

However, the presence of ergative on the causee is optional, as shown by example (52) where the causee *u-tču stu ku-xtci nu* ‘his youngest son’ is in absolutive form.

- (52) *ɲɣlpu ku u-tču stu ku-xtci nu c-ko-z-ruru.*
 king ERG 3SG.POSS-son most SBJ:PCP-be.small DEM TRAL-IFR-CAUS-guard
 ‘The king sent his youngest son to guard [the trees].’ (140507 jinniao-zh)
 {0003931#S37}

When the object is third person, and the causee first or second, the causee is obligatorily indexed, as in (53a) (see §17.2.4.2 for more examples), resulting in a verb form that is identical with that when both causer and causee are third person, and the object is first or second person as in (53b). With such ambiguous verb forms, the presence of the ergative postposition on the causee as *a-tču ku* ‘my son’ in (53b) is a way to disambiguate from the interpretation of the noun as object as in (53a).

- (53) a. *užo ku a-tču pú-wy-su-mto-a*
 3SG ERG 1SG.POSS-son AOR-INV-CAUS-see-1SG
 ‘He let me see my son.’ (elicited)
 b. *užo ku a-tču ku pú-wy-su-mto-a*
 3SG ERG 1SG.POSS-son ERG AOR-INV-CAUS-see-1SG
 ‘He let my son see me.’ (elicited)

No minimal pair similar to (53a) and 53b), where the ergative on the causee has a disambiguating function, is attested in the corpus.

8.2.2.7 Comparee marker

In the comparative construction (§26.2), in addition to the standard markers (such as *sɣz* and its variants, see §8.2.7), the postposition *ku* can appear on the comparee, although the comparee is syntactically an intransitive subject (indexed on the stative adjectival predicate).

The comparee with *ku* can either precede (54) or follow the standard, but most often this marker appears when no overt standard is present as in (55). In all of these examples, including the last one, the marker *ku* is optional.

- (54) *mahi numu ku azo syz c^ha*
 water.buffalo DEM ERG 1SG COMP can:FACT
 ‘The water buffalo is stronger than me.’ (150831 laoshu jianv-zh)
 {0006374#S59}
- (55) *ndzi-ts^huya nuura wuma naχtəuy. təri turgilanlan nu ku*

xtci.
 be.small:FACT
 ‘Their shape is similar, but the fir cone is smaller.’ (08-tWrgi)
 {0003464#S74}

See Jacques (2016b) for a historical hypothesis explaining how the ergative marker came to be used to mark the comparee.

8.2.2.8 Distributive

The postposition *ku*, when occurring with a counted noun designating a quantity, can be used to focus on the distributive meaning (‘for one X’, ‘per’). It occurs in constructions with intransitive verbs where no agent or instrument is present, but exclusively to express the price of the quantity designated, as in (56) (see additional examples in Jacques 2016b: 5–6). It cannot be used with time counted nouns.

- (56) *tu-turpa ku sqi jamar nu-ra.*
 one-pound ERG ten about SENS-be.needed
 ‘You need ten [renminbis] per pound [of Angelica].’ (17 ndZWnW)
 {0003524#S22}

As argued in Jacques (2016b: 23), this construction results from the elision of a verb such as *syndu* ‘exchange’, which can take as instrument (§8.2.2.4) the counted noun expressing a quantity, as in (57).

- (57) *tu-turpa ku yurza jamar nu-wy-syndu nu-k^hu*
 one-pound ERG hundred about IPFV-INV-exchange SENS-be.possible
 ‘One can exchange (sell) one pound for a hundred [renminbis].’ (elicited)

8.2.2.9 Partitive

The intransitive verb *mts^hyt* ‘be full’ generally has a dummy subject, and selects a locative argument and a partitive argument, indicating the material / elements that the location is full of. This partitive argument is generally in an absolutive form, as in (58), but we also find examples with the ergative, as in (59).⁵

- (58) *tʂapa t^hamtɕɛt, nuu-mbro nuu-ɟla, nuŋa paʋ nuwa*

- (59) *uu-pa nuwtɕu rca, ku-nɣmpo ku ɟɣ-mts^hyt*
 3SG.POSS-down DEM:LOC UNEXP:DEG SBJ:PCP-watch ERG IPFV.IFR-be.full
zo
 EMPH
 ‘Down [the stage], [the seats] were full of spectators.’ (150822 yan
 muouxi de ren-zh) {0006384#S50}

Another verb with an optional partitive argument, which can take ergative marking, is the passive *amar* ‘be smeared with’ (example 20, §18.1.3).

8.2.2.10 Oblique argument

The transitive verb *k^hyt* ‘do repeatedly’, ‘do for a long time’ and its causative form *su-k^hyt* ‘cause to do repeatedly’, ‘cause to do for a long time’ occur in a construction with instrumental-like noun phrases marked with the ergative *ku*, indicating the action which is performed repeatedly or done over a long time. These noun phrases can include either an action nominal derived from a verb with the prefix *tu-* (§16.4) as in (60), or an underived action noun, as in (61) and (62).

⁵Although (59) is translated from Chinese, the original has 下面坐满了观众 <xiàmiàn zuòmǎn le guānzhòng> ‘Below, the spectator seats were filled’, and there is nothing in the structure of the original sentence that could allow to interpret the ergative as a calque. In addition, Tshendzin confirmed that the ergative is correct here.

- (60) *tu-qioʁ* *ku tó-wy-su-k^hʁt* *zo tce, tce*
 NMLZ:ACTION-vomit ERG IFR-INV-CAUS-do.a.long.time EMPH LNK LNK

 only.then LNK poison DEM IFR-INV-CAUS-take.out
 ‘[The medicine] caused [Gesar] to vomit a long time until he expelled the
 poison.’ (Gesar)

- (61) *ta-ma* *ku ta-k^hʁt* *zo*
 INDEF.POSS-work ERG AOR:3→3’-do.a.long.time EMPH
 ‘He did a lot of work.’ (elicited)

Example (62), with the verb *k^hʁt* ‘do repeatedly’, ‘do for a long time’ taking 1SG→3 indexation (§14.3.2.1), shows that the ergative phrase cannot be analyzed as a transitive subject; moreover, the fact that adding the causative in this case would imply a real causative interpretation (‘cause X to repeatedly’) also indicates that this phrase is not an instrumental adjunct (see §8.2.2.4).

- (62) *k^hʁcʁl* *ku tʁ-k^hat-a* *zo*
 conversation ERG AOR-do.a.long.time-1SG EMPH
 ‘I have a long conversation.’ (elicited)

No other verb takes this type of oblique ergative phrase.

8.2.3 Genitive

With the exception of particular forms for some pronouns (§6.3), the genitive postposition has the invariant form *yu* in Kamnyu Japhug. Like the ergative *ku*, it is likely borrowed from the Amdo clitic *-yə/-kə* (Haller 2004: 62). It is used in possessive constructions, but also expresses beneficiary and recipient.

8.2.3.1 Possession

The genitive *yu* occurs in various type of possessive constructions, including genitival noun complements and possessive existential predicates (§22.5.2.1).

Inside the noun phrase, the genitive occurs between possessor and possessum, and a possessive prefix is found on the possessum (§5.1.1.2), as in (63).

8 Postpositions and relator nouns

- (63) *ri yzɣndza yw u-jwab nura mɣ-wxti ri,*
 LNK Agastache.rugosa GEN 3SG.POSS-leaf DEM:PL NEG-be.big:FACT LNK

 be.black:FACT EMPH LNK
 ‘The leaves of the *Agastache rugosa* are not large and quite dark in colour.’
 (11-qarGW) {0003480#S120}

Genitival phrases without possessive prefix on the possessum are rare but do exist, in particular when the possessum is a noun borrowed from Chinese and non-fully nativized like 国语 <guóyǔ> ‘national language’ in (64).

- (64) *izo yw <guoyu> ɲu-ɲu tce, nuɲw kɣsufse yw*
 1PL GEN national.language SENS-be LNK DEM all GEN
ji-rju ɲu-ɲu tce,
 1PL.POSS-speech SENS-be LNK
 ‘[Chinese] is our national language, it is our common language.’ (150901
 tshuBdWnskAt) {0006242#S14}

For singular noun possessors, the presence or not of a third person possessive prefix *u-* is not always easy to tell from recordings, as due to the external sandhi (§4.3), *yw u-* merges as /ywu/ when no pause occurs between the two. In careful speech, the third person prefix is clearly audible.

Nominal modifiers can sometimes be marked like possessors, with the genitive and/or with a possessive prefix on the following head noun, see §8.2.3.3.

The genitive can also appear between a noun phrase and a relator noun (§8.3), and even be followed by focus markers in this position, as in (65).

- (65) *tu-ci ku-wxti yw kumɣ u-rku ri nura*
 INDEF.POSS-water SBJ:PCP-be.big GEN also 3SG.POSS-side LOC DEM:PL
tu ɲgrɣl.
 exist:FACT be.usually.the.case:FACT
 ‘[Dragonflies] are also found near large rivers.’ (26-quspunmbro)
 {0003684#S7}

In these constructions, the genitive is always optional, and the prefix on the possessum suffices to express possession, as in (66) (see §5.1.1.2).

- (66) *paɣci u-jwab tsa fse ri, nuɲ svznɣ artum,*
 apple 3SG.POSS-leaf a.little be.like:FACT LNK DEM COMP be.round:FACT
 ‘[Its leaves] are a little like the leaves of an apple tree, but more round.’
 (09-mi) {0003466#S13}

When the possessum is elided however, the genitive postposition becomes obligatory, as in (67).

- (67) *u-ryi nunu, nɔki, <beigua> yu syz*
 3SG.POSS-seed DEM FILLER pumpkin GEN COMP
ɲu-jaɲju.
 SENS-be.thick.and.strong
 ‘Its seeds are thicker than those of the pumpkin.’ (16-CWrNgo)
 {0003518#S126}

While there are transitive and semi-transitive verbs expressing possession (§22.5.2), the most common possessive construction involves an existential verb taking the possessum as subject, with the possessor marked by a possessive prefix on the possessum, and optionally with the genitive, as in (68).

- (68) *qarts^haz p^hu nu yu u-bru yɔzu*
 deer male DEM GEN 3SG.POSS-horn exist:SENS
 ‘The male deer has horns.’ (27-qartshAz) {0003702#S32}

This construction is also used for abstract possession, as in (69).

- (69) *azuy a-βlu tu*
 1SG:GEN 1SG.POSS-trick exist:FACT
 ‘I have an idea.’ (140507 tangguowu-zh) {0003933#S28}

The causative verbs *ɣrtu* ‘cause to have’ and *ɣyme* ‘destroy’, ‘cause not to exist/have’ derived from *tu* ‘exist’ and *me* ‘not exist’ (§17.3.2.3) select an oblique argument with the genitive, as in (70). Although this argument could be considered to be a type of beneficiary (§5.1.1.4), we observe here stability in case marking of the possessor between the base construction and the derived causative one.

- (70) *uzo ku maka ky-ntɕ^hoz mɣ-ku-yrɕo ku-fse*

 IRR-PFV-2-give[III]
 Take it and give it to the nobleman.’ (150831 renshen wawa-zh)
 {0006418#S43}

The recipient of the verb *k^{ho}* ‘give’, ‘pass over’ can alternatively also be marked by a possessive prefix on the inalienably possessed noun *tu-jax* ‘hand, arm’ (with the meaning ‘hand over’, §8.3.6) or, with the dative relator nouns *u-ɕki* or *u-p^{he}* (§8.3.1).

The genitive is selected by a few intransitive modal verbs to indicate the experiencer/beneficiary, in particular *ra* ‘be needed’, ‘need’, *βzi* ‘be necessary’, as in (74) and (75).

- (74) *azɯy u-cɣru ra*
 1SG:GEN 3SG.POSS-bone be.needed:FACT
 ‘I want its bones.’ (07-deluge) {0003426#S9}
- (75) *azɯy wuma zo ʋzi ɲu-ɲu, a-kɣ-ntɕʰoz*

 ‘But animals too can feel dizzy.’ (29-tAmtshAzkAkWndo) {0004065#S66}

Finally, the experiencer subject argument demoted by the proprietive derivation can also in some cases be optionally encoded with the genitive case (see example 182, §18.8).

8.2.3.3 Other uses

The genitive *yu* occurs with various types of noun complements which are semantically neither possessive or beneficiaries/recipients.

Nouns used as prenominal modifiers are in rare cases followed by a genitive postposition before the head noun. If the head noun is an alienably possessed noun, the presence of a third singular possessive prefix *u-* is optional, as shown by examples such as (84) and (85).

- (84) *χsvr yu, nxkinu, k^htutsa ci to-nu-ndo.*
 gold GEN FILLER bowl INDEF IFR-AUTO-take
 ‘He took a golden bowl’ (140508 shier ge tiaowu de gongzhu-zh)
 {0003937#S152}

This type of construction is most common in texts translated from Chinese, but does also occur in more spontaneous material as in (85), with a complex modifier *ftsov kungut u-p^hu* ‘the price of nine female hybrid yaks’.

- (85) *tcendyre u-jav nuwcu [ftsov kungut u-p^hu]*

 ‘She had a ring worth nine female hybrid yak in her hand.’ (2003gesar)

In a construction with a prenominal modifier marker in the genitive, even when a possessive prefix is present on the head noun (in particular when it is an inalienably possessed noun), that prefix does not necessarily refer to the modifier. For instance, in (86), the third plural possessive prefix *nu-* on *nu-mgozmxryβ* ‘their vegetables’ refers to the people eating the vegetable, not the modifier *tux-palyskvr* ‘the whole year’ (on whose formation see §5.7.8.3) which would require a third singular prefix instead (an option which is also attested with this noun). Alternatively, it is also possible to have an indefinite possessor prefix on the head

8 Postpositions and relator nouns

noun if inalienably possessed, as in (87). Note that both options are attested in the construction with a prenominal modifier without the genitive, as seen in §5.1.4.

Some apparently unclassifiable uses of the genitive can be accounted for to some extent by assuming the elision of a head noun. For instance, in (88), the phrase *izora yui*, meaning ‘in our language’, can be explained as coming from *izora yui ji-skxt* ‘our language’ used as a absolutive locative phrase (§8.1.9) ‘in our language’, with elision of the head noun. This example does not illustrate a separate function of the genitive: it is simply a particular case of possessive.

- (88) *<longtoutan> nuu kupa-skxt cti. tce izora yui tc^hi*
 TOPO DEM Chinese-language be.AFF:FACT LNK 1PL GEN what

 ‘Longtoutan is a Chinese word; I don’t know how it is said in our
 [language].’ (150820 qaprANar) {0003798#S2}

The same is true of the use of the genitive with the verb *mjym* ‘feel pain’ and its causative *çumjym* ‘cause pain’, which take a body part (not the person or animal feeling pain) as their subject and object, respectively. In (89), the genitive first person *azuy* ‘1SG:GEN’ is not an oblique argument or even a malefactive adjunct. Rather, its presence implies an elided noun *a-βri* ‘my body’ (‘he caused pain to my body’). It is however likely that sentences like this are the pivot constructions which made possible the reanalysis of possessive genitive phrases as benefactive/malefactive adjuncts.

- (89) *azuy ta-cuu-mɿɿm, azuy a-laχtc^ha ra*

 {0003814#S31}

The genitive can also occur between prenominal relatives (§23.2.3) and their head noun. In this construction the head noun generally does not take a possessive prefix. This type of relative is particularly common in story translated from Chinese, where it calques the prenominal relatives in 的 <de>, as in (90). The same situation has been observed in Khroskyabs (Lai 2017: 640–643).

8.2.4 Locative

8.2.4.1 Core locative postpositions

There are three locative postpositions in Japhug, *zu*, *tɕu* and *ri*, the latter being homophonous with the correlative additive focus *ri* (§9.1.6.2). The exact conditions of their uses is still an unsolved problem of Japhug grammar. They appear to be always optional (goals and locative adjuncts can always be in absolutive form, see §8.1.8 and 8.1.9) and seem to be interchangeable, as is illustrated in this section.

All three postpositions can be used to express static location, motion into, motion or from a place. Location or motion (into/from/on) a surface, (into/from/in) a container or with/without contact does not seem to be relevant factors for the selection of the locative postpositions.

The locative *tɕu* is most often used in combination with a demonstrative *nu* as in (97), a form identical to the locative of the demonstrative pronoun (*nūtɕu* ‘there’, see §6.9.3). Without demonstrative, *tɕu* is also found as in (98) and (99).

- (97) *japa tce alo <ercha> nūtɕu, nɣkinw, icq^ha ts^hapa co*

 side.of.the.top.terrace LOC IFR-land
 ‘[The raven] landed on the side of the top terrace.’ (2002 qajdoskAt)
 {0003366#S124}

The above examples show *tɕu* used for location without motion (97), motion via a place (98), motion onto a place resulting in contact with the surface (99), and (100) illustrates *tɕu* expressing motion from the inside.

- (100) *nunnu kwiβba* *ra yuu nu-k^ha* *uu-kuum* *nuttɕu*

 IFR:DOWNSTREAM-AUTO-COME.OUT LNK
 ‘He went out from the door of the nobleman’s house.’ (140513 mutong de
 disheng-zh) {0003977#S153}

The same diversity of uses is found with the locative *zuu*; (101) shows *zuu* expressing static location (‘in their hands’) and motion from a place (‘from the sky’). Example (102) illustrates *zuu* used with the verb *zo* ‘land’, which is attested with *tɕu* in (99). Note that in another version of the same story by the same speaker, the relator noun *u-taβ* ‘on, above’ (§8.3.4.1) is found instead of a locative postposition (see 3 in §5.1.1.2).

 1SG.POSS-horse 3SG.POSS-tail LOC IMP-land
 ‘Land on my horse’s tail.’ (2014-kWLAG)

The postposition *zuu* is related to the suffix *-s* in *Situ*, which expresses motion from an origin or towards a goal (Lin 1993: 330–331). *Situ* is certainly most archaic

in this regard (as it also preserves a locative *-j* suffix of which only lexicalized traces remain in Japhug, §8.2.4.4), and the Japhug form has to be explained as debonding from suffix to clitic to independent word (see 33 in §8.2.1 for evidence that *zu* is not a clitic). Japhug-internal evidence for the degrammaticalization is the otherwise unexplainable voicing to *z*, a process that applied to all fricative codas (§3.2.2), and the fact that some frozen forms preserve a *-z* suffix, in particular the approximate locative *c^hiz* (§8.2.4.2), the related indefinite pronoun *cisc^hiz* ‘somewhere’ (§6.6.5) and the relator *u-ɲguuz* ‘inside, among’ (see 223 and 224 in §8.3.4.2) and the postposition *ɣaz* ‘while ... still’ (§5.8.3).

The locative *ri* also occurs in all the meanings attested above for *tɕu* and *zu*, though due to homophony with the additive correlative *ri* (§9.1.6.2), some examples are ambiguous. Examples (103) and (104) show the locative *ri* marking static location and motion towards a place, respectively.

- (103) *k^hɣxtu ri pu-ɣzi-a tce tɣ-mt^hum tu-ndze-a*
 terrace LOC PST.IPFV-stay-1SG LNK INDEF.POSS-meat IPFV-eat[III]-1SG

 ‘After he went to [his wife’s family’s] house...’ (14-siblings)
 {0003508#S165}

The same interchangeability and optionality of the locative postpositions is observed when these are combined with relator nouns (§8.3.4.5). Although the three postpositions are almost identical in their range of uses, there are nevertheless differences in their compatibilities. With the locative demonstrative pronouns *kure* ‘here’, and *nure* ‘there’ (§6.9.3) as well as *awɣndundɣt* ‘everywhere’, only *ri* can be added, as in (105). The postpositions *tɕu* and *zu* can be combined as *nutɕu zu* as in (106); no other combination of locative postpositions are possible.

 ‘(When) he was on the east side, ...’ (28-qajdoskAt) {0003718#S145}

All three postpositions are also used with time adjuncts, but do present some noticeable differences in usage. They can be interchangeably used with temporal relator nouns such as *u-raj* ‘during, the time when’ (§8.3.5), but in other contexts

With counted nouns expressing time (§7.5.1), there is not a single example with *zuu* in the corpus. The postposition *ri* is used to express a point in time (as in 107), while *tɕu* mostly means ‘within (the time period)’ as in (108).

- (107) *tu-xsoz ri tɕe jo-ɣi ri, u-βri tɣzri ɣɣzu,*

The form *tɕe*, which is mainly analyzable as a linker (§25.1.6) and in some cases a topic marker (§9.1.5.5) occurs with locative and temporal adjuncts and could be analyzed as a postposition in these usages (see also §8.2.4.4). With the temporal counted nouns, like *ri* it expresses a specific point in time as in (109) rather than a duration.

- (109) *tɕe tu-sɲi tɕe ɲɣ-k-ɣtuɣ-ci tɕe,*
 LNK one-day LNK IFR-PEG-meet-PEG LNK
 ‘One day, [the bear finally] met [the rabbit].’ (2011-13-qala)

8.2.4.2 Approximate locative

The suffix *-c^hu* is used to indicate approximate location, referring to a broad area rather than a specific place, like the plural *ra* (§9.1.1.2). In (110) it means ‘area/

region’, while in (111) it can be translated as ‘side’ and is opposed to *u-stu* ‘straight ahead’.

- (110) *tce kupa-c^{hu} nura, at^{hi} pɕoɐ nura,*

 ‘People from the Chinese areas downstream, outsiders, send [people]
 here to buy [these mushrooms]. (20-grWBgrWB) {0003554#S57}

It also occurs with various relator nouns, in particular *u-q^{hu}* ‘after, behind’ and *u-ŋgu* ‘inside’ as in (111) and (112), respectively. The form *u-q^{hu}-c^{hu}* exclusively has a locative meaning, unlike *u-q^{hu}* which can be used with the temporal meaning ‘after’. Note that *u-ŋgu* undergoes vowel assimilation to [uŋguc^{hu}], showing that it must be analyzed as a suffix rather than as a postposition. Most relator nouns cannot be used with *c^{hu}*, for instance one cannot say †*u-ɕɣri-c^{hu}*.

- (111) *u-jwaɐ u-ɕɣri u-stu nu ju-ɣɲi,*

 (15-babW) {0003512#S107}

The suffix *-c^{hu}* is itself related to the indefinite locative postpositions *c^{hi}z* and *sc^{hi}z* ‘at/in/towards a X, somewhere where X’ as in (114), which come from the combination of *-c^{hu}* with the locative suffix *-z* (degrammaticalized as the locative postposition *zuu*, see §8.2.4.1). For the notation *-iz* (instead of the more etymological *-uz*) here, see §3.5.2. In the case of the variant *sc^{hi}z*, the root of *-c^{hu}* was both prefixed and suffixed by the locative *-z*.

- (114) *tce tcekuu-kuu zo sc^{hi}z sʸstɔŋ zo sc^{hi}z*

8.2.4.3 *tce*: linker or postposition

The word *tce* is one of the most common words in Japhug, and it has several different morphosyntactic functions, including that of linker (§25.1.6) and topic marker (§9.1.5.5). In addition, it is also used as a postposition, expressing both motion and location; it especially commonly occurs with an ablative meaning, as in (118) and (119). Its etymology is discussed in the following section (§8.2.4.4).

- (118) *kutɕu* *zgo* *tce tcekui zgo*

 IFR-have.the.intention
 ‘In his mind, [the snake] wanted to take the water upwards and transform our whole area into water.’ (150820 qaprANar) {0006246#S19}

Distinguishing between the uses of *tce* as a postposition and as a topic marker (§9.1.5.5) is not always trivial; it is analyzed as a topic marker when it can be replaced by *nu* §9.1.5.4, or when two *tce* appear in a row as in (122): in this case, the first one is a postposition and the second one a topic marker.

8.2.4.4 Traces of the locative suffix *-j

Situ has a locative suffix *-j*, also used in the possessive construction (Lin 1993: 325–330), which has disappeared in Japhug, though a few traces remain.

The form *tce*, which is mainly used as a linker (§25.1.6) and also occurs as postposition (§8.2.4.3) and as a topic marker (§9.1.5.5), probably originates from the combination of the locative postposition *tɕu* and the locative suffix **-j*, with vowel merger at a stage preceding the sound change **o → u* (**tɕo-j → tce*; see §3.3.3 for a discussion of these sound changes).

Another trace of the locative suffix **-j* is found in the linker *q^he* ‘then’ and the time ordinal *q^huj* ‘this afternoon’ (§7.5.2), combining the relator noun *u-q^hu* ‘after, behind’ (§8.3.5) with the coda **-j*, in the former with vowel fusion (an earlier lexicalization), and the latter without fusion. The form *q^huj* ‘this afternoon’ shows

that the suffix **-j* was still productive in Japhug after the sound change **o* → *u* took place.

The interrogative pronoun *noj* ‘where’, variant of *notɕu* ‘where’ (§6.5.4), also has a trace of the **-j* suffix without vowel fusion.

Finally, the suffix *-re* in the locative pronouns *kure* ‘here’, *nure* ‘there’ and related forms is most probably the plural marker *ra* (§9.1.1.2) to which the locative **-j* has been added, with the same vowel fusion as in the forms above (§6.9.3).

8.2.5 Comitative

Postpositional phrases with the comitative postposition *c^ho* ‘and, with’ and its variants *c^hondɣre* and *c^honɣ* (comprising the additive *nɣ* and the linker *ndɣre*) are selected by verbs with non-singular subjects (§14.2.6), including *naɣtɕuɣ* ‘be the same’ (§9.1.7), *amuumi* ‘be on good terms’ (123), *rɣkrɣz* ‘have a discussion’ and reciprocal verbs (§18.4.1).

- (123) *[uɣo c^ho] ku-naɣtɕuɣ [suɣno, xɕaj ma*
 3SG COMIT SBJ:PCP-be.the.same vegetables grass apart.from
mɣ-ku-ndza nuɾa c^honɣ] amuumi-nu tɕe,

 ‘[The rabbit] is on good terms with [the animals] which eat only grass
 and vegetables like him.’ (04-qala2) {0003392#S31}

- (124) *[k^hu c^hondɣre] mbro ni to-rɣkrɣz-ndzi.*
 tiger COMIT horse DU IFR-discuss-DU
 ‘The tiger and the horse had a discussion.’ (20-tArka) {0003566#S31}

Postpositional phrases in *c^ho* can be considered to be oblique arguments, since they are relativized using the oblique participle (§16.1.3.7, §23.5.7). However, verbs that select *c^ho* phrases index not only the intransitive subject proper, but the sum of the subject and the *c^ho* phrase, which can be in the dual as in (125) (the white birch and the red birch) or in the plural (123) (the rabbit and the other animals).

- (125) *tɕe u-rq^hu nu yurni laɁma u-ŋɣu*

 DEM birch COMIT SENS-be.the.same-DU LNK
 ‘Apart from the fact that its bark is red, it is identical in the inside with
 the birch.’ (06-mbrAj) {0003414#S11}

8 Postpositions and relator nouns

The verb *naχtεuy* ‘be the same’ with a *c^{ho}* phrase can be used in an equative construction (§26.3.1.1).

Apart from the function presented above, *c^{ho}* ‘and, with’ is commonly used to link together two nouns inside a single noun phrase, as in (126). In this case too, the main verb of the clause indexes the whole noun phrase, comprising the sum of referents designated by the nouns linked by *c^{ho}*.

- (126) *a-wu* *c^{ho}* *a-bi* *ni*
 1SG.POSS-grand.father COMIT 1SG.POSS-younger.sibling DU
c^hu-yi-ndzi *ra* *ma zɣni-sti* *kɣ-rɣzi*
 IPFV:DOWNSTREAM-come-DU be.needed:FACT LNK 3DU-alone INF-stay
mɣ-c^ha-ndzi *tce*,
 NEG-can:FACT-DU LNK
 ‘My grandfather and my younger brother have to come, they cannot stay by themselves.’ (2011-05-nyima)

The marker *c^{ho}* can also link verb phrases and even entire clauses (see §25.6.2.1 and Jacques 2014a: 313).

Given the apparently equal status of the two linked nouns in (126), in particular with regard to indexation, it is legitimate to wonder whether analyzing it as a postposition makes more sense than considering it to be a coordinator; this question is explored in §9.2.1).

A *c^{ho}* phrase can be followed by the associative plural marker *ra* (§9.1.1) as in (127) to mean ‘et cetera’, and the whole phrase can take case marking such as ergative.

- (127) *tçeri uzo ndɣre, qajdo c^{ho} ra ku ndɣ tɔ-wy-ndza çti*
 but 3SG ADVERS CROW COMIT PL ERG ADVERS IPFV-INV-eat be.AFF:FACT
 ‘But it is eaten by crows and other [animals].’ (26-NalitCaRmbWm)
 {0003676#S134}

The ergative *ku* is however optional on comitative phrases, as shown by (128), where ergative marking would be expected on the phrase *u-pu ra c^{ho}*.

- (128) [*u-pu* *ra c^{ho}*] *tutturca to-ndza-nu tçe*
 3SG.POSS-young PL COMIT together IFR-eat-PL LNK

 IFR-AUTO-REFL-CAUS-be.full-PL EMPH SENS-be
 ‘[The eagle] ate them together with its fledglings and they ate to their full.’ (huli yu shanying-zh)

A postpositional comitative phrase can also serve as a dual or plural possessor, as if from a complex noun phrase ‘*X c^ho Y*’ with elided *Y* element, as in (129).⁷ See §9.2.1 for additional discussion.

- (129) *tce ur-rzaβ c^ho ndzi-me ci tu tce,*
 LNK 3SG.POSS-wife COMIT 3DU.POSS-daughter one exist:FACT LNK
 ‘He and his wife have a daughter.’ (14-siblings) {0003508#S281}

The comitative is also used in the simultaneous action construction (§16.4.3, §24.4.3.2)

8.2.6 Additive

The additive adposition *nɣ*, possibly from Tibetan ཁྱ *na* ‘locative’, appears after the protasis of some conditional clauses (§25.2.1), but it also occurs in direct adjacency between two nouns (generally identical ones), most commonly to express repeated action as in (130) and (131).

- (130) *ty-rpi nɣ ty-rpi zo ɲu-su-βzu-nu*

⁷Note that (129) does not mean ‘There is his wife and their daughter’ (dual indexation would be expected on the verb).

8 Postpositions and relator nouns

- (133) *tʂu nɣ tʂu pɣ-ee q^he*,
path ADD path IFR:DOWN-go LNK
'He went all the way down.' (140511 alading-zh) {0003953#S102}

The additive can also occur between finite verbs with a similar range of meanings (§19.4), with numerals and counted nouns (§7.3.2.3) to express distributivity, and with ideophones to describe a rhythmically occurring action (§10.1.2.3).

8.2.7 Standard marker

Japhug has several postpositions that are mainly used to mark the standard in the comparative construction. The most common one is *svz* 'compared with', but the variants *stav*, *svznɣ*, *stavnɣ*, *sustav* (117 in §15.1.5.5) *χtanɣ* (68, §10.4.1) and *suχta* are also attested (see §5.8.4 concerning their etymology). Their relative frequency appears to be speaker-dependent, and no meaningful difference could be detected between them.

In the comparative construction (§26.2.1), the comparee is the intransitive subject of the main verb (the parameter, generally an adjectival stative verb) and is indexed on the verb. The comparee is either in the absolutive or in the ergative (§8.2.2.7). The standard is necessarily marked by one of the postpositions listed above, and cannot be indexed on the main verb. Neither the standard nor the comparee are required to be overt. An adjectival stative verb with a standard postpositional phrase as in (134) is a well-formed comparative construction. Examples like (135) with overt comparee and standard are rarer.

- (134) *qandzɣi svznɣ nɯ-wxti, qaliaɁ svznɣ nɯ-xtci*
falcon COMP SENS-be.big eagle COMP SENS-be.small
'It is bigger than a falcon, and smaller than an eagle.' (2011-08-kuwu)

- (135) *uʒo nɯ azo svz tu-xpa wxti*
3SG DEM 1SG COMP one-year be.big:FACT
'She is one year older than me.' (12-BzaNsa) {0003484#S85}

The standard marker *svz* (and its variants) also occurs in a construction expressing progressive increase throughout the time, where a time counted noun like *tu-sɣi* 'one day' or *tu-xpa* 'one year' is followed by the standard marker and then repeated, as *tu-xpa svz tu-xpa* 'more year after year' in (136). This construction, although attested in non-translated texts, is more common in texts from Chinese, where it calques the construction 一年比一年 <yīnián bǐ yīnián> 'more year after year'. The more idiomatic Japhug construction to express the same

meaning is through partial reduplication of the first syllable of the main verb (§12.4.1.4).

- (136) *nu-jwab nu, [...] tu-xpa sz tu-xpa lu-dyn nu*
 3PL.POSS-leaf DEM one-year COMP one-year IPFV-be.many be:FACT
ma
 LNK
 ‘There are more needles (‘leaves’) each year.’ (08-saCW) {0003462#S17}

The standard markers can also be used with subordinate clauses (§25.6.2.3). The standard marker with the distal demonstrative *nu szznɣ* has the meaning ‘rather than that, could ... as well’ as in (137).

- (137) *nɣ-mu kɣ-fsraŋ mɣ-tu-c^ha tce, nu szznɣ,*

 {0006294#S20}

8.2.8 Exceptive

The exceptive postposition *ma* ‘apart from’ and its reduplicated variant *muma* are not selected by any verb, and only used in adjunct postpositional phrases as in (140).

- (140) *kum ci muma numu tee znde ɣja zo cti*
 door one apart.from DEM LNK wall completely EMPH be.AFF:FACT
 ‘Apart from one door, there are walls everywhere.’ (2011-11-kha)

The exceptive *ma* ‘apart from’ is used in particular in restrictive focus constructions (§9.1.6.5).

When the scope of the restrictive construction is on an entire clause rather than a single noun phrase, the clause is followed by the linker *ma* (homophonous with the exceptive) and an exceptive phrase limited to the demonstrative pronoun *nu* (here in resumptive use, coreferent with the entire preceding clause) and the postposition *ma*, as in (141). The first *ma* in this construction is not to be analyzed as the postposition: while it is possible to reduplicate the second one as in *ma nu muma* (example 142), reduplication of the first *ma* is not attested.

- (141) [*azwɣ u-ca ra*] *ma nu ma*

The postposition *ma* ‘apart from’ is also found in a periphrastic modal construction (§21.7.5).

8.2.9 Terminative

The postposition *mɣctʂa* ‘until’ is used after noun phrases to indicate temporal (143) or locative (144) limit. It can be used in opposition with the egressive postpositions (see 154 in §8.2.10) or with *kóɓmuuz* ‘only after’ (example 160 in §8.2.11).

- (143) *tv-pytso ku-dɣn nuura tce, tuu-pɣrme,*

8 Postpositions and relator nouns

The terminative postposition *mɤɤtʂa* can also be used to build temporal subordinate clauses (§25.3.2.3).

8.2.10 Egressive

There are six egressive postpositions in Japhug, which are built by combining the root *ɕaŋ-/ɕoŋ-* (among the words where *-aŋ* and *-oŋ* are in free variation; the variant *ɕaŋ-* is generalized in the orthography, see §3.5.1) with either the root of locative relator nouns (§8.3.4) or orientation adverbs (§15.1.1.4) as shown in Table 8.1. There is a one-to-one relationship between the orientations of these postpositions and the six definite orientations found in verb morphology (§15.1.1.4).

The egressive postpositions are mainly used with noun phrases of location expressing length or height (147) or a reference point marking a limit (148). However, *ɕaŋtaɤ* ‘up from’ and *ɕaŋpa* ‘down from’ can also follow noun phrases referring to time reference or durations, as in (149, 150) or more generally any quantity (151). No examples of these postpositions following finite subordinate clauses have been found.

The postposition *caṅlo* ‘upstream from’ is homophonous with, and historically related to, the noun *caṅlo* ‘seating place’ (for old people and ladies) (§15.1.4.4).

8.2.11 Other temporal postpositions

Apart from the locative, terminative and egressive postpositions, a certain number of specifically temporal postpositions are found in Japhug, including *ḅuṅgu* ‘before’, *ḅimuma* ‘immediately after’, *kóḅmuz* ‘only after’, *ḅḅintḅṛt* ‘since’, *jṛz* ‘when’ and *caṅḅci* ‘since’, ‘from ... on’. All can be used with noun phrases and subordinate clauses; the latter use is studied in the section on temporal clauses (§25.3).

The postposition *ɕuŋgu* ‘before’ is an ancient compound containing as first element the bound state of a root cognate to Tangut 𗵑²¹⁰⁴ *ʃi*^{1.10} ‘formerly, before’ and the relator noun *u-ŋgu* ‘inside’ (§8.3.4) as second element. It contrasts with *u-q^hu* ‘after, behind’ (§8.3.5), and can follow a noun phrase referring to a point in time, as in the common expression *saχsu ɕuŋgu* ‘before lunch’ (with the noun *saχsu* ‘lunch’), or a duration, as in (157) and (158). The latter example shows that *ɕuŋgu* ‘before’ can be used to refer to events occurring *after* the current temporal point of reference (in 158, before three days from the present in the story).

- (157) *txte sqamŋu-ŋi ɕuŋgu nwtcu tce, nɣki, nu-rlaβ tce*

 {0003852#S28}

The postposition *ɕuŋgu* ‘before’ however most commonly occurs with subordinate clauses, and requires a finite verb in the Imperfective (§21.2.3, §25.3.2.1). It is attested following personal pronouns, as in (159), *ɕuŋgu* ‘before’ refers to an action concerning the referent of the pronoun, whose nature can be determined from the context, as if the main verb of a subordinate clause had been elided.

 GEN 3PL.POSS-name IMP-CAUS-be.first[III] LNK
 ‘Before [you choose a name for] me, [choose] the names of my elder brothers up there first.’ (Gesar)

The common adverb *kuɕuŋgu* ‘in former times’ comes from the combination of the bound state of the proximal demonstrative *ki* ‘this’ (§6.9) with the postposition *ɕuŋgu* ‘before’. The phrases *ki ɕuŋgu* ‘before this’ *nu ɕuŋgu* ‘before that’ with the demonstratives *ki* ‘this’ and *nu* ‘that’ are also attested.

While the neutral antonym of *ɕuŋgu* ‘before’ is the relator noun *u-q^hu* ‘after, behind’ (§8.3.5), subsequent temporality can also be expressed by *ɕimuuma* ‘immediately after’ and *kóβmuuz* ‘only after’ (one of the rare uninflected words with a non-final stress, §3.7). These postpositions are mainly attested following the demonstrative pronoun *nu*, and often used adverbially as *nu ɕimuuma* ‘immediately’ and *nu kóβmuuz nɣ* ‘only then’, but are also attested with temporal and conditional clauses (§25.3.3.2, §25.2.2) and with temporal counted nouns or adverbs as in (160), which also illustrates the opposition between *kóβmuuz* ‘only after’ and the terminate postposition *mɣɕtɕa* ‘until’ (§8.2.9).

 ‘Usually, the walnut tree cannot have walnuts until fifteen years [have passed]. Just after one has planted it, after one plants its seeds, it is only fifteen years later that it bears nuts, they say.’ (12-ndZiNgri)
 {0003488#S151}

There is an adverb *nóβmuuz* ‘only then’ (found for instance in 60, §8.2.2.10) whose meaning is identical to *nu kóβmuuz nɣ* ‘only then’, and apparently results from the fusion of the demonstrative *nu* with the root *-oβmuuz*. The origin of the *k-* element in *kóβmuuz* ‘only after’ is unclear; it could be the fused form of the proximal demonstrative *ki* (§6.9.1).

The postposition *pɕintɕɣt* ‘since’ (from Tibetan ལྷོ་ཆད་ *p^hiɲ.tɕ^had* ‘thereafter’) can follow a date (161) or a subordinate clause, and is most often used with the relator noun *u-q^hu* ‘after, behind’ to mean ‘from that time on’ as in (162). Another postposition, *ɕaŋpɕi* ‘since’, ‘from ... on’ (combining the *ɕaŋ-* element found in egressive postpositions §8.2.10 with *-pɕi* from Tibetan ལྷོ་ *p^hi* ‘later’) can be used like *pɕintɕɣt* ‘since’ following *u-q^hu* ‘after, behind’ as in (163), or after temporal clauses (§25.3.3.3). The two postpositions *pɕintɕɣt* ‘since’ and *ɕaŋpɕi* ‘since’, ‘from

... on' have the same meaning, but the latter is considered by Tshendzin to be an influence from the Xtokavian dialects (§6.5.1, §15.1.1.3).

8.3 Relator nouns

Relator nouns are inalienably possessed nouns (§5.1.2) used to mark the grammatical relations of oblique arguments or adjuncts. They differ from postpositions by at least three properties.

First, they have an obligatory possessive prefix, which is coreferent with the preceding noun phrase or clause when one is present (generally the third person singular *w-* prefix).

Second, unlike postpositions, which require at the very least a demonstrative (§8.2), they can occur without a preceding noun phrase or clause if the referent indicated by the possessive prefix is definite (including first or second person, as in 166) or generic (see example 59 in §5.1.3).

- (166) *jufɕɯr <gongxun> a-cki jɣ-ye.*
 yesterday ANTHR 1SG.POSS-DAT AOR-come[II]
 ‘Yesterday Gong Xun came to [see] me.’ (160320, conversation)

Third, the genitive *ɣɯ* (§8.2.3) can optionally occur between the preceding noun phrase and the relator (as in 167 below and 65), since relator noun phrases are a subtype of the possessive construction (§8.2.3.1).

- (167) *tce smxt tumda rɣlpu ɣɯ w-cki nwtɕu, nɣkinɯ,*
 LNK TOPO TOPO king GEN 3SG.POSS-DAT DEM:LOC FILLER

 3SG.POSS-wife 3SG.POSS-SBJ:PCP-ask IFR:DOWNSTREAM-go LNK
 ‘He went to ask the king of the lower valley for [one his daughter to take as] a wife.’ (2014-kWLAG)

In addition, most relator nouns still preserve non-grammaticalized uses revealing their diachronic source, and some of them can be followed by the locative postpositions (§8.2.4.1) or by other relator nouns.

8.3.1 Dative

Two dative markers are attested in Japhug, *u-ɕki* and *u-p^he*; some speakers like Tshendzin prefer the former (as in 166, 168, 169), but most speakers I have recorded favor the latter (for instance, Kunbzang Mtsho who tells the story from which 170 is taken).

The dative can be followed by the locative postpositions *zuu* and *tɕu*, as in (168), (174) and (177).

- (168) *nuu mbro tu-skɣt kuu-tso nuunu u-ɕki*
 DEM horse INDEF.POSS-speech SBJ:PCP-understand DEM 3SG.POSS-DAT
zuu to-ti
 LOC IFR-say
 ‘She said ... to the horse who could understand speech’
 (2003kAndzWsqhaj)

The dative is used to mark the recipient or addressee. It occurs with indirective verbs of speech such as *ti* ‘say’ (168, 169 and 170), *fɕɣt* ‘tell’ and *t^hu* ‘ask’ (171), and also with some intransitive verbs of speech such as *ruɕmi* ‘speak’ (172).

 ‘[The snow leopard] borrowed a basket from the workers.’ (qala2002)

With the verb *k^ho* ‘give’, ‘pass over’ the recipient is more often encoded with the genitive or a possessive prefix on the theme (§8.2.3.2) or with the semi-grammaticalized noun *tu-jaw* ‘hand, arm’ (§8.3.6).

The semi-transitive verb *ru* ‘look at’ can mark its goal with the dative, as in (175); this is however optional, as this verbs also takes goals in the absolutive (§8.1.8) or locative (§8.2.4).

- (175) *tce tɣɲe nu nuɣ-me tce, tce tɣɲe u-cki*

sujno max.
 grass not.be:FACT
 ‘Buckwheat is a type of crops, it is not a [type of] grass.’
 (13-NanWkWmtsWG) {0003492#S64}

In addition, the unexpected focus marker *rcanu* (§26.1.1.4) and the epistemic sentence final particle *rca* (§10.4.4) are historically related to the secutive.

8.3.3 Deputative

The relator noun *u-ts^hyt* has two meanings. First, it can serve as a deputative relator noun ‘instead of, on behalf of’ as in (184) and (186). No verb selects this relator noun.

The deputative adjunct can correspond to the intransitive subject (as in 184, with the verb *tu* ‘exist’), the transitive subject (as in 185, with *yujtsi* ‘support’) or the object.

- (184) *nuʒora yuu nu-tʃ-sno* *ku-fse*

8 Postpositions and relator nouns

The examples (185) and (187) also show that the relator noun *u-tshyt* ‘instead of’ can occur with a first or second person possessive prefix.

Second, *u-tshyt* also means ‘with proper measure’, mainly occurring in adverbial function as in (188) or in collocation with the verb *βzu* ‘make’ in the sense ‘do with proper measure’ as in (189).

- (188) *rkaŋraŋ u-tshyt* *tsa ɲu-kw-nɣtʂabli-a-nw*

The inalienably possessed noun *u-tshyt* (at least in the meaning ‘proper measure’) is borrowed from *ཚད* *ts^had* ‘measure, limit’. It occurs as second element in

⁸This example is taken from a text describing goats and sheep; goats are called *ts^hyt* in Japhug, but it is clear from the context that *u-tshyt* cannot be the 3SG possessed form of this noun, though the two forms are indeed homophonous.

the compound *xɿɿts^hɿt* ‘restraint of one’s appetite’(with the bound state *xɿɿ-* of *tu-xtu* ‘belly’).

8.3.4 Locative relator nouns

The dearth of specific locative postpositions (§8.2.4) other than the egressive ones (§8.2.10) in Japhug is compensated by the existence of many relator nouns expressing various types of location, as shown in Table 8.2.

As other relator nouns, they can follow noun phrases (including headless relative clauses), with the possessive prefix agreeing in person and number with the preceding constituent, but can also occur on their own if the referent is definite, as *u-taɁ* ‘on, above’ in (191) and (222) below.

- (191) *u-taɁ* *zu kɿ-amdzu nɿ* *ɿ-lu* *pa-tɿɿt*

8.3.4.1 The tridimensional system

The first six nouns in Table 8.2 are derived from orientation adverbs (§22.2.6). The vertical dimension relator nouns *u-taɁ* ‘on, above’ and *u-pa* ‘below, under’ are simply built by adding a possessive prefix to the root of the adverb, while the other ones combine the bound state of the adverbial root (*lɿ-*, *t^hɿ-*, *kɿ-*, *ndɿ-* from *lo*, *t^hi*, *ku* and *ndi*, respectively) with a suffix *-cu*. This hexameric system comprising three pairs of elements along three dimensions (vertical, fluvial, solar) is the same as found in verbal morphological (§15.1.1.4) and also egressive postpositions (§8.2.10).

8.3.4.2 Other locative relator nouns

Outside of the tridimensional system, other locative relator nouns also occur in antithetic pairs, in particular *u-Ɂɿɿi* ‘before, in front of’ vs. *u-q^hu* ‘after, behind’ (the latter also occurs as a temporal relator noun, cf §8.3.5), *u-ŋgu* ‘inside’ vs. *u-pɿi* ‘outside’ and *u-mŋu* ‘opening, edge, border’ vs. *u-ndo* ‘edge, border’ or *u-qa* ‘bottom of’.

A few of these relator nouns are borrowed from Tibetan, as indicated in Table 8.2), but most of them are native Gyalrong words. In particular *u-Ɂɿɿi* ‘before, in front of’ is one of the very rare cases of a disyllabic word that has a cognate

Table 8.2: Locative relator nouns in Japhug

	Lexical origin
<i>u-taβ</i> ‘on, above’	<i>taβ</i> ‘up’
<i>u-pa</i> ‘below, under’	<i>pa</i> ‘down’
<i>u-lɣcu</i> ‘upstream of’	<i>lo</i> ‘upstream’
<i>u-t^hɣcu</i> ‘downstream of’	<i>thi</i> ‘downstream’
<i>u-kɣcu</i> ‘east of’	<i>ku</i> ‘east’
<i>u-ndɣcu</i> ‘west of’	<i>ndi</i> ‘west’
<i>u-ku</i> ‘top of’	<i>tu-ku</i> ‘head’
<i>u-qa</i> ‘bottom of’	<i>ɬɣ-qa</i> ‘paw, root’
<i>u-ɛɣri</i> ‘before, in front of’	
<i>u-q^hu</i> ‘after, behind’	
<i>u-ŋgu</i> ‘inside’	
<i>u-pɕi</i> ‘outside’	ཕྱི་ <i>p^{hi}</i> ‘outside’
<i>u-rku</i> ‘side’	
<i>u-χɕɣl</i> ‘center’	དཀྱིལ་ <i>dk’il</i> ‘middle’
<i>u-pɣrt^hɣβ</i> ‘between’	བར་ <i>bar</i> ‘middle, between’
<i>u-t^hɣβ</i> ‘between’	
<i>u-mju</i> ‘opening, edge, border’	
<i>u-ndo</i> ‘edge, border’	

in Tangut sharing both syllables (𐌗𐌘𐌙𐌚⁵⁴¹⁶⁻⁵⁶⁷ *ywə-rjir*^{2.25-2.74} ‘before’, Lai et al. 2020).⁹ The relator noun *u-ku* ‘top of’ (as in 192) is transparently grammaticalized from the body part *tu-ku* ‘head’.

- (192) *tɕetu si u-ku zu qaliab ɣɣzu tɕe*,

 ‘Up there on the top of the tree there is an eagle.’ (140427 laoying mao he
 yezhu-zh) {0003846#S29}

Some relator nouns other than *u-ku* ‘top of’ have non-grammaticalized uses; for instance *u-ŋgu* ‘inside’ still occurs as a noun meaning ‘internal part, inside’ in (193).

⁹The syllable *ɛɣ* = 𐌗𐌘⁵⁴¹⁶ *ywə*^{2.25} may be a fossilized allomorph of *tu-ku* ‘head’ with a uvular as in the Stau cognate *ɛə* ‘head’.

- (193) *tce nunuw kuu-spov ηu, u-ηgw nww*

 be.hollow:FACT LNK
 ‘Its [inside] has a hole, its inside is hollow.’ (12-Zmbroko) {0003490#S21}

Some of the relator nouns above can derive verbs of location such as *mɔku* ‘be first’ and *mɔpɛi* ‘be outside’ with the denominal prefix *mɔ-* (§20.6).

The meaning of the relator nouns *u-mɔju* and *u-ndo* requires a specific description. These nouns are not antithetic to another in all cases. The basic (non-grammaticalized) meaning of *u-mɔju* is the border of the opening or mouth of a container / bag (194), or the shoreline (of a lake), as in (195). In this use, it is opposed to *u-qa* ‘bottom of’, as in (196).

A contrast between *u-mju* and *u-ndo* occurs in their uses as relator nouns, indicating opposite extremities or sides. In the case of fields (as in 200), *u-mju* designates the higher side of the field (towards the mountain), while *u-ndo* refers to the side closer to the river (all arable lands in Gyalrong area lie in narrow valleys).

- (200) *qazmbri nu, tu-ji u-ndo, tu-ji*

8.3.4.3 The relator noun *u-taɕ* ‘on, above’

The relator noun *u-taɕ* ‘on, above’ is mainly used to build locative adjuncts or goals (see examples in §8.3.4.5), but it is also selected by a certain number of verbs to mark an oblique argument.¹⁰

The intransitive verb *atsa* ‘prick’ and its causative form *sɣtsa* ‘prick, pierce’ encode the piercing object as intransitive subject and object, respectively. The patient (the person or object being pricked) is encoded as an oblique argument in *u-taɕ*; example (204) illustrates the intransitive verb *atsa* with a generic human argument (§5.1.3).

¹⁰The relator noun *u-taɕ* is homophonous with the bare infinitive *u-taɕ* of the verb *taɕ* ‘weave’ (§16.2.2), as in example (198), §16.3.2, but the resemblance between the two forms is fortuitous.

8 *Postpositions and relator nouns*

 IPFV-prick LNK SENS-CAUS-hurt
 ‘[The fir needles] are pointy-headed, they prick people, it hurts.’
 (08-tWrgi) {0003464#S26}

The intransitive verb *nqov* ‘hang’ has an additional volitional meaning of ‘grab, lean on’, taking an object or person with both hands with body contact. It is attested for instance to describe a person who has fallen in the water, reaching for floating pieces of wood in order not to sink as in (205) or jumping on the back of someone and grabbing her to prevent her from leaving (206). The object or person being grabbed is marked with *u-taɕ*.

Some stative verb also optionally select an oblique argument in *u-taɕ*, in particular to express a beneficiary/maleficiary with the verbs *pe* ‘be good’ and *ɣɣn* ‘be evil’, in the meaning ‘be good to X, be nice with X, treat X well’ and ‘treat X badly’, as in (207). The genitive can alternatively be used to mark the beneficiary with these verbs (§8.2.3.2), but the meaning is rather ‘be advantageous’ or ‘be harmful’ depending on polarity.

- (207) *maka zo u-taɕ mu-pjɣ-pe-ndzi q^he,*

Other intransitive verbs selecting oblique arguments in *u-taβ* include *nurɕɣt* ‘slightly touch in passing’ (designating the object touched), *ndzov* ‘be attached’ (120, §18.5.5) and the labile verb *ɣpu* ‘bump into’ (§14.5.2).

The transitive verb *lyt* ‘release’, when used as a light verb (§22.4) in collocation with nouns expressing either objects, weapons or substances that are thrown or that the subject hits people with, selects a phrase in *u-taβ* to indicate the recipient, as in (210) and (211). This recipient, although syntactically quite different from an object or a semi-object, can however be relativized using the object participle (§16.1.2.5).

In addition, the relator noun *u-taβ* is required with some categories of nouns in specific contexts.

First, *u-taβ* in combination with a noun designating a type of transport (boat, car etc) can express the transportation used in a particular trip. With the verb *ce*

8 Postpositions and relator nouns

‘go’ taking the orientation UPWARDS, the meaning is ‘to take (a boat, a car etc)’ as in (212).

- (212) *zmbrui u-taʋ to-ɕe tɕe jo-nui-ɕe*
boat 3SG.POSS-ON IFR:UP-go LNK IFR-VERT-go
‘He took a boat and went back home.’ (150907 niexiaoqian-zh)
{0006262#S130}

The verb *toʋ* ‘come out’ with the orientation DOWNWARDS in combination with *u-taʋ* expresses the meaning ‘take off (a boat, a car etc)’ as in (213); the relator noun itself is neutral as to the type of location (static, motion from, motion towards)), a topic discussed in more detail in §8.3.4.5.

- (213) *zmbrui u-taʋ pjɣ-toʋ-nui*
boat 3SG.POSS-ON IFR:DOWN-come.out-PL
‘They took off the boats.’ (140508 shier ge tiaowu de gongzhu-zh)
{0003937#S144}

To designate the means of transportation used during the whole travel (as opposed to the begin and end points of the travel as in 212 and 213), the relator noun *u-ŋgu* ‘inside’ can also be used (§8.3.4.4).

The relator noun *u-taʋ* also occurs to refer to a written medium, as in (214).

- (214) *tɕe juɣi u-taʋ tu-fɛɣt tɕe,*

8.3.5 Temporal relator nouns

Many temporal postpositions are found in Japhug (§8.2.10, §8.2.9, §8.2.11), and temporal relator nouns are relatively fewer. The relator *u-raŋ* ‘during, the time when’ (from Tibetan མེར *riŋ* ‘long, during, when’) is very commonly used with subordinate clauses (§25.3.4.1), but can also follow temporal adverbs and nouns, as in (§225).

- (225) *χcitka u-raŋ tce, tceŋdɣre pya ra, nuw-kɣ-ndza maka*

8 Postpositions and relator nouns

There are two relator nouns that can be used as antonyms of the preposition *cuṅgu* ‘before’ (§8.2.11), *u-mp^hru* ‘after, following’ (from འཕྲོ་ *ṽp^hro* ‘remnant’, in particular in expressions such as དེ་འོ་འཕྲོ་ *defi.ṽp^hror* ‘next, after that’) and *u-q^hu* ‘after, behind’, which is also used for spatial relations (§8.3.4.2). These two nouns are not synonymous. The former must be used in the expression *ci u-mp^hru ci* ‘one after the other’ (228), and means ‘next’ as in (229), and can follow a subordinate clause, expressing temporal subsequence (§25.3.3.1), though most commonly a demonstrative pronoun such as *nu* or *numu* referring to the previous clause is used instead, as in (230).

- (228) *ci u-mp^hru ci zo ko-nuṽroṽ q^he lo-su-ye.*

The locative relator *u-q^hu* ‘after, behind’ also has temporal uses, in particular to build temporal subordinate clauses (§25.3.3.1), and it can also be used after noun phrases as in the expression *saṅsu u-q^hu* ‘after lunch, afternoon’, or simply following a demonstrative as in *nu u-q^hu* ‘after that’.

Another originally locative relator noun has temporal functions: *u-pṽrt^hṽṽ* ‘the middle of’, which is used after the demonstrative *nu* to mean ‘in the meantime’ (231) and also occurs with temporal clauses with the meaning ‘while’.

- (231) *azo ku-ce-a tce z-nu-savjar-a ηu tce nuu*

8.3.6 Semi-grammaticalized relator nouns

8.3.6.1 *tu-jav* ‘hand, arm’

The noun *tu-jav* ‘hand, arm’ occurs with several verbs in fixed collocation, the recipient of the action being indexed by the possessive prefix on this noun.

It is found with *k^ho* ‘give’ to express the meaning ‘hand over to’ as in (232) and (233).

- (232) *nxki txtsu nuu a-jav tx-k^hym!*
 DEM:MEDIAL lamp DEM, 1SG.POSS-hand IMP:UP-give[III]
 ‘Hand over to me (up here) that lamp.’ (140511 alading-zh) {0003953#S119}

 ‘(If you succeed), we will give you this horse.’ (2012-qachGa)
 {0004087#S60}

The collocation of *tu-jav* with the intransitive verb *zyut* ‘arrive’ means ‘receive’ or ‘obtain’, as in (234). With the causative form *szyut*, the collocation means ‘get’ (with volition and controlability) as in (235) – the recipient marked by the possessive prefix on *tu-jav* is the same referent as the transitive subject of the main verb.

- (234) *icq^ha txtsu nuu a-jav a-nuu-zyut*

 'Nowadays, nobody kills them, and one cannot get crossoptilon feathers (to use as ornaments).' (23-qapGAmtWmtW) {0003608#S152}

The noun *tu-jab* 'hand, arm' does not occur in metaphoric use outside of these collocations; it cannot be used in particular to mark any adjunct. Other noun-verb collocations where an experiencer or a recipient is marked as possessor of the noun are described in §22.4.

8.3.6.2 Cause and beneficiary

Two semi-grammaticalized inalienably possessed nouns can be used to express beneficiaries: *u-ndza* 'cause' as in (237), and *u-skɛt* 'speech, sound' as in (238), though the latter is very rare. These two nouns also take complement clauses (§24.6.3.5, §24.6.3.2) instead of noun phrases.

9 The noun phrase

9.1 Noun modifiers and determiners

This section discusses all noun modifiers and determiners except those involving subordinate clauses (relative and complement clauses, discussed in chapter 23 and §24.6, respectively).

9.1.1 Number

Japhug has two number markers, the dual *ni* and the plural *ra*. These clitics are not obligatory for non-singular arguments (even when these have human referents), and do not necessarily trigger plural or dual agreement on the verb (§14.6.1.1).¹

9.1.1.1 Dual

The dual *ni* is historically related to the numeral *ɸnuuz* (§7.1.1), but their relationship is synchronically opaque. It combines with the proximal and distal demonstratives *ki* and *nuu* to form the dual demonstratives *kuuni* and *nuni*, respectively (§6.9, §9.1.2).

There is no semantic restriction on the use of *ni*, it most often occurs with human referents (2, 5, 6, 7), but is also commonly attested with animals (3) inanimate objects (4), and placenames (1).

- (1) *prɤcta c^ho rguunba ni ndzi-pɤrt^hɤβ ri ŋu*
TOPO COMIT monastery DU 3DU.POSS-between LOC be:FACT
'It is between Prashta and the monastery.' (140522 Kamnyu zgo)
{0004059#S112}

The marker *ni* can appear with a noun phrase comprising two nouns (each with singular referents) linked by the comitative *c^ho* (§8.2.5) as in (1) and (2).

¹Cognates of these markers in Gyalrong languages and beyond are discussed in §14.8.1.

9 The noun phrase

- (2) *tce a-wuu c^ho a-bi ni pju-tu-sat*
 LNK 1SG.POSS-grandfather COMIT 1SG.POSS-younger.sibling DU IPFV-2-kill
mɣ-jɣ
 NEG-be.possible:FACT
 ‘You cannot kill my grandfather and my younger brother.’
 (2011-05-nyima)

The dual can follow the numeral *ɓnuuz* ‘two’, as in (3). This combination is however very rare (only 13 examples in the corpus out of hundreds of dual *ni*). The opposite order (dual followed by numeral) is not grammatical.

- (3) *mbɣɣru nuu jla ɓnuuz ni ndzi-t^hɣβ ri*
 plough.beam DEM hybrid.yak two DU 3DU.POSS-between LOC
juu-ɕe tce
 IPFV:WEST-go LNK
 ‘The beam of the plough goes between the two hybrid yaks.’ (24-mbGo)
 {0003621}

The adverb *ɓnaɓna* ‘both’ commonly co-occurs with dual, as in (4). It is exterior to the noun phrase, and must thus follow *ni* and all other postnominal determiners.

- (4) *zay c^ho raɓ ni ɓnaɓna zo ɓja ku-te juu-ŋu*
 copper COMIT brass DU both EMPH verdigris IPFV-put[III] SENS-be
 ‘Both copper and brass get verdigris.’ (30-Com) {0003736#S99}

The dual can also be used with noun dyads (§9.2.2.2), as in (5).

- (5) *uu-mu uu-wa ni ku juu-z-nɣja-ndzi q^he*
 3SG.POSS-mother 3SG.POSS-father DU ERG IPFV-CAUS-be.a.pity-DU LNK
 ‘Her parents could not stand to part with her.’ (14-siblings) {0003508#S275}

The third person dual pronoun *ɣni* is built by combining the pronominal root *-zo-* with the dual *ni* (§6.1), and is not attested in combination with the dual. The first and second dual pronouns *tcizo* and *ndzizo*, do occur with the dual marker as in (6), though examples are very rare.

- (6) *tcizo ni wuma zo pu-amuumi-tci tce*
 1DU DU really EMPH PST.IPFV-be.on.good.terms-1DU LNK
 ‘We were in harmony together.’ (140512 fushang he yaomo-zh)
 {0003967#S78}

Noun phrases with the dual *ni* are always correlated with a dual prefix on the following noun in possessive constructions or with relator nouns, as in (1), (3) and (7). Not a single example of a noun phrase in *ni* followed by a noun with a singular or plural possessive prefix is found in the corpus.

- (7) *u-pi ni ndzi-sroɕ ko-ri tce*
 3SG.POSS-elder.sibling DU 3DU.POSS-life IFR-save LNK
 ‘He saved the life of his two brothers.’ (2012-qachGa) {0004087#S136}

The marker *ni* is not obligatory with dual referents, in particular when the numeral *ɲnuuz* ‘two’ is present. There are in particular intrinsically collective nouns referring to a pair of individuals such as *ɲzɣmi* ‘husband and wife’, which can trigger dual indexation as in (8).

- (8) *kuɕuŋɣu tce tce atu <qinghai> zŋɣuloɕ nutɕu tce,*
 in.former.times LNK LNK up.there ANTHR ANTHR DEM:LOC LNK
ɲjumbrɣy ɲzɣmi ci pɣ-tu-ndzi tce,
 dragon husband.and.wife one IFR.IPFV-exist-DU LNK
 ‘In former times, in Qinghai, in the Mgolog area, there was a couple of dragons.’ (150820 qaprANar) {0006246#S40}

Such examples are however rare in the corpus; dual indexation is most often correlated with a dual marker on the corresponding noun phrase, if overt.

The numeral *ɲnuuz* ‘two’ without the dual also triggers dual indexation, as in (9).

- (9) *suŋɣu zu turme wuma zo ku-wxti ɲnuuz tu-ndzi tce*
 forest LOC person really EMPH SBJ:PCP-be.big two exist:FACT-DU LNK
 ‘In the forest, there are two giants.’ (140428 yonggan de xiaocaifeng-zh)
 {0003886#S160}

Dual marking on a noun phrase is not necessarily correlated with dual indexation on the verb, especially, but not exclusively, with inanimate referents, as in (10) (§14.6.1.1).

- (10) *u-mɲaɕ ɣc^hoɕe ni to-mto.*
 3SG.POSS-eye left.and.right DU AOR-have.sight
 ‘His left and right eyes recovered sight.’ (140517 mogui de jing-zh)
 {0004022#S100}

9 The noun phrase

However, a noun phrase with *ni* is never correlated with a plural indexation marker on the verb. Apparent exceptions are either speech errors, or cases of ambiguous indexation, as in (11).

- (11) *ny-pi* *ni kuu nyzo nuyi* *ky-suso kuu vmaɣ*
 2SG.POSS-elder.sibling DU ERG 2SG come.back:FACT INF-think ERG soldier
χsu-tɣxur kuu pa-z-nyk^har-nuu *ɕti* *tɕe*,
 three-round ERG AOR:3→3'-CAUS-surround-PL be.AFF:FACT LNK
 ‘Your two elder brothers, thinking that you are coming back, had [the
 palace] guarded on all sides by three rows of soldiers.’ (2012-qachGa)
 {0004087#S154}

Example (11) is not completely straightforward, and deserves a detailed comment. The form *paznyk^harnuu* can be parsed either as *pu-az-nyk^har-nuu* PST.IPFV-PROG-surround-PL ‘They were guarding it’ with vowel fusion (§12.3) or as *pa-z-nyk^har-nuu* AOR:3→3'-CAUS-surround-PL ‘(He/they) had them guard it’. Context makes it clear here that the second option is the correct one, in particular because in the same passage in another version of the same story, we find the verb *pa-suu-lɣt* (AOR:3→3'-CAUS-release) ‘he had (them) make’ with the perfective 3→3’ form of a causative verb (Jacques 2016a: 242, §17.2.1). Moreover, while the phrase *ny-pi ni kuu* ‘your two elder brothers’ could in principle belong to the infinitival clause in *ky-suso*², it is clear from the context and the explanations provided by native speakers that *ny-pi ni kuu* is the causer, and *vmaɣ χsu-tɣxur kuu* ‘three rows of soldiers’ is the causee (also marked by the ergative, see §8.2.2.6).

We thus observe plural indexation *-nuu* on the main verb *pa-z-nyk^har-nuu*, while the subject *ny-pi ni kuu* has a dual marker. However, this is neither a counterexample to the number indexation rule stated above, nor a speech error: rather, it is a consequence of the fact that causees rather than causers can trigger number indexation on the verb.

9.1.1.2 Plural

The plural marker *ra*, like the dual, follows the noun and most of its modifiers, and fuses with the demonstratives *ki* and *nuu* to build the plural demonstratives *kura* and *nura*, respectively (§6.9, §9.1.2). It should not be confused with the auxiliary verb *ra* ‘be needed’, ‘be necessary’ (§24.5.3.1), though there are cases where some ambiguity may occur.

²Incidentally, note that this infinitival clause contains another complement in Hybrid Reported Speech (§24.2.5.2).

Like the dual *ni*, the plural *ra* is compatible with both animate and inanimate referents, as in (12) and (13). It can be a plain marker of plurality as in (12).

- (12) *kuṃaβ si ra c^ho nu-mdoβ mɣ-naχtɕuɣ*
 other tree PL COMIT 3PL.POSS-colour NEG-be.the.same:FACT
 ‘Its colour is different from that of the other trees.’ (‘this tree and other trees, their colours are different’) 11-qrontshom) {0003482#S52}

The marker *ra* is also often a similitive plural (Mauri & Sansò 2018), understandable as ‘and other things’, ‘all kinds of’ as in (13).

- (13) *rdɣstax ra pjw-tɕaβ-nu q^he turme tu-xtsuɣ ju-w-ŋu*

c^hw-rɣpu,
 IPFV-bear.young
 ‘The mouse is fierce, it has pups everywhere in the house, and has pups in the fields.’ (27-spjaNkW) {0006330#S46}

³Note that in (14) *ci ci* is the expression for ‘sometimes’ (§22.2.1), not used as a numeral.

9 The noun phrase

This use of *ra* can convey a meaning of distributed location, and is often combined with the adverb *ax̣ndunḍxt* ‘everywhere’ (§6.7). It is reminiscent of plural markers in Kirghiz and Old Japanese, which combine collective, hypocoristic and approximate locative meanings (Antonov 2007: 195).

- (16) *nuu-βri ra nuu-tov, nuu-mke nuura nuu-tov*
 3PL.POSS-body PL IPFV-come.out 3PL.POSS-neck DEM:PL IPFV-come.out
nuu-r̄ŋa ra bryβbryβ zo nuu-tov

nuu-ŋu.
 SENS-be
 ‘[People who suffer from this disease have little blisters] appearing on their body, on their neck and all over their face.’ (27-kharwut)
 {0003698#S56}

The marker *ra* even occurs with referents which are clearly singular, not only in the approximative location function, but also in examples such as (17) where the reason for the presence of *ra* is less immediately obvious. In (17), a sentence taken from the translation of Rotkäppchen into Japhug (however, the presence of *ra* cannot be due to calque since there is no plural marker in the original), the function of the plural on the phrase *tx-wi ra* ‘the grandmother’ is more subtle: it conveys the idea that the impersonation takes on several aspects of the grandmother, not only her physical appearance, but also her voice, as implied by the second clause.

- (17) *qapar nuu ku li, [...] tx-wi ra to-nuɛpuz*
 dhole DEM ERG again INDEF.POSS-grandmother PL IFR-impersonate
tce, tce u-skxt ra c^hγ-suu-γmtcov zo tce nuura to-ti.

 ‘On the trees, [the bear] plucks acorn or fruits from other trees to eat.’
 (21-pri) {0003580#S43}

Apparent counterexamples such as (19), where *ra* is followed by a noun with the singular possessive prefix *u-*, occur when the preceding noun phrase is not the possessor of the following noun. For instance, in (19) *ra* in the locative phrase *tu-ŋga u-taβ ra* ‘on the clothes’ has a vague locative function. This is a locative adjunct.⁴

- (19) *tu-ŋga u-taβ ra u-mat bɣbɣβ*

'It is thorny and one does not dare to touch it with the hand.'
(11-qrontshom) {0003482#S85}

The marker *ra* following a locative noun or adverb can have the meaning 'the people/things from X', as in (23), without the need to add a demonstrative (cf 39 §9.1.2).

- (23) *alo ra nu-mbyom-nu q^he*
upstream PL SENS-be.in.a.hurry-PL LNK
'Those in the village, they [do things] in a hurry.' (conversation140510
tshering)

9.1.1.3 Honorific plural

The plural marker *ra* is also used as an honorific marker on terms of address as *a-zi ra* 'my young lady' in (24), correlating with the plural possessive prefix *nu-* and sometimes plural indexation (§14.6.1.2).

- (24) *a-zi ra nu-<bandeng> nu-car-a ci azo*
1SG.POSS-young.lady PL 3PL.POSS-seat IPFV-look.for-1SG QU 1SG
tu-ozgru-a ma
IPFV-bend-1SG LNK
'Young lady, should I look for a seat for you, or bend down [for you to sit on my back]?' (2003 Kunbzang)

The honorific function of plural number is also attested with the pronoun *nuzo* (§6.1.1).

9.1.2 Demonstratives

Japhug demonstrative determiners are formally identical to the demonstrative pronouns (§6.9). They distinguish between proximal and distal demonstratives with different roots, and fuse with the dual and plural markers studied in §9.1.1; the proximal *ki* undergoes change to *ku-* in those fused forms.

As with the demonstrative pronouns, there are three sets of demonstratives, the base form, the reduplicated one (obtained by reduplicating the first syllable), and the emphatic one, with added *u-* prefix. Note that the latter two sets are not attested in the dual for determiners in the corpus, but the forms exist and

are easily deducible from the corresponding plural ones. In addition, there is a medial demonstrative *nyki* which occurs in prenominal position.

Table 9.1: Demonstrative determiners

	Base form	Reduplicated	Emphatic
PROX.SG	<i>ki</i>	<i>kuki</i>	<i>ukuki</i>
DIST.SG	<i>nu</i>	<i>numu</i>	<i>unumu</i>
PROX.DU	<i>kuni</i>	<i>(kukuuni)</i>	<i>(ukukuuni)</i>
DIST.DU	<i>nuni</i>	<i>numuni</i>	<i>(unumuni)</i>
PROX.PL	<i>kura</i>	<i>kukuura</i>	<i>ukukuura</i>
DIST.PL	<i>nura</i>	<i>numura</i>	<i>unumura</i>
MEDIAL	<i>nyki</i>		

In Japhug, as in other Gyalrong languages, demonstrative determiners can be either/both pre- and postnominal as shown by an example such as (25), with the proximal *ki* both before and after the noun *srunloɣpu* ‘little ring’.

- (25) *azo yu-caβ-a* *ty-ŋu tce, ki* *srunloɣ-pu ki*
 1SG INV-catch.up:FACT-1SG AOR-be LNK DEM.PROX ring-DIM DEM.PROX
ɲu-ɕt^huz-a *tce,*
 IPFV:WEST-turn.toward-1SG LNK
 ‘When [the *rākshasas*] are about to catch up with me, I will turn this little ring towards west [in their direction].’ (28-smAnmi) {0004063#S209}

All possible combinations of base demonstratives (B) and reduplicated demonstratives (R) are attested as pre- or postnominal determiners:

- BNB: *ki* N *ki*, *nu* N *nu* (25)
- RNB: *kuki* N *ki*, *numu* N *nu* (26)
- BNR: *ki* N *kuki*, *nu* N *numu* (28)
- RNR: *kuki* N *kuki*, *numu* N *numu* (27)

The types BNB and RNB, with the postnominal determiner as a base demonstrative, are by far the most common ones in the corpus.

9 The noun phrase

- (26) *azo kuuki tɣpi ki lu-nɣk^huuk^hruut-a tce*
 1SG DEM.PROX staff DEM.PROX IPFV:UPSTREAM-drag-1SG LNK
 ‘I will drag along this staff [on the ground].’ (2003 Kunbzang)
- (27) *icq^ha kuuki <qingjiao> kuuki tce, w-qa*
 the.aforementioned DEM.PROX plant.name DEM.PROX LNK 3SG.POSS-root
ku-wyrum ɲu-ɲu.
 SBJ:PCP-be.white SENS-be
 ‘This [plant that is called] *qingjiao* (in Chinese), its root is white (unlike the other *qingjiao* whose root is red).’ (17-ndZWnW) {0003524#S75}
- (28) *ki rɣɣtpu kuuki ku, icq^ha, qazo nu*
 DEM.PROX old.man DEM.PROX ERG the.aforementioned sheep DEM
to-mts^{hi} q^he, li tɕu ku-wxti nuɽcu jo-ɕe tce,

 ‘The old man, leading the sheep, went to the big road.’ (150822 laoye zuoshi zongshi duide-zh) {0006298#S98}

The emphatic form is very rare prenominal. In (29), prenominal *wkuuki* occurs to put contrastive focus on the noun to avoid potential confusion with the subject of the sentence (‘this wife of mine, not his wife’).

- (29) *nu w-rzaβ nu ku, wkuuki a-rzaβ kuiki,*
 DEM 3SG.POSS-wife DEM ERG DEM.PROX.EMPH 1SG.POSS-wide DEM.PROX
kuiki ckom ki na-sw-ɣβzu tce,
 DEM.PROX muntjac DEM.PROX AOR:3→3’-CAUS-become LNK
 ‘[My son’s] wife turned this wife of mine into this muntjac.’ (140512 fushang he yaomo-zh) {0003967#S173}

When the postnominal demonstrative is in plural or dual form, the prenominal one is generally unmarked for number, as in (30).

- (30) *kuuki t^heme kuura nu-rca azo tu-ɕe-a*
 DEM girl DEM:PL 3PL.POSS-following 1SG IPFV:UP-go-1SG
ɲu-nts^{hi} ma múj-pe
 SENS-have.better apart.from NEG:SENS-be.good
 ‘I have no other choice but to go [to heaven] with these girls.’ (31-deluge) {0004077#S61}

However, there are also a few examples with plural marking on both pre- and postnominal demonstratives, as in (31), a remarkable phenomenon given the fact that the number markers are strictly postnominal.⁵ Plural marking on the prenominal demonstrative with a singular postnominal demonstrative is not attested.

- (31) *numura pya nura lonba zo ꞑꞑ-me-nu tce, vꞑꞑꞑꞑ sqꞑꞑꞑꞑ*
 DEM.PL bird DEM.PL all EMPH IFR-not.exist LNK young.man eleven
ꞑꞑ-k-ꞑꞑꞑ-nu-ci.
 IFR-PEG-become-PL-PEG
 ‘All those birds disappeared, and became eleven young men.’ (140520 ye
 tiane-zh) {0004044#S113}

Proximal prenominal demonstratives can be combined with the postnominal *nu*, as in (32), where the latter one is used as a topic marker. The opposite combination, a distal prenominal demonstrative with proximal postnominal one, is not attested in the corpus and presumably agrammatical.

- (32) *kuꞑi ꞑꞑi nu ꞑꞑꞑꞑꞑ nu,*
 DEM.PROX story DEM TOP LNK
 ‘As far as this story goes,’ (11 examples in the corpus)

The medial demonstrative *nyki*, used to designate referents closer to the addressee than to the speaker, is found as a pronoun (§6.9.2.1), but also occurs as a prenominal determiner, with or without postnominal demonstrative (either proximal or distal), as in (33) and (34). It is frequently used with a noun taking a second person possessive prefix – note that the first syllable *ny-* of the demonstrative *nyki* itself probably originates from the second singular possessive, as proposed in §6.9.2.1.

- (33) *nyki nu-tyꞑi u-taꞑ ky-ryt nu*
 DEM:MEDIAL 2PL.POSS-staff 3SG.POSS-on OBJ:PCP-write DEM
uꞑꞑꞑ-ku-z-nyꞑꞑꞑ-a-nu
 RH.Q-2→1-CAUS-watch-1SG-PL
 ‘You wouldn’t show me what is written on that staff of yours, would you?’ (2003 sras)

⁵This raises the question whether *numura* should be analyzed as a prenominal demonstrative, forming a constituent with *pya nura*. There is no pause between *numura* and *pya* in the sound file, but I cannot exclude the possibility that *numura* here as a left-dislocated demonstrative (and should be followed by a comma).

9 The noun phrase

- (34) *nɣki* *nɣ-tɣ-ri* *nu* *ɲotcu* *pɯ-tu*
 DEM:MEDIAL 2SG.POSS-INDEF.POSS-thread DEM where PST.IPFV-exist
 ‘That thread of yours, where is it from?’ (2005 Norbzang)

The relative position of pronominal demonstratives and other pronominal elements is not free. The aforementioned topic marker *iq^ha* (§9.1.5.2) strictly occurs before pronominal demonstratives (as in 27), while nominal modifiers such as *ɣsɣr* ‘gold’ in (35) appear closer to the noun.

- (35) *kuuki* *ɣsɣr* *pɣtɕu* *ki* *nɣ-jaɣ* *pɯ-k^ham-a*
 DEM.PROX gold bird DEM.PROX 1SG.POSS-hand IPFV-give[III]-1SG

ra
 be.needed:FACT
 ‘Please behead me!’ (140507 jinniao-zh) {0003931#S297}

The principles governing the presence and absence of the demonstrative determiners, and the choice of the various patterns described above, is particularly complex to describe and will be a topic for future research, when a larger corpus of texts will become available. While the proximal demonstratives always have some deictic function (although it may not always be appropriate to translate them with a demonstrative in other languages such as English), the distal demonstratives clearly contribute to marking topic (§9.1.5) and definiteness (§9.1.4.3), and disentangling these various functions is a complex matter.

The distal demonstratives *nu* and *numu* are particularly common after relative clauses (either participial §23.2.1 or finite ones §23.2.2) and complement clauses, where arguments against analysing these forms as complementizers are provided (§24.3.3).

Following locative adverbs or locative postpositional phrases, the distal and proximal demonstratives can be used to express the meaning ‘the one/those (at) X’ as in (38) and (39). Note that the number determiner *ra* can also be used in the same way (example 23 in §9.1.1.2) even without being combined with a demonstrative.

- (38) *amaŋ* *amaŋ*, *at^{hi}* *ki* *kuw*

 ‘Father, the one down there, I don’t know if he is a [boy] born in the year
 of the Tiger, to be thrown [into the lake], but...’ (2011-05-nyima)

Note however that demonstratives or number markers are not absolutely necessary in such a context. A few (rare) examples of locative postpositional phrases meaning ‘the one at/in/from’ without any modifier can be found, as in (40), where the postpositional phrase is directly followed by the dative, here used in its locative meaning ‘by (the side of), near, at’ (§8.3.1). In this example, the phrase *sukɣku nutcu* does not mean ‘on the treetop’, but ‘the man who is on the treetop’.⁶

- (40) [*sukɣku nutcu*] *w-p^{he}* *nutcu lo-zyut-ndzi* *tce*
 treetop DEM:LOC 3SG.POSS-DAT DEM:LOC IFR:UPSTREAM-reach-DU LNK
 ‘[The tiger and the fox] arrived at [the place where the one who was] on
 the treetop [was].’ (2012-x1-khu) {0004085#S45}

⁶The story from which this example is taken is about three thieves who mistakenly steal a tiger during the night, believing it was an ox; one of the three thieves flees on the top of a tree – his manner of fleeing being here the characteristic distinguishing him from the other two thieves.

9.1.3 Quantifiers

This section only discusses universal, mid-scalar and specifically distributive quantifiers; numerals and counted nouns, which also serve as quantifiers (in particular distributive ones), are described in chapter 7.

9.1.3.1 Universal quantifiers

The determiner *t^hamtɕɣt* ‘all’, from Tibetan འཇམས་ཅད་ *t^hams.cad* ‘all’, is strictly post-nominal, as in (41). It cannot be used as a pronoun, and there are no examples in the corpus of *t^hamtɕɣt* ‘all’ following a personal pronoun.

- (41) *suŋgɯ ky-ku-nuɣtɕɣn tce tce si t^hamtɕɣt ku nuɯ*
 forest AOR-SBJ:PCP-be.dangerous LNK LNK tree all ERG DEM
pju-ku-sat ku-ŋgrɣl ju-ŋu.
 IPFV-GENR:S/O-kill SBJ:PCP-be.usually.the.case SENS-be
 ‘The fierce/dangerous forest, it was (a place where) all the trees would kill [people thrown into it].’ (28-smAnmi) {0004063#S176}

The combination of a demonstrative such as *nu* ‘that’ with *t^hamtɕɣt* ‘all’ does not mean ‘all of this’, but ‘so much, so many’, as in (42). In this function, the prefixed form *st^hamtɕɣt* ‘so much’ (§5.8.4) is generally used, resulting in the form *must^hamtɕɣt* ‘that much’ (§26.1.1.3).

- (42) *izora t^hu-dɣn-i q^he, k^ha nu t^hamtɕɣt*
 1PL AOR-be.many-1PL LNK house DEM all
mu-ju-ɣmu-xtɕ^hut-i q^he
 NEG-SENS-RECIP-have.enough.place-1PL LNK
 ‘There was more of us [than before], and so many of us could not fit in the house.’ (14-siblings) {0003508#S94}

Another universal quantifier, *kɣsufse* ‘all’, is common as a pronoun (§6.7). It is analyzable as a determiner in examples like (43) where it follows the plural marker *ra*, and takes the ergative *ku*. It is restricted to human human referents.

- (43) *kytsa ra kɣsufse ku wuma zo pɣs-nu-rga-nu*
 parents.and.children PL all ERG really EMPH IFR.IPFV-APPL-like-PL
 ‘Everybody in the family liked her very much.’ (140429 qingwa wangzi)
 {0003890#S5}

The universal quantifier *lonba* ‘all’ (from Tibetan ལོན་པ། *lon.pa* ‘reached, enough, completed’), like *kʸsufse* ‘all’, also occurs after (never before) demonstratives and number markers as in (44).

- (44) *azo a-bi* *nura lonba azo ku*

tx-nʸpuʸpa-t-a
 AOR-take.care-PST:TR-1SG
 ‘It was I who took care of all my younger brothers and sisters.’ (140426
 tApAtso kAnWBdaR4)

In (45), *lonba* follows and has scope over the complement clause of the noun of speech *kʰʸcʸl* ‘discussion’ (§24.6.3.2).

- (45) [*a-wa* *nu tcʰi ku-fse* *ci pu-ŋu ku*] *lonba*

a-kʰʸcʸl *pu-fcʸt ra*
 1SG.POSS-discussion IMP-tell be.needed:FACT
 ‘Tell me all about what happened to my father.’ (2005 Norbzang)

In (46), it has scope over the possessor of the head noun *nu-rmi* ‘their names’ redundantly with *tʰamtʸt*. Here *nu-rmi lonba* could be glossed as *nu-rmi nu-tʸngut* ‘their name as a whole’, ‘their collective name’ (example 163, §9.1.8.1).

- (46) *nu-zda* *ruɖaʸ u-ku-ndza* *tʰamtʸt nuɖura*

 3PL.POSS-name all beast IPFV-GENR-say be:FACT
 ‘All those that eat the other animals, their generic name is ‘beast.’ (150822
 kWɪNi) {0006260#S7}

An alternative construction with a meaning similar to a universal quantifier is totalitative reduplication (§12.4.1.5). In particular, the totalitative participle *ku~ku-tu* ‘all who exist’ (§23.7) of the existential verb *tu* ‘exist’ commonly occurs with a preceding noun phrase (in a head-internal relative, as in 47) or on its own (as a headless relative) as a semi-lexicalized quantifier ‘all’.

9 The noun phrase

- (47) *tee [u-zda ra ku~ku-tu] ku nu-rzab*
 LNK 3SG.POSS-companion PL TOTAL~SBJ:PCP-exist ERG 3PL.POSS-wife
na-nu-car-nu ju~ju
 AOR:3→3'-AUTO-look.for-PL SENS-be
 'All of his companions took [other women] as their wives.' (2005 Norbzang)

The semantic proximity between totalitative reduplication and universal quantifiers such as *t^hamtɕɪt* 'all' is shown by examples such as (48), where both are used redundantly.

- (48) <wangbapi> *nu ku, turju ku~ku-pe, ku-mpɕɪr*
 ANTHR DEM ERG word TOTAL~SBJ:PCP-be.good SBJ:PCP-be.beautiful
t^hamtɕɪt spu~spe zo to-ti ri
 all TOTAL~be.able:FACT EMPH IFR-say LNK
 'Wang Bapi had said all the nice and pleasant words that he could [to convince the old man].' (150831 jubaopen-zh) {0006294#S82}

The marker *p^ha* 'whole' is exceptional in terms of word order, as it is the only strictly prenominal quantifier, occurring directly before the noun on which it has scope, as the following examples illustrate. It partially overlaps in meaning with the previous markers, as it can express the totality of individuals in a group as in (49) (see also for instance 85, §18.4.1.2), and also occurs with names of localities to refer to all the persons living in the place (73, §5.2.1).

- (49) *zara ku icq^ha sytc^ha yu u-rɣlpu*
 3PL ERG the.mentioned place GEN 3SG.POSS-king

ta-sɣpe-nu ju~ju
 AOR:3→3'-do.good-PL SENS-be
 'They became kings of this place, and treated well the whole population.'
 (2005 Norbzang)

Its core meaning however is to express the entirety of an object/entity, as in the noun phrase *p^ha u-p^hoŋbu* 'its whole body' in (50). If an overt possessor (for instance, the 3SG pronoun *uzo*) is present, it occurs stranded before *p^ha* 'whole', as in (51).

 about IPFV-GENR:S/A-exist IFR.IPFV-exist
 ‘[In] some [cases], a single [woman] had thirteen or fifteen children.’
 (140426 tApAtso kAnWBdaR)

9.1.3.3 Distributive quantifier

Although distributive meaning is generally expressed in Japhug with a counted noun (§7.3.2.2), the postnominal determiner *raṅri* ‘each’ and its variant *ruuri* ‘each’ (from Tibetan རྩེ་རེ *raṅ.re* ‘each’ and རེ་རེ *re.re* ‘each’) can also express distributive meaning, as in (56).

- (56) *paḅ rcanu, tu-tuṅu raṅri ku zo pju-ḅsu-nu*
 pig UNEXP:DEG one-household each ERG EMPH IPFV-raise-PL
ra.
 be.needed:FACT
 ‘Each single household has to raise pigs.’ (05-paR) {0003400#S4}

It can also be used with numerals, as in (57), where it refers specifically to days.

- (57) *sqamṅu raṅri zo zgo tu-ce pu-ṅu ju-ṅu,*
 fifteen EACH EMPH mountain IPFV:UP-go PST.IPFV-be SENS-be
 ‘Every fifteen days, she would go up the mountain.’ (2005 Norbzang)

When the quantifier *raṅri* ‘each’ occurs in the same sentence with a counted noun, the scope of the two quantifiers is ambiguous, as in (58).

- (58) *riryḅ raṅri ḅsu-tyxur a-ty-tu-su-lyt tce,*
 mountain each three-lap IRR-PFV-2-CAUS-throw LNK
 ‘Drag her three times around each mountain.’ (2005 Kunbzang)

In the predicative possessive construction (§22.5.2.1), when the possessor takes the determiner *raṅri*, its possessum is often followed by the distributive determiner *tuka* ‘each’ (and its reduplicated variant *tukaka*) as in (59).

- (59) *ieq^ha* *u-mat* *raŋri zo* *nu u-ru* *tuka*
 the.aforementioned 3SG.POSS-fruit each EMPH DEM 3SG.POSS-stalk own
ntsu tu.
 always exist:FACT
 ‘Each of its fruits has its own stalk.’ (17-thowum) {0003526#S34}

The determiner *tuka* ‘each’ can also be used without a possessor in *raŋri*, for example with the distributive pronouns *zaka* ‘each his own’ and *zakastaka* ‘each his own’ (§6.7.3) as in (60).

- (60) *zakastaka* *nu-k^ho* *tuka piŋ-tu* *tce*
 each.his.own 3PL.POSS-room each IFR.IPFV-exist LNK
 ‘Each of them had her own room.’ (140508 shie ge tiaowu de gongzhu)
 {0003937#S81}

In addition to the possessive construction, *tuka* ‘each’ also occurs in transitive constructions, following objects, with broad scope over the whole action (61).

- (61) *paɓ* *tuka to-βzu-nu* *tce jo-nu-ɕe-nu.*
 reverence each IFR-make-PL LNK IFR-VERT-go-PL
 ‘Each of them made a reverence and went back.’ (28-smAnmi)
 {0004063#S162}

The aspectual adverb *ntsu* ‘always’, which generally has scope over the whole sentence (§22.2.1, §22.2.7), can also be used as a distributive quantifier as in (62), where its scope is restricted to the temporal phrase *βnu-pɣrme nɣ βnu-pɣrme* ‘by two years’ (with the additive *nɣ*, §8.2.6).⁷

- (62) *tce izo kɣndzivi* *ra βnu-pɣrme nɣ βnu-pɣrme ntsu ma*

⁷On the morphosyntax of the verb *ac^hɣt* ‘be X years apart’, see §19.7.7.

9 The noun phrase

9.1.3.4 Intensifiers

The intensifier *k^hro* ‘much’ and *zimk^hym* ‘much’ can have both scope over the predicate (§26.1.1.2) or serve as postnominal modifiers meaning ‘many, a lot of’. They can undergo emphatic reduplication to *k^hu~k^hro* and *zu~zimk^hym*, respectively.

When following a noun in absolutive form as in (63), these intensifiers are syntactically ambiguous, as they can be analyzed as having scope over the preceding noun phrase, or on the whole predicate.

- (63) <baisuzhen> *nw ku, nɣki, sɲav pjɣ-spa tce (...)*
 ANTHR DEM ERG FILLER magic IFR.IPFV-be.able LNK

 INDEF.POSS-disease PL many EMPH IFR-CAUS-be.better
 ‘Bai Suzhen knew magic, and healed many diseases.’ (150825 *baishe zhuan-zh*) {0006342#S64}

In (64) however, *k^hu~k^hro* unambiguously occurs inside of the ergative postpositional phrase, showing that it cannot be analyzed here as a clausal intensifier.

- (64) [*turme k^hu~k^hro*] *ku zo yu-to-rɣts^hyt-nw*
 person EMPH~much ERG EMPH CISL-IFR-try-PL
 ‘Many people came and tried it.’ (140505 *xiaohaitu-zh*) {0003921#S16}

9.1.3.5 Other

In addition to the quantifiers discussed above, there are several markers which combine quantificational function with additional specific meanings.

The marker *cinarura* ‘each better than the other’ is used as postnominal attribute (§9.1.8.1). In transitive constructions, it occurs between the noun and the ergative *ku* as in (65). It is probably built by combining the pronoun *cu* ‘who’ (§6.5.2), the bound form of the copula *ɲu* ‘be’ (§22.5.1.1, **ɲɣ-* → *ɲa-* due to assimilation with the following *-ra*) and the plural *ra* (§9.1.1.2) in reduplicated form.

- (65) *rɣlpu cinarura ku ta-t^hu-nw cti ri,*

 NEG-AOR-agree-1SG
 ‘[Many] kings, all better than the other, asked for [my daughters in marriage], but we did not agree.’ (2003 *qachGa*) {0003372#S74}

The adverbs *mutç^himuruz* ‘all kinds’ and *mundzamuχtçuγ* ‘all kinds’ (from Tibetan མི་འདྲ་མི་གཞིག་ *mi.ⁿdra.mi.gtçig* ‘diverse, different’) are also used as postnominal attributes, located closer to the noun than numerals and demonstratives (66). These forms are only found in traditional narratives.

- (66) *coŋp^hu mundzamuχtçuγ χsu-ri* *kutçysqi a-pu-tu,*

 (140512 alibaba-zh) {0003965#S102}

9.1.4 Indefinite and definite markers

9.1.4.1 Indefinite determiner

The form *ci* ‘one’ has among its many functions (in addition to pronoun, numeral and adverb, see §6.6.1, §6.8, §6.7.2, §9.1.7, §7.1.1, §22.2.1, §21.7.5) that of singular indefinite determiner, as in (68) and (69). It is typically used to introduce a new referent in a story.

- (68) *te^heme kuw-mpeu~mpeγr* *ci* *γx-nu-łoB*
 girl SBJ:PCP-EMPH~beautiful INDEF IFR-AUTO-come.out
 ‘A very beautiful girl came [out of the skin].’ (31-deluge) {0004077#S50}
- (69) *tcelo* *tçe tx-tçu* *ci* *c^hγ-γi* *q^he,*
 upstream LNK INDEF.POSS-son INDEF IFR:DOWNSTREAM-come LNK
 ‘A boy came from upstream.’ (2003-kWBRa)

9 The noun phrase

Although *ci* can be used as a partitive pronoun ‘one of them’ (§6.7.2), as a post-nominal determiner it does not have partitive meaning. To express a meaning such as ‘one of the boys’, a counted noun such as *tu-rdox* ‘one piece’ is used instead (§7.3.2.1).

Note that when used as a prenominal modifier, *ci* has a completely different (definite) meaning ‘the other *X*’ (§9.1.7). However, the indefinite *ci* is attested in prenominal position if preceded by the prenominal identity modifier *kumax* ‘other’, as in (70), though the exact syntactic analysis of such sentences may require more research (it is possible that *nx-rzaβ* here is an essive adjunct §8.1.7, and does not belong to the same constituent as *kumax ci*).

- (70) *nxzo kumax ci nx-rzaβ nuu-nuu-car kuu mna*
 2SG other INDEF 2SG.POSS-wife IMP-AUTO-search ERG be.better:FACT
 ‘It would be better if you looked for another wife.’ (150909 xiaocui-zh)
 {0006386#S150}

There are no dual or plural indefinite determiners in Japhug. The plural marker *ra* can occur after the indefinite *ci*, but with a vague similative meaning ‘and other things’ as in (71).

- (71) *ndzi-tcuw ci, ndzi-me ci ra to-tu.*
 3DU.POSS-SON INDEF 3DU.POSS-girl INDEF PL IFR-exist
 ‘They_{du} had a boy and a girl (etc).’ (150827 tianluo-zh) {0006250#S153}

The indefinite *ci* is not obligatory for indefinite referents (whether specific or non-specific), and bare NPs can be used as *fsapax* ‘animal’ and *qapar* ‘dhole’ in example (72).

- (72) *fsapax nuu-me, a-puu-si q^he, ‘nuu qapar kuu ta-ndza*

 be:FACT SFP IPFV-say-PL be.AFF:FACT LNK
 ‘When an animal disappears, dies, people say ‘A dhole ate it.’ (28-qapar)
 {0003720#S25}

9.1.4.2 Indefinite pronoun as modifier

The indefinite pronoun *t^huci* ‘something’ (§6.6.2) has marginal uses as a prenominal indefinite modifier, as in (73), (75) and (80) below.

- (73) *t^huci laχci ci c-pu-nu-βzjoz-nu tce, jv-ce-nu*
 something trade INDEF TRAL-IMP-AUTO-learn-PL LNK IMP-go-PL
ra
 be.needed:FACT
 ‘Go and learn some trade!’ (140508 benling gaoqiang de si xiongdi-zh)
 {0003935#S29}

This construction arose perhaps from the use of the pronoun *t^huci* as head of a postnominal relative clause with the verb *fse* ‘be like’, as illustrated by examples like (74) or (85) in §6.6.2. Turning the verb *fse* ‘be like’ to a finite form as in (75) could cause the indefinite *t^huci*, head of the relative in (74), to be reanalyzed as the prenominal modifier of the immediately adjacent noun in (75).

- (74) *nuura [t^huci [kx-nusaχcωβ ku-fse]] pu-ŋu wo.*
 DEM:PL something INF-have.a.contest SBJ:PCP-be.like PST.IPFV-be SFP

 something 3SG.POSS-dream one EMPH PST.IPFV-be.like LNK
 ‘It looked like [he had had] some dream.’ (Lobzang2005) {0003370#S74}

9.1.4.3 The marking of definiteness

Japhug has no dedicated definite determiner, but *nu* and *numu* as demonstrative determiners (§9.1.2) and as topic markers (§9.1.5) and the prenominal aforementioned topic marker *iεq^ha* (§9.1.5.2) are generally used with definite referents.

Example (76) illustrates a typical example with the determiner *nu*; the indefinite determiner *ci* (§9.1.4.1) occurs in the first introduction of a new referent in the story as in the first clause of example (76), but on the following occurrence of the same noun *nu* is found.

- (76) *tce qajdo ci jo-yi tce, tce qajdo nu ku ‘mo laz tu,*
 LNK crow INDEF IFR-come LNK LNK crow DEM ERG girl karma exist:FACT
p^ho laz me’ to-ti.
 boy karma not.exist:FACT IFR-say
 ‘A crow came. The crow said: ‘The girl will have chance, the boy won’t.’
 (28-qajdoskAt) {0003718#S10}

However, although noun phrases followed by *nu* and *numu* more often than not denote definite referents, these determiners cannot be analyzed as definite

determiners, as noun phrases with *nuu* or *numu* can in certain cases have indefinite referents.

A very clear case of use of *nuu* with an indefinite referent occurs on nouns serving as heads of head-internal relative clauses. A well-attested typological generalization is that in this type of relative clauses, definiteness marking is agrammatical (see Basilico 1996). In Khroskyabs, Lai (2017: 636) reports that the definiteness marker =*tə* is indeed not accepted on the head noun of head-internal relatives. In Japhug however, *nuu* does occur in such a syntactic context. For instance, in (77), the head *tx-nmaʁ nuu kuu* is subject of the participle *ɲuu-kuu-nuu-ɕar* ‘looking for’, and is embedded in the participial relative clause indicated in brackets – the presence of the ergative *kuu* precludes to analyze it as a post-nominal relative (§23.4.3.1). From the meaning of the sentence the head *tx-nmaʁ* ‘husband’ is clearly indefinite non-specific non-generic (see Lehmann 1984: 286–291). The fact that it takes the marker *nuu* shows that this marker, unlike Khroskyabs =*tə*, is not primarily marking definiteness.

- (77) *tɕeri [tx-nmaʁ nuu kuu u-rzaʁ kuu-yntɕ^hu*
 but INDEF.POSS-husband DEM ERG 3SG.POSS-wife SBJ:PCP-be.many

 IPFV-SBJ:PCP-make IFR.IPFV-exist

‘However there were husbands who were looking for several women and had illegitimate children.’ (140427 tAndAGri) {0003858#S4}

Other cases of indefinite noun phrase with *nuu* are observed with left-dislocated topics. In example (78), we find a type of tail-head linkage (§25.1.7) where both the noun phrase *spjaŋkuu ʁnuuz* ‘two wolves’ and the verb *ɲy-k-ɣtuɣ-ci* ‘he met’ are repeated; in the second occurrence, the noun phrase is topicalized and is followed by the topic marker *numu*, with a slight pause of hesitation. The determiner *numu* in this clause, unlike *nuu* in (76), does not mark definiteness: that clause cannot be understood as ‘He met the two wolves’.

‘He_i (i.e. the butcher) met two wolves. He_i met two wolves, and the butcher_i was very much afraid.’ (150902 liaozhai lang-zh) {0006340#S7}

The determiners *nu* or *nunu* are rarely adjacent to the indefinite singular determiner *ci* in the corpus. In all cases with *ci* followed by *nu* (other than the identity pronoun in §6.8), or with *nu* followed by *ci* in the corpus, they belong to different constituents. For instance, in (79), *ci* is in adverbial use (§22.2.1) and does not belong to the preceding noun phrase.

The aforementioned topic marker *iɕq^ha* (§9.1.5.2) is almost always used with definite referents when prenominal, as in (78) above, and is the closest candidate to be analyzed as a definiteness marker in Japhug. However, it does occur with non-specific generic referents as in (82), including some that are very clearly indefinite as in (83); note the absence of postnominal determiner *nu* (83).

the.aforementioned radish 3SG.POSS-seed EMPH be.like:FACT
'It looks like a radish seed.' (hist-26-qro-fourmi) {0003682#S60}

In (80), *iɕq^ha* also precedes two phrases involving indefinite referents, but there is a marked pause, and this is a case of *iɕq^ha* in its function as speech filler (§10.3).

9.1.4.4 Absence of definiteness marking

Like many languages (Creissels 2006b: 130), Japhug uses bare nouns without any definiteness marking. Bare nouns are most often non-referential, as *tɕ^heme* 'girl' in (84).

- (84) *ɸnaɸna tɕ^heme tu~tɕ-tu* *ny, kyndzisiq^haj tu-kɕ-su-βzu*
both girl COND~AOR-exist LNK COLL:sister IPFV-INF-CAUS-make
'If both of them have girls, let them be sisters.' (2003 zrAntCW)

Bare nouns are less common with referential nouns (except in answers to questions), but examples can be found, as *qac^hya* 'fox' in (85).

- (85) *qac^hya kw maxtɕu* *tɕ-tut-a* *nuu mɕ-tu-ste*

ti juu-ŋu
say:FACT SENS-be
'The fox says: "You do not do as I told you to."' (2003 qachGa)
{0003372#S42}

Personal names generally occur as bare nouns, without any definiteness marker as in (86), but there are no constraints against co-occurrence of personal names with the determiner *nuu* either (see §5.3.4).

- (86) *wɕɕɸnɸanma* *kw ɸlaŋsaŋtɕ^hin w-cki*
Padmasambhava ERG Gesar 3SG-DAT
'Padmasambhava [told] Gesar.' (Gesar)

9.1.5 Topic markers

9.1.5.1 Delimitative topic

The delimitative topic marker *pu~pu-ŋu ny* 'as for..., concerning...' is transparently derived from the past imperfective of the verb 'be' in conditional form 'if it

was...’ (with verb-initial reduplication, §12.4.1), as other copulas such as affirmative *ɕti* ‘be’ and *maʂ* ‘not be’ in (87).

- (87) *nunuw koŋla zo tɣime pu~pu-maʂ nɣ*
 DEM really EMPH princess COND~PST.IPFV-not.be LNK
 ‘If she was not really a princess, ...’ (140519 wandou gongzhu-zh)
 {0004038#S68}

The delimitative construction generally has scope over a noun phrase, which can have an additional demonstrative *nu* as topicalizer as in (88) (see §9.1.5.4).

- (88) *a-mu nu pu~pu-ŋu nɣ, q^hlu ɛdɯxpaɣɣpu ɣu*
 1SG.POSS-mother DEM COND~PST.IPFV-be LNK nâga p.n GEN
u-me stu ku~xtci nu a-mu
 3SG.POSS-daughter most SBJ:PCP-be.small DEM 1SG.POSS-mother
ɣu-pe,
 SENS-be.good
 ‘As for my mother, the youngest daughter of the Nâga Gdugpa dkarpo is good to be my mother.’ (Gesar)

In this construction, the verb is in the process of becoming grammaticalized as a topic particle. It is possible to find examples where the verb still takes person indexation in the delimitative construction when the topicalized element is a first or second person pronoun, as in (89).

- (89) *azo pu~pu-ŋu-a nɣ, kɣndzivi kumŋu tu-j,*
 1SG COND~PST.IPFV-be-1SG LNK siblings five exist:FACT-1SG
 ‘Concerning me, we are five brothers and sisters.’ (hist140501 tshering skyid) {0003902#S1}

However, there are also examples with first or second person pronoun without indexation on the delimitative marker, as in (90), (91) and (92), where a first person singular form *pu~pu-ŋu-a nɣ* or second person *pu~pu-tu-ŋu nɣ* would have been expected. Such examples show that *pu~pu-ŋu nɣ* has ceased to be analyzed as a verb form at least in these cases. Moreover, third person plural and dual indexation is hardly ever found in the delimitative construction.

9 The noun phrase

 {0003975#S89}

A short form *ŋunɣ* instead of *pɔpɔŋu nɣ* is also attested, as in (93).

- (93) *ma u-ŋga ra ŋunɣ, maka wuma zo ko-Nq^hi ma.*
 LNK 3SG.POSS-clothes PL as.for at.all really EMPH IFR-be.dirty LNK
 ‘As for his clothes, they had become very dirty.’ (conversation 140510)

The delimitative topic construction can be used to introduce the main topic of a following discourse (as in 89 and 91), but can be used for contrastive topics, as in example (92) where the speaker expresses a contrast between his and the addressee’s action (‘you, you were fighting for the sake of other people’).

9.1.5.2 Aforementioned topic

The marker *ɪq^ha* ‘the aforementioned’ is used on referents that have been previously mentioned in the same story, usually only a few sentences back. It is strictly prenominal.

Example (94) illustrates the most typical use of this marker. Sentence (94a) introduces a new referent, *kɣtum* ‘ball of thread’ marked with the indefinite determiner *ci* (§9.1.4.1). Three clauses later in (94d), the same referent occurs again

as an overt noun with two topic markers, the postnominal *nuu* and the prenominal *iɕq^ha*.

- (94) a. ‘razri **kɾtʉm ci** ɲu-ra, taqɑβ ci ɲu-ra’ to-ti q^he

 the.aforementioned ball DEM 3SG ERG IFR-take
 ‘he took the ball of thread, and...’ (Gesar 270-272)

A systematic study of the use of the topic marker *iɕq^ha* in Japhug must overcome two inherent difficulties. First, this topic marker is homophonous with (and historically related to) the speech filler *iɕq^ha* (§10.3) and with the adverb *iɕq^ha* ‘just now’, which can also precede noun phrases. Listening to the sound files can help distinguishing between the three, as the speech filler is always followed by a pause (and optionally by the demonstrative *nuu*), but there are still ambiguous sentences (see below). Second, *iɕq^ha* occurs on nouns designating entities that the speaker considers to have been previously referred to in the conversation, even if they are not present in the same recording.

For instance in (95) the noun *ɲɿɿnoβ* ‘a species of fungus’ is used with *iɕq^ha*, although this name does not occur before in the same text; it was however mentioned the day before in another recording.

- (95) *nuu zdumqe c^ho iɕq^ha, ɲɿɿnoβ nuɿni ndzi-ts^huɿya*

 really EMPH be:identical:FACT
 ‘The *zdumqe* and the *ɲɿɿnoβ* are very similar.’ (23-mbrAZim)
 {0003604#S75}

The topic marker *iɕq^ha* transparently comes from the adverb *iɕq^ha* ‘just now’ (§22.2.1). The pivot constructions that allowed reanalysis from adverb to prenominal topic marker are very probably headless relatives (§23.4.1) as in (96), or complement clauses as in (97).

9 The noun phrase

- (96) [*icq^ha* *ty-tut-a*] *nuw* *tú-wy-stu* *q^he*,
 just.now IFR-say[II]-1SG DEM IPFV-INV-do.like LNK
 ‘One does as I just said, and...’ (2002 tWsqr)
- (97) *icq^ha* [*z-nuw-z-munmu-t-a*] *nuw*

muw-pjv-pe *rcama*.
 NEG-IFR.IPFV-be.good FSP
 ‘It was probably not a good thing that I had [gone and] moved them (as I
 said above).’ (150819 kumpGa) {0006388#S41}

These sentences are still synchronically ambiguous in Japhug; in (97) the context makes it clear that *icq^ha* is the topic marker (since the fact of having moved (the eggs) had been told a few sentences back) and not an adverb ‘just now’ with a temporal reference in the past, as the meaning would be ‘it was probably not a good thing that I had just moved them’ (an impossible interpretation in this context, since this sentence is an explanation why several eggs had not given chicks, several days after they had been brought to another place). However, extracted from the context, both interpretation would be equally possible for (97), and correspond to two different syntactic structures.

With postnominal relative clauses (§23.4.4) or head-internal relative clauses (§23.4.3) whose head noun happens to be located on the left edge of the clause as in (98), *icq^ha* can also be ambiguous. Since the adverb *icq^ha* ‘just now’ can occur both before the object (99a) or before the verb (99b) in an independent clause, a relative such as (98) can be either interpreted ‘the axe (mentioned above) that he had whetted’ (with the topic marker *icq^ha* outside of the relative clause, having scope over its head) and ‘the axe that he had just whetted’ with the adverb *icq^ha* ‘just now’ inside the relative clause.

- (98) *tcendv^re* <*luban*> *kuw* *icq^ha* [*turpa t^ha-fse*] *nuw*
 LNK ANTHR ERG the.aforementioned axe AOR:3→3’-whet DEM
to-ndo tce,
 IFR-take LNK
 ‘Luban took the axe that he had whetted.’ (150902 luban-zh)
 {0006268#S89}
- (99) a. *icq^ha* *turpa t^hw-fse-t-a*
 just.now axe AOR-whet-PST:TR-1SG

- b. *turpa iɕq^ha t^hu-fse-t-a*
 axe just.now AOR-whet-PST:TR-1SG
 ‘I just whetted a/the axe.’ (elicited)

The use of *iɕq^ha* as a topic marker with nouns (as in 94d above) probably took place by reanalysis of the adverb in headless or postnominal relatives, or in complement clauses as above, then generalized to all noun phrases even those without a subordinate clause.

9.1.5.3 Adversative topic

There are two adversative topic markers in Japhug, *ɓo* and *ndɤre*. The former is similar in meaning to Mandarin 倒 <dào> ‘instead, on the other hand’, and occurs in contexts with a strong adversative meaning ‘however, but, on the other hand’ as in (100).

- (100) *jinde ku-nu-tu ci kuuma mɤ-xsi ma*

The phrase *nu sɣnɣ* ‘even, rather than that etc’ (§8.2.7) is also used as an adversative topic marker similar to *ko* (see in particular example 139).

9.1.5.4 The demonstrative *nu* as a topic marker

The postnominal determiner *nu* and its reduplicated form *numu* is one of the most common words in Japhug, and has a considerable number of functions. It is used as a demonstrative (§9.1.2), contributes to expressing definiteness (§9.1.4.3) and could be argued to be a subordinator (an analysis not adopted in the present work, see §24.3.3).

In addition, it is commonly used to mark topic: left-dislocated noun phrases generally (though not compulsorily) take this determiner. For instance, in texts presenting animals or plants, their name on first occurrence is left dislocated and followed by the determiner *nu*, as in (106).

- (106) *qawuɣ nu, (qawuɣ nu pu-tu-mto-t, ɣe?) qawuɣ numu,*

 FILLER before LNK
 ‘The edelweiss, (you saw Edelweiss before, right?)... The edelweiss, in
 former times,’ (15-babW) {0003512#S164}

It also occurs with personal pronouns, as in (107), a sentence where the narrator talks about his personal situation, as opposed to that of his parents who were mentioned in the previous lines.

9 The noun phrase

- (107) *azo nuu, muŋi zuu ku-ry-βzjoz nu-ee-a*
 1SG DEM TOPO LOC SBJ:PCP-ANTIPASS-learn IPFV:WEST-go-1SG
pu-ŋu.
 PST.IPFV-be
 ‘As for me, I was going to school in Mungi.’ (2010-09)

In its function as a topicalizer, the determiner *nu* can follow a noun with post-nominal demonstratives, as in (108). However, due to the difficulty of systematically sorting out the topicalization and demonstrative functions of this marker, I do not attempt to reflect this distinction in the glosses, and use DEM everywhere.

9.1.5.5 The linker *tɕe* as a topic marker

The word *tɕe*, which originates from a locative postposition (§8.2.4.4), is mainly used in Japhug as a linker (§25.1.6) and as a postposition (§8.2.4.3). It is one of the most common words in the corpus.

In addition, it can serve as a topic marker, following left-dislocated noun or postpositional phrases (109).

 (05-paR) {0003400#S74}

9.1.6 Focus markers

There are several focalization strategies in Japhug, including pseudo-cleft sentences (§23.6.1) and sentence-final copulas (§22.5.3.2), but focalized constituents are sometimes also unmarked, though they have to be overt (§22.1.2.3).

This section presents the markers used to express different types of focus on noun phrase constituents.

9.1.6.1 Additive and scalar focus marker *kunɣ*

The additive and scalar focus marker *kunɣ* ‘also, even’ follows the constituent over which it has scope, which can be noun phrases, postpositional phrases but also subordinate clauses (§25.2.3.1). As with other function words with the syllable *nɣ* as last element (§3.7), the stress is on the first syllable (*kúɳɣ*) and the vowel on the second syllable is often elided (a pronunciation *kun* is often heard).

The marker *kunɣ* expresses both additive focus, as in (110), and scalar focus, as in (111) in affirmative sentences. It is also compatible with negative verb forms, as in (112), expressing the meaning ‘not even’ (see also *cinɣ* ‘(not) even one’ in §9.1.6.4).

- (110) *azo kunɣ stavlupa ɲu-a tce*

 one-day flower one-piece also one one LNK NEG:SENS-finish
 ‘Sometimes one cannot finish even one pattern (on the belt) in one day.’
 (2011-06-thaXtsa)

The scope of *kunɣ* is generally exclusively on the constituent that it immediately follows, but there are cases where the scope is more extensive. In (113), *kunɣ* occurs between the pronoun *azo* and the following participial verb form, which bears a 1SG possessive prefix *a-* coreferent with that pronoun (see also 118 below). The semantic scope of *kunɣ* here is on the whole relative *azo a-kɣ-suso* ‘(the things) that I want’ rather than exclusively on the pronoun *azo*.

- (113) *azo kunɣ a-kɣ-suso nu ty-stu-nu ra*

‘Even like that [despite the pain in her legs], she supports herself with a staff in one hand, (and does all kinds of things with her other hand)’

(14-siblings) {0003508#S49}

Although *kunɣ* ‘also, even’ can be combined with most postpositions and relator nouns as shown by the examples above, it is however incompatible with the ergative *ku*. For instance, in (124), although the demonstrative pronoun *nura* ‘they, those’ in the second clause is the subject of the transitive verb *ndza* ‘eat’, it does not take the ergative *ku* as would be expected (§8.2.2.1). The same applies to *w-zda ra* ‘his companions’, subject of the transitive verb *na-nu-ɕar-nu* ‘they looked for themselves’ in (125).

- (124) *w-puu nura li ju-ɣi-nu q^he, nura kunɣ*

na-nu-ɕar-nu ɲu-ɲu
 AOR:3→3’-AUTO-search SENS-be

‘His companions also took each a wife for himself (among the women of the island).’ (2005 Norbzang)

The combinations †*ku kunɣ* or †*kunɣ ku* are unattested, and not accepted by native speakers. The contrast between absolutive and ergative noun phrases is therefore neutralized in additive or scalar focus with *kunɣ*. Note that other focus markers, such as *ri* and *tɕi* (see 127 in §9.1.6.2) differ from *kunɣ* in this regard.

Four pieces of evidence converge to suggest that the first syllable of *kunɣ* is historically related to the ergative postposition *ku*: (i) the incompatibility of co-occurrence of *kunɣ* and *ku*; (ii) the stress on the first syllable in *kúɲɣ*; (iii) the similar *-nɣ* element in the other scalar focus marker *cinɣ* ‘(not) even one’ (§9.1.6.4)

9 The noun phrase

- (128) *svte^ha u-ŋguw tci ɣɣzu, svte^ha u-taβ tci*
 ground 3SG.POSS-inside also exist:SENS ground 3SG.POSS-inside also
zo ɣɣzu
 EMPH exist:SENS
 ‘It is found both inside the ground, and on the ground.’ (25-GdAso)
 {0003638#S17}

Alternatively, it is possible to enumerate several properties of the same referent using *ri* (this usage is not found with *tci*), but that marker still follows the noun phrase. In this case the referent cannot be elided, and must be repeated in both clauses, at least as a third person pronoun *uzo* as in (130).

- (129) *p^habrgot nunuw uzo ri pjɣ-rzi, uzo ri pjɣ-ts^hu tce*
 boar DEM 3SG also IFR.IPFV-be.heavy 3SG also IFR.IPFV-be.fat LNK
 ‘The boar, it was heavy and fat.’ (140428 yonggan de xiaocaifeng-zh)
 {0003886#S228}

This construction can be relativized with internally-headed relative clauses in apposition, keeping the third person *uzo* as a resumptive pronoun (§23.3.1).

The correlative construction can involve the possessor of an inalienably possessed noun, as in (130), where in the first clause the referent ‘the girl’ is possessor of the intransitive subject (literally ‘her age was small’) and in second it corresponds to the intransitive subject, realized as a third person pronoun *uzo* ‘she’.

- (130) *te^heme nuw u-luz ri pjɣ-xtci, uzo ri*

pjɣ-mpeɣɣ,
 IFR.IPFV-be.beautiful
 ‘The girl was young and beautiful.’ (150909 hua pi-zh) {0006278#S10}

More complex correlations, involving different subjects and predicates related to another referent, are also possible as shown by example (131), where *ri* occurs after the intransitive subject *tu-ci* ‘water’, after the transitive subject *lulu* ‘cat’ with the ergative and after the finite verb *tu-ɕe* ‘it goes up’.

- (131) *<yancong> ku-kuw-ɣɣloβ tce u-taβ*
 chimney IPFV-GENR:S/O-make.a.nest LNK 3SG.POSS-on
tu-ci ri múj-yi lulu kuw ri

 ‘[The sparrows] make their nest in the chimney, [because] water cannot come up there, the cats cannot catch them, and the snakes cannot go up there.’ (22-kumpGatCW) {0003590#S59}

The marker *ri* is homophonous with the locative *ri* (§8.2.4), and in cases with an enumeration of locative adjuncts, there can be ambiguity between the two. In (132), *ri* is analyzed as a locative because of the position of the determiner *ci*, and also because it can be replaced with other locative postpositions.

(132) *χc^ha ri ci, w-be ri ci w-jme*
 right LOC one 3SG.POSS-left LOC one 3SG.POSS-tail
c^hw-łoβ ɲw-ɲu.
 IPFV:DOWNSTREAM-come.out SENS-be
 ‘It has one tail on the right, and one on the left.’ (26-qro) {0003682#S109}

9.1.6.3 Incremental additive

Three markers are used to express the meaning ‘not only *X*, but also *Y*’, where *X* and *Y* stand for noun phrases: *bo alala ri/ma* (133), *mɣra ma* (134) and *w-tɣju tce*.⁹

(133) *tce nunwura bo alala ri wzo sɣz ku-xtci pya*

 ‘Apart from those, [the eagle] also catches birds that are smaller than itself and eats them.’ (19-qandZGi) {0003548#S55}

The combination of these markers with the scalar focus marker *cinɣ* ‘(not) even one’ (§9.1.6.4) on the second noun phrase means ‘not even *X*, let alone *Y*’, as shown by (134).

(134) *w-kɣ-p^hab mɣra ma, w-kɣ-skraβ cinɣ*
 3SG.POSS-head-half not.only LNK 3SG.POSS-head-fine.hair not.even.one

 EMPH NEG-AOR:3SG→3-CAUS-arrive SENS-be
 ‘[This time, the horse] did not even bring back one fine hair from the [evil woman’s] head, let alone half her head.’ (Kunbzang)

These three markers also occur as clausal subordinators (§25.6.2.3).

⁹The etymology of these markers is discussed in §25.6.2.3.

9.1.6.4 Scalar focus marker *cinɣ*

The focus marker *cinɣ* ‘(not) even one’ exclusively occurs with a negative verb. Like *kunɣ* ‘also, even’, this marker has stress on the first syllable *ciɣ* (§3.7), which is obviously related to the numeral *ci* ‘one’ (§7.1.1, §9.1.4.1).

The marker *cinɣ* has scope over the constituent that immediately precedes it, generally a noun phrase including or consisting of a counted noun, as in (135), but also headless participial relative clauses as in (136), and (137).

- (135) *tsuku kuu q^he tuu-rdoɔ cinɣ mɣ-kuu-mto tu.*

 ‘A lot of people diminish their fields, and not a single of them opens new fields.’ (150903 friche) {0006400#S6}

In the case of relative clauses before *cinɣ*, there is some ambiguity as to whether the scope of the focus marker is on the head of the relative or on the main verb of the relative clause. Hence the two proposed translations above for (136) and (137).

It is not possible to use *cinɣ* with scope over transitive subjects, followed by the ergative.

The form *cinɣ* also occurs in the expression *cinɣ maɔ kuu* ‘in any case it is not’ (§21.7.5).

9.1.6.5 Restrictive focus

The most common way to express restrictive focus in Japhug is to combine the exceptive *ma* ‘apart from’ (and its reduplicated variant *muma* §8.2.8) with a negative predicate. This can be a verb with a negative prefix as in (139), or a negative existential verb as in (140).

- (139) *χsy-rzab ma mu-pu-tsu-a ny-suso ri χsu-xpa*

ma me k^{hi}.
 apart.from not.exist:FACT HEARSAY
 ‘It is said that one-legged demons only had one leg.’ (140510 rkoNJA)
 {0003943#S5}

In the case of restrictive focalization on locative or temporal phrases, the terminative *mɣctsa* ‘until’ (§8.2.9) occurs instead of the exceptive.

- (141) *nunuwteu mɣctsa mts^halu pjy-me q^{he}*
 DEM:LOC until nettle IFR.IPFV-not.exist LNK
 ‘It was only there that there was nettle.’ = ‘There was no nettle until there.’ (140520 ye tian’e-zh) {0004044#S301}

The restrictive focus construction implies the presence of a noun phrase with a numeral or a counted noun when the restriction bears on the quantity as in (139) and (140) above, but restriction can also be qualitative, without quantifier, as in (142).

- (142) *u-mat nunu na-lyt cimuma ny*
 3SG.POSS-fruit DEM AOR:3→3’-throw just LNK
ku-ndu~nduɣ zo ma me, karyi zo
 SBJ:PCP-EMPH~small EMPH apart.from not.exist:FACT turnip.seed EMPH

 ‘When the fruit of [xanthoxylum] has just come out, there is only something very small, only like a turnip seed.’ (07-tCGom) {0003434#S6}

9 The noun phrase

The restrictive focus construction can be combined with a scalar focus in *kunɣ* (see §9.1.6.1), as in (143). In this example, *kunɣ* has scope over the subordinate clause *stusti ma ku-me*, which is ambiguous between a participial headless relative (§23.4.1) ‘consisting of only a female all alone’ and a manner infinitival clause (§25.4.2; in this case the gloss of *ku-me* would be INF:STAT-not.exist) ‘even (when) there is only a female all alone’.

- (143) *mu ma, stusti ma ku-me kunɣ*

 IPFV-lay.eggs SENS-be.AFF
 ‘Even only a female [hen] alone does lay eggs.’ (150819 kumpGa)
 {0006388#S10}

A second possibility to express restrictive focus is the use of the adverb *ɣja* ‘completely’, ‘all’ (§22.2.2.3) with scope over a noun phrase rather than the whole clause as in (145).¹⁰

- (144) *alo mbroɣpa ra tce tce nyki gra c^ho qambruɹ ra*
 upstream nomad PL LNK LNK FILLER female.yak COMMIT male.yak PL
ɣu nu-yli nuɹu tce nu tu-wum-nu, tu-suy-rom-nu

 not.exist:SENS LNK LNK
 ‘Upstream, in the nomad areas, they gather and dry yak dung, as in nomad places there is only grassland, there are no trees.’ (05-tamar)
 {0003406#S7}

The adverb *ɣja* (here used rather as a noun modifier) is related to the denominal verb *aɣja* ‘be bald, be bare’ (see §20.2.1 on the *a-* derivation), which can be applied to nouns such as *stɣmku* ‘grassland’ and *zgo* ‘mountain’.

- (145) *qajw ɣja tu-nu-ndze, ma nu ma*
 bug completely IPFV-AUTO-eat[III] LNK DEM apart.from
tɣ-rɣku ku-fse ra ndze
 INDEF.POSS-harvest SBJ:PCP-be.like PL eat[III]:FACT

¹⁰The form *ɣja* possibly originates from the first syllable of Tibetan གཤམ་མ་ *gia.ma* ‘stone slab’, through a meaning ‘bare rock’.

SENS-be

‘It was all wild beasts waiting for him [there].’ (2005 Norbzang)

A third option to express restrictive focus is the inalienable noun *u-jlu*, which is used in the meaning ‘uncooked’ as a property noun (§5.1.2.7), but has become

grammaticalized as a restrictive marker ‘exclusively, without anything else’ (presumably from an intermediate meaning ‘plain, simple’), as in (149).

- (149) *srɣz nuu kuɪ tɕ^hoz u-jlu zo pju-nuɪjntɪn*
 prince DEM ERG religion 3SG.POSS-exclusively EMPH IPFV-be.assiduous.in

 ‘The prince was focused exclusively in the study of religion, and was not looking for a wife.’ (2003 sras)

For the expression of restrictive focus with temporal noun phrases or clauses, the postposition *kósmuuz* ‘only after’ can also be used, especially with the demonstrative in the expression *nuu kósmuuz nɣ* ‘only then’ (§8.2.11, §25.3.3.2).

9.1.7 Identity modifiers

There is no specific identity modifier ‘the same’ in Japhug. The only way to express this meaning is to use the subject participle of the verb *naɣtɕuɪ* ‘be the same’ (a denumeral verb of Tibetan origin, §7.1.6.1, see also §8.2.5 and §26.3.1.1 on the syntax of this stative verb) in a relative clause, as in (150) (a possessor relative, §23.5.10). This participle competes with the borrowed identity adverb *anamana* ‘identical’ (§22.2.3).

- (150) *tɣ-rmi ku-naxtɕuɪ pjɣ-dɣn wo kɣmju,*
 INDEF.POSS-name SBJ:PCP-be.the.same IFR.IPFV-be.many SFP TOPO
nɣki kurru ra tɕe.
 FILLER Tibetan PL LNK
 ‘There were many people who had identical names, in Kamnyu, among the Tibetans.’ (140522 tshupa) {0004053#S155}

There are two pronominal modifiers expressing non-identity in Japhug: *kumax* ‘other’ and the numeral *ci* ‘one’, which in pronominal position means ‘the other one’ (in postnominal position, it is used as an indefinite determiner, see §9.1.4.1). Both of these words can also be used as pronouns, though *ci* requires to be combined with the demonstrative *nuu* in this usage (see §6.8).

The modifier *kumax* is pronominal in its meaning ‘other’, as in (151).

- (151) *tur-zda nu ma kumax turme a-pu-me*
 GENR.POSS-companion DEM apart.from other person IRR-IPFV-not.exist
tce, k^ha ra axynduundyt juu-s<nu>yro juu-ŋu juu-ti.

 ‘[Our neighbour] says that if there are no other persons apart from
 family members, [the monkey] would play everywhere in the house.’
 (19-GzW2) {0003538#S10}

There are apparent examples of *kumax* ‘other’ in postnominal position, as in (152) and (153), but in such sentences *kumax* is a preverbal adverb, not a noun modifier, with a slightly different meaning ‘anew’. In (152), the usage of *kumax* is very similar to its Chinese equivalent 另外 <lingwài> ‘other’ in the corresponding Chinese sentence 阿兰另外给我买了一部手机, where the preverbal position of 另外 <lingwài> ‘other’ clearly shows that it is not a noun modifier.

- (152) <alan> *ku a-<dianhua> kumax ta-χtu*

9 The noun phrase

The modifier *ci* differs from *kumaɕ* in that it is necessarily definite, meaning ‘the other one’, as in (156), where it refers to an animal that is chased by lions, which was previously mentioned in the text.

- (156) *zuruwɔyri q^he ci rudaɕ nuu duɣpa ma*

 ‘The other animal, poor him, it is their prey, progressively it falls down
 and cannot stand it anymore.’ (20-sWNgi) {0003562#S41}

Interestingly, the determiner *ci* does not have scope over other noun modifiers. For instance, in (157), the noun *tɕ^heme* ‘girl’ occurs with an attributive adjective in participial form *ku-ɣɣn* ‘who is evil’ (a relative clause, see §9.1.8), but the meaning is not ‘the other evil woman’ as could have been expected (this interpretation is excluded since the woman who is the subject of the sentence is, by contrast, a kind person), and rather must be ‘the other woman, the evil one’. There is no pause in the recording that could lead us to suppose that *ku-ɣɣn* here is an apposition – it is rather a postnominal relative.

9.1.8 Attributes

Japhug has several sub-parts of speech which could be described as “adjectives”: stative verbs, adverbs and nouns which express properties (rather than actions or entities). Property words used as noun modifiers are collectively designated by the term *attributes*. This heterogenous class excludes the property nouns described in §5.1.2.7, which are the syntactic heads of the noun phrase.

Three types of attributes are distinguished: attributive postnominal (noun or adverb) modifiers, prenominal modifiers and participial *ku-* relatives (mainly postnominal or head-internal). The constructions mentioned in this section are

all described in more detail elsewhere in the grammar, and for this reason the discussion is kept brief.

9.1.8.1 Attributive postnominal modifiers

In addition to the postnominal markers studied above (numeral and number §9.1.1, demonstratives §9.1.2, quantifiers §9.1.3, definiteness markers §9.1.4.1, topic and focus markers), there are a certain number of nouns that can serve as postnominal modifiers.

The terms *tɕ^heme* ‘girl’ and *tx-tɕu* ‘son’, ‘boy’ can be used as modifiers to specify the gender of a person, in particular in combination with gender-neutral kinship terms such as *tx-ftsa* ‘sister’s child’ or relative age sibling terms (§27.2.2.2).

Some compound nouns occur as postnominal modifiers, specific to a particular head-noun, for instance *t^hrlwɔtɕat* ‘sparing earth’ or *rnɔftɕuɣa* ‘whose ear has ten holes’, used as attributes of *qandze* ‘earthworm’ (example 107, §5.5.5.2) and *qala* ‘rabbit’ (§5.5.5.1), respectively. Some compounds from Tibetan such as the nouns of the twelve year cycle (such as *stablu* ‘year of the tiger’ from མཐོག་ལོག་ *stag.lo* ‘year of the tiger’ in 158) also occur postnominally.

- (158) *tcelo prɔmzi rɣtɕpu ɣu u-ye stab-lu ci*

 exist:SENS LNK
 ‘Up there, the old Bramze has a grandchild who is born in the year of the tiger.’ (2003nyima2)

Privative nouns in *-lu* ‘...less’ (§5.7.1) and nouns of relative location in *maŋ-* (§5.7.2) are mainly used as postnominal modifiers.

The nouns *ɣc^ha* ‘right’ and *ɬe* ‘left’ are mainly used with the noun *tu-jab* ‘hand, arm’ (or with other paired body parts), and can either be used as pre- (159) or postnominal modifiers (§160).

The word *wuma* ‘real, really’ from Tibetan རྩམ་ *ɲo.ma* ‘real, true’ (§3.3.1.4) is generally used as an intensifier, in particular with stative verbs (§26.1.1.1), but also occurs as a postnominal modifier meaning ‘real’, its original meaning, as in (161) and (162).

(161) *ɬyndzi wuma nu nɣzo ɲu-tu-ɲu ma azo ɬyndzi ɲu-maB-a*

 ‘Up from that path until the pasture, all the fields in there put together, their collective name is *tumɲu*.’ (150903 tWmNu) {0006280#S7}

In addition, some adverbs, which are more often used with scope over the whole clause, can occur as postnominal modifiers, in particular the comitative adverbs (§5.8.1) and adverbs of quantification (§9.1.3).

9.1.8.2 Attributive prenominal modifiers

Noun phrases serving as prenominal modifiers are not easily distinguishable from possessors, the only difference being the absence of a coreferent possessive prefix on the following noun (§5.1.1.2).

The most common type of prenominal modifiers are place-names and other unpossessible nouns (§5.2.1) and nouns expressing the material from which an object is made, as *χsvr* ‘gold’, *rɣul* ‘silver’ and *si* ‘wood’ in (164).

- (164) *a-tycime, nɣzo rɣul rɣyskɣt u-taβ tu-çe ci, χsvr rɣyskɣt*
 1SG.POSS-lady 2SG silver stair 3SG.POSS-on 2-go:FACT QU gold stair

 ‘My lady, will you go on the silver stairs, the golden stairs or the
 wooden stairs?’ (2014-kWLAG)

Prenominal modifiers can be more complex phrases. In (165), the prenominal modifier *çkrɣz* ‘oak’ takes the restrictive focus marker *βja* ‘completely’ (§9.1.6.5).¹¹

- (165) *nu [çkrɣz βja zo] sunɣu ɲu tce*
 DEM oak completely EMPH forest be:FACT LNK
 ‘It is a forest exclusively of oaks.’ (140522 Kamnyu zgo) {0004059#S88}

In (166), the prenominal modifier of *tɕu* ‘road’ has three degrees of embedding.

- (166) *[[[smɣt tumda] rɣɣlpu nurra yu] nu-sakaβ] tɕu nutcu*
 TOPO TOPO king DEM.PL GEN 3PL.POSS-well path DEM.LOC

 TRAL-AOR-stay SENS-be
 ‘He went (there) and stayed on the way to the well of the king of
 Smad.mda.’ (2005 Kunbzang)

When a prenominal modifier is present, possessive prefixes on inalienably possessed head nouns can be neutralized, becoming an indefinite possessor (§5.1.4).

At least in the case of some prenominal modifiers limited to single nouns,¹² possessive prefixes can either be prefixed on the head noun (167a), or on the modifier (167b) (§5.1.4).

¹¹A superficially similar construction is found in 70 (§22.2.2.3); in that example, the constituent [noun+*βja zo*] is a preposed nominal predicate. That analysis is not possible in (165), since the subject is the demonstrative *nu*, and the nominal predicate is *çkrɣz βja zo sunɣu*.

¹²Attempts to test this possibility with larger prenominal phrases such as that in (165) are inconclusive.

9 The noun phrase

- (167) a. $\chi s\gamma r$ *a-kumtɕ^hu*
 gold 1SG.POSS-toy
 b. *a-χsγr* *kumtɕ^hu*
 1SG.POSS-gold toy
 ‘My golden toy’ (see example 64, §5.1.4)

Since in (167) no stress can be heard on the modifier $\chi s\gamma r$ ‘gold’, it could be possible to argue that $\chi s\gamma r$ *kumtɕ^hu* in (167b) should rather be analyzed as a noun compound (§5.5.1) $\chi s\gamma r$ -*kumtɕ^hu*: this is one of the domains of Japhug grammar in which the boundary between syntax and morphology is unclear (§3.8.1).

The adverb *koŋla* ‘really’, ‘completely’ (§22.2.4) can be used as a prenominal modifier in the sense of ‘real’.

- (168) *koŋla turme ci, ku-pu~pe tɕ^heme ci, nɣ-ɕya*

smuɣm
 prayer
 ‘May you become a real human, a nice, young and beautiful girl.’ (said to a *rākshasi*) (2005 Norbzang)

9.1.8.3 Participial relatives

Most words expressing properties in Japhug are a subclass of stative verbs, and cannot serve as attributes without being embedded into a relative clause. Since intransitive subjects can only be relativized using *ku-* participial relative clauses (§16.1.1.4), attributive adjectival stative verbs are always in this form, as *ku-pe* ‘good one, which is good’ in (169); the relative *wuma zo tɕ^heme ku-pe* in this example is head-internal (§23.4.3), as shown by the position of the intensifier *wuma zo* (§26.1.1.1), and literally means ‘(a) woman who is/was really nice.’

- (169) *w-rzaβ βdaβmu nu [wuma zo tɕ^heme ku-pe] ci*
 3SG.POSS-wife lady DEM really EMPH woman SBJ:PCP-be.good INDEF
pjɣ-ŋu.
 IFR.IPFV-be
 ‘His wife, the queen, was a very nice woman.’ (28-smAnmi) {0004063#S4}

In the case of shorter relative clauses it is not always clear whether we have a head-internal, or a postnominal one (§23.4.4). Prenominal relatives with an

adjectival stative verb such as *stu ku-mna* ‘the best one, the leader’ in (170) are less common.

- (170) *rʃxlpu nʃruβzaŋ nuu ku, nʃki, [stu ku-mna tɕ^heme] nuu*
 king ANTHR DEM ERG filler most SBJ:PCP-be.better woman DEM
ɲʃ-nu-car ɲu-ŋu
 IFR-AUTO-search SENS-be
 ‘King Norbzang chose for himself the woman leader.’ (2012 Norbzang)
 {0003768#S37}

The presence of an adjunct, such as a standard marker, can disambiguate between postnominal and head-internal relatives (§23.5.1.2); in (171) for instance, the head *ɲa* ‘bird’ is clearly internal.

- (171) *βzar ndʃre ŋɲn ma [uʒo sʏznʃ ɲa ku-xtɕi] nuuɾa*
 buzzard LNK be.evil:FACT LNK 3SG COMP bird SBJ:PCP-be.small DEM:PL

 completely EMPH IPFV-eat[III] SENS-be LNK
 ‘The buzzard is fierce, its eats all the birds that are smaller than itself.’
 (24-ZmbrWpGa) {0003628#S80}

As shown in §23.3.5.1, in head-internal relative clauses the same determiner can appear on the head noun and repeated after the whole relative. The same is found with adjectival participial relatives, as in (172) with the indefinite *ci* ‘one’, though this usage is rare, in most cases only one of the two determiners is used (either the one inside the relative or the external one).

- (172) *tɕe [qaju ci ku-ʃŋi] ci ŋu.*
 LNK bug INDEF SBJ:PCP-be.green INDEF be:FACT
 ‘It is a green/black bug.’ (26-zrWGndza) {0003696#S6}

In prenominal position, subject relatives are almost not attested with stative verbs, but are found with some intransitive dynamic verbs. In the lexicalized expression in (173), prenominal placement of the participle *ku-rlaʃ* is required.

- (173) *ku-rlaʃ k^ha*
 SBJ:PCP-disappear house
 ‘An abandoned house.’

9.2 Noun coordination

Japhug lacks a dedicated noun coordinator. Nouns can be either coordinated by using the comitative postposition *c^ho* (§9.2.1), or by juxtaposition without any linking element (§9.2.2).

9.2.1 Coordination or embedded phrase

The closest thing to a noun coordinator in Japhug is the comitative marker *c^ho*; it can be used both to connect finite clauses (§25.6.2.1) or nouns as in (174).

When the constituent comprising two noun phrases connected by *c^ho* is in subject or object function, number indexation on the verb reflects the sum of all individuals referred to by this coordinated constituent, dual in the case of (174).

- (174) [*χpɿltcin c^ho alan*] *kuw ko-ndo-ndzi tce*,
 n.p. COMIT n.p. ERG IFR-take-DU LNK
 ‘Dpalcan and Alan caught [one].’ (24-qro) {0003626#S94}

Number markers like *ra* (§9.1.1.2) have scope over the whole coordinated constituent, as in (175).

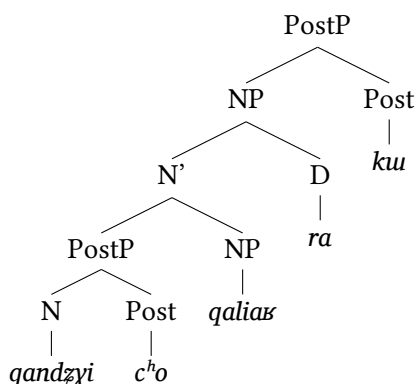

- (175) [*qandzyi c^ho qaliaɁ*] *ra kuw c^hu-nu-tsum-nu*
 falcon COMIT eagle PL ERG IPFV:DOWNSTREAM-VERT-take.away-PL
tu-ndza-nu ŋgrɿl.
 IPFV-eat-PL be.usually.the.case:FACT
 ‘Falcons and eagles take [the moles] and eat them.’ (28-qapar)
 {0003720#S192}

There is however evidence that *c^ho* is a postposition rather than conjunction. First, while *c^ho* cannot be used without a preceding noun phrase or clause, the noun following it (for instance, *qaliaɁ* ‘eagle’ in 175) is optional, as illustrated by (176) and several additional examples in §8.2.5.

- (176) *nuw c^ho to-rustunmu-ndzi*.
 [DEM COMIT] IFR-marry-DU
 ‘He married her.’ (140511 alading-zh) {0003953#S183}

Second, the fact that the noun followed by *c^ho* is a constituent can be shown by the fact that it can be relativized with an oblique participle (§16.1.3.7).

For these reasons, rather than assuming a ‘flat’ structure as in Figure 9.1, I consider *qandzyi c^ho* to be a postpositional phrase used as an adnominal modifier of the noun *qaliaɁ* ‘eagle’, as in Figure 9.2.

Figure 9.1: *c^ho* as a coordinatorFigure 9.2: *c^ho* as a postposition

9.2.2 Bare coordination

9.2.2.1 Enumeration

Enumerations are the listing of a series of nouns, often with a specific (rising) intonation and a pause between items, and without any coordinating element (such as the postposition *c^ho* seen above). In Japhug, quite lengthy enumerations are attested in the corpus, as shown by (177) with seven nouns.

- (177) *mbro, jla, nuŋa, mbala, ts^hyt, qazo, paβ, nuura nuɬcu*
 horse hybrid.yak cow bull goat sheep pig DEM:PL DEM:LOC

‘People used to graze their horses, hybrid yaks, cows, bulls, goats, sheep and pigs.’ (140522 Kamnyu zgo) {0004059#S151}

9 The noun phrase

Enumerations are generally understood as non-exhaustive, implying the potential inclusion of other referents to the list, especially when each noun occurs with the participle *ku-fse* ‘like’ as in (178).

- (178) *nuunu tx-mu nuu ku qala ku-fse, ca*
 DEM INDEF.POSS-mother DEM ERG rabbit SBJ:PCP-be.like deer

 SBJ:PCP-be.like DEM animal SBJ:PCP-be.small DEM:PL IPFV-kill
 ‘The mother kills small animals like rabbits or deer.’ (20-sWNgi)
 {0003562#S77}

However, enumerations with only two nouns and without specific intonation, as in (179), can also express exhaustive enumeration.

- (179) *q^he ts^hɣt qazo ra yu nu-ndza nuura ju-sna.*
 LNK goat sheep PL GEN 3PL.POSS-food DEM:PL SENS-be.good
 ‘It is good as fodder for goats and sheep.’ (16-RIWmsWsi) {0003520#S62}

When the order of the nouns is rigid (which is not the case in 179, since *qazo ts^hɣt* ‘sheep and goats’ is also attested), the construction belongs to a different category: that of noun dyads (§9.2.2.2).

9.2.2.2 Noun dyads

Noun dyads are a pair of nouns occurring in a fixed order, without intervening linker or postposition, and sharing their number and case markers. A good example is provided by the expression ‘parents’ comprising the kinship terms *tx-mu* ‘mother’ and *tx-wa* ‘father’, as in (180). Note that while number and case markers are shared by both nouns, each of them takes its own possessive prefix, and both prefixes are coreferent.

- (180) *nuu a-mu a-wa ni yu ŋu*
 DEM 1SG.POSS-mother 1SG.POSS-father DU GEN be:FACT
 ‘This is for my parents.’ (meimei de gushi)

The dyad for ‘parents’ has a honorific variant, originally used for noblemen in the traditional society. It comprises the terms *tx-pa* ‘father’ and *tx-ma* ‘mother’, which are borrowed from Tibetan ཇལ་པའི་ ?a.p^ha ‘father’ and ཇལ་མའི་ ?a.ma ‘mother’, respectively. Interestingly, the honorific expression follows the ‘father-mother’ order (as in example 181), while the native one reverses the order with ‘mother’ first, as in ‘mother-father’.

Other common dyads referring to humans, but alienably possessed, include *rgɣtpu rgɣnmw* ‘old man(men) and woman(women)’, *tx-tɕu tɕ^heme* ‘boy(s) and girl(s)’. They are most commonly used as collectives with indefinite referents as in (182), but are also attested with definite ones, as in (183), with the aforementioned topic marker *icq^ha* (§9.1.5.2).

- (182) *tx-tɕw tɕ^heme tu-sɣ-ɣmdzw zaka tu*

Dyads are not restricted to humans, as shown by the dyad *txɕi qaj* ‘barley and wheat’ (18, §10.1.2.10).

Another type of noun dyad comprises two abstract nouns, which can be used as manner adjuncts with the ergative (see example 46 §8.2.2.5) or in the degree construction as in (184) with the dyad *tx-re tx-ɣaɕ* ‘chatting and laughing’ (only *tx-re* ‘laugh (n)’ exists as an independent word). Some of these dyads are nominalized forms of bipartite verbs (§11.6.3).

9.2.3 Disjunction

There is no dedicated linker for expressing inclusive and/or exclusive disjunction of noun phrases in Japhug. The clausal linker *numaβnɣ* ‘otherwise’ can exceptionally occur between nouns as in (185), but such rare constructions are the result of the elision of the non-final verb(s) in a string of clauses sharing the same verb forms such as (186) (§25.6.4).

- (185) *tce azo a-rʃit nwi kwi a-wɣmiw w-rʃit nwi*

 ‘When one puts on a square cloth or a raincoat (to protect oneself from the rain), one attaches it with the hooks on the left and on the right.’
 (140429 NoR) {0003888#S14}

Another way of expressing disjunction with nouns is the polar sentence final particle *ci* (§10.4.2) but the verb is repeated in both clauses with elision, as in (188).

- (188) *tur-tɣp^hu ŋu ci βnɣ-tɣp^hu ŋu mɣ-xsi.*
 one-species be:FACT QU two-species be:FACT NEG-GENR:know
 ‘I dont know if it is one or two species.’ (23-RmWrcWftsa) {0003610#S43}

9.3 Word order in the noun phrase

The order of the elements in the noun phrase in Japhug is relatively rigid. Examples of complex noun phrases such as (189) and (190) illustrate the orders N(oun)-Adj(ective)-Num(eral) and Dem(onstrative)-N(oun)-Num(eral)-Dem(onstrative), respectively.¹³

- (189) *suŋgɯ zui, [tuɾme wuma zo ku-wxti ɸnuwz] tu-ndzi tce*
 forest LOC people really EMPH SBJ:PCP-be.big two exist:FACT-DU LNK
 ‘In the forest, there are two giants.’ (140428 yonggan de xiaocaifeng-zh)
 {0003886#S160}

- (190) *[ɯkuuki ɕnat ɸnuwz kuɿi] ku,*
 DEM.PROX heddle two DEM.PROX:DU ERG
 ‘[The weaving is done] with these two heddles.’ (vid-20140429090403)
 {0003776#S46}

From such examples, it can be extrapolated that the most basic word order in the noun phrase in Japhug is Dem-N-Adj-Num-Dem. Although no noun phrase in the corpus presents all five elements, it is easy to elicit such an example. This order is not unusual crosslinguistically: Cinque (2005) notes that the orders Dem-N-Adj-Num and N-Adj-Num-Dem are both widely attested.

All of the elements in the noun phrases are optional, even the nominal head.

Although the indefinite marker *ci* ‘one’ and the topic *nu* can appear between the noun and the adjective (being here a head-internal participial relative clause, §9.1.8.3), as shown by examples (172) above and (191) below, numerals are not attested in this position.

- (191) *ɸɸu ci ku-mbu~mbro zo ɸɸ-tu ɸu-ŋu*
 watchtower INDEF SBJ:PCP-EMPH~be.high EMPH IFR.IPFV-exist SENS-be
tce
 LNK
 ‘There was a very big tower.’ (2012 Norbzang) {0003768#S49}

There are attributes other than adjectival stative verbs in Japhug (§9.1.8.1 and §9.1.8.2), in particular prenominal attributes as *ɾɿul* ‘silver’ in (192), but it is problematic to use such examples as evidence for a Adj-N-Num-Dem, given the fact that prenominal attributes are always essentially nouns used as modifiers.

¹³The term “adjective” here refers to attributive adjectival stative verbs in participial form (§9.1.8.3).

9 The noun phrase

- (192) *rɲwɪl q^hoɓq^hoɓ χsum nuɪ ɲɣ-nuɪ-ɬoɓ.*
 silver ingot three DEM IFR-AUTO-come.out
 ‘The three silver ingots had come out.’ (28-qajdoskAt) {0003718#S169}

The prenominal slot can be filled by demonstratives (§9.1.2) and identity modifiers *kumaɓ* ‘other’ or *ci* ‘one’ (§9.1.7). These elements can be preceded by either a comitative *c^ho* phrase (§9.2.1) or by the aforementioned topic marker *iɕq^ha* (§9.1.5.2, cf. example 193), the leftmost element of a noun phrase.

- (193) *rɣɣɪpu w-tɕuɪ nuɪ kuɪ, iɕq^ha ci rɣɣɪpu*

10 Expressive words and sentence final particles

This chapter comprises four sections: §10.1 discusses ideophones, §10.2 presents expressive words lacking specific ideophonic properties (interjections and calling sounds), §10.3 and §10.4 describe sentence final particles and their contribution to the expression of modality and evidentiality.

10.1 Ideophones

Ideophones in Japhug constitute a particularly large part of speech, and can be unambiguously defined on the basis of morphological criteria. The present section builds on previous research (Sun & Shidanluo 2004; Jacques 2013c), but is based on a larger corpus of ideophones.

10.1.1 Ideophonic stem morphology

Cross-linguistic definitions have been proposed for ideophones; for instance, according to Dingemans (2017: 2), they are ‘marked words that depict sensory imagery’. While Japhug ideophones do indeed fit this description, in this grammar a language-particular definition is adopted.

Ideophones often have specific morphology, which differs from the rest of the lexicon (Diffloth 1976 and Zwicky & Pullum 1987). This is the case in Gyalrong languages (Sun & Shidanluo 2004: 3–4), and ideophones are thus defined in this grammar (following Jacques 2013c) as words derived from monosyllabic ideophonic roots that can undergo the morphological alternations described in this section.

Table 10.1 presents the ten ideophonic patterns attested in Japhug. Since these patterns involve several types of partial reduplication, a set of symbols are used to represent the elements of the root that are targeted by reduplication: C_i represents initial clusters (or single consonants), C_f codas, V the main vowel and R the complete ideophonic root.

Table 10.1: Ideophonic morphology in Japhug

	pattern	example	meaning
I	<i>R</i>	<i>zjaŋ</i>	semelfactive
II	<i>R.R</i>	<i>zjaŋ.zjaŋ</i>	stative
III	<i>R.nɣ.R</i>	<i>zjaŋ.nɣ.zjaŋ</i>	action with rhythm and/or motion
IV	<i>R.nɣ.IVC_f</i>	<i>zjaŋ.nɣ.laŋ</i>	action in disorderly fashion
V	<i>p^hu.R</i>	<i>p^hu.zjaŋ</i>	semelfactive, intensive
VI	<i>mɣlɣ.R</i>	<i>mɣlɣ.zjaŋ</i>	stative, intensive
VII	<i>Ru.C_fi</i>	<i>zjaŋu.ŋi</i>	progressive change of state
VIII	<i>C_iuC_fu.C_iaC_fi</i> <i>Ru.C_iaC_fi</i>	<i>zjuŋu.zjaŋi</i>	stative, in quantity, in disorder
IX	<i>Ri.nɣ.Ri</i>	<i>zjaŋi.nɣ.zjaŋi</i>	action with fast motion
X	<i>RRR(*)</i>		onomatopoeia

This system is not specific to Japhug: patterns I, II, III, IV and VII have direct correspondences in Tshobdun (Sun & Shidanluo 2004: 3–4). Patterns V and VI express an intensive meaning in comparison with the corresponding semelfactive (pattern I) and stative (pattern II). No equivalent pattern exists in Tshobdun. The *-nɣ-* element in patterns III, IV and IX is related to the additive *nɣ* (§8.2.6).

All patterns (except X) are illustrated with an example using the root *|zjaŋ|* ‘tall’. Example sentences for each of these forms and more detailed accounts of their semantics are provided in §10.1.2.

10.1.2 Regular derivations

Although most ideophonic patterns are attested in the text corpus, it is difficult to find real examples of all regular derivations from one particular root. For ease of presentation, we cite example sentences with complex ideophones based on a single root, *|zjaŋ|* ‘tall’,¹ and thus most of these examples are elicited.² Ideophones are glossed by IDPH, followed by the number of the pattern, and a brief translation of the general meaning of the ideophonic root.

The basic meaning of the ideophonic root *|zjaŋ|* ‘tall’ was glossed by Tshendzin as (1).

¹This root is not used to illustrate pattern X (§10.1.2.10), which is semantically restricted.

²They are however not translated: I asked my main consultant Tshendzin to produce sentences illustrating each of the possible patterns of the root *|zjaŋ|*.

- (1) *w-zda* *ra svz* *ku-mbro* *ku-fse*
 3SG.POSS-companion PL COMP SBJ:PCP-be.tall SBJ:PCP-be.like
 ‘Taller or higher than the others.’ (elicited)

There is a series of ideophonic roots that are related to *[zjaŋ]* by other type of processes (Table 10.3, §10.1.5.3).

10.1.2.1 Pattern I

Pattern I, which consists of the bare ideophonic root, is combined with predicates in the Aorist or Inferential to express an action occurring suddenly, as in (2). The form *zjaŋ* means that the action of the sentence resulted in the main referent becoming taller than its surrounding.

- (2) *zjaŋ* *zo* *tv-ndzur*
 IDPH(I):tall EMPH AOR-stand
 ‘He stood up suddenly, and [appeared to be] very tall.’ (elicited)

10.1.2.2 Pattern II

Pattern II with plain reduplication indicates a state. It is by far the most common ideophonic pattern in texts and it is attested for most ideophonic roots. It generally describes a permanent state (as in 4 below).

When an ideophone in pattern II is used with a lexical verb, it can describe a state resulting from the action indicated by the main verb (*rmbuu* ‘heap up’ in 3).

- (3) *tce zjaŋzjaŋ* *zo* *ku-pa* *to-rmbuu-nuu*
 LNK IDPH(II):tall EMPH INF:STAT-AUX IFR-pile.up-PL
 ‘[The villagers] had piled [the hay] up very high.’ (150902 liaozhai lang-zh) {0006340#S24}

A handful of deideophonic verbs in *a-* and *nv-* can be built from pattern II ideophones (§20.9.3).

The reduplicated form in pattern II is in most cases a complete reduplication. Not only the onset, but also the vowel as well as the final consonant are copied, even in the case of initial clusters, as in *[zʃraŋ]* → *zʃraŋzʃraŋ* ‘bulging, swollen’.

Nevertheless, we do observe some phonetic attrition in the case of the codas *-t*, *-y* and *-β*. Final *-t* is generally deleted regardless of the following consonant, as in *[xʃʏt]* → *xʃʏxʃʏt* ‘long, thin and flexible’. An exception, which involves an ideophone without initial cluster, is *cotcot* ‘small and cute’.

10 Expressive words and sentence final particles

Final $-\beta$ generally disappears in the reduplicated syllable when the onset of the ideophonic root contains a labial (§4.2.3.1), as in $|b\chi\beta| \rightarrow b\chi b\chi\beta$ ‘stubborn, bulky’. This rule is however only optional, and $b\chi\beta b\chi\beta$ is also attested.

Final $-y$ is generally deleted when the onset contains a velar (§4.2.3.1) as in $|g\gamma y| \rightarrow g\gamma g\gamma$ ‘moving with difficulty, unstable on its feet’. This rule is also optional.

Another type of phonetic reduction optionally appears with a few ideophones with open rhymes in $-i$ and a initial cluster with medial $-l-$ or $-r-$. The medial is deleted and the rhyme is replaced by $-u$, following the regular process of partial reduplication common in verbal morphology (§4.1). Examples of this phenomenon include for instance $|b\chi ri| \rightarrow b\chi u b\chi ri$ ‘fat, soft and wet’ and $|qli| \rightarrow quqli$ ‘staring without moving’.

- (4) *u-βri nuura kú-wγ-rtoβ q^he nu-ycilaj zo q^he, nγkinu,*

 IDHP:II:fat.soft.wet EMPH SENS-AUX
 ‘The body [of the gecko] looks wet, it is wet and soft.’ (28-tshAwAre)
 {0003722#S37}

10.1.2.3 Pattern III

Pattern III is formed by reduplicating the ideophonic root with the additive marker $n\chi$ (§8.2.6) inserted in between. It depicts a rhythmic action or a constant motion as in (5), depending on the semantics of the root.

- (5) *mbro u-taβ to-ce tce zjaηnχzjaη jχ-ari-ndzi*
 horse 3SG-ON IFR:UP-go LNK IDPH(III):tall AOR-go[II]-DU
 ‘He mounted the horse, and they went there, very tall.’ (elicited)

Deideophonic verbs in $\gamma\chi-$ and $s\chi-$ (§20.9.1) and $nu-$ (§20.9.2) are built from pattern III ideophones, without additive $n\chi$.

Pattern III also allows a variant $RR-n\chi-RR$ with double reduplication of the ideophonic root, with an intensive meaning. For instance $p\gamma\chi ln\chi p\gamma\chi l$ ‘(walking) with big strides’ has the slightly different meaning ‘(running) with big strides’ with double reduplication (6).

- (6) ‘wo a-mu ma-pu-tu-zγχ-sat tce azo

pjɣ-nu-yi.

IFR:DOWN-AUTO-come

‘She said “Mother, don’t commit suicide, I am coming back” and came back running in big strides.’ (2003 kAndZWsqhaj2)

10.1.2.4 Pattern IV

Pattern IV is formed by combining with the ideophonic root, the additive *nɣ* (§8.2.6) and a partial copy of the ideophonic root replacing the onset by *l-*, a pattern reminiscent of some distributed action verbs (§19.4.2.1). It describes an action involving motion occurring in disorderly fashion with intermittent changes of state. In (7) the form *zjaŋnɣlaŋ* can be used to depict a drunk person who stumbles from time to time while walking, so that he seems taller at one time and shorter at another time.

(7) *zjaŋnɣlaŋ nu-ŋke*

IDPH(IV):tall SENS-go

‘He is walking unsteadily, very tall.’ (elicited)

Deideophonic verbs in *ɣɣ-* and *sɣ-* can be build from pattern IV ideophones (§20.9.1), without insertion of the additive.

10.1.2.5 Pattern V

Pattern V, made of the ideophonic root prefixed with the element *p^hu-*, is similar to pattern I (§10.1.2.1) semantically, but it is more rarely used; it indicates a more sudden action and/or one carried out to a higher degree.

(8) *p^huɣzjaŋ zo tɣ-ndzur*

IDPH(V):tall EMPH AOR-stand

‘He stood up suddenly, and [appeared to be] very tall.’ (elicited)

This pattern occurs in particular with onomatopoeic ideophones, such as *|q^hloŋ|* ‘splashing’ (9).

(9) *nu p^huq^hloŋ zo pjɣ-ɣɣɣt*

DEM IDPH(V):splashing EMPH IFR-throw

‘He threw [the bag into the water], making a sudden splashing noise.’

(150824 kelaosi-zh) {0006276#S146}

The most common pattern V ideophone is *p^huɣlaɣ* from *|ɣlaɣ|* ‘suddenly’, which has the *ɣɣ-* and *sɣ-* denominal forms (§20.9.1) *ɣɣp^huɣlaɣ* ‘moving/working quickly, hardworking’ and *sɣp^huɣlaɣ* ‘do X quickly (not lingering)’.

10.1.2.6 Pattern VI

Pattern VI, with the root prefixed by *mylyx-*, describes a state like pattern II, but differs from it in that it expresses a higher degree. In addition, it can be used to express the result of a change of state with the verb *aβzu* ‘become, grow’ as in (10). It is the rarest of all ideophonic patterns, not attested in the Japhug text corpus.

- (10) *a-ye* *mylyzjaŋ* *zo* *t^hu-aβzu*
 1SG.POSS-grandson IDPH(VI):tall EMPH AOR-become
 ‘My grandson has become very tall.’ (elicited)

10.1.2.7 Pattern VII

In pattern VII, the coda of the root (C_f ; if no coda is present, a /w/ is inserted, §10.1.2.8) is resyllabified as onset of a syllable with the vowel *u*, and then reduplicated with the vowel *i* following the pattern $C_fV.C_fu.C_fi$. It expresses a progressive change of state, involving in some case slow motion as in (11).

- (11) *zjaŋuŋi* *zo* *jɣ-ari*
 IDPH(VII):tall EMPH AOR-go[II]
 ‘He went away slowly, looking taller than rest.’ (elicited)

10.1.2.8 Pattern VIII

Pattern VIII depicts a state involving a lot of referents having the property described by the ideophone, but spread out spatially in a disorderly fashion.

The formula $Ru.C_i a C_f i$ in Table 10.1 applies to ideophonic roots which do not have /a/ as their main vowel, for instance $|zjɣy|$ (whose meaning is almost identical to that of $|zjaŋ|$) has the form $zjɣy.u.zjaŋ.i$. When the main vowel is /a/, the formula is $C_i u C_f u . C_i a C_f i$. Thus, the pattern VIII of $|zjaŋ|$ is $zju.u.ŋu.zja.ŋi$. This form means that in a group of unique entities, some are tall and some are short, but they are unevenly spread (12).

- (12) *zjuŋuzjaŋi* *ŋu-xcat*
 IDPH(VIII):tall SENS-be.many
 ‘There are many [people], some taller and some shorter.’ (elicited)

Tshendzin glossed the meaning of (12) as follows (13).

- (13) *tsuku ku-mbro tsuku ku-mbyr ku-fse*
 some SBJ:PCP-be.tall some SBJ:PCP-be.short SBJ:PCP-be.like
 ‘Some tall and some short.’ (elicited)

In cases where the ideophonic root has no coda, the consonant /w/ replaces *C_f* in patterns VII and VIII. For instance, /ɛχi/ ‘with big holes, with big nostrils’ has the pattern VIII form *ɛχuwuwɛχawi* ‘full of holes everywhere’ (14).

- (14) *numu u-ŋgu ri ɛ-tu-ndze tce ku-rɔzi*

 ‘[The species of ants called *cɔmi qro*] goes into wood and eats it, and stays in there, (...) and makes holes everywhere in it.’ (26-qro) {0003682#S89}

10.1.2.9 Pattern IX

Pattern IX is formally similar to pattern III except that /i/ is added after each reduplicant of the ideophonic root. Semantically, it indicates that the entity presenting the property described by the ideophonic root undergoes a fast motion.

- (15) *mbro ta-numbrɔpui tce zjanɪnɔzjanɪ zo jɔ-ɛq^hlɔt*
 horse AOR:3→3’-ride LNK IDPH(IX):tall EMPH AOR-disappear
 ‘He mounted the horse and disappeared quickly (in the horizon), very tall.’ (elicited)

10.1.2.10 Pattern X

Pattern X involves reduplication of the ideophonic root three or more times (it was not considered to be an ideophonic pattern in Jacques 2013c). It is the only domain of Japhug grammar where triplication is allowed,³ unlike the Mazur variety of Stau, where triplication occurs in finite verb forms (Gates 2017).

Pattern X differs from all preceding patterns in that it is semantically restricted to onomatopoeia (16) and endopathic ideophones (ie. ideophones expressing inner sensations such as cold or pain) (17), and nearly always select *ti* ‘say’ as light

³Another language in which ideophone triplication has been documented is Chintang (Rai et al. 2005).

10 Expressive words and sentence final particles

verb (§10.1.7.2). Lexical verbs are also attested with pattern X ideophones (18), though more rarely.

- (16) *tu-mbri nuura cutcutcut zo tu-ti nu-ŋu*
 IPFV-call DEM:PL IDPH(X):cry EMPH IPFV-say SENS-be
 ‘When it calls it makes ‘cut cut cut.’ (24-ZmbrWpGa) {0003628#S8}
- (17) *nu-kw-syŋo tce, nu nu-łob tce, zurzurzur*

Not all onomatopoeia are realistic descriptions of natural sounds. In (19) we find an ideophonic root |ze|* describing the supposed minute sound made by the quick motion of the legs of a millipede.

- (19) *kú-wy-rtoβ tu-mɲaβ ku u-mylyjaβ ra múj-saxsɣl*

 ‘(Of a type of small millipede) Looking at it, its feet are not clearly visible, but it moves making zezezezezeze, extremely quickly.’ (28-kWpAz) {0003714#S142}

Some of the roots used in pattern X are polysyllabic (see for instance *dudut* in §10.2.3), in which case the ideophone can only be reduplicated two times.

10.1.3 Semantic categories

Japhug ideophones are used for describing various features including sound, colour, shape, texture, attitude or mood, and some ideophones are multimodal, referring to combination of several types of sensory information.

Dingemanse (2012: 663) proposed the hierarchy (20) according to which, if a particular language possesses ideophones belonging to a particular class in this hierarchy, it will also present ideophones for all the lower classes. All categories are exemplified in Japhug.

- (20) SOUND > MOTION > VISUAL PATTERNS > OTHER SENSORY PERCEPTIONS > INNER FEELINGS AND COGNITIVE STATES

Onomatopoeic ideophones include for instance $[q^h loŋ]$ ‘splashing’ (9, §10.1.2.5) or $[tɕ^h uŋ]$ ‘metal clinking’.

In addition to sounds, ideophonic roots also describe shapes (for instance *boŋ* ‘ovoid’), specific hues of colour (*smuysmuɣ* ‘fresh green’), touch (*bruɣbruɣ* ‘rough, covered in small pimples’), temperature (*xuβxuβ* ‘warm’), size (*scraβscraβ* ‘very small, close to the ground’), quantity (*zuβzuβ* ‘many (people, object) standing/in upright position’), attitudes (*dyrrdyrr* ‘agape, in a daze, looking stupid’, *ɕquɕqu* ‘frowning’), pain (*ɕnuɣ* ‘intense and sudden pain’), body position (*ɕp^hɣβ-ɕp^hɣβ* ‘lying on the ground, motionless’) and also cognitive states (*ɕɕɕ* ‘free from worry’).

Ideophonic roots often combine several parameters. For instance, *ɕɣaβɕɣaβ* ‘sharp and shiny (of fangs)’ encodes both shape and hue.

It appears that there are no ideophonic *roots* specifically dedicated to expressing motion; however, dynamic ideophonic patterns (I, III, IV, IX) applied to ideophones describing sound or shapes often add a motional imagery. For instance, the root $[xur]$ means ‘round’ in pattern II, but ‘rotating, turning’ in pattern III (69, §20.9.2) and IX (21).

‘[There is a species of insect which] does this with its legs repeatedly, and rotates the leaves of the *staxpurɣsk^{hi}* very quickly.’ (18-NGolo)

{0003530#S128}

Some ideophones, however, can have an auditory interpretation competing with many other ones. Thus, |*bxβ*| in pattern II form *bxβbxβ* can designate many objects clustered together (like mushrooms) (93, §18.4.2.1 and 19, §9.1.1.2), a stubborn person or a heavy and cumbersome object depending on the context.

With a dynamic pattern such as I or III, it can be interpreted as designating the noise made by a heavy object falling from a high place as in (22), a meaning shared with the deideophonic verbs *srbxbxβ* and *nubxβ* (see the examples in 70, §20.9.2).

10.1.4 Irregularities

In practice, very few ideophonic roots allow the application of all the ten patterns exemplified in §10.1.2. In many cases, a particular pattern is not attested because there is no imaginable context where the situation could exist.

The meaning of some ideophonic roots can be incompatible with stative patterns (II, VI and VIII). For instance, the very common |*ɕlaβ*| ‘suddenly’ is only attested in patterns I, III and V.

Even in the case of ideophonic roots which allow several different patterns, the semantics of a particular pattern cannot always be predicted from that of the other ones. In other words, not all ideophonic roots have a basic meaning from which the semantics of all patterns can be regularly derived. In this section, we provide two examples with such unpredictable semantics.

First, the root |*ruβ*| has a pattern III *ruβnɣruβ* meaning ‘dripping (drop by drop) continuously’ (23).

- (23) *li mbalɣ-pwi nuu ɣuu u-qom ra*

 ‘The tears of the calf flowed, dripping without stop.’ (140512 fushang he yaomo-zh) {0003967#S127}

The regular *ɣɣ-* deideophonic verb (§20.9.1) *ɣɣruβruβ* ‘drip continuously’ deriving from *ruβnɣruβ* is also attested (example 62, §21.3.2.3). In addition, the compound noun *mciruβruβ* ‘person whose saliva drips continuously’ (§5.5.3) has the same form with compatible semantics.

However, the pattern VIII *ruwuwurawi* from the same root has an entirely different meaning ‘upset and confused’. It occurs in collocation with *tuu-sum* ‘mind’ (24) and cannot be combined with nouns referring to liquids. Although it could originally have been a metaphorical extension of the concrete meaning of this root, the exact pathway of semantic change is by no means obvious.

- (24) *u-kɣ-nuzduy ɣuu-dɣn tce, u-sum*

Second, the root |*dzon*| has a pattern II *dzonɣdzon* meaning ‘having bristling hair’ (25).

- (25) *tceri nuunu u-rme nuu dzonɣdzon ɣuu-pa*
 LNK DEM 3SG.POSS-hair DEM IDPH(II):bristling.hair SENS-AUX
 ‘The hair [on the squirrel’s tail] is bristling.’ (28-qapar) {0003720#S129}

However, the pattern III form *dzonɣndzon* has an entirely different meaning: it refers to the itchy feeling one experiences when blood flows into a limb that has fallen asleep (due to a sitting position for instance) and blood flows back into the numb limb, as in (26).

- (26) *tu-ŋke-a tce a-mi dzonɣndzon zo ɣuu-ti*

10 Expressive words and sentence final particles

These two examples are in no way exceptional; while ideophonic morphology is productive, one should not assume that semantics is predictable.

10.1.5 The phonology of ideophonic roots

The phonological markedness of Japhug ideophones is relatively easy to assess, as ideophonic roots (and all the form derived from them present uncommon features from in both onsets and codas.

10.1.5.1 Onsets

Of all 423 known onsets in Japhug, 63 (including 45 two-consonant and 18 three-consonant clusters) are exclusively attested in ideophones or ideophonic verbs. These onsets present four types of unusual combinations which are completely absent from the native vocabulary and/or Tibetan borrowings.

First, palatal stops can be combined with the medials /r/, /l/ in clusters such as /cr-/ , /c^hr-/ , /jr-/ , /cl-/ , /ɲl-/ (§4.2.2.3, §4.2.2.4) in ideophones. The only medial consonant compatible with palatal stops in the non-ideophonic lexicon is /ɣ/ (§4.2.2.5).

Second, dental stops are found with the medials /r/, /j/ and /w/ in clusters such as /dr-/ , /dj-/ , /dw-/ and /t^hj-/ in ideophones. In the non-ideophonic lexicon, the only attested medial after dental stops is /ɣ/ (§4.2.2.5).⁴ There is evidence that proto-Gyalrong *tr- became a retroflex affricate /tʂ-/ (§5.4.3.2, §7.1.3), and that clusters of this type have been removed by regular sound change (§4.2.2.4).

Third, the unvoiced fricatives /s/ and /χ/ occur as preinitial consonants in clusters with voiced main consonant such as /sɣ-/ , /sɲ-/ and /χɲ-/ (χjuχɲi ‘soft and thin (of food); dizzy, listless’). In the non-ideophonic vocabulary, [s] and [χ] as first element of clusters are in complementary distribution with their voiced counterparts [r] and [ɣ], respectively (§4.2.1.4, §4.2.1.8).

Fourth, /l/ is common as first element of clusters in ideophonic roots, as in *lbjulbjuy* ‘soft, hanging down’. Comparison with other Gyalrongic languages reveals that *l- preinitial has changed to /j-/ in the non-ideophonic vocabulary (§4.2.1.6).

Another conspicuous phonological feature in ideophones is the very high relative frequency of non-prenasalized voiced stops. In native (non-Tibetan and non-deideophonic) nouns and verbs, the simple stop onsets /b/ and /g/ are extremely

⁴The noun *qumdroŋ* ‘crane’ also has such a cluster, but an onomatopoeic origin of the second syllable is not impossible, compare the Tibetan name of the same bird ལྷ་ལྷ་ *k^hruŋk^hruŋ* ‘crane’.

rare (§3.2.1). The onsets /d/ and /j/ are more common in the non-ideophonic vocabulary, but almost all originate from clusters containing laterals (see Jacques 2004: 313–314).

While Japhug ideophones, unlike calling/chasing sounds (§10.2.2) do not contain independent phonemes that are not found in the non-ideophonic vocabulary, they enrich the complexity of the phonological system by filling gaps in the phonological system caused by sound changes (see for instance Diffloth 1979) and by favouring rare phonemes and phoneme combinations.

10.1.5.2 Codas

The phonological specificities of ideophonic roots are not limited to onsets: the rhymes present also some unusual features, especially the codas.

The Kamnyu dialect of Japhug lacks a labial stop coda in the non-ideophonic vocabulary (§3.2.2), due to a sound change $*-p \rightarrow /-\beta/$. However, some ideophones allow a stop final $/-p/$ instead of $/-\beta/$; there is considerable variation across speakers as to which ideophones allow this pronunciation. Tshendzin optionally uses final $/-p/$ with six ideophones in combination with the main vowel $/u/$: ts^hupts^hup ‘feeling of humidity in the air’, $t\zeta^hupt\zeta^hup$ ‘with water drops’, $\#up\#up$ ‘many objects/persons standing upright’, c^hupc^hup ‘filthy’, $rsuprsup$ ‘very hairy’ and rk^huprk^hup ‘knocking noise’.

Another remarkable property of ideophones is the frequency of the codas $/-ŋ/$, $/-l/$ and $/-n/$ (§3.2.2). These codas have been eliminated by a series of sound changes, merging with the vowels in complex ways (for instance, proto-Gyalrongic $*-aŋ$ became Japhug $/-o/$, §3.3.3). They are also found in loanwords from Tibetan, but some rhymes such as $/-uŋ/$ are only attested in ideophones.

10.1.5.3 Phonological gradation and iconicity

This section focuses on *relative* iconicity (Dingemanse 2011a: 47), namely the correlation between a more or less gradient phonological feature and a semantic dimension, a phenomenon also known as sound symbolism (Boas & Deloria 1941: 16) or synesthesia (Gerner 2004: 186–187).

Japhug lacks regular patterns of consonant gradation such as the alternations described in Lakhota (Boas & Deloria 1941: 16–18). Gradation in place of articulation is attested, but specific to a particular family of ideophones. For instance, the roots in Table 10.2 have a dental – retroflex – velar – uvular gradation which does correlate with the degree of whiteness, but the same gradation is not generalizable to all ideophones with coronal fricatives.

Table 10.2: Example of consonant gradation in Japhug ideophones

Root	Meaning	Example
<i>suŋ</i>	white	hair of old people
<i>zuŋ</i>	white	hair of old people
<i>ʂuŋ</i>	clear	the sky, a glance
<i>xuŋ</i>	clear	the sky, a room
<i>χaŋ</i>	slightly orange	the sky during daybreak

In addition to consonant gradation, even more puzzling phenomenon is *ideophonic hybridization*, namely the merger between several ideophonic families by combining rhymes and initial consonant clusters. The ‘clear, bright, white’ family (unvoiced coronal initial fricative, *-u/aŋ* rhyme) of Table 10.2 has intersections with two other ideophonic families shown in Tables 10.3 and 10.4.

Table 10.3: The [dental fricative/affricate+j+velar coda] ideophonic family ‘high’

Root	Meaning	Example
<i>ʂjuŋ</i>	white and high	a stûpa
<i>tsjaŋ</i>	higher than the rest	man
<i>zjaŋ</i>	higher than the rest	man
<i>zjʁy</i>	higher than the rest	man

Table 10.3 presents the ideophonic family of |*zjaŋ*| ‘tall’, the ideophone used as example in §10.1.2. The members of this family mean ‘high, lofty’, and have the shape a dental fricative initial, followed by a *j+* medial and a velar coda. The root |*ʂjuŋ*| combines these phonological features with the unvoiced fricative /*s*/ and the rhyme *-uŋ* of the family ‘white’ in Table 10.2. Its meaning also combines ‘white’ and ‘high’ from both families.

The ideophonic family meaning ‘round, spherical’ (Table 10.4) is particularly rich. Its intersection with the ‘white’ family comprises four ideophones (|*ʂluŋ*|, |*slaŋ*|, |*ɕlaŋ*| and |*claŋ*|), which share the initial consonant, the vowel and the coda with the ideophones in Table 10.2, and integrate both the meanings ‘white, bright, shiny’ and ‘round’.

The two ideophonic families presented in Tables 10.3 and 10.4 have intersections with yet other families; a comprehensive account of ideophones however

Table 10.4: The [(fricative/r)+l+(u/a/o)+dorsal coda] ideophonic family ‘round’

Root	Meaning	Example
<i>shuŋ</i>	bright and round	the sun
<i>slaŋ</i>	white and round	the moon
<i>ɕlaŋ</i>	bright, shiny, spherical	a shaved head
<i>claŋ</i>	bright, shiny, spherical	a shaved head
<i>rlaŋ</i>	average size, spherical	the moon
<i>rloŋ</i>	huge, bulky, vaguely spherical	a yak
<i>rlaɕ</i>	round and hard	tsampa in bowl
<i>rloɕ</i>	average size, spherical	the head of a small child
<i>rwɔɕ</i>	little, in great number spherical	peas
<i>rjoɕ</i>	cylindrical and with a smooth surface	
<i>χploɕ</i>	small, spherical	mushroom, hat

goes beyond the scope of this grammar, as a considerable amount of elicitation will be necessary to fully reveal the structure of ideophonic vocabulary. Rather than isolated lexemes, ideophonic roots are organized in a network of similar forms, with gradual phonetic resemblances associated with gradual shades of meanings. A historical scenario accounting for how this type of pattern may have come into being is presented in §10.1.6.

10.1.5.4 Emphasis

Pattern II ideophones (§10.1.2.2) have in some cases an emphatic pronunciation, in which the first member of the reduplicated ideophone receives a peak in F0 and intensity. In (§27) for instance, the first syllable of the ideophone *xtsɔŋ*- has the highest pitch (315 Hz) in the whole sentence, and there is a sharp pitch drop on the second syllable (267 Hz), as shown in Figure 10.1. There is possibly a difference in voice quality (Jacques 2013c), though this remains to be demonstrated.

10.1.6 The genesis of ideophones

While it cannot be *a priori* excluded that some ideophones could be ancient, their phonological markedness is a sign that they are constantly renewed, using processes different from those found in non-ideophonic words. In this section, I propose a scenario account for one of the origins of ideophonic roots, and ideophonic hybridization (§10.1.5.3).

Some ideophonic roots are obviously built from Tibetan loanwords, but with slight phonetic changes. The most obvious case is $[ldzauŋ]$ ‘skyblue’, which originates from the first syllable of ལྗང་ཁྱུ་ *ldzan.k^hu* ‘green’ (also borrowed as the unpossessible noun *ldzan^hku* ‘green’, §5.2.2) with a slight modification of the vowel. The semantic relationship between the ideophone and the Tibetan borrowing is not always as obvious. For instance, $[zjaŋ]$ and $[zʃraŋ]$, both meaning ‘filled up, looking soft’ (of a person’s belly, a bag filled with objects) are reminiscent of the verb $\beta rjaŋ$ ‘stretch tight’ (of skin), which is borrowed from the past tense of རྩུང་བརྩུངས་ *rg’oŋ.brg’angs* ‘stretch, distend’: the ideophones describe a skin or membrane that is overstretched and distended, like the result of the action expressed by the verb $\beta rjaŋ$. The form $[zjaŋ]$ could either have been independently borrowed from a Tibetan variety where *r-* and *s-* merge, or directly based on $\beta rjaŋ$ with further consonant modification. The root $[zʃraŋ]$ is derived from $[zjaŋ]$ by insertion of *-r-* (see below for a possible account of these sporadic sound changes).

The Tibetan origin of some ideophones is one possible reason for the frequency of voiced stops in ideophones (§10.1.5.1), as /b/, /d/, /ʃ/ and /g/ are common in clusters in the borrowed layer.

However, in many cases the lexical origin of ideophones has been completely blurred by a variety of mechanisms which can only be hypothesized. The four synonymous ideophones *dzob* (29), *zgoʃ*, *goʃ* and *dzur* (30) exclusively occur in collocation with the transitive verb *ts^hoʃ* ‘attach’ and the noun *tu-χpum* ‘knee’ (§22.4.2.8) to express both the speed of the kneeling motion and the highly deferential attitude of the kneeling person.

 'The poor children, they knelt [before the ogre] one after the other.'
 (160704 poucet4-v2) {0006097#S23}

I propose that one of the mechanism of ideophone creation is by playful re-analysis from lexical verb roots. The four ideophones *dzoʋ*, *zgoʋ*, *goʋ* and *dzur*, which have either the onset (z)g- or dz- and the rhymes -oʋ and -ur, originate in my opinion from the verbs *ndzoʋ* 'be attached' (the anticausative of *ts^hoʋ* 'attach', §18.5.3) and *azgur* 'bow, bend down' (the latter borrowed from སྐར་ *sgur* 'bend down'). The development of these ideophones occurred in three steps, as illustrated in Figure 10.2.

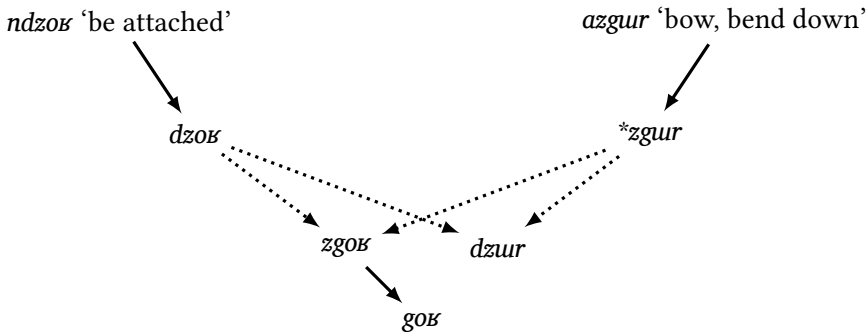

Figure 10.2: Development of the family of ideophones meaning 'kneeling respectfully'

First, the ideophone roots *dzoʋ* 'kneeling' (with alternation to the more marked plain voiced dz- onset, §3.2.1) and an unattested **zgur* (perhaps 'kneeling and bowing') were directly created from the two verbs. The forms *zgoʋ* and *dzur* result from blending from the two primary ideophones *dzoʋ* and **zgur* by exchanging rhyme and onset. Third, *goʋ* was derived from *zgoʋ* by simplification of the onset.

This process is not a derivation in the proper sense, since it is neither regular nor predictable, and involves processes such as blending which do not normally occur in the verbal and nominal morphology of the Japhug language.

In addition to native roots and Tibetan loanwords, an obvious source of ideophones are onomatopoeic imitations of natural sounds. However, given the fact

that ideophonic changes do not follow regular rules unlike the normal vocabulary on the one hand, and that northern Gyalrong languages lack historical records on the other hand, it is unlikely that the prehistory of this type of ideophones can be recovered.

10.1.7 Syntax of ideophones

As pointed out by Dingemanse (2012: 660), the markedness of ideophones is not limited to their phonology, but is also manifested in their syntactic behaviour.

Ideophones nearly always occur as verb adjuncts in Japhug. They are most commonly found with the intransitive light verb *pa*, the quotative verb *ti* ‘say’ and the similitive verb *stu* ‘do like’, following a cross-linguistically well-attested pattern (Güldemann 2008: 280–288). They can also be used as adjunct of any lexical verb in either nominalized or finite form, and in a handful of examples, as noun modifiers. Ideophones commonly occur with the emphatic *zo* (§26.1.1.5), which follows them.

10.1.7.1 The auxiliary *pa*

The intransitive verb *pa* (also attested in collocation with numerals, §22.4.1.4) is one of the most common light verb used with ideophones. It is the labile intransitive counterpart (§14.5.1.4) of the verb *pa* ‘do’, which also occurs as a light verb in noun-verb collocations (§22.4.2.5).

It can either appear as an inflected form as in (32), or as the participle *ku-pa* as in (33) (see also 3, §10.1.2.2). It is mainly used with pattern II ideophones describing colour, shape or spatial disposition.

10 Expressive words and sentence final particles

Like other stative verbs, *pa* has an inchoative meaning in the Imperfective (§21.2.6), the Aorist (§21.5.1.3) and the Inferential (§21.5.2.4). It is attested with the UPWARDS (*tu-pa*, example 34) and the WESTWARDS (*ɲuu-pa*, example §27 in §10.1.5.4) orientation preverbs.

10.1.7.3 The simulative verb *stu* ‘do like’

The transitive simulative verb *stu* ‘do like’ (§14.4.2, §25.4.1.2) most commonly appears with the non-stative ideophonic patterns III (40) and IV (41). It expresses volitional actions, unlike *pa* and *tɪ*. The syntactic function of the ideophones when used with *stu* ‘do like’ is possibly that of semi-object, as they replace the demonstratives that usually occur with this verb (§14.4.2).

- (40) *u-ɲuuro lu-lyt tce ɬuɲɪɬuɪ,*

10 Expressive words and sentence final particles

The reflexive form *zyɣ-stu* (§18.3.3) is almost exclusively attested with ideophones, in particular in the manner serial verb construction (§25.4.1) with other intransitive verbs, such as *ku-rɣzi* in (42). With pattern II ideophones, it means ‘make/have a X look’, generally expressing an attitude made on purpose.

- (42) *spyi ɲu-nu-te ndyɾe, nyki rɣɿlpu tu-ce*

10.1.7.4 Other verbs

Ideophones are not restricted in use to the light verbs cited above, and can appear with other types of verbs with compatible semantics. There are strict collocation

restrictions, and most ideophones can only be used with one one or a handful of verbs.

With the three light verbs discussed above (§10.1.7.1, §10.1.7.2, §10.1.7.3), ideophones are strictly preverbal, but when employed with other verbs, postverbal order is common, in particular in the case of stative adjectival verbs (44).

- (44) *w-mɲaʋ wuma nuu yu w-rku nura ɲu-yurni,*

 {0003656#S82}

10 Expressive words and sentence final particles

10.1.7.5 Noun modifier

In examples such as (46) or (47) (§10.1.7.4), the syntactic status of the ideophone is ambiguous between a sentential adverb and a postnominal modifier.

Examples (48) and (49) are incontrovertible evidence that ideophones can serve as noun modifier: in (48) is embedded within an exceptive (§8.2.8) postpositional phrase which does not contain any verb, and must be analyzed as modifier of the counted noun *tu-rdoɓ* ‘one piece’.

- (48) *ma nuniw cawurambum tu-ti-nuw tce nuniw, nɔkinuw,*

‘There remained only Donglang, the boy, all alone (on earth after his
family had been taken away).’ (150828 *donglang*) {0006312#S129}

However, ideophones as postnominal modifiers are rare, and only occur in combination with a singular counted noun such as *tu-rdoɓ* in the meaning ‘alone’.

10.1.8 Discourse function

Ideophones are non-essential to communication in the sense that any sentence containing an ideophone can be glossed with another sentence of identical truth value without using any ideophone. The frequency of ideophones and ideophonic verbs presents considerable variation in the corpus: some stories and procedural texts are almost devoid of them, while some episodes of traditional narratives are densely packed with them.

Some interjections cannot form a complete utterance on their own: *χawo* 'if only' introduces a clause in the Irrealis expressing a wish (see examples 120, §21.4.1.4 and 40, §5.1.2.10). The form *tsatsatsa* is used in a correlative construction meaning 'one can say that *X*, but one can also say that $\neg X$, with the positive *X* and negative $\neg X$ forms of the same verb followed by the additive *ny*, as in (55).

- (55) *nu-tu-fse ny tsatsatsa, múj-tu-fse ny tsatsatsa*
SENS-2-be.like ADD INTERJ NEG:SENS-2-be.like ADD INTERJ

'One can say that you look like her, but one can also say that you don't.' (2014-kWlAG)

Interjections can be classified into four categories (Table 10.5): involuntary responses to stimuli (interjections in the proper sense, Dingemanse 2011b), and uninflected words expressing comments on words uttered by oneself or others, short orders or polite expressions.

Table 10.5: List of interjections

Category	Form	Function
Involuntary response	<i>utɕ^hutɕ^hu, wutɕ^hutɕ^hu</i>	expresses cold
	<i>atsatsa</i>	expresses pain
	<i>atsatsa</i>	expresses pain
	<i>wudzudzi</i>	expresses fear
	<i>ama, amarj</i>	expresses surprise
	<i>mts^hɣri</i>	expresses surprise
Comment	<i>açi</i>	taking back what one has just said
	<i>ɣawo X</i>	‘If only X’
	<i>Xtsatsatsa ¬Xtsatsatsa</i>	‘One can say that X, but one can also say that ¬X’
	<i>maɣtɕu</i>	‘I told you so!’
	<i>ɕaβja</i>	‘It serves you right!’
	<i>woja</i>	confirmation
Orders	<i>c^he, pɣk^hije</i>	‘wait!’
	<i>kuuz</i>	‘go!’
	<i>ja</i>	‘come on’ speech filler (§10.3)
Phatic	<i>k^hɣβzarj</i>	‘here I am’
	<i>k^hatɕu</i>	‘thanks’
	<i>wortɕ^hi (wojɣr)</i>	‘please’
	<i>ɣa</i>	‘yes’
	<i>wowe</i>	response to words meaning ‘goodbye’
	<i>woja</i>	confirmation

Among these forms, *pɣk^hije* ‘wait’ is the only one with a clear internal etymology (from *pɣjk^hu je*, §22.2.1). Some interjections are from Tibetan, including the polite expressions and *mts^hɣri* ‘how strange’ (§21.3.2.4), which is originally a uninflected predicate borrowed from མཚན་ *mts^har* ‘feel strange’.

Although interjections lack morphological alternation, the additive *nɣ* can be inserted within *wortɕ^hi wojɣr* (which is borrowed from རྩོམ་ཆེ་ *flor.tɕ^he* ‘thanks’) to express repeated action as in (56) (see also 57, §22.2.1), a use reminiscent of the Ideophonic patterns III (§10.1.2.3) and IV (§10.1.2.4)

10 Expressive words and sentence final particles

- (56) *ty-tɛw nɯ kɯ* “*wortɛ^hi nɣ wɔjɣr zo*” *to-ti jɯ-ŋu*
 INDEF.POSS-boy DEM ERG please ADD please EMPH IFR-say SENS-be
 ‘The boy said ‘please’ several times.’ (2012-qachGa) {0004087#S79}

The phatic expressions and *sɤrma* ‘good night’ and *kɣnɣβdi* ‘take care’, though originally non-inflecting, can take number indexation suffixes (§14.7.1) and have become quasi-verbs, though they are highly anomalous and defective. The interjection *wɔwe* can be used as a response to these expressions.

The expression *k^hɣβzaj* ‘here I am’ is uttered by the guest when he arrives at someone else’s home; the hosts invites the guest inside by saying *nɣ-tɕu* ‘your way’.

The interjection *woja* ‘yes, right’ occurs to confirm the validity of a previous statement, sometimes assertive as in (57) but also with interrogative markers such as *ye* (see 76, §10.4.2). It can be used whether the addressee had a vocal reaction or not.

10.2.2 Calling and chasing sounds

Calling and chasing sounds, also referred to as ‘summons’ and ‘dispersals’ (Aikhenvald 2010: 318–319) are sounds used by people to interact with animals.⁵ They are used either to incite the animals to come forward in the direction of the speaker (calling sounds, as in 58a) or to advance or go away (chasing sounds, as in 58b).

- (58) a. *luɯ jɯr-wɣ-nɯ-ɣk^hɣzŋga q^he tɕítɕi tɕítɕi tɕítɕi nɯra*

 (06-huchements1) {0003412}

⁵French has the more colorful term *huchement de berger* to designate this class of utterances.

- b. *lulu jú-wy-no tce “tʰa” tu-kur-ti ɲu*
 cat IPFV-INV-chase LNK CHASE:cat IPFV-GENR-say be:FACT
 ‘When one chases a cat, one says tʰa.’ (06-huchements2)

In Japhug, nearly all farm animals and pets, whether mammals or birds, have special dedicated calling sounds, a list of which is provided in Table 10.6. In addition, a click sound for which no IPA symbol exists is used to call puppies.

Table 10.6: Calling and chasing sounds in Japhug

	animal	order
<i>tʰa</i> <i>tʰítʰi tʰítʰi tʰítʰi</i>	<i>lulu</i> ‘cat’	chasing calling
<i>wule</i> <i>aβleβle</i>	<i>nuŋa</i> ‘cow’	chasing calling
<i>buwo</i> <i>abobo</i>	<i>mbala</i> ‘bull’	chasing calling
<i>tsa? tsa?, tsotsa</i> <i>soŋ</i>	<i>kʰuna</i> ‘dog’	calling chasing
<i>tʰutʰutʰutʰutʰutʰu</i> <i>kɕut</i>	<i>kumɸya</i> ‘fowl’	calling chasing
<i>χaj</i> <i>ɑ ɑ ɑ ɑ</i>	<i>mbro</i> ‘horse’	chasing calling
<i>zʙozʙozʙozʙo</i> <i>acʰocʰo</i>	<i>ftsok</i> ‘female hybrid yak’ <i>jla</i> ‘male hybrid yak’	calling calling
<i>tʰʰyt</i> <i>anininini, ʔwan, ʔwan ʔwan</i> <i>anininini </i>	<i>paβ</i> ‘pig’ pig (adult) pig (little)	chasing calling calling
<i>alolo</i> <i>titititi</i> <i>kʰuɕu</i>	<i>qazo</i> ‘sheep’ <i>tsʰyt</i> ‘goat’ goat, sheep	calling calling chasing

Given the rudimentary nature of man-animal interactions, it is not surprising that these sounds cannot be subjected to any morphological operation other than reduplication. They cannot be used with any light verbs or occur as adjuncts.

10 Expressive words and sentence final particles

However, if the animal has a name, it can be added after the calling/chasing sound (59).

- (59) *tce uzo ku-ysku* *a-pu-ŋu q^he*
 LNK 3SG SBJ:PCP-having.white.colour.on.the.back IRR-IPFV-be LNK
 “*aβleβle rguskur*” *tu-ku-ti q^he tce uzo tso*
 CALLING:cow cow.name IPFV-GENR-say LNK LNK 3SG understand:FACT
cti q^he ju-nu-yi cti
 be.AFF:FACT LNK IPFV-AUTO-come be.AFF:FACT
 ‘If [the cow] has white colour on the back (and is given the name *rgusku*),
 one says *aβleβle rgusku* and she understands, and comes by herself.’
 (06-huchements1) {0003412}

Phonologically, these words contain very unusual sounds: they make use of consonants and vowel that are not found at all in the standard lexicon: the dental click /ɮ/, the glottal stop in a cluster /ʔw/ or as a coda and breathy voice.

Only one of these words appears to have an identifiable etymology: *soŋ* ‘chasing sound for dogs’ is possibly related to Tibetan མོང་ *soŋ* ‘go’. However, there is a striking resemblance between some of the chasing/calling sounds in Japhug and Khroskyabs (Lai 2017: 227), as illustrated by Table 10.7. It is unlikely that these resemblances are due to common inheritance.

Table 10.7: Calling/chasing sounds in Japhug and Khroskyabs

Japhug	Meaning	Khroskyabs	Meaning
<i>aβleβle</i>	calling a cow	<i>vlê:vlevle</i>	calling a hybrid yak
<i>tsa? tsa?</i>	calling a dog	<i>tsâ</i>	calling a dog
<i>soŋ</i>	chasing a dog	<i>sôŋ</i>	chasing a dog
<i>tɕutɕutɕutɕutɕu</i>	calling a fowl	<i>tɕû:tɕutɕu</i>	calling a fowl

10.2.3 Deonomatopoeic expressive nouns

A certain number of bird names are based on onomatopoeia imitating their song. For instance, *qusput* ‘cuckoo’ (example 55, §22.2.1) and *tsubot* ‘pheasant’ (60) are described as making a sound identical to their Japhug name.

- (60) *tsʷɔt p^hu nu tu-mbri tce, “tsʷɔt tsʷɔt tsʷɔt” ntsu*

 ‘There is [a bird] called turtle-dove, it always makes *dudut dudut*. Some people say that it makes *dudut cʷŋgluy*, I don’t know [if it is true], [in any case] it makes *dudut wu*.’ (22-CAGpGa) {0003586#S24}

The bird name *tacɔɔcɔɔ* is based on the onomatopoeia describing its song (see example 134, §21.4.2.2), but with the addition of a *ta-* prefix, which may or may not be related to the action nominal *tu-* prefix (§16.4).

10.3 Speech fillers

In Japhug speech fillers, rather than a central vowel, are used to mark pause during speech either due to hesitation, or to give the speaker more time to reflect on what he or she is about to say.

The cataphoric demonstrative *nɣki*, used both as a pronoun (§6.9.2.2) and as a noun modifier (§9.1.2), is the most frequent speech filler (examples in this grammar include 24 in §12.4.3, 63 in §9.1.3.4 and 121 in §15.1.5.5). It can be combined with the determiner *nu* (§9.1.5.4) as *nɣkinu* (6, §15.1.1.2) or with the indefinite *ci* (§9.1.4.1) as *nɣki ci nu*.

⁶In Tshobdun, ‘pheasant’ and ‘turtle-dove’ are called *tsʷɔt* and *dudut*, respectively (Sun & Blogros 2019: 137). These words cannot be inherited from the common ancestor of Japhug and Tshobdun however, since Tshobdun *-ot* should correspond to either *-ɣt* or *-ut*.

10 Expressive words and sentence final particles

The aforementioned anaphoric topic marker *içq^ha* (§9.1.5.2), which derives from the adverb *içq^ha* ‘just now’, also occurs as speech filler (example 217, §15.2.8.2), likewise frequently followed by the determiner *nuu* (25, §15.1.2.2 and 205, §15.2.7).

- (62) *numu tce, pçi ku-rvzi cti tce, nɣki nuu, içq^ha nuu,*

(unlike the domestic cat).’ (21-IWLU) {0003576#S5}

The interjection *ja* (§10.2.1) is used as speech filler by persons listening to traditional stories, as a sign that they are following the narrative of the storyteller. Traditional storytellers require their audience to respond in this way, as shown by (63).

- (63) “*ja*” *tv-ti ma tce múj-k^hu.*
FILLER IMP-say LNK LNK NEG:SENS-be.possible
‘Say ‘ya’, otherwise [I] can’t [tell the story].’ (160720 kandZislama)
{0006147#S3}

10.4 Sentence final particles

Japhug has a rich system of sentence final particles, which combine with verbal morphology to express modality, evidentiality, interrogation and the attitude of the speaker.

Given the fact that the meaning of most sentence final particles is rather difficult to pinpoint with precision, the non-specific gloss SFP is used for all of them.

10.4.1 Particles used in commands

The particle *je* conveys a milder tone to orders expressed with Imperative (§21.4.2), Irrealis (§21.4.1) and Prohibitive (§21.4.3), as shown by (64) (see also 131 in §21.4.2.2 and §21.4.2.3 in §135).

- (64) *pvk^hije tce <guan> ma-kv-tu-βze je!*
wait LNK turn.off NEG-IMP-2-make[III] SFP
‘Wait, don’t hang up [your phone].’ (conversation, 2015-07-05)

It combines with first person Imperfective verb forms to express hortative meaning (§21.2.5) as in (65).

- (65) *azo c^hu-yi-a je ma mɣ-p^han-a nɣ*
 1SG IPFV:DOWNSTREAM-come-1SG SFP LNK NEG:be.efficient:FACT-1SG ADD
mɣ-βduy-a t^han nɣ
 NEG-harm:FACT-1SG SFP SFP
 ‘Let me come along, even if I am of no use, I will not do any harm.’
 (several occurrences) {0003368#S20}

It is also used with 2→1 Imperfective forms to express commands with a first person object as in (66), since Imperative lacks 2→1 forms (§21.4.2).

- (66) *a-wi tɕ^horzi u-ŋguw pjw-kw-rku-a je*
 1SG.POSS-grandmother jar 3SG.POSS-in IPFV:DOWN-2→1-put.in-1SG SFP
 ‘Grandmother, put me in the jar, and...’ (2005 Kunbzang)

In addition, the particle *je* is often added to phatic expressions such as *tv-ɣstu* ‘goodbye’, *sɣma* ‘good night’ and *kɣnɣβdi* ‘take care’ (§14.7.1) as in (67).

- (67) *kɣnɣβdi je a-mu!*
 take.care SFP 1SG.POSS-mother
 ‘Take care, mother!’ (Gesar,54)

Other postverbal elements used with Modal categories include the noun *smu-lym* ‘prayer’ which occurs with the Irrealis (§21.8.3.2) and the softened command particle *wo* (originally an interjection) as in (68). This particle can be cliticized to the verb stem (§11.6.2).

- (68) *k^hu nuw βo nuw-βde wo, a-me nuw χtanɣ*
 tiger DEM ADVERS IMP-throw SFP 1SG.POSS-daughter DEM COMP
a-ftsab uβrɣ-yi ma
 1SG.POSS-roof.leak RH.Q-come SFP
 ‘My daughter, don’t worry about the tiger, [I am more worried] that my [house] could have a roof leak.’ (khu 2005) {0004085#S4}

The *je* and *wo* particles are curiously similar to the Imperative and Hortative suffixes *-(j)e* and *-(w)ə* in the Kiranti language Khaling (Jacques et al. 2012: 1114–1123), though it is extremely unlikely that this could reflect common inheritance, and is rather a pure coincidence.⁷

⁷In any case, Proto-Gyalrong **-o* yields Japhug *-u* (§3.3.3).

10.4.2 Particles used in polar questions

In addition to the interrogative prefix *u-* (§21.7.4), and interrogative pronouns (§6.5), questions can be marked by a series of several interrogative particles.

The particle *ci* is the most common way of expressing a polar question, in combination with a verb in assertive form as in (69) and (70). In this function, it is equivalent to the prefix *u-* (§21.7.4).

- (69) *kuuki li pjw-mnat-a ci?*
 DEM.PROX again IPFV-repeat-1SG QU
 ‘Do I tell [the story] again?’ (150908 menglang-zh) {0006320#S1}

- (70) *ny-zwβ jw-yi ci?*
 2SG.POSS-sleep SENS-come QU ?
 ‘Are you feeling sleepy?’ (09-stoR, 65) {0003470#S60}

It can be used to express an alternative between two possibilities (71), often with an assertive verb form followed by the corresponding negative one (72).

- (71) *nuzora smi c^hw-tw-nw-βlw-nw ηu ci, <dian>*

wood seat 3SG.POSS-on 2-<AUTO>sit:FACT

‘Will you sit on the golden seat, the silver seat, the iron seat or the wooden seat?’ (2005 Kunbzang)

The apprehensive prefix *ɕu-* is likely to have been grammaticalized from this particle (§21.7.1.3).

The particle *ku* occurs in questions to oneself (74), rhetorical questions and confirmation-seeking questions (79, §21.3.2.7). Unlike *ɕi*, it occurs together with either an interrogative pronoun or in combination with an interrogative verb form.⁸ It is particularly common with the Dubitative (§21.4.4).

(74) *a-rcɣmbe-ŋga nu ɲotɕu nu-a<nɯ>ri ku?*

1SG.POSS-old.jacket-wear DEM where AOR:WEST-<AUTO>go[II] QU

‘Where did my beggar (‘wearer of an old jacket’) of a husband vanish?’ (2005 Kunbzang)

It can be combined with the particles *ma* (§10.4.4) and *ye* (see below) as *kuma* (75) and *kuyē*.

(75) *mɣzɯ te^hi mu-pu-fɕɣt-tɕi kuma?*

even.more what NEG-AOR-tell-1DU QU

‘Which [trees] are there which we have not yet told [a story] about?’ (13-tApWpjoR) {0003494#S60}

Several particles mark a question inviting the addressee to confirm what the speaker has said: *ye*, which even resembles an interjection in that it can be preceded by a pause as in (76), *nétɕi* (77, 78) and *loβtɕi* (79).

(76) *kuβdesqafsum-pa to-tsu, ye? woja, nu to-tsu*

 ‘Rkangrang, you dealt with my son in the same way as you did with my
 husband (i.e. had him killed), don’t go over the top in your torturing of
 me (torture me with proper measure), please?’ (2012 Norbzang)
 {0003768#S185}

The second syllable *-maβ* in *raβmaβ* probably originates from the negative copula *maβ* ‘not be’ (§13.1.2, §22.5.1.1) as postverbal negation (§22.5.3; perhaps from an interrogative form *ú-maβ* ‘is it not ...’). The source of the first syllable *raβ-* is less clear, but may be from the auxiliary *ra* ‘be needed’ (§24.5.3.1), the original meaning being ‘is it not the case that X have/has to ...’

10.4.3 Hearsay particle

The particle *k^{hi}* expresses hearsay, and often occurs when the original narrator is left unidentified by the speaker (82).

- (82) *u-jabmu ra to-tɕxt k^{hi}, wo, tɕendɣre ku-ɣɣɐvab nu*

 ‘[The mushroom *Hericium erinaceus*] grows in patches (i.e. not spread evenly). So they say, I have not seen it.’ (23-mbrAZim) {0003604#S172}

⁹For the context of this example, see (205) (§24.6.3.2).

In the immense majority of examples, *k^{hi}* occurs with verbs in the Inferential (82) or Sensory (84 and 85) (§21.5.2, §21.3.2). However, this not a morphosyntactic constraint, and *k^{hi}* can in principle be combined with verbs in other TAME categories, such as the Factual (§21.3.1) in (86) (*c^{ha}* rather than the Sensory *nu-c^{ha}*), confirming Tournadre and LaPolla’s (2014) insight of the necessity of distinguishing *source* and *access* to information when describing evidential systems.

 owl DEM ERG mole INF-kill really EMPH can:FACT SFP
 ‘The owl is very good at killing moles, it is said.’ (28-qapar)
 {0003720#S196}

The archaic inferential *k^{hu}-ti* ‘s/he said’ found in a handful of stories may result from the fusion of this particle with the prefixless stem of the verb *ti* ‘say’ (§21.5.4).

In addition, the noun *k^{hi}c^{ho}* ‘rumour, hearsay’ is a delocutive noun derived from the particle *k^{hi}* and the comitative *c^{ho}* (§8.2.5). The etymological relationship between *k^{hi}c^{ho}* and *k^{hi}* is made clear by examples like (87), where *k^{hi}c^{ho}* is glossed as ‘saying *pjx-ŋu k^{hi}*’, i.e. using the hearsay particle and the Inferential to insist on the fact that one has only heard this information from second-hand sources.

- (87) *tceri u-pw-ku-mto tci pjx-me wo ma, k^{hi}c^{ho}*

The hearsay particle can be followed by other sentence final particles (such as *wo*, §11.6.2), but there are no examples of it being preceded by other particles.

10.4.4 Particles expressing epistemic modality

In addition to verbal morphology (§21.4, §21.7), epistemic modality is expressed in Japhug by sentence final elements, including the grammaticalized noun *u-mdov*

‘colour’ (§21.8.3.1) and the particles *tʰaŋ*, *rca* and *ma*.

The particle *tʰaŋ* is borrowed from Amdo Tibetan, where it appears in the complex ending *na.tʰaŋ.gi* expressing possibility (translated as ……かもしれない ‘maybe …’ in Ebihara 2019: 306–307).

Semantically *tʰaŋ* is close to the possible modality prefix (§21.7.2), as illustrated by (88a) and (88b) (see also 15b and 15a in §11.4). It is often followed by the exclamative *ny* (allomorph of *nu*, §10.4.5).

- (88) a. *qapri kuɯ ɣu-mtsuɣ-a tʰaŋ ny!*
 snake ERG INV-bite:FACT-1SG SFP SFP
 b. *qapri kuɯ umɣ-wɣ-mtsuɣ-a*
 snake ERG PROB-INV-bite:FACT-1SG

In the overwhelming majority of cases, *tʰaŋ* follows a verb in the Factual Non-Past (§21.3.1) to indicate either a probable future event (88a and 90; see also 48, §21.3.1.2) or a general statement of uncertain truth value (89).

- (89) *si u-mat ra tu-ndze ɲu-ɕti. xcaj nu*

 ‘[If we do it] this way, the ogre_i will think that we are his_i daughters and maybe he_i will not eat us. (160705 poucet5-v2) {0006163#S31}

It can also express a possibly undesirable result as in (91) (§25.5.6).

¹⁰In addition, (90) is an interesting example of hybrid indirect speech (§24.2.5.2), with the verb form *ɲu-ɲu* reflecting the point of view of the ogre, while the 1PL pronoun *izora* and the 3sg possessive *u-me* ‘his daughters’ represent that of the children.

10 Expressive words and sentence final particles

10 Expressive words and sentence final particles

The particle *kuma* results from the fusion of this dubitative *ma* with the interrogative *ku* (§10.4.2).

It is possible that these particles originate from the causal linkers *ma* and *matɕi* ‘because’ (§25.5.2), and that their use as dubitative particles arose from an elided causal clause (‘I don’t know whether it is true or not because...’) or justification clause (§25.5.5) (‘It looks like ... since’).

10.4.5 Particles expressing speaker attitude

The particles described in this section have meanings that are not easily classifiable into any of the previous categories, but some of which contribute to express modality.

The particle *nu*, sometimes realized as *ny*, occurs in exclamative sentences, in particular with degree nominals (§26.1.2.1) and exclamative nouns (§5.1.2.8).

- (100) *nu* *u-tʰoβ* *nu**ra* *nu-kʰi* *nu* *ye*, *nu-tu-scit*

11 The structure of the Japhug verb

11.1 Introduction

Japhug is a verbocentric language: nearly half of this grammar (eleven chapters) is devoted to verbal morphology.

This chapter first presents an overview of the structure of the verb in Japhug, including the prefixal (§11.2) and suffixal (§11.3, §11.4) chains. The final sections discuss the templatic structure of Japhug verbal morphology (§11.5) and word boundaries (§11.6).

11.2 The prefixal chain

Like other Gyalrongic languages, Japhug has a strongly prefixing verbal morphology. Inflectional and derivational prefixes constitute two different groups with almost no overlap, the latter closer to the verb root, and the former further away from it. For this reason, these two groups are referred to as ‘outer’ and ‘inner’ prefixes.¹

Not all prefixes are tautosyllabic; some only comprise a consonant (for instance some allomorphs of the translocative such as ζ -), and due to vowel contraction rules (§12.3, §14.3.2.7), some combinations of prefixes merge into a single syllable. The transcription used in this grammar however undoes the effect of vowel merger to bring clarity to the morphological analysis, and avoid a proliferation of portmanteau affixes.

11.2.1 Outer prefixes

The template of outer prefixes in finite verb forms is summarized in Table 11.1. It contains six slots, as compared to the four slots in the suffixal chain (§11.3). This table does not represent inner prefixes, which are contained within the ‘extended verb stem’, and discussed below in §11.2.2.

¹Previous accounts of the Japhug verbal template such as Jacques (2013b) do not clearly distinguish between these two prefixal domains.

Table 11.1: The template of outer prefixes

-6	-5	-4	-3	-2	-1	0
Modal	Negation	AM	Orientation	second person	Inverse Progressive	Extended verb stem

The minimal verb form only contains the verb stem without any prefix. The only finite verb forms with empty prefixal slots are the first or third persons (§14.2.1) or 1/3→3' configurations (§14.3.2.1, §14.3.2.2) of the affirmative Factual Non-Past (§21.3.1), as in (1). All other finite verb forms require the presence of at least one prefix.

- (1) *yi* / *yi-a*
 come:FACT come:FACT-1SG
 ‘He comes/will come; I (will) come.’

Slot -6 can be filled by the Irrealis *a-* (§21.4.1.1), the Rhetorical Interrogative *uβrɣ-*, the Polar Interrogative *u-*, the Probabilitative *umɣ-* and the Proximative Aspect *ju-* prefixes (§21.6.2). These prefixes are mutually exclusive.

Slot -5 contains the negative prefixes (§13.1), which also partially encode TAME. Only one negative prefix can appear in this position; double negation must be expressed with a negative auxiliary (§13.3).

Slot -4 is restricted to the translocative *ɕu-* and cislocative *ɣu-* Associated Motion prefixes (§15.2.1). These two prefixes are mutually exclusive, and also incompatible with motion or manipulation verbs with opposite deixis (§15.2.3).

Slot -3 corresponds to orientation preverbs (§15.1). It must be filled in all finite forms other than the Factual Non-Past (§21.3.1.1) and the negative Sensory (§13.1, §21.3.2.1), and only one preverb is allowed in this position. Xtokavian dialects of Japhug have an additional slot -3' containing the Inferential *a-* prefix (§15.1.1.3) and the Aorist *a-* (§14.3.2.2), but since these two prefixes have merged with the orientation preverbs in Kamnyu Japhug, this slot is not treated as different from -3 in this grammar. Although not an orientation preverb, the Apprehensive *ɕu-* (§21.7.1) also appears in slot -3.

Slot -2 includes indexation prefixes, including second person *tu-* (§14.2.1.2), the *ta-* 1→2 and *ku-* 2→1 portmanteau prefixes (§14.3.2.3) and the generic S/O prefix *ku-* (§14.3.2.5). The prefixal element *k(u)-* of the peg circumfix (§11.4) is also located in this slot.

Slot -1 comprises the inverse *-wy* (§14.3.2.7) and the Progressive *asu-* (§21.6.1.1) prefixes. These two prefixes only appear on transitive verbs, since they are incompatible with morphologically intransitive verbs. This slot is the only one that can be filled by more than one prefix simultaneously, as shown by forms such as *pjɣ-k-ɣ<wy>z-nɣjo-ci* ‘he was waiting for him’ in (2) where the inverse *-wy* (see §14.3.2.2 and §14.3.3.3 on the function of the inverse prefix in this example) is infixes within the *-ɣz-* allomorph of the Progressive (§12.3, §21.6.1.1).

 ‘[The snow leopard]_i came down. The rabbit was waiting for him_i (there).’
 (140427 qala cho kWrtsAG) {0003852#S60}

In addition, since the autive *nuu-* can also be infixes within the progressive (§19.1.2, §11.2.2), slot -1 actually lies at the border between the inner and outer prefixal domains.

All of these slots can be filled, as in example (3). Although there are co-occurrence restrictions across slots (for instance, some prefixes in -6 such as the Rhetorical Interrogative *uβɣɣ-* are incompatible with the negative prefixes in -5; additional examples are presented in §11.5), it is possible to build verb forms with nearly any subset of the six prefixal slots of the outer domain.

- (3) *qapar kuw nɣzo a⁻⁶-mɣ⁻⁵-ɣu⁻⁴-tɣ⁻³-tú⁻²-wy⁻¹-ndza*
 dhole ERG 2SG IRR⁻⁶-NEG⁻⁵-CISL⁻⁴-PFV⁻³-2⁻²-INV⁻¹-eat
 ‘(Let us hope that) the dhole will not come to eat you.’ (elicited)

The Sensory Evidential existential verbs *ɣɣzu* ‘exist’ and *maŋe* ‘not exist’ are only compatible with the affixes of slot -2 (the second person and generic *kuw-*), but in this case these appear as infixes rather than prefixes (§14.2.2). The defective verb *kɣtupa* ‘tell’ cannot take any prefix (§14.3.4).

Non-finite verb forms follow a similar but slightly different template. As shown in Table 16.1 (§16.1), participles lack the -2 slot, have strong restrictions on the other slots: in -6 only the prospective *ju-* is possible), in -5 only *mɣ-* or *mu-*, in -3 only type A and B preverbs, and in rare cases in -1 only the progressive. Participial prefixes occur between slot -1 and the extended verb stem, and in addition some participle forms take a possessive prefix before slot -6.

11.2.2 Inner prefixes

Unlike outer prefixes, inner prefixes do not follow a rigid template. The sigmatic causative, in particular, can occur recursively (§17.2.7) and its relative position vis-a-vis the facilitative (§18.9.2) and reciprocal (§18.4.1) derivations is determined by semantic scope (§17.2.8).

Figure 11.1 represents the possible ways in which most inner prefixes (excluding the active, the denominal prefixes, the human antipassive, the distributed action derivation and the subject-oriented facilitative) can be combined with each other, excluding cases of lexicalized derivations.² Examples of attested complex forms can be found in the following sections:

- Antipassive *rx-* (APASS): §18.6.9
- Applicative *nu(y)-* (APPL): §17.4.4
- Sigmatic causative *su(y)-* (CAUS): §17.2.8
- Velar causative *ɣɣ-* (CAUS2): §17.3.4
- Facilitative *nuɣu-* (FACIL): §18.9.2
- Passive *a-* (PASS): §18.1.6
- Proprietary *sɣ-* (PROP): §18.8.6
- Reflexive *zɣɣ-* (REFL): §18.3.4, §18.3.6, §18.4.1.2
- Tropative *nx(y)-* (TROP): §17.5.5

Combinations of more than two inner prefixes are very rare, and mainly involve lexicalized derivations. Examples include *asɣmumts^humts^hɣm* ‘inform each other’ (from *mts^hɣm* ‘hear’) (4), which combines an *amu-*reciprocal, a sigmatic causative, and a reduplicated reciprocal derivations (see further discussion in §18.4.2.5; in 4 and following examples, inner prefixes are colored in red and outer prefixes in blue).

- (4) *yurza kurcat nu z-nu-a-su-ɣmu-mts^hu~mts^hɣm-nu juu-ɲu,*
 hundred eight DEM TRAL-AOR-RECIP-CAUS-RECIP-hear-PL SENS-be
 ‘[All] one hundred and eight [boys] went and informed each other.’ (2005 Norbzang)

²Lexicalized derivations do not necessarily follow these ordering rules, see §17.2.3 and §19.1.6.

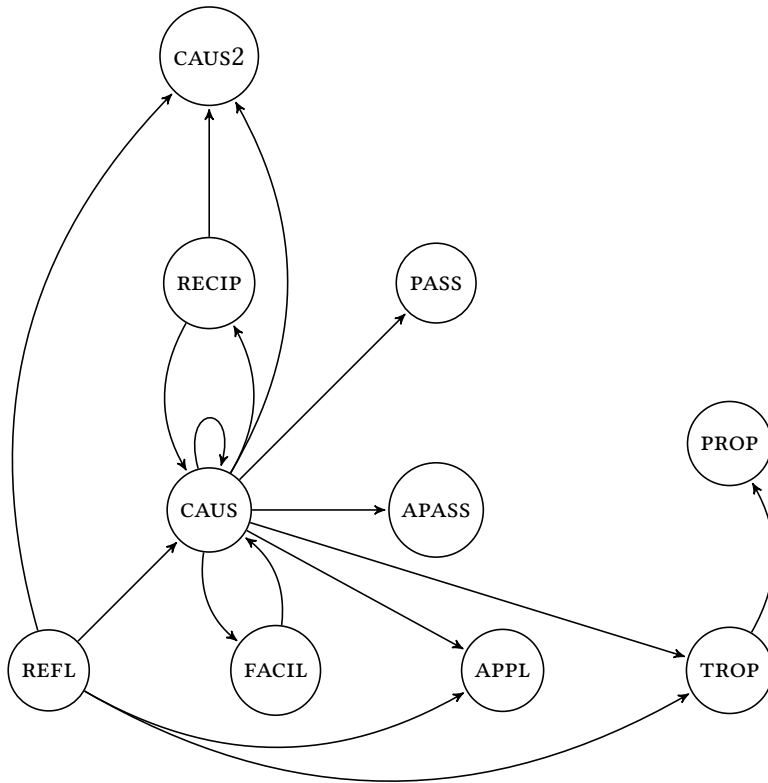

Figure 11.1: The possible linear orders of inner prefixes

A common case of non-lexicalized triple derivation is found when a doubly derived verb additionally takes the highly productive active prefix, as in (5).

- (5) *to-nuu-zɣɣ-cuu-fka-nuu zo nu-ŋu.*
 IFR-AUTO-REFL-CAUS-be.full-PL EMPH SENS-be
 ‘They ate to their full.’ (huli yu shanying-zh)

The position of the active prefix is very unusual (§19.1.2), and not easily representable in Figure 11.1. In non-contracting verb forms (§12.3), it occurs on the border between the outer and inner prefixal domain, following the inverse (as shown by example 6, with all six outer prefixal positions filled) and preceding the reflexive *zɣɣ-* (example 5 above, see also §18.3.5).

11 The structure of the Japhug verb

- (6) *u-pu-ra* *ny*, *a-my-yu-nu-tú-wy-nu-mbi*
QU-SENS-be.needed add IRR-NEG-CISL-PFV-2-INV-AUTO-give
'If he_i needs it_j, then he_i does not have to come and give it_j to you (if he does not want to).' (elicited)

In the case of contracting verbs (§12.3), the active is however inserted after the *a-* element (§19.1.2), even in verbs such as *atyr* 'fall' (7) where it is not analyzable as a prefix synchronically – the active is thus infixes within the verb stem.

- (7) *uzo pu-y<nu>tyr* *my-c^ha*.
3SG IPFV-<AUTO>fall NEG-can:FACT
'It cannot fall (detach) on its own (as its sticks on the clothes).'
- (18-qromJoR) {0003532#S171}

In addition, the active is infixes within the progressive *asu-* (§19.1.2, §14.3.2.7, §21.6.1.1), stranded between the outer and inner domain, as shown by (8). The active is also infixes when used with the Sensory existential verbs (§14.2.2, §19.1.2).

- (8) *ca* *ɸfa* *zo* *ku-o<nu>su-ndza-j*
meat completely EMPH PRS-PROG<AUTO>-eat-1PL
'We are eating only meat.' (2003 kandZislama)

While most of the prefixes in the inner domain follow a layered structure, the position of the active, which is determined by phonology and morphology rather than semantics, is clearly templatic (Bickel & Nichols 2007: 218, §11.5).

11.2.3 Stress

Unlike most Gyalrong languages (Sun 2005, Lin 2012, Gong 2018: 69–81), Japhug lacks tonal alternations, and stress retraction is very rare. Stress is located by default on the last syllable of the verb stem (all suffixes from slots +1 to +4, are unstressed, §11.3), and stress retraction only occurs with three prefixes: the inverse *-wy* (slot -1, §14.3.2.7), the negative sensory *múj-* (slot -5, §13.1.1) and the interrogative *u-* (slot -6, §21.7.4.1).

11.2.4 Phonotactic constraints

There are very strong phonotactic constraints on prefixes in Japhug. Of the fifty consonant phonemes that are contrastive in onset position (§3.2.1), only ten are attested in inner prefixes (§11.2.2): the nasal /m/ and /n/ (but not /ŋ/ and /ɲ/),

the glides /j/ and /w/, the dental and alveolo-patalal fricatives (/s/, /z/, /ç/ and /ʒ/), the rhotic /r/ (but not the lateral /l/) and the velar spirant /ɣ/ (but not its uvular counterpart /ʁ/). The vowels of the inner prefixes are limited to /a/, /u/ and /ɤ/. Outer prefixes (§11.2.1) other than person indexation (§14.2.1.2) and orientation preverbs (§15.1.1.1) show the same restriction.

Person indexation prefixes (second person *tu-*, generic *ku-* and the portman-teau *ta-* and *ku-*, §14.2.1.2, §14.8.3), are exclusively built from two unvoiced unaspirated stops, /k/ and /t/. This characteristic is shared with a subgroup of non-finite verb forms (§16.8.1, §16.8.3).

Orientation preverbs stand out among prefixes in allowing aspirated stops, palatal and labial stops, the lateral *l-* and the palatal nasal (§15.1.1.1, §21.5.4), as well as the vowels /u/ and /o/, which suggest a more recent grammaticalization (§15.1.1.4, Jacques 2012a: 92).

11.3 The suffixal chain

Japhug has four inflectional suffixal slots, fewer than the six slots of the outer prefixal domain (§11.2.1). Table 11.2 presents the suffixal template.

Table 11.2: The suffixal template

0	+1	+2	+3	+4
verb stem	Past transitive	First person	Dual/ Plural	Peg

Slot +1 only contains the *-t* suffix found in 1SG→3 and 2SG→3 of the Aorist, Inferential, Past Imperfective and Apprehensive (§21.1.3) of the transitive paradigm (§14.3.2.1). It can only be added on open syllable verb stems. It can only be followed by the 1SG *-a* indexation suffix. The form *-t* is only found in the dialects of Ercha, Kamnyu and Mangi, all dialects east of Rqakyo (including all Xtokavian dialects) have *-z* instead. A sound change **-s* → *-t* seems to have occurred in Kamnyu, but its conditioning is unclear. This suffix is cognate to the suffix *-z* in Zbu, which also occurs in 3SG→3' forms (Gong 2018: 160–161).

Slot +2 corresponds to the first person indexation prefixes 1SG *-a*, 1DU *-tçi* and 1PL *-ji* (§14.2.1.1, §14.3.2.1).

Slot +3 comprises the second and third person dual *-ndzi* and plural *-mu* indexation suffixes (§14.2.1.2). This slot cannot be filled if a non-singular first person suffix occurs in slot +2, and only contains at most one suffix. As a result of the

11 The structure of the Japhug verb

second constraint, in 3↔3 and 2↔3 configurations, it is not possible to index the number of both arguments. As shown in §14.3.2.6, these constraints are morphological and cannot be accounted for by purely phonological rules.

Slot +4 is restricted to the suffixal element *-ci* of the peg circumfix, which always occur in combination with the prefixal element *k(u)-* in slot -2, and can be elided (§11.4).

When no stress-bearing prefix is present (§11.2.3), the stress invariably falls on the last syllable of the verb stem. The prefixal slots +2 to +4 are always unstressed, and their vowel can become unvoiced (§3.7).

Combinations of 1DU/1PL *-tɕi/-j* (slot +2) with third or second dual or plural *-ndzi/-nuu* (slot +3) suffixes are prohibited (§14.3.2.6): for instance, †*puu-mto-tɕi-nuu* (AOR-see-1DU-PL, intended meaning: ‘The two of us saw them’) is categorically rejected. The only possible form is *puu-mto-tɕi* (AOR-see-1DU), with neutralization of the number of the object.

The only verb forms where slots +1, +2 and +3 are filled are the Aorist or Inferential 1SG→3DU/PL, as in (9). This is the verb form with the highest suffix-to-prefix ratio (3/1).

- (9) *puu-mto-t⁺¹-a⁺²-ndzi⁺³*
 AOR-see-PST:TR⁺¹-1SG⁺²-DU⁺³
 ‘I saw the two of them.’ (elicited)

The +4 slot is generally empty, except in two cases: the Inferential of contracting (intransitive) verbs, as in (10), and in combination with the *umɣ-* and *uβɣ-* modal prefixes (§11.4). In the latter case, it is potentially compatible with transitive verbs in the Aorist, and verb forms such as (11) with all four suffixal slots filled are acceptable, though no example is found in the corpus.

- (10) *to-k-ɣlulɣt-ndzi⁺³-ci⁺⁴*
 IFR-PEG-fight-DU⁺³-PEG⁺⁴
 ‘The two of them fought.’ (140428 yonggan de xiaocai Feng-zh)
 {0003886#S179}

The maximal suffixal chain as in (11) can only be built by integrating the circumfix *ku-...-ci* and the modal *umɣ-* prefix, so that the prefixal chain has at least three elements (*umɣ-puu-ku-*) constituting four syllables, as compared to the suffixal chain which contains four elements (*-t-a-ndzi-ci*) and three syllables (4/3 suffix-to-prefix ratio).

- (11) *umɣ-pu-ku-mto-t⁺¹-a⁺²-ndzi⁺³-ci⁺⁴*
 PROB-AOR-PEG-see-PST:TR⁺¹-1SG⁺²-DU⁺³-PEG⁺⁴
 ‘It looks like I have seen the two of them.’ (elicited)

Stem alternation (§12.2) involves in some cases suffixal elements such as *-t* in stem II (§12.2.1; see also §12.2.3) and *-m* in stem III (§12.2.2) which are not considered as part of this suffixal template. However, even if one were to analyze those elements as separate suffixes, they would occupy slot +1: the *-t* Past Tense transitive suffix and stem III are mutually incompatible, and in any case *-t* can only surface if the preceding verb stem has an open syllable. Moreover, evidence from bipartite verbs (§11.6.3), in particular example (35) suggests that stem III is not suffixal.

Derivational suffixes are very rare in Japhug, and only found in a handful of lexicalized examples such as the *-t* applicative (§19.7.2, §19.7.3). Since applicative suffix generates a closed syllable stem (for instance *ɣut* ‘bring’ from *ɣi* ‘come’), this suffix and the transitive Past tense *-t* suffix are mutually incompatible, and no verb form has more than four suffixes, even counting frozen morphology.

All of the suffixes presented in Table 11.2 occur in finite verb forms. Non-finite verbs in Japhug cannot take any suffix (§16.1).

Japhug clearly is a strongly prefixing language: it is possible to reach seven to even potentially nine prefixes in a single verb form by combining the six slots of the outer prefixal domain (§11.2) with one to three prefixes of the inner domain (see for instance 6), while four suffixes is the upper limit for the suffixal domain.

11.4 The peg circumfix

11.4.1 Morphology

The peg circumfix *ku-...-ci* comprises a prefixal element *k(u)-* inserted in slot -2 of the outer domain (§11.2.1), and a suffixal element *-ci*, which appears last in the suffixal chain, after all indexation suffixes, as shown by (12).

- (12) *ndzi-yi* *ra, nuuni* *mɯ-ɣɣ-k-ɣtuɣ-ɯ-*ci**
 3DU.POSS-relative PL DEM:DU NEG-IFR-PEG-meet-PL-PEG
 ‘Their relatives did not meet them (again).’ (2003 zrAntCW tWrme)

11.4.2 Optionality of the suffixal element

The *-ci* element of the circumfix is not always present, and thus in some cases only the peg prefix *k-* occurs.³ Example (13) with tail-head linkage (§25.1.7) for instance shows that the Inferential of *atuy* ‘meet’ can be either *ɲɣ-k-ɣtuy-ci* (the most common form) or *ɲɣ-k-ɣtuy* without the *-ci*, without change of meaning. In the whole corpus, out of 40 examples of *atuy* ‘meet’ in the Inferential, nine lack the *-ci* suffix.

- (13) *tcendi tcendi tce mts^hu ci ɲɣ-k-ɣtuy-ci. mts^hu*
 west west LOC lake INDEF IFR-PEG-meet-PEG lake
kɯ-ɲɯ-ɲɔɔ ci ɲɣ-k-ɣtuy-ci. tceɲɣre mts^hu
 SBJ:PCP-EMPH~be.black INDEF IFR-PEG-meet-PEG LNK lake
kɯ-ɲɯ-ɲɔɔ ci ɲɣ-k-ɣtuy tce tce,
 SBJ:PCP-EMPH~be.black INDEF IFR-PEG-meet LNK LNK
 ‘In the west, he found a lake, he found a lake that was very black. He found a lake that was very black, and...’ (28-smAnmi 92-94) {0004063#S87}

Forms with the simple prefixal peg *k-* without *-ci* are however never found in utterance-final contexts: they are always followed by a linker such as *tce* (§25.1.6), as in (13) above, where the two instances of *ɲɣ-k-ɣtuy-ci* have utterance final intonation and are followed by a pause, while *ɲɣ-k-ɣtuy* starts a new utterance group.

11.4.3 Functions of the peg circumfix

The circumfix has two different functions in the Kamnyu dialect of Japhug.

First, it occurs in contracting verbs (§12.3) to prevent vowel fusion when a D-type preverb is found before a contracting verb stem or prefix (§15.1.1.2). In (12) for instance, without the *k-* prefixal element, the inferential *ɲɣ-* would merge with the verb stem *atuy* as /ɲɣtuy/, becoming undistinguishable from the corresponding Imperfective *ɲɯ-ɣtuy* (§21.2.1). This function is not found in Xtokavian dialects of Japhug.

Second, the peg circumfix is found together with Rhetorical Interrogative *uβɣɣ-* and Probabilitative *umɣ-* prefixes. In these configurations, the negative prefixes cannot occur, and only type A orientation preverbs (Aorist, §15.1.1.1) are possible.

The minimal pair in (14) between *uβɣɣ-ɲu* and *uβɣɣ-kɯ-ɲu-ci* provides an illustration of the semantic function of the circumfix: without it, the Rhetorical

³Elision of prefixal *ku-* is also found in some rare forms, see (17) below.

Interrogative generally denotes worry/apprehension that the action could take/have taken place (14a), while the combination of the Rhetorical Interrogative and the circumfix has the negative epistemic modality value ‘it seems like X did/does not Y’ (14b).

- (14) a. *nɣ-ŋga kɣ-tu-nu-tʂuβ uβrɣ-ŋu ma*
 2SG.POSS-clothes AOR-2-AUTO-sew RH.Q-PEG-be-PEG LNK
 ‘You didn’t sew your garment, did you? (worried that the subject might have sewed his/her garment)’ (elicited)
- b. *nɣ-ŋga kɣ-tu-nu-tʂuβ uβrɣ-ku-ŋu-ci ma*
 2SG.POSS-clothes AOR-2-AUTO-sew RH.Q-PEG-be:FACT-PEG LNK
ɲu-nu-spov ɕti
 SENS-AUTO-have.a.hole be.AFF:FACT
 ‘It looks like you haven’t sewed your garment, it still has a hole.’
 (elicited)

With the Probabilitative *umɣ-*, the use of the circumfix (15c) is associated with a lesser degree of confidence than the corresponding form without it (15a). Tshenzin explains the meaning of (15c) with the Inferential (15d).⁴

- (15) a. *umɣ-jɣ-azyut*
 PROB-AOR-arrive
- b. *tʂ^huɣ jɣ-azyut t^haŋ*
 probably AOR-arrive SFP
 ‘He probably has already arrived.’ (elicited)
- c. *umɣ-jɣ-ku-zyut-ci*
 PROB-AOR-PEG-arrive-PEG
- d. *jo-zyut u-mdov*
 IFR-arrive 3SG.POSS-colour
 ‘It seems that he has probably arrived.’ (elicited)

The minimal pair above shows that the circumfix is not a simple secondary morphological exponent of the Inferential, but has a specific modal and evidential value. However, it is not obvious at this stage that the combination of the circumfix with Rhetorical Interrogative and Possible modality prefixes can be analyzed compositionally at the synchronic level in the Kamnyu dialect of Japhug, and I therefore use the arbitrary gloss ‘peg’ for this formative.

⁴Note that the Inferential preverbs are not compatible with the Probabilitative prefix (§21.7.2).

11 The structure of the Japhug verb

The *ku-* prefixal element competes with indexation prefixes in slot -2 (§11.2.1). Since the 2→1 portmanteau *ku-* prefix has the same shape as the peg prefix, transitive verbs can present ambiguity between 2→1 (§14.3.2.3) and 1→3 (§14.3.2.1) configurations, as in (16), a verb forms with two possible interpretations.

- (16) *umx-nu-ku-nu-jmut-a-ci*
 PROB-AOR-PEG/2→1-AUTO-forget-1SG-PEG
 ‘It looks I forgot about it.’ (*ku-* = PEG)
 ‘It looks like you have forgotten me.’ (*ku-* = 2→1)

The second person *tu-* and 1→2 portmanteau *ta-* are dominant in slot -2, and the peg prefixal element *ku-* disappears in 2→3 (17) and 1→2 configurations (18).

- (17) *umx-nu-tu-nu-jmut-ci*
 PROB-AOR-2-AUTO-forget-PEG
 ‘It looks like you have forgotten about it.’ (elicited)
- (18) *umx-pu-ta-mto-ci*
 PROB-AOR-1→2-see-PEG
 ‘It looks like I have seen you.’ (elicited)

The inverse prefix, although located in slot -1, is incompatible with the peg circumfix: both †*umx-nú-wy-nu-jmut-a-ci* (PROB-AOR-INV-AUTO-forget-1SG-PEG) and †*umx-nu-kiú-wy-nu-jmut-a-ci* (PROB-AOR-PEG-INV-AUTO-forget-1SG-PEG) are incorrect, and the only way to express this meaning is with the Inferential in combination with the complement-taking noun *u-mdov* (19) (§21.8.3.1).

- (19) *uzo ku pʻ-wɣ-nu-jmut-a u-mdov*
 3SG ERG IFR-INV-AUTO-forget-1SG 3SG.POSS-colour
 ‘It looks like he has forgotten about me.’ (elicited)

Although complex forms such as (15c), (16), (17) or (18) can be elicited, in the corpus the combination of circumfix with Rhetorical Interrogative or Probabilitative prefixes only occur on stative verbs in 3SG form, and mainly with copulas, existential or modal auxiliaries.

The Japhug *-ci* suffixal element is probably cognate with the Mediative *-cə* in Tshobdun (Sun 2017) and the non-egophoric *ki* in Zbu (Gong 2018), which however have a much larger distribution. The *k(u)-* prefixal element is related to the non-finite *ku-* prefixes (§16.8.1) and some related finite forms (§14.8.3).

11.5 Templatic vs. layered morphology

While the inner prefixal domain follows a layered structure (except for the autive prefix, §11.2.2), the outer prefixal chain (§11.2.1) and the suffixal chain (§11.3) are rather to be described in terms of templatic morphology. Each of the slots in these chains is rigid in the Kamnyu dialect: there is no free affix ordering as in Kiranti languages like Chitang (Bickel, Banjade, et al. 2007). We observe four specifically templatic features (Bickel & Nichols 2007: 216–218).

First, several non-adjacent dependencies (or mutual incompatibilities) are observed between prefixes, suffixes and stems, reflecting the fact that some TAME categories and person configurations are encoded by formatives in different slots. Some conspicuous examples are listed below.

- Morphological transitivity is encoded by seven independent morphological and redundant features in various slots (§14.3.1).
- The Aorist is marked by combining A-type orientation preverbs (slot -3, §15.1.1.1), Stem II (§12.2.1) and the past transitive *-t* (slot +1, §11.3).
- The Irrealis (§21.4.1.1) requires *a-* in slot -6, a type A preverb in slot -3 and stem III (§12.2.2.2) when the person configuration allows it, as in (20) below.
- The peg circumfix (slots -2 and +4, §11.4) occurs in conjunction with either some modal prefixes (slot -6) or type D preverbs (slot -3).
- Person configuration (direct vs. inverse, §14.3.2.8) is marked by the inverse prefix (slot -1, §14.3.2.7), the contrast between stem I and stem III (§12.2.2.2) and the past transitive *-t* (slot +1, §11.3). The former is incompatible with the latter two (which occur in complementary distribution).

Example (20) illustrates (coloured in red) the non-adjacent dependency between *a-* (-6), the type A preverb (-3) and stem III.

- (20) *a-yuu-tx-tuu-t^he*
 IRR-CISL-AOR-2-ask[III]
 ‘Come and ask [for her hand in marriage].’ (150826 liangshanbo
 zhuyingtai-zh) {0006244#S124}

Second, the position of some prefixes in the chain is independent of the semantic scope of the outer prefixes between themselves, and of their scope with

11 The structure of the Japhug verb

regards to the inner prefixes. In particular, the causative prefix, located in the inner domain (§11.2.2), has ambiguous scope with the negative (§17.2.4.4) and associated motion prefixes (§17.2.4.5).

Third, the allomorphy of more inwards prefixes is in some cases sensitive to more outward prefixes: for instance, the allomorphy of the inverse (§14.3.2.7) in slot -1 depends on the preceding prefixes: in particular, modal prefixes in slot -6 do not select the same allomorph as the other prefixes.

Fourth, bipartite verbs (§11.6.3) offer cases of verb forms with more than one head.

11.6 Wordhood

11.6.1 Criteria for wordhood

Some languages of the Trans-Himalayan family like Bantawa or Galo present conflicting morphosyntactic and phonological domains (Post 2009; Schiering et al. 2010; Doornenbal 2009) making an unambiguous definition of ‘words’ problematic.

In Japhug, the verb presents several phonological and morphological domains, represented in Table 11.3. Each of the domains is coloured in grey; slots partially included in the domain in certain contexts are represented in light grey.

Table 11.3: Morphological and phonological domains in the Japhug verb

	-6	-5	-4	-3	-2	-1	extended stem	+1	+2	+3	+4	enclitics
A	[Dark Grey]											
B	[Dark Grey]											
C	[Dark Grey]											
D	[Dark Grey]						[Light Grey]	[Light Grey]	[Light Grey]	[Light Grey]	[Light Grey]	[Light Grey]

Domain A represents non-adjacent dependencies: as argued in §11.5, the suffixal element *-ci* of the peg circumfix in slot +4 (§11.4) is selected by some modal prefixes in slot -6, showing that dependencies across formatives cover the whole verb complex from the beginning of the outer prefixal chain (§11.2.1) to the end of the suffixal chain (§11.3).

Domain B corresponds to the minimal obligatory free form: the suffixal element *-ci* is not included because it is optional (§11.4) and the dual and plural suffixes in slot +3 are also optional in specific conditions (§14.6.1.1).

Domain C indicates the slots that can receive stress. It general is found on the last syllable of the verb stem by default, but some prefixes attract stress (§11.2.3). Slot -6 receives stress when it is filled by interrogative prefix *ú-* followed by a monosyllabic verb form (§21.3.1), or when the other prefixes merge with the inverse *-wy*. Tautosyllabic suffixes are never stressed (§11.3), but 1SG suffix *-a* merges with the last syllable in some cases (§3.3.1.3).

Domain D correspond to the prefixal slots selecting the allomorph *-wy* of the inverse prefix when directly followed by it, and able to interact with the contracting vowel of the verb stem (§12.3), either by undergoing vowel fusion or by insertion of an epenthetic *-j-*.

These four domains, to which the extended verb stem (including the inner prefixes, §11.2.2) can be added, are concentric: the domain boundaries do not overlap. In this grammar, **domain A** is chosen as the verbal word, because in addition to non-adjacent dependencies, all formatives contained within it have a fixed position, and no external element can be inserted.

There are no proclitic markers which could be candidates to be analyzed as prefixes in Japhug. Some enclitic linkers and particles are phonologically attached on the verb, but there is clear evidence that they cannot be analyzed as suffixes (§11.6.2). Bipartite verbs (§11.6.3) offer a more serious challenge to the definition of wordhood, but problematic forms are extremely rare and limited.

11.6.2 Enclitics

Some particles and linkers are cliticized on the verb stem, and could seem to behave as suffixes.

The sentence final particle *wo* (§10.4.1) is generally a free-standing word, but it can optionally be phonologically attached to the verb as in (21). In these cases, it bears a stress, possibly analyzable as a effect of intonation.

- (21) *a-χpi* *ci* *pu-fcxt=ó*
 1SG.POSS-story INDEF IMP-tell=SFP
 ‘Tell me a story.’ (140511 yiqianlingyiye yinzi-zh) {0003963#S30}

There are two pieces of evidence showing that *=o* is not a verbal suffix. First, even in cliticized form, its locus is not specifically the verb, but rather the last word of the sentence: in (22), *=o* cliticized on the predicative noun *u-mdob* ‘colour’, ‘it looks like...’ (§21.8.3.1).

11 The structure of the Japhug verb

- (22) *ma qac^hya yur u-me pjɣ-cti u-mdob=o.*
 LNK fox GEN 3SG.POSS-daughter IFR.IPFV-be.AFF 3SG.POSS-colour=SFP
 ‘It looks like she (the main character of the story) was the daughter of a fox.’ (150909 xiaocui-zh) {0006386#S161}

Second, *wo* actually occurs last in the chain of sentence final particles. It follows for instance the hearsay particle *k^hi* in (23),

- (23) *<aizheng> ɲu-p^hɲn k^hi wo*
 cancer SENS-be.efficient HEARSAY SFP
 ‘It can cure cancer, it is said.’ (20-grWBgrWB) {0003554#S68}

This hearsay particle is never phonologically cliticized on the verb, and moreover can be separated from the verb by the emphatic particle *zo* (§26.1.1), as in (24).

- (24) *u-tur-yɲndzo saχab zo k^hi.*
 3SG.POSS-NMLZ:DEG-be.cold be.extremely:FACT EMPH HEARSAY
 ‘It is said that [during an eclipse], it is extremely cold.’ (29-mWBZi) {0003728#S104}

The additive linker *nɣ* occurs in additive repetition (§19.4) and in conditionals (§25.2.1). It is always an enclitic, as indicated by the vowel *ɣ*, which can never be stressed in word-final position in Japhug (§3.3.1). Were *nɣ* analyzed as a suffix, an additional +5 slot would be necessary, since it can follow the *-ci* suffixal element, as in (25).

- (25) *to-kuu-ɣtɕ^huɰz-ci=nɣ to-kuu-ɣtɕ^huɰz-ci*
 IFR-PEG-sneeze-PEG=ADD IFR-PEG-sneeze-PEG
 ‘He sneezed again and again.’ (140515 jiesu de laoren-zh) {0004004#S132}

In conditional constructions, this linker co-occurs with initial reduplication (§12.4.1.2, §25.2.1). However, although *nɣ* is the most common linker on the protasis on conditionals, it is not required, and other linkers such as *tɕe* are also attested, as in (26), and there is no strict non-adjacent dependency between *nɣ* and reduplication (§11.6.1).

- (26) *nuu tu-tɣ-tu-tut tɕe q^he tɕe rcanuu nɣzo rdɣstab*
 DEM COND~AOR-2-say[II] LNK LNK LNK UNEXP:DEG 2SG stone
ɲu-tur-ɣβzu
 IPFV-2-become
 ‘If you tell [them] about it, you will be turned into stone and...’ (150902 hailibu-zh) {0006316#S81}

In additive function, *nɣ* is not specific to verbs (§8.2.6), and the emphatic *zo* can be inserted between the verb and this linker (27).

- (27) *tcendɣre jɣ-ari nɣ jɣ-ari zo nɣ*
 LNK AOR-go[II] ADD AOR-go[II] EMPH ADD
 ‘He went again and again.’ (2005 Norbzang)

For these reasons, *nɣ* is not analyzed as a part of the verbal word in Japhug.

11.6.3 Bipartite verbs

Bipartite verbs comprise two morphologically active stems, which despite having affixes of their own are combined together in one phonological word, sharing in some cases whole prefixal or suffixal chains (Jacques 2018a). Following the Kirantological tradition (for instance Doornenbal 2009 or Schackow 2015), the first verb stem is referred to as V_1 , and the second one as V_2 .

The main features of bipartite conjugation can be explained using *stu=mbat* ‘try hard’, ‘do one’s best’, the most common bipartite verb. This verb has four possible conjugation patterns, illustrated in Table 11.4 imperative second dual form ‘try hard (the two of you)’, which contains one prefix (orientation preverb, slot -3, §11.2.1) and one suffix (indexation suffix, slot +3, §11.3).

Table 11.4: Four degrees of morphological integration

Type	Example	V_1 suffix	V_2 prefix
A (quasi-SVC)	<i>ɣɣ-stu-ndzi ɣɣ-mbat-ndzi</i> IMP- V_1 -DU IMP- V_2 -DU	✓	✓
B (right-dominant)	<i>ɣɣ-stu=ɣɣ-mbat-ndzi</i> IMP- V_1 -IMP- V_2 -DU		✓
C (left-dominant)	<i>ɣɣ-stu-ndzi=mbat-ndzi</i> IMP- V_1 -DU- V_2 -DU	✓	
D (quasi-compound)	<i>ɣɣ-stu-mbat-ndzi</i> IMP- V_1 - V_2 -DU		

Type A bipartite verbs are lexicalized serial verb constructions (§25.1.5): the two verb stems are not phonologically integrated, and each of them takes both prefixes and suffixes. No word can be inserted between *stu* and *mbat* in the corpus, unlike other examples of SVC in Japhug. This is however not the case with all

11 The structure of the Japhug verb

bipartite verbs. For instance, in the case of *fse = raj* ‘happen so many things’, it is possible to repeat the subject, as in (28).

- (28) *nura pu-fse nura pu-raj*
 DEM:PL PST.IPFV-be.like DEM:PL PST.IPFV-last.a.long.time
 ‘All these things happened.’ (many attestations of this sentence, occurs in traditional stories typically to avoid repeating sentences when a character tells another character what has happened previously)

In types B and C, the two conjugated verb forms merge phonologically, and either the suffixal chain of the first verb (in the case of the right-dominant B type, where the V_1 has a reduced form and the V_2 preserves the full form) or the prefixal chain of the second one (left-dominant) are removed. For instance, in (29) the right-dominant bipartite verb has only one dual suffix *-ndzi*⁺³ on the V_2 , while the prefixal chain *a*⁻⁶-*tr*⁻³-*tuu*⁻² (IRR-PFV-2) is repeated on both the V_1 and the V_2 . The boundary between the V_1 and the V_2 , transcribed with a clitic sign =, does not conform to the phonological rules of word-internal morpheme boundaries: for instance, no vowel contraction occurs between the Irrealis *a*- and the preceding *-u* in (29), either as *u-a* ⇒ /o/ (§12.3) or *u-a* ⇒ /wa/ (§14.2.1.1). In addition, this bipartite verb form has two stresses, one on each verb stem.

- (29) *a-tr-tuu-stu=a-tr-tuu-mbat-ndzi*
 IRR-PFV-2-try.hard(1)=IRR-PFV-2-try.hard(2)-DU
 ‘(While I am gone), may the two of you do your best.’ (smanmi 2003.2)

The prefixal chain must be complete: a partial copy such as †*a-tr-tuu-stu = tu-mbat-ndzi* with only the second person *tuu-* prefix on the V_2 is categorically rejected. Likewise, in left-dominant bipartite verbs, the suffixal chain has to be complete on both the V_1 and the V_2 . This specificity is by no means universal even in Trans-Himalayan: in Kiranti languages for instance, the V_1 generally only preserves a sub-set of the suffixal chain, as illustrated by the Bantawa example (30) below, where the chain *-in-ka* occurs in reduced form *-in* on the V_1 *k^hat-* ‘go’.

- (30) *k^har-in lont-in-ka*
 go-1/2PL come.out-1/2PL-EXCL
 ‘We shall rise again.’ (Doornenbal 2009: 254)

In type D, the two verbs come to share the same prefixal and suffixal chain, with no intervening affix between the two verb stems.

Table 11.5 summarizes all bipartite verbs discovered up to now in Japhug. Type C conjugation is only attested with *stu = mbat*.⁵ Question marks indicate that the forms in question are only attested in a few non-finite forms.

The important proportion of Tibetan loanwords in this list is particularly noteworthy: = *raj*, *zduy = sɲɻl*, *nts^hɻβ =*, *rga =*, are from རིང་ *riŋ* ‘long’, སྤྲུག་བསྐྱེད་ *sdug.bsɲal* ‘torment’, འཚོབ་ *ts^hab* ‘anxious’, དགའ་ *dga* ‘glad’, respectively.

Bipartite verbs cannot be easily subjected to verbal derivations. The only example that could be elicited is the tropative verb (§17.5) *ny-stu-mbat* ‘consider that X tries hard’. Only the quasi-compound form of the bipartite verb can be derived. The derivational prefix *ny-* cannot be repeated on the *V*₁ and the *V*₂ (a form such as †*ny-stu = ny-stu* is incorrect).

Table 11.5: Bipartite verbs in Japhug

Bipartite verb	A	B	C	D
<i>stu = mbat</i> ‘try hard’	✓	✓	✓	✓
<i>mu = cuy</i> ‘be terrified’	✓			
<i>χɕu = maβ</i> ‘thank a lot’	✓	✓		
<i>nts^hɻβ = rlu</i> ‘be in a hurry’		✓		✓
<i>fse = raj</i> ‘happen so many things’	✓			
<i>k^hruu = jɻβ</i> ‘be extremely dry’	✓			✓
<i>zduy = sɲɻl</i> ‘suffer extremely’	✓?			✓
<i>rga = le</i> ‘be extremely happy’	✓?	✓		
<i>rga = χi</i> ‘be extremely happy’	✓?	✓		
<i>NEG + spa = NEG + rka = tu/me</i> ‘be guilty/innocent’	✓			✓

There is only one bipartite transitive verb, *NEG + spa = NEG + rka = tu/me* ‘be guilty/innocent’, which is actually even tripartite, since its always occur with an existential verb. It means ‘be guilty’ when used with the affirmative existential verb *tu* ‘exist’ and ‘be innocent’ with the negative one *me* ‘not exist’ (§13.1.2). The *V*₁ and *V*₂ require a negative prefix (§13.1.3). Both type A (31, 33) and type D (32) conjugations are attested. The existential verb is always an independent word, and never takes person/number indexation in this collocation.

⁵In Kiranti languages, by contrast, right-dominant bipartite verbs (with partial suffixal chain on the *V*₁, as in 30) are by far the most common option (Jacques 2018a).

11 The structure of the Japhug verb

- (31) *mɣ-tu-spe* *mɣ-tu-rke*
 NEG-2-be.innocent(1)[III]:FACT NEG-2-be.innocent(2)[III]:FACT
me
 not.exist:FACT
 ‘You_{sg} are innocent.’ (elicited)

- (32) *mɣ-tu-spa=rka-ndzi* *me*
 NEG-2-be.innocent(1)-be.innocent(2):FACT-DU not.exist:FACT
 ‘You_{du} are innocent.’ (elicited)

The verb stems *spa* and *rka* are always in finite form: only the existential verb takes non-finite prefixes. In (33) the subject participle prefix *ku-* occurs on the negative existential *me*, while *spa* and *rka* are found in Factual Non-Past. This example suggests that *spa* and *rka* are located in a subject complement clause selected by the existential verb (§22.5.1.2).

- (33) [*mk^hɣrman*] [*mɣ-spa-nuu* *mɣ-rka-nuu*]
 people NEG-be.innocent(1):FACT-PL NEG-be.innocent(2):FACT-PL
ku-me] *nuu* *zimk^hɣm* *pjɣ-su-sat* *pjɣ-ra*
 SBJ:PCP-not.exist DEM a.lot IFR-CAUS-kill IFR.IPFV-be.needed
rcanu, *turme ra ku* *wuma zo* *pjɣ-q^ha-nuu*
 UNEXPECTED man PL ERG really EMPH IFR-hate-PL
 ‘As he had to have many innocent people killed, people hated him.’
 (hist140514 xiee de shewang-zh) {0003994#S76}

Although morphologically transitive (§14.3.1), as shown by the presence of stem III alternation in SG→3 non-past forms (§12.2.2.1), in examples (31) and (34), the direct object is dummy and cannot be overt.

- (34) *mɣ-spe-a* *mɣ-rke-a*
 NEG-be.innocent(1)[III]:FACT-1SG NEG-be.innocent(2)[III]:FACT-1SG
me
 not.exist:FACT
 ‘I am innocent.’ (elicited)

Example (35), where both *spa* and *rka* are in stem III form (*spe*= and *rke*, respectively) reveals two facts about type D conjugation. First, stem III alternation, although historically partially suffixal in origin (§12.2.2.1), is synchronically disjunct from the suffixal chain. Second, although type D forms could appear at first

glance to be simple compound verbs (§20.12), the presence of stem alternation on both V_1 and V_2 , instead of having †*mɣ-tu-spa-rke* with alternation on the V_2 only, shows that the two verb roots are still morphologically active.

- (35) *mɣ-tu-spe=rke* *me*
 NEG-2-be.innocent(1)[III]-be.innocent(2)[III]:FACT not.exist:FACT
 ‘You_{sg} are innocent.’ (elicited)

12 Non-concatenative verbal morphology

While Japhug lacks tonal alternations like most Gyalrongic languages (Sun 2005; Lai 2017; Gong 2018; Zhang 2018), non-concatenative segmental alternations are common.

This chapter briefly presents derivation onset alternations (§12.1), and then provides a detailed account of inflectional stem alternations (§12.2), vowel contraction (§12.3) and partial reduplication (§12.4) in verbal morphology.

12.1 Onset alternations

While most of the prefixal derivation morphology in Japhug is fairly concatenative, a handful of prefixal morphological processes involve consonantal alternations.

Prenasalization is found in the anticausative (§18.5) and a handful of frozen verb forms (§19.7.9, §17.2.2.4). In all cases, it is probably the result of the fusion of a nasal prefix with an unvoiced stop/affricative, turning it into the corresponding voiced prenasalized obstruent (§18.5.1.2).

Another type of consonant alternation is the β - \rightarrow b - fortition in the causative verb *zbraβ* ‘attach together’ (§17.2.2.7).

12.2 Stem alternations

Northern Gyalrong languages have three verbal stems, labeled I, II and III following Sun (2000a) (Situ dialects lack stem III, but some varieties have additional stems I' and II', see Zhang 2018). Stem I is the default form, stem II mainly occurs in Aorist and Past Imperfective, and stem III occurs in the Non-Past sg \rightarrow 3 direct forms of some transitive verbs (§14.3.2.1).

In Japhug, no verb has more than two different stems. Stem II is different from stem I in only a handful of irregular verbs (§12.2.1), while stem III has been regularized (§12.2.2).

12.2.1 Stem II

12.2.1.1 Morphology

Unlike in Tshobdun (Sun 2000a), Zbu (Sun 2004; Gong 2018) and Situ (Lin 2003; Zhang 2018), stem II in Japhug is very limited, and only found in three irregular verbs and in a few derivations from them (Table 12.1).

Table 12.1: Stem II alternations in Japhug

Stem I	Stem II	Derivation
<i>ɕe</i> ‘go’	<i>-ari</i>	
<i>yi</i> ‘come’	<i>-ye</i>	
<i>ti</i> ‘say’	<i>-tut</i>	
<i>suxɕe</i> ‘send, let go’	<i>-sɣɣri</i>	Causative
<i>suti</i> ‘cause to say’	<i>-sutut</i>	
<i>nuɕe</i> ‘go back’	<i>-anuri</i>	Vertitive, Autive
<i>nuyi</i> ‘come back’	<i>-nuye</i>	
<i>nɣɕuɕe</i> ‘go around’	<i>-anɣruri</i>	Distributed action
<i>nɣtuti</i> ‘tell around’	<i>-nɣtutut</i>	

The *yi/ye* alternation has an exact correlate in Tshobdun (*wi/wɛʔ*, Sun 2000a: 175). The verb *ti* ‘say’ has an irregular correspondence with other Gyalrong languages, where an affricate onset is found (Tshobdun *ʔsə* ‘say’, Sun 2000a: 174, Situ *tsâ, tsis*, Zhang 2018: 318). In Zbu however, a unique alternation between affricate and stop is found in this verb (stem I *ʔsʰə*, stem II *ʔʰit*, Gong 2018: 225). The correspondence between the Japhug stem II *-tut* and its Zbu equivalent *ʔʰit* is regular (apart from the aspiration). The irregular paradigm of this verb in Zbu certainly has to be reconstructed to proto-Gyalrong. Situ and Tshobdun have generalized the affricate to stem II, while Japhug has remade the stem I by generalizing the dental stop.

Suppletion is observed in the paradigm of *ɕe* ‘go’, whose stem II *-ari* is perhaps related to the stem I of the verb ‘go’ found in some dialects of Zbu (*rɿ*, Sun 2004: 274). Xtokavian dialects of Japhug have *tʰɔl* as the stem II of this verb (Lin & Luoerwu 2003), a form borrowed from Tibetan རྒྱལ་ *tʰal* ‘go beyond, pass’.

The transitive verb *suxɕe* ‘send’, ‘let go’ is the causative of *ɕe* ‘go’, and its stem II presents an irregular vowel merger *suy + ari* → *sɣɣri*, instead of expected *ʔsɣri* or *ʔasuyri* (§17.2.2.6). Other derivations from *ɕe* ‘go’ also have suppletion, but the

alternations are regular. The autive and the vertitive *nu-* prefixes (§19.1, §19.2) in *nu-ɕe* ‘go by oneself’/‘go back’ are predictably infixes (§11.2.2) within the stem II *ari* as *a < nu > ri* (see examples 44 in §19.1.6 and 13 in §6.2.1). the distributed action derivation *nɣɕuɕe* ‘go around’ likewise has the expected reduplicated stem *-anɣruuri*.

The verb *nuyi* ‘come back’, vertitive of *yi* ‘come’, shows the expected stem II *nuye* with vowel alternation. Its lexicalized causative *suye* ‘invite’ on the other hand, has lost stem alternation, but appears to have generalized stem II (§17.2.2.7).

12.2.1.2 Distribution

In Japhug, stem II is mainly found in the Aorist (§21.5.1.1) and in the Apprehensive (§21.7.1.1). The verb *ti* ‘say’ also has stem II *tut* in the irregular Progressive Sensory form *ɲuu-ɣsu-tut*, *ɲuu-ɣs-tut* ‘he is/was saying’ (§21.3.2.1). In Zbu, stem II is also found in the Progressive (Sun 2000a, Gong 2018: 196).

Unlike Stem III (§12.2.2.2), Stem II is insensitive to person and number in all known Gyalrong languages.

12.2.2 Stem III

12.2.2.1 Morphology

In the Kamnyu dialect of Japhug, stem III is fully regular, and applies to all transitive verbs with an open syllable stem ending in a non-front vowel in the expected contexts (§12.2.2.2).

As presented in Table 12.2, two types of alternations are attested: (i) vowel fronting in the case of stems in *-a*, *-u*, *-uu* and (ii) *-m* suffixation with vowel unrounding for stems in *-o*. In Xtokavian dialects, the alternations are less predictable, as some verbs in *-u* and *-uu* can take the *-m* suffix (Lin & Luoerwu 2003, Jacques 2008: 231–234). Kamnyu, by comparison, has regularized the alternations by analogical levelling. A cognate suffix *-m* in stem III is also attested in Zbu (Gong 2018: 228–229).

Stem III in *-ɣm* undergoes regular vowel assimilation to *-am-* when followed by a 1SG *-a* suffix (§14.2.1.1). For instance, the 1SG→3SG Factual Non-Past of *mto* ‘see’ is *mtam-a* ‘I (will) see it/him/her’ rather than †*mtɣm-a*. Stem III with the fronted vowel *-e* change to *-i* when followed by *-a*: *ndze-a* ‘I (will) eat it’ is realized as [ndzia].

Vowel fronting in stem III originates from the fusion of the verb stem with a **-j* suffix (§3.3.3, Jacques 2004: 357, Jacques 2008: 234), cognate to the “transitivity marker” *-jə* in Tshobdun (Sun 2003: 496).

12 Non-concatenative verbal morphology

Table 12.2: Stem III alternations in the Kamnyu dialect of Japhug

Stem I	Stem III	type
-a	-e	vowel fronting
-u	-e	
-u	-i	
-o	-ɣm	-m suffixation

Rather than analyzing the *-m* suffix as a part of the stem III, it could alternatively be possible to view it as part of the suffixal chain. Under such an analysis, it would be located in slot +1 (§11.3). Bipartite verbs provide evidence against such an analysis however (§11.6.3).

12.2.2.2 Distribution

Stem III only occurs in finite verb forms. It is found in Factual Non-Past (§21.3.1.1), Egophoric Present (§21.3.3.1), Sensory (§21.3.2.1), Imperative (§21.4.2.1), Irrealis (§21.4.1.1) and Imperfective (§21.2.1) of transitive verbs in the 1SG→3, 2SG→3 and 3SG→3' configurations (§14.3.2.1).

Table 12.3 illustrates all five person configurations of the Factual Non-Past where stem III appears and a selection of other configurations where stem I is used instead. It has exactly the same distribution in the other TAME categories listed above.

Stem III encodes four morphosyntactic features, comprising both TAME and person indexation: direct configuration (§14.3.2.8), singular transitive subject, third person object and Non-Past tense.

12.2.2.3 Backformation

An indirect consequence of the perfect regularity of stem III formation (§12.2.2.1) is that in some rare cases, the stem I has been generated from the stem III by applying the alternations backwards.

The stem I of *k^ho* 'give', 'pass over' (§14.4.1) regularly corresponds to Tshobdun *k^hi* (as if from proto-Gyalrong **k^haj*). On the other hand, Zbu *k^hɔm*, *k^hɔm*, *k^hɔm* 'give' (Gong 2018: 229) and Tangut 𐄂𐄃¹¹⁰⁵ *k^hjow*^{1.56} (Jacques 2014c: 200–201, proto-Tangut **khjVm*) match the Japhug stem III *k^hɣm*. A possible hypothesis to account for these diverging correspondences would be that Japhug and Tshobdun have

Table 12.3: Stem I vs. Stem III in the paradigm of *mto* ‘see’

Person configuration	Stem	Example
1SG→3SG	III	<i>mtam-a</i>
1SG→3DU	III	<i>mtam-a-ndzi</i>
1SG→3PL	III	<i>mtam-a-nuu</i>
2SG→3	III	<i>tu-mtɤm</i>
3SG→3′	III	<i>mtɤm</i>
1DU→3	I	<i>mto-tɕi</i>
2DU→3	I	<i>tu-mto-ndzi</i>
3DU→3′	I	<i>mto-ndzi</i>
3′→3SG	I	<i>ɣu-mto</i>

preserved the original verb root, and that Zbu and Tangut have generalized stem III to the whole paradigm. However, there are three reasons why such an explanation is problematic.

First, the verb 𑄀𑄀¹¹⁰⁵ *k^hjow*^{1.56} is highly irregular, and therefore unlikely to have been analogized. Second, Zbu is phylogenetically closer to Tshobdun and Japhug than it is to Tangut, and therefore shared features between Zbu and Tangut are more likely to be due to common retention than to common innovation. Third, there is Japhug-internal evidence that the stem I *-o* is secondary.

The transitive verb *fkro* ‘put in order’, ‘arrange’, whose stem III is *fkɤm* is borrowed from the past tense of the Tibetan verb འགྲེམ་བཀའ་ *grem-bkram* ‘spread out’. The stem I *fkro* is clearly backformed from the stem III, by overapplication of the *-o/-ɤm* alternation. Some speakers treat this verb as having a non-alternating stem *fkɤm*, showing that backformation is still an ongoing process.

The case of *fkro* offers a model to analyze Japhug *k^ho* ‘give’, ‘pass over’ and Tshobdun *k^hi* (Jacques 2014c: 201): this verb originally had a stem I **k^hɔm* in proto-Gyalrong, preserved in Zbu, but underwent backformation to **k^haŋ* in the common ancestor of Japhug and Tshobdun, subsequently evolving to *k^ho* and *k^hi* by the application of regular sound laws. This is one piece of evidence that Tshobdun is closer to Japhug than it is to Zbu.

The regular stem III *βze* of the verb *βzu* ‘make’ does appear in some non-finite forms such as *c^hu-ku-βze* in (1) (see also 22 in §19.1.4), in the dummy transitive subject construction (§14.3.5), meaning ‘grow’ or in collocation with the noun *u-tsa* (in the meaning ‘be suitable’, §22.4.2.1) for instance.

12 Non-concatenative verbal morphology

- (1) <hulu> *nw si ci jw-ŋu, w-mat c^hw-kw-βze*

 INDEF LNK 3SG.POSS-fruit DEM 3SG.POSS-top IPFV:EAST-SBJ:PCP-be.thin
w-pa jw-kw-jpum ci c^hw-βze
 3SG.POSS-bottom IPFV:WEST-SBJ:PCP-be.thick INDEF IPFV-make[III]
jw-ŋu tce, nw <hulu> tu-svrm-nw.
 SENS-be LNK DEM gourd IPFV-call-PL
 ‘The gourd is a tree, one which grows fruits. It grows fruits that are
 thinner on the top part and thicker in the bottom, they are called ‘gourd’.
 (150825 huluwa-zh) {0006346#S2}

Rather than an exception to the rules described in §12.2.2.2, it is simpler to consider that a synchronic verb root *βze* ‘grow’ different from *βzu* ‘make’ has been created by backformation (§12.2.2.3) from finite imperfective forms such as *c^hw-βze* ‘it grows’ in (1). The stem *βze* however never occurs in past tenses (Inferential and Aorist), so that this verb is an example of partial and ongoing backformation.

Another possible example of the same type of backformation is discussed in §19.7.12.

12.2.3 Frozen *-t* suffix

Three verbs presented in Table 12.4 have two alternative stem forms in free variation, with an optional *-t* suffix. This suffix appears in all person and TAME forms without any semantic change; compare for instance the Imperfective 1PL forms *ku-ryzit-i* (IPFV-stay-1PL, example 132, §16.1.3.7) and *ku-ryzi-j* (IPFV-stay-1PL, example 23, §7.1.7), uttered by the same speaker. The two variants are freely interchangeable, but some speakers use the *-t* suffixed forms more frequently than others.

The optional *-t* is not synchronically relatable to the past tense *-t*, which is restricted to 1SG→3 and 2SG→3 Aorist and Inferential (§14.3.2.1), and never appears on intransitive forms, or to any of the frozen derivation *-t* suffixes (§19.7.2, §19.7.3).

It could be a trace of the stem II *-t* suffix, attested in the verb *tī, tuw* ‘say’ in Japhug (§12.2.1), and in a handful of other verbs in Zbu (Gong 2018: 224–225). In this hypothesis, these three verbs used to have a stem II with the *-t* suffix, but at the present stage the two stems have ceased to be morphologically contrastive.

Table 12.4: Frozen *-t* suffix in free variation

Base form	Alternative stem	Transitivity
<i>amdzu</i> ‘sit’	<i>amdzut</i>	vi
<i>rxzi</i> ‘stay’	<i>rxzit</i>	vi
<i>rxci</i> ‘pull’	<i>rxcit</i>	vt

12.3 Vowel contraction

Contracting verbs have polysyllabic stems whose first syllable is *a-*. All of these verbs are morphologically intransitive (§14.3.1), but some of them can have semi-objects or oblique arguments (§14.2.3). The *a-* element can be a valency-decreasing prefix (including the passive §18.1, reciprocal (§18.4 or distributed property §18.7 prefixes), a denominal prefix (the stative denominal *a-* §20.2.1 or a disyllabic denominal prefix with *a-* as its first syllable, §20.2), a deideophonic prefix (§20.9.3) or a synchronically non-analyzable element (as in *aro* ‘own’ or *amdzu* ‘sit’).

To represent vowel contraction in a straightforward way, the notation employed in this grammar separates the vowel of the preceding prefix and the contracting by a hyphen, the prefix is transcribed in its base form, and the result of the vowel contraction is indicated after the hyphen. For instance *pu-a-* is to be read as ‘prefix *pu-* merging with the contracting vowel as /pa/’, while *pu-ɣ-* indicates merger of the preverb with the contracting vowel as /pɣ/. This orthographic rule transcribes contracting vowels in several ways (*-ɣ-*, *-a-* or *-o-*) depending on the prefix with which they merge (see Table 12.5 below). It is important to note however that there is no contrast between *-a-*, *-ɣ-* and *-o-* as contracting vowels: there are simply morphologically-conditioned allomorphs.¹

This convention has the advantage of disambiguating verb forms that have become identical due to vowel contraction (for instance, *tx-ɣ-* vs. *tu-ɣ-*, both of which surface as /tɣ/), and making the verb forms more easily parseable in the corpus.

In Factual Non-Past unprefix verb forms, the *a-* element surfaces without alternation, as in (§2).

- (2) *nu ma aro-a me q^he*,
 DEM apart.from possess:FACT-1SG not.exist:FACT LNK
 ‘I don’t have anything else.’ (2003 divination) {0003364#S114}

¹The *a-* allomorph is used as citation form of contracting verbs.

12 Non-concatenative verbal morphology

The prefixes in slots -6, -5 and -4 can occur in direct contact with the contracting vowel *a-* only in Factual Non-Past non-second person forms (§21.3.1.1). The vowel of Rhetorical Interrogative *uβrɣ-*, Proximative aspect *ju-* (-6) negative *mɣ-* (-5) and associated motion prefixes *ɕu-* and *ɣu-* (-4) merge as *a-*: *uβrɣ-a* → /uβra-/ , *ju-a* → /ja-/ , *mɣ-a* → /ma-/ , *ɕu-a* → /ɕa-/ and *ɣu-a* → /ɣa-/ , as shown in *ɕu-anbaɣ-i* ‘we go and hide’ /ɕanbaki/ in (3), *mɣ-a-rɣt* ‘it has not yet been written’ /marɣt/ (example 7, §18.1.1).

ma,
 LNK
 ‘It looks like we should go and hide in the [hollow] boulder.’ (160706
 poucet6) {0006109#S61}

The interrogative *u-* in slot -6 does not merge with *a-*. Rather, an epenthetic *j-* consonant is inserted between the two, as in (4) with the verb *atsutsu* ‘have time’.

- (4) *a-wa turju ɣsu-ŋka tu-ti-a u-j-átutsu*

 ‘Father, do I have time to say three sentences?’ (2003 qachGa)
 {0003372#S175}

In all finite verb forms other than the Factual non-Past, the slot -3 (§11.2.1) is filled, and vowel contraction occurs between the vowel of the preverb and the *a-* element. The rules of contraction with preverbs are detailed in §15.1.1.2, but Table 12.5 presents a summary.

Type C preverbs, which are restricted to transitive verbs, never occur with contracting verbs. In the case of type D preverbs, vowel contraction is avoided by the insertion of the peg circumfix (see §11.4, §15.1.1.2).

These rules are not purely phonological, since the outcome of the vowel fusion with type A preverbs depends on the TAME category. For instance, in the case of the contracting verb *atɣr* ‘fall’, the type A DOWNWARDS *pu-* preverbs merges as /pɣ-/ in the Irrealis and Imperative (for example *a-mɣ-pu-ɣtɣr* /amɣpɣtɣr/ in 5) and as /pa-/ in the Past Imperfective and Perfective (*pu-atɣr* /patɣr/ in 6).

Table 12.5: Vowel contraction rules with orientation preverbs

TAME	Preverb type	Vowel of the preverb	Vowel contraction
Aorist	A	- <i>ɣ</i>	<i>ɣ-a</i> → /a/
		- <i>u</i>	<i>u-a</i> → /a/
Irrealis, Imperative	A	- <i>ɣ</i>	<i>ɣ-ɣ</i> → /ɣ/
		- <i>u</i>	<i>u-ɣ</i> → /ɣ/
Imperfective, Sensory, Egophoric Present	B	- <i>u</i>	<i>u-o</i> → /o/
		- <i>u</i>	<i>u-ɣ</i> → /ɣ/

- (6) *li pu-atɣɣ ɲuu-ɲu*
 again AOR-fall SENS-be
 ‘He fell down again.’ (2003 tWxtsa)

In slot -2, since contracting verbs are all intransitive, only the second person *tuu-* and the generic *ku-* prefixes and the prefixal element *k(u)-* of the peg circumfix can occur before the contracting vowel *a-*. The outcome of vowel contraction depends on the TAME category (§14.2.1.2: *tu-a-* /ta-/ in Factual Non-Past (*tu-atɣɣ* ‘you will fall’) and Aorist (*pu-tu-atɣɣ* ‘you fell down’) and *tu-ɣ-* /tɣ-/ Imperfective (*pju-tu-ɣtɣɣ* ‘you fall down’), Sensory, Egophoric Present, Irrealis, Imperative and Prohibitive (*ma-pu-tu-ɣtɣɣ* ‘don’t fall down’). With the peg circumfix, which appears in the Inferential, the vowel fusion is always *-k-ɣ-* (see example 12, §11.4).

Slot -1 only contains prefixes associated with transitive verbs, which are therefore incompatible with contracting verbs.

With non-finite verb form prefixes (§16), vowel fusion is always *u-ɣ* / *ɣ-ɣ*, as summarized in Table 12.6.

With inner prefixes, vowel contraction is also straightforward and yields *ɣ-* in all cases: for instance, the sigmatic causative, applicative and tropative of contracting verbs are *su-ɣ-* /sɣ-/ (§17.2.1.3), *nu-ɣ-* /nɣ-/ (§17.4.2) and *nɣ-ɣ-* /nɣ-/ (§17.5.1), respectively. The active *nu-* cannot undergo vowel fusion and is rather infixated after the contracting vowel *a-* (§11.2.2, §19.1.2).

The Progressive prefix *asu-* (§21.6.1.1), located in slot -1 (§11.2.1), can undergo vowel contraction in ways similar to those of contracting verbs, summarized in Table 12.7. The non-contracting active *nu-* and inverse *-wy* prefixes are rather infixated between the *a-* and the *-su/z-* elements.

12 Non-concatenative verbal morphology

Table 12.6: Vowel contraction with non-finite prefixes

Sensory	-3	<i>ɲu-</i>	<i>ɲu-ɣsu-, ɲu-ɣz-</i>	<i>/ɲɣsu-/</i> , <i>/ɲɣz-/</i>
Second person	-2	<i>tu-</i>	<i>tu-ɣsu-, tu-ɣz-</i>	<i>/tɣsu-/</i> , <i>/tɣz-/</i>
2→1	-2	<i>ku-</i>	<i>ku-ɣsu-, ku-ɣz-</i>	<i>/kɣsu-/</i> , <i>/kɣz-/</i>
peg	-2	<i>-(ku)-</i>	<i>k-ɣsu-, k-ɣz-</i>	<i>/kɣsu-/</i> , <i>/kɣz-/</i>
Inverse	-1	<i>wɣ-</i>	<i>-ɣ<wɣ>su-, ɣ<wɣ>z-</i>	<i>/ó(ɣ)su-/</i> , <i>/ó(ɣ)z-/</i>

Vowel contraction is not restricted to the prefixal verbal template. Nominal stems in *a-* are extremely few, but do present some instances of vowel contraction (§5.1.1.1). Vowel fusion involving the first person suffixes is discussed in §14.2.1.1.

12.4 Partial reduplication in verbal morphology

12.4.1 Initial reduplication

Verb-initial reduplication has a number of morphosyntactic functions, involving clause linking (conditionals §12.4.1.2, temporal clauses (§12.4.1.3), expressing increase of degree (§12.4.1.4), totality (§12.4.1.5) or temporal resilience (§12.4.1.6). With the possible exception of its use in the protasis of conditionals, all of the functions of the initial reduplication present an iconic component typical of reduplication crosslinguistically.

Initial reduplication belongs to inflectional morphology. The only cases of lexicalization involve grammaticalization of reduplicated finite verb form into a discourse marker (see §9.1.5.1 and §12.4.1.2 below).

12.4.1.1 Morphophonology

While initial reduplication follows the general rules of partial reduplication (§4.1), two additional rules have to be taken into account.

First, the outcome of the reduplication of the negative prefix *mu-* is *mu~mɣ-* with vowel alternation (§13.1.1), not distinguishable from that of the prefix *mɣ-*.

Second, when the initial syllable of the word contains more than one morpheme, as in the case of the *ɕ-* or *ʒ-* allomorphs of the translocative prefix combined with an orientation preverb (§15.2.1.2), reduplication can disregard morpheme boundaries, resulting in a replication of the two morphemes: *ɕ-kɣ-ts^{hi}-t-a* (TRAL-AOR-drink-PST:TR-1SG) thus yields *ɕ-kuu~ɕ-kɣ-ts^{hi}-t-a* as in (7). Tshendzin however also accepts reduplication of the first morpheme only, reduplicated with addition of *-u* (*ɕuu~ɕ-kɣ-ts^{hi}-t-a*).

- (7) *c^ha ckuu~ɕ-kɣ-ts^{hi}-t-a zo lu-βzi-a*
 alcohol ITER~TRAL-AOR-drink-PST:TR-1SG EMPH IPFV-be.drunk-1SG
ɲu
 be:FACT
 ‘Each time I go and drink alcohol I get drunk.’ (elicited)

Example (8) illustrates a third possible pattern, with reduplication of the orientation preverb *ɕ-tɣ-kuu-ts^hɣt* ⇒ *ɕ-tuu~tɣ-kuu-ts^hɣt* without affecting the associated motion marker.

- (8) *kwuki turme kuura ɕ-tuu~tɣ-kuu-ts^hɣt zo nuu*

 IFR-INV-kill-PL
 ‘All of these men who had went and tried [to discover the princesses’ secret] were killed.’ (140508 shier ge tiaowu de gongzhu-zh) {0003937#S31}

12.4.1.2 Protasis of conditional

There are three possibilities in Japhug to mark the verbs in the protasis of conditionals (§25.2.1): Irrealis (§21.4.1.5), Interrogative *u-* (§21.7.4.2) and initial reduplication. In the latter two cases, the verb is generally followed by the additive linker *mɣ*, as in (9).

12 Non-concatenative verbal morphology

- (9) *a-tɕu tu~tu-ŋu nɣ, pu-ta-suxɛt nu ci nu-ndun*

ra
 be.needed:FACT
 ‘If you are my son, recite [the mantra] that I have taught you.’ (2012
 Norbzang) {0003768#S188}

Conditional reduplication interacts with TAME categories. For instance, reduplicated Aorist can be used to refer to hypothetical future events as in (10). Without the *nɣ* linker, reduplicated Aorist can be interpreted as Iterative coincidence (§12.4.1.3).

- (10) *tu~tɣ-tu-tut nɣ tɕe pjw-ta-sat ŋu*
 COND~AOR-2-say[II] ADD LNK IPFV-1→2-kill be:FACT
 ‘If you tell [people] about [it], I will kill you.’ (150901 changfamei-zh)
 {0006352#S48}

The scope of the protasis can go beyond the clause containing the reduplicated verb. In (11), the protasis contains two clauses, the first one headed by the verb *mu~mɣ-pu-pe* with reduplicated conditional, and the second one with the verb *tu-ku-ŋke* without conditional marking.

- (11) *tɕeri tu-mɣpa kɔnɣ, tu-xtsa mu~mɣ-pu-pe*
 LNK GENR.POSS-sole also GENR.POSS-shoe COND~NEG-PST.IPFV-be.good

 GENR.POSS-sole LOC blister IPFV-put.in[III] be.usually.the.case:FACT
 ‘On the soles too, if one (wears) bad shoes and walks for a long time, one
 gets blisters on one’s sole.’ (27-tWfCAI) {0003710#S131}

The reduplicated conditional *pu~pu-ŋu* of the Past Imperfective of the copula *ŋu* ‘be’ has been grammaticalized as a topic marker *pupuwunɣ* ‘as far as... is concerned’ (§9.1.5.1).

12.4.1.3 Iterative coincidence

One of the meaning of initial reduplication with verbs in Aorist form is iterative coincidence (Jacques 2014a: 295–296). In this biclausal construction, the first clause with the reduplicated verb expresses the repetition of an event ‘every time

X' (§25.3.1), and the second clause (with a main verb in the Imperfective) the resulting situation, as in (12).

- (12) [kwiki tɕ^hemɣw ki si w-kw-p^hut
 DEM.PROX girl DEM.PROX wood 3SG.POSS-SBJ:PCP-cut
 tw-tɣ-ye zo], nunw rgɣnmw nw ɣw w-si

 ‘Every time the girl came to cut firewood, she would cut firewood for the
 old woman and fetch water for her.’ (150829 taishan zhi zhu-zh)
 {0006350#S26}

Although the semantic relationship between the two clauses is more a matter of temporal relationship rather than strict causality (for instance in example 12), this construction is clearly a subcase of the reduplicated conditional (§12.4.1.2).

12.4.1.4 Incremental

Verb-initial reduplication with adjectival stative verbs can express a gradual increase of degree ‘become more and more X’. This function occurs with TAME categories which have an inchoative meaning when used with stative verbs: the Imperfective (§21.2.6) as in (13) and (14), the Aorist (§21.5.1.3) and the Inferential (§21.5.2.4).

12.4.1.5 Totalitative

Totalitative reduplication occurs on the main verb of relative clauses (§23.3.2), expressing universal quantification (§9.1.3.1) of the relativized referent. It is attested in participial relatives (§16.1.1.2), finite relatives (§23.2.2) and also some partially lexicalized participles (§16.1.1.7).

In the case of participial relatives, the reduplicated syllable is the first syllable of the verb other than the possessive prefix, either the subject participle prefix *ku-* (16), the object participle *kɔ-* (17) or an orientation preverb (18).

 ‘All people from Praskyu down there who built/repared their houses
 went there and took stones to use for themselves.’ (140522 Kamnyu zgo)
 {0004059#S188}

In finite relatives, the verb lacks any overt nominalization marker other than the reduplication itself. In this construction, the relativized elements are either direct objects (as in 19 and 20 below), semi-objects or goals, but never subjects (§23.2.2).

- (19) *u-ro nura [icq^ha pu-pu-fcat-a] nura ku tce tce*

 INF-say DEM IFR-AUTO-forget
 ‘He called the names of all [the crops] he knew, but forgot to say
 ‘sesame.’ (140512 alibaba-zh) {0003965#S103}

Finite transitive verbs with totalitative reduplication and a 1SG subject can optionally take plural indexation (§14.3.2.1) corresponding to the relativized direct object with universal quantification. Object plural indexation in this case is rare (it is absent for instance in 19 above), and only one example is attested in the corpus: *pu~pu-mto-t-a-nu* (TOTAL~AOR-see-PST:TR-1SG-PL) ‘all those that I have seen’ (60, §14.3.2.6).

The totalitative subject participle of the existential verb *tu* ‘exist’ can take a possessive prefix, which is interpreted as a possessor, as in *a-ku~ku-tu* 1SG.POSS-TOTAL~SBJ:PCP-exist ‘everything that I have’. No other totalitative verb form allows possessor prefixation. In particular, since the subject participles of transitive verbs require a possessive prefix coreferent with the object (§16.1.1.1), totalitative reduplication is incompatible with these forms. For instance, to express the meaning ‘all those who help me’, forms such as †*a-tu~tu-ku-qur* (1SG.POSS-TOTAL~IPFV-SBJ:PCP-help) with reduplicated orientation preverb or †*a-ku~ku-qur* (1SG.POSS-TOTAL~SBJ:PCP-help) with reduplicated participial prefix are unacceptable, and universal quantification has to be expressed with other means, for instance *a-tu-ku-qur t^hamtçɾt* (1SG.POSS-IPFV-SBJ:PCP-help all).

Totalitative reduplication of transitive subject participle is only possible if no possessive prefix is present (see 56, §23.3.2).

12.4.1.6 Emphatic autive

When occurring in word-initial position, the autive prefix *nu-* can be reduplicated to express emphatic permansive ‘still *X* (regardless of whatever may happen)’, and such verb form can be repeated with the additive linker *nɣ*, as in (21).

12.4.2 Verb stem reduplication as secondary exponence

Prefixal partial reduplication of the verb stem is a secondary exponence, used in combination with a prefix, in several productive verbal forms listed in Table 12.8.

Stem reduplication occurs in two converbs, the gerund (§16.6.1 and the purposive converb (§16.6.2), together with a *sɣ(z)*- prefix cognate to that of the oblique participle (§16.1.3).

It is also found in four regular derivations: reciprocal (§18.4.1, on the *a*- prefix see §20.10.3), distributed action (§19.4), auto-evaluative (§19.5) and attenuative (§19.6). The attenuative differs from all other cases in that the vowel of the reduplicated syllable is in some cases *-ɣ-* rather than *-u-*.

Table 12.8: Productive verbal forms with stem reduplication and prefixation

Function	Example	Reference	
Gerund	<i>mu</i> 'fear'	<i>sɣ-mu~mu</i> 'fearing'	§16.6.1
Purposive converb	<i>jmut</i> 'forget'	<i>u-mɣ-juu-sɣ-jmu~jmut</i> 'in order not to forget'	§16.6.2
Reciprocal	<i>rqoɸ</i> 'hug'	<i>a-rqu~rqoɸ</i> 'hug each other'	§18.4.1
Distributed action	<i>mtsəɸ</i> 'jump'	<i>nɣ-mtsɯ~mtsəɸ</i> 'jump around'	§19.4
Auto-evaluative	<i>mpɕɣr</i> 'be beautiful'	<i>znɣ-mpɕɯ~mpɕɣr</i> 'think of oneself as beautiful'	§19.5
Attenuative	<i>wɣrum</i> 'be white'	<i>a-ɣrɣ~ɣrum</i> 'be whitish'	§19.6

The locus of reduplication is the last syllable of the verb stem, disregarding indexation suffixes. When the verb stem contains more than one syllable, the reduplicated syllable is infix. For instance, the gerund of *nɣre* 'laugh' is *sɣz-nɣru~re* 'laughing': the partially replicated material *-ru-* occurs between the two syllables *nɣ-* and *-re* of the verb stem. Additional reduplication is blocked on lexically reduplicated verb stems such as *ruru* 'guard' (§19.7.11) or *nuqambumbjom* 'fly': triplication is not attested in Japhug, unlike in Stau (Gates 2017).

Non-productive suffixal partial reduplication is found in a handful of antipassive (§18.6.5) and distributed action derivations (§19.4.2.1).

Irregular partial reduplication with *-oβ* or *-um* in the replicated syllable instead of regular *-u* are also attested (for instance *пхъиткѡѡ* ‘play around’ from *пхѡѡ* ‘have a good time’, §19.4.2.2).

12.4.3 Emphatic reduplication

Emphatic reduplication is a partial reduplication in *-u* targeting the final syllable of the stem like other cases of verb stem reduplication (§12.4.2). This inflectional reduplication has several related functions.

With adjectival stative verbs, emphatic reduplication indicates a high degree, opposite of the attenuative reduplication (§19.6): compare for instance *qarŋu~rŋe* ‘be deep yellow’ vs. *aqarŋu~rŋe* ‘be yellowish’. Reduplicated adjectival verbs are almost always attested in participial form, as in (23).

 SENS-be.yellow LNK SENS-EMPH~be.white SBJ:PCP-be.like
 ‘It is yellow and very white on the top of its head.’ (24-ZmbrWpGa)
 {0003628#S24}

With the negative existential verb *me* ‘not exist’, emphatic reduplication indicates radical non-existence ‘not (have/exist) ... at all’, as in (25).²

²In (25), the mother of the character Padma ‘Od’bar, who asked her about the identity of father, gives this answer in the hope that her son will not try to find the truth about the disappearance of his father and thereby run into a mortal danger.

- (25) *nx-wa pu-nnu-mu~me cti*
 2SG.POSS-father PST.IPFV-AUTO-EMPH~not.exist
 ‘You never had a father at all.’ (2012 Norbzang) {0003768#S123}

Emphatic reduplication also occurs with modal verbs such as the semi-transitive *rga* ‘like’ (26) and the transitive *spa* ‘be able’ (27) to express high degree.

- (26) *ku-rgu~rga zo turme ra maŋe-nu ma*
 SBJ:PCP-EMPH~like EMPH people PL not.exist:SENS-PL LNK
 ‘There are no people who like it a lot.’ (160706 thotsi) {0006133#S24}

 bird INF-speak SBJ:PCP-EMPH~be.able DEM ERG
 ‘The bird who was able to speak very well (said)’ (2012 Norbzang)
 {0003768#S25}

Often in combination with the autive *nu-* (§19.1.4), emphatic reduplication occurs in free-choice correlatives and in universal concessive conditional constructions (§25.2.3.3) as in (28), without any constraint of the verb category.³

- (28) *tu-ji sna tce, [tɕ^{hi} lɣ-wy-nu-ju~ji] zo*
 INDEF.POSS-field be.good LNK what AOR-INV-AUTO-EMPH~plant EMPH
pe
 be.good:FACT
 ‘(The type of earth called *trɕso*) is fit (to be used) as fields, whatever one plants in it, [the planting] will be good (successful).’ (25-cWXCWz)
 {0003636#S61}

Although emphatic reduplication is highly productive and regular, a handful of verbs have irregular reduplication patterns. The transitive verb *rxɕaɕ* ‘tread on’ has the emphatic form *rxɕaumɕaɕ* ‘trample’ (compare example 184, §18.8.2 with 180, §14.6.2) with *-um* reduplicated syllable (§19.4.2.2). The stative verb *mdi* ‘be complete’ has the emphatic form *mdoɕmdi* with *-oɕ* reduplication (§19.4.2.2), and *ts^hu* ‘be fat’ has the suffixed *-e* reduplicated form *ts^huts^he* ‘be very fat’.

The verb *fse* ‘be like’ has the irregular reduplicated form *-fsɣ~fse* alongside *-fsu~fse* in universal concessive conditionals (*tɕ^{hi} pu-nu-fsɣ~fse* ‘in any case’, example 33, §25.2.3.3).

³In (28), the subject of the verb *pe* ‘(it) is good’ is not the crop referred to by the interrogative pronoun *tɕ^{hi}*, but the planting activity. To analyze this example as a correlative, one would have to suppose that a complement clause such as *numu ky-ji* ‘planting that’ has been elided before *pe* (on *pe* ‘be good’ as a complement-taking verb, see example 196 (§24.5.8)).

13 Negation

Negation in Japhug is mainly expressed by negative prefixes (§13.1). It is symmetrical (Miestamo 2005): the presence of these prefixes is not systematically correlated with finiteness or TAME alternations.

In addition to negative prefixes, a periphrastic negative construction with sentence-final negative auxiliary is also attested (§13.2), and it is required in particular to mark double negation (§13.3).

13.1 Negative prefixes

13.1.1 Allomorphy

Four negative prefixes are found in Japhug: *mɣ-*, *mu-*, *ma-* and *múj-*. Their distribution is determined by TAME and finiteness.

The *ma-* prefix is restricted to prohibitive verb forms (§21.4.3.1), and always combined with type A orientation preverbs (§15.1.1.1).

The stress-bearing (§11.2.3) *múj-* prefix (see 1 below) is a portmanteau of negation and Sensory evidential (§21.3.2). The Sensory prefix *juu-* has the expected negative form *mu-juu-* only in the case of contracting verbs (§21.3.2.1). Otherwise, when the prefixal sequence *mu-juu-* occurs, the *juu-* preverb marks the Imperfective (§21.2.1).

The form *mɣ-* is found on non-finite verbal forms without any orientation preverb (§16.1.1.2, §16.1.2.2, §16.2.1.2, §16.3.1), in Factual Non-Past and Irrealis form (see 3 above in §11.2.1), and also when preceded by the interrogative *u-* (§21.7.4.1) as in (1) and the Proximative *ju-* (§21.6.2) as in (2).

(26-NalitCaRmbWm) {0003676#S102}

13 Negation

- (2) *jufɛur ju-mɣ-c-tɣ-t^hu-t-a zo*
 yesterday PROXM-NEG-TRAL-AOR-ask-PST:TR-1SG EMPH
 ‘Yesterday I almost did not go and ask about it.’ (elicited)

The allomorph *mu-* is found elsewhere, including non-finite verb forms with orientation preverbs (§16.1.1.2, §16.1.2.2, §16.2.1.6) and all finite verb forms with orientation preverbs other than the Prohibitive and the verbal forms where slot -6 is filled (Irrealis, Interrogative, Proximate etc).

The partial reduplication (§12.4.1) of *mu-* (which occurs in particular in the protasis of conditionals, §12.4.1.2) does not yield expected †*mu~mu-*, but rather *mu~mɣ-* with vowel alternation: compare for instance *mu-nu-si* ‘she did not die’ with the *mu-* prefix (as expected in the Aorist) with *mu~mɣ-nu-si-a* ‘if I do not die’ in (4).

- (3) *tɣ-mu nu ɣuɟpa kuɾe mɣɛtɕa mu-nu-si*

- (4) *mu~mɣ-nu-si-a nɣ, a-tɣ-ku-nuɫaβɾdaβ-a*
 COND~NEG-AOR-die-1SG ADD IRR-PFV-2→1-hit.with.forelegs-1SG
ra
 be.needed:FACT
 ‘If [after that] I have not died [yet], hit me with your forelegs.’
 (2003kAndzwsqhaj2)

The Interrogative *u-* prefix, like conditional reduplication, requires the *mɣ-* negative prefix (see 1 above), and this commonality in morphophonology is correlated with a similarity in function, since both the prefix *u-* and reduplication are used to mark the verb of the protasis of conditional clauses (§25.2.1).

The -6 slot *umɣ-* prefix of possible modality (§21.7.2) has a surface form identical to the combination of the interrogative *u-* with the negative prefix *mɣ-*, as in (5). The *umɣ-* synchronically differs from *u-mɣ-* (from which it historically derives) in that it can occur with the peg circumfix (§11.4, §21.7.2.1). It is not compatible with a negative prefix.

- (5) *qajw ku-fse ra tu-ndze umɣ-ŋu ma*
 bug SBJ:PCP-be.like PL IPFV-eat[III] PROB-be:FACT LNK
 ‘It presumably/maybe eats bugs.’ (23-pGAYaR) {0003606#S28}

Negative prefixes are restricted to verb forms, and cannot be prefixed on nouns (§13.4.1). However, they occur on most non-finite verb forms, including participles (§16.1.1.2, §16.1.2.2, §16.1.3.4), infinitives (§16.2.1.2, §16.2.1.6, §16.2.3.1), degree nominals (§16.3.1), converbs (§16.6.1.2, §16.6.2), but not action nominals (§16.4) and fossilized deverbal nouns (§16.5).

13.1.2 Suppletive negative verbs

Negative prefixes can occur on most verbs, with the exception of copulas and existential verbs, which have suppletive negative forms (§14.2.2), as illustrated in Table 13.1.¹ The contrast between the neutral copula *ɲu* ‘be’ and the Emphatic Affirmative *ɕti* ‘be’ is neutralized in the negative, where only one negative copula *maʁ* ‘not be’ is present (§22.5.1.1).

Table 13.1: Suppletive negative verbs

	Affirmative	Negative
Copula	<i>ɲu</i> ‘be’, <i>ɕti</i> ‘be’ (emphatic affirmative)	<i>maʁ</i> ‘not be’
Existential	<i>tu</i> ‘exist’	<i>me</i> ‘not exist’
Sensory existential	<i>ɣɾʒu</i> ‘exist’	<i>maɲe</i> ‘not exist’

For instance, the negation of *ɲu* ‘be’ and *tu* ‘exist’ can only be *maʁ* ‘not be’ (6) and *me* ‘not exist’ (7).

- (6) *azo maʁ-a*
1SG not.be:FACT-1SG
‘I am not [that girl].’ (2003 sras)

- (7) *kuɕungu tce tuʁts^{hot} pu-me tce,*
former.times LOC clocks PST.IPFV-not.exist LNK
‘In former times, there were no clocks.’ (29-LAntshAm) {0003726#S60}

Combining *ɲu* and *tu* with negative prefixes (for instance †*mɾ-ɲu-a* instead of *maʁ-a* ‘I am not/It is not me’ and †*mu-pu-tu* instead of *pu-me*) is utterly incorrect

¹Another verb lacking negative forms is *krɪupa* ‘tell’, though for a different reason (§14.3.4).

13 Negation

and categorically rejected by all speakers. Likewise, negative copulas cannot take negative prefixes (†*mɣ-maɣ-a* is ungrammatical).

It is however possible to combine affirmative copulas or existential verbs with their negative counterparts as postverbal periphrastic negations (§13.2). The copulas *ŋu* and *maɣ* occur together in the phrase *ŋu cinɣ maɣ ku* ‘in any case it is not true’ (example 295, §9.1.6.4). The negative existential *me* ‘not exist’ is very commonly found with the participle of its antonym *ku-tu* to express emphasis on the non-existence, as in (8) in comparison with (7) (§22.5.1.2).

- (8) *kuɕungu mk^hurlu ku-fse ra pu-ku-tu*

(140430 tWfkuɣ) {0003898#S4}

13.1.3 Verbs requiring the negative prefixes

Some verbs are defective and lack affirmative forms: they only appear in conjunction with negative prefixes. Two categories can be distinguished.

First, a handful of defective verb roots are only attested with negative prefixes, listed in Table 13.2. The verb roots in this table are not found in any derived form without negation, except for *mɣ-xsi* ‘one does not know’, a highly defective verb (§14.3.4) historically related to the transitive verb *suz* ‘know’ (whose paradigm is not defective).

The complex collocation *NEG + spa = NEG + rka = tu/me* ‘be guilty/be innocent’ contains a bipartite verb (§11.6.3) whose first component *-spa* may be related to the modal auxiliary *spa* ‘be able’ (§19.3.1, §24.5.3.4) and whose second component *-rka* is an orphan verb.

The verb *NEG + zu* ‘not just be’, ‘not be/have only’ (9) is most commonly used in one of the comparative constructions (§26.2.3) and has even been further grammaticalized as an adverb *mɣzu* ‘even more’ (10).

- (9) *k^hɣjmu nuɕu mɣ-zu ma, tɣɣɣo tu tce,*

 ‘When the pig eats it [acorns], it can grow even fatter.’ (08-CkrAz)
 {0003444#S43}

Second, most *su-/z-* abilitative verbs (§19.3) are only found in negative forms. For instance the abilitative *z-nɣjo* from *nɣjo* ‘wait’ only occurs with a negation in the meaning ‘cannot wait to’ (due to hurry/impatience) as in (11).

- (11) *spjaŋkuw nuw kuw ju-zɣwt muw-pjɣ-z-nɣjo zo tce,*
 wolf DEM ERG IPFV-arrive NEG-IFR.IPFV-ABIL-wait EMPH LNK
 ‘The wolf could not wait [for the fox] to arrive.’ (140516 huli de baofu-zh)
 {0004010#S39}

This constraint is also observed with the lexicalized abilitative *sp^hut* ‘can cut’ (from *p^hut* ‘take out, cut’, §19.3.1) as in (12).

- (12) *tsuntu kuw u-ndzruw múj-sp^hut ma*

ɲu-sɣre zo
 SENS-be.ridiculous EMPH
 ‘The scissors cannot cut through her nails, as they are extremely hard and thick.’ (2012, heard in context)

13.1.4 Lexicalized negation

Some verb roots have negative forms with unpredictable lexicalized meanings. Three subtypes can be distinguished.

13 Negation

First, the negative form of the underived form of the root can have an extended meaning. For instance, the verb *rkaŋ* ‘be strong’, ‘be in good physical condition’ can mean ‘be pregnant’ in the negative as in (13).

- (13) *ki tɕ^heme ki mu-ɲ-rkaŋ*
DEM.PROX girl DEM.PROX NEG-IFR-be.in.good.shape
‘This woman became pregnant.’ (elicited)

Second, the special meaning of the negation appears in derivations: for instance, the stative verb *fts^{hi}* ‘feel better’ has a negative causative *NEG + sufts^{hi}* ‘force’, ‘coerce’ (§17.2.3) and a lexicalized negative participle *mykufts^{hi}* ‘forcibly’ used as an adverb (§16.2.1.8).

Third, some lexicalized noun-verb collocations require a negative prefix on the verb (§22.4.1.5), for instance *tu-sk^hru = NEG-βdi* ‘be pregnant’ from *tu-sk^hru* ‘body’ and *βdi* ‘be well’ as in (14).

- (14) *ndzi-rzaβ ɪnaɪna zo ndzi-sk^hru mu-ɲ-βdi*
3DU.POSS-wife both EMPH 3DU.POSS-body NEG-IFR-be.well
‘Both of their wives got pregnant.’ (2005 Lobzang) {0003370#S2}

13.2 Periphrastic negation

Aside from negative prefixes (15a), negation can be expressed by the negative copula *maɁ* ‘not be’ (15b) and the negative existential verb *me* ‘not exist’ (15c) in postverbal position.

- (15) a. *mu-pu-mto-t-a*
NEG-AOR-see-PST:TR-1SG
‘I have not seen it.’ (several examples)
- b. *pu-mto-t-a maɁ*
AOR-see-PST:TR-1SG not.be:FACT
‘I have not seen it, (but rather...).’
- c. *pu-mto-t-a me*
AOR-see-PST:TR-1SG not.exist:FACT
‘I have seen none/I haven’t seen anything.’ (several examples)

The negative copula *maɁ* ‘not be’ occurs postverbally in Periphrastic TAME categories requiring a copula (§21.2.2), or to express emphatic negation, contrasting with an assertative postverbal copula (§22.5.3.1) as in (16b).

- (16) a. *te^hindza ɲu-tu-ɣɣwu ɲu?*
 why SENS-2-cry be:FACT
 ‘Why are you crying?’
- b. *ɲu-ɣɣwu-a maɓ nɣ, tu-muu pɲu-lɣt*

ɲu-cti ma
 SENS-be.AFF LNK
 ‘It is not that I am crying, [I look like I am crying because] it has been raining.’ (2005-stod-kunbzang)

The postverbal negative existential *me* (§22.5.1.2) has a universal negative meaning ‘nothing’ or negative indefinite ‘none, not any’ as in (15c) (§22.5.4).

- (17) *tce u-mdov tɕ^hi zo fse mɣ-xsi,*
 LNK 3SG.POSS-colour what EMPH be.like:FACT NEG-GENR:know

 ‘I don’t know which colour it_i has, I can’t say because I have not seen it_i, I have not even seen any of its_i hides.’ (27-kikakCi) {0003700#S21}

It is also found in one of the superlative constructions, illustrated by example (18) (§26.4.3).

- (18) *βɰu ku-fse tu-q^he-a me*
 mouse SBJ:PCP-be.like IPFV-hate[III]-1SG not.exist:FACT
 ‘Mice is what I hate most.’ (‘there is nothing that I hate like a mouse’)
 (140427 bianfu yu huangshulang-zh) {0003838#S13}

13.3 Double negation

Since negative prefixes are not recursive, there are only two ways to express double negation in Japhug: either is by combining a negative verb form with a negative auxiliary (*me* ‘not exist’ or *maɲe* ‘not exist’), or a negative verb form in a complement clause with a negative complement-taking verb.

Double negation with existential verbs can indicate universal quantification, in particular when the verb taking the negative prefix is transitive (or semi-transitive) and no overt object (or semi-object) is present as in (19) (see also §22.5.4).

13 Negation

- (19) *paʋ aɣuɣli ma rcanu ɱɣ-ndze zo*
 pig produce.a.lot.of.manure:FACT LNK UNEXP:DEG NEG-eat[III] EMPH
me
 not.exist:FACT
 ‘Pigs produce a lot of manure, as they eat everything (there is nothing they don’t eat).’ (05-paR) {0003400#S27}

Negative participial forms with a negative auxiliary express mild assertion, as in (20) and (21).

- (20) *aʒuɣ ɱɣ-ku-pe me*
 1SG:GEN NEG-SBJ:PCP-be.good not.exist:FACT
 ‘I am fine (I don’t have any particular problem).’ (140506 shizi he huichang de bailingniao-zh) {0003927#S70}
- (21) *ɱɣ-ku-k^hu me*
 NEG-SBJ:PCP-be.possible not.exist:FACT
 ‘There is nothing wrong with it.’ (common in metalinguistic judgments about the grammaticality of sentences)

Another type of double negation construction is observed when both the complement-taking verb and the verb in the complement clause take a negative prefix. The most common verb in this type of configuration is the modal verb *k^hu* ‘be possible’ (§24.5.3.1), either with finite complements (§24.2.3) as in (22), or with negative infinitival complements (example 146, §16.2.1.2), expressing the meaning ‘have no choice but to *X*’.

- (22) *nɣ-rca ɱɣ-ɣi-a ɱɣ-k^hu q^he*
 2SG.POSS-together.with NEG-come:FACT-1SG NEG-be.possible:FACT LNK
 ‘It have no other choice but to go with you/follow you.’ (Nyima Wodzer 2003.2)

Other verbs attested in this type of construction include *nɣz* ‘dare’ (§24.5.3.5) as in (23) and *c^ha* ‘can’ (with the meaning ‘cannot help but’ as in 241, §15.2.10.4).

- (23) *rɣɣlpu fka cti tce, ɱɣ-kɣ-ɣi ɱɣ-nɣz-i ri*
 king order be.AFF:FACT LNK NEG-INF-come NEG-dare:FACT-1PL LNK
 ‘It is the king’s order, we do not dare not to come.’ (2005 Norbzang)

13.4 Negation and parts of speech other than verbs

Verbs are the only part of speech than can take negative prefixes. This section describes the constructions used in Japhug to express meaning corresponding to that of negative nouns or pronouns, and also discusses negative intensifiers adverbs.

13.4.1 Nouns

Although there is a privative nominal derivation in Japhug (§5.7.1), there is no way of building a negative noun like English ‘non-*X*’ or ‘un-*X*’ meaning ‘which is not *X*’ (rather than *X*-less). The only way to express such a meaning is build using a participial relative (§16.1.1) with the negative copula *X ku-maβ* ‘something/someone who/that is not *X*’ (§22.5.1.1), for instance *tx-rjit ku-maβ* ‘someone who is not a child’ in (24).

- (24) *wzora nu-rjit zo c^hw-βri-nu q^he ku-maβ ra*
 3PL 3PL.POSS-offspring EMPH IPFV-protect-PL LNK other PL

 IMPF-INV-consider LNK

‘(At school), [some parents] protect their own children, and as for the children of other people, they consider them as if they were not children (‘as non-children’).’ (140501 01)

13.4.2 Pronouns

Japhug lacks negative pronouns (§6.6), and headless relative clauses (§23.7) combined with a negative existential copula (§13.1.2) are used to express the meanings ‘nothing’, ‘nobody’ (25, 27) or ‘nowhere’ (26).

- (25) *nx-ku-caβ me*
 2SG.POSS-SBJ:PCP-catch.up not.exist:FACT
 ‘Nobody will [be able] to catchup with you.’ (2003 qachGa) {0003372#S112}

- (26) *tumurk^ha tce ur-sx-rŋgu mane*
 evening LOC 3SG.POSS-OBL:PCP-lie.down not.exist:SENS
 ‘In the evening, it has no place to stay.’ (26-NalitCaRmbWm)
 {0003676#S37}

13 Negation

In negative existential constructions, the headless relative can also mean ‘not any of’ as *kx-mto* ‘any (amadou) to be seen’ in (27).

- (27) *jinde tce nuu [u-ku-ntc^hoz] maŋe q^he, [kx-mto]*
nowadays LNK DEM 3SG.POSS-SBJ:PCP-use not.exist:SENS LNK OBJ:PCP-see
kunx maŋe
also not.exist:SENS
‘Nowadays **nobody** uses [amadou], there isn’t even **any** to be seen.’
(15-babW) {0003512#S214}

13.4.3 Adverbs

Japhug lacks an all-purpose negative adverb, but there are a few negative intensifiers.

The adverb *maka* is generally used with negative verb forms to express emphatic negation ‘not ... at all’ as in (28), in particular with negative existential verbs (§22.5.4).

- (28) *tch^heme k^hɣɕk^hɣr ku-ku-ɕe maka*
girl man.seating.place IPFV:EAST-GENR:S/O-go at.all
mu-pu-jɣɣ
NEG-PST.IPFV-be.allowed
‘Ladies were not allowed to go to the men’s seating place.’ (31-khAjmu)
{0004079#S39}

It is however attested in non-negative sentences as in (29), in adversative contexts.

- (29) *jɣxts^hi ndɣre maka nu-nɣɕqe ra*
this.time ADVERS at.all IMP-endure[III] be.needed:FACT
‘This time (unlike the previous times), you have absolutely to bear [the cold of the moon and the heat of the sun without making a word, otherwise we will not succeed].’ (tWxtsa)

This adverb is built from the root *-ka* found in the distributive determiner *tuka* ‘each’ (§9.1.3.3) and the distributive pronoun *zaka* ‘each his own’ (§6.7.3). The first syllable *ma-* resembles the negative prefix *mɣ-* (§13.1), but given the fact that negative prefixes (§13.1) are strictly restricted to verb forms, it is not likely that the first syllable of *maka* is from a negative prefix.

13.4 Negation and parts of speech other than verbs

Rather, it is from the intensifier *mu*,² also attested as intensifier ‘not... at all’ in negative contexts (30), in bound state form *mɣ-* (§5.4.1), followed by vowel assimilation with the following syllable *-ka*.

- (30) *nɯ ma ku-ra mu zo me*
DEM apart.from SBJ:PCP-be.needed at.all EMPH not.exist:FACT
‘I don’t need anything else at all.’ (2003 tWxtsa)

We find in addition the compound form *mucin* ‘not even one at all’ (31) from *mu* and *cinɣ* ‘(not) even one’ (§9.1.6.4).

²This form is related to the denominal verb *mɣmu* ‘be the most important’.

14 Person indexation and argument structure

14.1 Introduction

In Japhug, person indexation is the defining feature of finite verbs, as opposed to non-finite verbs (§16) and other parts of speech. Japhug finite verb forms index one or two arguments, depending on the transitivity of the verb, using a combination of prefixes, suffixes and stem alternation. No verb indexes more than two arguments. The indexation system is very close to a canonical direct-inverse system (§14.3.2.8).

This chapter first presents intransitive and transitive conjugations, investigates the issue of agreement mismatch, and then discusses the origin of person indexation affixes. In addition, it documents the analogical extension of person indexation suffixes to non-finite verb forms in some specific contexts.

14.2 Intransitive verbs

Intransitive verbs comprise dynamic, stative and semi-transitive verbs. All of the verbs have in common the property of indexing one argument, the intransitive subject, which when overt is in absolutive form (§8.1.1).

14.2.1 The intransitive paradigm

Table 14.1 illustrates the paradigm of intransitive verbs in Kamnyu Japhug, using the verb *ɕe* ‘go’ in the Factual non-past¹ as an example. Other Japhug dialects have slightly different indexation suffixes, a question discussed in §14.8.1 with comparative evidence from other Gyalrong languages.

¹This TAM category is chosen to illustrate the paradigms due to the fact that it does not bear any orientation preverb, but at the same time presents stem alternation in the transitive paradigm.

There is no stem alternation related to person indexation in the intransitive paradigm in any Japhug dialect. The invariable stem is represented with the symbol Σ in Table 14.1.²

Table 14.1: The intransitive conjugation in Japhug

Person	Form	<i>ɕe</i> ‘go’ (Factual non-past)
1SG	Σ - <i>a</i>	<i>ɕe-a</i>
1DU	Σ - <i>tɕi</i>	<i>ɕe-tɕi</i>
1PL	Σ - <i>ji</i>	<i>ɕe-j</i>
2SG	<i>tu</i> - Σ	<i>tu-ɕe</i>
2DU	<i>tu</i> - Σ - <i>ndzi</i>	<i>tu-ɕe-ndzi</i>
2PL	<i>tu</i> - Σ - <i>mu</i>	<i>tu-ɕe-mu</i>
3SG	Σ	<i>ɕe</i>
3DU	Σ - <i>ndzi</i>	<i>ɕe-ndzi</i>
3PL	Σ - <i>mu</i>	<i>ɕe-mu</i>
generic	<i>ku</i> - Σ	<i>ku-ɕe</i>

With a few well-identified exceptions, the indexation suffixes agree in person and number with the intransitive subject in Japhug. There is no indexation with possessors or oblique arguments, unlike closely related languages like Khroskyabs (Lai 2015) or Tangut (Jacques 2016e).

In the intransitive paradigm, five suffixes and two prefixes are found. The stress is always on the last syllable of the verb stem (§11.3, except in a handful of forms, §3.7), and all person indexation suffixes, including *-a*, are unstressed and sometimes are even devoiced (§3.7). Unlike other languages of the Trans-Himalayan, such as Khaling (where the dual inclusive and the third dual are homophonous, see Jacques et al. 2012: 1113), in Japhug all slots in the intransitive paradigm are distinct, without ambiguity.

14.2.1.1 First person

First person subjects are indexed by a set of three suffixes marking both person and number: *-a*, *-tɕi* and *-ji* for first singular, dual and plural, respectively. As in the pronominal paradigms (§6.1), there is no inclusive/exclusive distinction in Japhug; inclusive first+second person is indexed as 1DU or 1PL, as shown by

²This notation follows the Kirantological tradition (for instance van Driem 1993a).

examples such as (1) where the 1DU indexation corresponds to the sum of the 2SG and 1SG pronouns in the phrase *nyzo c^ho azo ni*. Equivalent examples with exclusive meaning (1SG+3SG) can be found in the corpus, for instance (23) below in §14.2.6.³

 ‘You and I will go on a three day tour on the sea.’ (150827
 mengjiangnv-zh) {0006290#S213}

The 1SG *-a* suffix is the only suffix in Japhug with a vowel other than *u* (or *i* after palatal and alveolo-palatal consonants, §3.5.2), and is the only indexation suffix that can be followed by another indexation suffix in the transitive paradigm (§14.3.2.6). The *-a* 1SG person index is among the suffixes revealing the underlying form of the codas: *-β*, *-ɣ*, *-β*, *-z*, which become unvoiced in some contexts (§3.2.2) are realized as voiced (see for instance in Table 14.2 below; *-β* is realized [-w-] in this context, since it becomes an onset, §3.2.1), but the coda *-t* remains unvoiced (for instance *scit-a* be.happy-1SG ‘I am happy’). The codas are resyllabified; for instance *scit-a* is syllabified as *sci/ta*).

Some verb stems (independently of transitivity) undergo predictable phonological alterations when followed by *-a*. With verb stems whose last syllable is an open syllable, the *-a* suffix merges its vowel. With closed syllable verb stem in *-rC* (C representing a coda), the 1SG suffix causes vowel assimilation. These phonological rules are presented in Table 14.2.

When the verb stem ends in *-a*, the 1SG suffix merges with the stem as [a] in Kamnyu Japhug, resulting in homophony between the 1SG and the 3SG forms. The surface form [rga] corresponds to both 1SG *rga-a* ‘I like it’ and 3SG *rga* ‘he likes it’. The fused and invisible suffix is systematically indicated in the orthography used in this grammar. In the Sarndzu of Japhug, a long vowel occurs in the 1SG, which thus remains different from the 3SG.

When the verb stem ends in vowels other than *-a*, these vowels undergo synize-sis with the *-a* suffix (§3.3.1.3), merging into one syllable. In addition, the mid-high vowels *-e* and *-o* become the corresponding high vowels *-i* and *-u* in this context.

These vowel mergers are obligatory in the Kamnyu dialect. However, there are not attested in all Japhug dialects, which may favor hiatus.

³In the transitive paradigm, the inclusive/exclusive distinction is not present either, but note the case of inclusive semi-reflexive configurations (§14.3.2.4).

14 Person indexation and argument structure

With verb stem ending in *-ɾt*, *-ɾn*, *-ɾβ*, *-ɾm*, *-ɾr*, *-ɾl* and *-ɾz*, the 1SG suffix causes non-optional vowel assimilation *-ɾC-a* ⇒ /-aCa/ (§3.3.1.2). Table 14.2 provides examples for all rhymes of this type. In the orthography employed in this grammar, these forms are transcribed as *aC-a* rather than the underlying *ɾC-a* (*jyat-a* rather than *jyɾt-a*), to indicate the fact that *ɾ* ⇒ *a* assimilation is obligatory in this context.

Table 14.2: Predictable phonological alternations on the verb stem caused by the *-a* 1SG suffix in Kamnyu Japhug

Rhyme of the last syllable of the verb stem	Result of fusion with the 1SG suffix	Examples
<i>-e</i>	[-ia]	<i>ɕe-a</i> ⇒ [ɕia] ‘I will go there’
<i>-o</i>	[-ua]	<i>tso-a</i> ⇒ [tsua] ‘I understand it’
<i>-a</i>	[-a]	<i>rga-a</i> ⇒ [rga] ‘I like it’
<i>-ɾβ</i>	[-awa]	<i>t^hu-rdɾβ-a</i> ⇒ [t ^h urdáwa] ‘I lost money’
<i>-ɾm</i>	[-ama]	<i>mts^hɾm-a</i> ⇒ [mts ^h áma] ‘I hear it’
<i>-ɾt</i>	[-ata]	<i>jyɾt-a</i> ⇒ [jyáta] ‘I will come back’
<i>-ɾn</i>	[-ana]	<i>tu-nuusmɾn-a</i> ⇒ [tunusmána] ‘I will treat it’
<i>-ɾr</i>	[-ara]	<i>pu-atɾr-a</i> ⇒ [patára] ‘I fell down’
<i>-ɾl</i>	[-ala]	<i>nu-nutufɕɾl-a</i> ⇒ [nunutufɕála] ‘I had diarrhea’
<i>-ɾz</i>	[-aza]	<i>mk^hɾz-a</i> ⇒ [mk ^h áza] ‘I am expert at it’

The first dual *-tɕi* suffix (*-tsə* in some dialects of Japhug, §14.8.1) only causes regular devoicing assimilation on the coda of the verb stem: *-z*, *-r*, *-ɣ*, *-ɸ* are realized as *-s*, *-ʂ*, *-x*, *-χ* when followed by *-tɕi* (for instance *mk^hɾz-tɕi* is pronounced [mk^héstɕi]). The labial coda *-β* is not affected.

The first plural *-ji* has two allomorphs, *-j* and *-i*. The first one occurs on verb stems ending in open syllables, for instance *ɕe-j* ‘we (will) go’, and the second follows verb stems in closed syllables, such as *scit-i* ‘we are happy’, with resyllabification of the coda (*sci/ti*). Like the *-a* suffix discussed above, the suffix *-i* reveals the underlying form of the codas. The contrast between *-u* and *-i* is neutralized as [i] when followed by the 1PL suffix: for instance, the last syllable of *smi t^hu-βlu-j* ‘we made a fire’ and *lxɾɸuy pu-βli-j* ‘we planted radish’ is considered to be homophonous (the last syllable is realized as [βlij]) by Tshendzin (§3.3.2).

14.2.1.2 Non-first person

Second and third person forms have the same set of suffixes (zero, *-ndzi* and *-nu* for singular, dual and plural, respectively) and only differ by the presence of a *tu-* prefix in second person forms. Unlike in Situ (Lin 1993: 197–208), there is no second person suffix in the 2SG.

The non-first person dual and plural suffixes *-ndzi* and *-nu* (some Japhug dialects have *-ndzə* in the dual instead, see §14.8.1) nasalize the coda *-t* to [n], which is not audible before *-ndzi* and results in a geminate in the plural. For instance, *scit-ndzi* and *scit-nu* are realized as [scíndzi] and [scínnu], respectively. The vowel *-i* and *-u* is often elided, resulting in apparent *-n* codas. The contrast between the codas *-n* and *-t* is neutralized in these forms: the last two syllables of both *tu-nxnduut-nu* IPFV-fight-PL ‘they fight (over it)’ and *pju-nduun-nu* IPFV-read-PL ‘they read/recite it’ are thus realized as [-ndúnnu].

By contrast, the codas *-β*, *-ɣ* and *-ʁ* are *not* nasalized to [m], [ŋ] and [N] when followed by the suffixes *-ndzi* and *-nu*, respectively.

The second person *tu-* prefix fuses with the initial *a-* of contracting verbs (§12.3). The result of vowel fusion is *tu-a* ⇒ [ta] in the Factual Non-past (*tu-atxʁ* ‘you will fall down’) or the Aorist (*jx-tu-ari* ‘you went there’), but *tu-x* ⇒ [tx] in Irrealis, Imperative, Imperfective or Prohibitive (*ma-tx-tu-xɕq^he* ‘don’t cough’) forms. Some irregular verbs have unpredictable second person forms (§14.2.2). The generic intransitive subject prefix *ku-* (also used for the object of transitive verbs, see §14.3.2.5) follows the same rules of vowel fusion as the second person prefix.

14.2.2 Irregular intransitive verbs

In comparison with Zbu (Gong 2018), Japhug only has very few irregular verbs. Irregularities related to person marking in Japhug all involve the prefixes.

The second person forms of Sensory Evidential existential verbs *ɣɣzu* ‘exist’ and *maɣe* ‘not exist’ (§21.3.2.1) are infixes rather than prefixed. The infixes are *ɣɣtɣzu* and *matɣe*, as in (2) (from Jacques 2012a: 91) and (3). These two verbs lack non-finite morphology (§16.7) and do not occur in other tenses (§15.1.1.5) and can be considered to be suppletive forms of the existential verbs *tu* ‘exist’ and *me* ‘not exist’ (§13.1.2).

 ‘[I] have not heard at all about you [for some time], I was wondering whether you have some disease, whether something bad happened to you.’ (phone conversation, 16-12-28)

These are not the only infixes in the paradigm of these verbs: the generic person *ku-* is also infixed (*ɣrɣɣɣu, makaŋe*) as is the autive *nu-* (§11.2.1).

The verb *zyut* ‘arrive’ has in part of its paradigm forms that are identical to those of contracting verbs (§12.3). In the Aorist, it has two alternative second person forms in free variation, the regular *jɣ-tu-zyut* and the form *jɣ-tu-azyut* with an additional *a-*, illustrated by (5) and (4), coming from two versions of the same story by the same speaker.

The paradigm of this verb otherwise includes non-optional contracting (*jɣ-azyut* ‘he arrived’) and non-contracting forms (the immediate converb *ju-tu-zyut* ‘as soon as X arrived’, §16.6.3).

14.2.3 Semi-transitive verbs

Semi-transitive verbs have the same paradigm as plain intransitive verbs, and lack the morphological properties of transitive verbs (§14.3.1). Their intransitive

subject is in absolutive form. However, they take a semi-object (§8.1.5), also in absolutive form, as *παχι* ‘apple’ in (6). These semi-objects do present some objectal properties (§8.1.5, §23.5.4.1).

- (6) *tce azo t^ham kuiki, paçi ci ty-aro-a tce tcendyre, [...]*

 ‘Now that I have (i.e. was given) this apple, I will give it to you also to eat.’
 (150904 zhongli-zh) {0006348#S32}

Unlike transitive verbs, which can index the number of the object if the subject is 1SG (§14.3.2.6), semi-transitive verbs cannot add a person index after the 1SG *-a*. For instance, in (7), although the object is plural, a form such as †*aroa-a-nu* with the *-nu* plural prefix is strictly prohibited.

- (7) *azo ty-rjit xsum aro-a*
 I INDEF.POSS-child three have:FACT-1SG

The subject of some semi-transitive verbs, in particular *tso* ‘know, understand’ and *zyxa* ‘pretend’, can optionally be marked with the ergative like a transitive subject (§8.2.2.3), as *ty-mu nu ku* in (8) and *βδαστι nu ku* in (9).

 SBJ:PCP-be.good IFR-pretend
 ‘The lady pretended to be a good person.’ (140520 ye tiane-zh)
 {0004044#S41}

Some semi-transitive verbs can take both nominal semi-objects and complement clauses. For instance, *tso* (which can be translated as ‘know’, ‘understand’ or ‘realize’ depending on the context) occurs with nouns referring to speech or meaning as semi-object (as in 10), finite relative clauses (11) and also participial clauses (12, §24.5.4.2).

Among semi-transitive verbs, we find the following subclasses:

- Verbs of cognition and perception: *tso* ‘know, understand’, ‘know’ *sɣŋo* ‘listen’
- Verbs of evaluation: *rga* ‘like’, *stu* ‘believe’, *duy* ‘have enough of’
- Modal verbs: *c^ha* ‘can’
- Verbs of possession: *aro* ‘own’
- Copulas: *ŋu* ‘be’, *maβ* ‘not be’, *apa* ‘become’ (§22.5.1.1)
- Verbs of assignation: *rmi* ‘be called’, *artsi* ‘be counted as’, *fse* ‘be like’
- Verbs requiring an argument expressing time: *ac^hɣt* ‘be X years apart’, *tsu* ‘pass (of time)’
- Verbs of pretence: *zɣɣpa* ‘pretend’
- Verbs of obtaining (§15.1.5.6): *abe* ‘have to eat/drink’, *βɣɣt* ‘obtain’

- Some adjectival stative verbs: *mk^hʁz* ‘be expert’, *p^hʁm* ‘be efficient’

The Tshobdun verbs *c^hv* ‘can, be able’ and *rge* ‘like’, cognates of the Japhug semi-transitive verbs *c^ha* ‘can’ and *rga* ‘like’, are fully transitive, as shown by the forms *mv-koy-c^hv-aj* (NEG-2→1-can-1SG) ‘you cannot (kill) me’ (Sun & Blogros 2019: 634) and *ne-tw-rge* (IPFV-1→2-like) ‘I love you’ (Sun & Blogros 2019: 674), which occur with local portmanteau prefixes (§14.3.2.3).

Most semi-transitive verbs are underived bare roots. The only obviously derived verbs are *ʒyʁpa* ‘pretend’, which comes from the reflexive of the verb *pa* ‘do’ (§18.3.3) and *artsi* ‘be counted as’, passive of *rtsi* ‘count’. The verb *aro* ‘own’ is possibly analyzable as a denominal verb historically derived from *tr-ro* ‘surplus, leftover’ (§16.4.6, §20.2.1).

Most semi-transitive verbs do not usually take a human semi-object, so that sentences with a first or second person semi-object are generally clumsy to build. For some of the verbs above, applicative forms are used when a first or second person object is needed, for instance *nurga* ‘like’ and *nxstu* ‘believe’ (§17.4.1). The verbs *stu* ‘believe’ and *nxstu* ‘believe’ differ in that the semi-object of the former refers to words (in general, a complement clause; ‘believe that X’) while the object of the latter is a person (‘believe him’).

However, examples with subjects and semi-objects both either first or second person are attested. For instance, (13) shows a very spontaneous use of a 2SG semi-object with a 1SG subject with the verb *fse* ‘be like’. Only the subject is indexed (with the suffix *-a*) and the use of the transitive *ta-* 1→2 portmanteau prefix (§14.3.2.3) here would be nonsensical.

- (13) *a-bi*, *nyzo w-ɲw-fse-a?*
 1SG.POSS-younger.sibling 2SG QU-SENS-be.like-1SG
 ‘Sister, do I look like you?’ (2014-kWIAG)

The same is observed with the copulas *ɲu* ‘be’, *max* ‘not be’ and also *apa* ‘become’ as in (14) and (15). (see also §22.5.1.1) The copulas always index the subject, never the semi-object, independently of any person hierarchy (see 66 in §14.3.2.8 below), and cannot take the *ta-* 1→2 and *ku-* 2→1 portmanteau prefixes.

- (14) *nyzo nuw-apa-a*
 2SG AOR-become-1SG
 ‘I became you.’ (elicited)
- (15) *azo nuw-tur-apa*
 1SG AOR-2-become
 ‘You became me.’ (elicited)

Some semi-transitive verbs are labile; some have a transitive counterpart, while others have a plain intransitive one (§14.5.3). The meaning of the verb also slightly changes depending on transitivity (for instance, *rga* means ‘like’ when semi-transitive, and ‘be happy’ when stative intransitive).

The antipassive form of secundative verbs (§14.4.2.2), such as *rɣmbi* ‘give to someone’ have a status intermediate between semi-transitive and monotransitive verbs: they lack most transitive features (§14.3.1), but can index first and second person objects (§14.4.2, §18.6.4).

14.2.4 Intransitive verbs with oblique arguments

Semi-transitive verbs have to be distinguished from motion verbs (or perception verbs) with a goal (§8.1.8), such as *ɕe* ‘go’, *yi* ‘come’ or *ru* ‘look at’. These verbs are morphologically intransitive, lacking the morphological characteristics of transitive verbs (§14.3.1).

With these verbs, the goal can occur in absolutive form, and superficially resembles a semi-object, as *sunɣu* ‘forest’ in (16). Indexation obligatorily occurs with the subject (for example, the 3DU form in 16), never with the goal. As in the case of semi-transitive verbs, number stacking on the 1SG *-a* is not possible (§14.2.3, example 7).

- (16) *ɣnɯz ni, [sunɣu] jo-ɕe-ndzi.*
 two DU forest IFR-go-DU
 ‘Two [men] went into the forest.’ (26-tAGe) {0003686#S1}

However, unlike semi-objects, these goals can optionally take locative postpositions, such as *zɯ* in (17).

- (17) *tɣ-pɣtso nunu li [sunɣu zɯ] jo-ɕe.*
 INDEF.POSS-child DEM again forest LOC IFR-go
 ‘The child went again into the forest.’ (140428 yonggan de xiaocaifen-zh)
 {0003886#S217}

Dative marking on the goals is also well-attested, as in (18) – with motion verbs, it translates as ‘towards X’.

- (18) *tɕ^hemɣpu nɯ ku w-wa c^ho w-pi nɯra*
 girl DEM ERG 3SG.POSS-father COMIT 3SG.POSS-elder.sibling DEM:PL
ɣɣ-βde tɕe, sunɣu w-cki tɕe jo-ɕe.

 ‘The girl left her father and her brothers, and went toward the forest.’
 (140506 shizi he huichang de bailingniao) {0003927#S72}

The subject of intransitive verbs with goals is in absolutive form, except when shared with a transitive verb in another clause, as *tʃ^hemxpu nu ku* in (18), which owes its ergative marking to the transitive verb *ɲɻ-βde* ‘She left them’. The verb *rpu* ‘bump into’ (which takes as goal the surface of physical contact) however can take ergative subjects, as it is labile and can be conjugated transitively (§14.5.2). Transitive verbs of manipulation can optionally take goals that are formally similar to those of *ɕe* ‘go’ and *ɣi* ‘come’ (§14.5.4).

Some intransitive verbs of speech, *ruɕmi* ‘speak’ and *ak^hu* ‘call’, can optionally take a dative argument, as in (19).

- (19) *turme u-eki tu-ruɕmi-a cti wo*
 person 3SG.POSS-DAT IPFV-speak-1SG be.AFF:FACT SFP
 ‘I am talking to someone [else].’ (phone conversation, 2013-12-02)

Other than locative and dative, some intransitive verbs select oblique arguments with the genitive (§8.2.3) the relator noun *u-taβ* ‘on, above’ (§8.3.4.3) and verbs with intrinsically non-singular subjects often occur with comitative postpositional phrases in *c^ho* (§14.2.6).

Some intransitive verbs which cannot take semi-objects do occur with counted nouns (in particular, *ruɕmi* ‘speak’); these counted nouns however have scope over the whole sentence, and are not arguments of these verbs, as argued in §7.3.2.5.

14.2.5 Semi-transitive verbs with additional oblique arguments

Some semi-transitive verbs can have up to three arguments, and are therefore trivalent.⁴ This is the case of rogative verbs (§18.2) such as *symbi* ‘ask for’ (derived from the secundative verb *mbi* ‘give’), which have both a dative argument and a semi-object, as shown by (20), but are yet conjugated intransitively (the generic subject is marked by *ku-*, §14.3.2.5).

- (20) <*guojia*> *u-p^he* <*piaozi*> *ɲu-ku-sɻ-mbi*
 country 3SG.POSS-DAT money IPFV-GENR:S/O-ROG-give
 ‘Ask the government for money.’ (2010)

14.2.6 Intrinsically non-singular subjects

Some intransitive verbs have an intrinsic reciprocal meaning, and do not occur in singular form. This category includes most derived reciprocal verbs (§18.4),

⁴This shows that trivalent verbs in Japhug are not necessarily ditransitive (§14.4).

 ANTHR 3SG.POSS-son COMIT 3SG.POSS-son DU IFR-PEG-fight-DU
 ‘The son of Gdugpa Dkarpo fought with my son.’ (2011-04-smanni)

However, examples with singular indexation are also attested, for instance (26) and (27) with 2SG form. Both are from texts translated from Chinese, but were not considered infelicitous by Tshendzin. While direct Chinese influence on indexation is unlikely, the use of *alulxt* ‘fight’ with the person one fights against left unexpressed (as in 26) or marked in the dative (as in 27), is not attested elsewhere.⁵

 NEG-be.good:FACT
 ‘It is not good for you to fight with your uncle.’ (150826 baoliandeng-zh)
 {0006370#S178}

The verb *naɣtɕuy* ‘be the same’, although requiring the comparison of at least two entities, most often occurs with singular indexation, as shown by examples like (28) and (29). This may be due to the fact *naɣtɕuy* ‘be the same’ is commonly used with inanimate referents (§14.6.1.1), and also because it commonly takes degree nominals (§16.3) as subjects in the equative construction (§26.3.1.1). These degree nominals can take non-singular possessors (dual in 29), but remain themselves singular arguments.

⁵The Chinese original sentences of examples (26) and (27) are 你是为众人的利益而战 <nǐ shì wèi zhòngrén de lìyì érzhàn> ‘You were fighting for the interest of the people’ and 你不该和舅舅动手 <nǐ bùgāi hé jiùjiù dòngshǒu> ‘You should not get into a fight with your uncle’.

14.2.7 Invariable intransitive verbs

A non-negligible amount of intransitive verbs are only attested in 3SG form. Four categories must be distinguished.

First, we find intransitive auxiliary verbs taking complement clauses as intransitive subjects (§24.5.3.1), for instance *jγ* ‘be allowed’, which has 3SG indexation regardless of the person of the subject or the object in the complement clause, as shown by example (30). For verbs of this type, the indexation restriction is structurally determined and independent of semantics.

- (30) *azo a-me nu [nɣzɯy nɣ-rzaβ juw-k^ham-a]*
 1SG 1SG.POSS-daughter DEM 2SG:GEN 2SG.POSS-wife SENS-give-1SG

 ‘(If you succeed), I will agree to give my daughter to you in marriage, she can become your wife (140518 huifei de muma-zh) {0004026#S66}

A second type of invariable verbs are those exclusively attested in noun-verb collocations where the noun is the intransitive subject. For instance, the intransitive verbs *mbi* and *ɲgu* are only found⁶ in collocation with *tx-mbru* ‘anger’ and the orphan noun *tu-ɬo*, meaning ‘be angry’ and ‘be discouraged be frustrated, lose heart’, respectively. The person and number of the experiencer are marked by the possessive prefix on the nouns, as in (31), and since these nouns are always singular, the verb indexation is also always in 3SG form.

⁶There are homophonous verbs such as the transitive *mbi* ‘give’ and the adjectival stative verb *ɲgu* ‘be poor’ but these are synchronically and even historically unrealized (*mbi* is an anticausative verb, see §18.5.4).

- (31) *nw-mbrw* *a-my-ty-ηgu*, *a*

 2SG.POSS-be.discouraged(1) IRR-NEG-PFV-be.discouraged(2)
 ‘Don’t be angry, don’t feel frustrated.’ (2003kAndzwsqhaj2)

This constraint on indexation is also found in collocations (§22.4.1) in cases when the verb is elsewhere attested, for instance *tu-βjiz* + *yi* ‘wish’, with the motion verb *yi* ‘come’ (§16.5.1, §24.6.3.3). The verb *yi* is compatible with all person indexation affixes, but in this collocation it is only found in 3SG, regardless of the person of the possessive prefix on *tu-βjiz*, as shown by (32).

- (32) *nw a-βjiz* *yi* *cti*
 DEM 1SG.POSS-wish come:FACT be.AFF:FACT
 ‘I want that.’ (140520 xiaoyida de huar-zh) {0004042#S60}

A third type of verbs with restricted 3SG indexation are verbs which pragmatically require an inanimate subject, such as *rpju* ‘turn sour’, which can only apply with *ty-lu* ‘milk’, as in (33) and would be nonsensical in first or second person.

- (33) *ty-lu* *to-rpju*
 INDEF.POSS-milk IFR-turn.sour
 ‘The milk turned sour.’ (elicited)

Fourth, meteorological verbs such as *yuts^hɣduy* ‘hot’ or *qanu* ‘be dark’ occur with a dummy intransitive subject, as in (34) and (35). In these examples, *q^haq^hu* ‘behind the house’ and *ɕɣr* ‘night’ are locative and temporal absolutive adjuncts, respectively (§8.1.9), not the subjects of these sentences.

- (34) *q^haq^hu* *myzu* *ɲw-yuts^hɣduy*

 LNK night really EMPH AOR-be.dark aboutLNK
 ‘In the night, when it has become very dark.’ (23-qapGAmtWmtW)
 {0003608#S129}

The noun *tu-mu* ‘sky, weather’ occurs in a few cases as subject of intransitive meteorological verbs in the corpus, in examples such as (36), but only in

texts translated from Chinese. These sentences are rejected by Tshendzin, and the presence of *tu-muu* ‘sky, weather’ is a calque from Chinese 天气 <tiānqì> ‘weather’.⁷

- (36) *tcendyre tu-muu w-tu-ywts^hyduw*

pjx-svre zo tce,
 IFR.IPFV-be.ridiculous EMPH LNK
 (140512 fushang he yaomo-zh) {0003967#S6}

Some verbs may appear to be invariable only because the non-3SG forms are rare. For instance, the auxiliary verb *ra* ‘be needed’ resembles *jxy* ‘be allowed’ in taking complement clauses as intransitive subject (§24.5.3.1), and it is almost always used in 3SG form. However, in the meaning ‘need, want’, it can take a human as subject, and (37) provides an example of 2SG indexation with this verb.

14.3 Transitive verbs

14.3.1 The morphological marking of transitivity in Japhug

Transitivity in Japhug can be defined exclusively on the basis of verbal morphology. Transitive verbs have the following six common properties.

First, the Aorist 3SG→3’ (§21.5.1.1, §21.1.1.1),⁸ a form that is attested on all transitive verbs except for one (§14.3.4) requires a C-type orientation preverb (§15.1.1.1) in Kamnyu Japhug. This test can always be applied to distinguish a transitive verb from an intransitive one. For instance, the Aorist 3SG→3’ of *ndza* ‘eat’ is *ta-ndza* ‘he ate it’ with the C-type prefix *ta-*, while an A-type prefix *tx-* would be expected if the verb were intransitive (the incorrect form †*tx-ndza*). A potential problem with this test is the fact that the result of the merger of A-type orientation preverbs with the initial *a-* of contracting verbs (which are always intransitive, see §12.3) is formally identical to a C-type prefix, for instance the Aorist 3SG *tx-ala*

⁷Example (36) corresponds to 由于天气太热 <yóuyú tiānqì tài rè> ‘Because it was too hot’ in the Chinese original.

⁸The notation 3SG→3’ means ‘third singular subject with another third person object’, see §14.3.2.

Sixth, the Progressive *asu-* (§21.6.1.1) is only found on transitive verbs. For instance, the transitive verb *ndza* ‘eat’ has a Progressive Sensory 3SG→3’ form *ɲuu-ɾsu-ndza* ‘He is eating it’, which would not exist if this verb were intransitive.

Seventh, only transitive verbs¹⁰ can take the inverse *wy-* (§14.3.2.7) and the portmanteau *ku-* 2→1 and *ta-* 1→2 prefixes (§14.3.2.3). The portmanteau prefixes are only found on verbs allowing human subjects and objects.

These seven criteria are almost completely congruent. With the exception of a handful of defective verbs (§14.3.4), the dummy transitive subject construction (§14.3.5), and the antipassive forms of some secundative verbs (§14.4.2, §18.6.4), if a verb satisfies one of these criteria, it will satisfy them all. This excludes cases when particular tests are not applicable, in particular criteria 2 and 5 if the verb has a closed-syllable stem or 3, 5, 6 and 7 due to semantic incompatibility. Only criteria 1 and 4 apply to all verbs.

Intransitive verbs, including semi-transitive verbs (§14.2.3) do not satisfy any of these seven criteria, as can be exemplified with the verb *tso* ‘know, understand’ (Table 14.3 and example 39 illustrating test 3).

Table 14.3: Transitivity tests with the semi-transitive verb *tso* ‘know, understand’

Test	Attested Form	Expected form if transitive
1 3SG Aorist (C-type preverb)	<i>kɾ-tso</i>	† <i>ka-tso</i>
2 Factual 3SG (Stem III)	<i>tso</i>	† <i>tsɿm</i>
3 Dental infinitive	<i>tu-tso</i> (<i>kɾ-za-t-a</i>) (39)	† <i>u-tso</i> (<i>kɾ-za-t-a</i>)
4 Subject participle	<i>ku-tso</i>	† <i>u-ku-tso</i>
5 Past tense 1/2SG	<i>kɾ-tso-a</i>	† <i>kɾ-tso-t-a</i>
6 Progressive	–	† <i>asu-tso</i>
7 Inverse or portmanteau prefix	–	† <i>yuu-tso</i>

- (39) *azo tu-tso* *kɾ-za-t-a*
 1SG INF:II-understand AOR-start-PST:TR-1SG
 ‘I began to understand.’ (elicited)

¹⁰ Antipassive secundative verbs such as *ɾmbi* ‘give to someone’ are the only exception, see §14.4.2.2, examples (114a) and (114b).

The morphosyntactic specificities of transitive verbs are not limited to inflectional verbal morphology. Some derivational processes, such as antipassivization (§18.6) and anticausativization (§18.5.1.2) can only be applied to transitive verbs, and conversely other derivations (such as the applicative, §17.4) are only attested on intransitive verbs. Since derivational morphology however, is not as productive as inflectional morphology and can be sometimes ambiguous, these characteristics cannot be used to define transitivity in Japhug.

Another distinction between transitive and intransitive verbs is the fact that transitive subjects require ergative marking (§8.2.2.1), whereas intransitive subjects are generally in absolutive form (§8.1.1). This is not an absolute criterion to distinguish between transitive and intransitive verbs, however, since some transitive verbs have a dummy subject (§14.3.5), and since intransitive verbs with ergative marking are attested in specific contexts (§8.2.2.3, §8.2.2.2).

14.3.2 Polypersonal indexation and direction marking

In Japhug, as in other Gyalrongic languages, transitive verbs index two arguments, the transitive subject and the object. This section provides a detailed analysis of the transitive indexation paradigm in comparison with the intransitive conjugation.

The transitive conjugation comprises 31 different forms for each TAME category, as listed in Table 14.6 on p.545. Table 14.7 exemplifies this paradigm using the Factual Non-Past of the verb *mto* ‘see’. These two-dimensional tables (and all other such tables in this chapter) list the subjects as rows and the objects as columns. The polypersonal configurations are represented using the notation $A \rightarrow P$, where A stands for the person and number of the transitive subject, and P for that of the object; for instance $1SG \rightarrow 3DU$ means ‘first singular subject with third DU object’. $3'$ represents obviative third person, a concept described in more detail in §14.3.2.2. The shaded cells $1 \rightarrow 1$, $2 \rightarrow 2$, $3 \rightarrow 3$ and $3' \rightarrow 3'$ correspond to reflexive forms, which are not transitive in Japhug, and are expressed by deriving an intransitive verb using the prefix *zyr-* (§18.3). Generic person (§14.3.2.5) is not included in Table 14.6.

One of the most fundamental features of the Japhug indexation system is the fact that the affixes found in the intransitive paradigm also occur in the transitive conjugation, and can index either the subject (intransitive S or transitive A) or the object (O) (depending on the presence or absence of direction marking, §14.3.2.8) as illustrated in Table 14.4 with the suffix *-a* and the prefix *tu-*. In other words, the indexation affixes reflect neutral alignment.

Table 14.4: Neutral alignment

	S	A	O
1SG -a	<i>yi-a</i> 'I will come'	<i>mtam-a</i> 'I will see it'	<i>yu-mto-a</i> 'he will see me'
2SG <i>tu-</i>	<i>tu-yi</i> 'You will come'	<i>tu-mtɔm</i> 'You will see it'	<i>tú-wy-mto</i> 'he will see you'

When studying indexation systems of this type, it is useful to divide the space of bipersonal indexation into three domains (Zúñiga 2006; Jacques & Antonov 2014): the LOCAL domain (when both subject and object are first or second person), the NON-LOCAL domain (when both subject and object are third person) and the MIXED domain (one argument is first or second person and the other one is third person). Table 14.5 represents these three domains in blue, red and green, respectively.

Table 14.5: The three domains of the transitive paradigm

	1	2	3
1		1→2	1→3
2	2→1		2→3
3	3→1	3→2	3→3
INTR	1	2	3

In the following sections, we first present the forms of the transitive paradigm in each of the three domains, then discuss some specific issues (generic and double number indexation) and then analyze the structure of the Japhug indexation system in a typological perspective.

Table 14.6: Japhug transitive and intransitive paradigms

							wy <u>ú</u> -mto	wy <u>ú</u> -mto-ndži	wy <u>ú</u> -mto-nuu	

14.3.2.1 Mixed configurations

In the mixed domain, we have to distinguish between *direct* configurations, where the subject is first or second person and the object is third person (1→3, 2→3) and *inverse* configurations, where the opposite holds true (3→1, 3→2).¹¹

Table 14.8 presents all 1→3 and 2→3 forms (except 1SG→3DU/PL, which are discussed in §14.3.2.6) of *mto* ‘see’ in the Factual Non-Past and the Aorist, compared with the corresponding forms of the intransitive verb *ngo* ‘be ill’. The DOWNWARDS *pu-* and UPWARDS *tx-* preverbs are lexically selected by these verbs (§15.1.5.9).

Table 14.8: Mixed domain (direct forms) compared with the intransitive paradigm

Person	Transitive		Intransitive	
	Non-Past	Past	Non-Past	Past
1SG(→3SG)	<i>mtam-a</i>	<i>puu-mto-t-a</i>	<i>ngo-a</i>	<i>tx-ngo-a</i>
1DU(→3)	<i>mto-tçi</i>	<i>puu-mto-tçi</i>	<i>ngo-tçi</i>	<i>tx-ngo-tçi</i>
1PL(→3)	<i>mto-j</i>	<i>puu-mto-j</i>	<i>ngo-j</i>	<i>tx-ngo-j</i>
2SG(→3)	<i>tuu-mtxm</i>	<i>puu-tuu-mto-t</i>	<i>tuu-ngo</i>	<i>tx-tuu-ngo</i>
2DU(→3)	<i>tuu-mto-ndzi</i>	<i>puu-tuu-mto-ndzi</i>	<i>tuu-ngo-ndzi</i>	<i>tx-tuu-ngo-ndzi</i>
2PL(→3)	<i>tuu-mto-nuu</i>	<i>puu-tuu-mto-nuu</i>	<i>tuu-ngo-nuu</i>	<i>tx-tuu-ngo-nuu</i>

With the exception of 1SG→3 forms (on which see §14.3.2.6), the number of the third person argument is never expressed in the mixed domain. Examples (40) and (41) illustrate 1PL→3SG and 1PL→3DU forms, respectively. Whether the third person object is singular or dual, person indexation is restricted to the 1PL *-ji* suffix in both cases. The same is true of the *-tçi* suffix, and also in inverse configurations.

- (40) *tce izo ji-k^ha* *kunx kx-fstun-i* *puu-ra*

 2SG.POSS-grandfather COMIT 2SG.POSS-younger.sibling DU IPFV-kill-1PL
ŋu
 be:FACT
 ‘We will kill your grandfather and your brother.’ (2011-05-nyima)

¹¹This terminology will be justified in §14.3.2.8.

Although the indexation suffixes *-ndzi* and *-nu* are the same for second and third person (§14.2.1.2), in 2→3 and 3→2 configurations, they can only index the number of the second person argument, never that of the third person. For instance, in (42), *to-tu-yut* is 2SG→3PL, and adding a plural *-nu* here would change the meaning to ‘you_{pl} brought people’ and be incompatible with the singular pronoun *nxʒo*.

- (42) *nxʒo turme ra to-tu-yut tce,*
 2SG people PL IFR:UP-2-bring LNK
 ‘You(SG) brought people [here].’ (150901 changfamei) {0006352#S146}

The direct forms of the transitive paradigm are nearly all identical to the corresponding intransitive paradigm. The 1SG→3 and 2SG→3 forms are the only ones that show morphological features absent from the corresponding intransitive paradigm: the Stem III alternation in the Factual Non-Past (and other tenses, §12.2.2.2, §21.1.2)¹² and the *-t* suffix in the Past. These features are highlighted in red in Table 14.8. Most dialects of Japhug, including those of Gdongbrgyad township, have *-z* instead of *-t* as Past suffix (§11.3).

Stem III alternation and the *-t* suffix mark at the same time TAME (§21.1.3, §11.3) and person of both subject and object, and must be considered to be an integral part of the person indexation system.

Not all transitive verbs present these two features, however; in particular, verb with close syllable stems lack both of them. Stem alternation is restricted to a few open-syllable stem types (*-o*, *-a*, *-u* and *-u*, §12.2.2.1), and the *-t* suffix cannot surface in close syllable stems. For instance, the Aorist 1SG→3SG of the verbs *joʁ* ‘raise’ and *ɕluɣ* ‘drop’ are *tx-joʁ-a* ‘I raised it’ and *pu-ɕluɣ-a* ‘I dropped it’, not the completely incorrect †*tx-joʁ-t-a* or †*pu-ɕluɣ-t-a* (with automatic regressive devoicing of /ʁ/ and /ɣ/ before /t/, §3.2.2). These incorrect forms would not violate Japhug phonotactics, since clusters such as *-χt-* and *-xt-* are well attested (§4.2.1.7, §4.2.1.8), showing that the rules governing the use of the *-t* suffix are not purely phonological.

The direct forms of transitive verbs with closed syllable stems (such as *joʁ* ‘raise’ and *ɕluɣ* ‘drop’) in the mixed domain are thus identical to that of intransitive verbs.

The inverse forms of the mixed domain of the verb *mtɔ* ‘see’ are presented in Table 14.9. All forms in this section of the paradigm, regardless of the TAME category, take the prefix *ɣú-/wy-*, whose distribution and allomorphy (*ɣú-* vs. *wy-*) is discussed in more detail in §14.3.2.7.

¹²Note in addition the allomorph *mtam-* of stem III when followed by the 1sg suffix *-a/*, following regular vowel assimilation (§14.2.1.1).

Table 14.9: Mixed domain (inverse forms)

Person	Non-Past	Past
3SG→1SG	<i>ɣú-mto-a</i>	<i>pú-wy-mto-a</i>
3→1DU	<i>ɣú-mto-tɕi</i>	<i>pú-wy-mto-tɕi</i>
3→1PL	<i>ɣú-mto-j</i>	<i>pú-wy-mto-j</i>
3→2SG	<i>tú-wy-mto</i>	<i>pu-tú-wy-mto</i>
3→2DU	<i>tú-wy-mto-ndzi</i>	<i>pu-tú-wy-mto-ndzi</i>
3→2PL	<i>tú-wy-mto-nuu</i>	<i>pu-tú-wy-mto-nuu</i>

Aside from the prefix *ɣú-/wy-*, the inverse forms in the mixed domain present the same affixes as those of the corresponding intransitive forms (except in the case of double number indexation, treated in §14.3.2.6), and lack stem alternation (only stem I occurs).

The imperative (§21.4.2.1) is only attested in the direct mixed 2→3 configurations, and is the only finite form involving a second person that neither takes the second person prefix nor a portmanteau prefix. To express 2→1 imperative, the imperfective is used instead (§21.2.5).

14.3.2.2 Non-local configurations

Table 14.10 presents the Non-local domain of the paradigm of *mto* ‘see’ in the Factual Non-Past and the Aorist, compared with the intransitive paradigm as exemplified by *ngo* ‘be ill’.

Table 14.10: Non-local domain compared with the intransitive paradigm

Person	Transitive		Intransitive	
	Non-Past	Past	Non-Past	Past
3SG(→3')	<i>mtɣm</i>	<i>pa-mto</i>	<i>ngo</i>	<i>tx-ngo</i>
3DU(→3')	<i>mto-ndzi</i>	<i>pa-mto-ndzi</i>	<i>ngo-ndzi</i>	<i>tx-ngo-ndzi</i>
3PL(→3')	<i>mto-nuu</i>	<i>pa-mto-nuu</i>	<i>ngo-nuu</i>	<i>tx-ngo-nuu</i>
3'→3SG	<i>ɣú-mto</i>	<i>pú-wy-mto</i>		
3'→3DU	<i>ɣú-mto-ndzi</i>	<i>pú-wy-mto-ndzi</i>		
3'→3PL	<i>ɣú-mto-nuu</i>	<i>pú-wy-mto-nuu</i>		

There are two types of non-local forms: those taking the *γú-/wγ-* prefix, the *inverse* configurations (§14.3.2.8), and those without it, the *direct* configurations.

Direct forms present two features distinguishing them from the corresponding third person intransitive forms. First, in non-past tenses such as the Factual Non-Past, the 3SG subject form has Stem III (like the 1SG→3 and 2SG→3 forms of the mixed domain, §14.3.2.1). Second, in the Aorist, a C-type orientation preverb, with *-a-* vocalism is used instead of the A-type orientation preverbs in *-u-* and *-x-* found in the mixed and local domains (*pu-* in the case of the verb *mto* ‘see’). C-type orientation preverbs, only found in this section of the transitive paradigm (§14.3.1, §15.1.1.1), result from the fusion of A-type prefixes with another prefix which is only otherwise attested in the Apprehensive (§21.7.1).

The *-t* suffix found in some direct forms in the mixed domain (§14.3.2.1) is not attested in the non-local domain.

Inverse forms of the non-local domain only differ from the third person intransitive forms by the presence of the *γú-/wγ-* prefix, lacking stem alternation or additional affixes, like the inverse forms of the mixed domain (§14.3.2.1).

Number indexation in the non-local domain encodes only one of the two arguments: the *subject* in the direct configurations and the *object* in the inverse configurations. For instance, in (43), the subject of the verb *pjś-wγ-nx̄sma-ndzi* is plural (3PL→3DU), but plural indexation *-nu* here instead of the dual would be incorrect, as this verb form has the *γú-/wγ-* prefix and thus agrees in number with the object.

- (43) *ndzi-julco* *ra kur wuma pjś-wγ-nx̄sma-ndzi*.
 3DU.POSS-neighbour PL ERG really IFR-INV-envy-DU
 ‘Their neighbours envied the two of them.’ (qajdoskAt)

The third person argument whose number is indexed (the 3DU argument in 43) is called *proximate*, and the one that is not indexed on the verb (corresponding to the noun phrase *ndzi-julco ra* in 43) is called *obviative* (glossed as 3’), using terminology from Algonquian linguistics. While in Algonquian the term *obviative* (coined by Cuoq 1866) originally refers to a category marked on both nouns and verb indexation (including intransitive verbs), in Gyalrong languages the proximate/obviative contrast is only reflected in transitive verbal morphology (see §14.3.2.8 and §14.3.3)

Direct configurations are by far more common in the corpus than inverse ones. Inverse non-local forms have two functions: marking the relative saliency of the subject and the object (a question detailed in §14.3.3) and indexing a generic subject (§14.3.2.5).

14.3.2.3 Local configurations

Local configurations stand out in Japhug verbal paradigms in being the only forms involving the second person without a *tu-* prefix. Instead, synchronically unanalyzable portmanteau prefixes are found: *ta-* for 1→2, and *ku-* for 2→1. The *ta-* co-occurs with the non-first person dual and plural suffixes (*-ndzi* and *-nu*, §14.2.1.2), and *ku-* with first person suffixes (*-a*, *-tci* and *-ji*, §14.2.1.1), indexing in all cases the person and number of the object. In 2→1 forms, the first person is redundantly indexed both by the suffixes and the portmanteau prefix *ku-*.

The presence of portmanteau prefixes in the local domain is not typologically unusual. Typologists have long noticed that languages with polypersonal indexation tend to have unanalysable affixes in 1→2 and 2→1 forms (Heath 1998) in part due to pragmatic factors (DeLancey 2018). The historical origin of these prefixes is discussed in Jacques (2018b) and §14.8.3.

In 1→2 configurations, since 2SG is exclusively indexed by the *tu-* prefix in the intransitive paradigm, without any suffix (unlike Situ, §14.8.1), the 1→2SG also lacks any indexation suffix. Table 14.11 presents all local configurations of the verb *mto* ‘see’ in the Factual Non-Past and the Aorist, except for those with double suffixation (2DU→1SG and 2PL→1SG) which are treated in §14.3.2.6.

There is no stem alternation, *-t* past tense suffix or *yu-/wy-* prefix in the local domain in Japhug. Aorist and Factual Non-Past only differ from each other by the presence of the A-type orientation preverb in the former, as can be seen in Table 14.11.

Table 14.11: Local domain

Person	Non-Past	Past
1→2SG	<i>ta-mto</i>	<i>pu-ta-mto</i>
1→2DU	<i>ta-mto-ndzi</i>	<i>pu-ta-mto-ndzi</i>
1→2PL	<i>ta-mto-nu</i>	<i>pu-ta-mto-nu</i>
2SG→1SG	<i>ku-mto-a</i>	<i>pu-ku-mto-a</i>
2→1DU	<i>ku-mto-tci</i>	<i>pu-ku-mto-tci</i>
2→1PL	<i>ku-mto-j</i>	<i>pu-ku-mto-j</i>

In Japhug, the forms of the local domain are always different from those of the mixed domain, and the person of the subject and the object is never ambiguous. In this regard, Japhug differs from many languages of the Trans-Himalayan family, in particular those of the Kiranti branch. In Khaling, for instance, the same forms are used for 2→1 and 3→1 configurations on the one hand, and for 3→2 and

1NSG→2 on the other hand (Jacques et al. 2012). In that language, the only local configuration to have specific unambiguous forms is 1SG→2.

In Japhug, while person is unambiguously expressed in the local domain, only the number of the *object* is specified, with the exception of 2→1SG configurations (§14.3.2.6). Examples (44) and (45) illustrate the same form *tu-ta-fsraŋ* meaning in the first case 1SG→2SG ‘I will save you_{sg}’ and in the second one 1PL→2SG ‘We will save you_{sg}’, showing that the form remains identical regardless of the number of the subject.

The 2→1 configuration can occur in the prohibitive with the prefix *ma-* (§13.1.1) as in the form *ma-t^{hu}-ku-βlu-a* ‘don’t burn me’ in (48), but not in the imperative (§21.4.2.1). Instead, the Imperfective is used (§21.2.5), most often with a modal verb, as in (46) and (47) and in the form *c^{hu}-ku-rku-a* in (48). Attempts to produce 2→1 Imperative forms such as †*tx-ku-qur-i* (instead of the correct *tu-ku-qur-i ra* ‘help us’) are rejected by native speakers.

14.3.2.4 Inclusive semi-reflexive configurations

Japhug lacks inclusive / exclusive contrast in both pronouns and indexation system (§14.2.1.1), and inclusive persons are treated the same way as 1DU and 1PL exclusive. While inclusive persons could in principle exist in the local domain, configuration of this type are problematic: if the subject or object of a transitive verb is inclusive, and the other argument strictly first or second person, the resulting configuration is partially reflexive, since the inclusive contains both first and person referents.

In a language like Japhug where reflexivity is marked by an intransitivizing derivation (§18.3), there is therefore a conflict between the absence of reflexive forms in the transitive paradigm and the need to express inclusive↔first/second person configurations in a way that is different from plain reflexives.

The following list provides the four theoretically possible inclusive semi-reflexive configurations, displaying the referent shared by subject and object in red. This list neglects possible additional third person referents in 1DU exclusive, 1PL, 2DU and 3PL arguments, which would artificially increase the number of configurations.

- 1+2→1 ‘You and I verb me’
- 1+2→2 ‘You and I verb you’
- 1→1+2 ‘I verb you and me’
- 2→1+2 ‘You verb you and me’

van Driem (1990), in his review of Michailovsky (1988), argues that Kiranti languages and Limbu in particular cannot express inclusive semi-reflexive configurations using transitive verbal morphology, and must resort to periphrases; for instance, in order to express the meaning of the 2→1+2 configuration ‘you saw both of us in the mirror’, Limbu uses a complement clause containing an intransitive verb meaning ‘you and I appear in the mirror’, object of the transitive verb ‘see’, as in (49).

- (49) *khεε? anchi aina-o a-dha:p-si-ba kε-ni*
 2SG 1DI mirror-LOC INCL-be.visible-DU-NMLZ 2-see
 ‘You(sg) saw both of us in the mirror.’ (van Driem 1990: 277)

In Japhug, a similar strategy (though with a finite clause instead of a nominalized verb form) is employed to express the 1→1+2 configuration in (50), with the finite complement clause *χελzgoŋ u-ŋgu kx-ntε^hvr-tci* ‘we appear in the mirror’ as object of the transitive perception verb *mtō* ‘see’.

- (50) [*χελzgoŋ u-ŋgu kx-ntε^hvr-tci*] *nuura pu-mto-t-a*
 mirror 3SG.POSS-in AOR-appear-1DU DEM:PL AOR-see-PST:TR-1SG
 ‘I saw both of us in the mirror.’ (elicitation, Jacques 2012a: 85)

Nevertheless, there are cases in Japhug where inclusive semi-reflexive meanings can be expressed by simple verb forms of the local domain. In example (51), the verb *kuu-z-maq^hu-tci* presents a 2→1DU configuration (§14.3.2.3); it is clear in this particular case that the object is first dual inclusive ‘you and I’ rather than first exclusive, and that we therefore have a semi-reflexive configuration 2→1+2.

- (51) *múj-tu-mbyom ri t^ha kuu-z-maq^hu-tci*
 NEG:SENS-2-be.in.a.hurry LNK later 2→1-CAUS-be.after:FACT-1DU
 ‘[If] you don’t hurry [up], you will get us late.’ (elicited)

No example of this type is found in the corpus, and such pragmatically clumsy configurations are on the borderline of the Japhug person indexation system.

Semi-reflexive indexation also occurs with third person referents, in particular in causative constructions (see 24, §17.2.4).

14.3.2.5 Generic indexation

The prefix *ku-*, which appears in the intransitive paradigm to express generic intransitive subject (§14.2.1.2), is also attested in the transitive paradigm to refer to generic object. For instance, in example (52),¹³ the transitive verbs *ku-mto* ‘(the yeti) will see one’ and *ku-ndo* ‘(the yeti) will catch one’ have the same *ku-* prefix as the intransitive verb *a-mx-jx-ku-phyo* ‘one should not flee’. This example also shows that stem I is selected in the 3→GENR form, as the stem III of *mtō* ‘see’ and *ndo* ‘take’, ‘catch’ are *mtxm* and *ndxm*, respectively. Combining the generic *ku-* prefix with stem III is impossible, and *ku-mto* cannot be replaced by a form such as †*ku-mtxm*, which would be unintelligible.

¹³The generic person in (52) is translated into English by the second person ‘you’.

 ‘People say that you should not flee in the direction behind[the yeti], as it
 would see you and catch you.’ (140510 mYWrgAt) {0003941#S20}

Unlike in Tshobdun (Sun 2014b), generic transitive subjects in Japhug are not indexed by the same prefix as generic intransitive subjects. Apart from a handful of irregular verbs (§14.3.4), the inverse prefix *wɣ-* occurs instead of *ku-* to express generic transitive subject, as in the verb *tú-wɣ-ndza* ‘one eats it’ in (53), whose object is definite (anaphorically referring to the noun *k^hurwum* ‘mold’ in a previous clause). Note that the generic subject of *tú-wɣ-ndza* is co-referent with the object of the verb *nu-ku-z-nutuɸɕɣl* ‘it causes one to have diarrhea’ (causative of the intransitive verb *nutuɸɕɣl* ‘have diarrhea’, on which see §16.4.4) in the following clause, indexed with the *ku-* as in (52) above, and that conversely the (inanimate) object of *tú-wɣ-ndza* corresponds to the subject of *nu-ku-z-nutuɸɕɣl*.

- (53) *ma tú-wɣ-ndza tce, nu-ku-z-nutuɸɕɣl* *cti*

 ‘If you eat [mold], it causes you diarrhea.’ (20-sWrna) {0003564#S51}

Generic person indexation is remarkable in Japhug morphosyntax in being one of the very few examples of ergative-absolutive alignment outside of the case marking system, since the intransitive subject and the object are marked by the same prefix *ku-*, while the transitive subject is not ($S = P \neq A$).

A generic person subject or object is only compatible with a third person argument ($\text{GENR} \rightarrow 3$ or $3 \rightarrow \text{GENR}$). Combinations with first or second persons are not possible. However, number indexation of the non-generic third person argument is possible when the generic argument is subject. Dual or plural suffixes in $\text{GENR} \rightarrow \text{DU}$ or $\text{GENR} \rightarrow \text{PL}$ configurations are attested in procedural texts. For instance, (54) has dual indexation (referring to the turnip leaves and the turnip root) with generic human subject.

- (54) *rasti c^ho rɣjndob ni, pju-wɣ-bndzɣr-ndzi tce*

 IPFV-INV-CAUS-ACAUS:separate-DU be:FACT
 ‘One separates the turnip from its root by cutting them.’ (150903 kAJar)
 {0006412#S7}

Number indexation occurs in particular in the case of generic subject indexation referring to a first person (§14.6.1.4). In (55), the generic subject of the verb *tú-wy-qur-nuu* corresponds to the first person plural, as indexed on the preceding verb *ryzi-j*, and the plural object is overtly indexed.

- (55) *tui-rdov tsa ryzi-j tce tú-wy-qur-nuu ravmaB*

 ‘How about only one of us staying [here] and helping them?’ (hist180503
 xiyouji 12-zh) {0006189#S74}

On the other hand, when the generic argument is in object or intransitive subject function, no person indexation suffix can appear on the verb, even if this argument is realized as an overt noun phrase with plural marking in addition to generic indexation.

For instance, in (56), the verb form with generic object indexation *ku-ku-suu-ndo* lacks any indexation suffix, although both the causer (‘the elders’) and the causee (the generic argument, *tx-pytso ra* ‘us, the children’) are plural.

14.3.2.6 Double number indexation

The transitive paradigm contains six doubly suffixed forms, two in the local domain, and four in the mixed domain, as summarized in Table 14.12. Japhug is not the only Gyalrong language with double number indexation. The same set of doubly suffixed forms is found in Tshobdun (Sun & Shidanluo 2002) and Zbu (Gong 2014).

The forms corresponding to those in Table 14.12 without additional *-ndzi* or *-nuu* suffix generally have a singular third or second person argument, for instance *pui-mto-t-a* ‘I saw him’ (§14.3.2.1) or *pui-ku-mto-a* ‘You_{sg} saw me.’ (§14.3.2.3). There are however also cases of optional number indexation, a topic discussed in §14.6.1.1.

The 1SG→3DU and 1SG→3PL forms have stem III alternation in non-past tenses (*mto* → *-mtam-* in Table 14.12) and the suffix *-t* in the Aorist, like the corresponding 1SG→3SG form (§14.3.2.1).

Table 14.12: Double number indexation in the transitive paradigm

Person	Non-Past	Past
1SG→3DU	<i>mtam-a-ndzi</i>	<i>pu-mto-t-a-ndzi</i>
1SG→3PL	<i>mtam-a-nuu</i>	<i>pu-mto-t-a-nuu</i>
3DU→1SG	<i>yuu-mto-a-ndzi</i>	<i>pú-wy-mto-a-ndzi</i>
3PL→1SG	<i>yuu-mto-a-nuu</i>	<i>pu-wy-mto-a-nuu</i>
2DU→1SG	<i>ku-mto-a-ndzi</i>	<i>pu-ku-mto-a-ndzi</i>
2PL→1SG	<i>ku-mto-a-nuu</i>	<i>pu-ku-mto-a-nuu</i>

Examples (57), (58), (59) illustrate 1SG→3DU (with stem III, *ndza* → *ndze*), 3DU→1SG and 2PL→1SG configurations, respectively. All these forms have double suffixation, comparable to *mtam-a-nuu*, *pú-wy-mto-a-ndzi* and *ku-mto-a-nuu* in Table 14.12 (with the Imperfective instead of the Factual Non-Past).

 (150828 donglang) {0006312#S106}

Double number indexation also occurs on relativized verbs with totalitative reduplication (§12.4.1.5), such as *pu~pu-mto-t-a-nuu* in (60). In this example, the suffix *-nuu* indexes the number of the object *tʻ^heme* ‘girl’, which is also the head of this head-internal relative (§23.4.3). It is redundant with the verb-initial reduplication, which expresses universal quantification of the object.

 muzhi guniang-zh) {0006334#S469}

All forms with double number indexation in Japhug (Table 14.12 and examples 57 to 59 above) contain the first person *-a* suffix. This includes 1SG→3, 3→1SG and 2→1SG configurations, but not 1SG→2: the 1→2 forms, unlike other configuration involving a first person, do not take person indexation suffixes coreferent with their first person subject (§14.3.2.3). Two hypotheses could be proposed to account for this relationship between *-a* suffix and double number indexation.

First, this constraint could be seen as a (haplological) prohibition against the presence of two identical suffixes in the same verb form. Since second and third person number markers are identical, the only way to express a form such as 2DU→3DU in a fully explicit way would be † Σ_1 -*ndzi-ndzi* with two times the same suffix, a form which would be excluded by the haplological rule. Such a rule however would not account for the absence of second number marker in verb forms suffixed with the 1DU *-tci* or the 1PL *-ji*.

Second, it could be argued to be a question of phonology: all person indexation suffixes apart from *-a* have the high vowels /i/ or /u/ (which are not contrastive in this context, §3.5.2), and one could suppose that the ban on double suffixation in this paradigm is due to a constraint against two unstressed suffixes with high vowels (since the stress is on the last syllable of the stem, except in a limited number of cases, §3.7).

However, this hypothesis is contradicted by the fact that other verbal paradigms in Japhug do contain verb forms with two suffixes in high vowels, as in example (61).¹⁴

- (61) *to-k-ylulɣt-ndzi-ci*
 IFR-PEG-fight-DU-PEG
 ‘They fought each other.’

Given the fact that the combination of two unstressed suffixes in high vowel are possible in Japhug, phonology cannot explain the absence of a form such as †*kuw- Σ_1 -tci-ndzi* (intended for 2DU→1SG).

A third approach to explain the unique properties of the *-a* suffix, involving the notion of person hierarchy, is explored in §14.3.2.8.

¹⁴See §15.1.1.2 and §11.4 on the peg circumfix *kuw-...-ci*.

14.3.2.7 The allomorphy of the inverse prefix

The inverse prefix¹⁵ has the allomorph *yú-* when occurring in word-initial position, something which is only possible in the Factual Non-Past (as it is the only TAME category without any orientation preverb, §21.3.1.1) when no other inflectional prefix is present. It surfaces as *wy-* in all other cases, merging with the vowel of the preceding prefix, which then bears the accent; the inverse is one of the very few stress-attracting prefixes in Japhug (§11.2.3).

The allomorph *wy-* also occurs in Factual Non-Past forms with the following prefixes:

- Second person *tuu-* (§14.3.2.1): *tú-wy-mto* (2-INV-see:FACT) ‘he will see you’
- Negative *mɣ-* (§13.1.1): *mɣ-wy-mto-a* (NEG-INV-see:FACT-1SG) ‘he will not see me’
- Apprehensive *ɕuu-* (§21.7.1): *ɕú-wy-mtsuy-a* (APPR-INV-bite:FACT-1SG) ‘(I fear) that it could bite me’
- Associated motion *ɕuu-/yuu-* (§15.2): *yú-wy-ndza-j* (CISL-INV-eat:FACT-1PL) ‘it will come to eat us’
- Proximative aspect: *juu-* (§21.6.2) *jú-wy-mtsuy-a* (PROXM-INV-bite:FACT-1SG) ‘it is about to bite me’
- Possible modality: *umɣ-* (§21.7.2) *umɣ-wy-mtsuy-a* (PROB-INV-bite:FACT-1SG) ‘it will perhaps bite me’ (88b, §10.4.4)
- Rhetorical Interrogative: *uβɣ-* (§21.7.3.1) *uβɣ-wy-mtsuy-a* (RH.Q-INV-bite:FACT-1SG) ‘it will not bite me, will it?’
- Interrogative: *uu-* (§21.7.4.1) *ú-wy-ndza-a* (QU-INV-eat:FACT-1SG) ‘Will it eat me?’

With the progressive prefix *asu-* (§21.6.1.1), the inverse is *infix*ed rather than being prefixed, for instance in a form such as *juu-tuu-ɣ<wy>su-zgroɔ* (SENS-2-PROG<INV>-attach) ‘he is attaching you’. This question is discussed in more detail in §11.2.1.

The merger of the /w/ of the inverse prefix with the vowels /u/ and /ɤ/ of the preceding prefixes yields /u/ and /o/, respectively. Although the transcription

¹⁵The possible origins of the inverse prefix are discussed in §5.1.1.5 and §14.8.2.

-wy- is chosen in the present orthography, the fricative /ɣ/ is most often elided, and the stress and vowel rounding are the main clues of the presence of the inverse prefix.

Due to the vowel merger, the contrasts between several series of prefixes are neutralized when preceding the inverse prefix, causing homophony between morphologically different forms (our orthography however keeps the distinction between the rounded and unrounded vowels in this context). There are potential ambiguities in three situations.

First, since the B-type (imperfective) UPWARDS preverb *tu-* (§15.1.1.1) and the second person *tuu-* (§14.2.1.2) both become neutralized as *tú-* before the inverse prefix, transitive verbs whose intrinsic orientation is UPWARDS (§15.1.5) have the same surface form in the Imperfective 3'→3 (and also 3SG→1SG with verbs whose stem ends in -a, due to vowel merger, see §3.3.1.3 and §14.2.1.1) on the one hand and the Factual Non-Past 3→2SG on the other hand. The two examples in (62) illustrate this ambiguity with the verb *ndza* 'eat' (which selects the orientation UPWARDS, §15.1.5.4) with the Factual Non-Past 3→2SG *tú-wy-ndza* 'it will eat you' in (62a) and the Imperfective *tú-wy-ndza-a* 3SG→1SG 'it eats me',¹⁶ both pronounced /túynda/ in two immediately adjacent sentences in the same text.

 '[The demon cannot] eat me, I came for you [to save you].'
 (tWxtsa2003)

In addition to the meaning difference, the ambiguity between the two prefixes can sometimes be resolved by the syntactic context alone. For instance, the verb *stu* 'do like' often occurs with another transitive verb in a serial verb construction (§25.4.1.2) sharing the same person and tense. If the other verb in the construction does not select the orientation UPWARDS, its Imperfective 3'→3 (or generic subject) and Factual 3→2SG will not be homophonous.

¹⁶For the use of the Imperfective in subject complement clause of the verb *jɣ* 'be allowed', see §21.2.4.

For instance, in (63a), since *nuc^hymda* ‘drink with a straw’ selects the orientation DOWNSTREAM (§15.1.5.4, example 73), its Imperfective 3’→3 would be *c^hú-wy-nuc^hymda*; the form *tú-wy-nuc^hymda* is thus unambiguous, and suffices to demonstrate that the surface form /tú(γ)stu/ in this context is really a 3→2SG form *tú-wy-stu* and not a 3’→3 Imperfective *tú-wy-stu*, even without considering the meaning of the sentence.

Conversely, in (63b), the second verb *juú-wy-cu* is unambiguously a generic Imperfective form, since there is no prefix with which the rounded allomorph of the B-type WESTWARDS preverb *juu-* could be confused; the form /tú(γ)stu/ in this sentence must therefore necessarily be analyzed as a generic Imperfective *tú-wy-stu*.

- (63) a. *t^hu-tu-rgyz tce ki tú-wy-stu*

 DEM.PROX IPFV-INV-do.like LNK IPFV-INV-open
 ‘One opens it like this.’ (26-tCAkWG) {0003688#S18}

Second, the A-type preverbs *tx-* UPWARDS, *lx-* UPSTREAM, *kx-* EASTWARDS and *yx-* and the corresponding D-type preverbs *to-*, *lo-*, *ko-* and *jo-* (§15.1.1.1) are neutralized before the inverse prefix. This implies that the Aorist (§21.5.1.1) and Inferential (§21.5.2.1) of verbs selecting the orientations listed above will be homophonous in all forms bearing the inverse prefix.

In (64a), the 3’→3 form /tó(γ)sulxt/ could either be Inferential *tó-wy-su-lxt* with the D-type preverb *to-* or Aorist *t^hé-wy-su-lxt* with the A-type preverb *tx-*. Here, the context can help to disambiguate between the two: the former is preferred because the whole story is told in the Inferential, and using the Aorist in this particular context would imply taking the event described by the verb as a reference point (§21.5.1.4), with a different translation ‘when the horse...’. In (64b) on the other hand, the presence of the postposition *çimuma* ‘immediately after’ (§25.3.3.2) and the meaning of the sentence imply that the form /tó(γ)χtu/ must be analyzed as Aorist rather than Inferential.

Third, the contrast between the Proximative *ju-* (§21.6.2) and the B-type *ju-* preverb is also neutralized when preceding the inverse prefix. For instance, the Proximative Factual 3→1SG *jú-wy-ɕaβ-a* PROXM-INV-catch.up-1SG ‘it is about to catch up with me’ and the Imperfective *jú-wy-ɕaβ-a* IPFV-INV-catch.up-1SG are homophonous, since the verb *ɕaβ* ‘catch up’ is compatible the indefinite orientation *ju-* (§21.6.2).

14.3.2.8 Direction marking and person hierarchies

The mixed and non-local domains of the Japhug indexation system present a remarkable symmetry, illustrated in Table 14.13: direct X→3 and inverse 3→X forms have the same person indexation affixes, and only differ by the presence of the prefix *wy-* in inverse configurations, and of stem III in (Non-Past) XSG→3 configurations.

Although this symmetry is broken in the local domain, where neither the *wy-* prefix nor stem III alternation occur (§14.3.2.3), Japhug has an indexation system very close to the canonical direct-inverse, as presented in Table 14.14 (Jacques & Antonov 2014): all configurations of the lower half of the bipersonal indexation space except 2→1 take the *wy-* prefix, while this prefix is not found in the upper half.

As mentioned above, person indexation affixes in Japhug have neutral alignment, and can be used to index either subjects (of transitive or intransitive verbs) or objects. With transitive verbs, the *wy-* prefix (whose allomorphy is described in §14.3.2.7) and Stem III (§12.2.2) serve to disambiguate the function of the inde-

14 Person indexation and argument structure

3'			3'→3	

xation affixes closest to the verb stem:¹⁷ if the *wɣ-* prefix is present, the affix(es) index the object, while if Stem III is present, they index the subject. The *wɣ-* prefix and stem III mark *inverse* and *direct* configurations, respectively.

A way to describe the distribution of the inverse and direct markers is the notion of person or empathy hierarchy (Silverstein 1976; DeLancey 1981; Sun & Shidanluo 2002; Lockwood & Macauley 2012). A typical example of person hierarchy is (65), on which first person ranks higher than second person, discourse participants (first of second persons) higher than third persons,¹⁸ and among animate third persons (in particular humans) higher than inanimate third persons.

(65) 1 > 2 > 3 animate > 3 inanimate

¹⁷If two indexation suffixes are present, the second suffix indexes the number of the other argument (§14.3.2.6).

¹⁸On the difference between third person on the one hand, and first and second persons on the other hand, see also Benveniste (1966b: 253–256).

This type of hierarchies,¹⁹ originally proposed to account for splits in pronominal systems (Silverstein 1976), have been invoked to explain various morphosyntactic phenomena, including slot accessibility (for instance, the prefixal slot in the Independent Order paradigms of Algonquian languages, Zúñiga 2006; Lockwood & Macauley 2012) and direct/inverse marking.

In this framework, when the subject and the object compete for the same morphological slot, the one that is higher on the hierarchy is indexed. In addition, INVERSE markers occur when the *object* is higher on the hierarchy than the subject (2→1, 3→1, 3→2), and DIRECT markers when the *subject* is higher (1→2, 1→3, 2→3).

The explanatory power of hierarchies to analyze indexation systems has been challenged (Zúñiga & Cristofaro 2018), in particular due to the fact that in some languages one would need to posit contradictory hierarchies (see Zúñiga's 2006 discussion of Plains Cree).

Independently of the cross-linguistic validity of the notion of person hierarchies, the Japhug indexation system is amenable to an analysis in terms of the two non-contradictory hierarchies in (66). The nature of the contrast between 3 proximate and 3' obviative is discussed in §14.3.3.

- (66) a. 1, 2 > 3PROX > 3', GENR
 b. 1SG > 1N.SG, 2, 3

Hierarchy (66a) describes the distribution of the inverse *wy-* prefix and Stem III in the mixed and non-local domains:

- The inverse prefix occurs whenever the subject is lower than the object (3→1, 3→2, 3'→3), a rule that also accounts for its function to mark the generic transitive subject GENR→3 (§14.3.2.5).
- Stem III is found when the subject is singular and higher than the object (1SG→3, 2SG→3, 3SG→3').
- Neither the inverse prefix nor Stem III are found when the subject and the object are equal on the hierarchy (66a), in particular in the local domain (2→1, 1→2), where portmanteau prefixes occur to indicate person configuration (§14.3.2.3), and the suffix closest to the verb stem indexes the object.

¹⁹Other hierarchies have been suggested; for instance, slot accessibility in most Algonquian languages requires to posit a hierarchy 2 > 1 > 3.

Generic object configurations, which are marked with the *ku-* generic prefix and lack Stem III (§14.3.2.5), are analyzed as $3' \rightarrow \text{GENR}$, as third person obviative and generic are equal on (66a).

Additional evidence for the existence of (66a) is presented in §14.4.3.

Hierarchy (66b) accounts for the special status of the 1SG: whenever one of the core arguments is 1SG, the number of the other argument is indexed on the verb. In $2 \rightarrow 1\text{SG}$, $3 \rightarrow 1\text{SG}$ and $1\text{SG} \rightarrow 3$ configurations, an additional suffix can follow the *-a* 1SG to index the number of the third or second person argument (§14.3.2.6). In the $1\text{SG} \rightarrow 2$ configurations, the suffix is coreferent with the number of the object like all forms in the local domain (§14.3.2.3).

The hierarchies in (66) are only valid for Japhug. In other Gyalrong languages, including Situ (DeLancey 1981; Sun 2015; Zhang 2019), Tshobdun (Sun & Shidanluo 2002) and Zbu (Gong 2014), the inverse prefix is also found in the $2 \rightarrow 1$ configuration and does not appear in the generic subject form, suggesting a hierarchy closer to (65).

A different approach to explain the structure of the Japhug direct-inverse indexation system is to analyze it in terms of historical linguistics. Some preliminary ideas on the topic are presented in §14.8.1 and §14.8.3.

14.3.3 The function of the direct/inverse contrast in non-local configurations

Like most Gyalrong languages, including Tshobdun (Sun & Shidanluo 2002), Zbu (Gong 2014), but excluding West Gyalrongic (Lai 2015) and some dialects of Situ (Sun 2015; Zhang 2019), Japhug has a contrast between inverse and direct forms in the non-local configurations.

The clearest function of the inverse prefix in this context in Japhug is marking generic subject (§14.3.2.5). In non-generic forms, the choice of inverse or direct configurations is determined by several factors, including animacy, possession and saliency of the core arguments.

Japhug lacks obviative marking on nouns (§5.1.1.3), but in the present work I use the terms ‘obviative’ (abbreviated as $3'$) to refer to the third person *object* of a verb in direct non-local configuration or to the third person *subject* of a transitive verb with inverse configuration, and ‘proximate’ (3) for the subject of a verb in direct form or object of a verb in inverse form (the choice of these terms is discussed in §14.3.2.2).

14.3.3.1 Animacy

The clearest factor determining the proximate or obviative status of a noun phrase in Japhug is animacy. Whenever one of the core arguments (whether a noun phrase or a clause) is inanimate and the other animate, the former will almost always be obviative, and the latter proximate.

When the subject is animate and the object inanimate (with the exception of generic subjects §14.3.2.5 and pseudo-passive constructions §14.3.3.4), the verb must be in direct form. Thus, indirective verbs of speech (§14.4.1) such as *tí* ‘say’, or transitive modal verbs such as *spa* ‘be able’ (§24.5.3.4), whose object is always a complement clause (or an abstract noun for some of these verbs),²⁰ and whose subject is necessarily human or higher animal, will always have a proximate subject and an obviative object (3→3’), and thus never appear in (non-generic) inverse configurations.

Conversely, in nearly all the cases when the subject is an inanimate entity (including plants) and the object an animate one (including humans and non-human animals), the verb appears in inverse form, as illustrated by examples (67), (69) and (68).

Inanimate agents are usually natural forces, such as *tu-ci* ‘water’ (subject of *c^hŷ-wy-yut* ‘it brings her downstream’ in 67) or *tu-muu* ‘the rain’ (subject of the verb *pjúú-wy-χtçi-nuu* ‘(they) wash them away’ in 69).

Plants can also be agents of verbs with animate patients, as in (§68). In this example, note the inversion between the subject and object of the first verb (*tu-*

²⁰Complement clauses, being inanimate arguments, are always obviative when used as objects of complement-taking verbs.

ndze, whose subject is the dog and object the plant) and those of the second verb (*lú-wy-su-qioʒ*, whose subject (causer) is the plant and object the dog).

There are also cases when inert substances (such as soot in 69) can be agents. Indeed, in (69), soot is the non-overt subject of the verb *ɲɣ-wy-suy-ɲaʒ-nu* ‘it caused them to become black’. In such cases the inanimate argument is always obviative, and inverse marking on the verb is required.

 {0003925#S52}

Natural forces appear to be intermediate between inanimates and animates, as counterexamples without inverse marking do exist. In (70) for instance, the verb *t^ha-nu-tsum* ‘it took them downstream’ has *tu-ci* ‘water’ as subject and the animate noun *βzu ra* ‘the mice’ as object, but a direct configuration 3→3’ is selected. However, only a handful of examples of this type are found in the corpus, and inverse marking would normally be expected.

14.3.3.2 Possession and obviation

In Algonquian languages, there are two main constraints governing the use of obviation on nouns: on the other hand, third persons possessed by another third person are automatically obviative (Wolfart 1973: 25, Valentine 2001: 625), and on the other hand, at most one argument can be proximate in any given clause (Valentine 2001: 627). A consequence of these constraints is that whenever a transitive verb takes as subject a possessed noun, and as object a (proximate) noun coreferent with the possessor of the subject,²² the verb will necessarily have an inverse form, as in the Cree example in (76). Conversely, if the subject is a proximate noun and the object a possessed noun whose possessor is coreferent with the subject, the verb will necessarily be direct.

- (76) *cān* *o-tēm-a* *kī-mākwam-ik*
 ANTHR 3SG.POSS-dog-OBV PST-bit-INV
 ‘John_{prox}’s dog_{obv} bit him_{prox}.’ (Wolfart 1973: 25)

Though similar phenomena have been reported outside of Algonquian (Aissen 1997), not all languages with direct-inverse indexation display such relationship between possession and obviation (Haude & Zúñiga 2016).

Japhug lacks obviation marking on nouns (§5.1.1.3), but the presence of direct or inverse morphology can nevertheless be used to test whether possession has an effect on the obviation status of nominal arguments.

There is a very clear tendency for inverse marking to occur when the subject is a possessed noun and the object its possessor (henceforth SPO ‘subject possessed by third person object’), as shown by examples such as (77), (78) and (79).

²²If the object noun is not co-referent with the possessor of the subject, it will be obviative too due to the second constrain.

 huishuohua de niao-zh) {0003992#S15}

However, the fact that a correlation between inverse marking and SPO configurations exists does not necessarily imply that the inverse is actually triggered by SPO.

First, there are also many examples of SPO with direct marking. For instance, in (80), the verbs *ɲu-z-nɛja-ndzi* and *mu-ta-su-ye-ndzi* with SPO lack inverse prefixes and have direct morphology (subject number indexation §14.3.2.2 and the C-type orientation preverb *ta-*, §14.3.1). In addition, the examples (8) and (9) in §5.1.1.3 provide a minimal of SPO configuration with direct vs. inverse configuration in exactly the same context.

- (80) *tɛ^heme wuma zo kuw-pe ci pu-ɲu q^he,*

 ‘[His wife]_i was a very nice girl, her_i parents were unwilling to part with her_i and did not let her_i come.’ (14-siblings) {0003508#S274}

Second, the presence of inverse marking in examples (77), (78) and (79) above (and in most cases of SPO with inverse) can be accounted for by factors other than possession, in particular the relative saliency of the subject and the object

(§14.3.3.3): in all three examples, the object corresponds to the main character of the story; notice in particular in (77) the presence of inverse marking on the previous verb *kó-wy-ndzú* ‘he complained about him’, which does not have SPO.

In stories, non-salient characters tend to be described on the basis of their relationship with a salient character (rather than by a different name), and are therefore expressed by nouns with third person possessor. Many, if not most SPO configurations in the corpus involve non-salient referents acting upon salient referents related to them; the apparent correlation between SPO and inverse marking in texts may therefore be a side-effect of argument saliency rather than a specific morphosyntactic phenomenon.

14.3.3.3 Saliency

When both core arguments are third person animate, both are potentially proximate or obviative, and the verb can thus be either in direct or inverse form, and the choice between one or the other is determined, as we will discuss in this section, by pragmatics. In this section, I mainly focus on human or anthropomorphized non-human referents; animals are briefly treated at the end of the section.

Transitive verb forms where such a choice between inverse and direct forms exist are however a minority. For instance, in (81), the verbs *to-ti* ‘she said’, *to-nu-ŋga* ‘she wore it’ and *ko-rqoʋ* ‘he hugged (her neck)’ are in the direct form due to animacy constraints (since the subjects of all three verbs are animates and their object inanimates, see §14.3.3.1). Note that a subject shift takes place between *to-nu-ŋga* ‘she wore it’ and *ko-rqoʋ* ‘he hugged (her neck)’ without inverse marking.

The only verb in this passage taking two animate referents is *tó-wy-tsum* ‘she took him up’, whose subject is *stu kuu-xtçi nu* ‘the smallest (of the daughters of heaven)’ and whose object is a human boy.²³

 {0003426#S68}

²³Compare example (81), where this referent is in 3sg, with (126) in §7.5.2 and (105) in §9.1.5.3, where it appears in 1sg.

The presence of inverse marking on *tó-wy-tsum* ‘she took him up’ in (81) is neither due to semantic nor syntactic factors. Rather, animate (in particular, human/sentient) referents in a particular passage (the subsection of a story, or a complete) are classified along a scale of obviativity. The main character(s) is/are ascribed proximate status, while characters which the narrator considers to be more secondary receive obviative status.

Example (81) is taken from a flood story whose main character is a human boy (the only survivor of the flood). This character remains proximate in the whole story, and thus by comparison, the daughter of heaven (the other character found in the passage in 81) is obviative. The proximate/obviative contrast on these animate referents is not visible when they occur as subjects with inanimate objects: the inanimate referents are necessarily always more obviative than any animate referent, and therefore direct forms are found. This contrast is only revealed when a verb takes two animate referents, namely the verb *tó-wy-tsum*. The apparent shift between direct and inverse forms found in (81) is not an effect of the animate referent changing their obviation status across sentences, but is rather a consequence of the fact that Gyalrong languages lack a special conjugation class used with inanimate objects, such as the VTI (transitive inanimate) verbs in Algonquian.

The scale of obviation (82) accounts for the distribution of direct and inverse marking in (81) (and in the rest of the story): direct marking is found when the subject is higher than the object on the scale, and inverse marking when it is lower.

- (82) human boy > daughter of heaven_i > inanimate referents (*qro u-ŋga* ‘pigeon clothes’ ; *u-mke* ‘her_i neck’)

The degree of obviativity of each referent, while generally stable within a particular passage, can be fluid in longer narratives. For instance, in the story ‘Norbzang and Padma ’Od’bar’, the analysis of direct vs. inverse forms reveals several scales.

In (83), the subject is the king and the object the character Padma ’Od’bar, and inverse marking indicates that the latter is proximate.

- (83) *kuɕnu-ŋi kuɕny-rzab nú-wy-z-nɣbav* *ɲu-ŋu.*
 seven-day seven-night IPFV-INV-CAUS-have.a.good.time SENS-be
 ‘[The king] let [Padma ’Od’bar] have a good time for seven days and seven nights.’ (2005 Norbzang)

Examples (84) and (85) have the secundative verbs *pa-suxɕɛrt* ‘he taught (it) to them’ (§14.4.2) and *nú-wy-ɕu-rŋo-nu* ‘he lent it to them’ (§14.4.3) in direct

and inverse forms, respectively. From these examples, one could further propose the scale (86) showing the relative obviativity of the three groups of characters (Padma 'Od'bar, the three girls, and the king).

- (84) *ty-tɕu nuu ku, [...] nunu tɕ^heme χsum nu lonba*

 SENS-be
 '[The king] said 'yes' and lent the Gserbzang to [the three girls].'(2005
 Norbzang, 406; girls > king)

- (86) Padma 'Od'bar > girls > King

However, while (86) is indeed valid in some sections of the story, we also find examples such as (87) and (88) with a verb in direct form, despite the fact that the subject (the king) is lower on the scale (86) than the object (Padma 'Od'bar): an inverse configuration would be expected.

- (87) *tcendyre rɣlpu ku na-nusŋom ju-ŋu.*
 LNK king ERG AOR:3→3'-envy SENS-be
 'The king envied [Padma 'Od'bar].'(2005 Norbzang)

 LNK up.there LNK ANTHR AOR:3→3'-burn-PL SENS-be
 '[The king and his servants] burned Padma 'Od'bar up there.' (2005
 Norbzang)

In (87) and (88), a different scale (89) has to be posited.

- (89) King > Padma 'Od'bar

Thus, a particular character of this story (the king), which has obviative status in (83) and (85), becomes proximate in (87) and (88), in a passage where he temporarily becomes the 'main character'.

Within each of the scenes of a narrative, the obviativity status of each referent generally remains stable. Thus, in chains of verbs sharing coreferent pairs of subject and object, all of the verbs are either in direct or in inverse form. In (90) for instance, we find four verbs in inverse form in a row; each of them takes *tx-wuu* ‘grandfather, old man’ as obviative subject and the main character of the story Nyima ’Odzer as proximate object.

- (90) *tcendyre tx-wuu* *nuu kuu jɣ-wy-ngɣjts^hi*

 IFR-INV-CAUS-be.full LNK LNK
 ‘The old man gave him food and drinks, gave him food to eat, water to drink, gave him enough for him to eat his fill.’ (2011-05-nyima)

However, alternations between direct and inverse can also be found across adjacent clauses with constant subjects and objects within a single passage. In (91), the noun *lulu* ‘cat’²⁴ is the proximate referent of the verbs *ko-mɣa* and *jo-mɣa*, since they are in direct form, but then a shift to inverse occurs and its preys (in the dual, the mouse and the sparrow) become proximate instead. The switch between direct and inverse marking gives native speakers flexibility to change the perspective of the narration.

In other cases, alternations between direct and inverse forms without change in subjects and objects appear to be due to hesitations on the part of the speaker.

²⁴This story is about humanized animals depicted as able to think and speak, and can be considered to be similar to human referents.

For instance, in (92) the speaker first chooses a direct 3PL→3' verb form *γγϣϣτ-*nuu**, with *ϣϣϣϣϣ γϣ *u-βjov* nura* 'the king's servants' being the proximate referent, but then switches to the inverse 3'→3SG form *γϣ-*tsum**, with the character Nyima 'Odzer as proximate referent instead.

14.3.3.4 Pseudo-passive

In some texts translated from Chinese, inverse verb forms are used in configurations with an inanimate object and an animate subject, an exception to the animacy constraints described in §14.3.3.1, according to which a direct form would be expected. This usage is similar to the generic subject construction (§14.3.2.5) where the inverse also occurs with animate subjects and inanimate objects, but semantically differs in that the subject is not generic, but rather an unknown referent.

Example (93) illustrates this construction with the verbs *jó-wy-kio* and *tó-wy-cu*, whose object is the jar's cover and subject the girl inside the jar (whose presence was unknown to the observer from whose point of view this passage is narrated).

- (93) *u-te^hira [...] γϣ *u-fkaβ* numu jó-wy-kio. tce nu*

'The jar's cover slid over and opened, and a girl with beautiful clothes and a very nice appearance came immediately out of it.' (150827 tianluo-zh) {0006250#S98}

The first two clauses translate Chinese 发现水缸盖被推开了 <fāxiàn shuǐgāng-gài bèi tuīkāi le> ‘He realized that the jar’s cover had been pushed open’. The inverse forms correspond here to a 被 *bèi* ‘passive’ construction, and nearly all of the examples of inverse expressing unknown (rather than generic) animate subjects have been found in the translation of sentences containing this construction in Chinese. This pseudo-passive construction appears to be an effect of calque from the original, although Tshendzin, when asked about these examples, did not consider them to be ungrammatical.

In addition, there are a few cases in translated texts like (94) with inverse marking and unknown human subject (on the verb *pjɣ-wɣ-lwoɔ* ‘someone spilled it’) where no 被 *bèi* construction is found in the original: this example translates 他发现水罐空了 <tā fāxiàn shuǐguàn kōng le> ‘He realized that his water jar was empty’. The fact that the translation in this example is somewhat removed from the original would support the idea that the pseudo-passive inverse is a native grammatical construction.

- (94) *tcendɣre ri, ku-rtoɔ tce u-tu-ci nura*
 LNK LNK IPFV-look LNK 3SG.POSS-INDEF.POSS-water DEM:PL

 ‘He_i realized that someone had spilled the water [in his_i gourd], and none was left.’ (140505 liuhaohan zoubian tianxia-zh) {0003913#S188}

Thus, it is unclear at present whether the extension of the generic subject construction to express unknown subjects (the ‘pseudo-passive’), is the result of translation, or whether it reflects a genuine but rare native construction.

14.3.4 Transitive irregular verbs

Unlike in Zbu (Gong 2014), there are no transitive verbs in Japhug with irregular 1SG forms. The only irregularities related to person indexation are either found in generic forms or defective conjugations.

The verb *ti* ‘say’ takes the prefix *ku-* to express generic human subject as in (95) as if it were an intransitive verb (§14.2.1.2) instead of the inverse *yu-* found on regular transitive verbs (§14.3.2.5); a form such as †*tí-wy-ti* would be incorrect. It is not the only irregularity of *ti* ‘say’: this is also the only underived transitive verb with a separate stem II in Japhug (§12.2.1.1).

- (95) *tce ckrɣz yu u-mat nu t^hye tu-ku-ti ɲu*
 LNK oak GEN 3SG.POSS-fruit DEM acorn IPFV-GENR-say be:FACT
 ‘The fruit of the oak is called an acorn.’ (08-CkrAz) {0003444#S39}

Although the prefix *ku-* expresses generic object on other transitive verbs (§14.3.2.5), in the case of *ti* ‘say’ there is no ambiguity: the object of this verb is necessarily a complement clause or a noun, and can never have a first, second or generic person referent. The use of *ku-* to mark the transitive subject is reminiscent of Tshobdun, where both transitive and intransitive verbs mark generic subject by the same prefix (Sun 2014b).

The defective verb *mɣ-xsi* ‘one does not know’ only occurs in Factual Non-Past negative with a generic subject. This transitive verb takes nouns or complement clauses as object, usually with either an interrogative pronoun or a polar opposition as in (95), sometimes with the dubitative (§21.4.4). It cannot take any additional affix (including nominalization prefixes, §16.7 and orientation preverbs, §15.1.1.5), except for the autive *nu-* in the form *mɣ-nuu-xsi*, as in (97).

- (96) *tu-ndze* *ɲu* *maβ* *mɣ-xsi*.

 3SG.POSS-material DEM NEG-AUTO-GENR:know LNK
 ‘Father, I don’t know whether the [boy] down there is someone born in the year of the tiger, [who must] to be thrown [into the lake as a sacrifice to the lake monster], but...’ (2011-05-nyima)

The stem *-xsi* contains the same root as *suz* ‘know’ but without *-z* suffix and with a *x-* prefix which represents a fossilized allomorph of the regular generic *ku-*. The verb *suz* ‘know’ is attested in generic form, as in (98). Although such examples are very rare, they show that *mɣ-xsi* cannot be considered to be a suppletive form in the paradigm of *suz* ‘know’.

- (98) *nuu* *ma* *kuu-pe* *tci* *pú-wy-suz* *me,*

 ‘Apart from that, I don’t know about the good or the bad things [that the butterfly does].’ (26-qambalWla) {0003680#S51}

The verb *kɣtupa* ‘tell’, which presents a unique case of incorporation (§16.1.2.7, §20.13.1), only occurs in non-prefixed forms. Its paradigm is thus restricted to the

Factual Non-Past (the only tense without orientation preverb, §21.3.1.1), excluding second person forms (which always take a prefix, whether in the mixed or local domain), all inverse forms (which take the *wɣ*-inverse prefix) and non-finite forms (§16.7). Table 14.15 (from Jacques 2012d) presents the defective paradigm of *kɣtupa* ‘tell’, with the regular stem III *kɣtupe* in 1SG→3 and 3SG→3’ forms, alongside that of *ndza* ‘eat’.

Table 14.15: Paradigm of the verb *kɣtupa* ‘tell’

3DU→3’	<i>ndza-ndzi</i>	<i>kɣtupa-ndzi</i>
3PL→3’	<i>ndza-nu</i>	<i>kɣtupa-nu</i>

14.3.5 Transitive verbs with dummy subjects

A handful of transitive light verbs (*βzu* ‘make’ §22.4.2.1, *lɣt* ‘release’ §22.4.2.2, *tɕɣt* ‘take out’ §22.4.2.3, *ndo* ‘take’ §22.4.2.4, *ta* ‘put’ §22.4.2.6 and *tsʰoɕ* ‘attach’) occur in the dummy subject construction, expressing natural phenomena, in particular meteorological ones.²⁵

In this construction, the verb only has one overt (always singular) absolutive nominal argument. The only form of the paradigm is the direct 3SG→3’ (§14.3.2.2), with Stem III alternation in non-past tenses as in (100), and C-type preverbs in Aorist as in (99), showing that the verb, despite its lack of ergatively-marked subject, is unambiguously transitive (§14.3.1).

- (99) *tvɣe na-βzu q^he nu-me cti.*
 sun AOR:3→3’-make LNK IPFV-not.exist be.AFF:FACT
 ‘It disappears when the sun appears.’ (25-RmArYWG) {0003652#S35}

²⁵These dummy subjects, which cannot be realized, correspond to expletive pronouns in languages which require overt subjects.

- (100) *u-taβ ri ku-wyrum ku-te, ku-ku-ta ci*
 3SG.POSS-ON LOC SBJ:PCP-be.white IPFV-put[III] IPFV-SBJ:PCP-put INDEF

 exist:FACT LNK DEM again mold be:FACT
 ‘A white thing grows on [meat that has been left to rot], there is
 something that grows on it, this is also mold.’ (20-sWrna) {0003564#S54}

The unique absolutive argument of this construction superficially resembles an object. However, in (100), note that the subject participle *ku-ku-ta* ‘(the thing) that grows (on it)’ (§16.1.1.4) is used to relativize this argument instead of an object participle (§23.5.3.4) as would have been expected (see also §16.1.1.5).

Moreover, despite the unambiguous morphological transitivity of the verb, the ergative is strictly impossible on the noun, even in the case of personified natural forces. For instance, in the retellings of Aesop’s story ‘The North Wind and the Sun’, although *akuc^hoble* ‘east wind’²⁶ occurs with the ergative with other verbs, and although here the North Wind is anthropomorphized and is described as blowing on purpose (to compete with the sun), the ergative is not accepted when the main verb is *βzu* ‘make’ as in (101).

- (101) *akuc^hoble nuu to-βzu tce rcanu,*
 east.wind DEM IFR-make LNK UNEXP:DEG
 ‘The East (North) Wind blew.’ (aesop feng he taiyang-zh)

In addition, the light verbs in this construction lack one of the seven morphological properties of transitive verbs (§14.3.1): they select dental infinitives instead of bare infinitives (§16.2.3). Compare for instance (102) where *βzu* ‘make’ occurs in the bare infinitive *tu-βzu* with (103), where the bare infinitive *u-βzu* is found instead, as *βzu* ‘make’ is in a plain transitive construction.

- (102) *tvrtsa ku-wxti tsa tu-βzu to-za.*

14.4 Ditransitive verbs

Ditransitive verbs are trivalent verbs which follow the transitive conjugation (unlike trivalent semi-transitive verbs, §14.2.5). Both indirective and secundative transitive verbs are attested (Malchukov et al. 2010), and causative verbs deriving from monotransitive verbs also belong to this category.

14.4.1 Indirective

Most non-derived ditransitive verbs in Japhug are indirective. The theme is in the absolutive and is indexed as an object. The recipient either takes dative (§8.3.1) or genitive (§8.2.3.2) flagging, as in (105), or is encoded as a possessive prefix on the object.

- (105) *ku-rɣrma ra nuu-cki nuuɕu, nɣki, kuxteo ci*
 SBJ:PCP-work PL 3PL.POSS-DAT DEM:LOC FILLER basket INDEF
z-ɲɣ-rɲo,
 TRAL-IFR-borrow
 ‘[The leopard] borrowed a basket from the workers.’ (2002 qalakWcraq)

The indirective category can be divided into four semantic subgroups.

First, it comprises verbs of speech, such as *ti* ‘say’, *t^hu* ‘ask’, *ndzu* ‘accuse’ and *fɛɣt* ‘tell’, which mark the addressee with the dative.

Second, it includes verbs expressing gift or temporary transfer of objects such as *k^ho* ‘give’, ‘pass over’ (§12.2.2.3) and *p^hul* ‘offer’ and *rɲo* ‘borrow’ and *nɣɲgu* ‘borrow’. The first two encode the source as their subject while their recipients

takes the dative case, whereas the latter encode the recipient as their subject, and their source appear in the dative.

The two verbs translated as ‘borrow’ differ in that the former (*rŋo*) expresses the lending of an object which can be returned in its original shape to the original owner, while the latter (*nrŋgu*) is used with grain or money, for which an equivalent amount is given back instead of the original object (which has presumably already been consumed).²⁷ In addition, verbs of manipulation such as *yut* ‘bring’ and *tsum* ‘take away’ can optionally take a dative beneficiary and convey a meaning similar to verbs of giving, as in example (106).

- (106) *tɕendvɾe rʃɣlpu u-p^he* *la-tsum* *ɲu-ŋu*,
LNK king 3SG.POSS-DAT AOR:3→3:UPSTREAM-take.away SENS-be
‘He brought[the shoe] to the king.’ (tWxtsa 2003)

Third, verbs expressing hitting or throwing can also be indirective, for instance *βde* ‘throw’, and also *lvt* ‘release’, which occurs in many light verb constructions (§22.4).

Fourth, some verbs of manipulation have an obligatory indirect argument expressing the goal, in particular the verb *rku* ‘put in’ which selects the relator noun *u-ŋgu* ‘inside’ (§8.3.4.4). For most verbs of manipulation the goal is optional (§14.5.4).

The object of indirective verbs is nearly always third person, and local and inverse configurations are almost never attested (except for inverse generic forms, §14.3.2.5). For instance in (§107), the recipient is 1SG (‘ask me’), but the verb *t^hu* ‘ask’ has the imperative 2SG→3 form (§21.4.2.1) because the non-overt theme corresponds to the questions that the addressee is about to ask, and using a 2→1 configuration here would be non-sensical.

- (107) *tx-t^he* *jɣɣ*
IMP-ask[III] be.allowed:FACT
‘Ask [me your questions]!’ (conversation, several attestations)

Local or inverse configurations are attested with indirective verbs of giving in the corpus to refer to asking or giving a girl in marriage, as in (108), as this is the most common situation when a human can occur as theme of a verb of this type.

²⁷The meaning ‘lend’ is expressed with the corresponding causatives, see §14.4.3.

- (108) *a-wa ku, turme yu u-rzaβ nú-wy-k^ho-a*

cti nɣ
 be.AFF:FACT SFP
 ‘My father has offered me in marriage to someone.’ (150828 liangshanbo zhuyingtai-zh) {0006244#S157}

The only indirective verb of speech which is commonly used with a human theme is *ndzɯ* ‘accuse’: the object and the dative argument correspond to the persons about whom and to whom one complains, respectively. For instance in (§109), the object is 2SG, and the dative argument a third person referent.

- (109) *azo <laoshi> u-eki ta-ndzɯ*

 ‘I will put you in my belly.’ (140505 xiaohaitu-zh) {0003921#S80}

14.4.2 Secundative

Secundative verbs have two absolutive arguments, one of which (the recipient) is indexed on the verb, and the other one (the theme) is not. The theme is a semi-object, and presents some objectal properties (§16.1.2.4, §23.5.4.2).

14.4.2.1 Inventory of secundative verbs

Most secundative verbs express temporary or permanent giving: *mbi* ‘give’ and *ctɕu* ‘entrust with’. Since these verbs index the recipient, they commonly occur in local configurations (§14.3.2.3), as in (§111).

- (111) *sumat kɣ-kw-ctɕu-a*
 fruit AOR-2→1-entrust.with-1SG
 ‘You had left me [a jar of] fruit.’ (140516 yiguan ganlan-zh) {0004014#S73}

14 Person indexation and argument structure

The verb *mbi* ‘give’ can in addition take an essive adjunct (give as *X*, §8.1.7), as *nx-rzaβ* ‘your wife’ in (112); in this sentence the object (theme) is *a-me nu* ‘my daughter’.

 ‘I will give you my daughter in marriage.’ (‘I will give her to you as your wife’) (140428 yonggan de xiaocaifeng-zh) {0003886#S164}

Most verbs of speech are indirective, but *suxɕɾt* ‘teach’ has secundative alignment (see example 146, §18.6.4). This verb is perhaps historically a causative (§17.2.1.4), but it is not analyzable as such synchronically.

The simulative verb *stu* ‘do like’ can also be considered to be secundative. It takes a semi-object designating the manner (generally a demonstrative), and its object refers to the entity (human, animal or inanimate) subjected to the action (with infinitival complement clauses however, there is no raising of the object from the complement, see §24.5.7). In (113), this verb occurs in a 3DU→1SG configuration (§14.3.2.6), and takes as semi-object the demonstrative *nura* ‘these (things)’. In serial verb constructions, it occurs with transitive verbs, sharing the subject and the object of its counterpart, but taking an additional (generally demonstrative) manner semi-object (§25.4.1.2).

 {0003372#S177}

14.4.2.2 The theme of secundative verbs

The theme of secundative verbs cannot be indexed, unlike that of indirective verbs, and first or second person themes are not appropriate with the verb *mbi* ‘give’. To express meanings such as ‘*X* gave me/you to *Y*’, either an indirective verb has to be used (see 108 above), or alternatively the antipassive form *ɾymbi* ‘give to someone’. This antipassive form is the only verb form in Japhug lacking morphological transitivity (§14.3.1, §18.6.4) that can be used with inverse and local person indexation, as shown by (114a) and (114b).

14.4.3 Causative of transitive verbs

The sigmatic causative is the only valency-increasing derivation in Japhug which can be applied to transitive (unlike applicative §17.4 and tropative §17.5) verbs. When the base verb is transitive, its causative form is ditransitive. I use the notation $C \rightarrow C' \rightarrow P$ to describe causative configurations with three participants: C represents the causer (corresponding to the initiator of the causation, the argument that is added by the causative derivation), C' the causee (corresponding to the subject of the base verb) and P the patientive (corresponding to the object of the base verb); for instance, if the base verb is ‘help’, a 1SG→3PL→2SG configuration can be interpreted as ‘I made them help you.’

Lexicalized causatives are like underived secundative verbs, and index the recipient as the object. This category includes *jts^{hi}* ‘give to drink’, which derives from the monotransitive verb *ts^{hi}* ‘drink’, and *ɕurŋo* ‘lend’, which comes from the indirective verb *ŋo* ‘borrow’ (see 120 below for a more detailed discussion on this derivation).

Examples (115) and (120) illustrate the 2→1→3 configuration with the verbs *jts^{hi}* ‘give to drink’ and *ɕurŋo* ‘lend’, expressed in the same way as the local 2→1 configurations of a monotransitive verb (§14.3.2.3).

- (115) *a-wu* *tu-ci* *ny-ku-j-ts^{hi}-tei*
 1SG.POSS-grandfather INDEF.POSS-water IPFV-2→1-CAUS-drink-1DU
ú-jy?
 QU-be.allowed:FACT
 ‘Grandfather, could you give us water to drink?’ (nyima wodzer 2002)

In the case of non-lexicalized sigmatic causatives, the status of the causee is more complex, since it can optionally receive ergative flagging (§8.2.2.6), and cannot be relativized like an object (see §23.5.6). The direct object of such verbs can also be relativized using constructions unavailable for the direct object of monotransitive verbs (§23.5.3.3).

In addition, unlike secundative verbs, triactantial causatives can either index the causee or the argument corresponding to the object of the base verb, depending on their person: if the causee or object is first or second person, and the other argument is third person, the first or second person will be indexed regardless of its syntactic function.

For instance, all three examples (116), (117) and (118) show 2→1 indexation, but the first two has a 2→3→1 configuration, and index the patientive argument as the object, while the last one is an instance of a 2→1→3 configuration, and it indexes the causee as object (see also §17.2.4 and 25, §8.1.7 for additional examples of the same type). The prevalence of first and second persons over third persons in this context might support the person hierarchy (66a) postulated in (§14.3.2.8).

 1SG meat IPFV-2→1-CAUS-eat-1SG
 ‘You make me eat the bones.’ (2014-kWLAG)

While indexation is ambiguous in such cases, ergative flagging helps distinguish between 2→3→1 and 2→1→3 configurations: the ergative is present on the causee in (116), and absent on the patientive argument in (118) (see also §8.2.2.6).

Configurations with both causee and patientive argument being first or second person (3→2→1 and 3→1→2) are not attested in the corpus,²⁸ and are not easy to elicit. The elicited examples (119a) and (119b) show that 3→1→2 and 3→2→1 configurations are expressed using mixed 3→1 and 3→2 forms, respectively. In other words, the causee is indexed as object, and the patientive argument is not indexed.

²⁸See however (121) below, quadrivalent configuration with a second person beneficiary in the dative and 3SG→1SG verb indexation.

- (119) a. *uʒo kuw nʒo pú-wy-su-mto-a*
 3SG ERG 2SG IPFV-INV-CAUS-see-1SG

- b. *uʒo kuw azo pu-tú-wy-su-mto*
 3SG ERG 1SG AOR-2-INV-CAUS-see
 ‘He made you see me.’ (3SG→2SG→1SG elicited)

The causative derivation of indirective verbs has several different effects on argument structure. In the case of the lexicalized causative *εuρηο* ‘lend’, the relationship between its three arguments and those of the base verb *ρηο* ‘borrow’ can be summarized as follows (compare 120 with 105 in §14.4.1).

- The subject of *ρηο* ‘borrow’, the receiving person, corresponds to the object of *εuρηο* ‘lend’.
- The object of *ρηο*, the thing that is borrowed, corresponds to the semi-object of *εuρηο* ‘lend’.
- The dative oblique argument of *ρηο*, the giving person, corresponds to the subject of *εuρηο* ‘lend’, which is semantically both causer and source.

- (120) *wortɕ^{hi} zo, nʒ-χsvrʒaŋ* *pu-kuw-εu-ρηο-j*
 please EMPH 2SG.POSS-magical.object IPFV-2→1-CAUS-borrow-1PL
 ‘Please, lend us you magical object.’ (2005 Kunbzang)

This ‘inversive’ causative derivation reverses the direction of the borrowing action and modifies the argument structure and the alignment (indirective to secundative) without adding any new referent, by merging the source and causer roles, interpreting *εuρηο* as ‘ X_i causes Y to borrow Z from himself_{*i*}’. Other cases of this type of ‘inversive’ causative are presented in §17.2.5.7.

For most indirective verbs however, recipients and beneficiaries are marked with the dative and/or with a coreferent possessive prefix. Thus, the causative derivation does turn them into absolutive patientive arguments. For instance, the beneficiary of the verb *suγyut* ‘send, cause to bring’ is in the dative as that of its base verb *yut* ‘bring’, as shown by (121), where dative marking on the 2SG is obligatory.

14.4.4 Causative of semi-transitive verbs

Causative verbs derived from semi-transitive ones (§14.2.3) show secundative alignment: the causee is treated as object, and the semi-object of the base verb as an absolutive oblique, not indexed on the verb. For instance, the causative *syrmi* 'give a name' (§17.2.2.7) of the verb *rmi* 'be called' selects the entity to which a name is given as direct object, the 1PL in example (122).

14.5 Labile verbs

Most Japhug verbs strictly follow either the intransitive, or the transitive conjugations, and voice alternations such as causative (§17.2, §17.3), applicative (§17.4) and antipassive (§18.6) are needed to change their valency. A limited number of labile verbs are compatible with both conjugations; three groups can be distinguished: plain labile, labile with oblique arguments and labile with semi-object.

14.5.1 Transitive-intransitive labile verbs

14.5.1.1 Morphosyntactic properties

Plain labile verbs are compatible with both the intransitive and the transitive conjugations. When conjugated intransitively, they only have one argument (no semi-object or oblique argument). When conjugated transitively (following the features in §14.3.1), their subject corresponds to the intransitive subject, and the added argument is the object, except for a handful of examples (§14.5.1.4).

Compare for instance the intransitive and transitive use of the verb *βλου* ‘burn’ in (123). In the (123a), the verb has 1SG indexation, and since it lacks the 12SG→3 past *-t* suffix (§14.3.2.1), cannot be a transitive verb form (§14.3.1). This intransitive verb form cannot take an object, and means ‘make a fire’. In (123b), the verb has the *-t* suffix and is therefore a 1SG→3 transitive configuration (§14.3.2.1), and can take an overt object (here *smi* ‘fire’, but it can also occur with a noun referring to the object being burned).

- (123) a. *tx-βλου-a*

Table 14.16 gives additional examples of labile verbs with open syllable stems in transitive and intransitive conjugations.

Table 14.16: Aorist 1SG(→3) of labile verbs

Verb	Intransitive form	Transitive form
<i>βλου</i> ‘burn’	<i>tx-βλου-a</i>	<i>tx-βλου-t-a</i>
<i>ϕλου</i> ‘plough’	<i>tx-ϕλου-a</i>	<i>tx-ϕλου-t-a</i>
<i>φει</i> ‘forge’	<i>t^hu-φει-a</i>	<i>t^hu-φει-t-a</i>
<i>murkuu</i> ‘steal’	<i>tx-murkuu-a</i>	<i>tx-murkuu-t-a</i>
<i>numbrɣpuu</i> ‘ride’	<i>tx-numbrɣpuu-a</i>	<i>tx-numbrɣpuu-t-a</i>
<i>νημηο</i> ‘watch’	<i>kɣ-νημηο-a</i>	<i>kɣ-νημηο-t-a</i>

All criteria listed in §14.3.1 (when applicable) are congruent to distinguish between the transitive and intransitive forms of labile verbs; Table 14.17 presents the application of the seven tests to the verb *βλου* ‘burn’.

Table 14.17: Transitivity tests

	Intransitive form	Transitive form (with <i>smi</i> ‘fire’ as object)
1 C-type preverb, AOR:3SG(→3’)	<i>tx-βlu</i>	<i>ta-βlu</i>
2 Stem III, IPFV:3SG(→3’)	<i>tu-βlu</i>	<i>tu-βli</i>
3 Dental/bare INF	<i>tu-βlu (to-za)</i>	<i>uu-βlu (to-za)</i>
4 Subject participle	<i>ku-βlu</i>	<i>u-ku-βlu</i>
5 -t suffix, AOR:1SG(→3)	<i>tx-βlu-a</i>	<i>tx-βlu-t-a</i>
6 Progressive	<i>ɲuu-βlu</i>	<i>ɲuu-ɣsu-βlu</i>
7 Generic	<i>tu-ku-βlu</i>	<i>tú-wɣ-βlu</i>

Tests 2 and 5 are not operational with verbs whose stem ends in close syllable, but at least test 1 (in the case of *taβ* ‘weave’ in 124) is always applicable. Some labile verbs can even be used with the non-periphrastic Past Imperfective (§21.5.3), as in (124a). The presence or absence of the ergative on third person overt subjects is also a useful confirmation of the valency of the verb; for instance, in (124a) the subject *tɕ^heme* ‘girl’ lacks ergative marking, confirming the fact that *taβ* ‘weave’ is used here intransitively.

- (124) a. *tɕ^heme ci pɯ-taβ ɲɯ-ɲu,*
 girl INDEF PST.IPFV-weave SENS-be

 ‘One ploughs the fields, and ...’ (2002-tWsqar)

14.5.1.2 Classification of labile verbs

In addition to those in Table 14.16, the following verbs are labile: *yndzur* ‘grind’, *lyy* ‘graze’, *nbraʁ* ‘loosen the earth’, *ntʂu* ‘weed with a hoe’, *nɣre* ‘laugh’, *nuyɣja* ‘talk back, oppose’, *nuk^hɣja* ‘talk back, oppose’, *nuproʁmba* ‘imitate’, *ɲju* ‘parch’, *sulaʁrdɣβ* ‘kick (kick with forelegs)’, *suqartsu* ‘kick’, *suso* ‘think’, *taʁ* ‘weave’, *ɬɣβ* ‘thresh’.

The majority of plain labile verbs denote actions modifying the substance or shape of a material (*yndzur* ‘grind’, *clu* ‘plough’ etc), in particular activities related to agriculture and traditional trades. When used intransitively, these verbs do not specify any object, and generally express atelic actions. For instance in (124a), *pu-taʁ* means ‘do weaving’, without intrinsic endpoint and without reference to a particular piece of cloth.

Another category of labile verbs express action negatively affecting people (such as *nuyɣja* ‘talk back, oppose’ etc), some with animal subjects (*sulaʁrdɣβ* ‘kick (kick with forelegs)’ etc). These verbs take humans as objects in the transitive conjugation;³⁰ when used intransitively, they express a general propensity of the subject to do these negative actions.

The perception verb *mto* ‘see’ also has an intransitive stative use, meaning ‘have sharp eyesight’, taking the noun *tu-mɲaʁ* ‘eye’ as subject, and expressing the experiencer as subject possessor). Example (126) shows that the verb *mto* is conjugated intransitively (without stem III alternation, otherwise *ɲu-mɬɣm* ‘he sees it’ would be expected). Some verbs derived from the root *mto*, such as the velar causative *ɣɬmto* ‘cause to recover eyesight’ (§17.3.3.2), come from this stative intransitive use rather than the more common transitive one.

- (126) *u-mɲaʁ* *nur wuma ɲu-mto* *ɲu-ʂa* *ɲu-ɲu nýma*,

 ‘The [eagle] has a sharp eyesight.’ 140522 Kamnyu zgo, 226
 {0004059#S216}

³⁰The verb *murkuu* ‘steal’, though adversely affecting the persons whose possession are stolen, does not belong to this category since it takes the possession as object, not the victim of the theft.

14.5.1.3 Accusative lability

Most labile verbs in intransitive use have a meaning and syntactic function reminiscent of antipassive (§18.6) derivations, and share with them the ability to take the non-periphrastic Past Imperfective *pu-* (§18.6.6). Nevertheless, it is unclear whether the transitive use of labile verbs is primary; one could also consider the intransitive use to be the basic function, and compare their transitive use to the Applicative derivation (§17.4) instead. Since the alignment of the subjects between the transitive and intransitive uses of these verbs follows nominative-accusative, it is referred to as ‘accusative lability’ in this work.³¹

Two plain labile verbs, *nɔre* ‘laugh’ and *suso* ‘think’, have an antipassive form.³² These two verbs also differ from other labile verbs in having idiosyncratic semantic differences in their intransitive and transitive uses.

The verb *nɔre* ‘laugh’ is a denominal verb deriving from the inalienable noun *ɔ-re* ‘laugh (n)’. In its transitive use ‘laugh at, mock’, it encodes the stimulus as direct object. Both the intransitive meaning and the transitive one are well-attested functions of the *nu-/nɔ-* denominal prefix: parallel examples include *nɔvax* ‘have a good time’ (from *ɔ-vax* ‘good time’, §20.7.1) for the intransitive use of *nɔ-* and *nɔmbru* ‘get angry with’ (from *ɔ-mbru* ‘anger’, §20.7.2) for its transitive use. Therefore, the most likely way to account for the lability of *nɔre* is to posit that it represents the conflation of two denominal derivations from the same base noun.

The antipassive form *sɔnɔre* ‘laugh at people’ is semantically connected with the meaning of the transitive use, and semantically quite different from the intransitive use of *nɔre* ‘laugh’.

The intransitive use of *suso* ‘think’ is restricted to the meaning ‘in X’s opinion’, as in (127),³³ and has no semantic overlap with the antipassive *rususso* ‘think’, ‘ponder’ (128).³⁴

- (127) *tce nu aj pjw-suso-a tce numu tu-tup^hu pu-ɲu-ndzi tce*

 ‘In my opinion, these two [animals belong to] the same species.’
 (20-ldWGi) {0003558#S43}

³¹The term ‘agent-preserving lability’ is less felicitous, since the subjects of labile verbs are not always agents.

³²This feature is shared with the semi-transitive labile verb *sɔŋo* ‘listen’ see §14.5.3. On the other hand, no labile verb is compatible with applicative derivation.

³³The intransitivity of *suso* ‘think’ in (127) is shown by the absence of Stem III, which would be expected in the Imperfective 1SG→3 (§21.2.1). Note that the orientation DOWNWARDS is selected, instead of WESTWARDS in the transitive use (§15.1.5.2).

³⁴Note that this antipassive form is irregular, §18.6.1.

- (128) *pju-rui-suso ny pju-rui-suso tce,*
 IPFV-APASS-think ADD IPFV-APASS-think LNK
 ‘He thought about it over and over.’ (02-deluge2012) {0003376#S60}

In the case of *suso* ‘think’, it appears that the very restricted intransitive use is derived from the transitive one.

14.5.1.4 Ergative lability

A handful of labile verbs have ergative (or passive-like) lability: the subject of the verb when used intransitively corresponds to its object when used transitively.

The clearest example is provided by the denominal verb *nuwʒov* from *ʒov* ‘servant’, which means ‘give orders to’ in transitive use (from ‘treat as a servant’, §20.7.2), and ‘work as a servant’ in intransitive use. In (129), the transitive *nuwʒov* shares its subject and object with causativized verbs, while in (130) the intransitive subject of *nuwʒov* has the same referent as the subject of *z-nu-nyme*, as shown by the presence of a translocative echo (§15.2.8.2) on both verbs (which cannot target the direct object, §15.2.2).

- (129) *te^heme nu tce tce u-k^ha nuwʒu ko-z-ryzi tce,*

 TRAL-IPFV-do.work[III]
 ‘In the day, he would work as a servant, and do work for the nobles.’
 (150828 donglang) {0006312#S10}

Since the *nu-*/*ny-* denominal prefixes occur with similar meanings (‘treat as *X*’ and ‘become/serve as *X*’) on other base nouns (see §20.7.1 and §20.7.2), the lability of *nuwʒov* can be accounted for by assuming a conflation of two homophonous denominal derivations from the same base noun, as in the case *nyre* ‘laugh’ discussed above (§14.5.1.3). The fact that double denominal derivation yields accusative lability in one case and ergative lability in the other is a consequence

of the high diversity of meanings associated with the hyper-productive *nu-*/*nr-* prefix (§20.7).

The other examples of ergative lability are highly lexicalized, and the transitive vs. intransitive functions have to be treated as different lexical entries synchronically.

The intransitive *ri* ‘remain’ ‘be left’ (131) (see also 87, §7.3.3.3) is related to the transitive homophonous verb root *ri*, which is exclusively found in collocation with *tu-sroʁ* ‘life’ (§22.4.3.2) in the meaning ‘save X’s live’ (132). The entity whose life is spared is encoded as subject of the intransitive *ri*, and as possessor of the object *tu-sroʁ* of transitive *ri* (see also 7, §9.1.1.1).

- (131) *u-tɕu ɳnuʔz nu pɣ-si, tu-rdoʁ nu ɳri q^he*

 1SG.POSS-life AOR-2-save-PST:TR
 ‘You saved my life.’ (150906 qingfeng-zh) {0006366#S109}

Given the more specific meaning of transitive *ri*, it is more likely that it derives from intransitive *ri* rather than the other way round. A further piece of evidence in favour of this hypothesis is the irregular causative *βri* ‘protect’, which also appears to derive from the intransitive *ri* ‘remain’ (§17.3.1). The relationship between intransitive *ri*, transitive *ri* and causative *βri* is purely historical. These three verbs are synchronically completely distinct, and select different orientation preverbs (WESTWARDS, EASTWARDS and UPWARDS, respectively).

The verb *pa* ‘do’ is one of the most common verbs in Japhug, with a wide range of meanings including ‘close (door)’, ‘become (friend, spouses)’ and ‘discuss’ (§22.4.2.5). It selects not only nouns, but also infinitive complements as objects (§24.5.2).

Two intransitive verbs with the same root form *pa*, but only attested in 3SG, also exist: the verb *pa* ‘pass X years’, which selects as subject a numeral referring to a number of years (see example 118, §22.4.1.4 and the discussion in §7.3.1.7), and the light verb *pa* used as light verb with ideophones (§10.1.7.1). Both of these functions are derivable from the meaning ‘do’ of the transitive verb (§7.3.4.3, §22.4.2.5). The conversion to the intransitive conjugation may have occurred through third person ambiguous forms in a dummy subject construction (§14.3.5).

The discussion above shows that in the cases of ergative lability, either the intransitive verb (*ri* ‘remain’) or the transitive one (*pa* ‘do’) can potentially be the primary form, with transitivity or intransitivity by zero-derivation due to reanalysis in ambiguous contexts (on this topic, see also §12.2.2.3).

14.5.2 Transitive-intransitive labile verbs with oblique arguments

The verb *rpu* ‘bump into’ is also labile, but unlike the previous verbs, it selects an argument with the relator noun *u-taʁ* ‘on, above’ (§8.3.4.3), corresponding to the person or object that the subject knocks/bumps into, as in (133).

- (133) *u-zmbruw nuunw [...] rʃʏmts^hu yw u-ŋgw rŋgw*

When used transitively, *rpu* ‘bump into’ takes an object corresponding to the body parts suffering the impact (134, with the 12SG→3 past *-t* suffix), while in its intransitive use as in (135) no body part is specified.

- (134) *a-ku kum u-taʁ kʏ-nuw-rpu-t-a*
 1SG;POSS-head door 3SG.POSS-on AOR-AUTO-bump.into-PST:TR-1SG
 ‘I bumped my head against the [top frame of the] door.’ (elicited)
- (135) *maka zo mu-kʏ-rpu-a tce mu-tʏ-nuymaz-a*

 ‘I did not hit [the bottom] and was not injured.’ (150824 kelaosi-zh)
 {0006276#S179}

When transitively conjugated, *rpu* ‘bump into’ does not have a causative meaning ‘cause X to bump into Y’ (the causative *su-rpu* is used for this meaning). Although one could be tempted to translate *rpu* ‘bump into’ in this way in examples like (136) (‘I caused my bracelet to knock on the tripod’), here the bracelet, which is worn on the body, is construed as an extended part of the body (note the autive, which conveys both the meaning of non-volitionality and of action affecting the subject, §19.1.3, §19.1.4).

14.5.3 Semi-transitive labile verbs

The verb *σρηο* ‘listen’ can be conjugated transitively or intransitively, but selects a semi-object in the second case. In addition, its meaning and the orientation preverbs it selects are different depending on its valency.

In the intransitive conjugation, *σρηο* means ‘listen’ and selects the orientation ‘towards west’, as in (137) (without Stem III alternation). In (138), it occurs with the semi-object *u-skvt*.

- (137) *nu-σρηο je*
IMP-listen SFP
‘Listen!’ (140516 guowang halifa-zh) {0004008#S71}
- (138) *pyxpaβ nuu u-skvt nu-ku-σρηο tce*
pheasant DEM 3SG.POSS-voice IPFV-GENR:S/O-listen LNK
saχsyl ma ky-mto rkun
be.obvious:FACT a.part.from OBJ:PCP-see be.rare:FACT
‘The pheasant, one can recognize its presence by listening to its voice, but it is rarely seen.’ (23-pGAYaR) {0003606#S32}

This verb can also take a complement clause as semi-object, and can refer to perceptions other than hearing, as in (139) (see also §15.1.5.9).

- (139) *ny-ηga nu-rtab ci muj-rtab ku nu-σρηο*
2SG.POSS-clothes SENS-be.enough QU NEG:SENS-be.enough SFP IMP-listen
‘Make sure (literally ‘feel whether’) you have enough clothes.’ (elicited)

With transitive valency, *σρηο* selects the orientation ‘towards east’, and means ‘obey, listen to’, as in (140).³⁵

³⁵In example (140), the C-type orientation preverb show that the verb is transitive (§14.3.1).

- (140) *tce a-mu a-wa ra ka-sʏŋo tce*

 SENS-APASS:HUM-listen
 'Xiaoqian is a very nice girl, she is obedient.' (150907 niexiaoqian-zh)
 {0006262#S156}

Another type of labile semi-transitive verb is *rga*, which can either be semi-transitive or intransitive stative (without semi-object). It means 'like' when semi-transitive as in (142), with a meaning close to its own applicative derivation (§17.4.1), and 'be happy' when stative intransitive, as in (143).

- (142) *icqʰa tumɲa nʉ cʰa ɲjʏ-rga qʰe*

 'The husband and his wife were very happy.' (140506 woju guniang-zh)
 {0003929#S10}

14.5.4 Ditransitive-monotransitive lability

There are two subtypes of ditransitive-monotransitive lability in Japhug: secundative-monotransitive and indirective-monotransitive.

Monotransitive-secundative lability is illustrated by verbs such as *ɕʏz* 'give back', *fsʉy* 'repay (gratitude)' and *sʏja* 'give back': they index as object either the recipient or the theme, as shown by examples (144a) and (144b).³⁶

³⁶The autive is optional in (144b).

14 Person indexation and argument structure

- (144) a. *nɣ-tʂumlɣn ɲuu-ta-fsuy ra*

2SG.POSS-gratitude IPFV-AUTO-repay-1SG
'I will return the favour.' (elicited, adapted from example 144a)

Indirective-monotransitive lability is more common: this phenomenon refers to verbs which optionally take an oblique goal argument similar to that of intransitive verbs (§14.2.4). Typical examples include allative verbs of manipulation (§15.1.2.2) such as *ɲut* 'bring' or *tsum* 'take away', which are often found with absolutive or locative postpositional phrases expressing the goal of the motion as in (145), but also commonly occur without any locative argument (146).

14.6 Additional questions on the generic and number indexation

The previous sections focused on person and number indexation in relation to verb argument structure. This section discusses some properties of number and generic indexation that are observed on both intransitive and transitive verbs.

14.6.1 Agreement mismatch

This section investigates various types of mismatch between person indexation on the verb and nominal and pronominal elements in the clause: optional number indexation, honorific plural, partitive indexation and the interaction between first person and generic person. There are two additional types of indexation mismatch not discussed here: hybrid indirect speech (§24.2.5.2), and affixal chains in bipartite verbs (§11.6.3).

14.6.1.1 Optional number indexation

The default situation in Japhug is for the third person core arguments to be indexed in number on the verb in intransitive or non-local configurations (the number of the subject in direct configurations, and that of the object in inverse configurations, §14.3.2.2). This is the case in particular in series of verbs sharing the same subject, as in example (147) with dual (3DU→3' or 3DU intransitive) indexation on five verbs in a row, referring to the same pair of persons.

- (147) *tcendyre* <*yinliao*> *to-nur-ndo-ndzi*, *kɿndza ra to-nur-ndo-ndzi* *q^he*,
 LNK drink IFR-AUTO-take-DU food PL IFR-AUTO-take-DU LNK
qrɿŋgɿy ʉ-t^hɿcu *tce, to-nuuna-ndzi qhe*,
 TOPO 3SG.POSS-downstream LOC IFR-rest-DU LNK
pɿ-nɿmpole-ndzi *q^he, tce ko-nur-yi-ndzi*
 IFR-do.sightseeing-DU LNK LNK IFR:EAST-VERT-COME-DU
 ‘The two of them took with them drinks and food, and rested and did
 sightseeing further down from Qrangak, and then came back.’
 (conversation 140510)

However, non-singular third person core arguments do not necessarily trigger number indexation in all cases. Several syntactic, semantic and discourse factors interfere with number indexation.

With existential verbs, number indexation of the subject is nearly always observed in the case of human referents in the existential construction, even in the case of collective nouns without number markers, such as the counted noun *tu-tuɿpu* ‘one household’ in (148). Dual or plural indexation is generally observed when the subject has a numeral modifier, as in (149).

- (148) *ʉnuɿutɿcu tu-tuɿpu* *pɿɿ-tu-nur*
 DEM:LOC ONE-household IFR.IPFV-exist-PL
 ‘there was one household there.’ (140512 yufu yu mogui-zh) {0003973#S3}
- (149) *kɿndzi-xɿy* *ɿsum pɿɿ-tu-nur*
 COLL-brother three IFR.IPFV-exist-PL
 ‘There were three brothers.’ (31-deluge) {0004077#S7}

On the other hand, with inanimate referents, number indexation is rarely observed. In (150) for instance, no dual indexation is found on the verb despite the numeral *ɿnuuz* ‘two’.

14 Person indexation and argument structure

- (150) *nunureri ts^hyko ɸnuuz tu.*
 DEM:LOC stone.mount two exist:FACT
 ‘There are two stone mounts there.’ (140522 Kamnyu zgo)
 {0004059#S133}

In the possessive construction (§8.2.3.1, §22.5.2), however, the subject of existential verbs (the possessum) rarely triggers number indexation, even in the case of human referents: compare for instance in (151) the first verb form *pjɣ-tu-ndzi* (existential construction with dual indexation) vs. the second one *pjɣ-tu* (possessive construction with plural possessum, no indexation).

- (151) *kuucungu tce, ɸzɣmi ci pjɣ-tu-ndzi tce,*
 long.ago LOC husband.and.wife INDEF IFR.IPFV-exist-DU LNK

 3DU.POSS-son three IPFV.IPFV-exist
 ‘Long ago, there was a husband and his wife, and they had three sons.’
 (140430 jin e-zh) {0003893#S2}

With dynamic verbs, as in the existential construction, core arguments generally triggers number indexation when they have animate referents. This is in particular the case with the adverb *tuturca* ‘together’ (§8.3.2), even to describe group actions where all individuals act exactly in the same way as in (152).

- (152) *tce ly-zo-nu kunɣ tuturca lu-zo-nu,*
 LNK AOR:UPSTREAM-land-PL also together IPFV:UPSTREAM-land-PL
t^hu-nuqambumbjom-nu kunɣ tuturca c^hu-nuqambumbjom-nu,
 AOR:DOWNSTREAM-fly-PL also together IPFV:DOWNSTREAM-fly-PL
 ‘When they land they all land together, when they fly they all fly together.’ (24-qro) {0003626#S9}

Number indexation is optional with *tuturca* ‘together’ in the case of inanimate referents (including plants). Examples (153a) and (153b) from the same text shows verb forms with and without plural indexation in the same context (referring to a species of mushroom).

- (153) a. *tuturca ku-du-dɣn tu-ɸob-nu ŋu.*
 together SBJ:PCP-EMPH-be.many IPFV-come.out-PL be:FACT
 ‘They grow together in great numbers.’ (21-jmAGni) {0003572#S78}

14.6 Additional questions on the generic and number indexation

 SBJ:PCP-EMPH~be.many EMPH together IPFV-come.out be:FACT
 ‘They grow together in great numbers.’ (21-jmAGni) {0003572#S80}

Optional number indexation is however also attested, though uncommon, with dynamic verbs in reference to humans, as in (154), where verb ‘die’ occurs without plural indexation in its first occurrence (just after a possessive construction, where indexation on the existential verb *tx-tu* is not found either), and with the plural suffix *-nu* in the second occurrence.

- (154) *u-rjit kungut tx-tu ri, kutɕyɲ nu-si. kutɕyɲ*
 3SG.POSS-child nine AOR-exist LNK six AOR-die six
nu-si-nu q^he
 AOR-die-PL LNK
 ‘She had nine children, but six [of them] died. Six died, and...’
 (14-siblings) {0003508#S16}

The conditions for optional number indexation of human referents with dynamic verbs are not completely clear. Absence of number indexation is rare in intransitive and direct forms, and may be due in part to speech errors (§14.6.1.5).

With generic human subjects, the indexation of the number of the object, though attested (§14.3.2.5), is not common. For instance in (155), despite an overt dual object, the verb lacks number indexation.

- (155) *kyndzi-bi ni s-c^húr-wy-gru ɲu*
 COLL-sibling DU TRAL-IPFV:DOWNSTREAM-INV-welcome be:FACT
 ‘Let’s invite the two brothers down here.’ (Nyima wodzer2003-2)

14.6.1.2 Plural as honorific

Plural marking on nouns (§9.1.1.3) and pronouns (§6.1.1) can be used to express singular honorific in Japhug. Similarly, honorific plural indexation is found with second (156) or third (157) person referents, with or without plural *ra* marking on the noun. Honorific plural is mainly attested in traditional stories, but it is still used to address lamas.

- (156) *a-tɕime ra, ci ɲu-yuts^hyduy tee, kɣ-nu-rɲgu-nu*

 bird DEM IFR-CAUS-kill
 ‘The woman had the bird killed while the king was away.’ (2014-kWLAG)

Honorific plural indexation on the noun does not always correlate with plural indexation on the verb, as in (158), where the verb has a singular form.

- (158) *wo a-zi ra tɕ^{hi}indza ɲuw-tuw-nɣre ɲu*
 INTERJ 1SG.POSS-young.lady PL why IPFV-2-laugh be:FACT
 ‘My lady, why are you laughing?’ (2005 Kunbzang)

14.6.1.3 Partitive indexation

Number indexation with a with first person core argument, unlike that of second and third person, is compulsory.

Apparent examples of mismatch however do exist, but are confined to a very specific partitive use of dual of plural number (Bickel 2000). With the interrogative pronoun *ɕuw* ‘who’ (§6.5.2), in particular, indexation on the verb can be non-singular with the specific partitive meaning ‘who among *X*’, in particular in comparative constructions as in (159), with 1DU indexation on the verb although this sentence implies that only one of the two sisters is the most beautiful (see §26.2.1 on this comparative construction, and Jacques (2016b) and §8.2.2.7 on the use of the ergative here).

- (159) *a-bi, nɣki tɕet^{hi} tce, tuw-ci*
 1SG.POSS-younger.sibling FILLER downstream LOC INDEF.POSS-water

ɲuw-mpɕɣr-tɕi kuw?
 SENS-be.beautiful-1DU SFP
 ‘Sister, go and look down there in the water, who is the most beautiful of us?’ (2014-kWLAG)

Similarly, non-singular indexation on the verb with a counted noun core argument can have a partitive meaning, for instance *tuw-rdoɕ* ‘one piece’ (§7.3.2.1) with plural *-nuw* on the verb in (160) can only be interpreted as meaning ‘one of them should take it’.

14.6 Additional questions on the generic and number indexation

- (160) *tu-rdov kuu a-sci a-t^hu-ndo-nuu nts^hi*

 ‘[The king] was thinking: ‘One of [my sons] should inherit the throne.’
 (140510 sanpian yumao-zh) {0003947#S7}

Another type of partitive indexation is the use of 1PL pronouns with third person indexation, as in (161), with two verbs in 3PL→3 form and the 1PL pronoun in topicalized position meaning ‘some among us’.

- (161) *izora tce ckyp^hyr tu-ti-nuu tsuku kuu ckjwaw tu-ti-nuu*

 ‘Among us, some call it *ckyp^hyr*, some *ckjwaw*.’ (07-Cku) {0003424#S63}

14.6.1.4 First person and generic person

Another type of agreement mismatch observed with first person concerns 1PL and generic person. Before examining the examples of mismatch between pronouns and verb indexation in Japhug, it is important to note that generic person often occurs in gnomic statements applying to the speaker himself (§14.6.2), and can be used as an indirect way to express a first person, as has been described in some Kiranti languages (Bickel & Gaenszle 2015). It is even found in contexts where it unambiguously refers to the first person *singular*, as in (162).

- (162) *my-xsi ko, nuwa ny-nuu-jmut-a*
 NEG-GENR:know SFP DEM:PL IFR-AUTO-forget-1SG
 ‘I don’t know, I forgot about these things.’ (phone conversation,
 2013-12-24)

Generic inverse Imperfective verb forms with modal verb such as *nts^hi* ‘have better’ or *ra* ‘be needed’ (example 163) or even without auxiliary (164) is a common way to express 1PL hortative (§21.2.4, §21.2.5), and in such contexts 1PL pronouns or possessive prefixes can be found.

In (163), generic inverse marking on the verb corresponds to the 1PL possessive on the object *nuwa* ‘cow’. The presence of the autive *nu-* (§19.1) is a further clue to the equivalence of the generic subject and the 1PL in this example.

14 Person indexation and argument structure

- (163) *skalpa ndzury nuw juw-ɲu tce, ji-nuŋa*

 IPFV-INV-AUTO-butcher SENS-be.better
 ‘The world is about to be destroyed, let us kill our cow.’ (07-deluge)
 {0003426#S7}

In (164), the 1PL pronoun *izo* directly co-occurs with a verb in transitive subject generic form (§14.3.2.5).

- (164) *izo kuw-myku pyjk^hu, u-cya kuw-mtɕov nuw ci*
 1PL SBJ:PCP-be.first still 3SG.POSS-tooth SBJ:PCP-be.sharp DEM a.little
juw-wy-p^hut
 IPFV-INV-take.out
 ‘Let us first take out its sharp teeth.’ (150908 menglang-zh) {0006320#S71}

Co-occurrence of generic indexation with a 1PL pronoun is also found in procedural texts; in such contexts the 1PL pronouns occur in apposition with place names (§5.2.1), ethnic groups or classes of people, for instance *izo kuru ra* ‘we Tibetans’ in (165).

- (165) *izo kuru ra, nykinu, qajyi luw-wy-nuw-βzu tce*
 1PL Tibetan PL FILLER bread IPFV-INV-AUTO-make LNK
 ‘We Tibetans, when we make bread,’ (160706 thotsi) {0006133#S1}

The opposite situation, a generic pronoun in combination with 1PL indexation, is much rarer, but also attested. For instance, in (166), the adjectival stative verb *xtci* ‘be small’ bears 1PL *-j* suffix, but the corresponding overt pronoun in the sentence is the generic person *tuzɣra* ‘one’ (§6.2.1). The generic form *pu-ku-xtci*, as in (167) would be possible in the exactly the same context, clearly including the first person.

- (166) *tuzɣra pu-xtci-j tce,*
 GENR PST.IPFV-be.small-1PL LNK

 ‘I have not seen any [wild crane] recently, but when we were young, we did see (some).’ (22-qomndroN) {0003598#S31}

Dual or plural indexation can occur with generic transitive subject indexation marking a first person, as in example (55) in §14.3.2.5.

In addition to the generic person, the proprietive derivation is another possible strategy to indirectly refer to the first person (§18.8.2).

14.6.1.5 Indexation mismatch and speech errors

Speech errors are inevitable in any corpus, and are a factor to take into consideration to explain inconsistencies in person indexation.

The clearest examples of erroneous indexation are self-corrections. In (168) for instance, the speaker first chooses a plural 3PL→3' with *-nu* suffix and then corrects herself to the appropriate form 3SG→3' *no-ta*. The error here is due without doubt to the presence of the overt object *vʒunu tʰemyli ra* bearing a plural marker: plural objects in non-local configuration are only indexed in the case of inverse forms (§14.3.2.2), but examples of this type show that speakers may nevertheless be tempted to index them in direct configurations too (as if the verb were intransitive).

- (168) *vʒunu tʰemyli ra, no-ta-nu tce, no-ta tce,*
 young.man young.woman PL IFR-put-PL LNK IFR-put LNK
 'She left [there] the young men and women.' (2003kandzWsqhaj)

In (169) from a text translated from Chinese, Tshendzin realised that the number of daughters was different from what she had remembered, and hesitated between the dual and the plural on the indexation of the intransitive verb *nyruura* 'look around'.

- (169) *oma, kuβde pjɣ-su-ye ny! kuβde pjɣ-su-ye*
 INTERJ four IFR:DOWN-CAUS-COME SFP four IFR:DOWN-CAUS-COME

 'He sent four (of his daughters, not three), he sent four of them, and they looked around.' (150826 baoliandeng-zh) {0006370#S214}

Without self correction, indexation errors are less obvious and have to be rechecked with a native speaker. In (170), the first verb *lx-wy-ɕaβ-ndzi* has inverse marking (§14.3.3.2) and indexes the non-overt object (the youngest daughter and her husband). The second (intransitive) verb has dual indexation, but its subject is coreferent with that of the previous verb (*u-pi ra* 'her elder sisters etc') and

plural indexation would therefore be expected here, and Tshendzin indeed proposes to correct the verb form to *kx-ak^hu-nnu* AOR-call-PL. The confusion between dual and plural here is a combination of two factors: the presence of a verb with dual indexation just before (indexation attraction), and the ambiguity of the subject: the youngest sister has two eldest daughters (the plural here refer to her husbands and servants), and one could construe the subject of *kx-ak^hu-ndzi* as referring only to the two elder sisters, without the additional people, hence the dual indexation.

- (170) *ndyre w-pi* *ra kuw lʼ-wy-caβ-ndzi* *ny*

kx-ak^hu-ndzi nu-ŋu.
 AOR-call-DU SENS-be
 ‘Her elder sisters and the others caught up with them and called.’ (2005 Kunbzang)

Some apparent cases of optional number indexation (§14.6.1.1) should also be analyzed as speech errors, as in (§14.6.1.1), where the first verb *jx-ye-ndzi* bears correct dual indexation, but the second one lacks it, presumably due to hesitation on the part of the speaker.

14.6.2 Generic person vs. 3PL indexation

In Japhug, both generic marking (§14.3.2.5) and third person plural indexation can be used to express generic referents. In particular, both can agree with the generic/indefinite noun *turme* ‘person’ (§6.2.2), as illustrated by examples (172)³⁷ and (173).

³⁷The generic transitive subject marker is the inverse prefix (§14.3.2.5). In this section, it is however glossed as GENR:A for clarity.

The aim of this section is to examine the semantic difference between generic person vs. 3PL in contexts like those illustrated by the examples above.

Generic indexation (§14.3.2.5) is most commonly used to express general or gnomic statements applying to most humans, including the speaker. No more than one argument in a particular sentence can be generic: In particular, it is not possible to have both generic subject and object on the same verb form (§5.1.3 and §6.2.1), except in reflexive constructions (example 15, §6.2.1).

There is obligatory agreement between all generic person markers, whether indexation on the verb, pronouns or possessive prefixes inside a clause, and across contiguous clauses. In (174) for instance, the generic intransitive subject of the verb *muw~mɣ-puw-kuw-tso* is coreferent with the transitive subject of *mɣ-wy-mto*.

- (174) *tce wuma zo muw~mɣ-puw-kuw-tso ny*

mɣ-wy-mto
 NEG-GENR:A-see:FACT
 ‘If you do not know it well, you won’t see it.’ (07-Cku) {0003424#S57}

In (175), the generic possessor prefix on *tu-laxtc^ha* is also coreferent with the object of *nuw-kuw-nuusuk^ho* ‘they rob people of X’. Note however in this example that the generic person on *tu-kuw-nɣk^he* is not exactly identical to the referent of the previous verb, referring to a subset of it (only women).

Example (176) show the agreement between the generic pronoun *tuɯzo* ‘one’ and generic marking on the verb.

(176) *tuɯzo tu-kuu-ruuɕmi* *nura u-ɲú-tso?*
 GENR IPFV-GENR:S/O-speak DEM:PL QU-SENS-understand
 ‘Does [you son] understand when people speak?’ (phone conversation
 15-01-13)

Generic human marking can sometimes be used as a substitute for first person, both as indexation prefix (§14.6.1.4) or as possessive prefix (§5.1.3.1). Example (177) illustrates this function.

(177) *tɕeri tɣ-pɣtso* *puu-kuu-ŋu* *tɕe, nuu kɣ-ndza wuma*

 {0003488#S126}

The commonality between all the uses of generic person marking is that it always refers to a group including the speaker.³⁸ It is particularly clear in (175), where the generic prefix *kuu-* on *tu-kuu-nɣk^he* is coreferent with the overt object *tɕ^heme* ‘girl’; this verb form is appropriate in this particular instance because the speaker is a woman, and *tɕ^heme* ‘girl’ is used here as a generic noun.

Example (178) further illustrates the same phenomenon. The speaker, also a woman, includes herself among the potential Jews’ harp players (though she has never played the instrument) and thus employs generic subject marking on the first verb (note also the presence of the 1PL pronoun, §14.6.1.4). Conversely, she excludes herself from potential flute players (traditionally, only men) and selects 3PL marking on the second verb.

³⁸Example (176) above could seem to be a counterexample, but the question here is about the ability to understand speech in general, not restricted to the people in contact with my son at the moment this question was uttered.

14.6 Additional questions on the generic and number indexation

- (178) *kuwungwu tce, izora tch^heme kuw zNGro juw-wy-lxt,*

 'Long ago, among us women used to play the Jews' harp, while men
 used to play the flute.' (150907 ZNGro) {0006252#S13}

This example is typical of procedural texts: the generic is consistently used by women speakers to refer to activities typically performed by women, and the 3PL for men's duties (and vice-versa with men speakers).

This contrast is also found when discussing differences between Tibetan and Chinese people, in particular the names given to animals and plants. In (179), Chinese are referred to collectively in the 3SG (the plural would also be possible in the same context), while Tibetans (the ethnic group to which the speaker associates herself) are indexed on the verb by the generic *kuw-* prefix (§14.3.4).

- (179) *nuuw kupa kuw <gouweicao> tu-ti nu tce, kurwu ra kuw*
 DEM Chinese ERG setaria.viridis IPFV-say be:FACT LNK Tibetan PL ERG
nuw li kh^hunajme tu-kuw-ti nu tce,

 'The Chinese call it 'gouweicao', Tibetans call it *khunajme*.'
 (16-RIWmsWsi) {0003520#S51}

The contrast between *kuw-/wy-* generic person and 3PL indexation can thus be described as *speaker-inclusive* vs. *speaker-exclusive* generic marking.

Another crucial difference between speaker-inclusive generic and 3PL, is that unlike the former, the latter can refer to several different referents in the same sentence. In example (180) for instance, the 3PL on the verbs *a-mx-tx-ndo-nuw* 'let them not take it' and *yuu-z-nxndxy-nuw* 'it will poison them'³⁹ agrees with the noun phrase *turme ra*, which is to be interpreted as meaning 'other people' (§6.8) rather than generic person (§6.2.2). Its referent is different from that of the generic 3PL in the rest of the passage, such as the matrix verb *juu-suso-nuw* 'they think that ...' or the preceding verb *pju-rxtcumtcaß-nuw* 'they stamp on it'.

14.7 Person indexation on non-finite predicative words

Despite being a highly verb-prominent language, Japhug has some non-verbal predicates (§22.3). There is evidence that a few nominals occurring as predicates, including nominalized verb forms and nouns, have acquired person indexation markers.

Phenomena of this type are uncommon, but clear examples do exist in Indo-European (Pott 1859: 414). For instance, in Greek, the adverbs δεῦρο 'hither' and τῆ 'here, take it' have developed the plural forms δεῦτε and τῆτε, with the plural present imperative suffix -τε (and unexplainable loss of the syllable -ρο in δεῦτε), by contamination with imperative verb forms (φέρε, φέρετε), which occur in the same contexts (Viti 2015: 113–114). A similar case is found in Gothic, where the adverb *hiri* 'hither' (which incidentally translates Greek δεῦρο) has dual *hirjats* and plural *hirjiþ*, modelled on imperatives (Braune 1953: 104).

Inflectionalization of nominals is attested in the case of a few phatic (§14.7.1) and exclamative (§14.7.2) expressions in Japhug.

14.7.1 Phatic expressions

The expression *sɣrma* 'good night', used to address someone leaving one's house in the evening, transparently derives from the oblique participle *sɣ-rma* 'place where/time when one stays overnight' (§16.1.3) from the verb *rma* 'stay the night, live', as illustrated by example (181).

- (181) *tce u-sɣ-rma* *nunu, prak, prakpa tce*
 LNK 3SG.POSS-OBL:PCP-stay.the.night DEM cliff cavern LNK
c-ku-rma *ɲu-ɲu*
 TRAL-IPFV-stay.the.night SENS-be
 ‘The place where its spends the night is the cliffs, it goes to spend the
 night in caverns under the cliffs.’ (20-xsar) {0003568#S36}

This expression is probably the abbreviation of a phrase such as ‘go back to your resting place’ (which would be *ɲɣ-sɣrma ɲɣ-muɕe*).

Yet, when addressing more than one person, the dual form *sɣrma-ndzi* and the plural *sɣrma-nuu* are used, with the 2/3 dual *-ndzi* and plural *-nuu* suffixes found in verb paradigms (§14.2.1.2). These suffixes normally only appear on finite verbs. The forms *sɣrma*, *sɣrma-ndzi* and *sɣrma-nuu* could in principle be analyzed as a Factual Non-Past form (§21.3.1.1), but there are three problems with this hypothesis.

First, the meaning of the expression (‘have a good night’) is hardly compatible with the Factual Non-Past; an Imperative or Irrealis form would be expected instead, and a second person prefix *tu-* would in any case be required. Second, while there are several *sɣ-* verbal derivational prefix, none of them (proprietary §18.8.1, antipassive §18.6.2 and causative §17.2.1.3) has a function which could account for a derivation such as ‘spend the night’ ⇒ ‘(have a) good night’. Third, no other verb forms (including first or third person), finite or non-finite, are attested for *sɣrma*.

A more promising approach to account for these verb forms is analogy with other phatic expressions involving finite verb forms. The most probable one is the verb *astu* ‘be straight’, whose Imperative is used to mean ‘goodbye’ (literally ‘(walk) straight’) as in (182). These verb forms optionally occur with the sentence final particle *je* (§10.4.1), another commonality with *sɣrma* ‘good night’.

- (182) a. *tɣ-ɣstu* *(je)*
 IMP-be.straight SFP
 ‘Goodbye’ = ‘(walk) straight’ (singular)
- b. *tɣ-ɣstu-ndzi* *(je)*
 IMP-be.straight-DU SFP
 ‘Goodbye’ (dual)

The dual and plural forms of *sɣrma* ‘good night’ can thus be explained as trivial four-part analogy as in Table 14.18.

The expression *kɣɲɣβdi* ‘take care’, used when leaving from someone’s place, and which also has a dual *kɣɲɣβdi-ndzi* and a plural *kɣɲɣβdi-nuu*, might also be a

14 Person indexation and argument structure

inflectionalized form of the *kr-* infinitive (§16.2.1) of the tropative *ny-* (§17.5) of the stative verb *βdi* ‘be well’.

However, this case is less compelling than *syrma* ‘good night’, because *kr-nyβdi-ndzi* and *kr-nyβdi-nuu* can alternatively be formally analyzed as imperatives with the EASTWARDS *kr-* preverb (§15.1.1.1), and because *nyβdi* is also found in regular finite forms (as in 183).

 QU-PRS-2-feel.well QU-PRS-2-good
 ‘Do you feel well, are you fine?’ (conversation, 16-12-28)

14.7.2 Exclamative expressions

The expression *duxpa* ‘poor ...’ seems at first glance to be a verb, as it not only takes dual and plural suffixes (*duxpa-nuu* ‘poor them’, example 184), but it can also receive first person indexation (such as 1DU in 185). The variant form *zduxpa* is also attested (see 25, §21.2.5).

- (184) *wo a-rjit ra duxpa-nuu ma nuu u-xtu*

 3SG.POSS-material EMPH be.ASSERT:FACT-1DU
 ‘We, on the other hand, poor us! We are to be butchered.’
 (kandZislama2003.210)

Yet, *duxpa* has a defective paradigm: it cannot take any prefix, including the second person *tu-*, any TAM marker or any nominalization prefix. In addition, if *duxpa* were to be analyzed as a verb, it would be anomalous, as it is borrowed from Tibetan མུག་པ་ *sdug.pa* ‘suffering’ (also spelled *sdug.ga*),⁴⁰ a nominalized form taking the *-pa/-ba* suffix.

While examples of verbs directly borrowed from Tibetan into Japhug are numerous, at least in the earliest layer (for instance *rɣuy* ‘run’, *βzɣur* ‘change, correct’ etc, see Jacques 2019d), nouns or nominalized verbs borrowed from Tibetan are never converted to verbs without denominal prefixes. Incidentally, we find in Japhug two verbs derived from the same Tibetan etymon (in the variant °*duxpa*, from an earlier layer of borrowing) by means of denominal prefixes, the intransitive stative verb *sɣzduxpa* ‘be pitiful’ and the transitive verb *muzduxpa* ‘have pity for’. The word *duxpa* cannot be analyzed either as a verb derived from a noun by zero-derivation, as zero denominal derivation does not exist in Japhug (§20.8.1).

A better account of the defectiveness of *duxpa* and its etymology is that it originally was an exclamative noun (§5.1.2.8, §22.3), and that the third person and first person indexation suffixes were added by contamination with finite stative verbs used in exclamative sentences, as *sɣzduxpa* ‘be pitiful’ in (186).

14.8 Historical perspectives

This section explores a range of hypotheses to account for the synchronic resemblance between indexation markers (indexation suffixes, the inverse prefix and the local scenario portmanteau prefixes) and other morphemes that are possibly historically related in Japhug, drawing on comparative data from other Gyalrong languages and beyond.

⁴⁰For an account of the alternation between *p/b* and *g* in the spelling, see Hill (2011a) and the references therein.

14.8.1 Indexation suffixes, pronouns and possessive prefixes

The indexation suffixes (§14.2.1) are similar to the corresponding possessive prefixes (§5.1.1) and pronouns (§6.1) in Japhug, as shown by the data in Table 14.19. In addition to the Kamnyu dialect, this table includes data on the Tatshi dialect (from Lin & Luoerwu 2003, Lin 2011 and personal communication) between brackets. The two dialects differ mainly in the presence of alveolo-palatal affricates in Kamnyu Japhug in the dual, while dental affricates are found in Tatshi.

Table 14.19: Indexation suffixes, pronouns and possessive prefixes in Japhug

	Indexation suffix	Pronoun	Possessive Prefix

2DU	- <i>ndzi</i> (- <i>ndzə</i>)	<i>ndzizo</i>	<i>ndzi-</i> (<i>ndzə-</i>)
3DU	- <i>ndzi</i> (- <i>ndzə</i>)	<i>zɲni</i>	<i>ndzi-</i> (<i>ndzə-</i>)
1PL	- <i>ji</i>	<i>izo</i>	<i>i-</i>
2PL	- <i>nu</i> (- <i>nə</i>)	<i>nuzo</i>	<i>nu-</i> (<i>nə-</i>)
3PL	- <i>nu</i> (- <i>nə</i>)	<i>zara</i>	<i>nu-</i> (<i>nə-</i>)

In the other Gyalrong languages, very similar affixes are found, as shown by Table 14.20 (data from Sun 1998: 139, Sun 2017: 562, Gong 2014; 2018, Lin 1993: 168;198).

The main differences between the indexation systems of the four Gyalrong languages include the following observations: (i) only Situ has a 2SG suffix (intransitive and 2SG object)⁴¹ and a third person object suffix, (ii) the 1SG suffix presents unique correspondences, and has many allomorphs in Zbu and Situ, (iii) Zbu has a 1PL possessive prefix that is unrelated to the 1PL suffix, (iv) Situ has no distinction between 1DU and 2/3DU possessive prefixes, and (v) the 1DU, 2/3DU and 2/3PL affixes are either (alveolo)-palatal or dental across the languages.

As shown by Table 14.21, Tshobdun and Tatshi Japhug only have dental person indices, Zbu and Situ only (alveolo-)palatal ones, and Kamnyu Japhug is intermediate between the two groups, with alveolo-palatal dual affixes *-tçi/-ndzi*

⁴¹In Situ, the second person singular is indexed by both a prefix and a suffix, while in the other languages including Japhug, it is only indexed by the prefix (§14.2.1.2).

Table 14.20: Indexation suffixes and possessive prefixes in Tshobdun, Zbu and Situ

	Tshobdun		Zbu		Situ

1PL	<i>jə-</i>	<i>-jə</i>	<i>ʰgə-</i>	<i>-jə</i>	<i>ja-/jə-</i>	<i>-i</i>
2/3PL	<i>nə-</i>	<i>-nə</i>	<i>ɲə-</i>	<i>-ɲə</i>	<i>ɲa-/ɲə-</i>	<i>-ɲ</i>

and dental plural affixes *-nu*. It is noteworthy that Kamnyu Japhug, the dialect geographically closest to Tshobdun, is less similar to that language in this regard than the Tatshi dialect, which is not in direct contact with Tshobdun.

Table 14.21: (Alveolo-)palatal vs. dental person indices in Gyalrong languages

	Tshobdun	Tatshi Japhug	Kamnyu Japhug	Zbu	Situ
1DU	<i>-tsə</i>	<i>-tsə</i>	<i>-tɕi</i>	<i>-tɕə</i>	<i>-tʃʰ</i>
2/3DU	<i>-ʰdzə</i>	<i>-ndzə</i>	<i>-ndzɿ</i>	<i>-ʰdzə</i>	<i>-ntʃʰ</i>
3PL	<i>-nə</i>	<i>-nə</i>	<i>-nu</i>	<i>-ɲə</i>	<i>-ɲ</i>

A possible explanation to account for the resemblances between the suffixes, the possessive prefixes and the pronouns is to argue that the former were grammaticalized from the latter, as has been proposed by LaPolla (1992). In the same line of reasoning, the second and third person dual and plural suffixes, which are similar to the dual and plural nominal markers in Situ and Tatshi Japhug, could be argued to have originated from them. In Tatshi Japhug for instance, the dual *-ndzə* and plural *-nə* suffixes could be analyzed as deriving from the dual *ndzə* and plural *nəjo* nominal clitics (which differ from those of Kamnyu Japhug, §9.1.1).

The idea of transparent grammaticalization from pronouns or number markers in indexation suffixes is however not as straightforward as it might appear at first glance. Leaving aside extra-Gyalrong comparative evidence (Jacques 2012a; Jacques & Pellard 2021; DeLancey 2014), and the fact that most of the pronouns

in Gyalrong languages are derived from possessive prefixes rather than the opposite (Jacques 2016e, §6.1), if the similarity between the three series of person markers were to be explained as resulting exclusively from a recent grammaticalization, the pattern in Table 14.20, where the place of articulation (alveolo-palatal vs. dental) of dual and plural indexation suffixes is aligned on that of the pronouns and possessive prefixes and draws an isogloss across the dialects of Japhug (Table 14.21), would imply that the grammaticalization postdated not only the breakup of proto-Gyalrong, but even that of the common ancestor of modern Japhug dialects.

The indexation system of Gyalrong languages cannot however be that recent, in particular because the stem alternation system, which contributes to person indexation (§12.2.2.2, §14.3.2.1) is clearly reconstructible to the common ancestor of Gyalrong languages and Tangut (Gong 2016b) and is too complex and irregular (in particular in Zbu, see Sun 2004 and Gong 2018) to be a recent development.

Three alternative types of explanation can be explored to account for the correspondences between affixes and pronouns: analogical simplification of allomorphy, contamination and degrammaticalization.

First, there is evidence that in proto-Gyalrong, the suffixes had phonetically conditioned allomorphs: the 1SG suffix has maintained some allomorphy in Zbu (Gong 2014: 46) and Situ (Lin 1993: 198). Analogical levelling is thus a likely explanation for the diverging forms of the 1SG suffix. Note that the form *-aŋ* in Tshobdun cannot derive from proto-Gyalrong **-aŋ* (which yields Tshobdun *-i*), and the Zbu and Situ *-ŋ* cannot be a phonetic reflex of **-ŋ* in most cases, otherwise for instance stems in *-a* should alternate with *-o* ← **-aŋ* in Situ in the 1SG. In Situ and Zbu, the final *-ŋ* in open syllables must have been restored, due to analogical spread from a particular context where the **-ŋ* was maintained.

Second, the similarity between possessive prefixes, indexation suffixes and pronouns could be the result of mutual contamination and convergence. Cases of contamination between indexation systems and possessive affixes are attested. In Hebrew and Phoenician, for instance, the first person singular perfect suffix *-tī* has an unexpected vocalism, as it is commonly agreed that proto-North-West Semitic suffix was **-tu*, whose outcome should have been *†-t*. The irregular Hebrew form is explained as due to contamination from either the 1SG pronoun *ʔānī* or the 1SG possessive suffix *-ī* (Joüon & Muraoka 2006: 122-123; 132-133, Suchard 2016: 227-229).

Contamination could account for the 1SG affixes in Japhug. The possessive prefix *a-* is the regular outcome of earlier **ŋa-*, a proto-form which also account for the 1SG prefixes in the other languages. The 1SG suffix *-a* however does not regularly correspond to the suffixes *-aŋ* and *-ŋ* found in Tshobdun, Zbu and Situ.

One possibility is that **-ŋv* was one of the proto-Gyalrong allomorphs of the 1SG suffix,⁴² and was generalized. Another explanation is that only **-ŋ* was present in proto-Gyalrong, and that the **-ŋv* precursor of Japhug *-a* arose by contamination of **-ŋ* with the (historically related) possessive prefix **ŋv-*.

Third, the possibility of degrammaticalization from person indexation suffixes to nominal number markers in Tatshi Japhug and Situ should be taken into consideration. Kamnyu Japhug, Tshobdun and Zbu have dual and plural markers that are completely different from indexation suffixes (Kamnyu *ni / ra*, Tshobdun *ni? / rɔ?* and Zbu *ni / ré?*, see §9.1.1, Sun 1998 and Gong 2018). The plural marker is cognate to Pumi =*ɬ* (Daudey 2014: 135): Japhug *-a* regularly corresponds to Pumi *-ə* in the native vocabulary (Jacques 2017c), and it is therefore unlikely to be a Northern Gyalrong innovation.

If the Zbu, Tshobdun and Kamnyu Japhug number markers above are conservative, the corresponding Tatshi Japhug *ndzə / nəjo* and Cogtse Situ *ndze / ɲe* forms must therefore be innovations, and by consequence, it cannot be argued that the 2/3 indexation suffixes derive from these number markers. The opposite scenario is possible: Norde (2009: 204–206) discusses the case of the Irish 1PL pronoun *muid* which comes from one of the allomorphs of the 1PL future indexation suffix. A similar type of debonding can account at least for the Tatshi Japhug dual *ndzə* nominal marker, from the 2/3 dual *-ndzə* indexation suffix.⁴³ The acquisition of indexation suffixes by several non-verbal words discussed in §14.7 may have contributed to the reanalysis of indexation suffixes as number-marking enclitics.

Much remains unclear about the history of person indexation suffixes and the nature of their relationship with pronouns, possessive prefixes and number markers in Gyalrong languages. A more satisfying account of these data will only become possible when a fully explicit system of proto-Gyalrong reconstruction, and complete data on as many varieties as possible becomes available.

14.8.2 The inverse prefix

Two Gyalrong-internal scenarios could be proposed to account for the origin of the inverse prefix.

First, it could be proposed that the inverse comes from the 3SG possessive prefix. In Tshobdun, Zbu and Situ, the inverse prefix (*o-*, *və-* and *wə-*, respectively) is homophonous with the 3SG possessive prefix (see Table 5.2 in §5.1.1.5). This is not

⁴²In Bantawa for instance, the 1SG suffix has three allomorphs *-ŋ*, *-ŋ*, and *-ŋa* (Doornenbal 2009: 155).

⁴³The case of plural *nəjo* is more complicated: the *nə-* element here probably rather derives from the distal demonstrative.

the case in Japhug, where the inverse $\gamma u-$ / $-w\gamma$ is clearly different from the 3SG $u-$, but it is possible that the 3SG possessive underwent an irregular development, as argued in §5.1.1.5. The $3' \rightarrow 3$ SG form would originally be a non-finite form taking a possessive prefix (for instance a predecessor of the bare infinitive, §16.2.2), and the inverse prefix would have spread from the $3' \rightarrow 3$ to the mixed scenarios $3 \rightarrow 2$ and $3 \rightarrow 1$, following the pathways described in Jacques & Antonov 2018.

Second, the partial resemblance between the Japhug allomorph $\gamma u-$ and the associated motion cislocative $\gamma u-$ prefix (§15.2.1.1) could support the idea that the inverse derives from the cislocative, following a well-known grammaticalization pathway (Jacques & Antonov 2014). This hypothesis is however less likely, as the cislocative itself may be an innovation in Gyalrong languages (§15.2.1).

In any case, cognates of the inverse prefix are found in other Gyalrongic languages (Lai 2015) and in Kiranti (Jacques 2012a), so that whatever the ultimate origin of this prefix, it was already grammaticalized at the proto-Gyalrongic level.

14.8.3 The origin of portmanteau prefixes

The presence of portmanteau prefixes in the local $1 \rightarrow 2$ and $2 \rightarrow 1$ configurations in Japhug is not unusual crosslinguistically (Heath 1998). However, the resemblance of the $1 \rightarrow 2$ prefix $ta-$ to the second person $tu-$ prefix on the one hand, and of the $2 \rightarrow 1$ prefix $ku-$ to various non-finite velar prefixes (§16.8.1) on the other hand, raises the question of their potential historical relatedness.

The form of the local configuration prefixes is very similar in other Gyalrong languages, as shown by Table 14.22 (data from Lin 1993: 218, Sun & Shidanluo 2002 and Gong 2014).

Table 14.22: Local scenario prefixes in Gyalrong languages

	1→2	2→1
Japhug	<i>ta-</i>	<i>ku-</i>
Tshobdun	<i>tɔ-</i>	<i>kə-o-, tə-o-</i>
Zbu	<i>tɔ-</i>	<i>kə-w-, tə-w-</i>
Situ	<i>ta-</i>	<i>kə-w-</i>

Only two differences are found in the local domain across the Gyalrong languages: Japhug does not have the inverse $w\gamma-$ prefix in the $2 \rightarrow 1$ form, and Zbu and Tshobdun allow an alternative form with the second person prefix $tə-$ and the inverse prefix. In all four languages, the verb takes suffixes that are coreferent

with the object (second person in 1→2 and first person in 2→1). Situ is the only language with a suffix *-n* in the 1→2SG form, the same as that found in intransitive 2SG and 3→2SG.

Jacques (2018b: 420–421) proposes that the 1→2 prefix originates from the fusion of the second person prefix *tu-* with the agentless passive *a-* (from **ŋa-*, Jacques & Chen 2007), which yields the expected form in all four languages. In this view, a form like Japhug *ta-mbi* 1→2-chase-SG ‘I will give it to you_{SG}’ would have developed through the following stages:

- **tə-ŋa-mbi-nə* 2-PASS-give-2SG ‘it will be given to you’ (Passive form)
- **ta-mbi-nə* 2:PASS-give-2SG (Regular phonological fusion between the person marker and the passive prefix, attested in all four Gyalrong languages, §12.3)
- **ta-mbi-nə* 1→2-give-2SG ‘I will give it to you’ (reanalysis of the fused form as a portmanteau prefix; the unspecified agent of the passive construction is construed as being first person)
- *ta-mbi* 1→2-give ‘I will give it to you’ (loss of 2SG suffix in Japhug)

This scenario is not completely straightforward; in particular, the passive *ambi* ‘be given’ of the verb *mbi* ‘give’ takes the theme, not the recipient, as intransitive subject (§18.1.4), and passives in Japhug are only rarely attested with first or second person subjects (§18.1). However, there are no major phonological or morphological obstacles against this hypothesized scenario, and good typological parallels have been described (DeLancey 2018).

In the case of 2→1 *ku-*, Jacques (2012a) originally proposed that this prefix might be an archaism of Gyalrong languages, based on the principle of archaic heterogeneity (Hetzron 1976), using the data in Table 14.23. In second person forms other than 1→2, some Kiranti languages have a dental stop prefix (Bantawa *t̪i-*, Doornenbal 2009), and Limbu has the velar prefix *kɛ-* (Michailovsky 2002), correspondance to Japhug *tu-* in intransitive second person and 2→3, and *ku-* in 2→1 configurations. A possible way of interpreting this corresponding would be to suppose that a pattern similar to that found in Gyalrongic (with a velar prefix in 2→1 and a dental stop prefix in other second person forms) has to be reconstructed in proto-Kiranti: Bantawa would have generalized the *t̪i-* prefix to the 2→1 slot (a type of analogical levelling attested in Zbu and Tshobdun, see Table 14.22), and Limbu the velar prefix to the 2→3 and intransitive forms.

14 Person indexation and argument structure

Table 14.23: Comparison of second person forms in Japhug and selected Kiranti languages

	Japhug	Bantawa	Limbu
2.INTR	<i>tu</i> - Σ	<i>t̥i</i> - Σ	<i>kɛ</i> - Σ
2→3	<i>tu</i> - Σ	<i>t̥i</i> - Σ - <i>u</i>	<i>kɛ</i> - Σ - <i>u</i>
2→1	<i>ku</i> - Σ - <i>a</i>	<i>t̥i</i> - Σ - <i>aŋ</i>	<i>kɛ</i> - Σ - <i>aŋ</i>
1→2	<i>ta</i> - Σ	Σ - <i>na</i>	Σ - <i>nɛ</i>

This hypothesis raises three issues: (i) the 2→1 form is less common than second intransitive and 2→3, and is unlikely to have served as the basis for analogical levelling in Limbu, (ii) the presence of an inverse prefix in the 2→1 form in other Gyalrong languages is unexplained and (iii) the homophonies between the second person possessive prefix *kɛ*- and the indexation prefix in Limbu on the one hand, and the *ku*- 2→1 portmanteau prefix and the non-finite *ku*- prefixes on the other hand, would be due to chance.

Since the *kɛ*- second person indexation prefix in Limbu can be explained as an internal innovation (Jacques 2012a: 94), it is necessary to explore the possibility that Japhug the 2→1 *ku*- portmanteau is also an Gyalrong innovation, especially since no other traces of such a putative prefix are found elsewhere in the Trans-Himalayan family.

As mentioned above, Japhug 2→1 *ku*- differs from the 2→1 portmanteau prefixes found in the three other Gyalrong languages, which co-occur with the inverse prefix (Table 14.22). An identical difference appears in the generic object form, which takes of a simple *ku*- prefix in Japhug (§14.3.2.5) but has an additional inverse prefix *kə-o*- in Tshobdun (Table 14.24, Sun 2014b).

Table 14.24: Comparison of generic person prefix in Japhug and Tshobdun

	Japhug	Tshobdun
GENR.S	<i>ku</i> -	<i>kə</i> -/ <i>kɔ</i> -
GENR.A	<i>wɣ</i> -	<i>kə</i> -/ <i>kɔ</i> -
GENR.P	<i>ku</i> -	<i>kə</i> - <i>o</i> -
2→1	<i>ku</i> -	<i>kə</i> - <i>o</i> -

The resemblance between the 2→1 portmanteau prefix, the generic person prefixes, and the nominalization prefixes in Japhug and Tshobdun is striking. However, since in these two languages velar participles (§16.1.1, §16.1.2) and infinitives (§16.2.1) are compatible with neither first person indexation suffixes nor the inverse prefix, it is not possible to propose a direct path of reanalysis from participial or infinitive forms to 2→1 (which co-occur with first person suffixes, §14.3.2.3) or generic (which appear with inverse in Tshobdun) prefixes.

However, in Situ, unlike other Gyalrong languages, semi-finite nominalized forms combining a prefix *kə-* and person indexation suffixes (187) and/or inverse marking (188, in 3→1SG configuration) are also attested, in particular to build certain types of relative clauses (Sun & Lin 2007).

- (187) [ηa kə-fî-ŋ]=tə tɛpê tsə̂s-ŋ
 1SG SBJ:PCP-know[I]-1SG=TOP DEM:PL say[I]-1SG
 ‘I will say what I know about.’ (Cogtse dialect, Lin 2016: 72)

- (188) [sanam-scāt kə no-kə-o-mbê-ŋ] tə,
 Bsod.nams-Skyid ERG AOR.INV-NMLZ-INV-give-1SG DET
 <zengguangxianwen> u-t^{hi}ê ‘nə-ŋes
 name 3SG.POSS-book SENS-be[I]
 ‘What Bsod nams Skyid gave me is the book ‘Zengguan xianwen.’
 (Bragbar dialect, Zhang 2020)

If one accepts the hypothesis that semi-nominalized verb forms did already exist in proto-Gyalrong, and could be used to mark *indefinite* core arguments in addition to the functions they have in modern Situ, it becomes possible to account for the forms in Tables 14.22 and 14.24.

A nominalized form combining the prefix *kə-*, the inverse and a first person suffix like *no-kə-o-mbê-ŋ* in example (188), originally meaning ‘someone gave it to me’, could have become a less abrupt way of saying ‘you gave it to me’ and have been progressively reanalyzed as a 2→1 prefix (Jacques 2018b; DeLancey 2018). The absence of inverse in Japhug in the 2→1 form may be explained by supposing that in the ancestor of Japhug, semi-finite forms became incompatible with inverse marking, while still taking indexation suffixes. This idea is not outlandish, as semi-finite inverse forms are very rare in Situ (only one example is found in Lin’s 2016 text corpus).

The velar nominalization prefixes in semi-finite indefinite forms could also have become reanalyzed as generic person prefixes. This hypothesis implies that Tshobdun is more conservative than Japhug, and that Japhug has later innovated

14 Person indexation and argument structure

by replacing generic transitive subjects by inverse forms, perhaps to avoid confusion between generic subjects and object caused by the constraint against inverse in semi-finite forms already posited above to explain the 2→1 portmanteau *ku-*. The idea that the Japhug pattern is innovative is supported by the existence of irregular verbs whose generic transitive subjects are marked by *ku-* prefix rather than the inverse (§14.3.4); these verbs would be the remnants of the stage attested in Tshobdun.

15 Orientation and associated motion

15.1 Orientation preverbs

In Japhug, orientation preverbs have main fundamental functions. First, they are a fundamental element of the TAME system; all finite verb forms, except the Factual Non-Past (§21.3.1) and the Apprehensive (§21.7.1), require one (and only one) orientation preverb. Nearly all verbs (§15.1.1.5) have at least one lexically determined orientation, used to build preverb-requiring tenses. Second, preverbs can in some cases also serve to indicate the spatial direction or orientation of a motion event or an action expressed by the verb form.

This section first presents the morphological features of orientation preverbs and their historical relationship with other words expressing orientation, and then discusses the expression of spatial direction with motion verbs, some common extended uses of the preverbs, and lexicalized orientations.

15.1.1 Morphology

The morphology of orientation preverbs presents significant differences across Japhug dialects. This section first describes the system of preverbs in Kamnyu Japhug, in particular with contracting verbs (§12.3), presents comparative data from Eastern dialects, and then discusses the historical relationship of preverbs with the corresponding locative nouns and adverbs.

15.1.1.1 The orientation preverbs in Kamnyu

This section deals with the form of orientation preverbs in the Kamnyu dialect in non-contracting verbs. In the Kamnyu dialect, four series of preverbs can be distinguished, as in Table 15.1. The choice of a particular series depends on TAME and person indexation; capital letters are used as labels, because functional labels (such as ‘perfective’ or ‘imperfective’) would be potentially misleading, since series B preverbs in particular occur in functionally unrelated verb forms. Series C and D historically result from the merger of vowel-initial prefixes with A and B preverbs, respectively (§15.1.1.3).

15 Orientation and associated motion

Only A and B-type preverbs are found in non-finite verb forms.

Preverbs occur in slot -3 of the verbal template (§11.2), following Associated Motion prefixes (§15.2.1), but preceding inverse and indexation prefixes (§14.2.1.2, §14.3.2.3, §14.3.2.7).

The four series of preverbs each comprise seven orientations, which can be divided into four subsets (including three spatial dimensions, §15.1.3): vertical (up / down), riverine (upstream / downstream), solar (east /west) and the unspecified orientation.¹

Table 15.1: Orientation preverbs in Kamnyu Japhug

Orientation	A	B	C	D
Upwards	<i>tx-</i>	<i>tu-</i>	<i>ta-</i>	<i>to-</i>
Downwards	<i>pu-</i>	<i>pju-</i>	<i>pa-</i>	<i>pjɣ- / pjo-</i>
Upstream	<i>lx-</i>	<i>lu-</i>	<i>la-</i>	<i>lo-</i>
Downstream	<i>t^hu-</i>	<i>c^hu-</i>	<i>t^ha-</i>	<i>c^hɣ- / c^ho-</i>
Eastwards	<i>kɣ-</i>	<i>ku-</i>	<i>ka-</i>	<i>ko-</i>
Westwards	<i>nu-</i>	<i>ju-</i>	<i>na-</i>	<i>ɲɣ- / ɲo-</i>
Unspecified	<i>jɣ-</i>	<i>ju-</i>	<i>ja-</i>	<i>jo-</i>

Each of the three spatial dimensions are encoded by a pair of preverbs: upper (upwards, upstream, east) vs. lower (downwards, downstream, west) orientations. In addition to formal differences between upper and lower orientation preverbs, this contrast reflects the fact that each of the three dimensions has an intrinsic directionality, encoding the direction of gravity, the flow of water and the apparent trajectory of the sun in the sky, respectively. The lower orientations correspond to the direction of natural motion along these dimensions: downwards (drawn by gravity), downstream (drawn by water flow) and westwards (towards the point where the sun sets). The upper orientations encode the opposite directions, reflecting the source from which natural motion takes place.

The A-type preverbs have either /ɣ/ or /w/ vocalism, corresponding to upper and lower orientations, respectively. They occur in the Aorist (§21.5.1.1, except for the 3SG→3' configurations (where the C series is used instead, §14.3.2.2), the Imperative (§21.4.2.1) and the Irrealis (§21.4.1.1). In addition, the Past Imperfective

¹Only orientable verbs (including motion and manipulation verbs, §15.1.2) are compatible with the unspecified orientation preverbs.

pu- corresponds to the DOWNWARDS A-type preverb (§21.5.3.1, Lin 2011). With subject and object participles, A-type preverbs are used to build perfective participles (§16.1.1.2, §16.1.2.2); they do not occur on oblique participles (§16.1.3.4) or infinitives (§16.2.1.2).

The B-type preverbs have /u/ vocalism in upper orientations, and /ʊ/ in lower orientations. In addition, lower orientations preverbs have a palatalized form. This palatalization is either reflected by the addition of a *-j-* medial in the case of *pju-* DOWNWARDS or by a shift of from dental (in the A-type preverb) to the corresponding palatal for *c^hu-* DOWNSTREAM and *juu-* EASTWARDS.² The vowel transcribed *u* is mostly realized as [i] in this context (§3.5.2). The B series occurs in the Imperfective (§21.2.1) and in the Immediate Perfective Converb (§16.6.3). In addition, the *juu-* prefix marking the Sensory evidential (§21.3.2.1) and the *ku-* prefix of the Egophoric Present (§21.3.3.1) and the Dubitative (§21.4.4) are specialized uses of the WESTWARDS and EASTWARDS B-type preverbs. B-type preverbs are found with subject, object and oblique participles (§16.1.1.2, §16.1.2.2, §16.1.3.4) as well as velar infinitives (§16.2.1.2, §16.2.1.6).

The C-type preverbs have the same onset as the corresponding A-type preverbs, but their vocalism is neutralized to /a/. This series only occurs in the Aorist 3SG→3' configuration of the transitive paradigm (§14.3.2.2).

The D-type preverbs are exclusively used to build the Inferential (Perfective §21.5.2.1 and Imperfective §21.5.3.1). These preverbs have the same onsets as those of the B series, with a division between non-palatalized UPWARDS preverbs and palatalized DOWNWARDS preverbs. The preverbs of the UPWARDS series have /o/ vocalism, but those of the 'downward' series have two variants, with either /o/ or /ɤ/ vocalism in free variation, as illustrated by the 3SG Inferential *ɲɤ-me* and *ɲo-me* of the verb *me* 'not exist' in (1) and (2), respectively.

- (1) *tce mts^hu nuu ɲɤ-me tce,*
 LNK lake DEM IFR-not.exist LNK
 'Then the lake disappeared.' (2003nyima-2)

- (2) *u-ftsoɔ nuu ɲo-me, ɲo-nu-ɣɣ-me*
 3SG.POSS-female.hybrid.yak DEM IFR-not.exist IFR-AUTO-CAUS-not.exist
q^he
 LNK
 'Her female hybrid yak was gone, she lost it.' (gesar 2003)

²In the synchrony of Japhug, clusters involving a dental stop followed by /j/ are attested, though only in ideophones (§4.2.2.2). The alternation between /t^h/ and /c^h/ is unique in the grammar of Japhug.

Since the contrast between /ɾ/ and /o/ is neutralized before the inverse *-wy-* prefix (§14.3.2.7), A- and D-type UPWARDS preverbs have the same surface form when they directly precede it, as shown in Table 15.2. The contrast is however maintained in the transcription system used in this grammar.

With DOWNWARDS preverbs the contrast is not lost in this context, since both vowels and consonants remain different (for instance *pú-wy-* vs. *pjɿ-wy-*).

Table 15.2: Neutralization of the contrast between A and D-type preverbs when followed by the inverse prefix

Orientation	Perfective 3' → 3SG	Inferential 3' → 3SG	Surface form
Up	<i>tɿ-wy-</i>	<i>tó-wy-</i>	[tó(ɿ)]
Upstream	<i>lɿ-wy-</i>	<i>ló-wy-</i>	[ló(ɿ)]
Eastwards	<i>kɿ-wy-</i>	<i>kó-wy-</i>	[kó(ɿ)]
Unspecified	<i>jɿ-wy-</i>	<i>jó-wy-</i>	[jó(ɿ)]

In all four series, the unspecified orientation preverbs behave like the upper orientation preverbs (/ɾ/, /u/ and /o/ vocalism in series A, B and D, respectively).

The isolated preverb *k^hu-*, which cannot be included in the system described above is found in the archaic form *k^hu-ti* ‘s/he said’ of the verb *ti* ‘say’ (§21.5.4).

15.1.1.2 Preverbs and vowel contraction

Vowel contraction occurs when a type A or B preverb (in tenses forms such as the *pu-* Past Imperfective §21.5.3.1, the *ju-* Sensory §21.3.2.1 and the *ku-* Egophoric Present §21.3.3.1 which require the same preverb for all verbs) directly precedes either the stem of a contracting verb (§12.3) or the progressive prefix *asu-*. Vowel contraction occurs in an idiosyncratic way depending on the type of preverb. The *a-* of contracting verb or of the progressive prefix merges with A-type preverbs as [-a-] in the Aorist, and as [-ɾ-] in the Irrealis and Imperative. With B-type preverbs the result of the contraction depends on the preceding vowel: [-o-] with upper *Cu-* preverbs, and [-ɾ-] with lower *C(j)u-* preverbs. Table 15.3 summarizes the resulting forms (not including Irrealis or Imperative); the spelling adopted in this grammar uses the intermediate ‘contracting form’.

The surface forms resulting from vowel contraction of A- and B-type preverbs are identical to C-type and D-type preverbs, respectively. The only immediate difference between D-type preverbs and contracting B-type preverbs is that the former show free variation between *Cɾ-* and *Co-* in the DOWNWARDS series, while

the latter only have the $C\gamma$ - form. For instance, while the Inferential of *me* ‘not exist’ is either *ɲɔ-me* or *ɲo-me* (see 1 and 2 above) with the two variants of the D-type preverbs, the result of the fusion of the B-type preverb *ɲuu-* (either Sensory or Imperfective) with either a contracting *a-* initial verb or a progressive *asu-* prefix is *ɲuu-ɣ-* [ɲɣ-] and cannot be realized as [ɲo-] except in the case of inverse *-wy-* infixation within the progressive $\gamma < wy > su/z-$ (§14.3.2.7, §21.6.1.1).

Table 15.3: Vowel contraction with A- and B-type orientation preverbs

Orientation	Preverb	Contracting form	Surface form
Up (A)	<i>tɣ-</i>	<i>tɣ-a-</i>	[ta-]
Down (A)	<i>pu-</i>	<i>pu-a-</i>	[pa-]
Upstream (A)	<i>lɣ-</i>	<i>lɣ-a-</i>	[la-]
Downstream (A)	<i>t^hu-</i>	<i>t^hu-a-</i>	[t ^h a-]
Eastwards (A)	<i>kɣ-</i>	<i>kɣ-a-</i>	[ka-]
Westwards (A)	<i>nu-</i>	<i>nu-a-</i>	[na-]
Unspecified (A)	<i>jɣ-</i>	<i>jɣ-a-</i>	[ja-]
Up (B)	<i>tu-</i>	<i>tu-o-</i>	[to-]
Down (B)	<i>pju-</i>	<i>pju-ɣ-</i>	[pɲɣ-]
Upstream (B)	<i>lu-</i>	<i>lu-o-</i>	[lo-]
Downstream (B)	<i>c^hu-</i>	<i>c^hu-ɣ-</i>	[c ^h ɣ-]
Eastwards (B)	<i>ku-</i>	<i>ku-o-</i>	[ko-]
Westwards (B)	<i>ɲuu-</i>	<i>ɲuu-ɣ-</i>	[ɲɣ-]
Unspecified (B)	<i>ju-</i>	<i>ju-o-</i>	[jo-]

C-type preverbs never appear in contracting contexts, because on the one hand contracting verbs are all intransitive and thus do not take C-type preverbs in the Aorist (§14.3.1), and on the other hand the progressive *asu-* removes all marks of morphological transitivity, including the alternation between A- and C-type preverbs (§14.3.1, §21.5.1.1).

Confusion between C-type preverbs and A-type preverbs with vowel fusion can arise in two cases with transitive verbs selecting the DOWNWARDS orientation. First, the 3→3' Aorist form (for instance *pa-rku* ‘he put it into it’) can have the same surface form (in this case [parku]) as the Past Imperfective of the Passive (§21.5.3.1, §18.1.1) of the same verb (*pu-a-rku* ‘it was put in it’). Second, the 3→3' Aorist Causative (*pa-su-rɣt* ‘he wrote it with it, he used it to write it’) can be homophonous (here [pasurɣt]) with the Past Imperfective Progressive (*pu-asu-rɣt* ‘he was writing it’).

15 Orientation and associated motion

Unlike C-type preverbs, D-type preverbs often occur with contracting verbs or with the progressive prefix. In such cases, the result of vowel contraction is not distinguishable from that with a B-type preverb. For instance, in (3) the Inferential Imperfective *pjɣ-ɣ<nu>ɣro-nuu* of the verb *anuyɣro* ‘play’ has the same surface form [pjɣnuwɣrónuu] as the corresponding Imperfective *pju-ɣ<nu>ɣro-nuu*. It is clear from context however that the form here must be interpreted as Inferential Imperfective, because the other verbs in the same passage *pjɣ-nuu-rɣ-rɣt-nuu* and *pjɣ-scit-nuu* are in this form, not in the simple Imperfective.

 IFR.IPFV-be.happy-PL SENS-be
 ‘In her dream, her elder brothers were drawing, they were playing, they were very happy.’ (140520 ye tiane-zh) {0004044#S77}

In the Kamnyu dialect of Japhug, however, although vowel contractions involving D-type preverbs are attested, such ambiguous forms are rare and avoided. More commonly, a peg circumfix *ku-...-ci* occurs in these forms: the *ku-* element prevents fusion between the D-type prefix and the following vowel, which is realized *-ɣ-* in this context.

For instance, instead of *pjɣ-ɣ<nu>ɣro-nuu*, the more common Imperfective Inferential form of *anuyɣro* ‘play’ is *pjɣ-k-ɣ<nu>ɣro-nuu-ci* as in (4). The *-ci* suffix is originally an evidential marker (cognate to the Tshobdun = *cə* Mediative suffix, on which see Sun 2017: 564), but in Kamnyu Japhug it only occurs in combination with the *ku-* prefix as a peg element (§11.4).

- (4) *tce nuura* *pjɣ-k-ɣ<nu>ɣro-nuu-ci* *tce*
 LNK DEM:PL IFR.IPFV-PEG-<AUTO>play-PL-PEG LNK
 ‘They were playing.’ (140510 fengwang-zh) {0003939#S33}

Inferential forms with the peg circumfix *ku-...-ci* regularly occur with contracting verbs or verbs bearing the progressive prefix in the same contexts as the corresponding non-contracting forms without the peg. For instance, in (5), the verb *pjɣ-k-ɣɲi-ci* ‘it was green’ with the peg circumfix clearly belongs to the same TAME category as the two preceding verbs *pjɣ-tu* ‘there was’ and *pjɣ-rom* ‘it was dry’.

In the Inferential, the peg circumfix becomes a morphological exponent of the Passive in addition to the Passive prefix *ɣ-* itself: without the peg, the passive would not be easily differentiable from the base transitive verb. For instance, without the peg element, the Inferential Imperfective Passive *pɣ-k-ɣ-ta-ci* ‘It had been put there’ in (6) would be identical to the Inferential *pɣ-ta* ‘he put it there’ with the DOWNWARDS orientation.

- (6) *tcoɣtsi w-tab nuɰtɕu, nɣkinu, qajyi kuβde, c^ha kuβde-p^hoŋ*

The *-ci* suffixal element can be elided, though not in utterance-final position (§11.4.2).

15.1.1.3 Preverbs in eastern Japhug dialects

The Kamnyu dialect of Japhug stands apart from most varieties in terms of its system of preverbs in two regards: the status of C- and D-type preverbs and the form of the DOWNWARDS orientation preverbs.

The Xtokavian (§6.5.1) dialects of Japhug spoken in Sarndzu and Tatshi are better analyzed with only two series of preverbs: the A- and B-types (Lin 2011: 70, with a different terminology). Instead of the C- and D-type preverbs, Lin & Luoerwu (2003) and Lin (2011) posit two additional vowel-contracting *a-* prefixes in these dialects, one occurring in the 3→3' Aorist configuration, and the other one in the Inferential.

These prefixes occur with the A- and B-type preverbs, respectively. In third and first person forms, the surface forms (resulting from the fusion of these preverbs with the *a-* 3→3' Aorist or Inferential) are identical (minor pronunciation differences excepted) to the corresponding C-type and D-type preverbs in Kamnyu Japhug, following fusion rules similar to those presented in Table 15.3

For instance, in (9a) and (9b), the verb forms transcribed as *ɲə-a-fe* (in Tatshi) and *ɲɻ-ɕe* (in Kamnyu) are near-identical in surface pronunciation and function.

- (9) a. *ɭamu ɲə-a-fe*
 ANTHR IFR:WEST-IFR-go
 'Lhamu went westwards.' (Tatshi dialect, Lin 2011: 70)
- b. *ɭamu ɲɻ-ɕe*
 ANTHR IFR:WEST-go
 'Lhamu went westwards.' (Kamnyu dialect)

In second person forms, on the other hand, the second person prefix in Tatshi is inserted between the B-type preverb and the *a-* Inferential prefix (A-type preverb and *a-* 3→3' prefix, respectively), as can be seen by comparing the Inferential second person intransitive in Tatshi (10a) and Kamnyu (10b). The change in the relative ordering between the vowel-contracting prefixes and the second person prefix has modified the structure of the preverbal system: the Kamnyu dialect has gained two additional series of preverbs, but lost one slot in the verbal template (§11.2).

- (10) a. *ɲə-tə-a-nɯɲemk^he*
 B.PREVERB-2-IFR-be.lean
 'You got lean.' (Tatshi dialect, heard in context)

- b. *ɲɣ-tu-nuɲɲmk^he*
 IFR-2-be.lean
 ‘You got lean.’ (Kamnyu dialect)

Alternatively, it is possible to analyze C- and D-type preverbs in Kamnyu Japhug as A- and B-type preverbs with vowel fusion following Lin & Luoerwu (2003), but there is little Kamnyu-internal data to support such an analysis, since D-type preverbs are not segmentable synchronically in this variety.

While in the case of D-type preverbs the vowel fusion approach proposed by Lin & Luoerwu (2003) is less attractive in Kamnyu Japhug than in the Tatshi dialect, for the C-type preverbs it is equally applicable to both dialects. First, there is no prefix ordering difference between Kamnyu and Tatshi: the 3→3' Aorist *a-* prefix posited by Lin Youjing never occurs in verb forms with prefixed person indexation markers (second person and/or inverse configurations). Second, there is arguably one additional trace of the 3→3' Aorist *a-* prefix in the Kamnyu dialect: the *ca-* variant of the Apprehensive *cu-* prefix (§21.7.1) when used with transitive verbs in 3→3' form.

There can be little doubt that the fusion hypothesis is correct historically – there was a stage where a 3→3' Aorist prefix did exist. However, from a synchronic point of view, it is not necessary to analyze this prefix as a separate morpheme. Furthermore, I decided to favour the non-contracting analysis of the preverbs to avoid potential confusion with the *a-* Denominal (§20.2), Passive (§18.1) and Reciprocal (§18.4.1) prefixes.

Another substantial difference between Kamnyu Japhug and the Xtokavian dialects concerns the B-type DOWNWARDS preverb. As shown by Table 15.4 (based on Lin 2011: 70), the A- and B-type preverbs in Tatshi are nearly completely identical to the corresponding Kamnyu preverbs (except for notational differences such as *v* and *ə* instead of *ɣ* and *ə*). The only real difference is the DOWNWARDS B-type preverb, which is *pju-* in Kamnyu but has the form *cə-* with a palatal stop instead of a cluster in Tatshi. It is possible that the Tatshi palatal results from the palatalization of *p-*, but no other examples of **pj-* → *c-* are known to me. Alternatively, Kamnyu *pju-* (and D-type *pjɣ-*) could be analogically based on the A-type preverb *pu-*. Another possible origin for the *cə-* of xtokavian dialects is the base *-ki* DOWNWARDS found in the adverbs *aki* and *tɕeki* (§15.1.1.4).

15.1.1.4 Orientation preverbs and orientation nouns and adverbs

Excluding the unspecified orientation, there is a one-to-one relation between the orientation preverbs, the egressive postpositions (§8.2.10, Table 8.1), locative

Table 15.4: Orientation preverbs in Tatshi Japhug

Orientation	A	B
Up	<i>tw-</i>	<i>tu-</i>
Down	<i>pə-</i>	<i>cə-</i>
Upstream	<i>lw-</i>	<i>lu-</i>
Downstream	<i>tʰə-</i>	<i>cʰə-</i>
Eastwards	<i>kɔ-</i>	<i>ku-</i>
Westwards	<i>nə-</i>	<i>ɲə-</i>

relator nouns (§8.3.4.1) and orientation adverbs (§22.2.6), as the data in Table 15.5 show.

The initial consonant of the orientation preverbs is identical to that of the locative adverbs (Table 15.5), except for (i) the WESTWARDS orientation with a nasal *n-* instead of a prenasalized *nd-* (ii) the DOWNWARDS orientation, which corresponds to *-ki* in some adverbial forms (*aki* and *tʰeki*).

The vocalism of the preverbs is only partially predictable from that of the corresponding adverbs: the prefixes *tʰu-* and *nu-* could be seen as the bound state of the adverbs *tʰi* ‘downstream’ and *ndi* ‘westwards’ with *-i* → *-u* alternation, but the pattern is less clear in the remaining preverbs. In the case of the UPWARDS preverbs, the *t-* prefixes are more likely to be related to the *-tu* root found in the adverbs *atu* and *tʰetu* rather than the *-tab* root found in the locative noun *u-tab* (on which see §8.3.4.3).

The irregular consonantal correspondence between the preverb *nu-* and the adverb *ndi* of the DOWNWARDS orientation could be interpreted in three ways.

First, the preverb could have been grammaticalized from the adverb, and a sound change **ndi-* → *nu-* could have taken place once it had become a prefix, due to a phonotactic constraint against prenasalized stops (and complex segments in general) in prefixal position (§11.2.4). This hypothesis is unlikely however, because orientation preverbs are precisely the only prefixes that appear to violate the phonotactic constraints observed by all other elements of the prefixal chain, as shown in particular by the presence of aspirated segments (*tʰu-*), laterals (*lɣ-*) and clusters (*pju-*).

Second, the adverb *ndi* could originate from a compound, whose first element *n-* would come from the same etymon as the WESTWARDS preverb *nu-*.

Finally, the possibility that the preverb *nu-* and the adverb *ndi* are historically unrelated should also be considered.

The strong resemblance between the preverbs and the locative adverbs could be interpreted as due to a relatively recent grammaticalization. However, just as in the case of the relation between pronouns and indexation suffixes (§14.8.1), the possibility of mutual contamination between partially cognate paradigms has to be taken into consideration.

Table 15.5: Orientation preverbs, egressive postpositions and locative nouns and adverbs

Orientation	A-preverbs	Locative Adverbs	Egressive	Locative relators	Locative distal adverbs
Upwards	<i>tx-</i>	<i>taʁ</i>	<i>ʁaŋtaʁ</i>	<i>u-taʁ</i>	<i>tʁetu</i>
Downwards	<i>pu-</i>	<i>pa</i>	<i>ʁaŋpa</i>	<i>u-pa</i>	<i>tʁeki</i>
Upstream	<i>lx-</i>	<i>lo</i>	<i>ʁaŋlo</i>	<i>u-lxʁcu</i>	<i>tʁelo</i>
Downstream	<i>t^hu-</i>	<i>t^hi</i>	<i>ʁaŋt^hi</i>	<i>u-t^hʁcu</i>	<i>tʁet^hi</i>
Eastwards	<i>kx-</i>	<i>ku</i>	<i>ʁaŋku</i>	<i>u-kxʁcu</i>	<i>tʁekku</i>
Westwards	<i>nu-</i>	<i>ndi</i>	<i>ʁaŋndi</i>	<i>u-ndʁcu</i>	<i>tʁendi</i>

15.1.1.5 Verbs incompatible with orientation preverbs

In the West Gyalrongic languages, including Stau (Jacques et al. 2017: 601) or Khroskyabs (Lai 2017: 311), some verbs never take orientation preverbs even in the Imperative and Aorist. This appears to be an archaic feature, as it is restricted to a very small set of cognate verbs, for instance Stau *vdə* ‘see’ and Khroskyabs *vdê* ‘see’. No such phenomenon exists in Japhug.³ The Japhug cognates of West Gyalrongic preverb-less verbs regularly take orientation preverbs (for instance, *mtə* ‘see’ selects the DOWNWARDS orientation, see §15.1.5.9).

A handful of verbs never occur with orientation preverbs in Japhug, but this phenomenon is completely different from the West Gyalrongic case. In Japhug, preverb-less verbs have a defective paradigm, and only occur in one TAME category. Two of them (*mʁ-xsi* ‘one does not know’ and *kʁtupa* ‘tell’, §14.3.4) are only attested in the Factual Non-Past, and the absence of preverbs is thus regular. The existential verbs *ʁʁzu* ‘exist’ and *maje* ‘not exist’ are only found in the Sensory Evidential (§14.2.2, §21.3.2), which is normally marked by the preverb

³Still, there are some indirect clues that *ti* ‘say’ could have had irregular preverbless forms at an earlier stage (§21.3.1.4).

15 Orientation and associated motion

ju-, and can be considered to be the suppletive forms of *tu* ‘exist’ and *me* ‘not exist’, respectively.

15.1.2 Orientable verbs

Most verbs in Japhug have one or several lexicalized orientation(s) (§15.1.5), and when used with preverbs, these no longer express spatial orientation or direction. Yet, there is a subclass of verbs, in which the preverbs retain their original spatial meaning: these are called in this grammar “orientable verbs”.

The defining feature of these verbs is not simply the ability to take any of the six orientation preverbs, but more importantly their compatibility with the *unspecified orientation* (§15.1.1.1), which is never used as a lexicalized orientation.

Orientable verbs can be subdivided into three main categories: motion verbs (‘go’, ‘come’ etc), manipulation verbs (‘bring’, ‘take’ etc) and orienting verb (‘look towards’, ‘turn towards’ etc). In addition, some stative verbs can be converted into orientable verbs. This section presents the specificities of a sample of these categories, and then describes the uses of preverbs to express spatial direction.

15.1.2.1 Motion verbs

Motion verbs in Japhug can be subdivided into four categories, depending on their transitivity and on whether they select a local phrase.

First, allative motion verbs select a locative phrase (in the absolutive §8.1.8, with a locative postposition §8.2.4 and/or a relator noun §8.3.4) expressing the goal / direction of the motion. The most common allative verbs are *ce* ‘go’ and *yi* ‘come’ (§15.1.2.3), which can also take a purposive complement (§16.1.1.6).

Other allative verbs include *zyut* ‘arrive’ (11), *cit* ‘move’, *p^hyo* ‘flee’, *mtsax* ‘jump’, *ce^hlyt* ‘disappear’ and *jyrt* ‘turn around’, and derived vertitive verbs (§19.2) such as *nuce* ‘go back’.

The orientation preverbs of allative verbs express the trajectory towards the goal, as in (11). Note here the orientation concord between the EASTWARDS preverb *ko-* and the locative relative noun *u-kɣcu* ‘east of’ (§15.1.2.7).

- (11) *u-kɣcu* *tce icq^ha* *mts^hu ku-wyrum* *n^u y^u*
3SG.POSS-east LOC the.aforementioned lake SBJ:PCP-be.white DEM GEN
u-tax *n^utce* *ko-zyut-ndzi*.
3SG.POSS-on DEM:LOC IFR:EAST-reach-DU
‘They arrived at the white lake east of there.’ (28-smAnmi)
{0004063#S256}

In addition, reflexive-causative derivations from allative verbs, or from verbs of relative location, such as *zyrszyut* ‘manage to reach’ and *zyrsrmbat* ‘move closer’ from *zyut* ‘arrive’ and *aribat* ‘be near’ (§15.1.2.5, §18.3.4.3), can also be allative verbs.

There is always an implicit goal with *ce* ‘go’, *yi* ‘come’ and *zyut* ‘arrive’, even when it is not overt, as in (12). In this example, the locative adverb *alo* ‘upstream’ (here ‘closer to the mountain’, see §15.1.3.2) refers to the path of the motion, not its goal. The goal, being encoded by the EASTWARDS preverb, would have to be expressed with a eastwards locative noun or adverb (§15.1.2.7).

- (12) *alo ny alo ky-ye-a ma u-byri*
 upstream ADD upstream AOR:EAST-COME[II]-1SG LNK 3SG.POSS-front
ku-ku-yi tce, nu-yuts^hdyu.
 IPFV:EAST-GENR:S/O-COME LNK SENS-be.hot
 ‘I came [here], (eastwards from the point of origin) by [the road that lies] closer to the mountain, when one comes by the [road that is located] in the front (closer to the river), it is too hot.’ (conversation, 140510)

Second, the verb *lob* ‘come out’ is an ablative motion verb, selecting a locative phrase expressing the point of departure of the motion event, as *ndzom u-pa nutcu* ‘from under the bridge’ and *tu-ci u-rku nutcu* ‘from the side of the river’ in (13) and *tumunymk^ha zu* ‘from heaven’ in (14). The preverb refers to the direction from this point of origin to the goal (which may be left unspecified), a motion upwards in (13), and downwards in (14).

- (13) *tce ndzom u-pa nutcu tu-ci u-rku*
 LNK bridge 3SG.POSS-under DEM:LOC INDEF.POSS-water 3SG.POSS-side
nutcu pystcu nu to-nu-lob tce

- (14) *tumunymk^ha zu pjx-nu-lob-nu.*
 heaven LOC IFR:DOWN-AUTO-COME.out-PL
 ‘[They] came down from heaven.’ (150828 niulang-zh) {0006318#S48}

The verb *yi* ‘come’ sometimes selects a locative phrase referring to the source of the motion, rather than to the goal, as shown by (15), describing an action similar to (14).

15 Orientation and associated motion

- (15) *spikuku zo tce tumunxmk^ha nutcu, gro xsum*
 every.day EMPH LNK heaven DEM:LOC pigeon three
pju-yi-nu
 IPFV:DOWN-come-PL
 ‘Everyday, three pigeons came down from heaven.’ (31-deluge)
 {0004077#S47}

Another ablative verb is the reflexive-causative *xγxγxq^hi* ‘move further away’ derivation from the stative verb *arq^hi* ‘be far’ (see §15.1.2.5).

Third, atelic motion verbs do not select a locative phrase. This category includes verbs expressing the speed of motion (*rjuγ* ‘run’, *ηke* ‘walk’), or non-terrestrial motion (*nuqambujom* ‘fly’, *ndzax* ‘swim’). With these verbs, when a locative phrase is present, it generally indicates the path of the motion, not the goal, as in (16).

- (16) <bazi> *w-ηguw ri tx-ηke-a ma, ku-xrq^hi ky-ce*
 yard 3SG.POSS-in LOC AOR-walk-1SG LNK SBJ:PCP-be.far INF-go
mu-ku-c^ha-a.
 NEG-PRS-can-1SG
 ‘I had a walk in the yard, I cannot go very far.’ (conversation, 2017-09-21)

To specify a goal, the atelic motion verb is usually conjoined with an allative verb, in particular *ce* ‘go’ or *yi* ‘come’, as in (17).

- (17) *rjxmts^hu w-pcov tce jo-ndzax tce jo-ce.*
 sea 3SG.POSS-side LOC IFR-swim LNK IFR-go
 ‘He swam towards the sea.’ (150830 baihe jiemei-zh) {0006368#S201}

With the verb *rjuγ* ‘run’ there are apparent examples of locative phrases indicating the goal as in (18), but only in texts translated from Chinese, and this may be a calque, though such examples are not considered clumsy by Tshendzin.

- (18) *rjara w-ηguw c^hγ-rjuγ ri,*
 yard 3SG.POSS-in IFR:DOWNSTREAM-run LNK
 ‘He ran out into the yard.’ (140505 bulaimei-zh) {0003911#S104}

The verb *ηke* ‘walk’ is barely attested with the unspecified orientation preverbs. It only occurs with them when in a serial verb construction (§25.4.1) with an allative motion verb, as in (19). When used on their own, the UPWARDS preverbs occur to express unspecified orientation, as in (16) above.

- (19) *tce jo-ŋke jo-ce tce tce, <changcheng> [...] u-kw-βzu*
 LNK IFR-walk IFR-go LNK LNK great.wall 3SG.POSS-SBJ:PCP-make
ra nu-cki tce jo-zɣut.
 PL 3PL.POSS-DAT LOC IFR-arrive
 ‘She went [there] on foot and arrived where people were building the
 Great Wall.’ (150827 mengjiangnv-zh) {0006290#S145}

The distributed action verb *nɣɕuɕe* ‘go around’ (from *ɕe* ‘go’) does not take definite goals (§19.4), and in addition is only compatible with unspecified orientation preverbs.

Fourth, transitive motion verbs include *βji* ‘chase’, *pjɣl* ‘go around, cross, avoid’, *pyaβ* ‘turn over’ and *numgla* ‘step over’, which can also occur with the non-specific orientation preverbs, as in (20). The object of these verbs is the location or entity around which (or through/towards which) the motion event takes place.

- (20) *zgo t^hystuy ja-nnu-pyaβ-ndzi, tu-ci*
 mountain how.many AOR:3→3’-AUTO-turn.over-DU INDEF.POSS-water
te^hi jarma ja-n-numgla-ndzi mɣ-xsi ma,

 ‘It is not known how many mountains and rivers they crossed.’
 (qajdoskAt 2002) {0003366#S50}

The transitive verb *nunq^hu* ‘go along, follow’ (§20.7.2) is also compatible with the unspecified orientation preverbs, but can also select the UPWARDS preverbs as default, like *ŋke* ‘walk’.

15.1.2.2 Manipulation verbs

Manipulation verbs are transitive verbs expressing a motion involving two entities.⁴ The subject, generally (but not exclusively) animate causes the object (prototypically, an inanimate) to move (in some case together with him/her/it). As in the case of motion verbs, there are several categories depending on whether a locative phrase is selected and the nature of the motion causation.

Allative manipulation verbs select a locative phrase indicating the goal of the motion, such as *<xuexiao> yu u- <caochang> u-χcɣl* ‘the middle of the school playground’ in (21) or *sɣtɕ^ha ku-ɣɣq^hi zuu* ‘to a place far away’ in (22). The presence of a locative phrase is however always optional (§14.5.4).

⁴The term “caused accompanied motion” has been suggested to replace “manipulation” (Margetts et al. 2019).

 IPFV:DOWN-GENR:S/O-say SENS-be
 'One has to send [the snake] outside, to a place far away without killing it, people say.' (2010-11)

Allative manipulation verbs can be divided into several subcategories. Verbs of transportation, in which the subject carries the object and moves together with it/him include *tsum* 'take away' and *yut* 'bring', the transitive counterparts of the motion verbs *ce* 'go' and *yi* 'come' (§15.1.2.3), *ru* 'fetch, bring' (discussed in more detail in §15.2.9). Verbs of accompanied motion, whose subject and objects move together along the same trajectory, include *mts^hi* 'lead', *no* 'drive', *sco* 'see off' and *lyt* 'release'.⁵ The latter two verbs can also refer to transportation in a vehicle, as in (23). Verbs of accompanied motion can occur with a locative phrase, but such uses are very rare.

- (23) *u-wa ku yu-ly-wy-lyt-i*
 3SG.POSS-father ERG CISL-IFR:UPSTREAM-INV-release-1PL
 'His father give us a ride here (from Chengdu to Mbarkham).' (elicited)

Allative verbs of induced motion comprise the causative derivations of motion verbs, in particular *suye* 'invite', 'cause to come' and *suxce* 'send', 'cause to go'.

⁵This verb has many functions as a light verb (§22.4.2.2), but one of its basic meanings when used on its own is 'see off' like *sco*.

Only the object undergoes the motion, as in (24).⁶

- (24) *rɣuul rɣyskɣt u-taɁ tʻ-wɣ-suux-ce ɲu-ɣu*
 silver stairs 3SG.POSS-on IFR:UP-INV-CAUS-go SENS-be
 ‘They made her go up the silver stairs.’ (2003 Kunbzang)

The verbs *mɣa* ‘take’ (§19.7.3) and *tɁɣt* ‘take out’ when used as manipulation verbs select a locative phrase which can refer to the goal, as in (26), but also in some cases to the point of origin of the motion, as in (25). These verbs do not necessarily imply translational motion of the subject (only motion of the hands).

- (25) *ɲɣ-mtsɯr q^he tɁendɣre u-p^huŋɣu nuɰtɕu iɕq^ha nu,*

- (26) *rɣymts^hu u-mɣu zu ju-tɁɣt-nu tɕe*
 ocean 3SG.POSS-border LOC IPFV-take.out-PL LNK
 ‘[The whalers] take [the whale] to the shore.’ (160703 jingyu)
 {0006169#S35}

Atelic manipulation verbs cannot select a locative phrase. Some atelic verbs are not orientable, and cannot take the unspecified orientation preverbs. For instance, *nut^haj* ‘carry’ (a verb borrowed from Chinese, see §20.11) is only compatible with the UPWARDS orientation, and requires to be used with an allative verb such as *tsum* ‘take away’ to specify the goal and the orientation, as in (21) above.

15.1.2.3 Motion deixis

Motion and manipulation verbs both have a contrast between translocative (*ɕe* §15.1.2.1, *tsum* §15.1.2.2) and cislocative (*yi* §15.1.2.1, *ɣut* §15.1.2.2), like the corresponding associated motion prefixes (*ɕu-* §15.2.1.2, *ɣu-* §15.2.1.1).

The translocative and cislocative verbs can often be translated as ‘go/take away’ and ‘come/bring’, respectively. However, these translations may be misleading, as the criteria for determining the deictic center in Japhug are not identical to those of Chinese or English.

⁶However, the motion verb *rɣuy* ‘run’ has a causative form *surɣuy* ‘run away with’ which expresses motion of both subject and object (§17.2.5.10).

15 Orientation and associated motion

The cislocative verbs are required not only in case of motion towards the location of the speaker, they have to be used whenever a motion is directed towards a spatial location related either to the speaker *or* the addressee, even in the case of motion from the location of the speaker to that of the addressee. For instance, while in Chinese (and most languages of Europe) both 来你家 <lái nǐ jiā> ‘come to your house’ and 去你家 <qù nǐ jiā> ‘go to your house’ are grammatical, in Japhug only the cislocative verbs are employed in this case. In (27) for instance, replacing *ju-yi-a* by *ju-ɕe-a* would result in a very clumsy clause.

- (27) *azo t^hxjtcu jamar ny-k^ha ju-yi-a pe?*
 1SG when about 2SG.POSS-house IPFV-come-1SG be.good:FACT
 ‘What time should I go to your house?’ (elicited)

Similarly, the cislocative is necessary when both addressee and speaker go together, in sentences with the secutive *u-rca* (§8.3.2) such as (28), (29) (see also 62 in §15.1.3.3). The translocative *ɕe* ‘go’ is never attested in such contexts.

15.1.2.4 Orienting verbs

Orienting verbs express change of orientation without translational motion, involving a pointing/aiming gesture towards a goal. This category includes the intransitive *ru* ‘look at’ (§14.2.4), the transitive verbs *ɕt^huz* ‘turn towards’ and *t^hu*

‘built’ (of roads or bridges; this verb also has additional meanings such as ‘leave (a trace)’ as in 33 in specific contexts), as well as the anticausative *ndu* ‘be spread’ (§18.5).

With the verb *ɕt^huz* for instance, the preverb indicates the orientation towards which the object is directed, and it can correlate with locative adverbs (31) or locative phrases (32).

15.1.2.5 Conversion to orientable verbs

A handful of stative verbs can take the unspecified orientation preverbs and be converted to dynamic orientable verbs. The stative verbs of relative location *arm-bat* ‘be near’ and *arq^hi* ‘be far’ can be used in the meanings ‘move closer’ and ‘move further away’ identical to the reflexive-causative derived verbs *ɣɣsɣrmbat* ‘move closer’ and *ɣɣsɣrɣ^hi* ‘move further away’ (§15.1.2.1, §18.3.4), as in (34).

 ‘He went [after them] until he became tired.’ (160706 poucet6)
 {0006109#S45}

15.1.2.6 Complement clauses

Some complement-taking verbs, in particular phasal verbs (§24.5.6.2) such as *za* ‘begin’, select the orientation of the verb in the complement clause, and can be used with indefinite orientation preverbs (§24.3.5).

15.1.2.7 Orientation concord

Clauses containing a orientable verb generally show agreement between the orientation of the preverb and that of orientation nouns and adverbs (§8.3.4.1, §15.1.1.4).

In (36) for instance, the UPSTREAM *lo-* and *c^hɣ-* DOWNSTREAM preverbs correlate with the adverbs *alo* ‘upstream’ and *at^hi* ‘downstream’, respectively, expressing here a back and forth motion.

- (36) *alo nɣ lo-rɣuɣ at^hi nɣ*
 upstream ADD IFR:UPSTREAM-run downstream ADD
c^hɣ-rɣuɣ
 IFR:DOWNSTREAM-RUN
 ‘He ran upstream and downstream.’ (160720 kandZislama) {0006147#S66}

In (37), the WESTWARDS *ɲɣ-* preverb corresponds to the orientation relator noun *u-ndɣcu* ‘west of’. In the same story, the main character comes back to the same place on the return trip, from the opposite direction, and the EASTWARDS orientation preverb and relator noun are found instead (example 11, §15.1.2.1).

 {0004063#S97}

15.1.3 The tridimensional system

Orientation preverbs (§15.1.1.1) in Japhug are organized in a three-dimensional system like spatial postpositions, relator nouns and adverbs (§8.2.10, §8.3.4.1, §22.2.6). Very similar orientation systems are found in other Gyalrong languages, in particular Tshobdun (Sun 2000a) and the Cogtse dialect of Situ (Lin 1993; Lin 2002; 2017).⁷

The present section describes the concrete spatial uses of each of the three dimensions (vertical, riverine and solar)⁸ with orientable verbs. The discussion here not only applies to orientation preverbs, but also to all nouns, postpositions and adverbs encoding orientation.

15.1.3.1 The vertical dimension

The basic meaning of the UPWARDS and DOWNWARDS preverbs, adverbs and locator nouns is to encode relative position or motion on the axis that is perpendicular to the ground. A typical use of these preverbs with orientable verbs for instance is to describe motion up and down trees or stairs, as shown by (38) and (39).

- (38) *tc^hi nuw ɣu w-taɁ tɣ-ari ɲu-ɲu*

 stairs IFR-make.trampling.noise EMPH IFR:DOWN-go
 ‘She hurtled down the stairs.’ (Nyima wodzer2002)

The DOWNWARDS preverb also expresses downwards motion into another medium such as water, as in (40).

⁷Not all Core Gyalrong languages, however, have a tridimensional orientation system: Zbu (Gong 2018) and the Bragbar dialect of Situ (Zhang 2020) are exceptions.

⁸The labels ‘riverine’ and ‘solar’ follow Sun’s (2000a) and Lin’s (2002) work on Tshobdun and Situ. Previous authors (Lin 1993) have analyzed the ‘riverine’ and ‘solar’ dimensions as ‘river-mountain’ and ‘upstream-downstream’, respectively (see the discussion in §15.1.3.2).

 IFR:DOWN-jump LNK IFR-die
 ‘(Desperate from) regret, he jumped into the water and died.’
 (28-qajdoskAt) {0003718#S177}

The rising and setting of the sun is also expressed with the vertical preverbs (*to-ɬob* IFR:UP-come.out ‘(the sun) rose’ vs. *ɲɣ-ɕq^hɣt* IFR:DOWN-disappear ‘(the sun) set’); alternatively, the solar dimension is also used (§15.1.3.3).

The vertical dimension preverbs also express relative altitude, in particular when the slope between two places is particularly steep. Alternatively, the riverine preverbs UPSTREAM / DOWNSTREAM (§15.1.3.2) occur either when the slope is less steep, or when following a water stream. This dimension can also be used between far away places when the difference in altitude is perceived to be particularly conspicuous. For instance, the orientation UPWARDS is selected to describe a journey from Gyalrong areas to central Tibet, and DOWNWARDS for a trip to Chinese areas, as in (41) and (42) (see also 193 in §15.2.4). The riverine dimension is alternatively possible however to refer to motion between Gyalrong and Chinese areas (§15.1.3.2).

- (42) *rɣa ɲɣ-ɕe* *tce*
 Chine IFR:DOWN-go LNK
 ‘He went to China.’ (Gesar)

In some cases, the orientation DOWNWARDS is selected when the path includes a section down a mountain, even if the axis is oriented in the upstream/downstream or east/west directions. For instance, the DOWNWARDS orientation preverb appears to express a motion from *kɣmɲuu* Kamnyu to *smulju* Smeliu village, as explained in example (43), although the path between them follows the east-west axis. It is however alternatively possible to use the EASTWARDS preverbs to describe the trip from Kamnyu to Smeliu (and the WESTWARDS preverbs for the opposite journey).

15.1.3.2 The riverine dimension

The basic meaning of the UPSTREAM and DOWNSTREAM preverbs, adverbs and locator nouns is to express motion or relative position along the axis of a flowing river or streamlet.

The downstream preverbs are systematically used to refer to the direction of water flow. In particular, the imperfective participles *c^hu-ku-yi* or *c^hu-ku-ce* with the DOWNSTREAM preverb are sometimes added to the noun *tu-ci* ‘water’ to specify the meaning ‘river, stream’ (*tu-ci c^hu-ku-yi*, literally ‘the water that is coming downstream’) as in (44) and (46).

The direction opposite to that of the flow of water is normally referred to with the UPSTREAM preverbs, as in (46).⁹ As shown by (47), the UPSTREAM preverbs and adverbs are understood by speakers as specifically referring to the direction towards the source of the river (*tɕ^hip^huɣ*, a noun borrowed from ལྷ་ལྷགས་ *tɕ^hu.p^hugs* ‘water source’).

 SENS-be
 ‘One calls going towards the source of the river UPSTREAM, and going towards the lower reaches of the river ‘downstream.’ (150904 akW andi) {0006372#S24}

For motion between localities in the Gyalrong areas located along a river, the UPSTREAM and DOWNSTREAM orientation are selected in some cases. For instance, the UPSTREAM preverbs occur to describe trips from Kamnyu to Tshobdun (or Zbu) as in (48), and the DOWNSTREAM preverbs for the opposite trip.

⁹In (46), the UPWARDS preverb on *nuŋq^hu* ‘go along, follow’ is the default orientation, see §15.1.2.1.

- (48) *ts^huβdun ku-sɣ-suxcɣt lɣ-ari-a.*
 TOPO SBJ:PCP-APASS-teach AOR:UPSTREAM-go[II]-1SG
 ‘I went to Tshobdun to teach.’ (150819 kumpGa) {0006388#S69}

The riverine dimension preverbs can also be used in the case of trips to far away places up or down the course of a river. For instance, a journey to Chinese areas can be described using the DOWNSTREAM orientation as in (49), though due to the considerable altitude difference the orientation DOWNWARDS is often preferred (compare with example 42, §15.1.3.1).

However, in valleys where the main river flows along the east-west axis, the solar dimension (§15.1.3.3) takes over the riverine dimension. In Mbarkham and the towns around it, where the Somang river flows from east to west, the UPSTREAM and DOWNSTREAM preverbs cannot be used to refer to the places along the river. Rather, the EASTWARDS preverbs occur for the UPSTREAM direction and the WESTWARDS preverb for the downstream orientation. For instance, from Mbarkham to Cogtse, located upstream, the EASTWARDS preverb is selected as in (50). For Rdzonggag and Bragbar, further downstream (and southwest from Mbarkham), the WESTWARDS preverb is used. For shorter trips (on foot or on vehicles) inside Mbarkham city, the solar dimension preverbs are also systematically used.

- (50) *tɕuɣtsi kɣ-ari-j, ku-nɣmɔ*
 TOPO AOR:EAST-go[II]-1PL SBJ:PCP-watch
 ‘We went to Cogtse, to visit.’ (conversation, 2013-10-15)

In this environment, the riverine preverbs are used to encode the mountain-river slope axis, which is perpendicular to the river axis. This phenomenon has been observed in other Gyalrong languages. Lin (2002: 34), in an article about Situ where the same reorganisation of preverb dimensions occurs, argues that ‘the riverine pair has become generalized for cases where there are no mountain creeks in sight, and the orientation markings then encode an opposition between higher and lower parts of a slope via metaphorical extension.’

15 Orientation and associated motion

A further extension of the riverine dimension in such geographical environments is to encode the orientation perpendicular to that river even in places with relatively flat ground without any slope. In localities where the river is exactly aligned on the East-West axis, the riverine preverbs thus started to encode the North-South axis, with the DOWNSTREAM preverb for the orientation *towards the river* on this axis, and the UPSTREAM preverb from that *away from the river*.

This perpendicular orientation grid is applied not only on streets (where a mild slope is generally perceptible in Gyalrong-speaking valleys), but even extended within houses, where the ground is even. For instance, if the toilets are located on the side of the building that is closer to the river, and if one happens to be on the opposite side of the apartment, one can say (51), even though one remains at the same vertical level (all solar and riverine prefixes would also be appropriate, depending on the absolute orientations).

- (51) *jɣɣt ci c^hu-ɕe-a*
 toilet a.little IPFV:DOWNSTREAM-go-1SG
 ‘I am going to the bathroom.’ (heard several times in context)

Some journeys involve a change of orientation. In such cases, the choice of the preverb depends on the longest section during the trip. For instance, the road from Mbarkham to Kamnyu first goes downstream the Somang river (westwards) and then, for a longer distance, upstream the Kyomkyo river (northwards), and therefore the UPSTREAM preverbs are required (52).

- (52) *kɣmɲu mu-lɣ-tsum-a*

Given the fact that several contradictory constraints are involved in the choice of the riverine vs. solar orientation preverbs, it is not surprising that the orientations chosen to describe motion from one locality to another in the Japhug

speaking area is not completely predictable, and that some orientations must be analyzed as having been completely lexicalized (§15.1.5).

The DOWNSTREAM preverbs can be used also for motion into water as in (54) and (55). They compete in this function with the vertical dimension DOWNWARDS preverbs (see 40 in §15.1.3.1, an example describing the event referred to in 54 in another version of the same story).

Metaphorical extensions of the riverine preverbs include the illative/elative functions (§15.1.4.2, §15.1.5.1), the orientation in the living room (§15.1.4.4), the loom (§15.1.4.5) and various lexicalized uses (§15.1.5.4).

15.1.3.3 The solar dimension

The basic meaning of the EASTWARDS and WESTWARDS preverbs, adverbs and locator nouns is to encode the east-west axis. Example (57) for instance shows that the orientation encoded by the distal locative adverb *tɕendi* is the same as that of the place where the sun sets.

15 Orientation and associated motion

- (57) *turmuuk^ha ri tce tce^hendi ri tɣne u-sɣ-cq^hlyt pcoɐ ri*

 {0006372#S21}

In locations where the river is oriented on this axis, the solar dimension is dominant and the riverine dimension recessive (§15.1.3.2). In Mbarkham city, where

the river flows from east to west, the EASTWARDS and WESTWARDS preverbs are used for the upstream and downstream directions, respectively. This overlap has caused previous linguists working on Gyalrong languages (in particular Situ) to analyze the solar dimension preverbs and adverbs as encoding the ‘upstream/downstream’ axis (see the discussion in Lin 2002).

The solar dimension remains dominant even when the path is not parallel to the east-west axis, but oriented southwest-northeast or southeast-northwest. For instance, a journey from Mbarkham to Jinchuan or Danba along the Somang river, which has a clear southwest orientation, the WESTWARDS orientation is still preferred over the DOWNSTREAM orientation.

- (61) <jinchuan> *nur-azyut-i ri*
 TOPO AOR:WEST-arrive-1PL LNK
 ‘When we arrived in Jinchuan...’ (2010-1)

The east/west dimension can even be used in the case of far away countries, as between France and China, as shown by the choice of the WESTWARDS preverb in (62).

There is one case in which the solar dimension preverbs are selected to encode the axis that is perpendicular to the river: to refer to motion toward the opposite bank of the river at the same altitude level (by walking on a bridge, by boat or wading), the EASTWARDS and WESTWARDS preverbs are selected, as in (67) and (68). In this context, both orientations are appropriate, and there is no strict rule to choose EASTWARDS or WESTWARDS to cross a river, unless the river is oriented north-south and the axis perpendicular to it corresponds to the east-west axis.

The EASTWARDS and WESTWARDS preverbs have many other extended uses, in particular to express centripetal/centrifugal directions (§15.1.4.3) and meanings

further derived from them (§15.1.5.7, §15.1.5.10, §15.1.4.1). In addition, the Sensory *nu-* (§21.3.2.1) and Egophoric Present *ku-* (§21.3.3.1) prefixes originate from the B-type WESTWARDS and EASTWARDS preverbs, respectively.

15.1.3.4 Deadverbial verbs of relative location

Deadverbial verbs of relative location express the position of the subject (in comparison to that of other referents) on one of the three dimensions. These verbs are built by adding the prefix *maŋ-* to the adverbial stems, as indicated in Table 15.6, and their stems are homophonous with the corresponding nouns of relative location (§5.7.2).

The *maŋ-* prefix has a function that is similar to that of the denominal *mɔ-* prefix, which derives verbs of relative location from relator nouns (§20.6).

Table 15.6: Verbs of relative location and corresponding locative adverbs

Locative adverb	Verb of location
<i>taɁ</i>	<i>maŋtaɁ</i> ‘be on the upper side’
<i>pa</i>	<i>maŋpa</i> ‘be on the lower side’
<i>lo</i>	<i>maŋlo</i> ‘be upstream’
<i>tʰi</i>	<i>maŋtʰi</i> ‘be downstream’
<i>ku</i>	<i>maŋku</i> ‘be on the east side’
<i>ndi</i>	<i>maŋndi</i> ‘be on the west side’

Each of the six verbs in Table 15.6 selects the orientation preverbs corresponding to their own orientation, for instance *maŋlo* ‘be upstream’ can only select the UPSTREAM orientation, as in shown by (69) and (70). They are not compatible with the indefinite orientation preverbs, and should not be confused with orientable (§15.1.2) and orienting (§15.1.2.4) verbs.

- (69) *nu-<beifen>* *ku-mbro* *nura*

cti tce,
 be.AFF:FACT LNK
 ‘You are upstream and I am downstream.’ (2014, lang he yang-zh)

Deadverbial verbs of relative location are either used in comparative sentences (70), in superlative constructions with *stu* ‘most’ (§26.4.1), with contrasting orientations such as (71) or in sentences with an implicit comparison such as (69).

15.1.4 Extended uses of orientations

15.1.4.1 Time

The flow of time can be expressed in Japhug using the vertical dimension, in particular to refer to a following period, as shown by the verb *puw-ari* in (72), which is translated as 到了他们的下一代 <dào le tāmen de xiàyīdài> ‘in the following generation’ by Tshendzin in this context (see §27.2.4 concerning this aspect of the kinship system).

- (72) *nuw u-pa puw-ari tce tce, a-wymuw*

However, motion verbs in collocations with temporal nouns in the sense of ‘pass (of time)’ select the orientation WESTWARDS, as in (73) and (74). This use could also be a metaphorical extension of the apparent westward motion of the sun in the sky during day time (§15.1.3.3), or derived from the centrifugal function of the ‘westward’ orientation (§15.1.4.3).

- (73) *tce u-tu-sɣ-scit* *ku nuu tɣ-rzab*

- (74) *kɣntɕ^hu-sla* *ɲɣ-ɕq^hlɣt* *ri*
 several-months IFR:WEST-disappear LNK
 ‘Several months passed, but ...’ (140513 mutong de disheng-zh)
 {0003977#S11}

The semi-transitive verbs *mda* ‘be the time’ and *tsu* ‘pass (of time)’ however generally select the orientation UPWARDS (see 115 and 116 in §7.5.1), though the unspecified orientation is also attested for the latter, as in (75). The verb *mdu* ‘live up to’ is used with the DOWNSTREAM orientation preverbs (see 89 and 90, §19.7.2).

- (75) *χsuu-xpa* *jɣ-tsu-j*,
 three-year AOR:UNSPECIFIED-pass-1SG
 ‘We have been [together] for three years [now], and ...’ (2005 Norbzang)

For these semi-transitive verbs, the noun phrase referring to a time period is the semi-object, not the subject.

15.1.4.2 Illative / elative

A common extended function of the riverine dimension preverbs is to express motion through an opening. The UPSTREAM preverbs can have an illative meaning, describing motion into a building or a natural cave (through a door, a window or any other opening) as in (76), (77) and (78).

- (76) *prab^həŋ u-ŋguu* *nutcu* *lo-ɕe* *ɲu-ŋu tɕeri*
 cave 3SG.POSS-in DEM:LOC IFR:UPSTREAM-go SENS-be LNK

lo-ce.
 IFR:UPSTREAM-go
 ‘The wolf pushed the door open and went in.’ (140428 xiaohongmao-zh)
 {0003884#S76}

The opposite DOWNSTREAM orientation preverbs have an elative meaning, expressing motion out of a building, as in (79).

- (79) *k^ha u-pei c^hɣ-ɬoɓ.*
 house 3SG.POSS-outside IFR:DOWNSTREAM-come.out
 ‘She came out of the house.’ (140428 xiaohongmao-zh) {0003884#S27}

However, in the case of tubular or pipe-like objects like the trunk of a musket, the orientation is the opposite: the DOWNSTREAM preverbs are used for motion toward the inside (80), and the UPSTREAM preverbs occur for motion towards the outside (81).

- (80) *ɕmɯɣdu u-lɣu u-mɲu ri qandzi*
 musket 3SG.POSS-upstream 3SG.POSS-opening LOC bullet

Likewise, the UPSTREAM preverbs occur to express motion out of a sheath, as in (82).

- (82) *scapa lo-χcov*
 sword IFR:UPSTREAM-take.out
 ‘He unsheathed his sword.’ (140514 huishuohua de niao-zh)
 {0003992#S166}

The same applies with containers having a small (and tubular) opening, like bags or bottles for instance. The DOWNSTREAM orientation preverbs have the illative meaning ‘go/put into’ and the UPSTREAM preverbs the elative meaning ‘come out of/take out of’ as illustrated by (83) and (84). By extension, the verb *γρmut* ‘blow’ (for instance, into a pipe) also selects the DOWNSTREAM preverbs (§15.1.5.8).

- (83) *tcendyre* “*ty-fkum* *u-ηγw* *tce t^hw-ce*

 {0003528#S66}

The data above show that no orientation preverb intrinsically encodes illative or elative meaning in Japhug. The interpretations ‘towards the inside’ or ‘towards the outside’ depend on the shape of the object and the location and the relative size of the opening.

15.1.4.3 Centripetal / centrifugal

In Gyalrong languages, the WESTWARDS and EASTWARDS preverbs in some cases express centrifugal vs. centripetal directions, respectively. This phenomenon was first noticed in Situ by Lin (1993: 228–229).

Example (91)¹⁰ illustrates this extension of the solar dimension with the verb *çt^huz* ‘turn towards’ (§15.1.2.4): the orientation towards the subject of the verb (centripetal) is expressed by the EASTWARDS preverb (*ko-çt^huz*), and the opposite orientation away from the subject (centrifugal) is encoded by the WESTWARDS preverb (*ŋɣ-çt^huz*).

- (91) *tce u-rme nu u-pçi ŋɣ-çt^huz,*
 LNK 3SG.POSS-hair DEM 3SG.POSS-outside IFR:WEST-turn.towards

 ‘He turned the fur [of the jacket]_i towards the outside, and the leather
 towards the inside and wore it_i.’ (140513 mutong de disheng-zh)
 {0003977#S52}

The centrifugal use of the WESTWARDS preverbs has been further lexicalized and extended to verbs expressing loss or transfer of property (§15.1.5.7, §15.1.5.10) and passing of time (§15.1.4.1).

The centripetal use of the EASTWARDS preverbs also accounts for the presence of the EASTWARDS preverbs with verbs meaning ‘close’, ‘wrap up’ or ‘fold’. Compare for instance the EASTWARDS preverb on *wum* ‘gather’ (in the meaning ‘fold wings’) with the WESTWARDS one on *qɣt* ‘separate’ in (92).

¹⁰This example is very freely translated from ……把羊毛朝外面翻出来 <bǎ yángmáo cháo wàimiàn fānchūlái> ‘he turned over the jacket so that the sheep fur was on the outside’. Given the distance from the original, there is no suspicion of calque from Chinese here.

 ‘When it sings, it does this with its wings, as if it is about to fly, it
 [repeatedly] spreads its wings and then folds them back.’ (24-ZmbrWpGa)
 {0003628#S109}

A separate use of the solar dimension preverbs is to express alternation between left and right motion, with two verbs either linked by *nɣ* as in (95) or in paratactic relation as in (93) and (94). In this function, the EASTWARDS preverbs occur on the first verb and the WESTWARDS preverbs on the second one.

- (93) *pjɣ-ɣɣɣt* *tce* *u-rjit* *ra* *kw* *ko-rɣci-nwu*

 {0003361#S78}

With the deictic motion verbs, the EASTWARDS-WESTWARDS alternation also occurs between *ce* ‘go’ and *yi* ‘come’ as shown by (95). Since in this construction the motion verb with translocative deixis always takes the EASTWARDS preverbs, while the one with cislocative deixis is found with the WESTWARDS preverbs, it is not possible to argue that these preverbs here have centripetal vs. centrifugal functions as in this case the deixis of the preverbs would contradict that of the motion verb.

15.1.4.4 Orientations in traditional houses

In the traditional living room (*k^hyjmu*), the seating places around the hearth and the tripod (*sq^hi*) have specific names and functions: *k^hyc^hyr* for the men, *k^hydi* for the lady (in charge of preparing the meal), *caŋlo* for elderly ladies¹¹ and *saŋdi* for servants and for putting firewood. The use of the riverine and solar dimension preverbs, adverbs and locative nouns in the living room is unrelated to the cardinal east-west axis or the direction of the mountain slope, and is rather completely determined by these conventional seating places, as explained in (96), and summarized in Figure 15.1.

- (96) *k^hydi nuuw tce at^hi tu-ti-nuu.*

The preverbs corresponding to the orientation indicated in Figure 15.1 are always selected when the goal of the motion is one of the seating places in the living room, for instance EASTWARDS in (97) or WESTWARDS in (98).

¹¹This noun is related to the egressive postposition *caŋlo* ‘upstream from’ (§8.2.10).

15.1.4.5 Orientations with the weaving loom

The riverine dimension is metaphorically extended to refer to the axis of the warp threads in the loom. The DOWNSTREAM orientation corresponds to the end of the warp closer to the weaver (where Tshendzin’s hands are located in Figure 15.2), and the UPSTREAM orientation to the opposite end, where the threads are attached.

The downstream preverbs are required on all verbs expressing motion towards the lower side, for instance to express the tamping of the intersections between the threads (using the tool called *tʰasmu*, which is located between upper and lower warp threads to maintain them apart from each other in Figure 15.2) towards the waist of the weaver, as in (99).

Figure 15.2: The riverine axis in a body tensioned loom

15.1.5 Lexicalized orientations

A complete description of the lexicalized orientation preverbs in Japhug would require a monograph-length treatment taking into account all verbs, basic and derived, and including complex predicates. In order to keep this chapter within a reasonable size, I therefore only focus on a few selected semantic categories comprising the most common non-orientable verbs of the language.

15.1.5.1 Spatial use of preverbs with non-orientable verbs

While non-orientable verbs generally select only one or two orientations (§15.1.5), orientation preverbs that are different from the lexical ones can occur in specific contexts to indicate either a motion event linked with the action of the verb (normally with an additional associated motion prefix, §15.2.4), the motion of a body part or the position of the body.

The intransitive verb *cu* 'hibernate' provides an interesting example of this use of the preverbs. The lexically selected orientation of this verb is EASTWARDS (like other verbs from the same semantic category), as shown by the preverb *ku* in (102).

- (102) *qartsu tɕe ku-cu nuu-ŋu.*
winter LOC IPFV-hibernate SENS-be
'In winter, [the bear] hibernates.' (21-pri) {0003580#S49}

However, the orientations UPSTREAM and UPWARDS are also attested with this verb, with more specific readings. The UPSTREAM orientation is found in (103) and also in (170) above, §15.2.1, and expresses hibernation in a cave. These examples reflect the illative use of the UPSTREAM preverbs (§15.1.4.2). The UPWARDS orientation, also shown by (103), is used when hibernation takes place in a hollow tree, with vertical motion up the tree (§15.1.3.1).

- (103) *tce qartsu tce nunu si k^boηrɣl tɣ-kuu-ɣri nu*

 IPFV:UPSTREAM-go LNK IPFV:UPSTREAM-hibernate
 ‘In winter, it either hibernates in a hollow tree, or goes into a cave and hibernates (there).’ (21-pri) {0003580#S100}

The forms with UPSTREAM and UPWARDS preverbs often occur with either motion verbs or associated motion prefixes, as in (104).

- (104) *si u-ηgu tɣ-kuu-so, u-ηgu*

 3SG.POSS-in TRAL-IPFV:UP-hibernate SENS-be
 ‘Trees whose inside is hollow, whose inside is dried out, [the bear] hollows it completely, goes up [the hole] and hibernates there.’ (21-pri) {0003580#S53}

The use of preverbs to express spatial position or motion as in the case of the UPSTREAM and UPWARDS orientations with *cu* ‘hibernate’ above are not unusual with non-orientable verbs, but are lexicalized, and restricted to highly specific and well-identified situations. Only orientations that are pragmatically and culturally plausible and compatible with the speaker’s knowledge of the world can be used: with *cu* ‘hibernate’ for instance, the other series of orientation preverbs (DOWNWARDS, DOWNSTREAM, WESTWARDS) are not attested. It is not possible to predict which non-orientable verb will be compatible with the spatial use of preverbs, and this information has to be specified in dictionaries in a systematic way. The following sections (§15.1.5.4 to §15.1.5.11) present a series of examples of similar phenomena.

15.1.5.2 Preverbs and lability

A handful of labile verbs select different preverbs and have slightly different meanings in their transitive and intransitive/semi-transitive uses.

15 Orientation and associated motion

The verb *svho* ‘listen’ takes the WESTWARDS preverbs when semi-transitive, and the EASTWARDS preverbs when transitive with the meaning ‘listen to, obey’ (§14.5.3).

The verb *suso* ‘think’ is normally transitive and selects the WESTWARDS preverbs. It can also occur with the DOWNWARDS preverbs, but in this case it is intransitive, and means ‘in X’s opinion’ (§14.5.1).

15.1.5.3 Irregular orientations with local toponyms

Motion from one locality to another is nearly always expressed using the vertical, riverine and solar dimensions in their basic spatial functions (§15.1.3.1, §15.1.3.2 and §15.1.3.3, respectively). While in some cases there are conflicts between several possible orientations, especially between the riverine and the solar preverbs, the choice of the preverbs is nearly always motivated.

However, there are also cases where the choice of the preverbs is unrelated to the actual spatial orientation of the trip from one particular place to another. For instance, Kamnyu *kymjuu* (32° 12’ 43” N, 101° 57’ 42” E) is located to the west of Mengi *muŋi* (32° 12’ 32” N, 102° 0’ 14” E, 蒙岩).

However, the preverbs corresponding to orientations that are exactly opposite to the geographical orientations are used between these two villages: the orientation WESTWARDS is used for motion from Kamnyu to Mengi (to describe a trip from west to east), and EASTWARDS from Mengi to Kamnyu (whereas the actual trip is from east to west), as shown by (105) and (106).

- (105) *kymjuu tce tce muŋi ky-ɕe ty-ra tce, “muŋi*

 ‘Mengi is in the east, and Praqwu (a small locality in Kamnyu) is in the west.’ (140522 Kamnyu zgo) {0004059#S21}

Ercha village (in Japhug *ɲu tʂapa*, most often called using its Chinese name 二茶村 *èrchácūn*, 32° 13' 10" N, 101° 55' 55" E),

located to the west of Kamnyu, also presents orientation inversion: as shown by (108), the EASTWARDS preverbs are used for trips from Kamnyu to Ercha, and the WESTWARDS preverbs for the opposite trip. This fact has been rechecked with several speakers (note in particular the anecdote reported in §27.5.2).

In (108) Tshendzin hesitates: she was about to say *ɲu-ku-ɕe* with a WESTWARDS preverb (the expected form, based on the geographical location of these localities), followed by the correct *ku-ku-ɕe* with the irregular orientation.

This puzzling irregularity has not been observed for other toponyms, especially those located further away from Kamnyu. For instance, the UPSTREAM orientation is used for trips to Tshobdun and Zbu, the DOWNSTREAM orientation

to Mbarkham (§15.1.3.2) and the EASTWARDS orientation to Sarndzu and Tatshi (§15.1.3.3).

15.1.5.4 Verbs of ingestion

The most common verb of ingestion, *ndza* ‘eat’, generally selects the UPWARDS preverbs, as shown for instance by (206) (in §15.2.7) and (200) (in §15.2.6). The same is true of verbs derived from it, such as the compound verb *rundzɔtsʰi* ‘have a meal’ (§20.12), as shown by (204) in §15.2.7, and of other more specialized verbs of food ingestion such as *moʋ* ‘eat (powdery food)’, *nutsʰaʋ* ‘eat fodder (of horses)’, *nutsʰɔɣndzɔr* ‘eat a tsampa meal’, *zmɔrɔʋ* ‘eat (mixing with)’ or *χsɔl* ‘eat (honorific)’.

The DOWNSTREAM preverbs can occur with *ndza* ‘eat’ to refer to eating by wild beasts and birds of prey, as in (109), probably due to the fact that this orientation is also selected by *ɕkut* ‘eat/drink completely’, a verb which can also describe the actions of ferocious animals as in example (71) in §14.3.3.1.¹²

- (109) *kuɔtsɔɣ nuu ku, nɔki, turme ra ɣu nuu-fsapaʋ nuu*

 ‘The snow leopard was eating farm animals, eating, sheep and goats.’
 (qala kWcQraR 2002)

This orientation is also attested to describe the eating of earth by earthworm as in (110), though in this case the preverb is used spatially (§15.1.5.1), reflecting the burrowing motion of the earthworm (§15.1.4.2).

- (110) *tɕeri qandze ku tʰɔlwa ʋʃa cʰu-ndze*

ɲu-cti.
 SENS-be.AFF
 ‘The earthworm only eats earth.’ (25-akWzɣumba) {0003632#S115}

The EASTWARDS orientation is exclusively attested with *ndza* to describe eclipses, as in (111), also a spatial use of the preverbs (expressing motion from the left side to the right side or vice-versa, §15.1.4.3).

¹²See also the discussion on the use of the DOWNSTREAM orientation with *tsʰi* ‘drink’ below, above example 115).

- (111) *u-rkuw ku-fse ku-ze tce,*

 ‘Sometimes [the eclipse] starts on one side, and ‘eats’ [the moon] until it
 [disappears] completely.’ (29-mWBZi) {0003728#S138}

The orientation WESTWARDS occurs with verbs referring to animals eating grass, such as the intransitive verb *nuru* ‘eat grass’ as in (112) and its synonym *nusɣɣɣ*.

- (112) *nunja q^he qazo ts^hyt nura pɣɣ-dɣn-nur tce, nuteu*

 ‘There were many cows, sheep and goats, and they were eating grass
 there.’ (150819 woniu-zh) {0006254#S8}

Verbs related to the ingestion of liquids select the EASTWARDS preverbs as default, as in (113), including the deideophonic *muk^huy* ‘gulp’ (§20.9.2).

- (113) *tu-ci ko-nuk^huy zo ko-ts^hi.*
 INDEF.POSS-water IFR:EAST-gulp EMPH IFR:EAST-drink
 ‘He gulped the water.’ (140429 jiedi-zh)

The verb *ts^hi* ‘drink’ is also found with the DOWNWARDS orientation to refer to drinking with the head down on the grounds (like animals, or from a jar with a straw), for instance in (167) and (168) in §15.2.1 and (37) in §5.1.2.9. The denominal verb *nuci* ‘drink from the ground’ also selects this orientation.

The DOWNSTREAM preverbs occur with this verb in two contexts. First, following the basic spatial meaning of these preverbs (‘direction of the flow of water’, §15.1.3.2), they can be used to insist on the flow of liquid through the oesophagus during ingestion, as in (114).

- (114) *tu-ci kunɣ c^hu-ce muw-ɲɣ-k^hu.*

 (of a person suffering from throat cancer) (27-tWfCAL) {0003710#S87}

15 Orientation and associated motion

Second, the DOWNSTREAM orientation is found to express excessive alcohol drinking, as in (115), possibly by analogy with *ɕkut* ‘eat/drink completely’ which also takes this orientation (see also the discussion concerning example 109 above).

- (115) *u-wa* *nɯ kɯ c^ha* *ntsɯ c^hu-ts^hi* *q^he*,

u-me *múj-nuβdaɕ*
 3SG.POSS-daughter NEG:SENS-take.care
 ‘Her father was drinking alcohol all the time, and did not take care of his daughter.’ (17-lhazgron)

The DOWNSTREAM preverbs are also selected by the denominal verb *nuc^hymda* ‘drink with a straw’ (example 73, §25.1.5), probably reflecting the illative (through tubular opening) function of the DOWNSTREAM preverb (§15.1.4.2). It is noteworthy that *ts^hi* ‘drink’ takes the DOWNWARDS orientation instead when referring to drinking from a straw.

The UPSTREAM preverbs occur with the verb *χγβ*, which can mean ‘drink until the last drop in one gulp’, or ‘breathe in, suck up, draw up’ as in (116), a special case of the illative (through large opening) function of this orientation (§15.1.4.2; note that the illative is expressed with the opposite orientation as that of *nuc^hymda* ‘drink with a straw’, due to the difference of the shape of the opening).

 (27-qaCpa) {0003716#S7}

15.1.5.5 Stative verbs expressing size

Adjectival verbs describing size, like other stative verbs, become dynamic verbs (‘become X’) in the Imperfective (§21.2), the Irrealis (§21.4.1), the Aorist (§21.5.1.3) and the Inferential (§21.5.2). The most neutral orientation preverbs for these verbs are indicated in Table 15.7. Most positive adjectival verbs select the UPWARDS orientation, except for those describing radial size (*jpum* ‘be thick’, *rjum* ‘be broad’) which are found with the WESTWARDS orientation, and those expressing length (see below).

It is much more difficult to ascertain the lexically selected orientation of negative adjectival verbs, since the situations in which their use as dynamic verbs is appropriate ('become small(er)', 'become short(er)') are less common. The DOWNWARDS orientation does occur as lexically selected orientation (with *xtɕi* 'be small' and *mbɣr* 'be low'), resulting in forms that are homophonous with the Past Imperfective (§21.5.3). Perhaps due to this homophony, the WESTWARDS orientation is also used instead with *xtɕi* 'be small', as in (117).

- (117) *ki* *ɯ-βɣri* *suɯstəβ zo* *ɯ-ɕɣa*

Positive size	Orientation	Negative size	Orientation
<i>wxti</i> 'be big'	up	<i>xtɕi</i> 'be small'	west, down
<i>mbro</i> 'be high'	up	<i>mbɣr</i> 'be low'	down
<i>zri</i> 'be long',	up,	<i>xtuut</i> 'be short'	west
<i>ɲɣi</i> 'be long'	downstream		upstream
<i>jpum</i> 'be thick'	west	<i>xts^hum</i> 'be thin'	west, east
(of radius)		(of radius)	
<i>jaβ</i> 'be thick'	up	<i>mba</i> 'be thin'	west
(of a surface)		(of a surface)	
<i>rjum</i> 'be broad'	west	<i>tɕɣr</i> 'be narrow'	east
		<i>ɲgɣr</i> 'be narrow'	east

In addition to the orientations in Table (15.7), the DOWNSTREAM preverbs can occur to express a progressive increase (§21.1.1.3). Compare for instance the use of *wxti* 'be big' with the UPWARDS orientation in (118) with that in (119) with the DOWNSTREAM orientation, describing a process taking place progressively over many years.

15.1.5.6 Verbs related to growth, gain or birth

Adjectival verbs of size can be used to express growth (§15.1.5.5), but another construction expressing the same meaning involves the transitive verb *βzu* ‘make’ with a dummy subject (§14.3.5), and an adjectival verb in participial form (§16.1.1), as in (124), with the UPWARDS orientation (compare with 120 above and 75 in §14.3.3.1).

- (124) *ɕɣ nu li ku-mbu-mbro tu-βze c^ha*

 ‘I have water in my mouth to drink, my life is back.’ (2011-05-nyima)

15.1.5.7 Verbs related to loss or death

Verbs expressing loss, with meanings such as ‘disappear’ or ‘lose’ generally select the orientation WESTWARDS, probably as an extension of its centrifugal use (§15.1.4.3). For instance, the verb *βde* ‘throw’, which can also be interpreted as meaning ‘lose’ when used non-volitionally (especially with the autive §19.1.6),

¹³This verb can be translated into Chinese as 吃到 <chīdào> ‘have to eat’ or 喝到 <hēdào> ‘have to drink’.

15 Orientation and associated motion

selects this orientation, as shown by (136), even though the loss of the hat (in the pear story movie) involved a motion downwards.

- (136) *tce ur-rte ra ny-nur-βde tce,*
 LNK 3SG.POSS-hat PL IFR:WEST-AUTO-lose LNK
 ‘[The boy] lost his hat’ (Pear story 2010, Tshendzin, 12)

The same is observed with the verb *me* ‘not exist’ in (137), here also despite a clear downward motion of the water level until the lake disappears.

- (137) *mts^hu nuw c^humc^hum zo, tce, tuw-skym pjy-syza tce*

mts^hu nuw ny-me tce
 lake DEM IFR:WEST-not.exist LNK
 ‘The level of the lake started to go down slowly and the lake disappeared.’ (nyima2003)

Verb expressing partial disappearance, such as *rkuun* ‘be few’ in (138), also occur with the WESTWARDS orientation.

- (138) *zgoku nwtcu si nuw zuruzryi ny~ny-rkuun zo*
 mountain DEM:LOC tree DEM progressively INCR~IFR:WEST-be.few EMPH
 ‘There were fewer and fewer trees on the mountain.’
 (04-xiaocunzhuang-zh) {0003394#S24}

The verb *cq^hlyt* ‘disappear’, also semantically related to these verbs, is an orientable motion verb (§15.1.2.1). It does not usually select the WESTWARDS orientation in a non-spatial way, except for the express the passing of time (§15.1.4.1). In example (139), there is however some ambiguity as to whether the WESTWARDS orientation is purely spatial (the setting of the sun in the west, see §15.1.3.3; note that the vertical dimension is more commonly selected, §15.1.3.1), or whether it could also be analyzed as centripetal.

- (139) *tyne nuw nyw-cq^hlyt ku-nyjym ra k^{hi}*
 sun DEM IPFV:WEST-disappear IPFV-wait[III] be.needed:FACT hearsay
ma tyne nuw wuma zo nyw-me k^{hi}.
 LNK sun DEM really EMPH APPL-be.afraid[III]:FACT hearsay
 ‘[The yeti] waits for the sun to disappear [before eating the man he has caught], because he fears the sun, it is said.’ (140510 mYWrgAt)
 {0003941#S7}

It is possible that the centripetal function of the WESTWARDS orientation has originated from a metaphoric extension of the disappearance of the sun in the west at dusk, in which examples like (139) would be the pivot construction allowing reanalysis from a purely spatial marker to a more abstract meaning such as ‘away from the deictic center’ or ‘loss’.

Verbs expressing a more abstract type of disappearance, such as the cognition verb *jmut* ‘forget’ (memory loss), likewise select the WESTWARDS prefixes, as in *ɲɣ-nuu-jmut-a* IFR:WEST-AUTO-forget-1SG ‘I forgot (about it)’ (see 162, §14.6.1.4).

The verb *me* ‘not exist’ has another set of forms with the UPWARDS orientation, as in (140). With the UPWARDS vertical preverbs, this verb does not entail the presupposition that loss occurred; in the perfective, the *ɲɣ-me* with UPWARDS orientation means ‘when there this no X’ (a usage found with other stative verbs, §21.1.1.3), while *nu-me* with WESTWARDS orientation can only be interpreted as ‘(when) X disappeared/was lost’.

- (140) *nuu ma si ɲɣ-me tce li nu ɲuu-p^hut-nuu*
 DEM apart.from wood AOR:UP-not.exist LNK again DEM IPFV-take.out-PL
 ‘When there is no other wood than this, people cut it.’ (07-Zmbri)
 {0003438#S59}

As in many languages (for instance Indo-European **mer*, Rix et al. 2001: 439–440), *me* in the meaning ‘disappear’ is commonly used as a euphemism for passing away, as in (141).

- (141) *uɪzo u-χti ɲɣ-me tce,*
 3SG 3SG.POSS-companion IFR:WEST-not.exist LNK
 ‘Her husband passed away.’ (12-BzaNsa) {0003484#S111}

Likewise, verbs expressing death and destruction, such as *si* ‘die’ and *χcaɁ* ‘pass away’ (a borrowing from *gcegs* ‘go away’), *plut* ‘destroy’, *ndzuy* ‘be destroyed’ select the WESTWARDS orientation, as shown by (142), (143) and (202) further below (in §15.2.6).

- (142) *βdaβmu nuu to-ngo tce ɲɣ-si.*
 lady DEM IFR-be.ill LNK IFR:WEST-die
 ‘The lady became ill and died.’ (2011-05-nyima)

 maize 3SG.POSS-grain AOR:WEST-destroy-1PL
 ‘We have used up all the maize grains.’ (elicited)

15 Orientation and associated motion

The verb *si* ‘die’ alternatively also occur with the DOWNWARDS preverbs, in particular in the case of animals as in (144). With humans, using the DOWNWARDS preverbs is not rude, but considered to be blunter than with the westwards’ preverbs.

- (144) *tætu zara nuu-NGarmuu nuu pjɣ-si k^hi tæe,*
 up.there 3PL 3PL.POSS-hybrid.cow DEM IFR:DOWN-die hearsay LNK
 ‘Those up there, their cow died, it is said.’ (Tagrdo conversation, 2003)

The transitive verb *sat* ‘kill’ also selects the DOWNWARDS orientation preverbs, even when taking an associated motion prefix and an overt goal pointing to an orientation other than DOWNWARDS, as in (145).

- (145) *atu pyɣtæu nuu c-puu-sat-nuu ra*
 up.there bird DEM TRAL-IMP:DOWN-kill-PL be.needed:FACT
 ‘Go and kill the bird up there.’ (2005 Kunbzang)

Likewise, *ntɕ^ha* ‘kill, butcher’ (on whose etymology see Gong 2018: 303–309) occurs with the DOWNWARDS preverbs in the meaning ‘kill (an animal)’, as shown by (146).

- (146) *tæe nuu-nuuŋa pjɣ-nuu-ntɕ^ha-nuu*
 LNK 3PL.POSS-cow IFR:DOWN-AUTO-butcher-PL
 ‘They killed their cow (for themselves to eat).’ (02-deluge2012)
 {0003376#S16}

The orientation WESTWARDS also occurs with this verb in the meaning ‘butcher’, as illustrated by (147) and (148). On the other hand, *sat* ‘kill’ is not found with the WESTWARDS preverbs.

- (147) *fsapav uu-ŋgru puu-nuu-ŋu, ruuɗav*

15.1.5.8 Verbs of speech and sound

Verbs of speech mainly select either the orientation UPWARDS (*ti* 'say', *ruɕmi* 'speak', *arju* 'speak', see for instance 123 in §15.1.5.5 and 19 in §14.2.4; their etymology is discussed in §20.2.1 and §20.6), with the exception of *fɕɛrt* 'tell' (borrowed from *ᄃᄃᄃ bɕad* 'tell'), which occurs with the DOWNWARDS preverbs (see the Inferential *pjɣ-fɕɛrt* IFR:DOWN-tell 'she told it' in 127, §16.1.3.7). The intransitive verb *mbri* 'make a sound', used for animals or objects, is also found with the UPWARDS preverbs (see *to-mbri* IFR:UP-make.noise in 107, §16.1.1.5)

The intransitive denominal verb *nurɣo* 'sing' (§20.7.1) on the other hand appears with the orientation DOWNSTREAM, as in (149), and this applies to transitive verbs taking the base noun *ɣo* 'song' as objects (such as *c^hu-tu-za* and *c^hu-ti* in 150).

- (149) *qarts^hi nuw ŋji tce c^hu-nurɣo ny*

 {0003556#S12}

15.1.5.9 Verbs of perception

With the exception of the orientable verb *ru* ‘look at’ (§15.1.2.4), most verbs of perception generally select only one orientation. The DOWNWARDS preverbs are selected by the non-volitional verbs *mtu* ‘see’ and *mts^hɣm*, which generally means ‘hear’, but is also used for all non-visual non-volitional perception, including olfaction (example 122, §17.5.3), touch and the perception of vibrations as in (154).

- (154) *juu-muummu nɣ juu-muummu tce tce, nuu u-ɲguu* *ngoena*

 ‘[The fly that has been caught in the spider’s web] moves and moves,
 and the spider inside feels it.’ (26-mYaRmtsA) {0003674#S58}

The other verbs each have a different orientation: the semi-transitive *sɣŋo* ‘listen’ selects the WESTWARDS preverbs (§15.1.5.2, §14.5.3), and the tropative verb *nɣmɣm* ‘smell’ (§17.5.3) the UPWARDS preverbs (examples 122 and 123, §17.5.3). This orientation simply reflects that of the base intransitive verb *mɣm* ‘smell’.

15.1.5.10 Verbs of giving

Ditransitive verbs expressing permanent or temporary transfer of property, including *mbi* ‘give’, *k^{ho}* ‘give’, ‘pass over’, *ṛṇo* ‘borrow’ and *ṇṛṅgu* ‘borrow’ (and verbs derived from these), have different argument structures (§14.4.1 and §14.4.2), but most of them select the WESTWARDS preverbs as default orientation, perhaps reflecting the centripetal function of this orientation (§15.1.4.3), as in English ‘give away’ or ‘give out’.

For instance, the most common Inferential 3→3’ forms of these verbs are *ṇṛ-*mbi**, *ṇṛ-*mbi**, *ṇṛ-ṛṇo* and *ṇṛ-ṇṛṅgu* (examples are plentiful elsewhere in this grammar, for instance 14 in §8.1.7, 105 and 108 in §14.4.1 and 173 and 174 in §8.3.1).

However, it is alternatively possible to choose a prefix reflecting the spatial direction of the transfer of property. In (155), we find thus a DOWNWARDS orientation preverb to describe a present (downwards) from heaven, and in (156) an UPWARDS preverb expresses the relative vertical position of the recipient and the subject: the latter being on the ground, while the former rides a tiger, the transfer of property involves a motion upwards.

- (155) *tumukumpci kuw pú-wy-*mbi*-a ṇu*
 heaven ERG AOR:DOWN-INV-give be:FACT
 ‘The heavens gave it to me.’ (2005 Norbzang)

- (156) *labjuy nuw u-tas nuw u-p^he to-k^{ho} tce,*

 ‘He gave the staff to the [thief] who was on [the tiger].’ (khu2012)
 {0004085#S15}

The DOWNWARDS orientation can also be used more metaphorically to express gift from someone higher up in the social hierarchy, as in (157).

- (157) *tas kuw, <piozi> pú-wy-*mbi*-j.*
 up ERG money AOR:DOWN-INV-give-1PL
 ‘The ones above (i.e. the government) gave us money.’ (2010-09)

The riverine axis is also metaphorically used to express relative social status with the verb *k^{ho}* ‘give’, ‘pass over’. The DOWNSTREAM preverbs express transfer of property from someone higher in the hierarchy (in particular, nobles or lamas) to someone lower than himself. For instance in (158), the subject of *c^{hy}-tu-k^{ho}-nuw* ‘you gave it to her’ is a prince, and the recipient an unknown girl; note that the DOWNSTREAM preverb co-occurs here with the honorific plural (§14.6.1.2), another linguistic clue to the social status of the subject.

15 Orientation and associated motion

- (158) *nutcu zu laftaβ c^hy-tu-k^ho-nu tce, nunu*

 ‘[Since] you have given her a token, we will go and look for (this woman, who is to be) your wife.’ (sras 2003)

The opposite UPSTREAM orientation is found to express gift from someone lower in the hierarchy to an important person. In particular, it is the orientation selected by the honorific verb *p^hul* ‘offer’, which is borrowed from ཕུལ *p^hul* ‘offer’.

15.1.5.11 Verbs of covering

The verb *fkaβ* ‘cover’ occurs with both the DOWNWARDS and DOWNSTREAM preverbs. The former are selected when the covering action involves a downwards motion (as in 159), or when describing the feeling of being completely covered by a roof (160b) or by the sky.

- (159) *tce ma nunu kumpya nunu, nykinu, pu-nuzwβ tce u-mjaβ*

 house PL IFR-cover-DU
 ‘They built a house.’ (02-deluge2012) {0003376#S121}

However, example (163) shows that the verb *ta* ‘put’ occurs with the EASTWARDS orientation to express a covering action, although a downwards manipulation (putting clothes or hay on top of the pot) clearly takes place, as confirmed by the DOWNWARDS preverb on *fkaβ* ‘cover’. The EASTWARDS orientation expresses complete covering, including on the top and the sides, a use that may be related to the centripetal function of these preverbs (§15.1.4.3).

15.2 Associated motion

An associated motion marker, following Guillaume’s (2016: 13) definition, is ‘a grammatical morpheme that is associated with the verb and that has among its possible functions the coding of translational motion.’ This definition excludes both motion verbs, which are not morphologically tied to the verb stem in the purposive construction (§16.1.1.6, §24.4.2.1) and orientation preverbs (§15.1), which do not express translational motion (of the whole body) by themselves in Japhug, though they can indicate in specific cases the direction of gestures involving the motion of a body part (§15.1.2.4).

15.2.1 AM prefixes: morphology

Unlike Arandic (Koch 1984 and Wilkins 1991) and Tacanan (Guillaume 2009) languages, Japhug and other Gyalrong languages have simpler AM systems with only two prefixes, andative/translocative and venitive/cislocative as illustrated by examples (167) and (168), respectively.

- (167) *tce tu-ci yu-pju-nu-ts^hi-nu*
LNK INDEF.POSS-water CISL-IPFV-AUTO-drink-PL
‘[The wild yaks] come and drink water.’ (20-RmbroN) {0003560#S43}
- (168) *tce tu-ci c-pjɣ-nu-ts^hi.*
LNK INDEF.POSS-water TRAL-IFR-AUTO-drink
‘She went [there] and drank water.’ (140428 mu e guniang-zh)
{0003880#S66}

AM prefixes in Japhug and other Gyalrong languages refer to a motion event occurring *before* the action of the main verb, resulting in a prior temporal relation

with respect to the main verb, as in (167) and (168). There are no AM markers for subsequent or concurrent motion.

Table 15.8: Associated motion prefixes in Gyalrong languages

	come	CISL	go	TRAL
Japhug	<i>ɣi</i>	<i>ɣu-</i>	<i>ɕe</i>	<i>ɕu-, ɕ-, ʒ-, ʒ-</i>
Kyom-kyo (Situ)	<i>vi</i>	<i>və-</i>	<i>tʃʰi</i>	<i>fɿ-</i>
Cogtse (Situ)	<i>pô</i>	<i>po-</i>	<i>tʃʰê</i>	<i>j-</i>
Brag-bar (Situ)	<i>βʒê, və</i>	<i>ʃv-</i>	<i>tɕʰê</i>	<i>ɕv-</i>
Tshobdun	<i>wî</i>	<i>o-</i>	<i>ʃb̥</i>	<i>ʃə-</i>
Zbu	<i>vâ</i>	<i>və-</i>	<i>xwéʔ</i>	<i>ɕə-</i>

Table 15.8 presents the forms of AM prefixes in all four Gyalrong languages (Jacques et al. 2021; data from Jacques 2013b, Gong 2018, Sun 2014a, Lin 2016, Zhang 2016: 200–204, Prins 2016: 497–500).

As shown by the close phonetic resemblance between the motion verbs and the corresponding AM prefixes, there is little doubt that the latter have been grammaticalized from the former,¹⁴ probably through a paratactic or serial verb construction in which motion verbs occurred in direct contact with the lexical verb without intervening linker.

Although attested, as in (§169), parataxis is rare in Japhug. It can also be found when the second verb takes an AM marker (see 212, §15.2.8).¹⁵

- (169) *tɕendɣre tɕetu zgo ku-mbu~mbro mɣɕʂa to-ɕe,*
 LNK up.there mountain SBJ:PCP-EMPH~be.high until IFR:UP-go
to-nɯɣɯɣɯɣa.
 IFR:UP-climb
 ‘He went up there, climbing the very high mountain.’ (150825
 huluwa-zh) {0006346#S151}

Usually, when a motion verb is followed by or follows another verb, a linker such as *tɕe* almost always occurs between them, as in (170).

¹⁴Exceptions however include the cislocative *ʃv-* in Bragbar Situ, whose origin is not straightforward (Zhang 2020), and the case of Zbu, where the motion verb *xwéʔ* is unrelated to the AM prefix.

¹⁵The preferred order is *to-nɯɣɯɣɯɣa to-ɕe*, and despite the absence of pause, *to-nɯɣɯɣɯɣa* here is an afterthought.

15 Orientation and associated motion

- (170) *ɸrawpa u-ŋgw lu-ce tce*
 cave 3SG.POSS-inside IPFV:UPSTREAM-go LNK
lu-cuu.
 IPFV:UPSTREAM-hibernate
 ‘(Otherwise), [the bear] goes into a cave and hibernates [there].’ (21-pri)
 {0003580#S101}

The grammaticalization of motion verbs to AM prefixes, from a construction similar to that in (§169), occurred in the common ancestor of all Gyalrong languages, rather than independently in each language, as is shown by the fact that the transitive verb ‘to bring, to fetch’ (Japhug *ru*, Bragbar Situ *ró / rō*) shares a common irregularity in all languages (Jacques 2013b): it must appear with an associated motion prefix. In examples (§171) and (§172) from Japhug and Situ removing the AM prefix would result in incorrect forms (§15.2.9).

- (171) *ɸ-tɣ-ru-t-a*
 TRANSL-AOR:UP-bring-PST:TR-1SG
 ‘I fetched it.’ (Japhug)
- (172) *rə-ɸr-rô-ŋ*
 AOR:UP-TRANSL-bring[II]-1SG
 ‘I fetched it.’ (Situ)

In the Japhug verbal template, AM prefixes occupy slot -4, just after modal and negative prefixes (§11.2), but before orientation preverbs (§15.1.1.1, see also (167) and (168) above) unlike in Situ, where AM occur closer to the verb stem than the orientation preverbs (as shown by §172).

The translocative and cislocative prefixes however may not be equally ancient. There is no doubt that the translocative prefix can be reconstructed to proto-Gyalrong, because in addition to the irregular verb ‘fetch’, it does not superficially resemble the verb ‘to go’ in Situ and Zbu (see Table 15.8) and therefore cannot have been recently grammaticalized. This idea is supported by the high allomorphy of this prefix (§15.2.1.2). The only language with a translocative prefix that is not cognate with the rest of Gyalrong is the Cogtse dialect of Situ, where the prefix *j-* originates from the indefinite orientation preverb (Japhug *jɣ-*), replacing the inherited prefix.

The cislocative prefix on the other hand lacks any allomorphy, and its initial consonant is identical to that of the verb ‘come’ (with its main vowel either converted to a schwa or identical to that of the verb stem in the case of Cogtse)

in almost all languages including Tshobdun (where *o-* comes from **wə-*, the reduced form of *wi* ‘come’), the only possible exception being the Bragbar dialect of Situ. It is therefore possible that each Gyalrong language has independently innovated a cislocative prefix from its verb ‘come’ after the breaking up of proto-Gyalrong, and that the proto-Gyalrong only had one AM prefix with neutral deixis. The introduction of a cislocative AM affix grammaticalized from the verb ‘come’ in a system which originally only comprised a single AM marker is attested in Manchu (Alonso de la Fuente & Jacques 2018), and a similar process may have taken place in Gyalrong languages.

15.2.1.1 Cislocative

The cislocative (or venitive) *yuu-* is superficially homophonous with one of the allomorphs of the inverse prefix *yuu-* (§14.3.2.7) and with one denominal prefix (§20.5), but cannot be confused with either one; nevertheless some discussion concerning the distinction between the inverse and the cislocative can be useful to readers of Japhug texts.

Since the cislocative and the inverse do not occur in the same slot, and in particular before and following the orientation preverbs, they two are easily distinguishable in forms having orientation preverbs such as (173) (where *yuu-* can only be the cislocative, not the inverse, since it occurs on the left of the orientation preverb *tu-*).

- (173) *qajw ra tu-ndze ma tx-ryku yuu-tu-ndze*

 NEG-be.usually.the.case:FACT
 ‘It eats bugs, and it does not come and eat the crops.’ (24-ZmbrWpGa)
 (Japhug) {0003628#S119}

The only type of forms where a confusion could potentially arise is in the non-past factual, without second person arguments (which are indexed by prefixes, see §14.2.1.2). Even in such forms, since the inverse receives stress, and since it is incompatible with stem III (§12.2.2.2, §14.3.2.8), verbs with stem alternation will not have ambiguous forms at least in the singular, as illustrated by the contrast between *yú-ndza* (inverse, stem I) in (174) and *yuu-ndze* (cislocative, stem III) in (175).

15 Orientation and associated motion

15.2.1.2 Translocative

Unlike the cislocative, the translocative (or andative) prefix presents an important degree of allomorphy. Besides the main allomorph *ɕu-*, the consonantal allomorphs *ɕ-*, *z-*, *s-* and *ʒ-* are also found. These allomorphs are only attested in direct contact with orientation preverbs, following the rules in Table 15.9.

Table 15.9: Allomorphs of the translocative prefix

Allomorph	Orientation preverb
<i>ɕ-</i>	<i>tu/ɣ/o/a-, pu/a-, t^hu/a-, ku/ɣ/o/a-, pjɱu/ɣ-, (c^hu/ɣ-)</i>
<i>z-</i>	<i>lu/ɣ/o/a-, nu/a-, (ɱu/ɣ-)</i>
<i>s-</i>	<i>c^hu/ɣ-, (pjɱu/ɣ-)</i>
<i>ʒ-</i>	<i>ju/ɣ/o/a-, ɱu/ɣ-</i>

The dental allomorphs *s-* and *z-* are only found with orientation preverbs with a palatal consonant, and result from dissimilation in place of articulation from their alveolo-palatal counterparts. They harmonize in voicing with the following orientation preverb, *s-* being found before the orientation preverbs in *c^h-* and *pj-*, and *z-* before those in *j-* and *ɲ-*.

The alveolo-palatal allomorphs are found with non-palatal orientation preverbs, and also harmonize in voicing with the following consonant, ζ - occurring before unvoiced prefixes (ζ -*tu-k^hat-a* in 178 below) and ζ - before voicing ones as in (177).

- (177) *tcendyre ur-pur ra nur-ndza z-na-car*

 'The [cat mother] went to look for food for her [kitten].' (21-IWLU)
 {0003576#S75}

The alveo-palatal allomorphs are also used with the palatal orientation preverbs, as shown by the form ζ -*nu-lat-a* (instead of ζ -*nu-lat-a*) in (178) (for an example of ζ -*c^hu-*, see 2, §4.2.1.5). With *c^h-*, *j-* and *n-* prefixes, the alveolo-palatal allomorphs are very rare, but with *pj-* prefixes interestingly, the dissimilatory effect is much more limited and ζ - is more common than *s-* (§4.2.2.2), as shown by the counts in Table 15.10.

Table 15.10: Number of attestations of the allomorphs of the translocative prefix with palatal orientation preverb

Prefixes	ζ -	ζ -	<i>s-</i>	ζ -
<i>pjV-</i>	95		3	
<i>c^hV-</i>	1		53	
<i>nV-</i>		4		96
<i>jV-</i>		0		62

Some clusters, such as *cpj-*, *zn-*, *cc^h-* and *zn-*, are only attested in translocative + orientation preverb combinations (§4.2.1.5).

With prefixes other than orientation preverbs, such as infinitive *kx-* (179) or second person *tu-* (180), only the allomorph *cu-* is found. The infinitive *kx-* and the east/centripetal orientation preverb *kx-* can thus be distinguished by their

15 Orientation and associated motion

compatibilities with the allomorphs of the translocative prefix, the former occurring with *cu-*, and the latter with *ɕ-*.

15.2.2 Argument of motion

The argument undergoing the motion event is always the subject in the case of intransitive, semi-transitive (182), and transitive verbs (183). It is thus impossible to interpret *ɕ-puu-svŋo* in (182) as meaning something like ‘listen to X, after X has gone there’ (motion of semi-object) or *ɕ-puu-sat* in (183) as meaning ‘kill the boar, after it has gone there’ (motion of object).

- (182) *aki ɕ-puu-svŋo*

 ‘There is a boar, go and kill it.’ (140428 yonggan de xiaocaifeng-zh)
 {0003886#S214}

This is also true in inverse (mixed and non-local) verb forms. In (184) for instance, the argument whose motion is indicated by the cislocative prefix is necessarily *tvndzi tv-mu* ‘the ghost woman’, the subject of the transitive verb *ɣuu-tú-wɣ-nusnuŋaɕ*, and also the subject the preceding motion verb *vi* (a case of AM echo, §15.2.8). The cislocative *ɣuu-* cannot be interpreted as expressing the motion of the object (2SG) (‘you will come and she will do you harm’).

- (184) *tcet^ha nuw ɬyndzi tɣ-mu numu yi tce nɣzo*

 CISL-2-INV-do.harm be.AFF:FACT
 ‘The ghost woman will come and cause you harm.’ (150907
 niexiaoqian-zh) {0006262#S88}

The same rule is observed in local configurations. In (185), the verb form *ɣu-pju-kw-mɣa-a* cannot be interpreted as meaning ‘Now that I have come here, take me’: the cislocative motion event concerns the subject, not the object.

- (185) *azo kure rɣzi-a, tce ɣu-pju-kw-mɣa-a wo*

 ‘I am here, come and take me!’ (150825 huluwa-zh) {0006346#S186}

In causative constructions however, the argument of motion can be either the causer or the causee (§17.2.4.5; on the syntactic status of the causee, see §14.4.3 and §17.2.4.2). For instance, the form *ɣu-c^hu-su-χtu-nu* could either mean ‘they send (cause to come) *X* here to buy *Y*’ or ‘they come and make *X* buy *Y*’; (186) illustrates the first interpretation.

- (186) *tce kupa-c^hu nuwa at^hi pɕoɓ nuwa, u-pci*

 ‘People from the Chinese areas downstream, outsiders, send people here
 to buy [matsutake].’ (20 grWBgrWB 58) {0003554#S57}

In the case of manipulation verbs, the motion can involve both the subject *and* the object. In (187) for instance, the cislocative does refer to the motion of the *object* (the character who has been sent down), but it is implied that he did not come alone, and was brought to his current place by the unspecified *subject* of the verb *ɣu-pjɣ-wy-lyt* ‘s/he/they sent/brought him down’.

15 Orientation and associated motion

A similar use of the cislocative with the verb *lɔt* ‘release’ in the sense of ‘bring, send’ (someone) is found in example (23) above.

15.2.3 Motion verbs and AM prefixes

In Japhug, there is no constraint on AM prefixes occurring on motion verbs with the same deixis. Examples (188) and (189) illustrate the cislocative on the verb *ɣi* ‘come’ and the translocative on the verb *ɕe* ‘go’, respectively. Such examples are not common enough to allow a clear analysis of the semantic value of the redundant AM in these examples.

 LOC TRAL-IFR:DOWN-go
 ‘He went into [a bag of] flour.’ (140519 chou xiaoya-zh) {0004034#S133}

The opposite combinations, namely cislocative with *ɕe* ‘go’ and translocative with *ɣi* ‘come’, are not grammatical.

In the case of motion verbs without an intrinsic locative goal such as *ŋke* ‘walk’, the presence of the translocative does not add a locative goal (unlike when used with non-motion verbs, see §15.2.7). In (190) for instance, no specific location is specified even in the previous clauses, and the translocative on *ŋke* indicates that the motion took place far away from the deictic center (the king’s palace).

- (190) *tcendɣre nuunuu ɕ-to-nuu-ŋke-nuu tɕe, lu ɕsu-xpa*

ɕ-pjɣ-ŋke-nuu,
 TRAL-IFR-walk-PL
 ‘The ministers went to look for [the girl], they walked for three years.’
 (sras 2003)

Participles used in the purposive complements of motion verbs (§16.1.1.6) do not take AM prefixes.

15.2.4 Orientation and AM

In Japhug, AM markers only specify deixis and the temporal relation between motion event and verbal action, but are neutral as far as the orientation of the motion event is concerned.

Orientation and AM markers occupy different prefixal slots. Apart from orientable verbs (§15.1.2), most verbs select one or two lexicalized orientations (see §15.1.5). For instance, the transitive *murkuu* ‘steal’ occurs with the orientation UPWARDS (with the orientation preverbs *tr-*, *ta-*, *tu-*, *to-*, see §15.1.1.1).

When non-orientable verbs occur with AM, the verb normally keeps its lexicalized orientation preverb, as in (191), where *murkuu* ‘steal’ is used with the expected *tu-* UPWARDS prefix. In this context, the motion related to the act of stealing occurs at the same horizontal level and there is no upward motion; the orientation preverb here encodes the default lexicalized orientation for the verb *murkuu* ‘steal’, and is thus irrelevant to the motion event itself.

- (191) *ku-nɲo* *nu q^he ci ci c-tu-murki*

 ‘The [lion] which is defeated steals a little [meat], but apart from that
 has nothing to eat.’ (20-sWNgi) {0003562#S62}

Similarly, in (192), the verb *skuu* ‘bury’ appears with the lexical orientation DOWNWARDS, although the associated motion event is oriented towards the opposite direction, as indicated by the adverb *tɕetu* ‘up there’.

- (192) *ki a-tɕu ki tɕetu zgoku tɕe*

 TRAL-IPFV:DOWN-bury[III]-1SG SENS-be.better
 ‘Let’s bury my son up there on the mountain.’ (150904 cuzhi-zh)
 {0006322#S107}

However, alternatively, the orientation preverbs of verbs with an AM marker can also reflect the orientation of the motion event. In (193), the verb *ntsye* ‘sell’ occurs with the orientation preverbs UPWARDS (*c-tu-ntsye-a*) and DOWNWARDS (*c-pju-ntsye-a*). The lexicalized orientation normally selected by *ntsye* ‘sell’ is the ‘westward; centrifugal’ one (§15.1.4.3). In (193) the UPWARDS and DOWNWARDS prefixes clearly correlate with those found on the manipulation verb *ɲut* ‘bring’ and express the direction of the motion event.

15 Orientation and associated motion

 LNK China LOC TRAL-IPFV:DOWN-sell-1SG
 ‘I bring things [down] from central Tibet, and sell them in China.’
 (28-qajdoskAt) {0003718#S15}

Overriding of the lexical orientation by the motion event is found in particular in the case of AM prefixes expressing round trips (§15.2.5). In (194) for instance, the translocative *z-lu-murki-a* with the UPSTREAM preverb expresses the fact that the main character of the story steals from a place located downstream (first motion event, indicated by the AM prefix) and then brings it upstream (second motion event, whose orientation is encoded by the preverb). Interestingly, after a few occurrences of the verb *murkuu* ‘steal’ with AM and UPSTREAM orientation, one finds examples of that verb with the same non-lexicalized orientation UPSTREAM but without the AM prefix in the same text, as in (195).

 (02-montagnes-kamnyu-cz) {0003378#S28}

In some limited contexts, it is thus possible for verbs without associated motion markers to use their orientation preverb to indicate the direction of the action, with or without motion, as in (195).

In (196), similarly, we find the verb *lu-pe-a* with the UPSTREAM orientation without an associated motion marker; when this sentence was uttered, we were sitting far from the door, and to close the door it was necessary to get up and walk a few meters (we were seated at a place closer to the river, so the door was UPSTREAM, §15.1.3.2). The same sentence could have been uttered if the door had been at a hand's reach, and could thus have been closed without walking. Replacing *lu-pe-a* in (196) by *z-lu-pe-a* TRAL-IPFV:UPSTREAM-close[III]-1SG, with an associated motion marker, would make the second interpretation impossible.

- (196) *tci-kum lu-pe-a je!*
 1DU.POSS-door IPFV:UPSTREAM-close[III]-1SG SFP
 ‘Let me close the door (for us).’ (conversation, 03-05-2018, Tshendzin)

It is debatable whether the orientation preverbs in examples like (195) and (196) could be analyzed as marking associated motion (in Guillaume's 2016 definition), as these prefixes do not actually specify that a motion event takes or does not place. What they specify is that if the main action is linked with a translational motion event, that motion event follows the direction indicated by the prefix. In this grammar, the use of orientation preverbs in examples such as (195) and (196) are therefore not considered to be cases of associated motion.

15.2.5 Round trips

The combination of some verbs with AM prefixes implies a round trip when the lexical orientation (§15.1.5) is overridden by the orientation of the motion event (§15.2.4).

With the verb *χtuu* ‘buy’ for instance, the translocative expresses a first trip to the goal indicated by the locative *ri* (§15.2.7), but a second trip back to the deictic center (here, Kamnyu) is implied by the selection of the DOWNSTREAM orientation (§15.2.4).

- (197) *tce mbroχpa ri jla nuu s-c^hu-χtuu-nuu*

ɛʃa puu-ra.
 completely PST.IPFV-be.needed
 ‘People had to buy hybrid yaks from the nomads.’ (150820 kAnWCKat)
 {0006256#S23}

In (198), the cislocative indicates a first trip from Chinese areas up to Mbarkham (the deictic center, *kure ri* ‘here’), and then back to Chinese areas, as indicated by the choice of the DOWNSTREAM preverb (§15.1.3.2).

15 Orientation and associated motion

ŋu.
 be:FACT
 ‘Outsiders send people to come here and buy [matsutake].’ (20
 grWBgrWB) {0003554#S58}

AM markers expressing round trips are found with a handful of verbs, for instance *murku* ‘steal’ (194), expressing actions which can be considered to have been fully completed only when the subject comes back to his starting point with the object. The verb *ru* ‘fetch, bring’, which requires to be used with an AM prefix, always implies a two way trip (§15.2.9). As in examples (197) and (198), the AM prefix encodes the deixis of the first trip, and the orientation preverb the direction of the second trip back – hence the motion of the first trip is always in a direction opposite to that indicated by the preverb.

15.2.6 The nature of the motion

In Japhug, AM prefixes express physical translation from one place to another, and unlike other Gyalrong languages do not have grammaticalized uses like prospective.

The *cis-* and *translocative* prefixes only refer to motion events occurring *before* the action of main verb (§15.2.1). The verbal action does not necessarily take place immediately after the motion. In (199) for instance, ‘learning computers’ is one of the many activities that the referent did in Chengdu, and took place a considerable amount of time after the travel from Mbarkham to Chengdu itself. Here the *translocative* specifies that the action took place at such a distance from the deictic center that motion was necessary.

- (199) *at^hi u-pci ri <chengdu> ri <diannao> ci*

 TRAL-AOR:3→3’-learn
 ‘He went outside of [Tibetan areas, downstream], to Chengdu, and
 studied computers there a little bit.’ (12-BzaNsa) {0003484#S73}

AM markers are not exclusively used to describe walking or motion on land (199). They can also be applied to flying, as in (200), where *mutcu c-tu-ndze* literally means ‘it flies there and eats it’. In this example, the *translocative* is in echo with the manipulation verb *tsum* ‘take away’ (§15.2.8.1).

- (200) *p^hʏri* *prax u-ŋgu* *mɣetʂa ku-tsum* *q^he, tce*

 ‘[The eagle] takes [the young animal] to the cliff on the other side [of
 the river] and eats it there.’ (19-qandZGi) {0003548#S48}

Additionally, they are attested in the case of motion in a liquid (involving for instance swimming), as in example (248) in §15.2.10.5, and also plants growing from one place to another (201).

- (201) *tce u-zrɣm* *ju-ce* *q^he nure* *ri, kumax u-ɣov*

 TRAL-IPFV-come.out SENS-be.AFF LNK
 ‘Its root spreads and it grows there, at a different place.’ (15-babW)
 {0003512#S42}

In (202), the motion implied by the translocative is more metaphorical, as it refers to the reincarnation of a lama in a house different from the one he was born in his previous life. In (132) above (§15.1.5.6), the cislocative occurs in this meaning.

- (202) *a-nu-ɣcav,* *a-nu-si* *tce tce, kumax ɣov* *ri li*

 TRAL-IPFV-be.born SENS-be
 ‘When [the reincarnated lama] passes away, he is born in another place.’
 (160722 skWBli) {0006227#S2}

In the case of (203), the translocative may be interpreted as referring to the motion of the seed, but since this example comes from a traditional story where the larch is humanized (since its relation to the fir is compared to that of a nephew to its uncle), it may also be viewed here as a metaphorical human-like motion.¹⁶

¹⁶In the context of nephews and uncles, the upstream-downstream dimension here refers to the relative position of the adult males on the seating position called *k^hɣc k^hɣr* (§15.1.4.4) in the traditional society.

15.2.7 Goal

Verbs taking the translocative prefix very often appear with a locative phrase (adverb, noun in the absolutive or locative case and/or a locative relator noun) expressing the goal of the motion, which at the same time corresponds to the location where the action takes place, as for instance in (204). The locative *ri* is particularly common to express the goal of an AM-prefixed verb (see also for instance 197 and 198 in §15.2.5 and 199 in §15.2.6 above).

- (204) <guanzi> *u-ŋguu ri c-ty-rundzɣts^hi-j.*
 restaurant 3SG.POSS-in LOC TRAL-AOR-east-1PL
 ‘We went to a restaurant and ate there.’ (2010-1)

Even if it is not present in the same clause as the verb with the translocative, the goal generally appears in previous clauses. For instance in (205), the verb *c-tu-βzdu-nuu* ‘they (went and) collected it there’ is not directly preceded by the goal, but it shares the goal *sunŋgu* ‘in the forest’ of the motion verb *ce* ‘go’.

 TRAL-IPFV-collect-PL IFR.IPFV-be
 ‘The dwarves went into the forest every day, searching around and collecting gold there.’ (140504 baixuegongzhu-zh) {0003907#S94}

Verbs with the cislocative, on the other hand, are more rarely used with an overt goal. As an example, the verb *ndza* ‘eat’ appears 7 times in the corpus with

the translocative, and 16 times with the cislocative. The goal is explicit with the translocative (either in the same clause or in the previous clause) in 6 times out of 7 (the only exception being 206; note that here the goal can be understood as the nest of the eagle), whereas it is overt in only 4 of the 16 examples with the translocative.

 ‘The eagle, (in the case of prey that is too big), it has to kill them by hitting them with its wings, and then take them away and eat them.’
 (50819 RarphAB) {0006356#S3}

The reason for the more common absence of locative phrases with the cislocative, as in (207), is because in the case of motion towards the deitic center, the goal can generally be inferred on the basis of the context: it is most often either the current location, or the house of either the speaker or the addressee.

 ‘The bird *javmɣzdoɣzdoɣ* eats bugs, and it does not come and eat the crops.’ (24-ZmbrWpGa) {0003628#S119}

The examples above illustrate the most typical uses of the AM prefixes. However, the translocative can also be used in cases where the goal is unspecified and not recoverable from the context, simply as a way to indicate that the action takes place at a distance from the deictic center. In (208) for instance, the presence of the translocative implies that the action did not take place immediately near the house, but that the subject had to look for the badgers (see also 190 in §15.2.3).

15.2.8 Echo phenomena

Previous literature on AM has reported the existence of ‘echo phenomena’ in the use of AM markers (Wilkins 1991: 251, Vuillermet 2012: 681–683, Rose 2015: 128–130, Guillaume 2016: 11), namely that the same motion event can be expressed by more than one AM marker. This phenomenon is common in Japhug narratives. Two subtypes of AM echo can be distinguished: motion verb with redundant AM, and multiple AM marking.

15.2.8.1 Motion verb with redundant AM

In examples such as (210), (211) and (212), a motion verb is followed by clause containing a verb with an AM prefix with the same deixis: translocative after *ɕe* ‘go’ (in the Aorist form *tx-ari* in 210) and cislocative after *ɣi* ‘come’, respectively. It is however clear from the context, in all of these examples, that only one motion event took place, and that the AM marker could be dispensed with.

- (210) *zgoku tx-ari nɣ, ‘hehe a-zi ra*
 mountaintop AOR:UP-go[II] LNK INTERJ 1SG.POSS-lady PL

 TRAL-AOR:3→3’-say[II] SENS-be
 ‘He went up the mountain top and said: ‘My lady, you had a child and did not notice it.’ (2003 Kunbzang)

The motion verb and the verb with AM are not necessarily adjacent, as in (210) where they are separated by a complement clause, but AM echo is common when the AM-marked verb directly follows the motion verb, with an intervening linker such as *tɕe* (as in 211) or more rarely with parataxis (as in 212).

- (211) *tɕ^hi u-taɕ to-ɕe tɕe ɕ-tɕ-ru*

 ‘He was not at home, and badgers were causing a lot of damage that summer, they came and even dug up the threshold of the house.’
 (27-spjaNkW) {0003704#S99}

Since, with some exceptions, verbs taking AM prefix do not indicate the direction of the motion using their orientation preverbs (§15.2.3), this echo construction makes it possible to indicate the orientation on the motion verb (for instance, UPWARDS in 210, 211 and 213) while keeping that on the AM-taking verb, something which would neither be possible with only AM or with a purposive motion verb construction (§15.2.10, §16.1.1.6). Specifying both orientations can be informative when the other verb is compatible with more than one orientation, as illustrated by the contrast between (211) and (213) with the orientations UPWARDS and DOWNWARDS on the AM-taking verb *ru* ‘look at’, respectively. In principle, all 7×7 theoretical combinations would be possible with this pair of verbs.

- (213) *tɕ-tɕu nu to-ɕe tɕe ɕ-pjɕ-ru ri,*
 INDEF.POSS-son DEM IFR:UP-go LNK TRAL-AOR:DOWN-look LNK
 ‘The boy went up and looked down.’ (2012 Norbzang) {0003768#S51}

Echo AM is however completely optional; in (214) for instance, even though the verbs *ku-ryzi* and *pju-ru*, share the same subject as *to-ɕe*, they lack the translocative.¹⁷

¹⁷Note that in this example the anaphora could be potentially ambiguous, and that adding the translocative on these verbs could have contributed to disambiguating the sentence.

15 Orientation and associated motion

Echo can also occur between a manipulation verb and an AM prefix, as in (215) (see also 200, §15.2.6).

- (215) *nunu tʂemɣpuw nunu jɣ-tsum tʂe ʂ-pu-sat*

15.2.8.2 Multiple AM marking

The second type of AM echo construction is found when two (or more) verbs are redundantly prefixed with the same AM marker, for instance the cislocative *yuu-* in (216), though only a single motion event is supposed to have taken place.

- (216) *tʂe a-kʰa ra yuu-ta-ryrobruuz, a-mgo ra*

 ‘Is it [the neighbour’s wife who took pity on me] and came and tidied my house and made food for me?’ (150827 tianluo-zh) {0006250#S76}

AM echo is almost obligatory in serial verb constructions (Jacques 2016a: 253–255, §25.4.1), as shown by (217) and (218), where the pairs of verbs *ʂ-tu-ste* / *ʂ-ku-nurtʂe* and *z-ju-suu-mtsʰɣt* / *z-ju-ski* share the same person (3→3’), TAM (imperfective) and AM (translocative) markers.

 ‘[The mole]_i goes to its nest_j and buries [so much of the food]_k it_i has
 collected that it_i] fills it_j up.’ (28-qapar) {0003720#S165}

However, not all adjacent verb pairs sharing the same AM markers are necessarily cases of AM echo. Repetition of an AM prefix can also refer to different motion events. In (219) for instance, the first translocative prefix on *ɕ-tu-nurdoɓ* refers to the motion of the animal to the place where the walnut tree is found, and the second one on *z-ju-ski* to the motion back to its nest. The translocative appears in both cases because both places are away from the deictic center (people’s houses), and there is no ambiguity that the two places are distinct.

 {0003720#S174}

15.2.9 The verb *ru* ‘fetch, bring’

The manipulation verb *ru* ‘fetch, bring’ (homophonous with the semi-transitive *ru* ‘look at’) is peculiar, as it generally requires the use of AM prefixes (with very few counterexamples, see below), a feature shared with Situ (§15.2.1).

With the translocative, the verb *ru* means ‘go to *X* and bring *Y* here’, expressing two motion events (§15.2.5): first, a trip away from the present location (to look

15 Orientation and associated motion

for an object), and second, the way back to the point of departure (bringing the object). The translocative refers to the *first* motion event. On the other hand, the orientation preverb encodes the direction of the way back to the deictic center, as shown by (220): the first trip (to the bottom of the ocean) has the DOWNWARDS orientation, indicated by the prefix on the first verb *pu-ari*, while the second one on *ru* has the opposite orientation UPWARDS.

- (220) *pu-ari ndyre juwi nu c-ta-ru juw-ru.*
 AOR:DOWN-go[II] LNK book DEM TRAL-AOR:UP:3→3'-bring SENS-be
 'He went down [to the bottom of the ocean] and brought up the sutra.'
 (2005 Norbzang)

Locative phrases/adverbs or the locative interrogative pronoun *ɲotɕu* 'where' (§6.5.4), when occurring with *ru*, refer to the destination of the first motion event (the place where the object was originally/is still found), not the destination of the trip back, as illustrated by (221) and (222). In (222), the destination of the first trip (UPWARDS) is the opposite orientation as that found on the verb (DOWNWARDS), confirming what has been observed in (220) above.

- (221) *kwiki sylaŋp^hyn ki nɣzo ɲotɕu z-jɣ-tu-ru-t*

- (222) *atu tɣ-mt^hum c-pu-re*
 up.there INDEF.POSS-meat TRAL-IMP:DOWN-bring[III]
 'Bring [down] the meat from up there.' (meimeidegushi)

Similarly, the person pronouncing (223) was going towards the east to fetch the key; the orientation WESTWARDS on the verb indicates the orientation of the way back to the current location.

- (223) *sycu z-juw-re-a*
 key TRAL-IPFV:WEST-bring[III]-1SG
 'I will fetch the key (over there, towards the east).' (heard in context, 2014)

With the cislocative, the meaning of *ru* can be rather translated as ‘come (to the current deictic center) and take *X* away’, as in (224) and (225); as with the translocative, two motion events take place (§15.2.5), but their relationship to the deictic center is reversed: the first trip is from some place to the present location, and the second trip is back to that original place.

- (224) *t^ha qaliaɓ nuu ku a-rjit yuu-nuu-re*
 later eagle DEM ERG 1SG.POSS-child CISL-AUTO-bring[III]:FACT
 ‘The eagle will come and take my child away.’ (140427 laoying mao he yezhu-zh) {0003846#S45}

The orientation preverb, when present, refers to the motion of the second trip away from the deictic center. For instance, in (225), the two people who are subjects of the verb *yuu-juu-ru-ndzi* (with westwards orientation *juu-*) came from their houses in a place called *tulu* to another location called *tabrdo* to take stones (both in Kamnyu village).

- (225) *kutɕu zo rdystaɓ yuu-juu-ru-ndzi izora yuu ra*

 NEG-be.usually.the.case QU-not.be:FACT LNK
 ‘They come here to take stones away, as if we did not need them.’
 (conversation, 14-05-10)

As shown by (226) (a few sentences before 225), this trip is oriented from west to east; having taken the stones in *tabrdo* (in the east), the two referents go back home to *tulu* (westwards).

- (226) *tɕekuɯ tabrdo ra kɣ-ye-ndzi*
 east TOPO PL AOR:EAST-come[II]-DU
 ‘They came to Tagrdo (and looked for stones).’ (conversation, 14-05-10)

The examples from (220) to (225) discussed above show that regardless of the AM prefix, the transitive verb *ru* expresses a two-way motion event: first from point *A* to point *B*, where an object is retrieved, and then back to *A* with the object. The AM prefix always indicate the deixis of the first trip (either away or towards the deictic center), and the orientation preverb encodes the direction of the second trip, whose deixis is the opposite of that of the first trip (§15.2.5).

The manipulation *ru* ‘fetch, bring’ passes all transitivity tests (§14.3.1), for instance C-type orientation preverbs (220), the past suffix *-t* (221) and Stem III alternation. These tests are generally sufficient to distinguish it from the semi-transitive *ru* ‘look at’, but there are still a few ambiguous cases, in particular in the Inferential, where neither stem alternation nor prefix alternation reveals the transitivity difference. For instance, the surface form *z-lo-ru* can either correspond to the transitive verb ‘she went down(stream) and brought it up(stream)’ as in (227) or to the translocative of the semi-transitive verb ‘he went there and looked upstream’ as in (228).

- (227) *tc^heme nuu kuu popo to-ndo tce, tuu-ci*

 ‘He went there and had a look up there, but the other ones had not [yet] disappeared.’ (tWJo 2005) {0004089#S71}

The transitive verb *ru* almost always occurs with AM prefixes, even its infinitive form *cuu-ky-ru* as in (229), or its participles as in (230) (for the presence of a subject participle instead of an infinitive in their complement clause, see §16.1.1.6).

However, in the purposive motion verb construction with *ce* ‘go’ and *yi* ‘come’ (§16.1.1.6, §15.2.10), the subject participle *u-ku-ru* is used without an AM marker, as in (231), as part of a more general constraint against AM prefixes in this construction (§15.2.3).

- (231) *lo-ce-nu* *tce, jimawozɣr nu stavlu* *pjɣ-ŋu*

 {0003975#S12}

15.2.10 Associated motion vs. motion verb construction

To express the meaning of motion prior to an action, associated motion prefixes are nearly two times as common as corresponding motion verb constructions (henceforth MVC) in the Japhug corpus. There is however a clear semantic difference between the two constructions, which was briefly described in Jacques (2013b), but is presented here in more detail.

AM and MVC differ from each other in that in the former, the completion of both motion event and verbal action is presupposed, whereas in the case of the latter, the two can be separated. This difference in degree of event integration is most conspicuous in Aorist forms, and can be observed in four types of

15 Orientation and associated motion

constructions: concessives (with negation of the verbal action), interrogatives, conditionals and complement clauses.

Another difference between MVC and AM is the fact that while MVC require a volitional verb in the purposive complement, there is no such requirement for the AM markers.

15.2.10.1 Concessive

A MVC with the motion verb in perfective form can be followed by a clause negating the purposive action, as in (233). In this example, only the motion is realized, while the action expressed by the verb *rtob* ‘look’ could not be accomplished.

- (233) *ny-kwu-rtob* *ju-ye-a* *ri*, *mw-nw-atuy-tci*,
 1SG.POSS-SBJ:PCP-see AOR-come[II]-1SG LNK NEG-AOR-meet-1DU
mw-pw-ta-mto.
 NEG-AOR-1→2-see
 ‘I came to see you but I did not see you.’

With the corresponding AM verb form *yu-ju-ta-rtob* ‘I came and saw you’, negating the action of the verb is self-contradictory and nonsensical, and a sentence such as (234) is incorrect.

- (234) †*yu-ju-ta-rtob* *ri* *mw-pw-ta-mto*
 CISL-AOR-1→2-look LNK NEG-AOR-1→2-see
 Intended meaning: ‘I came to see you but I did not see you.’

Additional minimal pairs of the same type are presented in Jacques (2013b: 202–203).

Example (235) from a conversation illustrates this property also with a manipulative verb *yut* ‘bring’: the action of the essive participial complement *ky-ntsye* ‘sell’ (§24.4.2.2) is negated in the following clause (with an abilitative *su-*, see §19.3).

- (235) *sxnɛmmts^hu kw ky-ntsye* *c^hy-yut* *ri*
 ANTHR ERG OBJ:PCP-sell IFR:DOWNSTREAM-bring LNK
múj-su-ntsye *ndyre*,
 NEG:SENS-ABIL-sell LNK
 ‘Bsod.nams.mtsho brought them [to Mbarkham] to sell, but could not sell them.’ (conversation, 14.05.10)

15.2.10.2 Interrogative

The difference between MVC and AM in interrogatives can be illustrated by the minimal pair (236) and (237).

In interrogative, MVCs are required to express meanings such as ‘What/who have you come/gone to X’, as in example (236), an example which occurs nine times in the corpus.

Example (236) presupposes that the addressee has not done anything yet, while (237) with associated motion can only be used if the presupposition is that the action has already taken place, requiring a different translation.

- (236) *tɕ^hi u-kuu-pa jɣ-tuu-ye?*
 what 3SG.POSS-do AOR-2-come[II]
 ‘What did you come to do?’ (nine examples in the corpus)

- (237) *tɕ^hi yuu-ty-tuu-pa-t*
 what CISL-AOR-2-eat-PST:TR
 ‘What did you do upon coming here?’ (elicited)

Similarly, in the interrogative clause in (238), the presence of the translocative on *ɕ-puu-tuu-rɣ-tɕuβ* implies that the sewing action has taken place.

- (238) *ɕuu ra nuu-k^ha tɕe ɕ-puu-tuu-rɣ-tɕuβ ty-ti*
 who PL 3PL.POSS-house LOC TRAL-AOR-2-APASS-sew IMP-say
ra
 be.needed:FACT
 ‘Say where (whose house) you went and did some sewing.’ (140512
 alibaba-zh) {0003965#S156}

This is not a universal property of AM markers. In languages such as Nanai, AM markers can be used even when the presupposition is that only the motion event has been completed (Stoynova 2016).

15.2.10.3 Conditional

The presuppositional difference between a MVC and AM is also perceptible in the protasis of conditional clauses.

With a MVC in the protasis as in (239), there is no presupposition that the verbal action took place, and the motion event alone constitutes a condition to the state of affair described in the apodosis.

15 Orientation and associated motion

 ‘If you had not come and seen your father, he would have been sorry.’
 (but you did see him, so he does not feel sorry)

15.2.10.4 Complement clauses

In complement clauses, verbs with AM prefixes are attested, and complement-taking verbs always have scope over both the action of the verb and motion event.

The combination ofodal verbs such as *c^ha* ‘can’ with double negation, with the specific meaning ‘cannot help’, §13.3, have scope over both the motion event and the verbal action.

This is illustrated in example (241), which is taken from a passage in a story where the king scolded a small child, who had just returned from a mission he himself send him on, because the child did not come to greet him first upon his return. Example (241) shows the answer the child uses to justify why he went to see his mother first before greeting the king. From context it is clear that both the motion event (to his mother’s house, explaining the child’s failure to go to see the king) and the action ‘drink milk’ (the reason for that motion event) are equally important to the plot and inseparable.

- (241) *tu-nu* *u-kur-ts^hi* *pu-cti-a* *tce,*
 INDEF.POSS-breast 3SG.POSS-SBJ:PCP-drink SENS-be.AFF-1SG LNK

múj-c^ha-a
 NEG:SENS-can-1SG

‘I am [a toddler] who [still] drinks [his mother’s] milk, when I arrived, I could not help but go and drink milk.’ (Norbzang)

In (242), the negated modal verb has also on the action of both the main verb and the motion event – the guards would prevent the main character not only from stealing, but also from going to place where the object to be stolen is found.

- (242) *ʋmaʋ ɣsu-tʏk^har ku ɲu-ʏz-nʏk^har-nu cti tce,*

 TRAL-INF-steal NEG-2-can:FACT
 ‘Three circles of soldiers will be surrounding it, you will not be able to [go there and] steal it.’ (2003 qachGa) {0003372#S28}

Examples (243) and (244) illustrate the scope of aspectual auxiliary verbs (here *atsu* ‘have the time to’ and *mda* ‘be the time’) on both motion event and verbal action. In (244), note that the infinitive form with AM *ɕu-kʏ-mtɕ^hot* ‘go and make offerings’ translates the Chinese festival 清明节 <qīngmíngjié> ‘Tomb-Sweeping Day’ (using a verb borrowed from Tibetan མཚོད་ *mtɕ^hod* ‘make offerings’). There was no motion verb in the original text.

- (243) *q^he poturzi ku nʏ-kum ʏu-kʏ-ɕu mʏ-atsu ma*

 grave TRAL-INF-make.offerings IFR-be.the.time SENS-be
 ‘It was time to [go and] make offerings for the graves.’ (160630 abao-zh) {0006197#S67}

The same scopal effect also applies to verbs with AM in complement clauses selected by a verb in the protasis, as in (245) and (246): the realization of the verbal action (in addition to that of the motion event) belongs to the condition.

- (245) *ɕu-kʏ-ru mu~mʏ-pu-tu-c^ha ŋu nʏ nʏ-srʏm*

 be.agreed:FACT
 ‘If you succeed in going and stealing it, I can make him to go back there.’
 (02-montagnes-kamnyu) {0003378#S39}

By contrast, in (247), in the case of the infinitival complement *ku-rɣma kɣ-ɕe* ‘go to work’ with a purposive clause *ku-rɣma* (§24.4.2.1), the main verb *mda* ‘be the time’ only has scope over the motion event expressed by the verb *ɕe* ‘go’ – the time that is indicated by the stars refers to the beginning of the journey to work, not the start of the work itself. Compare this example in particular with (244) above, with the same auxiliary verb.

15.2.10.5 Volitionality and controllability

An additional difference between AM and MVC has to do with volitionality and/or controllability. In the case of an MVC, the verb in the purposive clause, whose action follows the motion event, is always necessarily volitional and controllable. By contrast, in the case of AM, it is possible to find examples where the verbal action expresses a non-controllable event.

For example in (248) and (249), the verbs *ɕ-pjɣ-mto* ‘he (went and) saw/found it there’ (with verb echo, § 15.2.8) and *ɕ-pu-rndu-tɕi* ‘we (went and) obtained

it' express the action of finding something or someone, whose outcome is not controllable. Note that there are no examples of the non-volitional verb *mto* 'see' with the MVC in the corpus (the volitional *rtob* 'look' or *ru* 'look at' occur instead).

- (248) *nuɕimuma zo tu-ci u-ŋguw pjɣ-ɕe q^he*

 'We had to endure a lot of hardships before obtaining this golden bird, this golden horse and this girl.' (140507 jinniao-zh) {0003931#S347}

The verb *si* 'die' is also attested with AM as in (250), while a MVC would be clumsy in this context.¹⁸

15.2.10.6 Relativizability

Another difference between MVC and AM is related to the relativizability of core arguments. In the MVC, the common subject of the motion verb and the verb of the purposive clause (including transitive subject) can be relativized, and if overt, the head can be internal, between the purposive clause and the nominalized motion verb, as *tɣ-tɕuw* 'son, boy' in (251), or occur after the whole clause.

¹⁸The verb form *a-ɕ-puw-si-a* 'let me go and die' translates Chinese 寻死 <xúnsǐ > 'look for death'.

15 Orientation and associated motion

- (251) *[[tʃ-mu u-ku-rtov] tʃ-tɕu*
 INDEF.POSS-mother 3SG.POSS-SBJ:PCP-see INDEF.POSS-son
jʃ-ku-ʃri] nu a-bi ɲu
 AOR-SBJ:PCP-go[II] DEM 1SG.POSS-younger.sibling be:FACT
 ‘The boy who went to see the old lady is my brother.’ (elicited)

On the other hand, when the verb of the purposive clause is transitive, it is not possible to relativize the object. Example (252), with an overt transitive subject *a-bi ku* is thus non-grammatical, and the phrase *u-ku-rtov jʃ-ku-ʃri tʃ-mu* can only be interpreted as a subject relative ‘the old lady who went to see him’.

- (252) *ʃa-bi ku u-ku-rtov jʃ-ku-ʃri*
 1SG.POSS-younger.sibling ERG 3SG.POSS-SBJ:PCP-see AOR-SBJ:PCP-go[II]
tʃ-mu nu a-ʃab ɲu
 INDEF.POSS-mother DEM 1SG.POSS-MZ be:FACT
 Intended meaning: ‘The old lady that my younger brother went to see is my aunt.’

The only way to build a relative clause with this meaning is to use AM prefixes. In (253) for instance, the prenominal finite relative (a subtype that is restricted to object or goal relativization, §23.2.2) *a-bi ku z-ja-rtov* does not contain any additional embedded clause, and is a simple case of object relativization.

- (253) *[a-bi ku z-ja-rtov] tʃ-mu*

nu a-ʃab ɲu
 DEM 1SG.POSS-MZ be:FACT
 ‘The old lady that my younger brother went to see is my aunt.’ (elicited)

The fact that by contrast (252) is not grammatical shows that relativization out of purposive clauses is prohibited in Japhug grammar, unlike some complement clauses (§23.5.11).

16 Non-finite verbal morphology

The distinction between finite and non-finite verb forms is easy to draw in Japhug: the former have person indexation (see chapter §14), while the latter do not. The only personal markers found on non-finite verb forms are possessive prefixes, the same set as in underived nouns (§5.1).

In this chapter, I distinguish between several sub-categories of non-finite verb forms, including participles, infinitives, degree and action nominals as well as several converbs. In addition to describing the morphology of these verb forms, I also present their functions to build various types of subordinate clauses, including relative, complement and purposive clauses.

16.1 Participles

Japhug speakers, like Ancient Greeks, can be aptly described as φιλομέτοχοι ‘participle lovers’: Japhug and other Gyalrong languages have a rich system of participles, and these non-finite forms play a central role in the syntax of the language.

Participles are nominalized verb forms that keep some verbal characteristics: they can serve as predicates of subordinate clauses (in particular relative and complement clauses), take TAM, polarity and associated motion marking, and preserve the verb’s argument structure.

Participles differ from finite verbs in three ways. First, they cannot serve as the predicate of a main clause. Second, they are not compatible with the personal indexation of the intransitive and transitive conjugations (including direct/inverse marking, §14.3.2.7), and with all inflectional suffixes without exception (§11.3).¹ Rather, like nouns, they can take a possessive prefix which can be coreferent with one of the arguments. Due to the general impossibility of stacking possessive prefixes (§5.1.1), at most only one argument can be indexed this way. Third, there are restrictions on TAM marking on participles: they have at most three forms (neutral, perfective and imperfective), and completely lack Inferential (§21.5.2), Egophoric Present (§21.3.3) or Sensory (§21.3.2) forms .

¹Japhug is identical in this regard to Tshobdun and Zbu, but crucially differs from Situ, where nominalized forms in *kə-* can bear indexation suffixes (Sun 2006a; Sun & Lin 2007).

There are three participles in Japhug; the subject S/A participle in *ku-*, the object participle in *ky-* and the oblique participle in *sy-*.

Complex participial forms, including negative, associated motion or TAM prefixes are possible, as shown by example (1). However, never more than four inflectional prefixes are found; forms with all five prefixal slots filled (such as $\dagger u-yu-jy-ku-qru$) are not accepted by Tshendzin.

- (1) *u-yu-jy-ku-qru* *ty-tcu*
 3SG-CISL-AOR-SBJ:PCP-meet INDEF.POSS-boy
 ‘The boy who had come to look for her’ (The three sisters)

Table 16.1 summarizes the template of participial verb forms; more details are provided on possible and attested forms for each participle type in the following sections.

Table 16.1: The template of participial verb forms in Japhug

-6	-5	-4	-3	-2	-1	Σ
possessive prefix	proximative	negative prefix	associated motion prefix	TAM orientation	participle prefix	enlarged stem

Stem alternation is reduced in participle forms: stem III (§12.2.2.2) never occurs. The few verbs that have an alternation between stem I and stem II (*ɕe* ‘go’, *yi* ‘come’, *ti* ‘say’ and derived forms, §12.2.1), however, use stem II in subject and object participles with perfective orientational prefixes (§15.1.1.1), in forms like *jy-ku-ye* AOR-SBJ:PCP-come[II] ‘the one who came’ or *ty-ky-tut* AOR-OBJ:PCP-say[II] ‘what was said’.

16.1.1 Subject participles

The subject participle, built by adding the prefix *ku-* to the verb stem, designates an entity corresponding to the intransitive subject (2, §8.1.1 and §23.5.1), a possessor of the subject (§23.5.10.1), or the transitive subject (3, §8.2.2.1, §23.5.2) of the base verb.

- (2) *ku-si*
 SBJ:PCP-die
 ‘The dead one’ (many attestations)

- (3) *u-ku-ndza*
 3SG-SBJ:PCP-eat
 ‘The one who eats it’ (many attestations)

With *a-* initial verbs the *ku-* prefix regularly merge with *a-* as *ky-*, a form which resembles an object participle. There is almost no ambiguity since all *a-* initial verbs are intransitive, §12.3). The only exception are the semi-transitive verbs in *a-*, such as *aro* ‘own’, whose subject participle *ku-yro* ‘having, the one who has’ and object participle *ky-yro* both surface as /kyro/.

The subject participle *ku-* prefix is historically related to that of object participles (§16.1.2), velar infinitives (§16.2.1) and deverbal nouns in *x-/y-* (§16.5.2), and has cognates elsewhere in the family (§16.8.1).

In this section, I discuss first morphological issues (possessive prefixes §16.1.1.3, other prefixes §16.1.1.2 and ambiguous forms §16.1.1.3), and then present the various functions of subject participles, including participial relatives (§16.1.1.4 and §16.1.1.5), complementation strategies (§16.1.1.6), as well as the case of lexicalized participles (§16.1.1.7).

Examples which could potentially be viewed as subject participles in converbial use are analyzed as *ku-* infinitives (§16.2.1.7).

16.1.1.1 Possessive prefixes on subject participles

In the case of transitive verbs, a possessive prefix coreferent with the object is obligatory when no overt object is present (3SG *u-* in 3), and when no other prefix is added to the participle.

When another prefix (polarity, associated motion or orientation preverb) is present, the possessive prefix is optional, as shown by forms like *mx-ku-ndza* ‘the one which does not eat (it)’ in (4), as opposed to *u-mx-ku-mto* ‘the one who does not see it’ in (5) with both possessive *u-* and the negative prefix *mx-*.

 ‘There are [people] who see (find) it, and people who don’t.’ (20-sWrna)
 {0003564#S21}

In the case of ditransitive verbs, the possessive prefix strictly refers to the object. With indirective verbs like *tʰu* ‘ask’, the possessive prefix is necessarily the theme, never the recipient. The form in (6) thus cannot be interpreted as meaning ‘the one who asks me (about it)’; the correct construction would be (7), with the recipient in the dative case.

- (6) *a-kuu-tʰu*

 {0003965#S186}

This construction is used as a type of superlative (§26.4.2).

16.1.1.2 Associated motion, polarity and orientation preverbs on subject participles

Of all non-finite verb forms, subject participles allow the richest possible combinations of inflectional prefixes: associated motion (§15.2, example 13) below with the translocative (*ɕu-*), polarity (§13.1, see 5 above) and orientation preverbs marking TAME (§15.1.1.1) all can be prefixed.

- (13) *tceri nuwa u-cuw-kuw-p^hut ra kuw-tu me*

 ‘But nobody goes and picks it.’ (11-paRzwamWntoR) {0003476#S81}

Two of the four series of orientation preverbs (§15.1.1.1) are possible with subject participles. With A-type prefixes (*tr-* UPWARDS, *pu-* DOWNWARDS etc), the

participle of dynamic verbs is perfective as *t^hu-ku-ye* ‘the one who came’ in (14), and takes stem II (§12.2.1). With B-type prefixes (*tu-* UPWARDS, *pju-* DOWNWARDS), it has a habitual imperfective meaning with dynamic verbs as *ju-ku-yi* ‘the one who (usually) comes’ in (15).² The prefixes *jnu-* and *ku-* do appear on subject participles, but only to express imperfective: there are no Egophoric (§21.3.3) or Sensory (§21.3.2) subject participles.

{0004087#S22}

The participles of stative verbs with series A and B orientation preverbs have an inchoative meaning, exactly like their finite counterpart (§21.5.1.3 and §21.2.6). In (16) for instance, the imperfective participle *jnu-ku-jpum* from *jpum* ‘be thick’ means ‘the one which becomes thicker’, as opposed to the basic participle *ku-jpum* ‘the thick one’.

- (16) *ndzu* *u-ku* *jamar jnu-ku-jpum* *ɣɣzu* *nɣ,*
chopsticks 3SG.POSS-head about IPFV-SBJ:PCP-be.thick exist:SENS SFP
ku-wxti.
SBJ:PCP-be.big
‘There are [maggots] that grow as thick as the tip of a chopstick, the big ones.’ (25-akWzgumba) {0003632#S73}

Imperfective participles of stative adjectival verbs are also can also describe the gradient variation of a property across space rather than time. For instance, in (17), the imperfective subject participles *ku-ku-xts^hum* and *jnu-ku-jpum* are used not to indicate a change across time, but to describe the shape of the gourd, which is progressively thinner towards the top and thicker towards the bottom (on the contrast between the EASTWARDS *ku-* vs. WESTWARDS *jnu-* preverbs in this context, see §15.1.4.3).

²These two examples also illustrate the use of subject participles as purposive complements with the forms *u-ku-ntsye* and *u-ku-ndza* (see §16.1.1.6, §24.4.2.1).

- (17) *tce u-mat nunu, u-taβ ku-ku-xts^hum,*

The past imperfective of stative verbs is built using the series A prefix *pu-* as in the corresponding finite forms (§21.5.3.1). For instance, the past imperfective participle of *ŋu* ‘be’ is *pu-ku-ŋu* ‘the one who used to be ...’ (§5.7.10), as in (18).

- (18) *uzxy nɯ cɯŋgw u-nmaβ pu-ku-ŋu ts^huraŋ nɯ*

 ‘It is fair that she would [be given] to the one who looked for her and found her, not to the ones chasing her.’ (140517 buaishuohua-zh)
 {0004018#S117}

The negative prefix has the form *mu-* when occurring with a perfective orientation preverb as *mu-mu-kuw-sna* ‘the one that is not good anymore’ in (19) and *mɣ-* when no orientation preverb is present (examples 5 and 4 above). With the imperfective orientation preverbs, the allomorph *mɣ-* occurs when preceded by a possessive prefix (20) and *mu-* is found when no possessive prefix is present: compare the elicited forms (22) and (23). The allomorphs of the negative prefix are not in free variation: forms such as †*w-mu-ku-kuw-ts^{hi}* or †*mɣ-ku-kuw-ts^{hi}* would be incorrect in Kamnyu Japhug.

- (22) *w-mɣ-ku-kuw-ts^{hi}*

 ‘The one who drinks it.’ (elicited)

There are no constraints on the number of derivational prefixes in participial forms. The derivational prefixes are all closer to the verb root than the participle prefix *ku-*, and thus follow it as shown by (20), where the active *-nu-*, the leftmost of all derivational prefixes (§11.2.2), is placed after *ku-*.

Aside from possessive, orientation, associated motion and polarity prefixes, subject participles can also receive the Proximative aspect prefix *ju-* (see 252, §21.6.2).

Subject participles can undergo totalitative reduplication (§12.4.1.5, §23.3.2), which applies to the first syllable of the word, whether it is the participle *ku-* or an orientation preverb as in (24), meaning ‘all of those who/that X’.

 (26-mYaRmtsar) {0003674#S99}

16.1.1.3 Ambiguities

The subject participle *ku-* prefix is homophonous with the generic person marker for intransitive subject and object (§14.3.2.5; note that these two prefixes are probably historically related, §14.8.3). In the case of intransitive verbs, some subject participles are therefore homophonous with generic person forms.

For instance, the past imperfective generic *pu-ku-ŋu* ‘one used to be’ in (25) is identical to the past imperfective participle *pu-ku-ŋu* ‘the one who used to be ...’, discussed above (example 18 in §16.1.1.2). In this example, it is obvious that *ku-* is the generic person marker because the verb *pu-ku-rga* ‘one used to be’ occurs as the main verb; outside of any context, *tv-pɤtso pu-ku-ŋu* could be understood as a relative clause ‘the one who used to be a child’, but this is not the meaning of this sentence.

- (25) *tceri tv-pɤtso pu-ku-ŋu tce, nu kɤ-ndza wuma*

 ‘When [we] were children, [we] used to like eating it.’ (12-ndZiNgri)
 {0003488#S126}

16 Non-finite verbal morphology

More generally, the Factual, Imperfective, Past Imperfective and Aorist forms of intransitive verbs in generic person forms are homophonous with unmarked, Imperfective, Past Imperfective and Aorist participles, respectively. In the case of transitive verbs, the subject participle can be identical to the object generic form. For instance, the participle *nu-tu-ku-ndza* ‘the one who eats them’ in (26) only differs from the generic *tu-ku-ndza* ‘it eats us/people’ in (27) by the possessive prefix *nu-*, and that prefix being optional, there are forms that are really ambiguous between participle and generic.

- (26) *nu u-rkuw jɣ-azyut-nu tce, zara nu-tu-ku-ndza*

juw-ŋgrɣl
 SENS-be.usually.the.case
 ‘The one called ‘brown bear’, it eats people.’ (21-pri) {0003580#S91}

The irregular generic *tu-ku-ti* ‘one says’ of the verb *ti* ‘say’ is also identical with the participle ‘the one who says’.

The 2SG→1SG form of transitive verbs in *-a*, due to the vowel fusion rule /-a-a/ → *-a*, are also superficially identical to subject participles. For instance *tu-ku-ndza-a* ‘you eat me’ is pronounced [tukundza] exactly like the generic and the participle *tu-ku-ndza* in the Kamnyu dialect (in the dialects of Japhug where this vowel fusion does not occur, the forms remain distinct).

- (28) *nu kóɣmɯz nɣ tu-ku-ndza-a*
 DEM only.after LNK IPFV-2→1-eat-1SG
 ‘Eat me only after [having taken the thorn from my foot].’ (140426 lang
 yisheng-zh) {0003808#S16}

In the case of stative verbs and some auxiliary verbs, the infinitive has in some cases the form *ku-*, and there is thus ambiguity between infinitive and subject participial forms for these verbs (§16.2.1).

16.1.1.4 Subject relative clauses

The most common use of subject participles is to build participial relative clauses whose head noun is the subject; it is the only way to relativize the subject in Japhug (§23.5.1). Headless relatives are most common (§23.4.1), but when the head noun is overt, the relative can be either prenominal, postnominal or head-internal. With intransitive verbs the difference between postnominal or head-internal relatives is often difficult to ascertain, and many examples are ambiguous; for instance in (29), the relative clause could be argued to be postnominal (limited to the participle *ku-ruɕmi* ‘speaking’) or head-internal (including *tɕ^heme ɲnuuz* ‘two girls’, and possibly even the previous adjunct).

- (29) *k^ha u-ŋgu nuɕtu tɕ^heme ɲnuuz ku-ruɕmi pɣ-tu.*
 house 3SG.POSS-inside DEM:LOC girl two SBJ:PCP-speak IFR.IPFV-exist
 ‘There were two girls speaking in the house.’ (150909 xiaocui-zh)
 {0006386#S144}

Other examples such as (30) are unambiguously head-internal, since the locative adjunct *kum u-rku zu* cannot belong to the matrix clause. This example additionally illustrates the necessity of using a subject relative clause with an existential verb to connect a noun with an postpositional phrase (†*kum u-rku zu pya* would not be a complete sentence).

- (30) *kumpya nunu tɕe [kum u-rku zu pya ku-tu] kɣ-ti*

ɲu-ŋu
 SENS-be
 ‘The word *kumpya* ‘fowl’ means ‘the bird that is next to the door’.
 (22-kumpGa). {0003588#S3}

With transitive verbs, subject head-internal relatives can be distinguished from postnominal ones by the presence of the ergative *ku* on the head noun (§23.4.3), as in (31).

- (31) *[tsuku u-rdu~rdob ku zo t^hotsi u-ku-ta]*

ɣɣzu.
 exist:SENS
 ‘There are people who put a decorative mark [on their bread].’ (160706
 thotsi) {0006133#S20}

Prenominal relatives are relatively rare with intransitive verbs, but commonly occur with transitive verbs, as in (32). Note the presence of indefinite person possessive marking on the head noun *tx-pɣtso* ‘child’ in this example; unlike in Situ (Sun & Lin 2007), the head noun of prenominal relatives in Japhug does not take a third person singular prefix as in a possessive construction (in which case the form †*u-pɣtso* would have been found).

- (32) [*tu-nu* *u-kw-ts^{hi}*] *tx-pɣtso* *yu*
 INDEF.POSS-breast 3SG.POSS-SBJ:PCP-drink INDEF.POSS-child GEN

 3SG.POSS-SBJ:PCP-hurt SENS-be LNK
 ‘It is a disease [that affects] infants who still drink their mother’s milk.’
 (25-kACAl) {0003640#S54}

There are nevertheless prenominal genitival subject relative clauses, containing a subject participle, with the genitive *yu* occurring between the relative clause and the head noun. This construction is especially common in texts translated from Chinese (due to calquing with 的 <de>-relatives, §23.2.3), but also attested in natural speech, as in (33).

 {0006260#S6}

When subject relative clauses contain a complement clause, the main verb of the complement clause can be in subject participle form (see example 84 in §24.4.2.4).

16.1.1.5 Other relative clauses

In addition to subject relativization, the subject participle is also used in possessor relatives, when the relativized element is the possessor of the subject (§23.5.10.1). The head-internal clause in (34) is such a possessor relative; its head noun *si* ‘tree’, possessor of the subject *u-mat* ‘its fruits’, is marked with the genitive, showing that it belongs to the relative.

- (34) [si yur u-mat kur~kur-tu] nuu u-ku ri

 be.usually.the.case:FACT
 ‘People call ‘parrots’, those with a big mouth, who tell [everything],
 including things that should [remain] hidden.’ (24-qro) {0003626#S121}

In addition, there are also participial relative clauses in *kuu-* whose relativized element is neither the subject or the possessor of the subject, in particular locative adjuncts with the relator noun *u-stu* ‘place’ (§23.5.5.3), the only argument of dummy subject verbs (§23.5.3.4) or arguments from complement clauses embedded within the relative (§23.5.11.4).

16.1.1.6 Purposive clauses and other complementation strategies

Subject participles occur in three types of complement clauses and complementation strategies (§24.4.2).

First, the three motion verbs *ɕe* ‘go’, *yi* ‘come’ and *ʎɔɔ* ‘come out’ (§15.1.2.1) use subject participle clauses as purposive clauses (§15.2.10), such as *ndzi-kuu-qur* in (36), whose (transitive or intransitive) subject is coreferent with that of the matrix verb.

- (36) *azo [ndzi-kuu-qur] c^huu-yi-a je*
 1SG 2DU-SBJ:PCP-help IPFV:DOWNSTREAM-COME-1SG SFP
 ‘Let me come to help you.’ (tWJo 2005) {0003368#S26}

Sun (2012) posits the category of *supine* to refer to the cognate construction in Tshobdun. However, given the existence of object participle purposive clauses

(§16.1.2.6, §24.4.2.1) above, I consider the supine to be only a specific use of the subject participle, rather than an independent morphology category.

Second, subject participle relative clauses (§23.8.3, §24.4.2.3) are selected as objects or semi-objects by some verbs such as *nuɕpuɕ* ‘pretend’, ‘imitate’, as in (37).

- (37) *zara kuɕ [c^ha nu ku-kuɕ-ts^hi] to-nuɕpuɕ-nuɕ,*
 3PL ERG alcohol DEM IPFV-SBJ:PCP-drink IFR-pretend-PL
 ‘They pretended to drink the alcohol (‘imitated an alcohol drinker’).’
 (2012 Norbzang) {0003768#S77}

Third, participial clauses occur as genuine complements in some constructions (§24.4.2.4), in particular in negative existential constructions and when the matrix verb is itself in subject participle form, as in (38).

- (38) *[[azo a-kuɕ-cu-nŋo] kuɕ-c^ha] me*

 ‘Nobody can defeat me.’ (150821 edu de wangzi-zh) {0006402#S5}

16.1.1.7 Lexicalized subject participles

A certain number of subject participles have developed specialized meanings and can be considered to have been lexicalized. Some of these lexicalized participles are formally identical to the regular participle (Table 16.2, for instance the noun *kuɕ^hi* ‘candy’ in (39) as compared to the non-lexicalized participle *kuɕ-c^hi* ‘the one that is sweet’ in (40). For such nouns, lexicalization is shown by the meaning specialization and the inability to take orientation, associated motion and polarity prefixes (but not possessive prefixes, as shown by the prefix *a-* on *kuɕ^hi* ‘candy’ in 39).

mɕ-kuɕ-c^hi tu.
 NEG-SBJ:PCP-be.sweet exist:FACT
 ‘When one eats them, some are sweet, some are not.’ (08-rasti)
 {0003460#S49}

Table 16.2 does not include the many names of profession / occupation built from the subject participles which are semantically transparent. We can distinguish two cases.

First, labile verbs derive participial forms such as *ku-lɣy* ‘shepherd’ or *ku-murku* ‘thief’ (from *lɣy* ‘graze’ and *murku* ‘steal’) without an obligatory possessive prefix; the absence of these prefixes cannot be attributed to lexicalization, since these verbs can also be used intransitively (§14.5.1.2).

Second, plain transitive verbs have to undergo antipassive derivation (§18.6) for their subject participles to be usable as names of professions. For instance, *kuɣɣɣɣt* ‘writer’ and *kuɣɣɣɣtɕuβ* ‘tailor’ are from the *ɣɣ-* non-human antipassive forms of *ɣɣt* ‘write, draw’ and *ɣɣuβ* ‘sew’, while *ku-sɣ-suxɕɣt* ‘teacher’ comes from the *sɣ-* human antipassive of *suxɕɣt* ‘teach’ (see Table 18.9, §18.6.7.4). Without antipassive prefixes, the subject participles of (non-labile) transitive verbs require either an overt object or a definite and anaphorically recoverable object, and are used as names of professions. For instance, in (41), the participle *u-ku-ɣɣt* ‘the one writing it’ is used with *ɣɣ-rmi* ‘name’ as its object.

- (41) [*ɣɣ-rmi* *u-ku-ɣɣt*] *ɣɣ-pɣtso* *nu*

 3SG.POSS-side EMPH IFR-reach LNK
 ‘It arrived near the boy who wrote the names (of the contestants).’
 (150826 shier shengxiao) {0006284#S109}

Moreover, I do not include among lexicalized participles cases like ‘shooting star’ (42): although this expression is not compositional, the participle here is not frozen; the verb *mɣɣɣɣɣɣ* ‘marry’ can also occur in finite forms with the noun *ɣɣgri* ‘star’ in the meaning ‘appear, fall (of a shooting star)’ as in (43).

Table 16.2: Lexicalized subject participles

Noun	Base verb
<i>kuβva</i> ‘noble’	<i>βva</i> ‘prevail, win’
<i>kuσpov</i> ‘hole’	<i>σpov</i> ‘have a hole’
<i>kuσ^hi</i> ‘candy’	<i>c^hi</i> ‘be sweet’
<i>kuμ^hγ^hμ</i> ‘ailment’	<i>μ^hγ^hμ</i> ‘feel pain’
<i>ku^hγ^h</i> ‘right thing’	<i>γ^h</i> ‘be’
<i>ku^hμα^h</i> ‘bad thing’	<i>μα^h</i> ‘not be’

In the case of *ku^hγ^h* ‘right thing’ and *ku^hμα^h* ‘bad thing’, lexicalization is very advanced, and the meanings of the nouns are very different from those of the corresponding participles *ku-γ^h* ‘the one that is’ and *ku-μα^h* ‘the one that is not’. Examples such as (44) and (44) illustrate their use in collocation with verbs like *nx^hma* ‘do’ and *fse* ‘be like’.

- (44) *mx-ti-a ma ku^hγ^h mx-tu-nx^hme*

 ‘If he catches up with me, [our enterprise] won’t succeed.’
 (25-kAmYW-XpAltCin) {0003642#S36}

The participle *ku-μα^h* ‘the one that is not’ has been independently grammaticalized as an identity pronoun/determined *kuma^h* ‘other’ (see §6.8 and §9.1.7).

From the nouns *ku^hγ^h* ‘right thing’ and *ku^hμα^h* ‘bad thing’, the intransitive verbs *ruk^hku^hγ^h* ‘do the right thing’, ‘take good care of one’s family’ and *ruk^hku^hμα^h* ‘do bad things’, ‘happen bad things’, ‘be clumsy’ and the transitive verb *nuk^hku^hμα^h* ‘make a mistake’ have been derived by denominal derivation with *ru-* and *nu-* (§20.4.1, §20.7.3).

The subject participle *ku-μ^hφ^hε^hγ^h* ‘the beautiful one’ of the verb *μ^hφ^hε^hγ^h* ‘be beautiful’ has a derived denominal transitive verb *nuk^hku^hμ^hφ^hε^hγ^h* ‘wear (on important occasions)’ with highly derived semantics, reflecting the lexicalized use of the participle in the meaning ‘decoration’ as in (46).

- (46) *tce li u-ku-mpɕɿr ku-fse*

 {0006131#S5}

Several names of diseases only exist as intransitive verbs, and the disease itself or the person suffering from the disease can only be referred to by using a participial or infinitive form. In particular, the word *kɿ-ku-nɿndza* ‘leper’ is the perfective subject participle of *nɿndza* ‘have leprosy’; this word has some degree of lexicalization (in particular, it is a common insult), but it behaves like a participle grammatically; in particular, it can undergo totalitative reduplication (§12.4.1.5, §23.3.2), as in (47).

 (conversation taRrdo 2003)

In addition, we find nouns in *ku-* that can be suspected to be former lexicalized participles, such as *kuiŋu* ‘oath’, which appears to contain the root of the verb *ŋu*

‘be’, though the segment *-j-* cannot be accounted for at the present moment,³ and *kumtɕ^{hi}u* ‘toy’, whose verbal root cannot be identified. The name *kusxyru* ‘mirror’ (an archaic word in the process of being replaced by the Tibetan *ཇེལམེགལ* ‘mirror’) could also be a frozen subject participle of the verb *ru* ‘look at’, but the nature of the prefix *sxy-* is unclear: it could be proprietive prefix (§18.8), or alternatively, be analyzed as a frozen oblique participle prefix (§16.1.3.10). In the second view, the prefix *ku-* would not be identifiable.

Lexicalized subject participles appearing in compounds are also found. Several cases must be distinguished. First, we find subject participles of transitive verbs as the second member of a compound, with their object as the first member. This type of compounds are lexicalized headless relative clauses, like *qalekuuts^{hi}* ‘species of kite’, which combines *qale* ‘wind’ and the participle *u-ku-ts^{hi}* of the transitive verb *ts^{hi}* ‘block’, literally ‘blocking the wind’ (§5.5.1.1), a designation referring to this bird’s ability to apparently remain unmoving in the sky, as described in (49).

 ‘It does not move [flying] but remains [in the sky] in place, slightly flapping its wings.’ (23-RmWrcWftsa) {0003610#S39}

A second type involves two participles in apposition, as *kuurjukuyndzaur* ‘harvestman’, built from the subject participles of the verbs *rju* ‘parch’ and *yndzaur* ‘grind’ (§5.5.1.3). Both verbs being transitive, the absence of a possessive prefix *u-* is an additional clue that the form is fully lexicalized.

Third, there are compounds with the subject participle of transitive or intransitive verbs as first element (see also §5.5.6), for instance *kuqurzngri* ‘evening star’ from *u-ku-qur* ‘the one helping him’ (*qur* ‘help’) and *zngri* ‘star’ literally ‘the star of the helper’, for reasons explained in the following excerpt (50).

Nominalizations with the *x-/y-* prefix (§16.5.2) are ancient lexicalized subject participles that have undergone a syllable reduction rule (§5.6.2, Jacques 2014b: 6) and have become completely separated from their base verbs synchronically.

There are also a few adverbs derived from verbs with a *ku-* prefix, but these are best analyzed as lexicalized stative infinitives (§16.2.1.8).

16.1.2 Object participles

The object participle is a nominalized form which refers to an entity corresponding to the object (§8.1.3) or semi-object (§8.1.5) of the base verb. Nearly all transitive and semi-transitive verbs (except for a handful of exceptions, §16.7) can build an object participle by adding the prefix *kʸ-* (for instance *kʸ-ndza* from the verb *ndza* ‘eat’ in 52). This form is homophonous with, and historically related to the velar infinitive (§16.2.1, §16.8.1).

- (52) *kʸ-ndza*
 OBJ:PCP-eat
 ‘The one that is eaten.’ (many attestations)

In the case of secundative verbs (§14.4.2), the object participle can either refer to the recipient or the theme, as in (53); this question is discussed in more detail in §16.1.2.4.

- (53) *nu-kʸ-mbi*
 AOR-OBJ:PCP-give
 ‘The one that he has given it to.’
 ‘The one that has been given to him.’ (many attestations)

In this section, I first describe the morphological properties of object participles (compatibility with possessive prefixes §16.1.2.1 and other prefixes §16.1.2.2). Then, I discuss several cases of ambiguity between object participles and other *kʸ-* prefixed forms in §16.1.2.3 (see also §16.2.1.1). The uses of object participles to build relative clauses and complement clauses are described in §16.1.2.4 and §16.1.2.6. Finally, I present a few cases of lexicalized object participles in §16.1.2.7.

16.1.2.1 Possessive prefixes on object participles

Unlike subject participles, object participles never require a possessive prefix. An optional possessive prefix coreferent with the transitive subject, as in (54), can however be added.

- (54) *a-kʸ-suz*
 1SG-NMLZ:P-know
 ‘The one that I know.’ (many attestations)

In the case of semi-transitive verbs, the possessive prefix is also coreferent with the subject, as in the form *u-kʸ-rga* ‘the one that he likes’ in (55), built in the

same way as the object participle of the transitive (tropative, §17.5) verb *ny-mum* ‘find tasty’.

- (55) *ri numu stu u-ky-rga, u-ky-ny-mum*

pjy-cti.
 IFR.IPFV-be.AFF
 ‘But it was what he liked most, what he found most tasty.’ (160703
 poucet3) {0006107#S72}

In addition to semi-transitive verbs, the complement-taking verb *c^ha* ‘can’ has object participles taking possessive prefixes meaning ‘the one that *X* can *Y*’, *X* being the subject (marked by the possessive prefix), and *Y* the verb in the complement clause, which can be overt or not as in (56), where *nu-mx-ky-c^ha* stands for *ky-ndo nu-mx-ky-cha* ‘the one(s) that they are able to catch’ (see additional examples in §23.5.11.2).

- (56) *tce nu-mx-ky-c^ha nu k^huna χsum pu-tu q^he, nura*

 dogs, and these [dogs] caught them at once.’ (150831 BZW kAnArRaR)
 {0006378#S41}

16.1.2.2 Associated motion, polarity and orientation preverbs on object participles

Object participles, like subject participles, are compatible with polarity (57), associated motion (58) and orientation preverbs (58).

- (57) *tce azo a-mx-ky-stuz txjmyy nu ky-ndza*
 LNK 1SG 1SG.POSS-NEG-OBJ:PCP-know mushroom DEM INF-eat
mx-naz-a
 NEG-dare:FACT-1SG

tce,
 LNK
 ‘[The mouse] had something to do outside.’ (140518 mao he laoshu-zh)
 {0004030#S77}

Associated motion and polarity prefixes on object participles co-occur with possessive prefixes, as shown by (57) and (58) above, but orientation preverbs (whether perfective or imperfective) do not. This is an important difference between subject and object participles (§16.1.1.2). Object participles only have at most two prefixes.

- (59) *tce pjka wuma numu tce, pjw-ky-nu-ji nu tce,*
 LNK gourd really DEM LNK IPFV-OBJ:PCP-AUTO-plant be:FACT LNK
 ‘The gourd proper is cultivated (it does not grow on its own).’
 (16-CWɿNgo) {0003518#S61}

Finite relative clauses, instead of object participles, can be used to specify both TAME and the subject (§23.2.2).

Unlike subject participles, object participles are attested with the progressive *asu-* prefix, as in (60). It is the only non-finite form compatible with this prefix.

- (60) *te^heme nu ku icq^ha, u-jaɁ <meihua>,*
 girl DEM ERG the.aforementioned 3SG.POSS-hand plum.blossom

 ‘The girl threw down the plum blossom, the flower that she was holding
 in her hand.’ (150907 yingning-zh) {0006264#S28}

These forms are rare and difficult to identify, as they are always ambiguous with object participles or infinitive of causativized verbs. In the case of (60), the context makes it clear that interpretation as the participle of a progressive form is the only possibility, as the same verb with the progressive appears a few sentences before in (61).

- (61) *u-jaɁ nutcu, icq^ha, <meihua> ci*

 IFR.IPFV-PEG-PROG-take-PEG
 ‘She was holding a plum blossom in her hand.’ (150907 yingning-zh)
 {0006264#S19}

16.1.2.3 Ambiguity

There is rampant ambiguity between object participles, *kr*- infinitives and subject participles of passive verbs. The question of the ambiguity between object participles and *kr*- infinitives is discussed in §16.2.1.3.

The passive *a*- merges with the subject participle as /*kr*/, homophonous with the infinitive and the object participle. Potentially ambiguous examples are very common. For instance, in (62), the form /*kr*ku/ could be argued to be an object participle *kr*-*rku* or a passive subject participle *ku*-*r*-*rku*; the second option is chosen here due to the semantics, which fits the passive *arku* ‘be in’ better (as this passive verb is in the process of becoming a locative existential verb, §22.5.1.2). In the absence of any argument in favour of the passive analysis, the ambiguous /*kr*-/ forms are analyzed as object participles by default.

- (62) *syt*^h*a* *u*-*ŋgu* *ku*-*r*-*rku* <*yangyu*> *c*^h*o* *lxpu**y* *nura*

 IPFV-eat[III] be.usually.the.case:FACT
 ‘It eats the radish and the potatoes that are in the ground.’
 (25-akWzgumba) {0003632#S21}

Due to the fact that passive verbs in Japhug are barely attested in perfective forms (§18.1.1), participles with perfective prefixes can be considered to be object participles, especially in cases like (63), where the participle *nu*-*kr*-*χtyr* ‘(those) that have been scattered’ occurs in a sentence following the transitive form *nr*-*χtyr* ‘it scattered, it smashed’.

- (63) *to*-*yi* *tce* *nu*-*zmbriu* *nr*-*χtyr* *zo* *nu*-*ŋu* *tce*,

 ‘The [monster] came up and smashed their ship, and [Norbzang] said to his companions: “Grab the [pieces of the] ship that have been scattered”.’
 (2012 Norbzang) {0003768#S29}

16 Non-finite verbal morphology

The same analysis as object participles, rather than passive subject participles is applied to examples of perfective *kx*- forms also when the transitive verb is not found in finite form in a neighbouring sentence, such as (64).

- (64) *fsapaʁ w-ŋgo rcanu, pu-kx-prɣt zo*
 animals 3SG.POSS-disease UNEXP:DEG AOR-OBJ:PCP-break EMPH
tx-fse ɲu-ŋu.
 AOR-be.like SENS-be
 ‘It was like the disease of the cattle had been [suddenly] stopped.’ (2003
 kAndZislama)

A more marginal case of homophony occurs between object participles and velar infinitives on the one hand, and several finite forms taking the series A orientation preverb *kx*- on the other hand (§16.2.1.1).

16.1.2.4 Object relative clauses

Object participles can be used to build object relative clauses, but compete in this function with finite relatives (§23.5.3). They differ in this regard from subject relatives, which are the only available construction to relativize transitive and intransitive subjects.

As was described in §16.1.2.2, object participles, unlike subject and oblique participles, cannot combine possessive and orientation preverbs.

Object participles with orientation preverbs are used in relative clauses with indefinite subjects, or with definite third person subjects as in (65).

- (65) [*ʔamu ku qajyi nu-kx-mbi*] *nu tu-ndze ɲɣ-ŋu*
 ANTHR ERG bread AOR-SBJ:PCP-give DEM IPFV-eat[III] IFR.IPFV-be
 ‘[As] he was eating the [pieces of] bread that Lhamo had given him.’
 (2002 qajdoskAt) {0003366#S110}

The only example of first or second person that could be interpreted as subject in a perfective object participle relative in the corpus is (66), but in this example (translated from Chinese), the referent of the first person is a pen that has been used to write a poem; the ergative postpositional phrase *azo ku* here can be either analyzed as an instrument (‘the poem that has been written using me’) or as a causee (§8.2.2.6, ‘the poem that he has made me write’), as shown by the presence of the causative *sui*- prefix, not a subject.

- (66) [azo kuu puu-ky-suu-ryt] nuuu pjuu-nduu juu-nyu nétei

 (The pen said): [the poet is reading the poem] that has been written using
 me.' (150818 bi he moshuihu-zh) {0006382#S131}

When the subject is first or second person, an object participle with a possessive prefix is used instead. In (67) for instance, we find *ji-ky-rku* 'the thing that we give' (see §16.5.1 concerning the meaning of this verb) and *ny-ky-suuso* 'the thing that you think / that you want' with a first plural and a second singular possessive prefix, respectively.

- (67) nu ma izo ji-ky-rku me, atu

 {0003746#S1}

Secundative verbs undergoing antipassivization become semi-transitive verbs (§14.4.2, §18.6.4) with the theme remaining the semi-object. Like other semi-transitive verbs, these antipassive verbs can build an object participle, which can then be used to relativize the theme, as in (80).

- (80) *ny-kɣ-ɣɣ-ɣ-mbi* *nɯ tɕ^hi pɯ-ɲu?*
 2SG.POSS-OBJ:PCP-APASS-give DEM what PST.IPFV-be
 ‘What was it that you gave (to people)?’ (elicited)

Object participles also occur in genitival relatives (§23.2.3, postnominal relative with the genitive postposition *ɣu* occurring between the relative clause and the head noun), as in example (81). This type of examples is frequently found in texts translated from Chinese, but unattested in the rest of the corpus for object relativization, and is a clear case of calque (§23.2.3). Although speakers do accept these examples, they cannot be considered to be representative of the normal grammar of the language.

 {0003909#S155}

16.1.2.5 Other relative clauses

Just like subject participles can relativize the possessor of subjects §16.1.1.5), object participles can be used to relativize possessors of objects, as in (82), where the head of the relative *ndzi-mɲaɓ muu-ty-ky-ryt* is not the object ‘their eyes’ (which would result in a non-sensical sentence ‘their eye which had not been drawn were still on the wall’) but rather the possessors (the dragons).

- (82) [*ndzi-mɲaɓ muu-ty-ky-ryt*] *nuni tɕetu, znde u-taɓ*

 DEM:LOC DEM IFR.IPFV-AUTO-exist-DU

‘The two [dragons] whose eyes had not been drawn were still on the wall.’ (160718 hualongdianjing-zh) {0006153#S59}

In light verb constructions with *lyt* ‘release’ (§22.4), the oblique argument encoded with the relator noun *u-taɓ* ‘on, above’ (§8.3.4.3) can be relativized with the object participle. For instance, in (83) and (84), although the noun *tusɲaɓ* ‘enchantment’ is the object of the verb *lyt* ‘release’ in the collocation meaning ‘cast a spell’, the participial relative *tusɲaɓ ty-ky-lyt* means here ‘(prince) who has been enchanted’, not ‘the spell that has been cast’.⁴ The head of this relative is therefore not the object, but the recipient, although this oblique argument is marked with *u-taɓ* ‘on, above’, as shown by example (84).

⁴The second interpretation is however possible, and these relatives are ambiguous.

In addition, there are cases where an object participle can relativize a locative adjunct (§23.5.5.2). The object participle of the perception verbs *mto* ‘see’ and *mts^hym* ‘hear’ can be used to make headless locative relative clauses meaning ‘(a place) where *X* can see/hear *Y*, in particular when occurring as the goal of a motion verb as in (85). Note the optionality of the ergative on the nouns *tçi-rna* ‘our ears’ and *tçi-mnaʁ* ‘our eyes’ in (85).

- (85) [*tçi-rna mʁ-kʁ-mts^hym*], [*tçi-mnaʁ mʁ-kʁ-mto*]

a-jʁ-ce-ndzi ra
 IRR-PFV-go-DU be.needed:FACT
 ‘May they go away [to a place] where our ears cannot hear them, where our eyes cannot see them.’ (2003-kWBRa)

It is not possible in (85) to replace the object participle by an oblique participle *sʁ-*.

16.1.2.6 Purposive clauses

While *kʁ-* prefixed non-finite verb forms are very common in complement clauses, most of these forms are infinitives rather than object participles (§16.2.1.5), since there are no restrictions on intransitive verbs (§16.2.1).

The only complementation strategy where an object participle, rather than an infinitive, has to be posited occurs in the purposive clause of motion verbs when the verb of the purposive clause is transitive and coreference occurs between its object (rather than subject) and the subject of the matrix motion verb, as *kʁ-nʁk^hu* in (86).

- (86) <*xingqi*> *raŋri zo tce nunuu sʁβzuu yuu u-k^ha nutcu*

 ‘He would come to the mouse’s house as a guest.’ (150818 muzhi
 guniang-zh). {0006334#S291}

A possessive prefix coreferent with the transitive subject of *nʁk^hu* can be optionally added on this object participle, as in (87).

- (87) *a-kʁ-nʁk^hu jʁ-ye*
 1SG.POSS-OBJ:PCP-invite AOR-come[II]
 ‘He came to my house as a guest (following my invitation).’ (elicited)

In purposive clauses, the rule is thus that the subject participle is used when there is subject-subject coreference (§16.1.1.6), and the object participle in cases of object-subject coreference (Jacques 2016a: 248).

16.1.2.7 Lexicalized object participles

While some object participles are commonly used as headless relative clauses, few can be considered to be fully lexicalized.

The verbs related to food ingestion such as *ndza* ‘eat’, *ts^{hi}* ‘drink’, *ndzrts^{hi}* ‘eat and drink’, *mox* ‘eat (powdery food)’ have object participles such as *kx-ndza* ‘food’, *kx-ts^{hi}* ‘drink (n), beverage’, *kx-ndzrts^{hi}* ‘food and drink’ and *kx-mox* ‘dry tsampa’, which commonly occur in enumerations (§9.2.2.1) with nouns not derived from verbs, as in (88).

- (88) *u-kx-ndza* *u-kx-ts^{hi}* *u-tukrimgo* *ra*
 3SG.POSS-OBJ:PCP-eat 3SG.POSS-OBJ:PCP-drink 3SG.POSS-butter.bread PL

 2DU.POSS-SBJ:PCP-eat.and.drink IRR-IPFV-not.exist prayer
 ‘May you never lack food or drink, may there nobody [coming to] eat you.’ (2003kAndZWslama)

In these examples, the possessive prefix always refer to the person or animal ingesting the food (not the person giving the food), and although these forms are very common, since their semantics is completely predictable from the base verb, and since the possessive prefix behaves like that of a normal oblique participle, there is no specific reason to consider that they have become nouns and constitute lexical entries that must be distinguished from the verb (except in the case of *kx-mox* ‘dry tsampa’, whose meaning has become more specific).

The forms *kɣ-pa* and *kɣ-stu*, derived from the verbs from the verbs *pa* ‘do’ and *stu* ‘do like’, both meaning ‘manner, method (to solve a problem)’ (like Chinese 办法 <bànfǎ> ‘method’), are other potential candidates to be analyzed as lexicalized object participles (or infinitives). They are particularly commonly used with existential verbs to mean ‘X has (no/a) way to do it’ (X being referred to by the possessive prefix on *kɣ-pa* or *kɣ-stu*), as in (90).

- (90) *a-kɣpa* *maŋe*
 1SG.POSS-method not.exist:SENS
 ‘I have no way of doing it.’ (many attestations)

However, collocation in texts of *kɣ-pa* and *kɣ-stu* with the finite forms of the verbs *pa* ‘do’ and *stu* ‘do like’, as in (91) and, suggest that these forms are still synchronically linked with these verbs, and that it may be more economical to analyze them as participles rather than derived nouns.

 {0003642#S35}

The object participle *kɣ-ti* from the verb *ti* ‘say’, although transparently derived, has an unpredictable meaning in the existential construction. With a negative existential verb, in addition to the expected meaning ‘have nothing to say’, it can be interpreted as ‘be unable to say for sure’, as in (93).

- (93) *a-kɣ-ti* *ci* *maŋe*
 1SG.POSS-OBJ:PCP-say INDEF not.exist:SENS
 ‘I cannot say for sure.’ (many examples)

In addition, there are highly lexicalized object participles occurring as members of compounds; these cases are generally ambiguous, and alternatively analyzable as lexicalized velar infinitives (§16.2.1.9). The incorporating verb *kɣtupa*

‘tell’ is an interesting case: it combines the form *kɣ-ti* (either the participle ‘what one says’ or the infinitive ‘to say’) in bound state *kɣtu-* (the alternative form *kɣtipa* is also attested) with the auxiliary *pa* ‘do’ (§22.4.2.5).

16.1.3 Oblique participles

The *sɣ*-prefix (and its allomorphs *sɣɣ*-, *sɣz*- and *z*-) is used for non-core argument nominalization, in particular recipients of indirective verbs (§8.2.3.2, §8.3.1), instruments (§8.2.2.4), place and time adjuncts, as in (94). It takes a possessive prefix which can be coreferent with any core argument (subject or object).

- (94) *u-sɣ-ɣi*
 3SG.POSS-OBL:PCP-come
 ‘The place/moment from where/when he/it comes.’ (elicited)

Related forms include the gerund (§16.6.1) and the purposive converb (§16.6.2); the historical relationship between these categories is discussed in §16.8.2.

16.1.3.1 Allomorphy

The base form of the oblique participle is *sɣ*-, but three additional allomorphs are also found: *sɣz*-, *z*- and *sɣɣ*-.

The allomorph *sɣɣ*- or *sɣz*- (depending on the voicing of the next consonant) is attested with intransitive (or labile) monosyllabic verbs with an onset without velar/uvular consonant, and without consonant cluster involving a preinitial (§17.2.1.4). This allomorph is to some extent lexicalized, and is not found with all verbs fulfilling these criteria. Table 16.3 presents some of the most common examples of *sɣɣ*- participles in Kamnyu Japhug.

Some of the verbs taking the *sɣɣ*- allomorph do also occur with *sɣ*-. For instance, *me* ‘not exist’ is attested with both *u-sɣɣ-me* as in (95) and *u-sɣ-me* in (96). However, most verbs in Table 16.3 are only compatible with the *sɣɣ*- allomorph.

The allomorphs *svz-* and *z-* occur in the same context, with non-monosyllabic verb stems, where the first syllable (either a productive or a frozen prefix) is sonorant-initial. These two allomorphs are completely interchangeable, without restriction on particular verbs or the function of the relativized element (instrument, locative or temporal adjunct). For instance, the locative participle of *rvzi* ‘stay’ is attested as both *u-svz-rvzi* and *u-z-rvzi* ‘the place when he/it stays’ in the corpus, as shown by examples (97) and (98), a few sentences away from each other in the same story.

 '(He put tape on the drawers so that) they could not be opened, and there was no way to come out of them (to prevent the rats inside from escaping).' (150831 BZW kAnArRaR) {0006378#S18}

The allomorph *syɣ-* is also (though more rarely) attested with the autive *nu-* of verbs that take *syɣ-* in their simplex form. For instance, next to *sy-nu-ɬoɓ*, the oblique participle *syɣ-nu-ɬoɓ* is found in (100) (without autive prefix the oblique participle is *u-syɣ-ɬoɓ*, see Table 16.3).

- (100) *u-syɣ-nu-ɬoɓ yw u-kw-spoɓ*

16.1.3.2 Transitivity

Like subject and object participles, oblique participle keep the verb transitivity, and transitive verbs can take an overt object as *qaj u-sy-ji* 'place for planting

wheat'⁵ in (102).

- (102) *qajsta nuunw kuwɔŋguw qaj u-sɣ-ji*
 TOPO DEM in.former.times wheat 3SG.POSS-OBL:PCP-plant

 this reason, it is called ‘Qaysta’ ‘the place of the wheat.’ (140522
 kAmYW tWji2) {0004057#S101}

An antipassive form (§18.6) is necessary if there is no definite object. For instance in (103), *sɣz-rɣ-ji* ‘place for planting, field’ is based on the *rɣ-* antipassive of *ji* ‘plant’; this form, unlike *u-sɣ-ji* in (102), is used without (and cannot occur with) any noun specifying the crop planted in the field.

 (140522 kAmYW tWji2) {0004057#S17}

16.1.3.3 Possessive prefixes

Possessive prefixes on oblique participles are optional, though their presence is preferred in careful speech.

With intransitive verbs, the possessive prefix refers to the subject, as *a-sɣz-nɣri* ‘the place where I stay’ in (104).

- (104) *a-kɣ-ndza ri ɣɣzu, a-sɣz-rɣzi ri*
 1SG.POSS-OBJ:PCP-eat also exist:SENS 1SG.POSS-OBJ:PCPoblique-stay also
ɣɣzu q^he
 exist:SENS LNK
 ‘(There), I have food to eat and a place to stay.’ (150831 renshen wawa)
 {0006418#S22}

With transitive verbs, the possessive prefix can be coreferent with the object. For instance, in (105), the plural *nuu-* on *nuu-sɣ-tɕuβ* refers to the many types of clothes and shoes mentioned just before in the same text.

⁵Note that participle *u-sɣ-ji* can have other interpretations, including ‘the period when it is planted’, as in (129) below.

- (105) *nuust^hamtɔt yu nu-sɣ-tɕuβ nu tu-ŋgru*

 IPFV-CAUS-make-PL
 ‘People use sinew to sew that many [types of clothes and shoes].’
 (150906 tWNgru) {0006304#S17}

However, it is also possible for the possessive prefix to be coreferent with the subject. This is particularly common when the subject is first or second person, and no overt object is present, as *ny-sɣ-ta* ‘the place where you put it’ in (106).

- (106) *kuɔtɛ nuɔtɕu ny-sɣ-ta me ú-ŋu*
 other DEM:LOC 2SG.POSS-OBL:PCP-put not.exist:FACT QU-be:FACT
 ‘Isn’t there any other place where you put [the food]?’ (meimei de gushi)

There is no person hierarchy in slot accessibility to the possessive prefix however; in (107), the possessive prefix on *nu-sɣ-ntɕ^hoz* marks the subject, although the object is first person plural.

- (107) *tɛ izora yu nu-sɣ-ntɕ^hoz a-pu-tu tɛ ju-tɕum*
 LNK 1PL GEN 3PL.POSS-OBL:PCP-use IRR-IPFV-exist LNK SENS-be.grateful
 ‘We are glad that [some] of us have an opportunity to be useful to them.’
 (conversation)

When the object is overt (§16.1.3.2), it is rare to put a first or second person possessive prefix coreferent with the subject on the participle. Rather, a possessive prefix occurs on the object, as in (108) and (109), as if *k^hutsa sɣ-rku* ‘place where one puts the bowls’ and *mbrɣz sɣ-rku* ‘rice container’ were compounds.

 ‘We don’t have any place to put the bowls.’ (elicited)

If the object is an inalienably possessed noun, it can be alienabilized (§5.1.2.9). For instance, the 1PL possessive form of *tu-ŋga sɣ-χtɛi* ‘washing machine’ can be either (111a) with alienabilization or (111b) without it.

- (111) a. *ji-tu-ŋga sɣ-χtɛi*

 ‘Our washing machine’ (111a heard in context, 111b elicited)

16.1.3.4 Polarity and orientation preverbs

Unlike subject and object participles, the only prefixes (other than possessive prefixes) that oblique participles can take are the polarity prefixes and series B orientation preverbs.

It is thus not possible to have perfective or past imperfective oblique participles, and alternative strategies are used to express the corresponding meanings. For instance, from the verb *sqa* ‘cook’, the form †*u-pu-sɣ-sqa* (intended meaning: ‘the thing that has been used to cook’) is incorrect, and the solution to circumvent this morphological constraint is to combine the plain oblique participle *u-sɣ-sqa* with *pu-ku-ŋu* (the past imperfective subject participle of *ŋu* ‘be’) and with the phrase *nu ɕuŋgu* ‘before that’, as in (112).

- (112) *nw cunɣw u-sɣ-sqa pu-ku-ɲu u-ɲgw*

 (06-qaZmbri) {0003416#S17}

16.1.3.5 Locative relative clauses

The oblique participle can be used to build many different types of relative clauses, with various non-core arguments and adjuncts as relativized elements, including locative, temporal, instrumental adjuncts and dative arguments. The most common ones are the locative relative clauses.

With motion verbs like *ɕe* ‘go’ or verbs of manipulation, the relativized element can be either the goal (the endpoint of the motion, as in 114), or the path through which the motion event takes place: in (115) for instance, the head *tɕu* is a locative adjunct (‘the road through which one goes to *X*’) different from the goal (the placename *prɣɕta*).

 for it to spread, one plant can yield about fourty pumpkin.’ (16-CWrNgo)
 {0003518#S95}

The relativized locative adjunct can also be the place of origin rather than the goal in the case of the verb *yi* ‘come’ as in (117).

- (117) *izora nu ji-sɿ-yi nuɕu ɲɿ-ŋu tce.*
 1PL DEM 1PL.POSS-OBL:PCP-come DEM:LOC IFR.IPFV-be LNK
 ‘The place from where we come was there.’ (2010-06)

With stative verbs or dynamic verbs implying no motion, the oblique participle has a static locative meaning, as in (118).

- (118) *tɿ-tɕu tɕ^heme tu-sɿ-ɿmdzu zaka tu.*
 INDEF.POSS-son girl INDEF.POSS-OBL:PCP-sit each exist:FACT
 ‘Gentlemen and ladies each have [different] seating places.’ (31-khAjmu)
 {0004079#S10}

Participial locative relative clauses are used to describe non-transient properties of places: directions, locations or places of origin that are unchanging characteristics of things or persons (115 and 117), places where some state of affair generally occurs due to a natural law (116 and 128) or places used for a specific purpose, as in (118), and even more clearly in (119) with the property noun *u-rkoz* ‘something special’ (§16.5.1).

16.1.3.6 Instrumental relative clauses

Another very productive type of oblique participial relatives are the instrumental relative clauses (§23.5.6). Although instruments, like transitive subjects, receive ergative case (§8.2.2.4), they are usually relativized with oblique participles.

There is often ambiguity between instrument relativization and locative adjunct relativization; for instance, while the participle *u-z-rɣ-rɣt* can mean ‘pen (the tool used to write)’ as in (123), this form can also designate the paper on which one writes or even one’s office.

- (123) *u-slamaxti nuu yuu, [u-z-rɣ-rɣt]* *ci*

 IFR-AUTO-take LNK IFR-VERT-take.away SENS-be LNK
 ‘He took away the pen of a classmate.’ (2014-tou dongxi de xiaohai-zh)

Instrumental relative clauses built with oblique participles can occur as objects of the causativized verb *su-βzu* ‘cause to make; use X to make’, as in (124).

- (124) *nunu [tu^thu sɣ-ɣtci], [tu-ŋga sɣ-pɕiz] nuura*

pu-ŋgrɣl
 PST.IPFV-be.usually.the.case
 ‘People used to employ it (a boat oar) to mix [the alcohol].’ (31-cha)
 {0003764#S42}

Oblique participles are used to make instrumental relative clauses, used like nouns of instruments, from both transitive and intransitive verbs. If the base verb is transitive, the participle retains its transitivity: thus in (125), the absence of object in the one-word relative clause *u-sɣ-ɕmi* ‘the tool used to mix it’ is the result of zero-anaphora, and implies a definite object. Instrumental relative clauses with a transitive verb more often have an overt object, as in (124). For indefinite objects, antipassivization is necessary, as in *u-z-rɣ-rɣt* ‘the tool used to write’ in (123) above (see also §16.1.3.2).

The relativized instrument need not be an entity, but can also be an action. For instance, in the pseudo-cleft (126), what is referred to by the participial relative is the infinitival clause *mɣɣm kɣ-p^haɣ*.

- (126) *qajdo [u-rzaβ u-ɕki u-sɣz-nuɣmɣzu] nu*

16.1.3.7 Other oblique relative clauses

In addition to goals, locative adjuncts and instruments, oblique participles are used to relativize various other types of arguments and adjuncts, though those cases are considerably less common in the corpus.

Dative arguments (in *u-ɕki* or *u-p^he*, §8.3.1) are relativized with an oblique participle (§23.5.8), as is shown by (127), where the verb *fɕɣt* ‘tell’ also occurs as the main verb of the second clause with an overt recipient marked with the dative.

- (127) *[u-sɣ-fɕɣt] pɣɣ-me q^he tee tɣ-pɣtso*

 ‘She had no one [else] to tell, so she told the boy everything that had happened.’ (140515 congming de wusui xiaohai-zh) {0003998#S74}

Likewise, comitative phrases in *c^ho* (§8.2.5) and occurring with verbs with intrinsically non-singular subjects (§14.2.6), are relativized with an oblique participle. For instance, the participle *u-sɣ-ɣmuumi* in (128) is a headless relative meaning ‘those with whom it is on good terms with’.

- (128) *tce uzo [u-sɣ-ɣmuumi] nu dɣn*

 goats.’ (04 qala1) {0003392#S30}

Time adjuncts are also possibly relativized using oblique participles, as *u-sɣ-ji*, which means ‘the period when it is planted’ in (129). However, finite relative clauses are the preferred way of relativizing time adjuncts (§23.5.9). As in the case of locative relative clauses (§16.1.3.5), participial relative clauses are only used to refer to specific dates and time periods that are intrinsic properties of the event.

- (129) *tce numu zaka [u-sɣ-ji] nu-ɲu tce*
 LNK DEM each 3SG.POSS-OBL:PCP-plant SENS-be LNK
 ‘These are the [periods] when people plant each of these [crops].’ (15

Temporal relative clauses are generally headless, but (130) shows an example of head-internal (or postnominal) relative clause, with *skɣrma* ‘minute, date’ as its head noun. In addition, this participial relative has here a superlative interpretation (§26.4.2).

- (130) *lɣsvr ɣsum u-raj tce, tuɣpalɣskɣr yuu, nɣkinuu, [skɣrma*

Even in context, the exact meaning of a particular oblique relative clause may allow some leeway in interpretation. For instance, the participle *ji-syx-ɕe* in the negative existential construction in (132) could be understood as a locative relative clause ‘(we had no) place to go’ but also alternatively as ‘(we had no) opportunity to go (anywhere)’ in this particular context.

16.1.3.8 Causative

The oblique participles can occur as object of the verb *βzu* ‘make’, with a purposive (133) or causative (134) interpretation. These meanings derive from the instrumental nominalizing uses of the oblique participle.

- (133) *tu-ji u-rku ra tx-yur ɲu-ta-nu tce,*

 {0004004#S118}

16.1.3.9 Ambiguity

The various allomorphs of the oblique participle do resemble other prefixes found in Japhug. The *sɣ-* and *sɣɣ-* allomorphs are also found with the proprietive derivation (§18.8), and *sɣ-* is also similar to the human antipassive, or the sigmatic causative of *a-* initial verbs (§12.3). Finally, the *z-* allomorph of the oblique participle can resemble the causative (§17.2.1.1) or one allomorph of the translocative prefix (§15.2.1.2).

However, unlike subject (§16.1.1.3) and object (§16.1.2.3) participles, these surface ambiguities are only very superficial, as the forms with which the oblique participle could potentially be confused are all finite, and hardly ever occur in the same syntactic context as the oblique participle (and except for their bare infinitive form, in the case of transitive verb, never occur with a possessive prefix).

In the case of the *z-* allomorph of translocative prefix, note that it only occurs before a few orientation preverbs (*ju-*, *ɲɣ-*, *ju-*, *ɲɣ-*, *jo-*, *ja-*), whereas the oblique participle *z-* can only follow an orientation preverb, as in *u-c^hu-z-rabrɯz* in (135), so that the two forms can never be confused.

16.1.3.10 Lexicalized oblique participles

Nouns of instruments and of location, including placenames, are often made from oblique participles.

The noun *sɣcu* ‘key’, although transparently originating from the instrumental use of the oblique participle of *cu* ‘open’, is lexicalized as shown by the fact that it cannot take orientation preverbs, and that it occurs in collocation with the auxiliary *lɛt* to mean ‘lock (the door)’ as in (136).

- (136) *u-ŋguw lɣ-yi jɣy ma sɣcuw*

mɣ-a-lɣt
 NEG-PASS-throw
 ‘Come in, the door is not locked.’ (140428 xiaohongmao-zh)
 {0003884#S73}

Place names built from oblique participle include *Znɣɣɣma*, from the locative participle *z-nɣɣɣma* of the verb *nɣɣɣma* ‘pray for rain’ (probably a denominal verb from a compound **ɣɣma* based on *tu-ɣyi* ‘seed’ and *ta-ma* ‘work’, §20.7.1), as it was the place where people used to perform this activity in Kamnyu in the traditional society, as explained in §18.6.7.3.

Another example is the uninhabited place called *kulɣysɣmdzu*, a transparent combination *ku-lɣy* ‘shepherd’ (§16.1.1.7) and *u-sɣ-ɣmdzu* ‘sitting place’ reflecting the use of this place (as described in 137).

- (137) *kuw-xtɕu-xtci ci zo antɣm, tɕe nuu*

There are also case of nouns of instruments in *sɣ-* whose base verb is not identifiable. For instance, the noun *sɣɕɕuɣy* ‘strap’ (to carry children on the back), which is glossed using an oblique participle as in (138), is most certainly a frozen oblique participle, but there is no verb **ɕɕuɣy* in Japhug.

- (138) *tɣ-pɣtso uu-sɣz-burwa*
 INDEF.POSS-child 3SG.POSS-OBL:PCP-carry.on.the.back
 ‘Something used to carry children on the back’ (definition given for the noun *sɣɕɕuɣy*)

Some nouns originating from lexicalized participles have an irregular *s-* allomorph (Table 16.4). Their antiquity is shown by the existence of exact cognates in Tangut (Jacques 2014c: 49;299) and Khroskyabs (Lai 2017: 514; 580). All three nouns are used as relators in relative clauses (§23.2.4, §23.5.5.3), and *u-spa* ‘material’ additionally occurs to build a type of purposive clauses (§25.5.4).

In addition from the general meaning of ‘place’, the nominal stem *-sta* has three highly specific meanings: *tu-sta* ‘bed’, *tr-sta* ‘designated place (for burying a dead

Table 16.4: Examples of fossilized oblique participles in *s-*

Noun	Base verb	Tangut	Khroskyabs
<i>u-spa</i> ‘material’	<i>pa</i> ‘do’		= <i>spi</i>
<i>u-stu</i> ‘place’	<i>tu</i> ‘exist’	𐞗 ⁵¹⁶⁵	<i>twu</i> ^{1.58}

pu-nu-fse *ny*
 PST.IPFV-AUTO-be.like ADD
 ‘She had become again like she was before.’ (2003 Kunbzang)

More speculatively, it is possible that other allomorphs of the oblique nominalization are preserved in some nouns, even when the base is lost. For example, *zmbriu* ‘boat’ might be the lexicalized participle of a verb **mbriu* ‘float’ (cognate of 浮 *bjuw* ← **m.b(r)u* ‘float’, Zhang et al. 2019) with a fronted *z-* allomorph (like that of the sigmatic causative, §17.2.2.4).

An even more pronounced type of lexicalization occurs when an oblique participle becomes member of a compound with *status constructus* vowel alternation. In these cases, it is probable that the compound is genitival, rather than a reduced relative clause.

As first element of compound, we find the oblique participle *u-sx-qru* (from the verb *qru* ‘greet, welcome, receive’) in bound state combined with the noun *c^ha* ‘alcohol’ into *syqrxc^ha* ‘alcohol offered to one’s guests’ (§5.5.1.1). There are also cases of undetectable bound state, as in *syrguŋga* ‘bed cover’ from the oblique participle of *rgu* ‘lie down’ and the inalienably possessed noun *tu-ŋga* ‘clothes’: since the first element of this compound *sy-rgu* ends in *-u*, it would not have a different bound form.

Oblique participles are also attested as second element of compounds from both transitive and intransitive verbs.

As an example of lexicalized participle from an intransitive verb, the compound *t^sxyngxt* ‘crossroad’ combines the participle *u-sx-NGxt* ‘place where X

part ways’ from the anticausative verb *ngɔt* ‘part ways, part company’) with the bound state of the noun *tʂu* ‘road’, from an earlier locative participial relative **tʂu u-sɣ-ngɔt* ‘the place where roads separate’.

With a transitive verb, we find the noun *βyɣsɣprɔt* ‘watermill valve’, from an earlier instrumental relative **βya u-sɣ-prɔt* ‘the tool used to stop (water) in the mill’ from the bound state *βyɣ-* of *βya* ‘mill’ combined with the oblique participle *u-sɣ-prɔt* of the verb *prɔt* ‘break’. With undetectable bound state, we have for instance *p^husɣti* ‘belows’ from the onomatopoeia *p^hu* and the oblique participle of *ti* ‘say’, literally ‘the tool used to make ‘pff’ sound’.

The noun *tɣresɣtɕutɕɣt* ‘joke’ is an example of compound without bound state on the first element. It comes from the reduplicated oblique participle of the verb *tɕɣt* ‘take out’, which occurs in collocation with the inalienably possessed noun *tɣ-re* ‘laugh (n)’ to mean ‘mock’, as in (140). The original meaning of this compound presumably was ‘something/someone to make fun of’.

- (140) *a-re* *ma-tu-tɕɣt*
 1SG.POSS-laugh NEG:IMP-2-take.out
 ‘Don’t laugh at me!’ (elicited)

In the lexicalized compound *tɣresɣtɕutɕɣt*, *tɣ-re* is alienabilized (§5.1.2.9); this noun occurs in collocation with the verb *βzu* ‘make’ or the causative *sυβzu* ‘cause to make’ in the sense of ‘joke’. It can specifically mean ‘mock’, in which case the compound *tɣresɣtɕutɕɣt* takes a possessive prefix coreferent with the *subject* of *βzu* (the person making the joke, not the object of mockery), as shown by the presence of the third dual possessive prefix *ndzi-* in (141) and the second singular *nɣ-* in (142).

 2SG.POSS-joke NEG:IMP-IMP-2→1-CAUS-make-1SG
 ‘Don’t mock me!’ (elicited)

In these cases, the noun occurring as first element of the compound corresponds to the object of the verb.

The expression *sɣrma* ‘good night’ derives from the oblique participle of the verb *rma* ‘stay the night, live’, and presents unusual morphological properties (§14.7.1).

16.2 Infinitives

16.2.1 Velar infinitives

The most common infinitives in Japhug are the velar infinitives, built from the stem I of the verb and prefixed either with *kɣ-* or *ku-*; they are homophonous with participles (and historically related to them, §16.8.1) and not always easily distinguishable from them (§16.2.1.1). They are in particular the preferred citation form of the verbs (§16.2.1.4), though not with all speakers.

The *ku-* infinitives are found with stative verbs (including adjectives and existential verbs), impersonal modal verbs and some anticausative verbs; other verbs take the *kɣ-* infinitives. In Tshobdun, Sun (2014b: 235) reports that the *kə-* and *kɔ-* infinitives (corresponding to *ku-* and *kɣ-* in Japhug) occur with non-human and human arguments, respectively (in the case of dynamic verbs). It seems that this criterion is not applicable to Japhug.

Stative verbs in *a-* have regular fusion of *ku-* and *a-* as */kɣ-/*, and thus superficially appear to have *kɣ-* infinitives (for instance, the infinitive of *arŋi* ‘be green’ is *ku-ɣŋi* */kɣŋi/*).

16.2.1.1 Infinitives vs. participles

It is not immediately obvious that a category of ‘velar infinitives’ needs to be distinguished from participles in Japhug, as both are non-finite verbal categories prefixed in *kɣ-* or *ku-* (§16.1.2.3 and §16.1.1.3).

The necessity to set *kɣ-* infinitives apart from object participles stems from the fact that the latter can only be built from transitive or semi-transitive verbs, while the former also occurs with strictly intransitive verbs. Thus, if one were to argue that all *kɣ-* prefixed non-finite forms of transitive verbs are object participles, including in the case of complement clauses (for instance *kɣ-ndza* in 143), one would not be able to account for the *kɣ-* prefixed forms of intransitive verbs occurring in the same context such as *kɣ-ɕe* in (144) – even though *ɕe* ‘go’ could be considered to be a kind of semi-transitive verb (since it can take a goal, which can be relativized with a finite relative clause, §23.5.5.1), it is not possible to build

a participial relative clause by prefixing *kr-* on this verb (the oblique participle *sx-* must be used instead, §16.1.3).

- (143) *azo kr-ndza mu-pu-rjo-t-a*
 1SG ???-eat NEG-AOR-experience-PST:TR-1SG
 ‘I never ate that.’ (many attestations)

- (144) *aj kr-çe mu-pu-rjo-t-a*
 1SG INF-GO NEG-AOR-experience-PST:TR-1SG
 ‘I never went there.’ (150820 ZNGWloR) {0006292#S3}

I therefore adopt the following criteria to distinguish between a *kr-* infinitive and an object participle: *kr-* non-finite forms of (non-semi-transitive) intransitive verbs are infinitives; *kr-* non-finite forms of transitive and semi-transitive verbs occurring in the same contexts as the infinitives of intransitive verbs are infinitives.

By systematically applying these criteria, we can identify three contexts where infinitives are attested: citation form (§16.2.1.4), complementation (§16.2.1.5; object participles used in complement clauses are discussed in §16.1.2.6), and manner converbs (§16.2.1.7).

Distinguishing between subject participles and *ku-* infinitives in Japhug is less straightforward, unlike in other Gyalrong languages such as Tshobdun for instance, Sun 2014a, since even stative verbs take the *kr-* infinitive in complement clauses (§16.2.1.5). The only clear contexts where *ku-* infinitives do occur is that of citation forms (§16.2.1.4) and complement clauses containing impersonal modal verbs (§16.2.1.5). Converbs in *ku-* are analyzed as infinitives rather than subject participle because they are only attested with stative verbs or other verbs taking the *ku-* infinitives (§16.2.1.7).

16.2.1.2 Associated motion, polarity and orientation preverbs on infinitives

With the exception of the construction in §16.2.1.6 and some converbial uses (§16.2.1.7), *kr-* infinitives do not take possessive prefixes. However, like participles, they are compatible with associated motion (145), negative prefixes (146) (with double negation, §13.3) and B-type orientation preverbs (147), with combinations of two prefixes.

 which it is said that if the blood comes out and gets into contact with
 other parts of the skin, it will spread) (24-pGArtsAG) {0003624#S56}

Negative infinitives take the allomorph *mɣ-* (as in 146), unless an imperfective orientation preverb is present, in which case the negative is *mu-* as in (147).

Impersonal and stative infinitives in *ku-* are only attested with the negative prefix *mɣ-*.

16.2.1.3 Ambiguity

Aside from the homophony between infinitives and participles (§16.2.1.1), another type of ambiguity occurs with verbs selecting the orientation preverb EASTWARDS, whose A form is *kɣ-* (§15.1.1.1). Intransitive verbs in imperative singular and perfective third singular forms (for instance *kɣ-ŋgu* ‘he laid down’) and transitive verbs without stem alternation in imperative singular (*kɣ-ts^{hi}* ‘drink!’, §21.4.2.1) have forms that are homophonous with the corresponding infinitives (*kɣ-ŋgu* ‘to lie down’, *kɣ-ts^{hi}* ‘to drink’), but these cases are never really ambiguous, as it is trivial to distinguish between a finite verb form and a non-finite one, for instance by changing from singular to dual or plural.

For instance, in a particular context, if a form such as *kɣ-ŋgu* can be changed to the corresponding plural *kɣ-ŋgu-mu* (which can be either perfective AOR-lie.down-PL ‘they laid down’ or imperative ‘lie down!’), it is possible to conclude that this *kɣ-ŋgu* is necessarily finite (since non-finite verb forms in Japhug never take indexation affixes, §2.4.2.3) and cannot be an object participle or an infinitive.

16.2.1.4 Citation form

The infinitive is the preferred form to refer to a verb in metalinguistic discourse as a citation form. In this context stative and impersonal verbs consistently take

the *ku-* prefix as in (148), and the rest of verbs the *ky-* prefix, as in (149) and (150). Even in citation form, the infinitive verb can take orientation (150) and polarity prefixes (148).

The infinitive is commonly used in metalinguistic discussions about collocations, and in those cases can appear together with intransitive subjects (148) or objects (150). In the latter, the focus is on the noun *u-kɣlɣjme* ‘head upside down’ (§5.7.8.3), the verb *ɕt^huʒ* ‘turn towards’ being present only because it is selected by *u-kɣlɣjme*.

- (150) *u-mɲu nuw pa pjuw-wɣ-ɕt^huʒ tce nuw*

 IPFV-GENR:A-say be:FACT

‘One turns the mouth [of the container] downwards, it is called ‘to turn upside down’.’ (30-macha) {0003746#S64}

The infinitive is not the only possible choice as a citation form; some speakers sometimes cite a generic form (especially with the imperfective, as *pjuw-wɣ-ɕt^huʒ* in 150) or other finite forms (even imperatives).

Outside of metalinguistic discourse, the stative/impersonal infinitive is also used as subject of adjectival stative verbs such as *pe* ‘be good’ as in (151), expressing the meaning ‘the fact of ... is good’.

16.2.1.5 Complementation

The most common function of the velar infinitive is to build complement clauses (§24.2.1). Apart from a handful of well-identified cases (§16.1.1.6), all *kɣ-* prefixed verb forms in complement clauses are infinitive rather than object participles (using the criteria in §16.2.1.1).

Velar infinitives occur with a great variety of auxiliaries and other complement-taking verbs (§24.2.1) as well as a few complement-taking nouns (§24.6). Few verbs however require the infinite in complement clauses. Some complement-taking verbs like *c^ha* ‘can’ occur with either infinitival complement clauses as in (154) or finite complement clauses (§24.2.3), and other verbs like *ɾno* ‘experience’ are compatible with both velar infinitives and bare infinitives (§16.2.3). The constraints on co-reference between the subject of the matrix verb and the participants of the complement clause is treated in §24.2.1.2.

- (154) *u-kʰχɔl* *u-bru* *nu a-nu-p^hut* *tce*

 INF-VERT-go can:FACT SENS-be.AFF
 ‘If one takes out the horn on his head, he will be able to go back [to the heavens].’ (divination 2005)

Complex velar infinitive forms with polarity, orientation and associated motion prefixes are attested in complement clauses, as in (155) (see also for instance 145 and 146 in §16.2.1.2).

- (155) *azo [ɕu-kʰ-ɕar]* *pu-rɲo-t-a*.
 1SG TRAL-INF-search AOR-experience-TR:PST-1SG
 ‘I did go to search [for *Amanita caesarea*].’ (22-BlamajmAG)
 {0003584#S30}

Stative verbs, when occurring in a complement clause, generally take the *kʰ*-infinitive, as in example (156) and (157). The main verb of the complement clauses in these examples have the *kʰ*-infinitive, even though both *tu* ‘exist’ and *scit* ‘be happy’ are stative verbs and have a citation form with the *ku*-prefix.

- (156) [*a-rɲul* *kʰ-tu*] *pu-rɲo-t-a*
 1SG.POSS-money INF-exist PST:IPFV-experience-PST:TR-1SG
 ‘I used to have money.’ (elicited)
- (157) [*kʰ-scit*] *ɲɲ-ɲgru* *ɲu-ɲu*
 INF-be.happy IFR-succeed SENS-be
 ‘She succeeded in being happy.’ (150818 muzhi guniang-zh) {0006334#S6}

The conversion to *kʰ*-infinitive only applies to stative verbs, not to impersonal modal verbs such as *ra* ‘be needed’. When the latter occur in a complement clause, as in example (158), they always have the *ku*-prefix.

- (158) [[*smɲn* *kʰ-ndza*] *ku-ra*]
 medicine INF-eat INF:IMPERS-be.needed
pu-rɲo-t-a
 PST:IPFV-experience-PST:TR-1SG
 ‘I used to have to take medicine.’ (elicited)

The velar infinitive is also found in some adnominal complement clauses, for instance in the collocation comprising the nouns *ftɕaka* ‘method’ or *kowa* ‘manner’ with the transitive verb *βzu* ‘make’ (§24.6.3.1), as (160) below (see also 147 above).

In infinitive complement clauses, the complement verb lacks person/number indexation. However, in the case of the verbs that require coreference between the core arguments of the matrix clause and those in the complement clause, the person and number of the subject (and sometimes also the object) of the complement clauses are reflected on the indexation of the verb in the matrix clause (§24.2.1.2). For instance, in (159), both the infinitive *kɣ-ti* ‘to say’ and the matrix verb *múj-spe-a* ‘I am not able’ share the same 1SG subject and 3SG object (*u-mdov* ‘its colour’).

- (159) *nw u-mdov nw aj [kɣ-ti] múj-spe-a*
 DEM 3SQ.POSS-colour DEM 1SG INF-say NEG:SENS-be.able[III]-1SG
 ‘I don’t know how to say (describe) its colour.’ (06-qaZmbri)
 {0003416#S50}

This is also the case with noun+verb collocations taking complement clauses: in (160), the verb form *tú-wy-βzu* reflects the 3PL→2SG configuration of the infinitive *kɣ-ndza* ‘to eat’ in the complement clause.

- (160) *a-rfit ra nw-yi-nw eti tɕet^ha,*
 1SG.POSS-children PL VERT-come:FACT-PL be.AFF:FACT in.a.moment
kɣ-ndza kowa tú-wy-βzu eti
 INF-eat manner 2-INV-make:FACT be.AFF:FACT
 ‘My children are coming back home soon, and they will try to eat you.’
 (2012 Norbzang) {0003768#S258}

With velar infinitive complements, some auxiliary verbs take the orientation preverb selected by the verb in the complement clause (§24.3.5).

16.2.1.6 Doubly prefixed velar infinitives with negative existential verbs

The infinitive in *kɣ-* can take two prefixes in a construction combining the negative existential verb *me* ‘not exist’ (§22.5.1.2) with a verb in the infinitive prefixed with a B-type orientation preverb and a possessive prefix coreferent with the subject,⁸ meaning ‘have no way to X, be completely unable to X’, as in (161) and

⁸The assertion in Jacques (2016a: 228) that infinitives cannot take possessive prefixes is thus wrong.

(162). Note that since in both of these examples, the verbs are intransitive and lack an object participle, the *kɣ-* form can only be analyzed as an infinitive here. This construction is also possible with transitive verbs, in which case the possessive prefix corresponds to the transitive subject.

(161) *tce ndzi-ju-kɣ-ce pɣɣ-me*
 LNK 3DU.POSS-IPFV-INF-go IFR.IPFV-not.exist
 ‘They could not go.’ (150908 menglang-zh) {0006320#S41}

 ‘He could not sleep the whole night, because...’ (150831 BZW kAnArRaR)
 {0006378#S12}

A derived construction involves the causative *ɣɣme* ‘destroy’, ‘cause not exist/have’, ‘suppress’ with doubly prefixed infinitives to ‘make it impossible for X to Y’ as in (163).

(163) *a-pju-kɣ-nuɰɰβ na-ɣɣ-me*
 1SG.POSS-IPFV-INF-sleep AOR:3→3’-CAUS-not.exist
 ‘It kept me from sleeping.’ (elicited)

There is a variant of this construction with imperfective subject participles in *ku-* instead of infinitives (§16.1.1.6).

16.2.1.7 Converbial function

Velar infinitives in *kɣ-* can also be used as converbs, in subordinate clauses that are neither relatives nor complement clauses, with a variety of meanings.

The most common function of converbial infinitives is similar to the gerund (§16.6.1.3), expressing either the manner in which an action takes place (as in 164, 166 and 167) or describing an additional action occurring at the same time as that referred to by the main verb (as *laɣtɕ^ha kɣ-fkur*, with an overt object, in 165) (additional examples are presented in §25.4).

(164) *kɣ-ŋke lɣ-ye-a*

 2SG thing INF-carry.on.the.back IPFV-2-walk SENS-be LNK
 ‘You are walking carrying things on your back.’ (150909 hua pi-zh)
 {0006278#S12}

Converbial infinitives also indicate the degree to which an action is undertaken, as in the common expression *t^hi k^h-c^ha zo* ‘do whatever X can to Y’ in (166).

- (166) [*t^hi k^h-c^ha*] *to-k-yndzuit-ci ri, maka zo*

 ‘[The dog] barked as much as it could, but it was all for nothing.’ (140426
 gou he qingwa-zh) {0003802#S20}

The converbs can also be followed by adverbs of quantification like *βja* ‘completely’ (§22.2.2.1), as illustrated by (167).

- (167) <*kaihui*> *ku-fse tx-ra tce, k^h-ηke βja zo*

 ‘When one had to [take part in] a meeting for instance, one had to go on
 foot.’ (12-BzaNsa) {0003484#S20}

Infinitives in these functions can optionally be followed by the ergative *ku*, like the gerunds (§16.6.1.3), as shown by (168).

- (168) *maka to-numbrɣpu-nu tce li k^h-rɣuy ku zo jo-ce-nu.*
 completely IFR-ride-PL LNK again INF-run ERG EMPH IFR-go-PL
 ‘They mounted their horses and galloped away.’ (140512 alibaba-zh)
 {0003965#S39}

Unlike gerunds (§16.6.1.3), infinitive converbs do not necessarily imply that two different actions take place at the same time. In (167) and (168) for instance, the converbs *k^h-ηke* and *k^h-rɣuy* do not express a motion event distinct from that described by the main verb; rather, the verb *ce* ‘go’ indicates the direction and deixis of the motion, while the converbs specify the speed and manner of realization of the action. Note that in this particular example, using the gerund is not possible.

The converbial infinitives are attested with the negative prefix *mɣ-*, meaning ‘without Xing’, and generally refer to the way in which the action is performed as in (169).

- (169) *maka mɣ-kɣ-ruusuiso kuu zo ‘jɣ’ to-ti, to-nɣla.*

 ‘She said ‘yes’, she agreed without thinking at all.’ (140429 qingwa wangzi-zh) {0003890#S65}

Negative infinitive converbs can have an adversative interpretation (§25.6.1.1). In (170), *mɣ-kɣ-ɣtuɣ* ‘not meeting’ expresses the non-realization of a telic event that was the original purpose of the previous actions of the main referent.

- (170) [*a-mu a-wi ni mɣ-kɣ-ɣtuɣ*]
 3SG.POSS-mother 3SG.POSS-grand.mother DU NEG-INF-meet
kú-wy-suu-jyat-a-ndzi.
 IPFV:EAST-INV-CAUS-go.back-1SG-DU
 ‘[My uncles] forced me to go back [to school] without having seen my mother and my grandmother (even though I had not met them).’
 (2010-Dpalcan-09)

Converbial infinitival clauses can contain an object or a semi-object which does not belong to the main clause, as *a-mu a-wi ni* ‘my mother and my grandmother’ in (170). The dual on *kú-wy-suu-jyat-a-ndzi* refers to the subject (‘the uncles’, mentioned in the previous clause), not the mother and the grandmother.

In nearly all examples, there is subject (S/A) coreference between the matrix clause and the converbial clause, but examples like (170), where we rather observe coreference between the *object* of the main clause and the subject of the subordinate clause, shows that there is no syntactic constraint on subject coreference in this construction.

Infinitives in *ku-* (impersonal or stative) also occur as converbs, though these forms could in principle also be analyzed as subject participles (§16.1.1). For instance, in (171) *mɣ-ku-mbrɣt* ‘without stop’ is considered to be an impersonal infinitive serving as a manner converb, but it could be possible to propose an alternative analysis as a *ku-* subject participle ‘the one which does not stop’ used adverbially. The analysis as infinitives however better accounts for the fact that only the verbs whose infinitive is in *ku-* have converbial forms in *ku-*.

16 Non-finite verbal morphology

ɲu-cti tce,
 SENS-be.AFF LNK
 ‘It works without stopping at all.’ (26-GZo) {0003668#S62}

The existential verbs also occur in converbial use. For instance, *tu* ‘exist’ in infinitive form *ku-tu* following a noun or a pronoun can mean ‘in the presence of...’ as in (172).

- (172) [*zara ku-tu*] *zo to-sɣuru tce,*
 3PL INF:STAT-exist EMPH IFR-compare LNK
 ‘He compared [his testimony with theirs] in their presence.’ (150909 xifangping-zh) {0006408#S147}

Similarly, the negative existential verb *me* ‘not exist’ in infinitive converbial form means ‘without...’, as in example (173).

- (173) *tce nɣj a-pi [nɣzo ku-me] azo kɣ-rɣzi*

mɣ-c^ha-a
 NEG-can:FACT-1SG
 ‘Brother, without you I cannot stay [here].’ (2011-05-nyima)

16.2.1.8 Velar infinitives as adverbs

The *ku-* infinitive of stative verbs can be used to create adverbs. The most common example is the degree adverb *kuxtɕuɣxtɕi* ‘a little’ from *xtɕi* ‘be small’ in sentences such as (174). In this example, the co-occurrence of an adverb derived from *xtɕi* ‘be small’ with the verb *wxti* ‘be big’ shows that this adverb is already fully grammaticalized, otherwise such a sentence would be self-contradictory.

- (174) *βzɯ sɣz ku-xtɕu~xtɕi wxti.*
 mouse COMP INF:STAT-EMPH~be.small be.big:FACT
 ‘It is a little bigger than a mouse.’ (21-GzWLa) {0003570#S4}

An even more lexicalized example is *mɣkuɣts^hi* ‘forcibly’, which occurs in particular with causative verbs to express coercive causation (§17.2.5.2), as in (175).

- (175) *tcendyre mykuf^hi zo, n^hki u-me yu u-mi*
 LNK forcibly EMPH FILLER 3SG.POSS-daughter GEN 3SG.POSS-foot
n^hu icq^ha tu-xtsa u-ŋgu nu^htcu

 IFR:DOWNSTREAM-CAUS-put.in
 ‘She forced her daughter to put her foot into that shoe.’ (140504
 huiguniang-zh) {0003909#S219}

This adverb is formally the negative stative infinitive of the verb *ft^hi* ‘feel better’ (of a disease) (§17.2.3).

These adverbs are probably lexicalized from infinitival converbs (§16.2.1.7), but differ from them in lacking any argument structure.

16.2.1.9 Lexicalized velar infinitives

Lexicalized velar infinitives in *kɣ-* found in some compounds, though some cases could alternatively be analyzed as lexicalized object participles, and are treated in §16.1.2.7.

The delocutive expression *ŋɣtɕukɣti + k^hu* ‘be obedient’ provides an unambiguous example of lexicalized velar infinitive. The compound *ŋɣtɕukɣti* combines the pronoun *ŋotɕu* ‘where’ in bound state form *ŋɣtɕu-* with the infinitive *kɣ-ti* of the verb *ti* ‘say’, and is exclusively used in collocation with *k^hu* ‘be possible’, ‘agree’, as in (176).⁹ This expression originates presumably from a phrase such as ‘agree (*k^hu*) to whatever (*ŋotɕu*) X says (*kɣ-ti*)’. However, it should be noted that the pronoun *tɕ^hi* ‘what’, not *ŋotɕu* ‘where’ is used in Japhug in the free-choice indefinite construction meaning ‘whatever’ as in examples (98) to (100) in §6.6.6). The form *kɣ-ti* in any case was originally the complement of the verb *k^hu* ‘be possible’, which takes infinitival complements (§24.5.3.1), and thus is not analyzable as a former object participle.

- (176) *u-tɕu kuβde nura wuma zo ŋɣtɕukɣti*
 3SG.POSS-son four DEM:PL really EMPH obey.to.everything(1)

 xiongdi-zh) {0003935#S15}

⁹The causative *ŋɣtɕukɣti + suk^hu* ‘cause to be obedient’ also exists.

16.2.2 Bare infinitives

Bare infinitives are formed by combining the stem I of the verb with a possessive prefix coreferential with the object of the complement clause, as in example (177). Bare infinitives are not attested with orientation, polarity or associated motion prefixes. They historically derive from bare action nominal (§16.4.6), which have become a very restricted subclass.

- (177) *nyzo ku-fse* *a-ŋk^hor* *nuu u-mto*
 you NMLZ:STAT-be.like 1SG.POSS-subject TOP 3SG.POSS-BARE.INF:see

 NEG-AOR-experience-PST:TR-1SG
 ‘I never saw anyone like you among my subjects.’ (28-smAnmi, 393)
 {0004063#S373}

With *bzyβ* ‘be careful’ as matrix verb however, the possessive prefix can also index the transitive subject as in (178) (expressing an indefinite object).

- (178) *kytsa* *ni ndzi-pa* *ɲuu-bzyβ* *rca*
 parents.and.children DU 3DU.POSS-BARE.INF:do SENS-be.careful SFP
 ‘The two of them do things very carefully.’ (14-05-10)

Intransitive verbs do not have bare infinitives. Complement-taking verbs selecting bare infinitives for transitive verbs either take *tuu-* infinitives (§16.2.3) or velar infinitives (§16.2.1) when occurring with intransitive verbs.

16.2.2.1 Complement clauses

Bare infinitives only occur in complement clauses (§24.2.2). Apart from the aspectual verb *ŋno* ‘experience’, ‘have already *X*’ mentioned above in (177), bare infinitives are found with two categories of complement-taking verbs.

First, they are compatible with some phasal verbs (§24.5.6.2) such as *za* ‘begin’, *sɣza* ‘begin’, *st^hut* ‘finish’ and *jɣy* ‘finish’ as in (179).

- (179) *tce nunuu tuu-ŋga* *nuu u-tɕuuβ* *t^hu-jɣy*
 LNK DEM INDEF.POSS-clothes DEM 3SG.POSS-BARE.INF:sew AOR-finish
 ‘When one has finished sewing the clothes, ...’ (30-tWNgā)
 {0004069#S29}

Second, they are found with some adjectives such as *βdi* ‘be well’ and derived sigmatic or velar causative verbs such as *ɣɣ-βdi* ‘repair, cause to be good, do *X* well’ as in (180) (see §17.3.2.2, §24.5.1.4).

- (180) *lu-ji-nuu* *q^he u-nɣpupa* *tu-γɣ-βdi-nuu*,

 care of it and add enough fertilizer, it becomes fibrous (so that it can be
 sowed for the next year).’ (140522 kAmYW tWji) {0004055#S46}

The same set of verbs take complement clauses with dental infinitives when the verb of the complement is intransitive (§16.2.3.2).

The bare infinitives also occur in adnominal complement clauses with the noun *u-ts^huya* ‘shape, manner’, as in (181).

- (181) *ndzi-mi* *u-ts^hoβ* *u-ts^huya* *nuura wuma*

 EMPH be.the.same:FACT-DU
 ‘The way their legs [of fleas and crickets] touch the ground is very
 similar.’ (26-mYaRmtsar) {0003674#S17}

No verb requires a bare infinitive: all complement-taking verbs selecting it are either alternatively compatible with velar infinitives (§16.2.1.5) or a finite complement (§24.2.3).

16.2.2.2 Bare verb stem in negative existential construction

A non-finite form resembling bare infinitives without possessive prefix is found in an unusual construction with the negative existential verbs *me* ‘not exist’ and *maje* ‘not exist’ (§13.1.2) with alternative concessive meaning ‘whether or not X, it amounts to the same’ (§25.2.3.2), in which the bare verb stem occurs in affirmative and in negative form with the negative prefix *mɣ-*. Unlike bare infinitives proper, this form exists with both transitive (182) and intransitive verbs (183).

- (182) *ndza* *mɣ-ndza* *me-a*
 BARE.INF:eat NEG-BARE.INF:eat not.exist:FACT-1SG
 ‘Whether [you] eat me or not, it amounts to the same.’ (sentence
 obtained as the correction of a sentence I produced to translate a story

 BARE.INF:go NEG-BARE.INF:go not.exist:SENS
 ‘I can hear half of it, can’t hear the other half, whether or not [I] go, it amounts to the same.’ (conversation 140510)

In this construction, the negative auxiliaries can take person marking, and are obligatorily coreferential with the object if the verb in the complement clause is transitive, as in (182). With intransitive verbs, no person marking appears on the negative verb as in (183).¹⁰ In this construction, the transitive subject (whether of transitive or intransitive verbs) cannot be overt.

Although the non-finite form *ce* in (183) superficially resembles a 3SG Factual Non-Past (§21.3.1), the absence of stem III alternation (§12.2.2) on *ndza* in (182) shows that this cannot be a finite form (otherwise *ndze* ‘s/he/it will eat/eats it’ would be expected).

16.2.3 Dental infinitives

Dental infinitives (glossed as ‘second infinitives’ INF:II) are built by prefixing *tu-* with the verb stem. Dental infinitives occur with intransitive verbs, including dynamic (184) and stative verbs (185), including semi-transitive verbs, but are not attested with transitive verbs, which take bare infinitives or velar infinitives instead.

- (184) *tu-ŋke ta-za tce*
 INF:II-walk AOR:3→3'-start LNK
 ‘When it starts moving...’ (26-NalitCaRmbWm) {0003676#S76}

With contracting verbs (§12.3), regular vowel fusion between the *tu-* prefix and stem-initial *a-* occurs, resulting in the surface form /tɣ-/ as in (185).

- (185) *si nu daltɕutsa nu tu-ɣŋi jo-za tce*
 tree DEM slowly DEM INF:II-be.green IFR-start LNK
 ‘The tree slowly started to become green.’ (divination 2003)

However, a few morphologically transitive verbs selecting dummy subjects (§14.3.5), in particular *lɣt* ‘release’ and *βzu* ‘make’ do take *tu-* infinitives as in

¹⁰The fact that only the object is indexed on the auxiliary verb suggests here that this construction displays nominative-accusative alignment.

(186). Note that in these complex predicates, the light verbs *lxt* ‘release’ and *βzu* ‘make’, although transitively conjugated, cannot take an overt subject marked with the ergative, and only have one argument.

- (186) *tu-muu ku-wxtu~wxti zo tu-lxt pjx-za*
 INDEF.POSS-sky SBJ:PCP-EMPH-be.big EMPH INF-throw IFR-start
 ‘A heavy rain started.’ (150819 haidenver-zh) {0006314#S101}

It is possible that dental infinitives are historically related to degree nominals (§16.3) and action nominals (§16.4), which however do not display the same transitivity restrictions. Several hypotheses accounting for the origin of dental infinitives are presented in §16.8.3.

16.2.3.1 Polarity prefixes

Dental infinitives are only compatible with polarity prefixes (as in example 187), and cannot take orientation or associated motion. Possessive prefixes on dental infinitives only occur in the simultaneous construction with the verb *supa* ‘cause to do’ (§24.5.1.3).

- (187) *qaʃy u-me nunuu, tcendyre k^hro mɣ-tu-rga to-za*
 fish 3SG.POSS-daughter DEM LNK a.lot NEG-INF:II-like IFR-start
 ‘He started not liking the mermaid that much [anymore].’ (150819
 haidenver-zh) {0006314#S149}

Degree nominals present the same constraints on orientation and associated motion prefixes (§16.3.1).

16.2.3.2 Complement clauses

Dental *tu-* infinitives are only attested in complement clauses (§24.2.2), and are only found with the verbs that select a bare infinitive (§16.2.2.1) when the verb in the complement clause is transitive. This complementary distribution suggests that bare infinitive and dental infinitives could be treated as two variants of the same grammatical category.

Dental infinitives are more often attested with phasal verbs, in particular *za* ‘begin’ and *sɣza* ‘begin’ as in (188).

- (188) *mts^hu nuu c^humc^hum zo, tce, tu-skɣm pjx-sɣza*
 lake DEM IDPH(II):slowly.retreating EMPH LNK INF:II-be.dry IFR-start
 ‘The [water of the] lake started to retreat slowly.’ (nyima wodzer 2003)

16 Non-finite verbal morphology

Non-phasal verbs selecting bare infinitive such as *ṛno* ‘experience’ never occur with the dental infinitive in the corpus, but such forms can be elicited, as in (189). In the corpus, intransitive complements of the verb *ṛno* ‘experience’ rather velar infinitives; it is also possible in (189) to replace the dental infinitive *tu-yi* with a velar infinitive *ky-yi*.

- (189) *mbark^hom tu-yi pu-ṛno-t-a*
 TOPO INF:II-come AOR-experience-PST:TR-1SG
 ‘I came to Mbarkham before.’ (elicited)

Like other intransitive verbs, antipassivized transitive verbs can take a dental infinitive (as in 190), unlike the base verb from which they are derived (as in 191, where a bare infinitive is used instead).

- (190) *tu-ry-ryt pa-za*
 INF:II-APASS-write AOR:3→3’-start
 ‘He started writing.’ (elicited)

- (191) *txscoz ur-ryt pa-za*
 letter 3SG.POSS-BARE.INF:write AOR:3→3’-start
 ‘He started writing the/a letter.’ (elicited)

In addition, dental infinitives also occur in complements of causativized verbs (§24.5.1.3, §24.5.1.4), and in the construction expressing simultaneous actions with *supa* ‘cause to do’ described in §16.2.2.1.

16.3 Degree nominals

Degree nominals are built by combining the verb stem with a nominalizing *tu-* prefix and a possessive prefix coreferent with the subject, as the dual *ndzi-* in (192). The form *ndzi-tu-ymumi* also shows that the nominalization *tu-* prefix undergoes regular vowel fusion with stem-initial *a-* to /tʁ/.

- (192) *tcendyre ndzi-tu-ymumi*

 3DU.POSS-NMLZ:DEG-be.happy PST.IPFV-be.extremely EMPH SENS-be
 ‘They were very happy together.’ (2005 Lobzang) {0003370#S14}

All gradable stative verbs can form degree nominals. They most typically occur in constructions expressing degree as in (192) (§16.3.4, §26.1.2), but can also indicate manner as in (193).

- (193) *nw-mi w-tw-ɣʃbu kwnɣ múj-naχtcwɣ.*
 3PL.POSS-leg 3SG.POSS-NMLZ:DEG-be.curved also NEG:SENS-be.the.same
 ‘[People with clubfoot] also differ in the way that their feet are curved (some have both legs curved, some only one, some have the legs rotated inwards, others rotated outwards) (160719 kAmARu)

With dynamic verbs, degree nominals express either the intensity or the frequency of an action as in (194), or the manner of the action (195). Such examples are however uncommon in the corpus.

- (194) *japa tce p^hawrgot w-tw-nɣru ɲw-saxav*

 EMPH IPFV-discuss-PL PST.IPFV-be.AFF:FACT
 ‘People would discuss whether one sat properly or not.’ (31-khAjmu) {0004079#S28}

Degree nominals from transitive verbs are extremely rare, but do occur in particular for tropative verbs (§17.5) as in (196). It is possible to elicitate degree nominals for most transitive verbs, even if such forms are not attested in the corpus.

- (196) *maka w-tw-nɣ-mpɣɣr kw pɣ-nɣscɣr*
 completely 3SG.POSS-NMLZ:DEG-TROP-be.beautiful ERG IFR-be.startled
zo.
 EMPH
 ‘He found her so beautiful that he was startled.’ (140429 jiedi-zh)

Although similar in form to dental infinitives (§16.2.3) and action nominals (§16.4), they differ from both categories in requiring the presence of a possessive

prefix (see §16.8.3 concerning the historical relationship between these forms). In addition, unlike dental infinitives, degree nominals are compatible with both intransitive and transitive verbs. Their semantics is also fully predictable, unlike action nominals which tend to be lexicalized (§16.4.5).

Degree nominals occur in exclamative nominal predicates (§16.3.3), degree constructions (§16.3.4) and also several types of complement clauses (§16.3.5).

Another type of degree nominal is built by compounding the stems of two antonyms, for instance *jaɓmba* ‘thickness’ (of a sheet) from *jaɓ* ‘be thick’ and *mba* ‘be thin’ (§5.5.2.2). The corresponding regular degree nouns also exist (*u-tu-jaɓ* and *u-tu-mba*).

16.3.1 Polarity prefixes

Like dental infinitives (§16.2.3.1), degree nominals cannot be used with orientation or associated motion prefixes, but can be found with the negative prefix *mɣ-*, as in (197).

- (197) *maka u-mɣ-tu-nɯɣu-ŋke* *ɸjɣ-saxaɓ* *zo*
 at.all 3SG.POSS-NEG-NMLZ:DEG-FACIL-walk IFR.IPFV-be.extremely EMPH
 ‘It was extremely inconvenient to walk [on the soft earth].’
 (2014-kWLAG)

16.3.2 Argument structure

Unlike action nominals, degree nominals still keep their argument structure intact. They can take complements exactly in the same way as finite verb forms. For instance, *βdi* ‘be well’ takes the bare infinitive *u-taɓ* in (198).¹¹

- (198) *maka nu raz rcanu, u-tu-pe*
 at.all DEM cloth UNEXP:DEG 3SG.POSS-NMLZ:DEG-be.good
ɸɯ-saxaɓ zo, u-taɓ

 SENS-be.extremely
 ‘This piece of cloth is very nice, it is extremely well woven, it is extremely beautiful.’ (140521 huangdi de xinzhuang-zh) {0004047#S77}

¹¹Note that the bare infinitive *u-taɓ* from the verb *taɓ* ‘weave’ is homophonous with the relator noun *u-taɓ* ‘on, above’ (§8.3.4.3) and that this construction is potentially ambiguous.

In (199), the verb *mbat* ‘be easy’ selects a finite complement clause comprising the verb *c^hu-wxti* ‘it grows bigger’ in imperfective third singular form.

- (199) *c^hu-wxti* *u-tu-mbat* *ɲu-sɣre* *zo*
 IPFV-be.big 3SG.POSS-NMLZ:DEG-be.easy SENS-be.ridiculous EMPH
 ‘It grows very easily.’ (25-akWzgumba) {0003632#S70}

Degree nominals can also be used with oblique arguments, such as the first person marked by the relator noun *a-taʁ* (unrelated to the bare infinitive *u-taʁ* from the previous example) in (200).

- (200) *a-wi* *a-taʁ* *u-tu-ɣyutʂum*

u-grɣl *me*
 3SG.POSS-order not.exist:FACT
 ‘My grandmother was extremely kind to me (so that I have to repay her).’ (2005 Kunbzang)

16.3.3 Nominal predicates

Degree nominals commonly occur as nominal predicates (§22.3), either with the sentence final particle *nu* as in (201), or as a bare noun phrase as in (202). In this predicative use, degree nominals express an exclamation, possibly including surprise as in (98) and (202).

- (201) *lɣ-yi-nu* *wo tɣ-rundzɣts^{hi}-nu* *ma,*
 IMP:UPSTREAM-come-PL SFP IMP-have.a.meal-PL C
nu-tu-mtsur-ɕpaʁ *nu,*
 2PL.POSS-NMLZ:DEG-be.hungry-be.thirsty SFP
nu-tu-ɲat *nu*
 2PL.POSS-NMLZ:DEG-be.tired SFP
 ‘Come in and have a meal, you [must be] so hungry, thirsty and tired!’
 (160701 poucet2) {0006155#S39}

Example (198) can be compared with (202) with the verb of degree *saʁaʁ* ‘be extremely’ in sensory form. It is possible that the use of degree nominal as nominal predicates historically results from the ellipsis of the degree predicate. The high frequency of the predicative use of degree nominals in the corpus however indicates that this usage has been constructionalized.

- (205) *ny-tu-sy-nyk^he* *nuu my-ra*
 3SG.POSS-NMLZ:DEG-APASS:HUM-bully DEM NEG-be.needed
 ‘You are out of line (‘you should not bully people like that’).’ (28-qajdo)
 {0003718#S14}

The degree nominals also seem to occur as adnominal complement of *u-ts^huya* ‘shape, manner’ as in (206). Note however that since bare infinitives are attested in complement clauses of this noun (see example 181, §16.2.2.1), it is also conceivable that the forms *u-tu-ts^hu* and *u-tu-rɔm* could be alternatively analyzed as dental infinitives (§16.2.3).

- (206) *paβ nuu u-βri,* *nyki,* *u-rme* *ku-me* *zo*

 {0003550#S44}

16.4 Action nominals and abstract noun

16.4.1 *tu-* action nominals

There are two types of action nominals in Japhug: action nominals in *tu-*, a very productive formation which is the main topic of this section, and the bare action nominals, treated in §16.4.6.

Action nominals in *tu-* can be built from both intransitive and transitive verbs. They differ from both participles and infinitives in that the argument structure of the verb is lost and the transitivity contrast neutralized, and cannot take objects or oblique arguments other than possessors like normal alienably possessed nouns.

The action nominal has three potential meanings. First, it can refer to the action itself, for instance *tuji* ‘planting and sowing’¹³ from the verb *ji* ‘plant’, *tuɲɲaβ*

¹³This action noun should not be confused with the related inalienably possessed noun *tu-ji* ‘field’, which is a different nominalized form.

from *nat* ‘be tired’ with an additional *-y-* or *txɣɣm* ‘pain’ from *mɣɣm* ‘feel pain’ with a missing *-m-*.¹⁴

Abstract nouns mainly occur with the ergative *ku*. These postpositional phrases express either the manner in which an action takes place (§8.2.2.5) as in (208), or the cause of the action describe by the main verb due to a high degree as in (209) (see also §26.1.2.1).

- (208) *tx-rga* *ku zo t^hw-ari* *ɲu-ɲu*.
 NMLZ:ABSTRACT-be.happy ERG EMPH AOR:DOWNSTREAM-go[II] SENS-be
 ‘She went there happily.’ (2005 Kunbzang)

Example (209) also illustrates that one ergative postposition can follow several abstract nouns linked with the comitative *c^ho* or in bare coordination (§9.2.2).

- (209) *a-bi,* *tx-ɣnat* *c^ho*
 1sg.poss-younger.sibling NMLZ:ABSTRACT-be.tired COMIT
tx-mtsur *tx-cpaɐ* *ku*

 ‘Brother, we are so tired, hungry and thirsty that we can’t [go any further], let us rest!’ (2012-qachGa) {0004087#S138}

The meaning of the abstract nouns in (209) is very similar to that of degree nominals (§16.3.4) combined with the ergative in examples such as (210).

- (210) *maka w-tu-mtsur* *ku kɣ-ɲke mu-ɲɣ-c^ha*
 at.all 3SG.POSS-NMLZ:DEG-hungry ERG INF-go NEG-IFR-can
 ‘It was so hungry that it could not walk anymore.’ (140515 huli he yelv-zh) {0004002#S37}

Abstract nouns in *tx-* are also attested without ergative to express the state or condition described by the adjective, for instance *tx-mtsur* ‘hunger’ from *mtsur* ‘be hungry’, as in (211) and (212). Note in both example the possibility of adding a possessive prefix on the noun.

¹⁴In the case of *txɣɣm* ‘pain’ it is possible that the verb *mɣɣm* ‘feel pain’ derives from the noun with the irregular allomorph of a denominal prefix, which could be either *ɣɣ-* (§20.5) or *mɣ-* (§20.6). Note also the existence of the compound noun *tuxtxɣɣm* ‘dysentery’ from the bound state of *tu-xtu* ‘belly’ with the root *-ɣɣm*.

16.4.3 Simultaneous

The simultaneous action nominal is built by prefixing an additional *tu-* to the base form of the action nominal, resulting in a double *tu-tu-* prefixed form. It is found in collocation with the verb *βzu* ‘make’ (§22.4.2), and optionally with the comitative *c^ho* (§8.2.5), linking two noun phrases referring to the entities undergoing the action together as in (213).

- (213) *ty-wa* *nui kwi w-tɕwi* *c^ho* *w-me* *ni*
 INDEF.POSS-father DEM ERG 3SG.POSS-son COMIT 3SG.POSS-daughter du
ɸnawna zo *tu-tu-rqov* *ko-βzu.*
 both EMPH SIMULT-NMLZ:ACTION-hug IFR-make
 ‘The father hugged both his son and his daughter at the same time.’
 {140427 xiong he mei-zh} {0003862#S21}

In this construction, the orientation preverb on *βzu* ‘make’ is the one that is lexically selected by the verb in simultaneous action nominal form (EASTWARDS in 213, reflecting the centripetal function of this orientation, §15.1.4.3). With orientable verbs (§15.1.2), the unspecified orientation *ja-* can be selected (214).

- (214) *zɸni tu-tu-ce* *ja-βzu-ndzi*
 3DU SIMULT-NMLZ:ACTION-go AOR:3→3’-make-DU
 ‘They went at the same time.’ (elicited)

Example (214) also illustrates the fact that, when the verb in simultaneous action nominal form is intransitive, the shared subject (here *zɸni*) is in absolutive form, even though *βzu* is transitive. This type of construction is described in more detail in §24.4.3.2.

The first *tu-* prefix in the simultaneous construction is probably from the numeral *tu-* ‘one’ prefix (§7.3.1.1), added to a *tu-* action nominal. With intransitive verbs, the dental infinitives in *tu-* (with a possessive prefix coreferent with the subject) also occur to express simultaneous actions in collocation with the light verb *supa* ‘cause to do’, as shown by (118) in §16.2.2.1. The action nominal simultaneous construction differs however from the dental/bare infinitive simultaneous construction in that in the former the action of the same verb applies to different subject/objects, while in the latter the same subject performs actions expressed by different verbs.

This category is difficult to distinguish from denominal verbs from bare action nominals (§16.4.6) taking an indefinite possessor prefix *tu-*. For instance, the transitive verb *tɕ^hu* ‘gore, stab’ can be used in a light verb construction in *lyt* ‘release’ in bare infinitive form, as in (218).

- (218) *u-tɕ^hu* *to-lyt*
 3SG.POSS-BARE.INF:gore IFR-throw
 ‘He stabbed him.’ (elicited)

The denominal verb *nututɕ^hu* ‘stab’ (attested in 219) is most probably derived from the indefinite form *tu-tɕ^hu* of the bare infinitive in the construction in (218), though it is also conceivable that this form comes from the action nominal.

- (219) *to-nututɕ^hu tɕe pjɣ-sat*
 IFR-stab LNK IFR-kill
 ‘She stabbed and killed him.’ (140512 alibaba) {0003965#S285}

16.4.5 Lexicalized action nominals

Action nominals in *tu-* are prone to lexicalization, developing meanings that are unpredictable from the base verb.

Action nominals from verbs related to preparation or ingestion of food can become names of specific types of food. For instance, *tusqa* ‘wheat gruel’ and *tuts^{hi}* ‘rice gruel’ originate from the transitive verbs *sqa* ‘cook’ and *ts^{hi}* ‘drink’, though the synchronic link between these nouns and the base verbs has ceased to be completely obvious. Other cases of unpredictable meanings are found with *tupu* ‘moxibustion’ (with the verb *ta* ‘put’ §22.4.2.6, as in 220), which derives from *pu* ‘cook’ (especially of potatoes in hot ashes, but is not used in reference to moxibustion).

- (220) *tupu* *ku-ta-nu* *tɕe, tɣ-pytso* *yw u-laz*

 one IPFV-put-PL
 ‘(To treat this disease), they apply moxibustion, they apply it to the
 forehead of the child.’ (25-kACAI) {0003640#S64}

In some cases, the action noun has a highly restricted meaning in comparison with the base verb, limited to one particular sub-meaning. For instance, the noun *tupɣaɁ* ‘land clearing’ (221) (used in collocation with *tɕɣt* ‘take out’,

§22.4.2.3) derives from the transitive verb *pyaʁ* ‘turn over’, which has the meaning ‘plough’ when occurring with the orientation preverb UPSTREAM (see example 136 in §18.6.3). This noun lacks the basic meaning of the base verb and its additional extended meanings (such as ‘go across (a mountain)’, like Chinese 翻山 <fānshān> ‘cross a mountain’). The antipassive *rypyaʁ* ‘reclaim land’ has the same meaning restriction as the action noun, an observation whose significance is developed in §20.10.1.2.

- (221) *tupyʁ lo-tɕxt-ndzi*
 field.clearing IFR:UPSTREAM-take.out-DU
 ‘They cleared fields.’ (07-deluge) {0003426#S109}

The divergence in meaning between the action nominal and the base verb can also be due to semantic innovation in the verb. For instance, the verb *rma* means in Japhug ‘to stay at someone else’s place (for a few nights), as in (222), but the action nominal *turma* ‘household’ (223), suggesting that the original meaning of the verb used to be ‘live’ and became more restricted semantically, while the derived noun preserved its original meaning.

- (222) *syndzuum <laoshi> u-ɕki ri kɣ-ari-a tce, tu-rzaʁ*

 house PL IFR-cover-DU LNK household IFR-take-DU
 ‘They built a house and established a family.’ (02-deluge 2012)
 {0003376#S121}

Note the barely translatable use of the action nominals *turma* and *tuβlu* (the latter from the transitive verb *βlu* ‘burn’) in the expression used as the conclusion of most traditional stories in (224).

- (224) *turma tu-βlu c^hɣ-nuu-sɣncɣɣncɣɣt-nuu*
 household NMLZ:ACTION-burn IFR-AUTO-cause.to.be.prosperous-PL
kɣ-ti ɲuu-ŋu
 INF-say SENS-be
 ‘They lead a prosperous life = they live happily ever after’ (many examples)

There are cases where an alienably possessed noun in *tu-* lacks a corresponding base verb; for instance, no verb **qartsu* ‘kick’ is attested besides the noun *tuqartsu* ‘kicking’, which is used with *lyt* ‘release’ as in (225) (note that the *tu-* prefix here is neither the indefinite possessor nor the numeral ‘one’ prefixes). The only related verb is the denominal labile verb *suqartsu* ‘kick’ (used only for animals, kicking with the rear limbs), which comes from the action nominal *tuqartsu* ‘kicking’ (§20.3.2).

- (225) *u-rqo* *nuṭcu* *tuqartsu* *t^ha-lyt* *ɲu-ŋu*
 3SG.POSS-throat DEM:LOC kick AOR:3→3’-throw SENS-be
 ‘He kicked her in the throat.’ (2012 Norbzang) {0003768#S253}

In this case, it is most likely that the base verb **qartsu* ‘kick’ did exist at some stage but was lost, only leaving derived words.

16.4.6 Inalienably possessed bare action nominals

Bare action nominals lack any nominalization affix. They are inalienably possessed (§5.1.2), and take the indefinite possessor prefixes *tu-* or *tr-*, very similar in function to the *tu-* action nominals and in form to the bare infinitives (§16.2.2).

They can refer to the action itself, as in *tu-suso* ‘thought’ from the transitive verb *suso* ‘think’ or the way an action is performed, as *u-ti* ‘way of saying’, ‘wording’, ‘expression’ from *ti* ‘say’. They can also be concrete nouns (Table 16.6). In the case of transitive verb, these nouns refer to an instrument used to perform the action, or resulting from the action (*tr-ts^hoB* ‘nail’ from *ts^hoB* ‘attach’, on which see §18.5.3). In the case of intransitive verbs, bare action nominals can refer to an object having a property described by the verb (for instance *tr-ro* ‘surplus, leftover’ from *ro* ‘be in surplus’). Note the presence of a borrowing from Tibetan among these verbs (*fkaβ* ‘cover’ from བཀའ་ *bkab* ‘cover (past)’), showing the productivity of this type of derivation.

For some examples, the semantic relationship between the bare action nominal and the base verb is not transparent anymore; for instance, *tu-ɲoB* ‘helper’ apparently derives from *ɲoB* ‘glue, paste’ (possibly through the sense ‘(person) attached to oneself’).

Some property nouns, which are derived from adjectival stative verbs (§5.1.2.7) without nominalization *x-/y-* prefix (§16.5.2), are also bare action nominals. Table 16.7 presents a list of these property nouns and their respective base verbs (among which *maŋ* ‘be many’ is borrowed from མང་ *maŋ* ‘be many’).

Intransitive verbs in *a-* are correlated with inalienably possessed action nominals with the *tr-* indefinite possessor prefix, for instance *aɕq^he* ‘cough’ (vi) and

Table 16.6: Bare action nominals designating concrete objects

Noun	Base verb
<i>tx-ro</i> ‘surplus, leftover’	<i>ro</i> ‘be in surplus’
<i>tx-fkaβ</i> ‘lid’	<i>fkaβ</i> ‘cover’
<i>tx-ɕp^hɣt</i> ‘patch (n)’ (n)	<i>ɕp^hɣt</i> ‘patch’(vt)
<i>tx-ts^hoβ</i> ‘nail’	<i>ts^hoβ</i> ‘attach’ (or ‘plant’)

Table 16.7: Property nouns derived from stative verbs

Property Noun	Base verb
<i>tx-mbe</i> ‘old thing’	<i>mbe</i> ‘be old’
<i>u-do</i> ‘old one’	<i>do</i> ‘be old (of plants)’
<i>u-k^he</i> ‘something nasty’	<i>k^he</i> ‘be stupid’
<i>u-maŋ</i> ‘in big groups’	<i>maŋ</i> ‘be many’

tx-ɕq^he ‘cough’ (n). Two hypotheses can be proposed to account for such pairs. First, one can argue that the base forms are the verbs, and that the inalienably possessed noun are derived from them; in this view the *a-* element is absorbed the possessive prefixes, and leaves no trace in the possessive paradigm: the 2SG and 2PL of *tx-ɕq^he* ‘cough’ are *nx-ɕq^he* ‘your_{SG} cough’ (226) *nu-ɕq^he* ‘your_{PL} cough’, whereas one would have expected these two forms to have become homophonous due to vowel fusion (2PL †*nu-ɣɕq^he* realized as /*nɣɕq^he*/ like the 2SG, §5.1.1.1, §12.3).

Second, it is also possible that *aɕq^he* ‘cough’ (vi) (and other verbs of the same type) derives from *tx-ɕq^he* ‘cough’ by the *a-* denominal prefix (§20.2.1).

- (226) *nx-ɕq^he* *uβɣɣ-ɣɣzu?*
 2SG.POSS-cough RH.Q-exist:SENS
 ‘You don’t have a cough, do you?’ (conversation, 2013-11-12)

The functional proximity between bare action nominals and *tu-* action nominals is illustrated by example (227), where both types of nominals (from different verbs) appear in parallel contexts.¹⁵

¹⁵This sentence is a metalinguistic comment on the phenomenon described in §9.2.2.2, examples (181) and (180).

- (230) *c^hɣts^hi* *ko-ɣɣ-tc^hom* *tce*
 alcohol.drinking IFR-CAUS-be.too.much LNK
 ‘He had drunk too much alcohol.’ (150829 jidian-zh) {0006338#S16}

Compounds with *rpu* ‘bump into’ or *tc^hu* ‘gore, stab’ as second element can be built productively with the meaning ‘hit with *X*’ and ‘stab with *X*’ in collocation with *lxt* ‘release’, *X* corresponding to the first element of the compound. For instance, in (231) we find the nonce formation *Ɂzɣn-rpu* ‘hitting with a monastic robe’, whose first element *Ɂzɣn* ‘monastic robe’ comes from Tibetan གཙན་ *gzan* ‘monastic robe’, a rather incongruous action which cannot possibly have been lexicalized.

- (231) *u-βɣo* *nɯ pu-ari* *nɣ, Ɂzɣn-rpu* *Ɂʃa* *zo*
 3SG.POSS-FB DEM AOR:DOWN-go[II] ADD robe-bump completely EMPH
c-ta-lxt *ɲu-ɲu.*

 ‘(As he_i fell down the throat of the giant snake_j) his lama_k went down
 [to the place where the snake was] and hit it_j repeatedly with his_k
 monastic robe [to force it_j to spit him_i out].’ (2003 kandZislama)

The patient of the hitting action, if overt, is marked with the relator *u-taɁ* ‘on, above’ (§8.3.4.3) as in (232), with the compound *ɁruɁrpu* ‘hitting with horns’ (sideways, not goring) from *ta-Ɂru* ‘horn’.

- (232) *jlá kwi a-tax wru-rpu ta-lxt*
 hybrid.yak ERG 1SG-on horn-bump AOR:3→3' -throw
 'The hybrid yak hit me with his horn.' (elicited)

In addition, we find action nominal compounds whose incorporated noun expresses the manner of the action, rather than the object, the goal or the instrument as in the previous cases.

First, the noun *k^hramba* 'lie' can be compounded (without bound state alternation) with transitive or intransitive verbs, in forms as *k^hramba-ts^hi* with the verb *ts^hi* 'drink' in (233). These compound nouns, in collocation with *βzu* (§22.4.2.1), have the meaning 'pretend to *X*'. Note that the compounding with *k^hramba* does not saturate the object position, and has no antipassivization effect: the object *c^ha* 'alcohol' is overt in (233).

- (233) *zara kwi [c^ha nuw k^hramba-ts^hi] ka-βzu-nuw*
 3PL ERG alcohol DEM lie-drink AOR:3→3' -make-PL
 'They pretended to drink alcohol.' (2005 Norbzang)

Second, the lexicalized participle *kuzya* 'a long time' can be compounded with a verb root as *kuzya-* (here with vowel alternation). These compounds also occur with light verb *βzu*, and the collocation means 'do *X* for a long time' as in (234).

- (234) *kuzya-car zo ɲβzu-nuw*
 long.time-search EMPH IFR-make-PL
 'They searched for it for a long time.' (elicited)

In these constructions, the verb *βzu* 'make' takes the person indexation of subject and object (§24.3.5), as well as the orientation preverbs selected by the verb in the compound, for instance EASTWARDS like *ts^hi* 'drink' in (233) and WESTWARDS like *car* 'search' in (234). Additional examples of these constructions are discussed in §24.4.3.3 (see also Jacques 2016a: 252).

Some action nominal compounds can serve as basis for incorporating denominal verbs. The incorporated object sometimes saturates the object function, and the resulting incorporating verbs are intransitive, as in the case of *ɲuc^hyt-s^hi* 'drink alcohol' or *ɲuylutɕɣt* 'remove dung out of stable' from *c^hyt^hi* 'alcohol drinking' and *ɲlutɕɣt* 'removing dung out of the stable', respectively. In the case of *wru-rpu* 'hitting with horns' however, the resulting verb *ɲwru-rpu* 'hit with horns' is transitive, the oblique argument marked with *u-tax* 'on, above' in the construction in (232) being promoted to direct object status. It is not possible to derive a denominal verb from all of the Noun+*rpu* or Noun+*tɕ^hu* compounds.

A complete list of incorporating denominal verbs and the corresponding action nominal compounds is provided in §20.13. There are also action nominals built by compounding two verb roots (§5.5.2.1), which serve as the basis for compound verbs by way of denominal derivation (§20.12).

16.5 Other deverbal nouns

This section present vestigial nominalization affixes, which despite of their rarity are however important for historical linguistics: the *-z* suffix and the *x/y-* prefix.

16.5.1 Nominalization *-z* suffix

Japhug has five inalienably possessed nouns derived from verbs by means of a nominalizing *-z*¹⁷ (Table 16.8), three of which take the indefinite possessor prefix *tr-* (§5.1.2.1).¹⁸

Table 16.8: Traces of the nominalization *-z* suffix in Japhug

Noun	Base verb
<i>tr-rkuz</i> ‘parting present’	<i>rku</i> ‘put in’
<i>tr-scoz</i> ‘letter, writing’	<i>sco</i> ‘see off’
<i>u-mnoz</i> ‘preparation’	<i>mno</i> ‘prepare’
<i>u-ɛjiz</i> ‘wish’	<i>ɛjit</i> ‘think of’
<i>tr-rkoz</i> ‘specially’, ‘on purpose’	<i>rko</i> ‘be hard’

The first two nouns *tr-rkuz* ‘parting present’ and *tr-scoz* ‘letter, writing’¹⁹ are object nominalizations. The former *tr-rkuz* ‘parting present’ is biactantial possessed noun, whose possessor corresponds to the recipient (§5.1.2.13). The etymological relationship between *tr-rkuz* and *rku* ‘put in’ is obvious when the use of this verb in the sense of ‘give as a present to take away’ (put in someone’s luggage) is considered, as in (235).

¹⁷The *-z* nominalizing suffix, though rare in Japhug, is of Sino-Tibetan origin. In Situ, the corresponding nominalizing *-s* suffix is much more common (Jacques 2003), and Tibetan and Chinese have traces of a cognate suffix (Jacques 2016c).

¹⁸Nouns in *-z* such as *tr-rtsuz* ‘number’ cannot be counted as a Japhug-internal derivation from *rtsi* ‘count’: both the noun and the verb come from Tibetan, respectively from རྩིས་ *rtsis* ‘calculation’ and རྩི་ *rtsi* ‘calculate’ (Hill 2014b).

¹⁹This noun is possibly borrowed from Situ (Jacques 2003).

16 Non-finite verbal morphology

'He prepared his departure, and gave him a bladder full of water to take with him, and said 'this is your departing present'.' (28-smAnmi.txt) {0004063#S247}

The verb *rku* 'put in' can even occur with its derived noun *ɣ-rkuz* 'parting present' in the *figura etymologica* construction in (236) (the verb *βzu* 'make' can alternatively be used instead of *rku* 'put in').

- (236) *a-me* *ku a-rkuz* *rŋwɪl ta-rku*
 1SG.POSS-daughter ERG 1SG.POSS-present money AOR:3→3'-put.in
 'My daughter gave me some money (as a present for my departure)
 (elicited)

The other nominalizations in *-z* are all abstract nouns. The form *u-βjiz*, which derives from the transitive verb *βjit* 'think of', 'miss', 'remember', results from the simplification of a complex coda **-ts* to *-z*. This noun only occurs in collocation with motion verbs, and is preceded by a finite or infinitive complement clause (§24.6.3.3). The whole construction has the meaning 'want to X', where X refers to the content of the complement clause; the experiencer is encoded by the possessive prefix on *u-βjiz*, as illustrated by (237).

- (237) *tce aʒo nuɰcu kɣ-ɕe a-βjiz* *múj-yi* *tce*
 LNK 1SG DEM:LOC INF-go 1SG.POSS-want NEG:SENS-come LNK
 'I don't want to go there.' (150909 hua pi-zh) {0006278#S20}

The noun *u-mɲoz* 'preparation' is also only attested in a collocation (with the verb *βzu* 'make' as in 238). The transitive verb *mɲo* 'prepare' from which it derives is itself the irregular causative of *ɲo* 'be prepared' (§17.3.1). A *-z*-less bare action nominal *u-mɲo* 'preparation' (§16.4.6) is also attested.

- (238) *pju-ɲfo* *ɕuŋgu tce u-mɲoz* *tú-wy-βzu*
 IPFV-be.damaged before LNK 3SG.POSS-preparation IPFV-INV-make

 'One has to make preparations before it gets damaged.' (elicited)

The property noun *u-rkoz* ‘something special’ (239), probably derived from *rko* ‘be hard’,²⁰ is used adverbially (with the 3SG or the indefinite possessor prefix) as *tr-rkoz* ‘specially’, ‘on purpose’. This meaning is however frequently expressed by the borrowing 专门 <zhuānmén> ‘specially, on purpose’).

- (239) *u-rmi* *u-rkoz* *me*.
 3SG.POSS-name 3SG.POSS-special not.exist:FACT
 ‘There is no specific name (for this type of kinship relationship).’ (140425
 kWmdza06) {0003790}

16.5.2 Nominalization *y-/x-* prefix

A handful of nouns, most of them inalienably possessed, are derived from intransitive verbs by means of a velar prefix *y-* or *x-*, harmonizing in voicing with the initial consonant of the stem since the voicing contrast is neutralized in preinitial position (§4.2.1.7). These nouns are lexicalized ancient subject participles (§16.1.1, §16.8.1) which underwent the same phonological change as that observed with the velar animal class prefix (§5.6.2), that has a syllabic allomorph *ku-* and reduced allomorphs *y-* or *x-*.

The reduced *y-* / *x-* prefix only derives nouns from intransitive verbs with monosyllabic stems, without consonant clusters. Some of the nouns in Table 16.9 have cognates in other Gyalrong languages with reduced prefixes. For instance, *yndzɣβ* has an exact cognate in Tshobdun: *yⁿdʒov* ‘fire’ (Sun & Blogros 2019: 214). The noun *u-yɣɣu* has two corresponding forms in Tshobdun: *-ɣⁿɣú?* ‘window’ (Sun & Blogros 2019: 609) with a reduced uvularized prefix, and *kəⁿɣu?* ‘hole’ (Sun & Blogros 2019: 374) with a non-reduced prefix.

Table 16.9: Irregular subject nominalizations in *y-* and *x-*

Noun	Base verb	Reference
<i>yndzɣβ</i> ‘disastrous fire’	<i>ndzɣβ</i> ‘be burned’	
<i>u-ɣɣaɣ</i> ‘disaster’	<i>ɣaɣ</i> ‘be black’	
<i>u-yɣɣu</i> ‘orifice’	<i>ɣɣu</i> ‘open’ (vi)	
<i>u-xso</i> ‘empty, normal’	<i>so</i> ‘be empty’	§5.1.2.7
<i>u-ɣrom</i> ‘dried thing’	<i>rom</i> ‘be dry’	

²⁰This etymology is however uncertain, as it would be the only noun of this type from an intransitive verb, and besides the semantic relationship is not entirely transparent.

The noun *tu-xpa* ‘one year’, although derived from the verb *pa* ‘pass X years’ and having an additional *x-* element, does not belong to this category, see §7.3.1.7 and §7.3.4.3.

The noun *tu-ɣni* ‘friend, ally’ also belongs to this category, though the base verb does not exist in Japhug. It is a near-exact cognate of Tibetan གཉེན་ *gñen* ‘friend, relative’, a noun derived from the adjective ཉེ *ñe* ‘near’.

16.6 Converbs

This section discusses several non-finite verb forms which exclusively occur in subordinate clauses other than relative and complement clauses. Other verb forms which might be labeled as converbs, in particular some uses of the velar infinitive, are treated in previous sections (§16.2.1.7).

16.6.1 Gerund

The gerund is built by prefixing *sɣ-* or *sɣz-* to the verb stem with partial reduplication of the final syllable. It clearly derives from the oblique participle (§16.1.3, §16.8.2), but differs from the latter by the impossibility of adding orientation or possessive prefixes, by the obligatory reduplication, and by the absence of the allomorphs *z-* and *sɣɣ-*.

Given the fact that the gerund is marked by both the prefix *sɣ-/sɣz-* and the reduplication, I only gloss GER under the prefix, and leave the reduplication un-glossed; for instance in (240) *sɣ-rguu~rga* is glossed GER-be.happy instead of the more explicit but burdensome GER-GER~be.happy.

- (240) [*sɣ-rguu-rga*] *ku jo-nuu-ce*
 GER-be.happy ERG IFR-VERT-go
 ‘He went back home happy.’ (140516 yiguan ganlan-zh) {0004014#S134}

This section reviews the morphology of the gerund (§16.6.1.1), §16.6.1.2), then discusses the syntactic properties of gerundive clauses (§16.6.1.3), and finally presents some cases of lexicalized gerunds (§16.6.1.4).

16.6.1.1 Allomorphy

The distribution of the *sɣ-* and *sɣz-* allomorphs is illustrated in Table 16.10. The *sɣz-* allomorph of the gerund prefix is found when the verb stem contains a sonorant initial syllabic prefix (like *nuu/ɣ-*, *ru/rɣ-*, *ɣu-/ɣɣ-* etc), while the *sɣ-* allomorph

appears in all other contexts, in particular with monosyllabic stems. Verbs with a stem in *a-* undergo vowel merger *sɣ-ɣ-* to /*sɣ-*/, as in *sɣmdzudzu* ‘sitting’ from *amdzu* ‘sit’. The *sɣ-* allomorph can also optionally be used in all contexts.

Table 16.10: Examples of gerunds

Base verb	Gerund
<i>tu</i> ‘exist’	<i>sɣ-tu~tu</i>
<i>mu</i> ‘be afraid’	<i>sɣ-mu~mu</i>
<i>rɲgu</i> ‘lie down’	<i>sɣ-rɲgu~rɲgu</i>
<i>amdzu</i> ‘sit’	<i>sɣ-ɣmdzu~mdzu</i>
<i>nɣre</i> ‘laugh’	<i>sɣz-nɣru~re</i>
<i>nɣrte</i> ‘wear (head cover)’	<i>sɣz-nɣrtu~rte</i>
<i>ɣɣwu</i> ‘cry’	<i>sɣz-ɣɣwu~wu</i>

Verbs whose stem already contains a reduplication are not triplicated. For instance, the gerund of *nuqambumbjom* is *sɣ(z)-nuqambumbjom*, not the impossible form †*sɣ(z)-nuqambumbumbjom*.

As in other reduplicated forms (§4.1), partial reduplication in the gerund disregards morpheme boundaries. In (241), the allomorph *nuɣ-* of the applicative has a coda /-ɣ-/ (§17.2.1.4, §17.4.2) which resyllabifies and becomes the preinitial of the next syllable of the verb stem; as such it undergoes partial reduplication, resulting in *sɣznuɣmuɣmu* rather than the incorrect form †*sɣznuɣmumu*.

- (241) *tce* [*sɣz-nuɣ-muɣ-ɣmu*] *zo ku-ɣse juu-ra*.
 LNK GER-APPL-fear EMPH IPFV-feed[III] SENS-be.needed
 ‘It_i has to feed it_i while being afraid of it_i’ (24-ZmbrWpGa)
 {0003628#S101}

Some lexicalized gerunds have slightly irregular forms (§16.6.1.4), but otherwise gerund formation is very regular. However, there are traces of the *sɣɣ/x-* allomorph remaining as alternative gerund forms of some verbs. For instance, the intransitive motion verb *ce* ‘go’, next to the regular gerund *sɣɣuɣce*, also has the form *sɣɣɣuɣce*. Like the oblique participle *u-sɣx-ce* (§16.1.3.1), the gerund *sɣɣɣuɣce* was derived with the *sɣx-* allomorph, with resyllabification of the final *-x-* and its inclusion in the partial reduplication of the last syllable, like *sɣznuɣmuɣmu* above. Since in the case of oblique participles the *sɣɣ-* allomorph is only found with monosyllabic verbs, in the corresponding gerund form the *-ɣ/x-* ex-crescent element necessarily resyllabifies and undergoes partial reduplication.

16.6.1.2 Polarity prefixes

Gerunds cannot bear possessive or orientation preverb, but are attested with the negative prefix *mɣ-*, as in (242) with the negative gerund *mɣ-sɣ-cu~ce* ‘not going’ in collocation with the noun *tu-sum* ‘mind’, here meaning ‘not willing, unwillingly, reluctantly’.

- (242) *tcendɣre tɣ-pi* *ni ku li* [*ndzi-sum*
 LNK INDEF.POSS-elder.sibling DU ERG again 3DU.POSS-mind
mɣ-sɣ-cu~ce] *zo jɣ-ta-ndzi*
 NEG-GER-go EMPH IFR-put-DU
 ‘The two elder brothers reluctantly left [the ducks] alone.’ (140510
 fengwang-zh) {0003939#S40}

The form of the negative prefix is *mɣ-* with all verbs, except for the lexicalized *masɣrurju* ‘quietly, in secret’ (§16.6.1.4); the form *ma-* is perhaps due to the fact that the base verb *arju* ‘speak’ has an initial *a-* vowel; however, other verbs in *a-* have the *mɣ-* allomorph, for instance *mɣ-sɣ-ɣq^hu~ɣq^he* ‘without coughing’ from *aɣq^he* ‘cough’.

16.6.1.3 Gerundive clauses

Gerunds are non-finite forms but preserve the verb’s argument structure, and gerundive clauses can contain overt intransitive subjects (243 and 242 above) or, very rarely, objects (244).

- (243) *tɣime nunu ku* [*u-qom sɣ-tu~toɔ*] *ku nura*

- (244) [*u-rte sɣz-nu-tu~ta*] *jɣ-ari*
 3SG.POSS-hat GER-AUTO-put AOR-go[II]
 ‘He went away wearing his hat.’ (elicited)

Gerundive clauses are always subordinate to a main finite clause, and express a background action or state occurring at the same time as that referred to by the main verb; they can nearly always be translated either by a gerund in English or by a ‘while’ clause (§25.3.4.2, §25.4).

Gerundive clauses, like converbial infinitival clauses (§16.2.1.7), can be followed by the ergative *ku* (example 243 above), the emphatic *zo* (241 and 242, §26.1.1.5) or both (as in 245 below). Bare gerundive clauses are also common, as in (244 and 246 below). No semantic difference between bare gerundive clauses and gerundive clauses followed by *ku* or *zo* can be brought to light.

The focus marker *kunx* can also follow a gerundive clause with the meaning ‘even Xing’ as in (248) below.

The (intransitive or transitive) subject of the gerundive clauses is often coreferent with that of the main clause, as in (244) above and (245) below.

- (245) *tyçime ra rca sɣ-mbu~mbyom zo ku,*
 young.lady PL UNEXP:DEG GER-be.in.a.hurry EMPH ERG

 IFR-VERT-go-PL
 ‘The princesses left the princes in a hurry and went back home.’ (140508 shier ge tiaowu de gongzhu-zh) {0003937#S156}

There is however no strict syntactic constraint on coreference between the subject of the gerundive clause and that of the main clauses. Other types of configurations are attested. In (246), the intransitive subject of the gerundive clause *tx-ɣtso nu* ‘child(ren)’ is the object, not the subject, of the main clause verb *ku-z-rɣzi-nu*.²¹

- (246) [*tx-ɣtso nu sɣ-ɣmdzu~mdzu*] *ku-z-rɣzi-nu*
 INDEF.POSS-child DEM GER-sit IPFV-CAUS-stay-PL
 ‘They [used to] put the children in sitting position (after having covered them in cloth).’ (140426 tApAtso kAnWBdaR 2)

Coreference between the possessor of the subject in the gerundive clause and the object of the main clause as in (243) and (242) above is also attested. It is particularly common in inalienably possessed noun+intransitive verb collocations where the experiencer is marked as the possessor on the inalienably possessed noun (§22.4), such as *tu-sum + çe* ‘want’, *tu-βjiz + yi* ‘wish’ (§22.4.1.1) or *tx-mbru + ηgu* ‘get angry’ as in (247) (§22.4.1.5).

²¹In this example I assume that *tx-ɣtso nu* belongs to the gerundive clause, with zero anaphora in the main clause; the opposite analysis could also be considered.

16 Non-finite verbal morphology

- (247) *u-mbruw sɣ-ŋgw~ŋgw ku zo jo-nu-ɕe.*
 3SG.POSS-anger GER-get.angry ERG EMPH IFR-VERT-go
 ‘He went back home angry.’ (150826 baoliandeng-zh) {0006370#S89}

The opposite configuration, with the possessor in the main clause coreferent with the subject of the gerundive clause, is also attested, as in (248).

- (248) *sɣ-rŋgw~rŋgw kuɲɣ tu-kɣrnoɕ ɲu-mtɕur tɕe,*

 ‘Even lying down, one feels dizzy [one’s head is turning].’
 (29-tAmtshAzkAkWndo) {0004065#S55}

The only example of gerund without apparent coreference between any participant of the gerundive clause and of the main clause in the corpus is (249). However, even here one can interpret the gerundive clause as having a non-overt subject whose possessor would be coreferent with the subject or the object of the main clause.

- (249) *nuw sɣ-rku~rkun zo tɣ-pytso c^hú-wɣ-tɕɛt*

pjɣ-ra tɕe,
 IFR.IPFV-be.needed LNK
 ‘People had to raise children with few [resources].’ (140426 tApAtso kAnWBdaR)

While gerunds can be built for motion verbs, in the corpus the velar infinitive converbs *kɣ-* (§16.2.1.7) are more common than gerunds to express meanings such as ‘running’ (*kɣ-rɲuɣ (ku zo)*), ‘walking’ (*kɣ-ŋke (ku zo)*) when occurring in a main clause with another motion verb (for instance with *jo-nu-ɕe-nu* ‘they went away’ in 168). Motion verbs are only attested in non-motional collocations (as in 242) above). Gerunds of motion verbs are however possible if the motion is different from the action of the main verb, as in (250).

- (250) *sɣ-ŋku~ŋke zo ɲu-ɣsu-ndza*
 GER-walk EMPH SENS-PROG-eat
 ‘He is eating it while walking.’ (elicited)

16.6.1.4 Lexicalized gerunds

There are a few examples of adverbs from lexicalized gerunds, whose form and meaning is not completely predictable from the base verb.

The gerund *sy-xtɕu-xtɕi*, from the stative verb *xtɕi* ‘be small’ means ‘in childhood, when X was young, since childhood’, as in (251). Since the verb *xtɕi* ‘be small’ includes ‘be young’ among its range of meanings, the use of this gerund to refer to young age is not unexpected (‘while being young’), but the additional meaning ‘since childhood’ does not correspond to the usual function of the gerund, which expresses an action or state taking place simultaneously with the action of the main verb.

- (251) *sy-xtɕu-xtɕi zo u-mu u-wa jɣ-me.*
 GER-be.small EMPH 3SG.POSS-mother 3SG.POSS-father IFR-not.exist
 ‘He lost his parents when he was young.’ (150827 tianluo) {0006250#S4}

The adverb *masɣurju* ‘quietly, in secret’ from *arju* ‘speak’ is formally an ancient negative gerund, with the negative prefix *ma-* rather than *mɣ-*). It originally meant ‘without speaking’, but its meaning has become ‘in secret, without someone knowing’ as in (252), and it can even be applied to acts involving speech as in (253), showing that it is not semantically linked to its base verb anymore.

- (252) *tɕ^hemɣpu nura, nɣkinu, mu-tɣ-rundzaŋspa-nu jamar tɕe tɕe, uzo*

 3SG ERG quietly mantra DEM IFR-recite
 ‘He recited the mantra in secret.’ (2012 Norbzang) {0003768#S170}

The adverb *mɣsɣmdɣla* ‘in advance’ (example 254), related to the verb *bmda* ‘be the time’, might also be an ancient negative gerund, but its morphological structure is not completely clear, in particular the element *-la* and the absence of reduplication.

- (254) *nɣki tɣ-rjit nu mɣsɣmdɣla zo to-ŋke*
 DEM INDEF.POSS-child DEM in.advance EMPH IFR-walk
 ‘This child started walking early.’ (elicited)

16.6.1.5 *str-* Gerund

The Tibetan loan verb *rʃuɣ* ‘run’ has a regular gerund *sɣ-rʃu~rʃuɣ* ‘running’; however, the adverb *strʃuɣ* ‘running’ can also be derived from this verb, with a meaning identical to that of the gerund, as in (255).²² It is the only verb with the prefix *str-*; an exact cognate *stɔrʃəɣ?* is found in Tshobdun (Sun & Blogros 2019: 610).

- (255) *strʃuɣ nɣ strʃuɣ zo jo-nu-p^hɣo*
 running add running EMPH IFR-VERT-flee
 ‘She fled back home running.’ (140504 huiguniang-zh)

16.6.2 Purposive

The purposive converb is used in clauses meaning ‘in order to’, ‘for X to Y’, ‘so that X does Y’. This converb originates from the oblique participle (§16.8.2). It combines the *sɣ-/sɣz-* with a reduplicated verb stem like the gerund, but in addition takes a B type orientation preverb preceded by a possessive prefix coreferent with a core argument, as for instance *a-ʃu-sɣ-stu~stu* ‘in order for me to believe in it’ from the semi-transitive *stu* ‘believe’ in (256).

- (256) *tce numu a-ʃu-sɣ-stu~stu nuura tu-nɣme pʃɣ-ŋu*

 ‘Today I put [the pebble in my clothes] so that I would not forget [to tell you].’ (2014-kWLAG)

In example (260), the purposive form *a-mx-tu-sx-rpu~rpu* with subject indexation is also possible, without meaning difference.

- (260) *kum ju-mβɣr tce, a-ku u-mx-tu-sx-rpu~rpu*

pu-p^haβ-a
 AOR-lower-1SG
 ‘As the door is low, I lowered my head so as not to bump on it.’ (elicited)

Although most examples of purposive converbs have the same subject as the main clause, this is not a syntactic constraint. In (261), it is the object of the main clause *k^huna* ‘dog’ that corresponds to the subject of the purposive clause. Furthermore, in (257) above, the subject and object of the purposive clause are not even arguments of the main clause.

- (261) *a-my-ku-sx-mtsu-mtsuy* *uzo ku k^huna ka-βraβ*
 1SG-NEG-IPFV-CONV:PURP-bite 3SG ERG DOG AOR:3→3’-attach
 ‘He tied up the dog so that it would not bite me.’ (elicited)

Purposive converbs, although they can be generated for most verbs without difficulty, are very rare in the corpus, and several alternative constructions are preferred to build purposive clauses (§25.5.4).

16.6.3 Immediate

The immediate perfective converb expresses that the action in the converbial clause is immediately followed by that in the main clause (‘as soon as’). It is built by adding the B type orientation preverb and a *tu-* prefix (which may be historically related to the homophonous prefix of action nominals, see §16.8.3) and the verb stem I. It is the only verb form with a type B orientation preverb (which in all other cases occurs with imperfective TAM categories) that has a perfective value. The immediate converb cannot take any additional prefix, even possessive or negative prefixes.

Since there is a homophonous prefix *tu-* for second person (§14.2.1.2), the immediate converb is formally identical to the second person singular (the intransitive 2SG and the transitive 2SG→3 forms) of the Imperfective for all verbs whose stem I and stem III are identical (all intransitive verbs and some transitive ones, §12.2.2.1). These forms are distinct in the case of transitive verbs with stem III alternation, as illustrated by Table 16.11.

The converbial clause can contain overt arguments, including absolutive arguments as in (262) or transitive subjects marked with the ergative as in (263).

- (262) *u-pu* *pu-tu-βaβ* *ny kumpyxtcu jamar*

pjx-ηgrxl.
 IFR.IPFV-be.usually.the.case
 ‘As soon as one was thrown in there, one would die.’ (28-smAnmi)
 {0004063#S154}

There is often coreference between the arguments of the converbial clause and those of the main clause. In (262) and (264), the subjects of the main clauses correspond to the intransitive subject and the object of the converbial clause, respectively. In (263) above and (265) below, both the subject and the object of the subordinate clauses are coreferent with those of the main clauses. Example (265) also shows that immediate converbs can have non-third person subjects, though this is rare in the corpus.

(265) *tut^hu nu-sx-cke tce, azo a-jax ku-tu-ndo*

zo pu-nu-cluy-a
 EMPH AOR-AUTO-drop-1SG
 ‘As the pot was burning hot, I dropped it as soon as I had grabbed it.’
 (elicited)

There is however no strict syntactic constraint on subject or object coreference, as we also find examples where the subject of the converbial clause is not a participant of the main clause, such as (266).

16 Non-finite verbal morphology

- (266) *lu-tur-fsoʋ zo q^he tu-rɣma tu-ze ɲu-ŋu.*
 IPFV-CONV:IMM-be.clear EMPH LNK INF:II-work IPFV-begin[III] SENS-be
 ‘It starts working as soon as the day breaks.’ (26-GZo) {0003668#S64}

This type of converbial clause is nearly always followed either by the emphatic *zo* (§26.1.1.5) and/or by a linker such as *tɕe*, *q^he* (266) or *nɣ* (262).

The immediate converb commonly occurs in the corpus, but it is not the only way to express immediate succession. Several constructions have a very close meaning (§25.3.3.2), involving in particular the postposition *ɕimuma* ‘immediately after’ (§8.2.11).

16.6.4 Adverb from finite verb

The adverb *nufse* ‘just like that’ does not derive from a non-finite verb form, but rather has been lexicalized from the demonstrative *nu* (§6.9.1) with the 3SG form of the Factual Non-Past of *fse* ‘be like’ in manner clause from a serial verb construction (§25.4.1.2). The range of meanings of *nufse* is however not predictable from those of the base verb.

The main meaning of *nufse* is ‘just like that, for no particular reason’ as in (267).

 (08-CkrAz) {0003444#S47}

16.7 Defective verbs

Nearly all Japhug verbs have participles, infinitives and the other non-finite forms described in this chapter. There is however a handful of defective verbs lacking non-finite categories.

The sensory existential verbs *ɣɣzu* ‘exist’ and *maje* ‘not exist’, which present other types of irregularities (§14.2.2), lack all non-finite forms; the nominalized forms of the existential verbs *tu* ‘exist’ and *me* ‘not exist’ are used instead.

The transitive verb *krɬupa* ‘tell’ cannot be prefixed (§14.3.4), and therefore lacks all non-finite forms.

The verb *mɣ-xsi* ‘one does not know’ is only found in the generic negative Factual Non-Past (§14.3.4), and the corresponding non-finite forms are provided by the verb *suz* ‘know’.

16.8 Historical perspectives

The great majority of non-finite verb forms studied in this chapter take either a velar, a sigmatic or a dental prefix. While it is necessary to distinguish many sub-categories from a synchronic point, it is equally obvious that a diachronic relationship exists between some of these non-finite forms. While a complete account of the history of nominalized forms in Japhug will have to wait a proper reconstruction of proto-Gyalrongic, it is nevertheless possible to offer some preliminary thoughts on the relationship between these morphological categories.

16.8.1 Velar non-finite prefixes

Many Trans-Himalayan languages, including Karbi and Kiranti, have productive velar nominalization prefixes (Konnerth 2016), and traces of such prefixes can also be found in other languages such as Tibetan (Jacques 2014d). These forms are very probably historically related to the velar nominalization prefixes found in Gyalrong languages, but the present chapter focuses on Gyalrong-internal evidence.

In Japhug, non-finite verb forms with velar prefixes include the following ones:

- *ku-* subject participles (§16.1.1)
- *kr-* object participles (§16.1.2)
- *ku-* and *kr-* velar infinitives (§16.2.1)

- Infinitival converbs (§16.2.1.7)
- *x-/y-* deverbals nouns (§16.5.2)

In addition, three finite prefixes are likely to be related to these forms: the 2→1 *ku-* prefix (§14.3.2.3, §14.8.3), the generic S/O *ku-* prefix (§14.3.2.5), and the circumfix *ku-...-ci* occurring in several morphological contexts (§11.4).

Given the difficulty of distinguishing infinitives from participles even synchronically (§16.2.1.1), it is quite obvious that these forms are ultimately related, but accounting for the precise distribution of the forms is not trivial.

In addition to the categories mentioned above, shared by all core Gyalrong languages, Situ has a type of semi-finite participles in *kə-*, used in various types of relative clauses (Sun & Lin 2007). In (269) for instance, the form *nə-kə-maʃe-ntf* has both a participle *kə-* and a dual suffix *-ntf*; in Japhug, such combination is impossible: indexation suffixes (and the second person prefix *tu-*) are incompatible with all non-finite forms studied in this chapter.

(269) *ndzok kə-nəwətjô=ndzêstə ptʂêrə dzəspê*
 slightly NMLZ-be.hardworking[II]=DU=TOP then quite
nə-kə-maʃe-ntf nə-ŋos
 AOR-NMLZ-be.rich[II]-DU SENS-be[I]

‘The two hardworking ones then became rather rich.’ (Lin 2009: 193–194)

In the following, I assume that in proto-Gyalrong both semi-finite participles of the type exemplified in (269) and subject participles as in Japhug (§16.1.1) did exist, and were marked by the ancestor of the *ku-* prefix.

The object participle in *kʁ-*, which is synchronically still homophonous with the subject participle of a passivized transitive verb (§16.1.2.3), likely originates from the fusion of the **kə-* participle with the passive **ŋa-* prefix (see also Sun 2006a; Sun & Lin 2007 for a suggestion in the same lines).

Since only transitive verbs can have a passive form, the use of the object for semi-transitive verbs (for instance example 79 in §16.1.2.4) must have been an analogical extension occurring after the merger of the participle prefix and the passive was complete.

The *kʁ-* infinitive possible derives from the object participles. The pivot construction where such a reanalysis could have taken place is the object of verbs of perception such as *mtə* ‘see’. When an object participial clause occurs as the object of a verb of perception, while in some case there is no ambiguity (as in 270), in examples such as (271) it is possible to analyze the *kʁ-* prefixed form either as

an object participle (entailing a translation ‘grains that are sold like that’) or as an infinitive (‘selling grains like that’, referring to the whole action rather than the object).

- (270) *ma [pu-kʰ-sat] nu kʰ-mto nu pu-rpo-t-a.*

 NEG-AOR-see-TR:PST-1SG
 ‘I have not seen its grains sold like that (i.e. unprocessed).’ (09-mi)
 {0003466#S51}

After such reanalysis took, the *kʰ-* infinitive, originally restricted to transitive verbs, was extended to dynamic intransitive verbs.

The nominalization *x/ɣ-* prefix is probably the result of the application of a sound law of presyllable reduction on monosyllables without initial cluster (§5.6.2, §16.5.2) to the subject participle prefix. The regular *ku-* subject participle on monosyllabic clusterless verb stems is due to the analogical generalization of the *ku-* allomorph to all verb forms.

The generic *ku-* and the 2→1 *ku-* prefixes, which occur in finite verb forms in Japhug, are less likely to come from subject participles. Instead, as argued in Jacques (2018b) and §14.8.3, they are traces of the semi-finite participles in Japhug and other Northern Gyalrong languages.

Figure 16.1 summarizes the pathways of reanalysis proposed in this section and in §14.8.3. The semi-finite participle and subject participle forms are without doubt historically related, but both have to be reconstructed at the proto-Gyalrong level and the function of the original prefix from which they derive is unclear – it is conceivable that the original prefix was completely non-finite like the Japhug subject participle, and that the semi-finite participle is an innovation (on the addition of person indexation markers on non-verbal predicative words, see §14.8.3), but the opposite is equally possible.

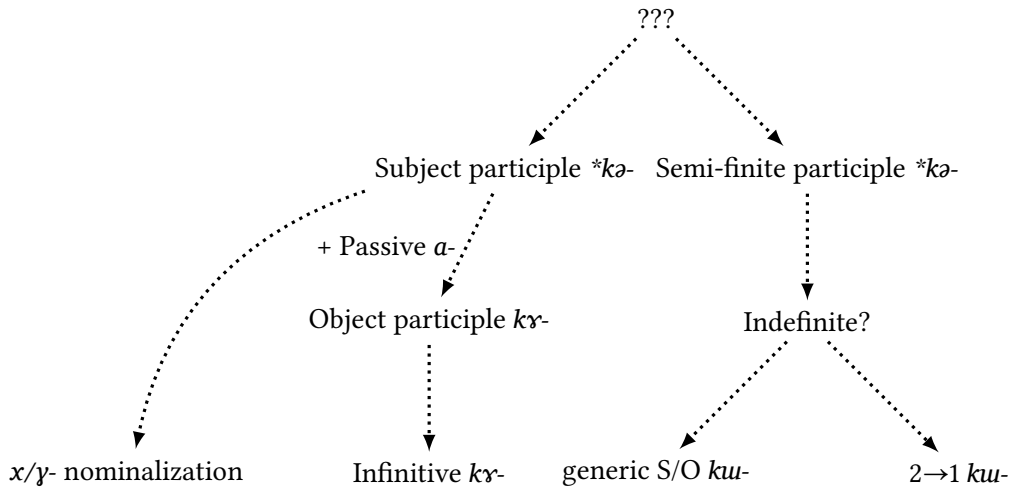

Figure 16.1: Development of velar non-finite forms from proto-Gyalrong to Japhug

16.8.2 Sigmatic non-finite prefixes

Nominalized forms involving a coronal fricative prefix, or a trace thereof, have been described in Old Chinese (Sagart 1999: 73, Baxter & Sagart 2014: 56), Tibetan (Jacques 2019b) and Jinghpo (Dai & Xu 1992: 3–4).

In Japhug, non-finite verb forms with dental fricative prefixes are very widespread, and include the following ones:

- Oblique participle (§16.1.3)
- Gerund (§16.6.1)
- Purposive (§16.6.2)

It is quite obvious that both gerund and purposive converbs derive from the oblique participle. The reduplication found in these forms (optional in the case of the purposive, see 257 in §16.6.2) presumably reflects the emphatic reduplication (§12.4.3) that can be applied to nearly all verb forms.

While derivation of gerunds from oblique participle is not a problem from a formal point of view, the exact pathway of reanalysis deserves some discussion. Given the fact that oblique participles are used to build temporal relatives ‘the time when...’ (§16.1.3.7), it is tempting to suppose that the gerund derives from

this function, in absolutive locative form (§8.1.9). In this view, a gerund like *sx-ɣmdzɯ~mdzɯ* ‘sitting’ would come from an original construction meaning ‘at the time when X was sitting’. However, this hypothesis is difficult, because of the very restricted nature of participial temporal relatives, which are only found for very specific time periods that belong to common knowledge (for instance *u-sx-ji* ‘the period when it is planted’ in example 129 in §16.1.3.7), and are not compatible with most types of temporal clauses.

Other possibilities to explain the origin of the gerund include the locative (§16.1.3.5) and instrumental (§16.1.3.6) uses of the oblique participles. Locative participles could account for the use of gerund with psychological verbs; for instance *sx-mu~mu* ‘fearing’ from *mu* ‘fear’ could originate from a metaphorical locative similar to English ‘in fear’. However, the hypothesis that gerunds derive from instrumental oblique participles is more probable due to the optional presence of the ergative *ku* with the gerunds (§16.6.1.3) while locative postpositions are never found in this context. The gerunds thus probably originated from subordinate clauses expressing reason or cause, from which they came to express manner or simultaneous action (‘by sitting’ ⇒ ‘sitting’).

The purposive converbs probably also come from the instrumental use of oblique participles, but through a different pathway. As suggested in Jacques (2014a: 272), examples such as (272) may constitute the pivot construction between instrumental participial relatives and purposive converbs.

- (272) *ɣzɯt^huz nu kuɕuŋɣu tɕe [tut^hu sx-χtɕi]*
Selaginella DEM in.the.past LNK pan OBL:PCP-wash
ɲú-wɣ-nu-p^hut pu-ŋgrɣl
 IPFV-INV-AUTO-uproot PST.IPFV-be.usually.the.case
 ‘In the past, people would dig up *Selaginella* [to use as] a pan cleaner.’
 (16-RIWmsWsi) {0003520#S102}

In (272), the participial relative clause *tut^hu sx-χtɕi* ‘pan cleaner’ is an essive adjunct (in absolutive form, §8.1.7) which can be translated as ‘(to use) as a pan cleaner’. This meaning is very close to that of a purposive clause ‘in order to clean pans’. An instrumental participial relative clause in essive function could thus easily be reanalyzed as a purposive clause, and hence the oblique participle as a purposive converbal.

16.8.3 Dental non-finite prefixes

Non-finite verbal forms taking a dental stop prefix *tu-* or *tx-* in Japhug include the following ones:

- Dental infinitive (§16.2.3)
- Degree nominals (§16.3)
- *tu-* action nominals (§16.4)
- *tr-* abstract nouns (§16.4.2)
- Simultaneous action nominal (§16.4.3)
- Immediate perfective converb (§16.6.3)

It is possible that all of these forms are historically related. However, given the fact that some of the non-finite verb forms in Japhug are inalienably possessed nouns (§5.1.2) derived by adding a possessive prefix to the bare verb stem (bare infinitives §16.2.2 and bare action nominals §16.4.6), it is likely that at least some of the categories listed above originate from the indefinite possessive form of a bare infinitive or a bare action nominal, as suggested in Jacques (2016a: 236) concerning the bare infinitives.

Since bare infinitives and dental infinitives are in complementary distribution, the former being used with transitive verbs and the latter with intransitive ones (see §16.2.2.1 and §16.2.3.2), it is legitimate to consider the possibility that both forms go back to a single category. The bare infinitive takes a possessive prefix that is coreferent with the object of the verb; intransitive verbs lack an object (semi-transitive verbs have a semi-object §8.1.5, but its morphosyntactic properties are different from those of canonical objects), and thus if a bare infinitive were built from an intransitive verb, one would only have three choices: (i) index the subject, (ii) use the bare stem with any possessive prefix or (iii) use a ‘dummy’ possessive prefix indicating the absence of object. It is possible to argue that dental infinitives correspond to solution (iii), and that the *tu-* prefix in this form is the indefinite possessor *tu-* (§5.1.3). In this hypothesis, dental infinitives taking a possessive prefix (see example 195 in §16.2.3.2) are later creations, made after the etymological origin of the *tu-* had become obscured.

Proposing that *tu-* action nominals and *tr-* abstract nouns come from alienabilized bare action nominals is not to be excluded, but appears to be less compelling, since there is no complementary distribution between the former and the latter, unlike in the case of bare vs. dental infinitives.

It is also conceivable that dental infinitives come from *tu-* action nominals, and bare infinitives from bare action nominals, respectively. In the absence of evidence from languages other than Japhug, I leave this issue unresolved.

Regardless of the origin of action nominals, it is clear that degree nominals on the one hand, and simultaneous action nominals on the other hand, derive from them by prefixing possessive prefixes (in degree nominals) and the numeral *tu-* prefix, respectively (in simultaneous action nominal, §16.4.3).

The origin of the immediate perfective converbs is quite puzzling. While immediate converb take an obligatory type B orientation preverb, no other *tu-* non-finite form is compatible with orientation preverbs, and moreover type B prefixes normally occur with imperfective TAME categories (§15.1.1.1, §21.1.1). It is conceivable that these converbs ultimately originate from action nominals, but the pathway of morphological evolution that has led to their creation is unclear.

Figure 16.2 summarizes the hypotheses presented in this section; the dotted arrows represent uncertain derivations.

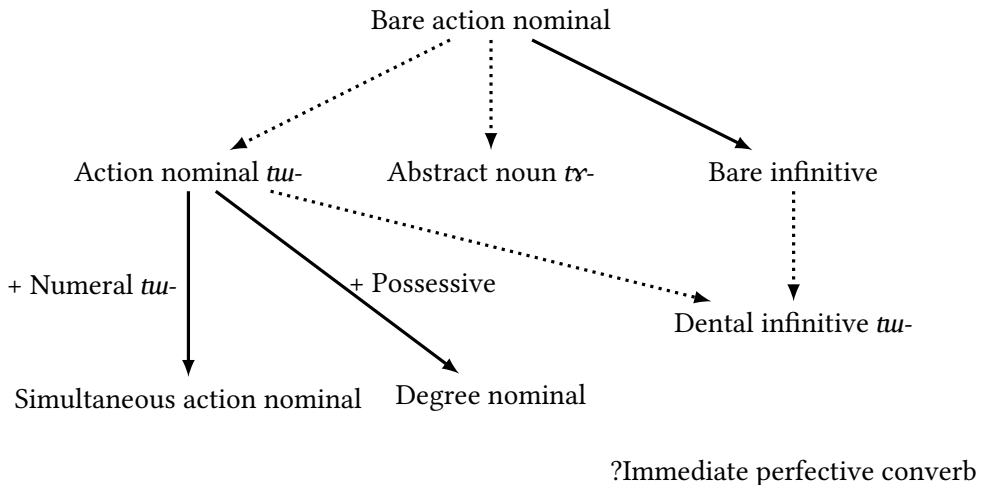

Figure 16.2: Several hypotheses to account for the historical origin of dental non-finite forms in Japhug

17 Valency-increasing derivations

17.1 Introduction

Japhug has much fewer valency-increasing derivations than valency-decreasing ones: leaving aside fossil derivations (§19.7), only four clearly identified prefixes are found: sigmatic causative (§17.2), velar causative (§17.3), applicative (§17.4) and tropative (§17.5). The sigmatic causative however is probably the most productive of all derivational processes in Japhug, and can be combined with the other three (§11.2.2, §17.2.8, §17.4.4, §17.3.4).

17.2 Sigmatic causative

Despite the existence of periphrastic causative constructions (§24.5.1.1), the main morphosyntactic device to express causation in Japhug is the causative verbal derivation by dental or alveolo-palatal fricative prefixes, referred to as ‘sigmatic’ causative in this work.

17.2.1 Regular allomorphy

Although not as complex as the causative derivations in Stodsde (Sun 2007a) or in Khroskyabs (Lai 2016), the sigmatic causative prefix is the derivation with the greatest number of allomorphs in Japhug.

It has five regular allomorphs *su-*, *suɣ-*, *z-*, *s-* and *sv-* depending on the following element, and a number of irregular ones (§17.2.2). The allomorph *su-* occurs in most environments, and can be considered to be the default form.

17.2.1.1 *z-* allomorph

The *z-* allomorph appears in non-monosyllabic verb bases, when the first syllable (generally a derivational prefix, or a synchronically non-analysable prefixal element belonging to the verb root) has a sonorant initial (in practice only *mV-*, *nV-*, *ɣV-* or *rV-*). Table 17.1 illustrates some examples of this allomorph.

Table 17.1: Examples of the *z*- allomorph of the causative prefix

Nature of the prefixal element	Base verb	Derived verb
non-analyzable	<i>nuna</i> ‘rest’ <i>yurni</i> ‘be red’	<i>znuna</i> ‘stop’ <i>zyurni</i> ‘reddden’
§19.7.1	<i>muunmu</i> ‘move’	<i>zmuunmu</i> ‘cause to move’
denominal	<i>nyma</i> ‘do’ <i>myku</i> ‘be first’	<i>znyma</i> ‘make/let do’ <i>zmyku</i> ‘make/do first’
antipassive	<i>ryryt</i> ‘write/draw things’	<i>zryryt</i> ‘cause to write/draw things’, ‘draw/write with’

On the other hand, monosyllabic verbs with single sonorant initials, whether nasals, rhotics or semi-vowels, never select the *z*- allomorph. Monosyllabic bases with these initials take the allomorph *su*- (§17.2.1.4): *no* ‘drive’ and *mar* ‘smear’ have the causative forms *sunno* ‘make/let drive’, ‘drive with’ and *sumar* ‘make/let smear’, not †*zno* and †*zmar*. The same constraint on monosyllabicity is observed with the regular *s*- allomorph (§17.2.1.2), but does not apply to the irregular vowel-less allomorphs of the causative (*ɕ*- §17.2.2.3, *ʒ*- §17.2.2.4, and *j*- §17.2.2.5).

Intransitive bases with nasal (except *ŋ*-), rhotic and semi-vowel initial consonants select the *suy*- allomorph, as illustrated by *jyγ* ‘finish’, *ru* ‘look at’ and *no* ‘be prepared’, whose sigmatic causative forms are *suyjyγ* ‘finish’, *suyru* ‘make/let look at’ and *suyno* ‘prepare’, respectively.

In the case of intransitive verbs with the velar sonorant *ɣ*-, the allomorph *su*- occurs. For instance, *yi* ‘come’ has the causative form *suyɣe* ‘invite’ (with irregular ablaut, §17.2.2.7).

Causative verbs with the *z*- allomorph in irregular contexts are discussed in §17.2.2.7.

17.2.1.2 *s*- allomorph

The *s*- allomorph is only found with base verbs whose first syllable is *qa*- (Table 17.2). All of these verbs are intransitive; it is unclear whether this *qa*- element is analyzable as a prefix historically.

Monosyllabic verbs with initial *q*- always select the *su*- allomorph. For example, the causative of *qab* ‘peel’ is *suqab* ‘make peel’, not †*sqab*.

Table 17.2: Examples of the *s-* allomorph of the causative prefix

Base verb	Derived verb
<i>qanu</i> ‘be dark’	<i>sqanu</i> ‘put in darkness’
<i>qapu</i> ‘be fallow’ (of a field)	<i>sqapu</i> ‘leave fallow’
<i>qarndum</i> ‘be murky’	<i>sqarndum</i> ‘make murky’

17.2.1.3 Vowel fusion

With verbs whose stem begins in *a-* (contracting verbs, §12.3), the sigmatic causative prefix merges with this vowel as *sɣ-*, as shown in Table 17.3. In the glosses, this vowel merger is represented as *su-ɣ-*, following the orthographic rules in (§12.3). Only one contracting verb has an irregular causative with intrusive *-ɣ-* (§17.2.2.6).

Table 17.3: The *sɣ-* allomorph of the causative prefix

Base verb	Derived verb
<i>aɕq^he</i> ‘cough’	<i>sɣɕq^he</i> ‘cause to cough’
<i>ajtu</i> ‘accumulate’ (vi)	<i>sɣjtu</i> ‘accumulate’ (vt)
<i>amɣɣm</i> ‘be homogeneous’	<i>sɣmɣɣm</i> ‘do homogeneously’

There are two irregular causative verbs in *sɣ-*, whose base verb is not a contracting verb (§17.2.2.7).

17.2.1.4 *suɣ-* allomorph

For all other types of verb stem, the choice between the *su-* and *suɣ-/sux-* allomorphs depends on both phonology and morphology. The *suɣ-/sux-* allomorphs occur when the base verb is intransitive, monosyllabic, has no initial cluster and no velar or uvular initial consonant, while *su-* appears in all other cases, in particular in all bases with consonant clusters.

With the intransitive verb *ɸaɸ* ‘hatch’ (the only verb with the single *ɸ-* onset), some speakers (such as Tshendzin) select the *suɣ-* allomorph and use the causative form *suɣɸaɸ* ‘cause to hatch’ (1) with an internal */-ɣɸ-/* cluster (§4.2.3.1), while other speakers select the *su-* allomorph.

Table 17.4 illustrates the correlation between the *su-* / *suy-*/*sux-* contrast and transitivity. The intrusive *-y-* element undergoes regressive voice assimilation to *-x-* when the initial of the verb root is unvoiced.

Table 17.4: The *su-* and *suy-*/*sux-* allomorphs of the sigmatic causative prefix

Transitivity	Base verb	Derived verb
intr.	<i>mbuz</i> ‘overflow’	<i>suymbuz</i> ‘let overflow’
tr.	<i>mbi</i> ‘give’	<i>sumbi</i> ‘make/let give’, ‘give with’
intr.	<i>ɕe</i> ‘go’	<i>suxɕe</i> ‘send’
tr.	<i>ɕum</i> ‘brood’	<i>suɕum</i> ‘make/let brood’
intr.	<i>tso</i> ‘know, understand’	<i>suxtso</i> ‘make understand’
tr.	<i>tsum</i> ‘take away’	<i>sutsum</i> ‘send with’
intr.	<i>ndzur</i> ‘stand’	<i>suyndzur</i> ‘make/let stand up’
tr.	<i>ndza</i> ‘eat’	<i>sundza</i> ‘make/let eat’
intr.	<i>nrɣ</i> ‘dare’	<i>suynrɣ</i> ‘cause to dare’
tr.	<i>no</i> ‘drive’	<i>suno</i> ‘make/let drive’, ‘drive with’

The intrusive *-y-* also appears in one of the irregular allomorphs of the sigmatic causative (§17.2.2.2).

Other derivational prefixes, including the velar causative *ɣɣ-* (§17.4.2), the applicative *nu-* (§17.4.2), the tropative *nr-* (§17.5.1), the proprietive *sɣ-* (§18.8.1) and some denominal derivations (§20.3.2), present an allomorphy involving the insertion of the *-y-* element, originally in the same context as that of the *suy-* allomorph of the sigmatic causative. However, in the case of the proprietive and tropative derivation, this *-y-* insertion has ceased to be productive.

17.2.2 Irregular allomorphs

In addition to the regular allomorphs described in the previous section, the sigmatic causative has five irregular allomorphs with alveolo-palatal or palatal con-

sonants instead of alveolar fricatives: *ɕu-*, *ɕuy-*, *ɕ-*, *ʒ-* and *j-*. All known examples are presented in Table 17.5.

Table 17.5: The irregular allomorphs of the causative prefix

Base verb	Derived verb
<i>fka</i> ‘be full’	<i>ɕufka</i> ‘cause to be full’
<i>fkaβ</i> ‘cover’	<i>ɕufkaβ</i> ‘cover with’
<i>mbyom</i> ‘be in a hurry’	<i>ɕumbyom</i> ‘cause to be in a hurry’
<i>mnɣm</i> ‘smell’	<i>ɕummnɣm</i> ‘cause to have a smell’
<i>mɣɣm</i> ‘feel pain’ (of a body part)	<i>ɕummɣɣm</i> ‘cause pain’ (vt)
<i>ntaβ</i> ‘be stable’	<i>ɕuntaβ</i> ‘leave’ (there)
<i>ngo</i> ‘be ill’	<i>ɕungo</i> ‘make sick’
<i>ɲɔ</i> ‘lose’	<i>ɕunɲo</i> ‘win’
<i>nqoβ</i> ‘hang’ (vi)	<i>ɕunqoβ</i> ‘hang’ (vt)
<i>ɲo</i> ‘borrow’	<i>ɕunɲo</i> ‘lend’
<i>tx-mbru</i> + <i>ɲgu</i> ‘get angry’	<i>tx-mbru</i> + <i>ɕunɲgu</i> ‘anger’ (vt)
<i>ɲgu</i> ‘lie down’	<i>ɕunɲgu</i> ‘make/let lie down’
<i>rga</i> ‘be happy’	<i>ɕurga</i> ‘please’ (vt)
<i>mu</i> ‘be afraid’	<i>ɕuymu</i> ‘frighten’
<i>p^hyo</i> ‘flee’	<i>ɕp^hyo</i> ‘flee with’
<i>luɣ</i> ‘get loose’	<i>ɕluɣ</i> ‘drop’
<i>nqoβ</i> ‘hang’ (vi)	<i>ʒngoβ</i> ‘hang’ (on a hook)
<i>ɲga</i> ‘wear’	<i>ʒɲga</i> ‘help wearing’
<i>mbri</i> ‘cry, sing’	<i>ʒmbri</i> ‘play’ (an instrument)
<i>ts^hi</i> ‘drink’	<i>jts^hi</i> ‘give to drink’

17.2.2.1 *ɕu-* allomorph

The *ɕu-* allomorph is the most common of all alveolo-palatal allomorphs. It occurs on verb bases with initial clusters with nasal, *f-* or *r-* preinitials, contexts where the regular *su-* allomorph would be expected (§17.2.1.4). The only clusterless verb root which selects the *ɕu-* allomorph is the orphan verb *ɲgu* in the complex predicate *tx-mbru* + *ɲgu* ‘get angry’ (§22.4.3.2).

The *ɕu-* allomorph derives causatives mainly from intransitive verbs, except

17 Valency-increasing derivations

for *ɲo* ‘borrow’ (with the inersive causative *ɕurɲo* ‘lend’, §17.2.5.7) and *fkaβ* ‘cover’ (which has the instrumental causative *ɕufkɑβ* ‘cover with’, §17.2.5.8).

The base verb *nqoβ* ‘hang’ has three causative forms, *ɕu-nqoβ* (for the most common meaning corresponding to transitive ‘hang’), *z-NGOβ* (with a more restricted meaning, §17.2.2.4) and the regular *su-nqoβ* for instrumental (‘hang with’) or indirect causation.

17.2.2.2 *ɕuy-* allomorph

The verb *mu* ‘be afraid’ has the causative *ɕuyɲu* ‘frighten’, the only example of the *ɕuy-* allomorph of the sigmatic causative. The intrusive *-ɣ-* is expected since the base verb is intransitive and has a labial initial consonant with no cluster (§17.2.1.4), and appears in other derivations such as applicative (*nuuyɲu* ‘be afraid of’, §17.4.2) and proprietive (*sɣɲu* ‘be frightening’, §18.8.1).

17.2.2.3 *ɕ-* allomorph

The *ɕ-* allomorph is one of the three irregular vowel-less allomorphs of the causative. It occurs on two monosyllabic verbs, *ɕp^hɣo* ‘flee with’¹ (from *p^hɣo* ‘flee’) and *ɕluy* ‘drop’ (from *luy* ‘get loose’), unlike the vowel-less regular allomorphs *z-* and *s-* which are never found on monosyllabic bases (§17.2.1.1, §17.2.1.2). The contrast between *ɕ-* and *z-* is not determined by the voicing of the initial consonant of the base verb (since *luy* ‘get loose’ has a sonorant initial *l-*). Rather, *z-* exclusively occurs with voiced prenasalized obstruents (§17.2.2.4), and *j-* derives from *ɕ-* by a recent sound change (§17.2.2.5).

Like other irregular allomorphs, *ɕ-* is not restricted to one particular sub-function of the sigmatic causative. The verb *ɕp^hɣo* ‘flee with’, ‘help *X* flee with oneself’ reflects the adjunctive function of causative (§17.2.5.3), indexing as direct object the entity helped by the subject, as shown by the 3SG→2PL configuration in (2).

 ‘Say ‘please’ to him, and he will help you flee [from here].’ (2012
 Norbzang) {0003768#S65}

¹An alternative form *ɕup^hɣo* with the *ɕu-* allomorph is also attested.

On the other hand, *ɕluy* ‘drop’ generally expresses non-volitional causation, especially when used with the autive prefix as in (3) (see also 23 in §17.2.4) but even without it (4).

- (3) *u-xɕyt tu~tu zo to-ɣɕqali ri tɕe*

- (4) *kupa-skɣt to-ɕ-luy-a*
 Chinese-language IFR-CAUS-get.loose-1SG
 ‘I spoke Chinese by mistake.’ (‘I should have spoken Japhug’) (heard in context)

The regular causative of *luy* ‘get loose’ is *suy-luy* (§17.2.1.4), and is used to express a volitional causation ‘untie, detach, take off’, as in (5). The *luy* ‘get loose’ itself cannot express a volitional action; this meaning is provided by the reflexive-causative *ɣɣ-suy-luy* ‘detach oneself’ (§18.3.4.1).

 ‘The hunting dog took off its chains.’ (140426 liegou he zhonggo-zh)
 {0003812#S10}

17.2.2.4 ɣ- allomorph

The ɣ- allomorph of the causative is only attested with verb bases having prenasalized onsets. In each of the three verbs, the meaning of the prefix is slightly different.

The causative *ɣmbri* ‘play’ (an instrument), ‘make noise with’ from the intransitive *mbri* ‘cry, sing’, ‘make noise’, is a plain instrumental causative (§17.2.5.8), which selects as object the musical instrument (see for instance 5a, §8.1.3), while *ɣnga* ‘help wearing’, ‘make/force to wear’ (from the transitive *nga* ‘wear’) reflects

17 Valency-increasing derivations

the adjunctive (§17.2.5.3) function rather than the instrumental one, since it selects as object the person wearing the clothes (the 3DU object indexation in 6), while the clothes are a semi-object (*tu-ŋga nura u-mbe t^hu-ku-NGRAŋ nura* ‘old and torn clothes’, without ergative marking).

- (6) *[tu-ŋga nura u-mbe t^hu-ku-NGRAŋ*
 INDEF.POSS-clothes DEM:PL 3SG.POSS-old.one AOR-SBJ:PCP-ACAUS:damage
nura] *tú-wy-z-ŋga-ndzi,*
 DEM:PL IPFV-INV-CAUS-wear-DU
 ‘[Their_i stepmother was evil], and made the two of them_i wear old and
 torn clothes.’ (140429 jiedi-zh)

The causative *zNGOŋ* from *nqoŋ* ‘hang’ (vi) presents an irregular voicing of the onset, possibly the effect of a phonotactic constraint against clusters comprising a preinitial fricative with a unvoiced prenasalized obstruent such as **ɕnq-*, since only *voiced* prenasalized obstruents are monophonemic (§3.2.1).

The meaning of *zNGOŋ* is not completely predictable from that of the base verb *nqoŋ* ‘hang’. Although it can be translated as transitive ‘hang’ like the other irregular causative *ɕuunqoŋ* ‘hang’ (§17.2.2.1), its more common meaning is ‘pull threads (that are coiled around one’s fingers) apart (as part of the weaving process)’ (in Chinese 牵线 <qiānxiàn> ‘pull the threads’), as in (7).

- (7) *a-ty-ri ky-zNGOŋ*
 1SG.POSS-INDEF.POSS-thread IMP-hang
 ‘Pull the threads for me.’ (elicited)

With an additional causative prefix (§17.2.7) in instrumental function (§17.2.5.8), it specifically means ‘hang on a hook’ as in (8).

- (8) *tyŋoŋ ku tu-ŋga ko-su-zNGOŋ*
 hook ERG INDEF.POSS-clothes IFR-CAUS-hang
 ‘He hung the clothes on the hook.’ (elicited)

17.2.2.5 *j-* allomorph

In the Kamnyu dialect of Japhug, the verb *ts^hi* ‘drink’ has the irregular causative form *jts^hi* ‘give to drink’ with the *j-* allomorph. In dialects of Japhug which have not undergone the *t^hi* → *ts^hi* sound change, the base verb is *t^hi* and its causative *ɕt^hi* with the *ɕ-* allomorph (§17.2.2.3). This suggests that a sound change **ɕts^h-* → *jts^h-* took place in this word by dissimilation of mode of articulation (§4.2.1.5).

The causative *jts^{hi}* ‘give to drink’ is highly lexicalized, and can occur as input for other derivations such as antipassive (§17.2.8, §18.6.4). The regular causative *su-ts^{hi}* can be used with a neutral factitive meaning ‘make drink’ (9) or in the instrumental function ‘drink with/using’ (§17.2.5.8).

 ‘After it_i has had its fill, the leech_i [detaches and] falls down. After that, it is not possible to make it_i drink [blood].’ (28-kWpAz) {0003714#S133}

17.2.2.6 Irregular vowel fusion

The causative verb *suxce* ‘send’ (from *ce* ‘go’) has a stem II form *sɣri* derived from the stem II *ari* of its base verb (§12.2.1). This stem II appears to present the merger of the *suy-* allomorph with the *a-* prefixal element as *sɣ-*, with preservation of the *-ɣ-* element, instead of expected †*sɣri*.

17.2.2.7 Other irregularities

The denominal verb *sɣmbru* ‘get angry’ (§20.3.1) has a causative form *sɣzmbru* ‘anger’ (10) with the *z-* allomorph (§17.2.1.1) infixal rather than prefixed (occurring between the denominal *sɣ-* prefix and the nominal root *-mbru*).

- (10) *nuw maɣ kuw tɣ-ta-sɣ<z>mbruw tu ú-ŋu*
 DEM not.be:FACT ERG AOR-1→2-<CAUS> exist:FACT QU-be:FACT
 ‘Otherwise, is it the case that I/we have made you angry?’ (2005 tAwakWcqrAR)

The verb *zbraɣ* ‘attach together’ (11 provides a definition of this verb) is possibly an instrumental causative form of *braɣ* ‘attach to’, with irregular placement of the vowel-less allomorph *z-* (§17.2.1.1) on a monosyllabic stem and fortition of the *β-* to /b/ to avoid the impossible cluster †*zβr-*.

- (11) *w-p^{hoŋbu} c^{hoŋ} si, tɣtɣsi nuwura tuw-tuw-xtɣr*

 ‘His brother came and stopped looking for water.’ (2002 nyimawodzer)

The form *suuqav*, which is analyzable as the causative of the transitive verb *qav* ‘peel’, has the unexpected meaning ‘delimit the boundaries of (a place)’ (14). The semantic change is unexplained.

- (14) *k^ha w-sta* *ty-nuw-suuqav-a*
 house 3SG.POSS-place AOR-AUTO-delimit-1SG
 ‘I delimited the site [to build] the house.’ (elicited)

The secundative verb *nusuk^ho* ‘rob, extort’, is the lexicalized autive (§19.1.6) of the causative *suk^ho* ‘cause to give’ of the indirective verb *k^ho* ‘give’ (§14.4.1).² The original meaning of *nusuk^ho* was presumably ‘X causes Y to give Z to himself_i’, its grammatical subject being thus originally both agent (causer) and recipient at the same time, reflecting the inersive function of the causative (§14.4.3, §17.2.5.7).

The transitive subject, object and dative arguments of *k^ho* correspond to the object, semi-object and subject of *nusuk^ho*, respectively. Example (15) shows this verb with 2→1SG indexation, with a meaning that can still be interpreted as ‘you cause me to give it to you’.

- (15) *nuw mɣkuwft^hi juw-kuw-nusuk^ho-a puw~puw-eti* *q^he*,
 DEM forcing IPFV-2→1-extort-1SG COND~PST.IPFV-be.AFF LNK

 ‘If you [try] to take it from me forcibly, I will break this basin.’ (150831 jubaopen-zh) {0006294#S92}

The causative derivation from *k^ho* to *nusuk^ho* differs from other inersive causatives in the obligatory presence of the autive *nu-*, and the additional coercive meaning.

The verb *nusuk^ho* can serve as input for other derivations (§18.6.9). The autive prefix *nu-* in this verb, although lexicalized, can be optionally reordered with regard to the antipassive prefix (§18.6.9, §19.1.6).

²This derivation dates back to the common ancestor of Northern Gyalrong languages, as shown by the Tshobdun cognate *nsək^hi* ‘snatch away’ (Sun & Blogros 2019: 220).

17 Valency-increasing derivations

The verb *sufts^{hi}*, formally the causative of the stative verb *fts^{hi}* ‘feel better’ (or ‘be good for nothing’), only occurs in negative form (§13.1.3) and means ‘force, coerce’ as in (16).

- (16) *tceri tɣɕime nuu ku, tce u-wa nuu ku mu-tó-wy-sufts^{hi}*
 but girl DEM ERG LNK 3SG.POSS-father DEM ERG NEG-IFR-INV-force

 LNK
 ‘It hurt a lot, she could not stand it and came [down to Mbarkham for
 treatment].’ (12-BzaNsa) {0003484#S91}

The related adverb *mɣkufts^{hi}* ‘forcibly’, which originates from the negative stative infinitive of *fts^{hi}* (§16.2.1.8), is also used to express coercion (§17.2.5.2).

17.2.4 Morphosyntax

17.2.4.1 Intransitive bases

The causative derivation increases the valency of the base verb by one argument. In the case of intransitive bases, the resulting verb is monotransitive. The intransitive subject of the base verb corresponds to the object of the causative verb. For instance, in (19) the causative verb *sɲnbax* ‘hide’ (vt) (from the intransitive *anbax* ‘hide’ (vi), 18) takes the portmanteau prefix 1→2 *ta-* (§14.3.2.3), indexing the person hiding as object, and the causer (the person helping him/her, §17.2.5.3) as transitive subject.

- (18) *kɣ-anbax-a*
 AOR-hide-1SG
 ‘I hid.’ (elicited)

- (19) *a-rjit ra nuu-yi-nuu cti tceet^ha, kx-ndza kowa*

 ‘My children are about to come back and will try to eat you, let me hide you.’ (2012 Norbzang) {0003768#S258}

The causer of causative verbs derived from intransitive bases is morphosyntactically identical to the subject of a monotransitive verb both from the point of view of indexation and case marking, and takes ergative when overt as in (20).

- (20) *ty-mu nuu ku ty-pytso ra k^hri u-pa zuu*
 INDEF.POSS-mother DEM ERG INDEF.POSS-child PL bed 3SG.POSS-under LOC
ko-suu-ynbaβ
 IFR-CAUS-hide
 ‘The old woman hid the children under the bed.’ (elicited)

17.2.4.2 Transitive bases

The causativization of monotransitive verbs³ is more complicated. While the causer is always treated like a transitive subject in terms of indexation, ergative marking and relativization (§14.4.3), the status of the causee (corresponding to the transitive subject of the base verb) and of the patientive argument (object of the base verbs) are less straightforward.

From the point of view of indexation (§14.4.3), both causees (21) and patientive arguments (22) can be indexed as direct objects (in these examples with 2→1SG configurations, §14.3.2.3).

- (21) *χpi pjw-fcat-a, pjw-ku-suu-fcat-a-ndzi nuu βo*

 be.acceptable:FACT
 ‘I can tell a story_i, the two of you can have me tell it_i, but ...’ (140511 1001 yinzi-zh) {0003963#S48}

The form *ty-ku-suu-βndu-a* is ambiguous, and can either be interpreted as ‘you caused me to be beaten (by him/someone)’ as in (22), but also as ‘you made me beat him’ with the 2SG as causee rather than patientive argument.

³The causativization of semi-transitive and ditransitive verbs is discussed in §14.4.4 and §14.4.3, and is not repeated here.

17 Valency-increasing derivations

- (22) *taʋndo múj-tu-tso tce, tce li tɣ-ku-su-ʋndu-a*
 speech NEG:SENS-2-understand LNK LNK again AOR-2→1-CAUS-hit-1SG
 ‘You are not listening [to what I say], you caused me to be beaten again.’
 (2003-kWBRa)

The indexation of these verbs is determined by a person hierarchy: when the causee (or patientive) is first/second person, and the patientive (or causee) is third person, the causative verb takes first/second object indexation (§14.4.3).

From the point of view of case marking, patientive arguments never take the ergative, while causees can take it optionally (§8.2.2.6). In example (23), the first causee *ɕɣɣɣa* ‘bird sp.’ in left-dislocated position has no ergative marking, while the second one *qajdo* ‘crow’ takes it (note that the plural indexation on *pjɣ-su-yut-nu* shows that *qajdo* is causee and not causer).

- (23) *ɕɣɣɣa numu, smɣn saŋɣɣɣz ra ku ci pjɣ-su-yut-nu*

 but it_j dropped it_k on a juniper tree, they_i sent a crow_l, but it_l dropped it_k
 on an oak.’ (2003 gesar)

17.2.4.3 Semi-reflexive

A special subtype of semi-reflexive indexation (§14.3.2.4) is found in causative forms derived from transitive verbs, when a dual or plural number marker includes both the causer and the causee, as in (24) where in the 3'→3DU form *tó-wɣ-su-ndza-ndzi* the dual suffix indexes the addition of the causer (*tɣ-rzaβ* ‘wife’) and the causee (her husband).

- (24) *tɣ-rzaβ nu ku icq^ha, ts^haŋ u-ŋɣw*

 {0006276#S73}

17.2.4.4 Negation

The relative position of the negative and causative prefixes in the prefixal chain is fixed (§11.2) and independent of the semantic scope.⁴ Thus, a negative causative verb can be either interpreted as ‘not cause to *X*’ or as ‘cause not to *X*’ (prohibition). For instance, *mɿ-sux-ɕe-nuu* (NEG-CAUS-go:FACT-PL) can either mean ‘they don’t send him/them’ or ‘they prevent/forbid/don’t let him/them go’ as in (25).

- (25) *nuu ɕɿmɿwyduwɿ ky-lɿt kuu-mk^hɿz nuura ra*

 ‘They need people who are good at shooting with guns, they don’t let
 those who are not able (to shoot) go.’ (150829 KAGWcAno) {0006420#S13}

The negative verb form *muu-pa-suu-p^hut* (NEG-pfv:3→3’-CAUS-take.off) can also either mean ‘he did not make him/them destroy it’ or ‘he prevented him/them from destroying it’, as in (26).

- (26) *ɿzo uu-k^ho ta-fsraŋ nuunu, [u-pi ni*
 bee 3SG.POSS-house AOR:3→3’-protect DEM 3SG.POSS-elder.sibling DU

jo-ɿi.
 IFR-come
 ‘The king of the bees whose hive he had protected and prevented his
 brothers from destroying came.’ (140510 fengwang-zh) {0003939#S129}

Another possible interpretation of the combination of causative and negative prefixes is ‘make sure *X* does not need to *Y*’, ‘take care of *X* and ensure *Y* does not need to happen’ (where *X* represents the causee and *Y* the base verb), as in (27).

⁴The same is true of associated motion prefixes (§17.2.4.5).

17 Valency-increasing derivations

- (27) *a-mu rcanw ndzu tu-ldza cinɣ*
 mother UNEXP:DEG chopsticks one-stick even
a-mɣ-pw-tu-sw-qluwt-nw ra
 IRR-NEG-PFV-2-CAUS-break-PL be.needed:FACT
 ‘Make sure that my mother does not even need to break chopsticks.’ (an idiomatic expression meaning ‘please take care of my mother’s every need’, 2012 Norbzang) {0003768#S207}

The same type of ambiguity is also found with the velar causative (§17.3.2.1).

17.2.4.5 Associated motion

As in the case of the negation (§17.2.4.4), the relative ordering of the associated motion and causative prefixes in the template is fixed and independent of semantic scope, and both ‘go/come and cause to *X*’ and ‘cause to go/come and *X*’ are possible interpretations.

Thus, either the causer or the causee can be the argument undergoing motion (§15.2.2). For instance, the verb *ɕ-ko-z-ruru* in (28) can either mean ‘he sent him to guard it’ (causee motion, the correct interpretation in this context) or ‘he went and made him guard it’ (causer motion).

- (28) *rɣɣlpu kuw w-tɕuw stu kuw-xtɕi nw ɕ-ko-z-ruru.*

 {0003931#S37}

17.2.4.6 Serial verb constructions

In the serial verb construction with the simulative verb *stu* ‘do like’, the instrumental causative can be repeated on both verbs, as in (29).

- (29) *tɕe w-jak nw kuw t^hɣlwa ki*
 LNK 3SG.POSS-hand DEM ERG earth DEM.PROX
ɕ^hw-suw-ste nw w-t^hɣcu

 IPFV:DOWNSTREAM-CAUS-throw
 ‘[The mole] does this with its forepaws, and throws the earth below.’
 (28-qapar) {0003720#S148}

In other serial verb constructions (§25.4.1), intransitive stative verbs generally have to be causativized to be used with transitive verbs to ensure transitivity harmony. These causative verbs expressing manner can appear before the lexical verbs as in (30) (where the causative of *mɤku* ‘be first’ expresses the meaning ‘do X first’, §20.6) or follow it (31, 32).

- (30) *a-tʂʰa* *ci* *pu-z-mɤke* *pu-rke*
 1SG.POSS-tea once IMP-CAUS-be.first[III] IMP-put.in[III]

 ‘Luban said [the answers] very well, without missing anything.’ (150902
 luban-zh) {0006268#S56}

17.2.4.7 Complement clauses with sigmatic causative of manner

Causative forms from adjectival stative verbs occur as complement-taking verbs to express the manner in which the action takes place (§24.5.1.4). This causative complement construction competes with the manner serial verb construction (§17.2.4.6, §25.4.1) and the use of infinitive converbs (§16.2.1.7, §25.4.2). The same construction is found with velar causatives (§17.3.2.2).

For instance in (33) the meaning ‘give a good answer’ is expressed with the causative *sɤ-pe* of *pe* ‘be good’ (§17.2.2.7) and an infinitival complement clause with the verb *kɤ-kʰo* ‘to give’.

17 Valency-increasing derivations

- (33) *[a-lyn kʰ-kʰo] u-tʰ-tu-sʰ-pe-t nʰ tce*

 IPFV-1→2-gather be:FACT
 ‘If you give a good answer [to all my questions], I will take you [as my disciple].’ (150902 luban-zh) {0006268#S44}

With the exception of a few verbs like *sʰpe* ‘do well’, most complement-taking causative verbs select the lexicalized orientation of the verb in the complement clause (§24.3.5). For instance, in (34), the causative verb *cʰʰ-sʰu-ʎmʎʰm* has the DOWNSTREAM orientation preverb *cʰʰ-* (§15.1.1.1) selected by *ʎndzʰur* ‘grind’ in the infinitival clause.

- (34) *kʰ-ʎndzʰur cʰʰ-sʰu-ʎmʎʰm*
 INF-grind IFR:DOWNSTREAM-CAUS-be.homogeneous
 ‘He ground [the flour] very homogeneously.’ (elicited)

The causative form is also required when the infinitival complement clause contains a transitive verb with dummy subject (§14.3.5), as in (35).

- (35) *paʰci nu u-ʎwʌb kʰ-lyt ʎu-z-mʰke, nu*

 ‘The apple [tree] first grows leaves, and after that blooms.’ (07-paXCi)
 {0003430#S11}

17.2.4.8 Auxiliary verbs

A few auxiliary verbs can take the sigmatic causative, and are used with complement clauses in a way that is different from those treated in §17.2.4.7.

The causative *suxcʰa* from the modal verb *cʰa* ‘can’ often occurs in inverse form with a dummy subject (§14.3.5) with the specific meaning of ‘(cause to) be physically able to X’, ‘(cause to) be strong enough to X’, as in example (36) (see also §24.5.3.3). The agent is not expressed, but implicitly refers to the heavy object in (36).

- (36) *ʎu-rzi tce [kʰ-fkur] mʰʉj-tu-wʎ-sux-cʰa.*
 SENS-be.heavy LNK INF-carry.on.the.back NEG:SENS-2-INV-CAUS-can
 ‘It is heavy, you won’t be able to carry it on your back.’ (elicitation)

This complement-taking verb is exceptional in being the only one in Japhug requiring coreference between object of the matrix clause and subject of the complement clause (§24.5.3.3).

This verb is attested in direct forms, as in (37), but only in the meaning ‘cause to be able to bear’ without infinitival complement.⁵

- (37) *kumpɣa p^hu nu ɲu-βva tce, mu nuwa mu-ɲu-sux-c^he*
 fowl male DEM SENS-win LNK female DEM:PL NEG-SENS-CAUS-can[III]
 ‘(Otherwise) the roosters are too strong, and the hens cannot bear it.’
 (150819 kumpGa) {0006388#S8}

The intransitive phasal *ɲɣ* ‘finish’ (§24.5.6, unrelated to the modal verb *ɲɣ* ‘be allowed’, §24.5.3.1) has the causative form *suɣɲɣ* ‘finish’, used as a synonym of the transitive verb *st^hut* ‘finish’ (§24.5.6).

Some modal verbs also appear in the same construction with a velar, instead of a sigmatic causative (§17.3.2.3).

17.2.4.9 Collocations

Verbs in noun-verb collocations can undergo sigmatic causative derivation. For instance, the combination of *tu-χpuum* ‘knee’ and *ts^hoβ* ‘attach’ (§22.4.2.8), which means ‘kneel’ (38), can be causativized to *tu-χpuum + su-ts^hoβ* ‘cause/make/force to kneel’ (39).

- (38) *u-χpuum pɲɣ-ts^hoβ*
 3SG.POSS-knee IFR-attach

 3PL.POSS-front IPFV:DOWN-scatter LNK IPFV-CAUS-eat[III] IFR.IPFV-be
 ‘[The evil prince] forced them to kneel at his side, and would throw them leftovers from his food and force them to eat them.’ (150821 edu de wangzi-zh) {0006402#S58}

⁵The base verb *c^ha* ‘can’, among other functions, is attested with the meaning ‘be fine, be all right’ (Chinese 行 <xíng> ‘be all right’), in which case it does not take any complement clause or overt semi-object.

The possessive prefix on the inalienable noun *tu-xpium* ‘knee’, which is obligatorily coreferential with the transitive subject in the base construction (38), must be coreferential with the causee in the causativized construction (39).

Causativization of complex predicates is also possible with the velar causative prefix (§17.3.2.4).

17.2.5 Semantics of the causative

The basic meaning of the sigmatic causative is a factitive ‘make *X*’ or ‘have someone/something *X*’.

Depending on the volition of the causer and causee and the nature of the action, several specific cases can be distinguished: missive ‘sent to’ (§17.2.5.1), coercive ‘force to’ (§17.2.5.2), adjutative ‘help *Xing*’ (§17.2.5.3), rogative ‘ask *Xing*’ (§17.2.5.4), permissive ‘let, allow’ (§17.2.5.5) and indirect causation (§17.2.5.6). This classification is intended as a convenient way of exploring the uses of the causative in Japhug, and makes no claim to reveal the instantiations of universal categories.

In addition, the sigmatic causative has extended and more grammaticalized functions, such as inversive (§17.2.5.7), instrumental (§17.2.5.8) and also tropative (§17.2.5.9), as well as purely syntactic functions in serial verb constructions (§17.2.4.6 above) and complementation (§17.2.4.7).

17.2.5.1 Missive

With motion (§15.1.2.1) and manipulation verbs (§15.1.2.2), the causative has a missive meaning. For instance, the causative *su-yut* from *yut* ‘bring’ means ‘send’ in the sense of ‘have someone bring *X*’ (either by directly asking a person or by mail), as in (40) (see also 23 above in §17.2.4.2).

- (40) *a-ŋga* *lx-tu-su-yut-ndzi* *nuu, a-xtsa* *nuu wuma*

ɲu-pe
 SENS-be.good
 ‘The clothes that you have sent me, the shoes are very nice.’
 (conversation, 15.04.18)

The missive meaning of the causative is also found with non-motional bases taking an associated motion prefix, as in (28) above (see also §17.2.4.5).

17.2.5.2 Coercive

The sigmatic causative also occurs to express coercive causation ‘force to’ against the will of the causee, as in (41) (see also 39 in §17.2.4.9).

- (41) *tc^heme nuw kuɟɟu ku-wxtur~wxti zo na-suw-ta-ndzi*

ɟur-ɟu
 SENS-be
 ‘They_{DU} forced the girl to swear a big oath.’ (2003 qachGa)
 {0003372#S142}

This meaning occurs in particular with the adverb *mɣkuɟts^{hi}* ‘forcibly’ (42) (see also 175, §16.2.1.8), and the related lexicalized causative verb *suɟts^{hi}* ‘force’ (see 16, §17.2.3).

- (42) *tx-pɣtso smɣn mɣkuɟts^{hi} tx-suw-ndza-t-a*
 INDEF.POSS-child medicine forcibly AOR-CAUS-eat-PST:TR-1SG
 ‘I forced the child to eat the medicine.’ (elicited)

In this function, the causee generally does not take the ergative, as shown by the examples above.

17.2.5.3 Adjutative

The adjutative meaning of the causative ‘help Xing’ occurs with verbs whose action is in the interests of the causee, and can only be successfully performed by collaboration between causer and causee. A typical example is the causative *sɣnbax* ‘hide’, ‘help to hide’ from *anbax* ‘hide’ (vi) (see 19 and 20 above, §17.2.4).

Some verbs with irregular allomorphs have the adjutative function, in particular *ɸ^hɣo* ‘flee with’ (from the intransitive *p^hɣo* ‘flee’, §17.2.2.3) and *ɳɳga* ‘help wearing’ (from *ɳga* ‘wear’, §17.2.2.4).

17.2.5.4 Rogative

Rogative causation occurs when the causer asks a causee for help in performing an action, for instance for medical treatment as in (43).

- (43) *azɣɣ kumɣ tx-z-nuusman-a q^he tx-mna cti*
 1SG:GEN also AOR-CAUS-treat-1SG LNK AOR-be.better be.AFF:FACT
 ‘I had my own [bellyache] treated and it got better.’ (2011-13-qala)

The rogative *sɣ-* prefix derives from this use of the causative (§18.2).

17.2.5.5 Permissive

The sigmatic causative occurs with a permissive interpretation ‘let/allow X’, when the causer does not prevent the causee from performing an action. This meaning of the causative is common for instance in 2→1 verb forms such as (44) and (45).

- (44) *ku-kw-z-ryzi-a-nw* *ɲw-nts^{hi}*
 IPFV-2→1-CAUS-stay-1SG-PL SENS-be.better

 ‘Mother, let us look at [the thing] that is in the interstice between your fangs?’ (2012 Norbzang) {0003768#S265}

Additional examples of permissive causatives include for instance *z-nuna* ‘allow to rest’ (§12, §17.2.3) and *su-ndza* ‘let eat, give to eat’ (24, §17.2.4).

17.2.5.6 Indirect causation

The sigmatic causative can be used to express the unintended result of an (erroneous) action on the part of the causer, as in (46) (see also 22, §17.2.4).

- (46) *nyzo ty-ndze* *ma alo* *ma-ly-tu-tsum* *ma*
 2SG IMP-eat[III] LNK upstream NEG-IMP:UPSTREAM-2-take.away LNK
t^ha li *kw-suw-ɸndur-a*
 later again 2→1-CAUS-hit-1SG
 ‘Eat it, don’t take it up there, you would cause me to be beaten again.’
 (2003-kWBRa)

It can even be used to express a detrimental result for the causer due to his negligence and failure to take proper preventive measures (47).

- (47) *kum mu-c^hw-pe* *q^{he}* ... *kum kw-ɲɲw* *ɲw-βde* *q^{he}*

 thing PL IPFV-CAUS-steal[III]
 ‘(Due to being a heavy drinker), he would [forget] to close the door, leave it open, and [as a result] have his things stolen [by other people].’
 (17-lhazgron)

It also occurs when the causer only suggests that the causee undertake an action of his own volition, with unexpected consequences for the causee. In (48), the causative on *nu-tu-su-p^hut* ‘you had it taken off’ refers to the fact that the causer (a trickster rabbit from a traditional story) cheated the referent in 1SG (a fierce bear) by suggesting that he treat his belly ache in such a way that he would wound his own bottom. Note that the absence of 2→1 indexation on the verb *nu-tu-su-p^hut* means that the bear does not regard himself as causee, and expresses it as if the wound resulted from an event independent of him.

- (48) *pjɣ-kw-nuβlu-a tce mɣ-jɣɣ ma tce a-xtu*

 ‘You cheated me, it is outrageous, not only did my belly not get better, but [by misleading me] you caused a piece of my buttocks to be ripped off.’
 (2011-13-qala)

The causative can also express an event resulting not from an action, but from the absence of action on the causer’s part, with unintended consequences for the patientive argument. For instance, in (49), the 2SG causer (a bird) is about to (unwillingly) cause the 1SG (patientive argument) to be killed by not appearing to the king.

 INDEF.POSS-meat IFR-CAUS-have.a.stench-PST:TR-1SG
 ‘I let the meat spoil.’ (elicited)

17.2.5.7 Inversive

The inersive function of the causative occurs with verbs expressing a transfer of property, reversing the recipient/source relation of the base verb. Two possible cases exist, depending on how source and recipient are encoded by the base verb's argument structure.

First, most inersive causatives are recipient-source inersive: the argument with oblique case of the base verb (the source of the transfer) corresponds to the causer of the causative verb, and the subject of the base verb (the recipient of the transfer) to the causee of the causative verb (indexed as direct object) (see §14.4.3 for a more detailed discussion). Examples of goal inversives include the irregular *ɕurŋo* 'lend' (§17.2.2.1) from *ŋo* 'borrow' and *zɪŋŋu* 'lend' from *nŋu* 'borrow' (see §14.4.1 on the semantic difference between *nŋu* and *ŋo* 'borrow'),

Second, the highly lexicalized *musuk^ho* 'rob, extort' from *k^ho* 'give' is a source-recipient inersive: the dative argument of the base verb (recipient) corresponds to the transitive subject (causer/recipient) of the causative verb, and the subject of the base verb to the direct object (source) of the causative verb (§17.2.3). For other secundative verbs, the rogative *sɾ-* derivation is used instead to express source-recipient inversion (§18.2).

Although inersive causative mostly occurs with ditransitive bases, the causative of the monotransitive verb *χtu* 'buy' can also be interpreted as a recipient-source inersive. Although *χtu* 'buy' lacks a dative argument, the source can be optionally specified with the dative as in (51) in the case of people, or as a locative adjunct, as in (52).

- (51) <*wugui*> *u-ku-ntsye* *ɣɣzu* *tce, nuɪwura nu-cki*
 turtle 3SG.POSS-SBJ:PCP-sell exist:SENS LNK DEM.PL 3PL.POSS-DAT

 again 3SG.POSS-food PL OBJ:PCP-buy exist:SENS
 'There are people_i who sell turtles_j, and one [can] buy their_j food from them_i.' (140510 *wugui*) {0003951#S33}

- (52) <*shangdian*> *u-ŋu* *kɣ-χtu* *ɣɣzu*
 shop 3SG.POSS-inside OBJ:PCP-buy exist:SENS
 'It [can] be bought in a shop.' (28-CAmWGdW) {0003712#S101}

The causative form *su-χtu* has several meanings, including the factitive 'cause to buy' and instrumental 'buy with' (see 54 below), but can also mean 'sell'. This meaning is found in (53) with 3→1SG indexation: the transitive subject of *suχtu* in this construction is both causer and source, while its direct object is the recipient.

- (53) *pɣnmaʋombɣr kuw [...]* *tɣ-wɣ-su-χtu-a* *ŋu*
 ANTHR ERG AOR-INV-CAUS-sell-1SG be:FACT
 ‘It is Padma ‘Od’bar who sold it to me.’ (2012 Norbzang) {0003768#S133}

Case marking is completely different when *su-χtu* has the factitive function ‘cause to buy’, as in (54): the source of the transaction (*tv-mthum u-ku-ntsye* ‘the meat seller’) is marked with the dative as with the base verb above in (51).⁶ The causative *suχtu* therefore has two different argument structures depending on whether it reflects the inversive (‘sell’, 53) or factitive/missive (with associated motion ‘send to buy’ as in 54, §17.2.5.1) functions of this derivation.

- (54) *tɣ-mt^hum* *u-ku-ntsye* *u-cki* *tce*

 INDEF.POSS-meat TRAL-IFR-CAUS-buy LNK
 ‘She sent him to buy meat at the butcher’s.’ (160701 poucet2) {0006155#S15}

17.2.5.8 Instrumental

The causative prefix occurs on transitive verbs to mark an instrument, syntactically treated as a causee as in (55), where the Chinese loanword 粉笔 <fěnbǐ> ‘chalk’ occurs with ergative marking (§8.2.2.4).

- (55) *tcaχpa ɓnuuz nuw kuw, nɣki, <alibaba> ɣu u-kum* *nwtcu*
 thief two DEM ERG FILLER ANTHR GEN 3SG.POSS-door DEM:LOC
 <fēnbǐ> *kuw, nɣkinu, ku-ɣrtum* *ci to-su-ɣxt-ndzi*
 chalk ERG FILLER SBJ:PCP-be.round INDEF IFR-CAUS-write-DU
 ‘The two thieves drew a circle on Alibaba’s door.’ (140512 alibaba-zh)
 {0003965#S121}

However, the causative prefix is not required with overt instruments, as in (56).

- (56) *u-jab* *kuw ju-muɣɣuuz ɣu-c^ha*,
 3SG.POSS-hand ERG IPFV-scratch SENS-can
 ‘[The mole] can scratch it with its claws.’ (28-qapar) {0003720#S152}

⁶One should note however that the verb in (54) has the translocative prefix, and that the dative argument could also in principle be analyzed as a goal (§15.2.7), though in this case the locative *ri* would rather be expected – compare with examples 197 and 198 in §15.2.5.

17 Valency-increasing derivations

The co-existence of an overt instrument in the ergative with an overt transitive subject in the same clause (without any pause) is clumsy. Example (57a) for instance is considered infelicitous if borderline ungrammatical, and the alternative construction with two clauses (57b) is highly preferred.

- (57) a. *??užo kwi spuyju kwi tyscoz pa-sui-ryt*
3SG ERG pen ERG letter AOR:3→3'-CAUS-write

3SG ERG pen AOR:3→3':UP-take LNK letter AOR:3→3'-CAUS-write
'S/he took the pen and wrote the letter with it.' (elicited)

With intransitive bases (such as *βzi* 'get drunk' in 58), the causative expresses a cause (§8.2.2.5) rather than an instrument.

- (58) *c^ha kwi ló-wy-sui-βzi*
alcohol ERG IFR-INV-CAUS-become.drunk
'He became drunk from the alcohol.' (elicited)

The irregular causative *ɕufkaβ* 'cover with' (from the transitive *fkaβ* 'cover', §17.2.2.1) has an instrumental function, and the instrument is marked with the ergative as in (59).

- (59) *k^hlyβ kwi tut^htu pu-cui-fkaβ-a*
cover ERG pan AOR-CAUS-cover-1SG
'I covered the pan with a cover.' (elicited)

Another irregular causative, *ɰmbri* 'play' (from *mbri* 'cry, sing'), can also be interpreted as an instrumental causative, but this verb treats the instrument as the object (§17.2.2.4) without ergative.

17.2.5.9 Tropative

A handful of verbs with a sigmatic causative prefix have a tropative 'find X, consider X' rather than a factitive meaning, the same as what would have been expected from a *ny-* tropative derivation (§17.5).

The most common tropative causative is *ɰnyja* 'find X a shame', 'hate to part with' (60) (in Chinese 舍不得 <shěbùdé> 'hate to part with'), which derives from the intransitive *nyja* 'be a shame' (61).

- (60) *u-mu u-wa ni ku ju-z-nyja-ndzi q^he*

 LNK INDEF.POSS-field SENS-be.a.shame
 'These fields, what a shame (nobody is taking care of them).'
 (150903-friche) {0006400#S7}

Other examples of tropative causative include *zyrtca* 'consider to be wrong' from *yrtca* 'be wrong' (46, §18.3.1.4), *zyngi* 'consider to be right' from *yngi* 'be right' and *znkyro* 'find okay' from *nykyro* 'be okay' (itself a denominal verb, §20.7.1). The velar causative also has tropative uses (§17.3.3.1).

The expected tropative forms †*nynja*, †*nyrtca*, †*nyngi* and †*nykyro* are not attested.

In addition, the verbs *supa* 'consider' and *syrtsi* 'count as', causatives of *pa* 'do' (§22.4.2.5, §10.1.7.1) and *artsi* 'be counted as' (§17.2.8) are used in the periphrastic tropative construction (§24.5.1.2).

The causative of the denominal verb *afsuja* 'be of the same size' (§20.2.1) has the near-tropative meaning 'compare the length/size of X and Y' (rather than 'make X and Y have the same length' or 'consider that X and Y have the same length') as in (62).

- (62) *mbro u-jme c^ho ny-kyrme tu-wy-su-yfsuja*

17.2.5.10 Applicative

The *su-* prefix has a value that can be described as applicative comitative when used with the motion verb *rjuuy* 'run'.

Its causative form *surjuuy*, in addition to the regular missive meaning 'cause to gallop', can also serve as an allative transitive verb of manipulation 'run away with' (§15.1.2.2), as in (63).

17.2.6 Stative verbs

Although the velar causative *ɣɣ-*, rather than the sigmatic prefixes, occurs with most stative verbs, some stative verbs only appear with allomorphs of the sigmatic causative.⁷ Table 17.6 presents a list of representative examples.

Table 17.6: Examples of the sigmatic causative prefixes with stative verbs

Base verb	Causative verb	
<i>wɣrum</i> ‘be white’	<i>sui-wɣrum</i>	§17.2.1.4
<i>ɲaɸ</i> ‘be black’	<i>suiɣ-ɲaɸ</i>	§17.2.1.4
<i>arɲi</i> ‘be green’	<i>sui-ɣrɲi</i>	§17.2.1.3
<i>ɣurni</i> ‘be red’	<i>z-ɣurni</i>	§17.2.1.1
<i>mɣrtsaβ</i> ‘be spicy’	<i>z-mɣrtsaβ</i>	
<i>pe</i> ‘be good’	<i>sɣ-pe</i>	§17.2.2.7
<i>mɲɣm</i> ‘feel pain’ (of a body part)	<i>ɕui-mɲɣm</i>	§17.2.2.1

Stative verbs with a prefixal syllable (*mɣ-*, *rɣ-*, *ɣui-* etc), always appear with *z-*, never with *ɣɣ-* (except some examples with the prefixal element *a-*). This constraint explains for instance why the causative of *mɣrtsaβ* ‘be spicy’ is in *z-* rather than *ɣɣ-*, while almost all other stative verbs denoting feelings or taste have a causative in *ɣɣ-*, for instance *tɕur* ‘be sour’ → *ɣɣtɕur* ‘make sour’ and *tsri* ‘be salty’ → *ɣɣtsri* ‘make salty’.

Color stative verbs and stative verbs related to disease and pain (*ngo* ‘be ill’, *mɲɣm* ‘feel pain’ etc) also form their causative with *sui-* and its variants rather than with *ɣɣ-*, as seen in the table above.

Only a handful of stative verbs are compatible with both velar and sigmatic causative prefixes. The semantic contrast between them is treated in §17.3.3.2.

⁷See §17.2.4.6 and §17.2.4.7 concerning some uses of the causativized stative verbs.

17.2.7 Recursion

The causative is the only derivation in Japhug that can occur twice in the same form. A second causative prefix can appear on lexicalized causative verbs, in particular those with irregular allomorphs (§17.2.2), such as *ɕuɩŋqoɕ* ‘hang’ in (64), where the additional *su-* prefix has a factitive function.

- (64) *mbro nuɩw u-ku pɟɣ-su-p^hut tɕe, u-ku nuɩw*

 IFR:UP-CAUS-CAUS-hang
 ‘She had [people] behead the horse, and hang its head on the city gate.’
 (140428 mu e guniang-zh) {0003880#S101}

The rogative verb *syjts^{hi}* ‘ask for something to drink’ (§18.2) also contains two instances of the sigmatic causative (at least historically), the irregular *j-* (§17.2.2.5), preceded by the passive *a/ɣ-* whose vowel merges with another causative. The underlying form of this verb is thus *su-ɣ-j-ts^{hi}* (CAUS-PASS-CAUS-drink).

However, double causativization also occurs with non-lexicalized causatives. For instance, in (65) and (66), the *su-* prefix closest to the stem is factitive, and the one added to it has the instrumental function (§17.2.5.8), meaning ‘cause to X with’.

- (65) *nuɩw ku pɟú-wɣ-su-su-spoɕ ɲu-ŋu.*

 ‘The other [method to remove chicken feathers] is to make a fire and burn off the feathers with the flames.’ (150907 kAnWtChWwWt) {0006282#S20}

In (65) and (66), the base verbs *spoɕ* ‘have a hole’ and *βɣut* ‘be burned off’ (of hairs/feathers) are intransitive, but double causativization is also possible with transitive bases, as in (67).

- (67) *pu-ta-su-ryt*
 AOR-1→2-CAUS-CAUS-write
 'I made you write it_i with it_j.'

Another type of double causative occurs when sigmatic and velar causative prefixes are combined (§17.3.4).

17.2.8 Compatibility with other derivations

As the most productive verbal derivation, the sigmatic is also the one that is compatible with the greatest number of other derivations.

Table 17.7 lists the derivational prefixes that can follow the causative in the prefixal chain (following the regular allomorphy described in §17.2.1). Since all cases are exemplified and discussed in the relevant sections, the data is not reproduced here. Despite the considerable number of prefixes that are compatible with the sigmatic causative, the reflexive *zyr-* (§18.3.4), *sr-* antipassive (§18.6.2) and propriative (§18.8) derivations are never preceded by the sigmatic causative. The active does not normally follow the causative, except in a handful of lexicalized examples (§19.1.6).

Table 17.7: Derivations following the sigmatic causative in the prefixal chain

Derivation	Form	Reference
Applicative	<i>z-nu/r-</i>	§17.4.4
Tropative	<i>z-nr-</i>	§17.5.4
Velar causative	<i>z-yr-</i>	§17.3.4
Passive	<i>su-r-</i>	§18.1.6, §18.2
Reciprocal	<i>su-r-</i> + reduplication	§18.4.1.2
Anticausative	<i>su(y)</i> +prenasalization	§18.5.6
Antipassive	<i>z-rr-</i>	§18.6.9
Antipassive	<i>z-rr-</i>	§18.6.9
Distributed property, reciprocal	<i>su-rmu-</i>	§18.7, §18.4.2.5
Facilitative	<i>z-muyu-</i>	§18.9.2
Distributed action	<i>z-nr-</i> + reduplication	§19.4.3

Fewer derivations can occur before the causative in the prefixal chain. The other valency-increasing derivations (applicative, tropative, velar causative) never take a sigmatic causative verb as input. Among valency-decreasing derivations, the anticausative prenasalization is never attested on causative verbs.

Three valency-decreasing derivations precede the causative only in a handful of lexicalized verbs. The antipassive and passive derivations are only found on *rɔjts^{hi}* ‘give to someone to drink’ (§18.6.4) and *ajts^{hi}* ‘be given to drink’ (§18.1.4), from the irregular causative *jts^{hi}* ‘give to drink’ (§17.2.2.5) of *ts^{hi}* ‘drink’ and *sɔnu-suk^{ho}* ‘rob people’ from the autive-causative *musuk^{ho}* ‘rob, extort’ (§18.6.9).

In addition, the progressive prefix *asu-* probably derives from the combination of the passive with the sigmatic causative (§21.6.1.3), but cannot be analyzed this way synchronically.

The derivations that can productively take a sigmatic causative verb as input are presented in Table 17.8.

Table 17.8: Derivations preceding the sigmatic causative in the prefixal chain

Derivation	Form	Reference
Reflexive	<i>zɣɣ-su(y)-</i>	§18.3.4
Reciprocal	<i>a-su(y)-</i> + reduplication	§18.4.1.2
Facilitative	<i>nuɣu-su(y)-</i>	§18.9.2
Autive	<i>nu-su(y)-</i>	§19.1.2

From Tables 17.7 and 17.8, we see that only two derivations, the reduplicated reciprocal (§18.4.1.2) and the *nuɣu-* object-oriented facilitative (§18.9.2) can both freely precede and follow the sigmatic causative in the prefixal chain. Unlike negation (§17.2.4.4) and associated motion (§17.2.4.5) prefixes, whose semantic scope with the causative is independent of their relative position in the template, in the case of the reciprocal and facilitative, the relative position influences the semantic scope of the prefixes (§11.2.2).

17.3 Velar causative

The velar causative prefix *ɣɣ-* (in the Kamnyu dialect, corresponding to *wɣ-* in eastern dialects) is the second causative derivation found in Japhug. Unlike the sigmatic causative (§17.2), it is restricted to stative verb bases. Not all stative verbs,

however, build their causative form with the velar causative. In particular, polysyllabic bases, including those whose non-final syllable is a derivation prefix or an unanalyzable element (such as *a-*, *nV-*, *rV-*, *sV-* etc) can only be causativized with sigmatic prefixes (§17.2.6). A handful of verbs are compatible with both velar and sigmatic causative prefixes (§17.3.3.2).

Table 17.9 presents a representative sample of velar causative verbs, including adjectival stative verbs, existential verbs and modal verbs. The presence of Tibetan loanwords such as *dʎn* ‘be many’, *βdi* ‘be well’ and *ts^hoz* ‘be complete’ (from ལྡན *ldan* ‘possessing’, བདེ *bde* ‘well’ and ཚུར་བློ་བཟོ་ *ts^harj* ‘complete’) in the list shows that this prefix is productive.

Table 17.9: Examples of velar *ɣr-* causative derivations

Base verb	Derived verb
<i>dʎn</i> ‘be many’	<i>ɣrdʎn</i> ‘increase’
<i>βdi</i> ‘be well’	<i>ɣrβdi</i> ‘repair’, ‘make better’
<i>ts^hoz</i> ‘be complete’	<i>ɣrts^hoz</i> ‘make complete’
<i>wxti</i> ‘be big’	<i>ɣrwxti</i> ‘make bigger’
<i>jom</i> ‘be broad’	<i>ɣrjom</i> ‘broaden’
<i>mna</i> ‘be better’	<i>ɣrmna</i> ‘heal’, ‘make better’
<i>smi</i> ‘be cooked’	<i>ɣrsmi</i> ‘cook’
<i>me</i> ‘not exist’	<i>ɣrme</i> ‘destroy’
<i>maʁ</i> ‘not be’	<i>ɣrmaʁ</i> ‘cause not to be’
<i>ra</i> ‘be needed’	<i>ɣrra</i> ‘cause to have to’
<i>k^hu</i> ‘be possible’	<i>ɣrk^hu</i> ‘make it possible to’

The velar causative *ɣr-* prefix is homophonous with a few other derivational prefixes, including denominal (§20.5), deideophonic (§20.9.1) and subject-oriented facilitative (§18.9.1). The latter derives intransitive verbs whose stems are identical (with different conjugations however) to those of velar causatives, for instance *ɣrwxti* ‘become big easily’ vs. *ɣrwxti* ‘make bigger’ from *wxti* ‘be big’.

The causative verbs from complement-taking modal verbs such as *k^hu* ‘be possible’ can occur with nominal objects, especially abstract nouns as in (68), but are more commonly found with complement clauses as objects (§17.3.2.3).

17.3.1 Irregular allomorphs

Irregular allomorphs of the velar causative are very rare and highly lexicalized. The *ɣɣ-* prefix clearly originates from earlier **wɯ-*, as shown by the form *wɣ-* in eastern Japhug dialects and the cognate prefixes *wɯ-* in Tshobdun and Zbu (Sun 2014a). The vowel-less irregular allomorphs originate from earlier **w-*, nasalized to /m/ before nasal and prenasalized stops.

A /w-/ allomorph, realized as *β-*, is found in the verb *βri* ‘protect’, ‘save’ (69),⁸ which derives from the intransitive *ri* ‘remain’, ‘be left’ (see examples 87, §7.3.3.3 and 131, §14.5.1.4). The bare root *ri* is also attested in the transitive verb *ri* ‘save’ (always in collocation with *tu-sroβ* ‘life’, §22.4.3.2), a zero derivation from *ri* ‘remain’ (§14.5.1.4).

- (69) *nɣ-pi ni tɣ-tu-βri-t ɲu*
 2SG.POSS-elder.sibling DU AOR-2-save-PST:TR be:FACT
 ‘You saved your two elder brothers.’ (2003 *qachGa*) {0003372#S133}

The lexicalized causative *βri* can be subjected to reflexivization (§18.3.4) in *ɲɣβri* ‘protect oneself’ (example 15, §6.2.1).

The regular sigmatic causative *suy-ri* from the base verb *ri* ‘remain’ also exists, and predictably means ‘leave, not use up completely’ as in (70). It is probable that *βri* originally also had a meaning close to that of *suy-ri*, and then changed to ‘save, protect’.

- (70) *ki a-tɣ-tu-ndze q^he q^he u-qa nwtɕu*

 INDEF.POSS-nail about INDEF EMPH IRR-PFV-2-CAUS-remain LNK
 ‘When you eat this, leave a [quantity of] about a nail [from it in the
 bowl].’ (2003 *kandZislama*)

⁸This verb can take as object the entity being protected as in (69) (see also 45, §14.3.2.3), but also in some cases the entity one protects something from; for instance the participial clause *qale u-ku-βri* (wind 3SG.POSS-SBJ:PCP-protect) means ‘(hedge) that protects from the wind’.

The *m*- allomorph of the velar causative occurs in the verb *mno* ‘prepare’ (see 36 in §8.2.2.1, and the discussion in §16.5.1), a causative of the intransitive stative verb *no* ‘be prepared’ (with nasalization **w-no* → *mno*). This intransitive verb is particularly common in the participle form *ku-no* ‘already prepared, ready to (eat)’ (corresponding to Chinese 现成 <xiànchéng> ‘ready-made’), as in (71).

- (71) *ma jinde tce ku-χsu-j me ma ku-no ntsur*

 IPFV-eat-1PL be.AFF:FACT LNK
 ‘Nowadays we do not raise [chicken] anymore, we eat ‘ready-made’
 [eggs].’ (22-kumpGa) {0003588#S79}

Like *βri* above, the causative *mno* can be reflexivized to *χχmno* ‘prepare oneself’ (§18.3.4). A regular causative form *suw-no* ‘prepare’ is also attested, but it is much rarer than *mno*, and the semantic difference between these two causative forms has not been elucidated.

Another example of the nasalized *m*- allomorph is the rare transitive verb *mdzar* ‘drip dry’ (73)⁹ which derives from the intransitive verb *ndzar* ‘drip dry’ (72).¹⁰ The onset *mdz-* is phonologically /mndz-/, with the causative **w-* prefix nasalized by the prenasalized voiced affricate /ndz/, a unitary phoneme (§4.2.1.9).

17.3.2 Morphosyntax

17.3.2.1 Negation

The combination of the velar causative with negation prefixes is ambiguous. As in the case of the sigmatic causative (§17.2.4.4), the scope of the negation can either include the causation (‘not cause to *X*’) or not (‘cause not to *X*’). For instance, the causative *ɣɾwxti* ‘make bigger’ in negative form can either be ‘not make bigger’, or ‘make smaller’ as in (74).

- (74) *uu-p^hu* *ɲuu-wxti* *tce, nuura* *t^hamtɕyt ma-tɣ-tuu-ɣɣ-wxti*
 1SG.POSS-price SENS-be.big LNK DEM:PL all NEG-IMP-2-CAUS-be.big
 ‘It is expensive, make it less expensive.’ (2010-12)

With the velar causative from modal verbs, the broad scope interpretation of the negation is very common. For instance, *ɣɾra* ‘cause to have to’ and *ɣɾk^hu* ‘make it possible to’ in the negative form generally mean ‘cause not to have to’ and ‘make it impossible to’ (§17.3.2.3).

17.3.2.2 Complement clauses with causative of manner

As with the sigmatic causative (§17.2.4.7), the velar causative can derive complement-taking verbs expressing manner (§24.5.1.4), selecting complement clauses with velar infinitive (§16.2.1.5) or bare infinitive (§16.2.2.1).

The examples in (75) illustrate the possible constructions with the causative *ɣɾtɕ^hom* ‘cause to be too much’, ‘do *X* too much’ from *tɕ^hom* ‘be too much’ and the verb *ts^hi* ‘drink’ expressing the main action in the complement clauses. The velar infinitive (75a) and bare infinitive (75b) constructions have the same meaning ‘drink too much’, and the causative verb takes the orientation prefix normally selected by the verb in the complement clause, in this case either EASTWARDS (75a) or UPSTREAM (75b).

- (75) a. [*c^ha* *kɣ-ts^hi*] *ko-ɣɣ-tɕ^hom*
 alcohol INF-drink IFR-CAUS-be.too.much
 b. [*c^ha* *uu-ts^hi*] *lo-ɣɣ-tɕ^hom*

17 Valency-increasing derivations

- c. *c^hɣts^hi* *ko-ɣɣ-te^hom*
 alcohol.drinking IFR-CAUS-be.too.much
 ‘He had drunk too much alcohol.’ (150829 jidian-zh) {0006338#S16}

In addition, example (75c) shows that object-verb action nominal compounds (§5.5.5.2, §16.4.7) can occur with causative verbs instead of complement clauses.

While action nominal compounds are rare, the causative complement construction with velar and bare infinitive is very common and compatible with all verb categories. Even noun-verb collocations such as *tu-xcɣt* + *lɣt* ‘exert strength, do X forcibly’ can occur in these complement clauses as in (76) (with an UPWARDS orientation preverb).

- (76) *rgɣtpu nuu kuu u-tcuu* *ja-st^hoɓ* *tce, u-xcɣt*
 old.man DEM ERG 3SG.POSS-son AOR:3→3’-push LNK 3SG.POSS-strength

 ‘The old man pushed his son, but exerted too much strength and...’
 (150831 jubaopen-zh) {0006294#S143}

All velar causative verbs, even those that are generally used with a concrete factitive meaning, can be used in these complement-taking constructions. For instance, *ɣɣ-βdi* (from *βdi* ‘be well’), which can mean ‘repair’ with a nominal object (see 23, §6.3), occurs in the sense of ‘do X well, do X nicely’ with a complement clause as in (77).

- (77) *k^ha u-βɣri* *nuutcu u-fkɣɣm*

a-kɣ-tu-ɣɣ-βdi
 IRR-PFV-2-CAUS-be.well
 ‘Place these nicely [in order] in front of the house.’ (smanmi 2003.1)

17.3.2.3 Modal and existential verbs

Velar causative forms of modal verbs, in particular *ɣɣra* ‘cause to have to’ and *ɣɣk^hu* ‘make it possible to’, are found with velar infinitive or finite complement clauses (§24.5.1.1) like the corresponding base verbs *ra* ‘be needed’ and *k^hu* ‘be possible’ (§24.5.3.1) as in (78), but not with bare or dental infinitives.

- (78) [*kɣ-nu-tɔɓ*] *mu-tɣ-ɣɣ-k^hu-t-a.*
 INF-AUTO-come.out NEG-AOR-CAUS-be.possible-PST:TR-1SG
 ‘I prevented it/him from coming out.’ (elicited)

The object of the causative verb is most often the (transitive or intransitive) subject of the complement clause as in (78), but not necessarily; in (79), the object of *tx-γx-k^hu-t-a* is the possessor of the subject (in the possessive construction, §22.5.2.1).

- (79) [*u-rηul* *kx-tu*] *tx-γx-k^hu-t-a*.
 3SG.POSS-money INF-exist AOR-CAUS-be.possible-PST:TR-1SG
 ‘I made it possible for him/her to have money.’ (elicited)

In (80), the causative *γxra* occurs with a clause containing the form *ku-ra* that can either be interpreted as a relative (with a subject participle) or as a complement clause (in which case the *ku-* prefix is preferably analyzed as a stative infinitive).

- (80) <*xianling*> *nū nū-rga* *q^hendxre*, [...] [*nū-bjov*
 magistrate DEM AOR-be.happy LNK 3PL.POSS-servant

 ‘The magistrate was happy, and cancelled the duties that they had to do.’
 (150904 cuzhi-zh) {0006322#S173}

The existential verb *tu* (§22.5.1.2) can also be subjected to the *γx-* derivation, which yields the verb *γxtu* ‘cause to have’. This form is used to causativize possessive constructions (§22.5.2) or noun-verb collocations (§22.4.1) as in (81).

- (81) *a-xcvt* *zo* *tu-γxte* *tce*

 {0006254#S49}

17.3.2.4 Collocations

Complex predicates comprising a noun-verb collocation can undergo causativization with the *γx-* prefix.¹¹

For instance, the combination of the lexicalized object participle *kx-ti* (OBJ:PCP-say) with the existential verb *me* ‘not exist’, which means ‘have nothing to say’ or ‘be unable to say for sure’ (see example 93, §16.1.2.7), can be causativized to *kx-ti + γx-me* ‘cause *X* to have nothing to say’ as (82).

¹¹The causativization of complex predicates with the sigmatic prefixes is treated in §17.2.4.9.

- (82) *rʃɤlpu nuw u-kɣ-ti na-ɣɣ-me*

 'He made the king unable to say anything.' (2005 tAwakWcqraR)

17.3.3 Semantics

17.3.3.1 Troponative

The velar causative does have a troponative interpretation in specific contexts, like the sigmatic causative (§17.2.5.9). The verb *ɣɣwxti* 'make bigger' from *wxti* 'be big' for instance can mean 'find/consider to be bigger' as in (83).

- (83) *kumaw u-yi nura nu-rtsawa*

17.3.3.2 Velar vs. sigmatic causatives

Some stative verbs are compatible with both sigmatic (§17.2.6) and velar causative prefixes, an observation which raises the question of the semantic distinction between these two derivations when contrastive.¹²

Sun (2006b; 2014a), with regard to the causative prefixes *sə* and *wɔ-* in Tshobdun, proposes that in the case of some stative verbs, the former indicates an increase of degree (85a), while the latter expresses a change of state (85b).

¹²The contrast between the two causative derivations in the case of the irregular allomorphs *β-* and *m-* is discussed in §17.3.1.

- (85) a. *c^héfi ne-kə-səy-c^hiʔ=nəʔ* *mimʔ=cə*
 beer IPFV-GENR-CAUS-be.sweet=DEM be.tasty=MED
 ‘Beer is tasty when one allows it to sweeten (naturally and gradually).’
- b. *c^héfi ne-kə-wə-c^hiʔ=nəʔ* *mimʔ=cə*
 beer IPFV-genr-CAUS-be.sweet=DEM be.tasty=MED
 ‘Beer is tasty when one sweetens it (e.g. by adding sugar).’

In Japhug, it is not completely clear whether a semantic contrast of the same type is attested. Minimal pairs such as *suux-c^hi* and *ɣɣ-c^hi* from *c^hi* ‘be sweet’ or *suux-tɕur* and *ɣɣ-tɕur* from *tɕur* ‘be sour’ do exist, but no consistent semantic difference appears to exist between them.

Examples (86) and (87) suggest that the causative *suux-tɕur* means ‘make sour’ rather than ‘make more sour’ as would be expected following Sun’s analysis of Tshobdun.¹³

- (86) *tce tɣjko mu-tɣ-tɕur tce, ɳgolo u-mat nu*

 ‘It is so sour that when one puts it into one’s mouth, it makes everything [sour in an even way], as if one’s whole body becomes sour.’ (09-mi) {0003466#S60}

¹³In the case of (86), it is possible that *tɣjko mu-tɣ-tɕur* can be contextually translated as ‘when the pickle is not sour enough’, and that therefore the verb *pɳu-suux-tɕur* does indeed mean ‘make more sour’. Tshendzin proposed conflicting interpretations of this example. The occurrence of *suux-tɕur* in (87) however is incompatible with an analysis in terms of heightened degree.

unlike the sigmatic causative which can precede a dozen derivational prefixes (§17.2.8).

The velar causative prefix can be preceded by the reflexive *zyr-* as in (91) (see also 59, §18.3.4.1 and §18.3.4.2).

- (91) *icq^ha* *tur-xtsa* *nuni* *tx-kx-s^hab*

 DEM:LOC IRR-PFV:EAST-2-go
 ‘[Since] you have already had the road repaired (by someone else), [take that road] to go [east].’ (2011-04-smanni)

The tropative causative *yrk^he* ‘depreciate, demean’ (derived from *k^he* ‘be stupid’, §17.3.3.1) also has the *sr-* antipassive form (§18.6.2) *srz-yr-k^he* (APASS-CAUS-be.stupid) ‘demean people’.

17.4 Applicative

The applicative *nu-* is a valency-increasing derivation by means of which an oblique argument, an adjunct or even a non-participant (including comitative or dative adjuncts and semi-objects, §17.4.1) is promoted to object function. In Japhug, the base verb is always morphologically intransitive, and the applicative verb transitive (§14.3.1). The subject of the applicative verb corresponds to the same referent as that of the base verb, though it receives ergative case marking instead of absolutive (see examples 106 and 105 in §17.4.1 below).

The *nu-* applicative is only attested by a limited number of examples (exhaustively listed in Table 17.10; the allomorphy is discussed in §17.4.2), but the fact that

it includes the Tibetan loanword *rga* ‘like’, ‘be happy’ (from དགའ་ *dga* ‘be happy’) shows that it has some degree of productivity.

Cognates of the applicative prefix are found in other Gyalrong languages (in Tshobdun, see Sun 2006b), and one potential example is found in Khroskyabs (Lai 2017: 361). This prefix probably originates from the denominal *nu-* (§20.7.2), and replaced the older suffixal applicative, which only remains in a handful of examples (§17.4)

Table 17.10: Examples of the *nu-* applicative prefix

Base verb	Derived verb
<i>azuzu</i> ‘wrestle’	<i>nzuzu</i> ‘wrestle with’
<i>ak^hu</i> ‘call’	<i>nk^hu</i> ‘invite’
<i>ak^hɣzɲga</i> ‘call’, ‘shout’	<i>nk^hɣzɲga</i> ‘shout at’
<i>andzuit</i> ‘bark’	<i>nzndzuit</i> ‘bark at’
<i>amdzu</i> ‘sit’	<i>nzmdzu</i> ‘look after’
<i>ayro</i> ‘play’	<i>nyro</i> ‘play with’
<i>stu</i> ‘believe’ (vi)	<i>nstu</i> ‘believe’ (vt)
<i>mbyom</i> ‘be in a hurry’	<i>numbyom</i> ‘look forward to’
<i>ɲke</i> ‘walk’	<i>nuɲke</i> ‘look for’
<i>rga</i> ‘like’ (vi)	<i>nurga</i> ‘like’ (vt)
<i>sjom</i> ‘envy’ (vi)	<i>nusjom</i> ‘envy’ (vt)
<i>zduy</i> ‘suffer’	<i>nuzduy</i> ‘worry about’
<i>buy</i> ‘miss home’ (vi)	<i>nuybuy</i> ‘miss’ (vt)
<i>mu</i> ‘be afraid’	<i>nuymu</i> ‘be afraid of’

In addition to these examples, the *ny-* deideophonic verbs can be analyzed as applicative derivations from their *a-* deideophonic counterpart (§20.9.3).

17.4.1 The syntactic and semantic functions of the promoted argument

Despite the limited number of applicative verbs, there is a considerable diversity in the syntactic functions of the non-core arguments (of the base verbs) that are promoted to object status by the applicative derivation.

17.4.1.1 Promotion of comitative argument

The verb *azuuzu* ‘wrestle’, historically a reciprocal verb (§18.4.1.3), requires a non-singular subject and can select a comitative argument in *c^ho* (§8.2.5). The object of the applicative form *nyzuuzi* ‘wrestle with’ corresponds to this comitative argument, as shown by the minimal pair (93) vs. (94).

- (94) *u-zda* *ɲu-ɣz-nu-ɣzuuzi*
 3SG.POSS-companion SENS-PROG-APPL-wrestle
 ‘He is wrestling his friend.’ (elicited)

17.4.1.2 Promotion of semi-object (stimulus)

In the case of the semi-transitive *rga* ‘like’, the argument added by the applicative is the semi-object (§14.2.3). The base verb *rga* and its applicative form *nurga* ‘like’ are in some contexts semantically identical, for instance in the pseudo-clefts (§23.6.1) *stu ji-kɣ-rga* and *stu ji-kɣ-nu-rga* in (95) and (96) which both mean ‘the one that we like most’ (both objects and semi-objects can be relativized with the object participle §16.1.2.4, and the possessive prefix in both cases refers to the subject §16.1.2.1).

cti,
 be.AFF:FACT
 ‘Coloured belts are something that we Tibetan woman must absolutely have, and it is what we like best.’ (thaXtsa 2002)

In addition to morphological (§14.3.1) differences, as well as absolutive vs. ergative marking of the subject (§8.2.2.1), the base verb *rga* and its applicative *nurga* differ from each other in three regards.

First of all, *rga* displays lability between a semi-transitive use ‘like’ and a stative intransitive use meaning ‘be happy’ (compare 142 and 143 in §14.5.3), while the applicative *nurga* does not mean ‘be happy because/for’.

Second, whereas the base verb *rga* can take infinitival complement clauses (§16.2.1.5, §24.2.1.2), as in (97) (see also 177, §14.6.2), its applicative form *nu-rga* cannot: the applicative derivation thus *removes* complement-taking ability (at least in this case).

- (97) *ma azo [qajuu nuura kx-nxrtoχpjxt] puu-rga-a tce*
 LNK 1SG bug DEM:PL INF-observe PST.IPFV-like-1SG LNK
 ‘I liked to observe bugs.’ (26-quspunmbro) {0003684#S15}

Third, with first or second person objects, only the applicative *nurga* is possible. The local scenario 1→2 (98) and 2→1 configurations (example 43, §5.1.2.12), as well as the mixed scenario inverse configurations (99) cannot be expressed with the base verb *rga*.

17.4.1.3 Promotion of dative argument

The verbs *andzuit* ‘bark’ and *ak^hrznga* ‘call’ optionally select a dative argument (*turme mx-kx-nuufse nu* ‘the person that it does not know’ in 100), which is promoted to object status by the applicative (101).

 ‘[The dog] is barking at the unknown person.’ (elicited)

17.4.1.4 Introduction of new referent

For most applicative verbs, the object corresponds to an entirely new referent, without equivalent in the argument structure of the base verb. Based on the semantic role of the added argument, four sub-cases can be distinguished.

The semi-transitive verb *stu* ‘believe’, like *rga* ‘like’, is semi-transitive (§14.2.3). Its semi-object is either a complement clause or a noun such as *u-rju* ‘his words’, expressing the content of the utterance that is believed by the subject. Its (morphologically irregular, §17.4.2) applicative *nrstu* takes as object the person uttering the words that are believed by the subject, as in (102), which is not expressed as an argument of the base verb (with *stu* ‘believe’ the only way to express the person saying the words that are believed is as possessor of the semi-object).

- (102) *nuɸnu azo u-ɲu-kuu-nɣ-stu-a nɣ, tɕendɣre, nuɸimuma*

 EMPH GO:FACT-1DU LNK
 ‘If you believe me, let us go [there] immediately.’ (140425 shizi huli he lu-zh) {0003794#S41}

Examples like (103) with the relative clause *uzo ku ta-tuɸt* ‘(the words) that he said’ appearing before the verb could seem to imply that *nrstu* can also select as object the words uttered. If this analysis were correct, the applicative *nrstu* would be similar to *nurga* ‘like’ above in promoting the semi-object of its base verb as object. However, if the relative clause takes a second person subject as in (104), it is possible either to use the base verb *stu* ‘believe’ or the applicative *nrstu* with a second person object (*mɣ-ta-nrstu* ‘I don’t believe you’), but not with a third person object, showing that in (103) the relative clause is not the object, but an adjunct (the object of *nrstu* in this example is the referent corresponding to the subject of the relative clause).

 ‘I don’t believe what you said.’ (elicited)

Other intransitive verbs with experiencer subject, such as *buɣ* ‘miss home’, *mu* ‘be afraid’ and *ʃɔm* ‘envy’, have applicative forms that promote the stimulus as object. The base verb forms cannot select a noun or a complement clause to specify this stimulus, even as adjunct; the stimulus can only be indirectly expressed in a separate clause. In (105) for instance, the clause *tɣ-tɕu ... tu-ɣɣɕqali-nu* ‘the men ... shout’ describes the reason for the fear of the animals; though it could be analyzed as the stimulus of the verb *ɲu-mu-nu*, the relationship between the two clauses is simply one of temporality/causation, and the verb *mu* ‘be afraid’ is unable to take any overt stimulus.

- (105) *tɣ-tɕu t^hamtɕɣt kuw-duw-dɣn nuw*

 SENS-be
 ‘The men (i.e. the hunters) all shout together in great numbers, and the wild animals being afraid flee downstream.’ (150829 KAGWcAno)
 {0006420#S9}

The corresponding applicative verb *nuɣmu* ‘be afraid of’ marks the experiencer in the ergative, and takes the stimulus (in 106, *turme* ‘person’) as object (note the generic object indexation, §14.3.2.5). The referent promoted as object by the applicative derivation in this verb is the same as that promoted to subject status by the proprietive *sɣ(ɣ)-* (see 181, §18.8).

- (106) *nuwu kuw turme wuma zo ɲu-kuw-nuɣ-mu.*
 DEM ERG people really EMPH IPFV-GENR:S/O-APPL-be.afraid
 ‘It is very afraid of people.’ (24-ZmbrWpGa) {0003628#S26}

The verb *ayro* ‘play’ (almost always attested as *a <nu> yro* with infixation of the autive, §19.1.2), rarely occurs in the singular, and can select comitative arguments (§8.2.5), as in (107).

- (107) <xiaocui> *nɯ tɣ-rustunmɯ u-q^hu q^he tce*

 ‘After she married, Xiaocui played every day with Yuanfeng, who did
 not understand speech.’ (150909 xiaocui-zh) {0006386#S60}

However, unlike *azuzu* ‘wrestle’ above, its applicative *nɣɣro* ‘play with’ does not promote the comitative argument (the person one plays with) to object status. Rather, it selects the instrument (the toy one plays with) as object. In (108), the object of *nɣɣro* is not overt in the same clause, but anaphorically refers to *kumtc^hu* ‘toy’ in the previous clause.

17.4.1.5 A problematic case

The relationship between the transitive verb *nuzduy* ‘worry about’ and the base verb *zduy* ‘suffer’ (from སྤུག *sdug* ‘suffering’) is slightly different from the preceding cases, and it is disputable whether this verb is to be classified as applicative. The intransitive verb *zduy* has two different meanings: ‘be sad’ when used with the nouns *tu-sum* ‘mind’ or *tu-sni* ‘heart’ as subjects, and the experiencer as possessor as in (109), and ‘endure hardship’ when taking a human (or non-human animal) subject (110). The meaning ‘worry’ of the verb *nuzduy* is not directly derivable from either. It is close to ‘to be sad about’, but the transitive subject of *nuzduy* corresponds to the possessor of the subject of *zduy*, making it a unique type of derivation.

 {0003366#S18}

17.4.2 Allomorphy

The applicative prefix has three regular allomorphs: *nu-*, *nuɣ-* and *ny-*.¹⁴ The allomorph *nuɣ-* has the same distribution as the *suɣ-* allomorph of the causative (§17.2.1.4), occurring with monosyllabic intransitive verb roots whose onset does not contain a cluster and/or a velar consonant. The allomorph *ny-* (homophonous with the tropative, §17.5.1) is due to vowel fusion with the contracting *a-* in some verb stems (§12.3; the de-contracted form *nu-ɣ-* is used in some of the discussion in this section), with the exception of the verb *stu* ‘believe’ whose applicative is irregular.

The allomorph *nu-* occurs in all other contexts. It is homophonous with the autive (§19.1), the vertitive (§19.2) and various other prefixes, including the WESTWARDS orientation preverbs (§15.1.1.1) and the denominal *nu-* (§20.7), but ambiguity is rare as these prefixes belong to different slots (§11.2).¹⁵

17.4.3 Lexicalized applicatives

Three of the applicative verbs in Table 17.10 are highly lexicalized and cannot be considered to be synchronically analyzable as related to their base verbs.

First, the transitive verb *nyk^hu* ‘invite’ (to one’s home as a guest, see examples in §24.2.2.2 and §16.1.2.6) originates from the applicative *nu-nyk^hu* of *ak^hu* ‘call’, meaning ‘call (someone), shout at’. The verb *ak^hu* can select a locative goal (referring to the direction where one calls), as in (111), and its applicative *nu-nyk^hu* presumably originally promoted this oblique argument to object status.

- (111) *k^ha nutɕu ɕ-to-k-nyk^hu-ci*
 house DEM:LOC TRAL-IFR-PEG-call-PEG
 ‘He went and called in the direction of the house.’ (2011-05-nyima)

At that earlier stage, *nu-nyk^hu* probably used to have a meaning similar to that of *nu-nyk^hɣzɳga* ‘shout at’, the applicative of *ak^hɣzɳga* ‘call’, ‘shout’ (a verb related to

¹⁴A similar allomorphy is found in other Gyalrong languages, see Sun (2006b) on Tshobdun.

¹⁵For an example of partial ambiguity between autive and applicative, see examples (113) and (114) in §17.4.3.

and synonymous with *ak^hu* ‘call’). As shown by (112), the applicative *nyk^hyzhga* ‘shout at’ selects the goal/addressee as object (the plural marking on the verb form which here indexes the object being due to the presence of the inverse prefix, see 3’ → 3PL in §14.3.2.2).

- (112) *te^heme w-skxt ku-snuw-sna ci ku zo*
 girl 3SG.POSS-voice SBJ:PCP-EMPH~nice INDEF ERG EMPH
tú-wy-nuw-^hyzhga-nuw ntsuu.
 IPFV-INV-APPL-call-PL always
 ‘A girl who had a beautiful voice was calling them.’ (2003kandZislama)

The applicative *nuw-^hu* however underwent the semantic change ‘call *X*’ ⇒ ‘call *X_i* to invite him/her_i to come as guest’ ⇒ ‘invite *X* to come as guest’, so that its etymological relationship with its base verb *ak^hu* ‘call’ is not synchronically obvious anymore.

Second, *nuŋke* ‘look for’ is formally an applicative of the atelic motion verb *ŋke* ‘walk’ (§15.1.2.1). The promoted object corresponds to the aim of the motion (the entity that the subject is searching), as in (113).

- (113) *ji-<baogao> tɣ-lɣt, <piaozi> c-tɣ-nuŋke, <dianzhan>*

k^hw tce
 be.possible:FACT LNK
 ‘One can walk [on this path] everywhere in the fields [as one wishes].’
 (15-06-05)

Third, the transitive verb *nymdzu* ‘look after’ historically derives from the intransitive *amdzu* ‘sit’ by the applicative derivation. Its original meaning probably was ‘sit by’, with a locative adjunct promoted to object status, but in Japhug it rather means ‘stay near *X* and look after *X*’ without necessary implication of remaining seated, as in (115).

17.4.4 Applicatives and other derivations

The applicative derivation cannot take any other derived verb form as input. The only partial exception is the applicative *nyzuзу* ‘wrestle with’, whose base form *azuзу* ‘wrestle’ historically was a reciprocal verb (§18.4.1.3), but since it is an already fossilized reciprocal, it does not demonstrative the ability of the applicative to apply to reciprocal forms in general.

On the other hand, applicative verb forms can be subjected to further derivations, including the reflexive *zyr-* (*zyr-ny-stu* REFL-APPL-believe ‘believe in oneself’, see example 72, §18.3.6) and the sigmatic causative (116).¹⁶

- (116) *turme ra, zimk^hym zo,* *ɲu-z-nu-sjom-a-nu* *c^ha-a*
people PL many EMPH IPFV-CAUS-APPL-envy-1SG-PL can:FACT-1SG
‘I will be able to make a lot of people envy [me for my dress].’ (jinai de guniang-zh)

The problematic verb *muzduy* ‘worry about’ (§17.4.1.5) can in addition serve as input to the proprietive derivation (§18.8.6).

17.5 Tropative

The tropative¹⁷ *ny-* prefix is a valency-increasing derivation creating a transitive verb meaning ‘find/consider to be *X*’ out of an intransitive stative verb.¹⁸

The tropative resembles the causative derivations in that the subject of the base verb becomes the object of the derived verb, and the added argument is the transitive subject (unlike the applicative). However, the semantic role of the transitive subject is not an agent (causer), but an experiencer.

¹⁶In this example, the 1SG is both causer (indexed as transitive subject) and patient, while the causee (‘the people’) is indexed as object.

¹⁷This term is taken from Arabic linguistics, see for instance Larcher (1996). Another possible term for this derivation would be ‘estimative’.

¹⁸Cognate prefixes are found in other Gyalrong languages, (Sun 2006b: 5–6, Jacques 2013a).

For instance, the trovative of the stative verb *mpeɣɣ* ‘be beautiful’ is the transitive *nɣmpɣɣ* ‘find beautiful’, whose object is the entity considered to be beautiful (*iɕq^ha tɕ^heme* ‘the girl’ in 117), and whose transitive subject in the ergative is the person feeling the beauty of the object (*tɣru u-tɕu* ‘the prince’ in 117).

- (117) *tɕe nuu tɣru u-tɕu nuu kuu nuucimuma zo*
 LNK DEM chieftain 3SG.POSS-SON DEM ERG immediately EMPH

 IFR-TROP-be.good
 ‘The prince immediately found the girl very beautiful and fell in love
 with her.’ (140518 huifei de muma-zh) {0004026#S51}

The trovative derivation is extremely productive, and Table 17.11 illustrates a few representative examples.

Table 17.11: Examples of the *nɣ*- trovative derivation

basic verb	derived verb
<i>rtab</i> ‘be enough’	<i>nɣrtab</i> ‘find sufficient’
<i>wxti</i> ‘be big’	<i>nɣwxti</i> ‘find big’
<i>zri</i> ‘be long’	<i>nɣzri</i> ‘find long’
<i>pe</i> ‘be good’	<i>nɣpe</i> ‘consider to be good, like’
<i>mnɣm</i> ‘smell’ (vi)	<i>nɣmnɣm</i> ‘smell’ (vt)
<i>c^{hi}</i> ‘be sweet’	<i>nɣxc^{hi}</i> ‘find sweet’
<i>maɣ</i> ‘not be’	<i>nɣymaɣ</i> ‘consider wrong’
<i>mbat</i> ‘be easy’	<i>nɣymbat</i> ‘finish easily’

The semantics of the derived verb is not always simply ‘consider/find X’. In the case of stative verbs whose meaning is neutral (not explicitly positive like ‘beautiful’), the trovative often has the additional meaning ‘find too X’, as in (118) for instance.

- (118) *nɣ-sytɕ^ha uu-ɲu-tu-nɣ-xtɕi nɣ, azo a-βlu ci*

 ‘If you find this place too small for you, I have an idea.’ (150829 taishan
 zhi zhu-zh,203) {0006350#S196}

The tropative *nɣ-* cannot be prefixed to non-adjectival stative verbs like copulas (*ŋu* ‘be’, *ɕti* ‘be’) or existential verbs (*tu* ‘exist’, *me* ‘not exist’). A meaning such as ‘consider *X* to be *Y*’, where both *X* and *Y* are nouns, cannot be expressed in Japhug using a tropative derivation (forms such as †*nɣ-ŋu* or †*nɣ-tu* are utterly incorrect), and a synthetic construction must be used instead (§24.5.1.2).

An apparent exception could seem to be *nɣmaɕ* ‘consider wrong’ from the negative copula *maɕ* ‘not be’. However, this verb never means ‘consider *X* not to be *Y*’, and it seems that one of the original meanings of /*maɕ*/ was ‘not to be right’, as shown by a lexicalized form such as the fossilized participle *kuɕmaɕ* ‘bad thing’ (from ‘(something) which is not right’, §16.1.1.7). In this example the tropative preserved the original meaning of the verb, while the base verb underwent an independent semantic change (already at the common Gyalrong stage).

The ability to undergo tropativization is thus a criterion for identifying a subclass of adjectives among stative verbs (with the exception of some derived adjectives, which are not compatible with the tropative possibly for morphological reasons, §17.5.4).

17.5.1 Allomorphy

As shown by Table 17.11, aside from the regular *nɣ-* allomorph, a few verbs select a *nɣɣ-* / *nɣx-* allomorph. A similar allomorphy is observed on the sigmatic causative (§17.2.1.4) and the applicative (§17.4.2) prefixes. The *su-* / *suɣ-* alternation of the sigmatic causative is still productive: the latter allomorph occurs when the original verb is intransitive, without an initial consonant cluster and without initial velar or uvular. It is possible that a similar distribution used to exist at a former stage for the *nɣ-* / *nɣɣ-* allomorphs, but the data at hand do not permit a firm conclusion.

The *nɣ-* allomorph of the tropative is homophonous with that of the applicative before *a-* contracting verbs (§12.3, §17.4.2), but there are no cases of forms that are ambiguous between these two derivations.

When two base verbs have stems that only differ in the presence vs. absence of an *a-* prefixal element, their tropative form is identical. For instance, the stative verbs *amtɕoɕ* ‘be pointy’ and *mtɕoɕ* ‘be sharp’ (§19.7.7) have the same tropative *nɣmtɕoɕ*, which can be interpreted as either ‘find pointy’ or ‘find sharp’.

17.5.2 Past imperfective

Tropative verbs stand out among transitive verbs in that they are compatible with Past Imperfective *pu-* and Inferential imperfective *pjɣ-* forms as in (§119) (see also

124c in §17.5.4 below), unlike most transitive verbs which require the progressive *asu-* to occur with these TAME prefixes (§21.5.3).

- (119) *u-tu-tcur* *ny-tc^hom* *tce*,
 3SG.POSS-NMLZ:DEG-SOUR NEG-be.exceedingly:FACT LNK

 PST.IPFV-INV-TROP-be.tasty be.AFF:FACT
 ‘It is not too sour, and we used to find it tasty.’ (17-ndZWnW)
 {0003524#S54}

The use of the Inferential or the Perfective with tropative verbs indicates a change of state. For instance, *to-ny-mum* IFR-TROP-be.tasty) means ‘(he used not to find it tasty, but now) he finds it tasty’.

17.5.3 Lexicalized tropatives

Some tropative verbs have specialized meanings that are not completely predictable from the base verb. Thus, *ny-pe* (tropative of *pe* ‘be good’), in addition to its regular meaning ‘consider to be good’, can also be used in the sense of ‘love’, as in (117) above. The tropative of the modal auxiliary *nts^{hi}* ‘have better’ (§24.5.3.1), *nynts^{hi}*, also has this meaning (120).¹⁹

- (120) *azo a-nú-wy-nynts^{hi}-a* *ra*
 1SG IRR-PFV-INV-love-1SG be.needed:FACT
 ‘[Aladin thought] ‘May the princess love me.’ (140511 alading-zh)
 {0003953#S187}

The transitive verb *nyk^{he}* ‘bully’ from *k^{he}* ‘be stupid’, probably also used to be a tropative verb ‘consider to be stupid’, with a quite unpredictable semantic evolution.

The perception verb *nymnym* ‘smell’ (vt) is formally a tropative derived from the intransitive *mnym* ‘smell’ (vi), a verb that can only take nouns meaning ‘smell’ (such as the inalienably possessed noun *ty-di* ‘smell’) as subject, as shown by (121).

¹⁹Since the etymological relationship between the base verb *nts^{hi}* ‘have better’ and *nynts^{hi}* ‘love’ is not synchronically transparent, the *ny-* is not analyzed as a prefix in the glosses.

17 Valency-increasing derivations

 (08-CAG) {0003442#S13}

The tropative *nymnym* can take as object a noun meaning ‘smell’, with the referent whose smell is perceived encoded as a possessive prefix on the object (for instance the 3PL prefix on the noun *nu-di* ‘their smell’ in 122). However, unlike its base verb, *nymnym* can also directly select as object the referent whose smell is perceived, including even a first or second person as in (123).

Example (122) also shows that *nymnym* expresses volitional olfactory perception (looking for something by paying attention to smell). Its non-volitional counterpart is *mts^{hy}m* in the sense of ‘perceive (a smell) inadvertently; find (by smell)’.²⁰

17.5.4 Compatibility with other derivations

In addition to underived stative verbs as in Table 17.11 above, the tropative derivation can also take verbs with the proprietive *sx-* derivation (§18.8)

One of the most common of such verbs is *nxyscit* ‘find pleasant’ (of a place, a situation, an event) from the proprietive *sxscit* ‘be pleasant’ (‘be such that people feel happy with/in it’) of the stative verb *scit* ‘be happy’. In the excerpt from a conversation in (124), we see that the tropative *mu-puu-nx-sx-scit-a* (124c) occurs in answer to a question with the proprietive verb *u-pú-sx-scit* (124a).

²⁰The verb *mts^{hy}m* expresses non-visual non-volitional perception (§15.1.5.9), not only auditory (in the meaning ‘hear’), but also olfactory as in (122).

lo-nuʰtʰe^homba-a

IFR-have.a.cold-1SG

‘As far as I am concerned, I did not find [that party] nice, I caught a cold.’ (TaRrdo2003)

The antonym of *nʰsʰscit*, *nʰsʰyduy* ‘find unpleasant’, is also the tropative of a propriative verb *sʰyduy* ‘be unpleasant’ from the base verb *duy* ‘have enough of’, ‘be upset’. Both *scit* and *duy* are Tibetan loanwords (from མྱོད *sk'id* ‘be happy’ and སྐྱུག *sdug* ‘suffer’, respectively), showing the productivity of this double derivation. While no other examples of this double derivation are found in the corpus, it is possible to elicit additional examples (§18.8.6).

‘[Its seeds] go into the hair [of the sheep], deeper and deeper, and stick into their skin, and the animals find this unpleasant.’ (19-khWlu)

{0003540#S96}

The tropative-propriative verbs *nʰsʰscit* and *nʰsʰyduy* take as transitive subject (with the ergative in 125) the experiencer (like the base verbs *scit* ‘be happy’ and *duy* ‘have enough of’) and as object the stimulus (the situation or place causing the feeling, like the propriative verbs *sʰscit* ‘be pleasant’ and *sʰyduy* ‘be unpleasant’).

The tropative is also attested with the subject-oriented facilitative $\gamma\gamma$ - (§18.9.1). For instance, from $\gamma\gamma\beta zi$ ‘become drunk easily’ (facilitative of βzi ‘get drunk’) one can derive the tropative $n\gamma\gamma\beta zi$ ‘consider that X becomes drunk easily’ (126).

- (126) $n\gamma zo nd\gamma re juu-ta-n\gamma-\gamma\gamma-\beta zi$
 2SG LNK SENS-1→2-TROP-FACIL-be.drunk
 ‘You, I think that you get drunk easily.’ (elicited)

Distributed property verbs such *amuzyut* ‘be evenly distributed’ (§18.7) can undergo the tropative derivation (*nymuzyut* ‘consider that X is evenly distributed’, for instance about colours), though such uses are uncommon.

The tropative cannot take as input any other type of derived stative verbs, such as the passive (§18.1), and more surprisingly the *nuyuu*- facilitative (§18.9.2).

Tropative verbs can in their turn serve as input for other derivations, including causative (§17.2.8), reflexive (§18.3.6) and reciprocal (§18.4.1.2). A related derivation whose meaning is close to that of a reflexivized tropative is the auto-evaluative *zn*- (§19.5).

17.5.5 Other tropative constructions

Apart from the tropative *n*-, tropative meaning can be expressed in Japhug by the sigmatic causative in a few cases (§17.2.5.9), the velar causative (§17.3.3.1) and by periphrastic constructions (§24.5.1.2).

Other derivations with a tropative meaning include the *ry*(γ)- prefix in *ryryuy* ‘cherish’ (from *ruy* ‘be precious’, §19.7.5), and the reflexive *zy*- of some intransitive verbs (§18.3.1.4).

18 Valency-decreasing derivations

18.1 Passive

The passive derivation is marked by the prefix *a-*, a formative also found in the reciprocal derivation (§18.4.1) and probably of denominal origin (§20.10.3). It derives an intransitive verb from a transitive one, whose intransitive subject corresponds to the object of the base verb (*txscoz* ‘letter’ in 1a and 1b).¹ The transitive subject cannot be expressed: passive verbs do not take overt agents.

- (1) a. *uʒo kuw txscoz ryt*
3SG ERG letter write:FACT
‘S/he will write a/the letter.’ (elicited)
- b. *txscoz a-ryt*
letter PASS-write:FACT
‘The letter is written/has been written.’ (elicited)

Like other verbs in *a-*, passive verbs present vowel contraction and insertion of the peg circumfix *k-...-ci* in Inferential forms (§21.5.2.1, §15.1.1.2), as in (2) (where it is realized as *-ʁ-*, following the rule in §12.3). In the Kamnyu dialect, the peg circumfix, although originally a secondary marker, has almost become the main exponent of the passive in the Inferential tenses.

- (2) *kum pʁ-stʰoʁ ri, kum pʁ-k-ʁ-ʁxtuʁy-ci eti tce,*
door IFR-push LNK DEM IFR.IPFV-PEG-PASS-lock-PEG be:AFF:FACT LNK
‘He pushed the door, but the door was locked.’ (tWJo 2012) {0004089#S20}

Table 18.1 presents a few representative examples of passive verbs, including lexicalized ones whose meaning has become slightly shifted from that of the base verb (§18.1.2). The presence of Tibetan loanwords such as *rtsi* ‘count’ (from རྩི *rtsi* ‘count’) among the base verbs shows that the passive derivation is still productive.

¹The derivation also affects the dynamicity of the verb and the TAME (§18.1.1).

Table 18.1: Examples of the passive *a-* prefix

Base verb	Derived verb
<i>mp^hur</i> ‘wrap’	<i>amp^hur</i> ‘be wrapped’
<i>βraβ</i> ‘attach to’	<i>aβraβ</i> ‘be attached to’
<i>rtsi</i> ‘count’	<i>artsi</i> ‘be counted as’
<i>ɲɔβ</i> ‘glue, paste’	<i>aɲɔβ</i> ‘be glued’
<i>ts^hoβ</i> ‘attach’	<i>ats^hoβ</i> ‘be attached’
<i>sti</i> ‘block’	<i>asti</i> ‘be blocked’
<i>pa</i> ‘do’	<i>apa</i> ‘become’
<i>βzu</i> ‘make’	<i>aβzu</i> ‘become, grow’
<i>ta</i> ‘put’	<i>ata</i> ‘be on’
<i>rku</i> ‘put in’	<i>arku</i> ‘be in’

The passive derivation only removes transitive subjects, and passivized verbs preserve oblique arguments or adjuncts. For instance, like the verb *βraβ* ‘attach to’, which includes a locative argument in its argument structure, the passive form *aβraβ* ‘be attached to’ also selects a locative phrase, with a locative case as in (3) or in absolutive form as in (4).

 IPFV-PEG-PASS-attach-PEG LNK
 ‘The old woman’s son was attached on the back of the door.’ (tWJo 2012)
 {0004089#S61}

The passive derivation also applies to some noun-verb collocations. For instance, in (5), passivized verb *a-lɣt*, meaning ‘be locked’ in collocation with the noun *sɣcu* ‘key’, has a meaning directly derived from that of the collocation of *sɣcu* with the base verb *lɣt* ‘release’, which means ‘lock (the door)’ (§16.1.3.10). The noun *sɣcu* ‘key’ is a semi-object (§8.1.5) in this collocation. The intransitive subject of (*sɣcu*) *a-lɣt* ‘be locked’ in (5) is *kum* ‘door’.

- (5) *kum sycu mɣ-a-lyt*
 door key NEG-PASS-release:FACT
 ‘The door is not locked/has not been locked.’ (140428 xiaohongmao-zh)
 {0003884#S74}

Passive verb forms are almost never attested in first or second person forms, except for the highly lexicalized passives *apa* ‘become’ and *aβzu* ‘become, grow’ (§18.1.2). Example (6) with *arku* ‘be in’² shows that there is not absolute constraints against first or second person indexation on passive verbs.

- (6) *nunu p^hoŋ u-ŋgu nutcu pu-a-rku-a*
 DEM bottle 3SG.POSS-in DEM:LOC PST.IPFV-PASS-put.in-1SG
 ‘(You don’t believe that) I had been put inside this bottle.’ (140512 yufu yu
 mogui-zh) {0003973#S111}

The historical hypothesis in (§14.8.3) proposes that the 1→2 portmanteau prefix *ta-* originates from the fusion of the passive *a-* with the second person *tu-* prefix indexing the object. If correct, this scenario implies that first or second person indexation on passive verbs may have been more common in proto-Gyalrong than in Japhug.

18.1.1 The interaction of the Passive derivation with Dynamicity and TAME

With the exception of *apa* ‘become’ and *aβzu* ‘become, grow’ (§18.1.2), passive verbs express resultative states. They are mainly attested in the Past Imperfective (6) and in the Inferential Imperfective (4, see also 16 in §18.1.3). In combination with the Factual Non-Past the passive means ‘X has already been Yed’ or ‘X is Yed’ (where X represents the object of the base verb Y) as in (7) (see also 1b and 5 above).

- (7) *javmɣzdovzdov nu kumɣ pɣa ŋu, mɣ-a-ryt*

²Although this passive verb is used as a semi-lexicalized existential verb (§18.1.2), in this particular context it can be interpreted as expressing a resultative state with a definite agent.

18 Valency-decreasing derivations

Examples of passive verbs in Perfective or Inferential forms are very rare. In (8), the form *ko-k-γ-ηḡoβ-ci* can only be interpreted as the Inferential of the passive of *ηḡoβ* ‘glue, paste’, with a meaning ‘(the spit) got glued (on her)’ that does not seem interpretable as resultative.

 (2003-kWBRa)

The participle /kγkγηḡoβ/ in this example could in principle either be parsed as an perfective object participle *kγ-kγ-ηḡoβ* (AOR-OBJ:PCP-glugue) or perfective subject passive participle *kγ-ku-γ-ηḡoβ* (AOR-SBJ:PCP-PASS-glugue), but only the second option is likely, due to the fact that the gluing action is spontaneous and lacks an agent.³ The fact that *ηḡoβ* ‘glue, paste’ lacks an anticausative (§18.5) and that the passive form *αηḡoβ* is used with an anticausative-like meaning (§18.1.3) may explain why the perfective forms are possible with this verb.

18.1.2 Lexicalized passives

The verbs *pa* ‘do’ (§22.4.2.5) and *βzu* ‘make’ (§22.4.2.1) have lexicalized passive forms that are used as quasi-copulas *apa* ‘become’ and *aβzu* ‘become, grow’ taking a semi-object serving as nominal predicate (§22.5.1.1), for instance *tɕ^hi* ‘what’ in (9) or *turme (ci)* ‘a human’ in (10) (for additional examples, see 31 in §9.1.2, 7 and

³Note in addition that the relativized element is the referent marked with the oblique relator noun *u-taβ* ‘on, above’ (§8.3.4.3).

8 in §15.1.1.2). In addition, *aβzu* is also used as a plain intransitive verb meaning ‘grow’.

In the perfective, the third person forms of *aβzu* ‘become, grow’ have an identical surface form with those of the transitive *βzu* ‘make’: for instance /*naβzu*/ can be either parsed as *nu-aβzu* (AOR-become) or as *na-βzu* (AOR:3→3’-make). Since the transitive *βzu* has dummy subject functions (§14.3.5), in examples such as (11), it is possible to analyze the form /*t^haβzu*/ as *t^ha-βzu* (AOR:3→3’-make) instead.

- (11) *u-mat t^hw-aβzu tce tce*
 3SG.POSS-fruit AOR-grow LNK LNK
 ‘When its fruits grow...’ (06-zrAntCW) {0003422#S25}

The verbs *ta* ‘put’ and *rku* ‘put in’ have passive forms whose meaning is still predictable from the base verb, *ata* ‘be on’ and *arku* ‘be in’. However, these passive forms generally serve as existential verbs (§22.5.1.2) as in (12) and (13), without the implication that the state results from a manipulative action. While in (12) one could argue that an alternative translation such as ‘a saddle has been put there’ would be possible,⁴ in the case of (13) it is obvious the presence of a sweet substance inside of a plant leaf is not attributable to an external agent.

- (12) *u-rku nutcu si u-sno ci a-ta tce,*
 3SG.POSS-side DEM:LOC wood 3SG.POSS-saddle INDEF PASS-put:FACT LNK
 ‘Next to [the horse], there is a wooden saddle.’ (2012-qachGa2012-qachGa)
 {0004087#S50}

⁴In this example, the Factual actually can be construed as having a future interpretation (§21.3.1.2): a character describes to another character what he will see when he arrives at a place. I translate here *a-ta* as ‘there is’ in the present tense rather than ‘there will be’ because at the time of utterance, the wooden saddle is already placed next to the horse, and there is no implication that a change of state will occur.

A piece of evidence suggesting that the verbs *ata* ‘be on’ and *arku* ‘be in’ are in the process of becoming specialized existential verbs (§22.5.1.2) is the fact that they alternate with the suppletive Sensory forms of the existential verbs (*ɣɣzu* ‘exist’ and *maŋe* ‘not exist’, §14.2.2), as in (14).

18.1.3 Agent demotion

The *a-* derivation demotes the transitive subject, and the agent is not expressible in the same clause. However, the agent is not necessary semantically deleted by the passive derivation. In (16) for instance, the agent of the wrapping action is clear from the context both to the narrator of the story and to the person discovering the silver ingots inside the pieces of bread – it is therefore semantically recoverable.

- (16) *u-ŋguw nwtcu rŋuɩ q^hoɔq^hoɔ tu-rdoɔ*

 IFR.IPFV-PEG-PASS-wrap-PEG
 ‘A silver ingot had been wrapped inside.’ (qajdoskAt 2002) {0003366#S108}

Many of the verbs that have an anticausative form (built by prenasalizing the onset, see Tables 18.4 and 18.5, §18.5 below) also have a passive. The passive is required in these cases when the agent is implicit and recoverable (for instance, *apɾyt* ‘have been broken’ from *prɾt* ‘break’ (vt), example 103 in §18.5.2), while the anticausative is selected when the action occurs spontaneously without external agent (*mbrɾt* ‘break’ (vi), example 104 in §18.5.2).

In some contexts, both passive and anticausative forms are possible. For instance, to express the fact that a piece of iron is attached to an object, both the passive *atsʰoɓ* ‘be attached’ (17) and the anticausative *ndzoɓ* ‘be attached’ (18) (from *tsʰoɓ* ‘attach’) are attested.

- (17) *u-pa, tɕʰuŋkʰɿr ɣu u-sɟuŋ tu-ku-yi*

 exist:FACT LNK DEM weaving.blade call:FACT
 ‘Below, there is [a weaving implement] that has a piece of iron attached to it, it is called *tʰaɓmu*.’ (thaXtsa 2002)

The anticausative *ndzoɓ* ‘be attached’ is required in cases when the entity that is attached on a surface has grown on it, rather than having been attached by someone, as in (19). In this function, it can be considered to be a subtype of existential verb (§22.5.1.2).

- (19) *u-muɳtoɓ nu kuɳɿ cʰu-ɿɟirja tɕe tu-kʰɿl*

 DEM:LOC two three four about IPFV-ACAUS:attach
 ‘Its flowers are also aligned, in each place they are attached in [groups] of about two, three or four.’ (16-RIWmsWsi) {0003520#S9}

Another difference between *ndzoɓ* ‘be attached’ and *atsʰoɓ* ‘be attached’ is that the former only occurs as a resultative (like most passive verbs in Japhug, see

§18.1.1), while *ndzob* ‘be attached’ can also mean ‘cling onto, lean on, grab’ as in (120) (§18.5.5).

In the case of verbs lacking an anticausative form however, such as *ɲɔb* ‘glue, paste’, the passive forms can be used with an anticausative function, with a semantically deleted agent, as shown by examples such as (8) in §18.1.1.

Passive verbs are as a rule incompatible with an overt agent, even when semantically recoverable. Other morphosyntactic devices such as a direct-inverse marking are used to express the relative saliency of the agent and the patient in Japhug (see the discussion in §14.3.3).

In example (20) with a passive verb, the ergative postpositional phrase *tx-se ku* could appear to be an example of overt agent.⁵ However, note that the base verb *mar* ‘smear’ can encode the material used to smear a surface as a semi-object (*taɣaz* ‘soot’ in 21) rather than as an instrument. Likewise, the ergative is optional on *tx-se* ‘blood’ (compare with 22).

- (20) *xɕiri yu u-mtc^{hi} ra [tx-se ku]*

pjɣ-k-ɣ-mar-ci zo.
 IFR.IPFV-PEG-PASS-smear-PEG EMPH
 ‘Its mouth was smeared with blood.’ (140518 xuezhe he huangshulang-zh)
 {0004032#S19}

The apparently puzzling optional use of the ergative in (20) is in fact the same as that observed with the partitive argument of the verb *mts^hɣt* ‘be full’ (§8.2.2.9), and has to be distinguished from either agent or instrument.

⁵In the Chinese original from which this story is translated, the corresponding passage is 满嘴鲜血 <mǎnzǔi xiānxuè> ‘the mouth covered in blood’; the presence of ergative in (20) cannot be explained as calquing from Chinese.

The agent can at best be expressed as a possessive prefix on the intransitive subject of the passive verb, as in (23), though in this example the implication that the agent is 2SG is only contextual.

- (23) *nʏ-smʏn* *u-j-á-ndza?*
 2SG.POSS-medicine QU-PEG-PASS-eat:FACT
 ‘Has your medicine been eaten?’ (elicited)

The only case of a passive verb taking as argument an overt noun phrase corresponding to the transitive subject of the base verb is *afskʏr* ‘be surrounded’ from *fskʏr* ‘turn around’. As shown in (24) and (25), an absolutive locative noun phrase referring to the surrounding entity (in square brackets) can appear with this verb after the intransitive subject (the surrounded entity/location).

- (24) *izʏra ji-k^ha* *nʏ [jʏʏt tu-tʏk^hrʏz nʏ]*

However, the base verb *fskʏr* ‘turn around’ in the meaning ‘surround’ can be constructed with the surrounding entity as its transitive subject (in 26, *praʃ* ‘cliff’). This ergatively-marked subject however is not a volitional agent and rather semantically corresponds to a locative argument, which may explain why it is not removed by passivization (though ergative marking is lost).

- (26) *kuuki* *sʏt^ha ki,* *u-rku* *t^hamtʃxt [praʃ] ku*

 ‘The sides of this place are all surrounded by cliffs.’ (elicited)

18.1.4 Passive from ditransitive verbs

Secundative verbs such as *mbi* ‘give’ and *jts^{hi}* ‘give to drink’ (a lexicalized causative of *ts^{hi}* ‘drink’), which select as object the recipient rather than the theme (§14.4.2), can be subjected to the passive derivation. The resulting verbs *ambi* ‘be given’ and *ajts^{hi}* ‘be given to drink’ however encode as subjects not the recipient, but the theme; in particular, they never take indexation affixes even when the recipient is a first or second person. The recipient can only be encoded as possessor of the subject (27) or as left-dislocated focus constituent (28).

- (27) *ty-pytso* *u-smɣn* *a-mbi*

 INDEF.POSS-child PL INDEF.POSS-milk PASS-give.to.drink:FACT
 ‘The children have been given milk to drink.’ (elicited)

The causativization of these passive verbs yields the rogative derivation (§18.2).

18.1.5 Reduplicated passive

The intransitive verb *aβzdɔβzdɔ* ‘be in good order’ derives from the transitive verb *βzdɔ* ‘collect’ (itself borrowed from བསྐྱེ *bsdu* ‘collect’), and can be interpreted as a lexicalized passive derivation (‘have been collected and put in order’ → ‘be in good order’). However, unlike other passive verbs, it presents reduplication with the rare *-ɔ* replicant (on this type of reduplication, see also §19.4.2.2).

The verb *aβdɔββdi* ‘be in good health’ (29) apparently has the same morphological structure as *aβzdɔβzdɔ* ‘be in good order’, but since its base verb *βdi* ‘be well’ (from བདེ *bde* ‘be well’) is stative intransitive, this example cannot be analyzed as a passive.

- (29) *izora ɕɣxɕo* *ku-ɔβdɔββdi-j*
 1PL these.days PRS-be.in.good.health-1PL
 ‘These days we are in good health.’ (elicited)

Another interesting difference between *aβzdɔβzdɔ* ‘be in good order’ and *aβdɔββdi* ‘be in good health’ is that the former has a sigmatic causative *sɣβzdɔβzdɔ* ‘put in order’, while the latter has a velar causative *ɣɣβdɔββdi* ‘tidy up, put in order’ whose meaning is not derivable from that of *aβdɔββdi* ‘be in good health’.

18.1.6 Compatibility with other derivations

There are no examples in the corpus of passive derivations taking as input causative or applicative verbs, except for some lexicalized causatives such as *jts^{hi}* ‘give to drink’ (§18.1.4). However, it is likely that the progressive prefix *asu-* originates from the combination of the passive and the sigmatic causative (§17.2.8, §21.6.1.3).

Passive verbs however can be subjected to sigmatic causative derivation. The fusion of the sigmatic causative *su-* with the passive *a-* yield /sʏ/, a surface form identical to the antipassive (§18.6.2) and the propriative (§18.8) prefixes.

First, the causative-passive double derivations from secundative verbs (§18.1.4) has become the rogative derivation (§18.2). Second, the lexicalized passives *apa* ‘become’ and *aβzu* ‘become, grow’ (§18.1.2) have the causative forms *sʏpa* and *sʏβzu*, both of which predictably mean ‘cause to become, turn into, transform into’. These causative verbs are ditransitive, as in (30), taking as semi-object the entity in which the object is transformed.

- (30) *tu-ci* *t^hamtɕɿt tʏ-se* *su-ʏpa-j*
 INDEF.POSS-water all INDEF.POSS-blood CAUS-become:FACT-1SG
 ‘Let us turn all the water into blood.’ (2003 smanmi)

The object indexed on the verb is the entity that undergoes transformation, such as the 1PL in (31), not the one that it is transformed into. Only the object is targeted by reflexivization (§18.3.4).

- (31) *kwki* *ji-βdaβmu* *ku ki* *ku-fse,* *nʏki, sunɣw*

 bird AOR-INV-CAUS-become-1PL
 ‘Our queen has transformed us into bird from the forest.’ (140520 ye
 tiane-zh) {0004044#S119}

The verbs *sʏpa* and *sʏβzu* ‘cause to become, turn into, transform’ occur with a variety of semi-objects. In (32), the semi-object *tu-mpɕar tu-mpɕar* is a repeated counted noun (§7.3.2.3) expressing literally the meaning ‘turn (the rock) into sheets one by one’.

- (32) *cupa* *kʏ-tɕɿt* *tɕe ɲu-nqa* *ma pʏaβ*

 IPFV-INV-CAUS-become SENS-be.needed

‘To extract stone slabs, one has to chop the rocks sheet by sheet (layer by layer).’ (14-siblings) {0003508#S155}

The semi-object of *sɣpa* and *sɣβzu* ‘cause to become’ can also be an infinitival or participial clause. This combination is a common type of periphrastic causative construction (§24.5.1.1), illustrated in example (33) with the two relative clauses *uw-ɣya kuw-xtɕuw~xtɕi* ‘who is young, whose age is small’ and *kuw-mpɕuw~mpɕɣr* ‘who is beautiful’ as semi objects. A more literal translation could be ‘he turned his mother into (someone) whose age was small and who was beautiful’.

 SBJ:PCP-EMPH-be.beautiful EMPH AOR:3→3’-CAUS-become SENS-be
 ‘He made his mother become young and beautiful.’ (2005 Norbzang)

This periphrastic construction is also possible with the reflexivized forms of *sɣpa* ‘transform’ and *sɣβzu* ‘transform’ (example 68, §18.3.4)

The verb *sɣrtsi* ‘count as’ (see 23, §8.1.7) is the sigmatic causative of *artsi* ‘be counted as’ (34), itself passive of the transitive *rtsi* ‘count’ (from ᄃ *rtsi* ‘count’).

- (34) *xciri* *kuw-fse* *nura* *kuwɲi* *muw-ɲuw-ɣ-rtsi* *lo.*

 kWɪNi) {0006260#S8}

Passive verbs can occur as second element of Noun-Verb nominal compounds, but in this case the *a-* prefix is absorbed by the previous nominal root, resulting in a surface form undistinguishable from that of the base verb. For instance, the compound *ɕnɣsti* ‘person with a stuffy nose’ can be parsed as *ɕnɣ-* (bound state of *tu-ɕna* ‘nose’) and *-sti*, a syllable ambiguous between the passive *asti* ‘be blocked’ and the base verb *sti* ‘block’ (108, §5.5.5.2). . The former is more probable, as this noun should be analyzed as meaning ‘(person) whose nose is blocked rather than as ‘blocking noses’.

18.2 Rogative

The rogative⁶ *sr-* prefix is attested on the secundative verbs *mbi* ‘give’ and *jts^{hi}* ‘give to drink’, and produces intransitive verbs meaning ‘ask (someone) to *X* (something) to oneself’ (where *X* stands for the meaning of the base verb), *sɣmbi* ‘ask for’ and *sɣjts^{hi}* ‘ask for something to drink’, respectively.

The *sr-* prefix is homophonous to that of the antipassive (§18.6.2)⁷ and of the propriative (§18.8) derivations.

Rogative verbs are morphologically intransitive, as shown by (35) (the past transitive suffix *-t* would be expected here if this verb were transitive, see §14.3.1) and (36), where a type-C orientation prefix would be expected (§14.3.2.2, §15.1.1.1).

However, while the rogative derivation affects transitivity, it does not decrease valency: *sɣmbi* and *sɣjts^{hi}* are trivalent like their base verb: they have two arguments in addition to the intransitive subject, a semi-object (the entity that is asked for) and a dative argument (§14.2.5).

- (35) *azo a-pi* *ur-cki* *kumtc^hur ci*
 1SG 1SG.POSS-elder.sibling 3SG.POSS-DAT toy INDEF
nur-sɣ-mbi-a
 AOR-ROG-give-1SG
 ‘I asked my elder brother/sister to give me a toy.’ (elicited)

The semi-object of *sɣmbi* ‘ask for’ can be a human (including a first or second person), in contexts like asking for someone in the context of arranged marriage (36) or asking for a child to become recognized as a reincarnated lama.

- (36) *tce a-bi* *nure* *ri, nur-sɣ-mbi-nur*
 LNK 1SG.POSS-younger.sibling DEM:LOC LOC AOR-ROG-give-PL
 ‘They asked for my younger brother (to come to marry their daughter) there.’ (14-siblings) {0003508#S188}

The dative argument is optional, and rarely expressed. Rogative verbs with non-overt dative can be used as a polite way to ask for something, as in (37), where neither the person asking (the child) nor the addressee (the grandfather, that would take the dative) are expressed within the same clause.

⁶This term is from Latin *rogo* ‘I ask, I require’.

⁷The rogative prefix on *sɣmbi* ‘ask for’ was mistakenly glossed as ‘antipassive’ in Jacques (2012c: 215), example (32). The antipassive forms of *mbi* ‘give’ and *jts^{hi}* ‘give to drink’ are *rɣmbi* ‘give to someone’ and *rɣjts^{hi}* ‘give to someone to drink’, respectively. These forms have the *rɣ-* antipassive prefix instead of *sr-* (§18.6.4).

18 Valency-decreasing derivations

- (37) *a-wuu*, *tu-mgo* *ky-sx-mbi*,
 1SG.POSS-grandfather INDEF.POSS-food OBJ:PCP-ROG-give
tu-ci *ky-sx-jts^{hi}* *wβry-tu*
 INDEF.POSS-water OBJ:PCP-ROG-give.to.drink opt-exist:FACT
 ‘Grandfather, would there be food or water that [we could] ask for [you to give us]?’ (2011-05-nyima)

The rogative *sx-* is likely to have originated from the combination of the sigmatic causative *su-* and passive *a-* prefixes (§18.1.6). The verbs *mbi* ‘give’ and *jts^{hi}* ‘give to drink’ have the passive forms *ambi* ‘be given’ and *ajts^{hi}* ‘be given to drink’ (§18.1.4), which select as intransitive subject the theme. A causative derivation from these passive verbs ‘cause *X* to be given’ could yield the meaning of the rogative derivation (note the semantic similarity with the inversive and rogative functions of the causative discussed in §17.2.5.7 and §17.2.5.4). However, this analysis is not completely straightforward, as one would expect causative verbs to be transitive (not semi-transitive like the rogative verbs) and the dative marking of the addressee is also unexplained.

18.3 Reflexive

While Japhug has a generic pronoun *tuzo* ‘one’ (§6.2.1) and an emphatic pronoun *raŋ* ‘oneself’ (§6.4), it lacks any reflexive pronoun, and the only way to express reflexive meaning is by means of a dedicated prefix *zyx-*, different from the autive (§19.1), the reciprocal (§18.4) and other valency-decreasing derivations.

18.3.1 The reflexive prefix: form and basic function

Table 18.2 presents several examples of the reflexive prefix *zyx-*, deriving reflexive verbs from transitive ones.

The reflexive derivation turns the base verb into an intransitive verb whose subject acts upon itself, and corresponds to both the transitive subject and the object of the base verb. For instance, in (38), the subjects of the reflexive verbs *ε-pju-zyx-γx-la-mu* ‘they bathe in it=they cause themselves to soak in it’ and *ku-zyx-nusmɔn* ‘to heal themselves’ are semantically both agents and patients. When the subject is non-singular, each member of the group corresponding to the subject is acting on himself, as opposed to the reciprocal derivation, where every member performs the same action to other members of the groups, and is agent and patient either simultaneously or in turn (§18.4).

- (38) *tce nuw u-ŋguw ri c-pjuw-zɣɣ-ɣɣ-la-nuw tce li*

 ‘People go and bathe in [warm springs], they go [there] to heal
 themselves.’ (20-ldWGi, 52;56) {0003558#S52}

Table 18.2: Examples of reflexive verbs in Japhug

Base verb	Reflexive verb
<i>χtci</i> ‘wash’	<i>zɣɣχtci</i> ‘wash oneself’
<i>ts^{hi}</i> ‘strangle’	<i>zɣɣts^{hi}</i> ‘hang oneself’
<i>sat</i> ‘kill’	<i>zɣɣsat</i> ‘commit suicide’
<i>rku</i> ‘put in’	<i>zɣɣrku</i> ‘put oneself in’
<i>nɣstu</i> ‘believe’	<i>zɣɣnɣstu</i> ‘believe in oneself’
<i>fstun</i> ‘take care of’	<i>zɣɣfstun</i> ‘take care of oneself’

The prefix *zɣɣ-* is highly productive, but only targets objects.⁸ Other syntactic functions such as possessors of objects for instance cannot be reflexivized using *zɣɣ-*. The form †*zɣɣ-sɣɣɣt* (intended meaning ‘comb oneself’) found in one example in the corpus (39a) is a mistake, as pointed out by the consultant who told the story (Tshendzin) herself, since *sɣɣɣt* ‘comb’ can only take the noun *tu-ku* ‘head’ as object, not the person whose hair is combed. The only way to express the meaning ‘comb oneself’ is by the autive prefix (§19.1.3) as in (39b).

- (39) a. †*pjuw-zɣɣ-sɣɣɣt-ndzi to-rɣmpɕoβ~mpɕɣr-ndzi,*
 IFR-REFL-comb-DU IFR-EMPH-make.up-DU

- b. *ndzi-ku pjuw-nuw-sɣɣɣt-ndzi to-rɣmpɕoβ~mpɕɣr-ndzi,*
 3DU.POSS-head IFR-AUTO-comb-DU IFR-EMPH~make.up-DU
 ‘They combed their hair and made themselves beautiful.’ (correction
 of the previous example)

⁸The only exceptions to this rule are a handful of intransitive verbs which take the *zɣɣ-* prefix (§18.3.1.4).

18 Valency-decreasing derivations

Similarly, in the reflexive causative derivation *zyrsuntc^hyr* ‘cause oneself to appear’ from *ntc^hyr* ‘appear’ (§18.3.4), reflexivization by *zyr-* only targets the intransitive subject of the base verb (the entity which appears in the dream, *sunḡi* ‘lion’ in 40a), not the experiencer, which is encoded as possessor of the noun *tu-jmḡo* ‘dream’. Thus, example (40b) cannot be interpreted as ‘he caused her to appear to himself’.

- (40) a. *tu-jmḡo tu-ḡgu sunḡi ko-ntc^hyr*

 ‘He made himself appear to her in a dream.’ (2012 Norbzang)
 {0003768#S97}

18.3.1.1 Transitivity

All reflexive verbs are morphologically intransitive (§14.3.1). In terms of case marking however, they are not prototypical intransitive verbs. When their subject is overt, it is in absolutive form in most cases as in (41), but subjects of reflexive verbs in the ergative (§8.2.2.3) are also attested (15, §6.2.1).

- (41) *uzo ku-nui-zyr-fstun c^ha*
 3SG IPFV-AUTO-REFL-serve can:FACT
 ‘It [will] be able to take care of itself on its own.’ (150822 laoye zuoshi zongshi duide-zh) {0006298#S146}

In particular, the semi-transitive lexicalized reflexive *zyrpa* ‘pretend’ (derived from *pa* ‘do’, §18.3.3) often occurs with subjects marked with the ergative, such as the right-dislocated constituent <*tangseng*> *nu ku* in (42) (see also example 9, §14.2.3).

- (42) *mḡ-ku-tso to-zyrpa, <tangseng> nu ku.*
 NEG-SBJ:PCP-understand IFR-pretend ANTHR DEM ERG
 ‘He pretended not to have understood, Tangseng.’ (180503 xiyouji 12-zh)
 {0006189#S43}

18.3.1.2 Reflexivization from ditransitive verbs

The reflexive is possible with indirective verbs of giving or speech, whose objects corresponds to the theme (§14.4.1): *k^ho* ‘give’ and *fɛɾt* ‘tell’ yield the reflexive verbs *ʒɿɾk^ho* ‘give oneself up’ and *ʒɿɿfɛɾt* ‘tell about oneself’, as in (43).

- (43) *nɿzo bgra u-jab nuɿtcu ɲu-tu-nu-ʒɿɿ-k^ho zo*
 2SG enemy 3SG.POSS-hand DEM:LOC IPFV-2-AUTO-REFL-give EMPH
umɿ-ku-cti-ci?
 PROB-PEG-be.AFF-PEG
 ‘(By doing that), aren’t you handing yourself over to your own enemy?’
 (2014niulan li de lu-zh)

The *ʒɿɿ-* prefix can only express reflexivization of the theme of indirective verbs, never the dative-marked recipient; for instance, it cannot be prefixed to an indirective verb such as *t^hu* ‘ask’ (§14.4.1) to convey the meaning ‘ask oneself’. With the secundative verb *mbi* ‘give’, the reflexive prefix is not possible either, though for pragmatic rather than syntactic reasons.

18.3.1.3 Permissive function

The reflexive prefix can in some cases have the permissive function ‘let oneself be *X*’, the most common case with the verb *ʒɿɿnuɿβlu* ‘be fooled’ from the transitive denominal verb *nuɿβlu* ‘cheat’ (‘let oneself be cheated’). With most transitive verbs, this meaning is expressed by means of the reflexive+causative double derivation (§18.3.4).

In (44), an overt agent (corresponding to the causee of the causative construction) marked with the ergative *ku* appears with the verb *ʒɿɿnumbrɿɿpu* ‘let oneself be mounted’. Although taken from a text translated from Chinese, it is not considered incorrect after rechecking with Tshendzin.

18.3.1.4 Reflexivization of intransitive verbs

A handful of intransitive verbs can undergo reflexivization with the *zyr-* prefix.

With intransitive deadverbial (§15.1.3.4) and denominal verbs of relative locations in *mr-*, such as *manlo* ‘be upstream’ and *mxyprt^hγβ* ‘be in the middle’, the reflexive prefix derives volitional motion verbs such as *zyrmanlo* ‘put oneself upstream’ (45) and *zyrmxyprt^hγβ* ‘put oneself in between’. It is possible that these forms come from the simplification of former reflexive+causative (§18.3.4) by loss of the causative prefix.

- (45) *ur-lycu* *nutcu* *jo-ce* *tce* *lo-zyr-manlo*.
 3SG.POSS-upstream DEM:LOC IFR-go LNK IFR:UPSTREAM-REFL-be.upstream
 ‘[The wolf] went to a place upstream [from the lamb], he placed himself upstream.’ (2014 lang he yang-zh)

The pair of intransitive verbs *γrtca* ‘be wrong’ and *γrηgi* ‘be right’ have the reflexive forms *zyrγrtca* ‘recognize one’s mistake’ and *zyrγrηgi* ‘consider oneself to be right’, as shown by (46). Note that the causative of these verbs has a tropative meaning, for instance the causative *zyrtca* ‘consider to be wrong’ in the second clause of (46); the reflexive forms thus have the expected meaning of reflexive+causative double derivations (‘consider oneself to be right/wrong’).

 ‘One has to recognize one’s mistakes; if one considers one’s companions to be wrong, and if one consider oneself to be always right even if one is wrong, there will be no [good] result.’ (IWlu)

The reflexive verb *zyrsɣke* ‘burn oneself’ appears to derive from the propriative verb *sɣke* ‘be burning’ (from *cke* ‘get burned’, §18.8), though from its meaning it is tempting to wonder whether this prefix *sɣ-* here is not rather analyzable as an irregular causative (§17.2.2).

- (47) *ma-pu-tur-zɣɣ-sɣ-cke*
 NEG-IMP-2-REFL-PROP?-burn
 ‘Don’t burn yourself!’ (elicited)

One reflexive verb seems to be derived from an ideophone rather than from a verb root: *zɣɣɕp^hɣβ* ‘lay flat’ (48)⁹ shares the same root $|\mathcal{C}p^h\mathcal{Y}\beta|$ as *ɕp^hɣβɕp^hɣβ* ‘laying flat’ (49). It is possible that this verb originates from a deideophonic derivation (§20.9), with subsequent deletion of the denominal prefix.

múj-c^ha
 NEG:SENS-can
 ‘The bird is staying on the ground without moving, it cannot fly.’ (elicited)

18.3.1.5 Other reflexive constructions

The reflexive *zɣɣ-* is almost the only way to express reflexivity in Japhug. However, the antipassive verb *ra-χtɕi* (from the transitive verb *χtɕi* ‘wash’), has the meaning ‘wash one’s face’ or ‘have a shower’ (§18.6.7.5), almost like that of the regular reflexive *zɣɣχtɕi* ‘wash oneself’. Similarly, the prefix *rɣ-* in *rɣmpɕɣr* ‘make up’ from *mpɕɣr* ‘be beautiful’ is reflexive-like (‘make oneself beautiful’, see §19.7.5).

18.3.2 Reflexive vs. anticausative

Transitive verbs such as *tɕaβ* ‘cause to fall/roll’, *kɣɣ* ‘bend’ or *xt^hom* ‘put horizontally’ which have a corresponding prenasalized anticausatives (§18.5) use the reflexive derivation to express the corresponding intransitive volitional action.

The action of the transitive verb itself can be either volitional (50) or non-volitional (including involuntary actions of animate beings and actions of inanimate referents, as in 51) depending on the context.

⁹The vowel alternation in (48) is regular, see §14.2.1.1.

On other hand, the combination of the transitive verb with the reflexive expresses a volitional meaning implying that the action was done on purposive by an animate agent. In (55), the subject of *ɲɣ-zɣɣ-xt^hom* ‘he put himself horizontally=he laid down horizontally’ did not fall down (unlike that of example 53), but on the contrary lays down on the ground by himself voluntarily to pretend to have fallen down and have died.

- (55) *tɕu nutɕu ɲɣ-zɣɣ-xt^hom tce pu-ku-si*

 jiemei-zh) {0006368#S199}

When no prenasalized anticausative verb exists, the reflexive can still be used to insist on the volitional character of a usually non-volitional action in combination with a causative prefix (§18.3.4.1).

18.3.3 Lexicalized reflexives

A few reflexive verbs have meanings that are unpredictable from their base verbs and have become highly lexicalized.

18 Valency-decreasing derivations

The semi-transitive verb *zyɣpa* ‘pretend’ (§18.3.1.1, §14.2.3, §16.1.1.6) transparently comes from the reflexive of the light verb *pa* ‘do’ (§22.4.2.5). This semantic evolution probably took place through a meaning such as ‘make oneself into X’. The lexicalized reflexive *zyɣpa* is also attested as a stative verb meaning ‘be arrogant’.

The intransitive auxiliary *zyɣstu*, which occurs as a light verb with ideophones (§10.1.7.3) to express voluntary actions, is the reflexive of the similative verb *stu* ‘do like’ (§14.4.2, §25.4.1.2).

The verb *zyɣct^huz* ‘reveal one’s true nature’ (57) derives from the orienting verb *ct^huz* ‘turn towards’ (§15.1.2.4).

- (57) *uzo nuɣst^huɰci pju-suzduɣ-a múj-pe ɣɣ-suɣo tce*

18.3.4 Reflexive causative

Reflexive derivations from causativized verbs are extremely common in Japhug, and have a considerable diversity of uses.

18.3.4.1 Reflexive causative and volitionality

The double causative+reflexive derivation also serves as a strategy to express volitional action, when applied to non-volitional intransitive verbs. For instance, a non-volitional verb like *fka* ‘be full’ is not attested in the Imperative (§21.4.2.2). The doubly derived *zyɣ-ɰu-fka*, which conveys the meaning ‘cause oneself to become full=eat to one’s fill’, can on the other hand occur in the Imperative, as in (58).

- (58) *tɣ-zyɣ-ɰu-fka*
IMP-REFL-CAUS-be.full
‘Eat to your fill!’ (a common polite expression)

Examples (58) and (59), illustrate that the reflexive prefix is compatible with both the velar (§17.3.4) and the sigmatic (§17.2) causative prefixes.

Note that the meaning of *zyɣɣzo* ‘make oneself light’ can also be expressed with a periphrastic construction as in (68) below.

- (59) *nɣzo nuu, tɣ-muj* *st^huuci* *a-tɣ-tuu-zɣɣ-ɣɣ-zo,*

 ‘[If] you make yourself as light as a feather, and your horse makes itself
 as quick as the wind, [you will succeed].’ (2011-04-smanmi)

This use of the double causative+reflexive derivation is similar to the reflexivization of transitive verbs that have prenasalized anticausative counterparts to express the volitional intransitive (§18.3.2).

When the meaning of the causative verb is not completely predictable from that of the base verb, the reflexivized verb always follows the meaning of the causative, rather than that of the base verb. For instance, *zɣɣ-ɣɣ-la* ‘bathe into, immerse oneself into’ (example 38 above), derives from the intransitive verb *la* ‘soak’ through the causative *ɣɣ-la* ‘immerse, dip in’. However, even in this case the doubly derived verb *zɣɣ-ɣɣ-la* is volitional and the base verb *la* ‘soak’ non-volitional (and essentially only takes inanimate subjects).

When the base verb is an intransitive verb that can be used volitionally, the doubly derived verb is used to put emphasis on the fact that the subject took active measures to perform the action. For instance the verb *mbyom* ‘be in a hurry’ (a verb whose Imperative form *tɣ-mbyom* ‘hurry up!’ exists) has the double derivation *zɣɣ-ɕuu-mbyom* ‘hasten, hurry, strive to do X as fast as possible’, as in (60).

- (60) *to-zɣɣ-ɕuu-mbyom* *zo* *jo-nuu-ɕe* *tce* *uu-jilco* *ra*

 3PL.POSS-DAT IFR-say
 ‘He hastened to go back [to the village], and told it to the other villagers.’
 (150902 hailibu-zh) {0006316#S104}

Some intransitive verbs have both volitional and non-volitional uses, with slightly different meanings. For instance, the intransitive *nqoɓ* has two meanings: ‘hang, be hanging’ or ‘grab and cling onto’ (see 205 in §8.3.4.3, and 126 in §7.5.2). The doubly derived verb *zɣɣ-ɕuu-nqoɓ* ‘let oneself hang’ (as in 61) only reflects the first meaning of the base verb (the non-volitional ‘be hanging’).

 (26-mYaRmtsaR) {0003674#S94}

18 Valency-decreasing derivations

18.3.4.2 Reflexive of tropative causatives

Some causative verbs have tropative ('consider *X* to be *Y*', §17.5) or causative tropative ('cause people to consider *X* to be *Y*'), for instance *ɣrk^{he}* 'depreciate, demean' from *k^{he}* 'be stupid' (§17.5.5). Reflexive verbs deriving from this type of causative mean '(cause people to) consider oneself to be *Y*'; for example, *ɣɣrk^{he}* 'depreciate, demean' is not used in meaning 'cause oneself to become stupid'.

18.3.4.3 Motion verbs

With the stative verbs of relative location *armbat* 'be near' and *arq^{hi}* 'be far', the reflexive+causative double derivations produce the motion verbs *ɣɣsɣrmbat* 'move closer' and *ɣɣsɣrq^{hi}* 'move further away', whose goal is marked in the dative, as in (62) (see also 59 in §5.1.3). Although zero conversion of these stative verbs into motion verbs is also attested (§15.1.2.5), the double derivation is by far the most common way of expressing these meanings.

- (62) *uɔ zo daltsutsa zo li, masɣrurju zo, srutp^{hu} nu u-ɕki*

IFR:EAST-REFL-CAUS-be.near
'He moved closer to the ogre slowly in secret.' (160706 poucet6)
{0006109#S85}

When the base verb is a motion verb, the reflexive+causative double derivation also yields a motion verb, as in the case of *ɣɣ-su-ɣzyut* 'manage to reach' from *zyut* 'arrive' (on the *ɣ-* prefixal element, see §14.2.2). The verb *ɣɣ-su-ɣzyut* differs from its base verb in that it expresses that the subject had to strive hard to reach the goal, as example (63) illustrates.

alading-zh) {0003953#S22}

18.3.4.4 Reflexive causatives from transitive verbs

When the base verb is transitive, the result of the reflexive+causative double derivation is still an intransitive verb.

The double derivation can have a plain compositional meaning, as in *zyr-su-rtob* ‘have oneself examined’ in (64). The reflexivized argument corresponds to the causer and object of the base verb. The causee *smxnba* ‘doctor’ does not receive ergative marking, and is not indexed on the verb, as an inverse 3→2 configuration (§14.3.2.1) would be nonsensical in (64).

- (64) *smxnba a-tx-tu-zyr-su-rtob*
 doctor IRR-PFV-2-REFL-CAUS-see
 ‘You should have yourself examined by a doctor.’ (elicited)

Doubly derived verbs can also express involuntary actions ‘get oneself Xed’. For instance, the reflexive+causative *zyr-su-sat* from *sat* ‘kill’ can have the meaning ‘get oneself killed’, as in (65).

- (65) *ma byuz nu tce, k^hyrku ra wuma zo yi tce*

 ‘The badger often comes near houses, and gets itself killed. (The dogs chase it and kill it, and people also kill it).’ (27-spjaNkW) {0003704#S114}

With some transitive verbs, the double derivation has the same meaning ‘take pains to X, strive to X’ as with intransitive verbs above (examples 60 and 63). For instance, the reflexive causative *zyr-su-pjvl* of the transitive motion verb *pjvl* ‘go around, cross, avoid’ (§15.1.2.1) means ‘strive to avoid X, take the necessary measures to avoid X’ rather than ‘get oneself avoided’: with this verb, the reflexivization targets the causee rather than the object (‘cause oneself to avoid X’ rather than ‘cause X to avoid oneself’).

- (66) *tcendyre nu tu-kx-zyr-su-pjvl kowa ntsu*

 IPFV-make-DU IFR.IPFV-be
 ‘[The mouse and the sparrow] took every measure to avoid [the cat].’
 (IWlu) {0003361#S20}

The causative verbs *sypa* ‘transform’ and *sβzu* ‘transform’ (§18.1.6) derived from the lexicalized passive verbs *apa* ‘become’ and *aβzu* ‘become, grow’ (§18.1.2) are ditransitive, selecting as object the entity that undergoes transformation, and as semi-object the entity into which the change occurs. Reflexivization targets

the object, and the corresponding reflexive forms *ʒʏrsʏpa* and *ʒʏrsʏβzu* mean ‘transform oneself into *X*’ (rather than ‘transform *X* into oneself’). They select as semi-object the entity into which the subject is transformed, for instance *pʒʏrgʏt* ‘vulture’ in (67).

- (67) *sloχpʏw nʏ ci nʏ-ʒʏʏ-sʏp^hʏr nʏ pʒʏrgʏt ci*

 AOR-AUTO-REFL-CAUS-become SENS-be
 ‘The teacher shook himself, and transformed himself into a vulture.’
 (2003kandZislama)

Just like the causative verbs *sʏpa* and *sʏβzu* from which they are derived (example 33, §18.1.6, §17.2.8), *ʒʏrsʏpa* and *ʒʏrsʏβzu* can select as semi-object participial clauses, and be used as periphrastic causative constructions (§24.5.1.1), as in (68), where instead of the reflexive causative verb *ʒʏʏʏʒo* ‘make oneself light’ (example 59 above), the participle *ku-ʒo* ‘the one who is light’ occurs as semi-object of *ʒʏrsʏpa* ‘transform oneself into’.

 ‘The man, him, made himself as light as a feather.’ (04-smanmi)

18.3.5 Reflexive and autive

Reflexive and autive (§19.1) derivations have completely different semantics, and distinct morphosyntactic properties, since the latter does not change the verb transitivity. With a handful of verbs such as *ʏmʏʏ* ‘intend to, decide’, the reflexive form has an autobenefactive meaning (*ʒʏʏʏmʏʏ* ‘decide for oneself’), but the transitivity is changed.

The autive *nu-* (§19.1) is compatible with the reflexive *ʒʏʏ-*. It is the only derivational prefix that precedes the reflexive prefix in the prefixal chain (§11.2.2). The autive+reflexive combination has four different meanings.

First, it can express and involuntary action that the subject both causes and suffers from (as in 43 above).

Second, the *nu-* prefix can also be used to put emphasis on the fact that the subject perform the reflexive action by him/her/itself without external help, as in (69).

- (69) *tcet^ha tu-ji u-ŋguw nunwura, icq^ha tu-rdoɓ*

 care of itself on its own.’ (150822 laoye zuoshi zongshi duide-zh)
 {0006298#S145}

Third, the *nu-* prefix is also found with the autobenefactive meaning ‘for one-self’ in these forms. In (70) for instance, the autive prefix occurs to insist on the fact that the parents (dual subject) ate to their full in the absence of their children.

- (70) *ndzi-pɣri ku-pu~pe to-βzu-ndzi q^he, zɣni*

 IFR-AUTO-REFL-CAUS-be.full-DU
 ‘They made a nice diner for themselves, and ate to their fill.’ (160701
 poucet2) {0006155#S16}

Fourth, it can occur to express an action taking place spontaneously without external agent, as in (71).

- (71) *kum c^hɣ-nu-zɣɣ-su-ɣtsa*
 door IFR-AUTO-REFL-CAUS-be.locked
 ‘The dock locked itself.’ (elicited; describes house doors with an
 automatic locking system)

The autive is common on verbs with reflexive and causative prefixes (§18.3.4), resulting in a triple derivation, as in (70) and (71) above.

18.3.6 Reflexive, tropative and applicative

Apart from the causative, the reflexive derivation can be added after other valency-increasing derivations such as the tropative and the applicative.

As an example of reflexivized tropative, *nɣmpɛɣɣ* ‘find beautiful’ (from *mpɛɣɣ* ‘be beautiful’) can be reflexivized as *zɣɣnɣmpɛɣɣ* ‘find oneself beautiful’ (§17.5.4).

The applicative verbs *nuɣmu* ‘be afraid of’ and *nurga* ‘like’, ‘love’ (from *mu* ‘be afraid’ and *rga* ‘like’) have reflexive form *zɣɣ-nu-rga* and *zɣɣ-nuɣ-mu* which

can either mean ‘like/be afraid of oneself’ or have a reflexive+causative meaning ‘have people like/be afraid of oneself’. The latter meaning can also be expressed with a triple derivation such as *zyr-z-nuy-mu* with the causative *z-* between the reflexive and the applicative prefixes.

The applicative *nrstu* ‘believe’, which selects as object the person one believes in (example 102, §17.4.1), can also be reflexivized as *zyrnrstu* ‘believe in oneself’, as in (72).¹⁰

- (72) *nui pa-mto nura mu-jɣ-zɣɣ-nɣ-stu.*

 ‘He did not believe the things that he himself had [just] seen.’ (150830
 baihe jiemei-zh) {0006368#S104}

18.3.7 Historical origin

The reflexive *zyr-* is cognate to forms found in other Gyalrong languages, including Tshobdun *oɣ-* (Sun 2014a), Zbu *vɣ-* (Gong 2018: 9) and Situ *wɣ-*.¹¹ These prefixes go back to a proto-Gyalrong form **wɣ-* (with a variant **wəɣ-* for Tshobdun) with metathesis in Japhug. However, the cluster *zy-* is otherwise only attested in Japhug in ideophones such as *zyrzyr* ‘having some (pieces) coming out (out of a bundle)’ (§10.1.5.1).

This prefix itself is possibly the incorporated bound state form of the third singular pronoun **wajar* (corresponding to Japhug *uzo* ‘he’, §6.1, whose irregular phonology is discussed in §5.1.1.5); typological parallels of the PERSONAL PRONOUN ⇒ REFLEXIVE change proposed here also exist in Yukaghir (Jacques 2010b, Maslova 2007: §5.2).¹²

The reflexive prefix is a core Gyalrong innovation, not shared even by Khroskyabs. The reflexive prefix *ɣjê-* in Khroskyabs is not directly related to its core Gyalrong equivalent, as it is based on the denominal *ɣ-* (Lai 2017: 300), cognate of the Japhug stative denominal *a-* (§20.2). Both Khroskyabs *ɣjê-* and proto-Gyalrong **wɣ-* reflexive prefixes share the bound state of the pronominal base **jar-* (Japhug *-zo*, §6.1), but result from independent grammaticalizations.

¹⁰This example is from a translated story, but the presence of a second object (the relative *nui pa-mto nura*) is not due to calquing from the original (which has 不敢相信 <bùgǎnxiāngxìn> ‘he did not dare to believe it’), and was not considered to be clumsy upon rechecking.

¹¹Some dialects of Zbu however have a divergent reflexive prefix *ɣw-*, which cannot be cognate to the forms discussed here (Gong 2018: 9).

¹²For an alternative etymology, see Sun (2014a).

18.4 Reciprocal

18.4.1 Reduplicated reciprocal

The reduplicated reciprocal derivation is the productive way of expressing mutual action in Japhug. It combines the *a-* prefixal element found in the passive (§18.1) and several denominal derivations (§20.2) with the partially reduplicated stem of the base verb. If the verb has a polysyllabic stem (whether the non-final syllables are derivational prefixes or not), only the last syllable is reduplicated. For instance *rqoɓ* ‘hug’, *nupɔɓ* ‘kiss’ and *nurutʂa* ‘envy’¹³ yield *a-rqu~rqoɓ* ‘hug each other’ (73), *a-nupu~pɔɓ* ‘kiss each other’ and *a-nurutʂu~tʂa* ‘envy each other’, respectively.

As in other cases of partial derivation, the reduplication disregards morpheme boundaries: when the reciprocal derivation is applied to verbs with the *suy-* and *nuy-* allomorphs of the sigmative causative (§17.2.1.4) and applicative (§17.4.2), the final *y-* is reduplicated together with the monosyllabic verb root.

For instance, the reciprocal of the applicative *nuybuy* ‘miss’ is *anuybu~ybuy* ‘miss each other’ (§18.4.1.2), despite the fact that the verb root is *buy* ‘miss home’ (Table 17.10, §17.4) and that the preinitial *y-* belongs to the applicative prefix.

Since reduplicated reciprocal has two exponents (*a-* and reduplication), in the glosses only the *a-* prefix is glossed as RECIP, while the reduplication left un-glossed to avoid unnecessary redundancy: thus *a-rqu~rqoɓ* is glossed as RECIP-hug rather than as RECIP-RECIP-hug.

The *r/a/o* allomorphy of the *a-* element, and the presence of the peg *k-...-ci* (§11.4) in the Inferential (as in 73) follows the same rules as other contracting verbs (§12.3, §15.1.1.2).

Reciprocal verbs are morphologically intransitive, and their subject is necessarily non-singular except in the case of verbs expressing naturally collective action (Kemmer 1993: 123–127) (as in 77 below), in generic forms, where number is neutralized, or when the subject is a group of inanimate and poorly distinguishable entities.

When the plural or dual subject of the reciprocal verb is the combination of a previously mentioned entity or group with another group, the comitative *c^ho* (§8.2.5) can be used to specify the second group.

For instance, in (73), the subject of the verb *ko-k-rqu~rqoɓ-nu-ci* ‘they hug each other’ corresponds to the sum of referent of the subject of the first verb *jo-nu-ɕe* ‘he went back’ with the group of people referred to by the postpositional

¹³The verb *nurutʂa* ‘envy’ is denominal from *nutʂa* ‘envy’ (n).

18 Valency-decreasing derivations

phrase *u-yi ra c^{ho}* ‘with his relatives’ (see §14.2.5 for examples of the same phenomenon with non-reciprocal verbs).

 ‘When winter arrives, they gather and stay together in great numbers.’
 (23-qapGAmtWmtW) {0003608#S100}

The meaning of this reciprocal form is also slightly different from that of the base verb, since *wum* ‘gather’ has a wide range of extended meanings, such as ‘take as a X’ (as in example 24, §8.1.7) or ‘fold wings’ (as in 92, §15.1.4.3) which are completely absent from the reciprocal form. In addition, the verb *wum* typically takes non-human entities as objects when meaning ‘gather’ as in (76).

- (76) *tursa u-rku xpun-nga t^hamtcɣt a-c-tɣ-tu-wum*

The intransitive verb *anduundo* derived from *ndo* ‘take’ can have a prototypical reciprocal meaning ‘grab each other’ (especially relative to fighting, see example 86 below, §18.4.1.2). It also occurs with the naturally collective event meaning ‘be clustered together’ as in (77) with a singular verb form, due to the fact that mushrooms are poorly differentiable inanimate referents (§14.6.1.1).

 {0003616#S10}

A handful of intransitive verbs can derive reciprocal forms. The verb of speech *ruɕmi* ‘speak’ has the derived form *a-ruɕmu~ɕmi* ‘exchange words, talk to each other’ (see example 102, §18.4.4), with reciprocalization of the dative-marked recipient (compare with 172, §8.3.1).

18.4.1.1 Reciprocal and noun-verb collocations

In some noun-verb collocations (§22.4.2), the verb can undergo the reduplicated reciprocal derivation, expressing mutual action between the subject and the possessor of the object of the base construction.

For instance, the collocation meaning ‘braid hair’ (78) including the verb *βzu* ‘make’ and the body part *tu-ku* ‘head’ (§5.1.2.3) yields in (79) a reciprocalized construction with the reduplicated verb *aβzuβzu* and the noun *tu-ku* demoted as semi-object.

18.4.1.2 Reciprocal and other derivations

The reciprocal derivation is highly productive, can be applied to verbs that have undergone a valency-increasing derivation such as causative (§17.2, §17.3), applicative (§17.4) or trovative (§17.5).

Reciprocalized causatives are found with both sigmatic and velar causative verbs. For instance, the velar causative *ɣɣrlaβ* ‘destroy’ (from the intransitive verb *rlaβ* ‘disappear’, borrowed from *བརྐྱ* *brlag* ‘lose’) has a reciprocal form *ayɣrluurlaβ* ‘destroy each other’ (81).

- (81) *kuwɕungu tce, tyru ra tu-o-nuɣnuɣɲu-ɲaβ-nu tce*

 IPFV-RECIP-CAUS-disappear-PL IPFV.IFR-be.usually.the.case
 ‘In former times, chieftains used to harm (murder) each other and destroy
 each other’s families.’ (elicited)

Reciprocalization of sigmatic causatives is productive. Example (82) illustrates two verbs with this double derivation: *asuɲq^huɲq^hi* ‘make each other dirty’ (from

the causative *sunq^{hi}* ‘make dirty’ derived from *nq^{hi}* ‘be dirty’) and *asuyynuyynab* ‘blacken each other’ (from the causative *suyynab* ‘blacken’ from *nab* ‘be black’). In the latter, note that partial reduplication targets the syllable /ynab/, disregarding morpheme boundaries (the /y/ is part of the causative prefix, §17.2.1.4).

- (82) *nɣ-k-ɣ-suw-nq^{hu}~nq^{hi}-ndzi* *tce*,

 IFR-PEG-RECIP-CAUS-be.black-DU-PEG EMPH
 ‘They_{DU} made each other dirty, they blackened each other.’ (elicited, can be said of children playing in a dirty place)

The lexicalized verb *nusuk^{ho}* ‘rob, extort’ which etymologically derives from *k^{ho}* ‘give’ with the causative and autive prefixes (§17.2.3) can also undergo reciprocalization to *anusuk^{hu}k^{ho}* ‘extort each other’ as in (83).

- (83) *nunuw jɣ-k-ɣ-ɣɣɣt* *nuw pɣɣ-k-ɣ-nusuk^{hu}~k^{ho}-n-w-ci*.

 ‘The beasts fought with each other to get the [piece of cloth] that he had thrown [at them].’ (150825 huluwa-zh) {0006346#S145}

Reciprocalized tropatives are not commonly found in the corpus, but potentially any tropative verb can undergo reciprocal derivation. For instance, the slightly lexicalized tropative verb *nɣpe* ‘consider to be good, like’ (from *pe* ‘be good’) yields *anɣpupe* ‘like each other’, as in (84).¹⁴

- (84) *nɣ-k-ɣ-nɣnts^{hu}~nts^{hi}-ndzi-ci*, *nɣ-k-ɣ-nɣ-pu~pe-ndzi* *tce*

 ‘They fell in love with each other.’ (150827 mengjiangnv-zh)
 {0006290#S103}

The reciprocal derivation is also completely productive with applicative verbs. For instance *nuybuy* ‘miss’, ‘long for’ (from *buy* ‘miss home’), *nɣk^{hu}ɣzɣga* ‘shout at’ (from *ak^{hu}* ‘call’) and *nurga* ‘like’ (from *rga* ‘like’) yield the reciprocal verbs *anuybuybuy* ‘miss each other’, *anɣk^{hu}ɣzɣgu~zɣga* ‘shout at each other’ and *anurgu~rga* ‘like each other’, respectively. In the case of *a-nuy-bu~ybuy*, partial reduplication disregards morpheme boundaries (the /y/ that belongs to the applicative prefixes is reduplicated together with the verb root), as in the case

¹⁴The other verb *anɣnts^{hu}nts^{hi}* ‘love each other’ in (84) derives from *nɣnts^{hi}* ‘love’, which is a lexicalized and synchronically non-analyzable tropative (§17.5.3).

18 Valency-decreasing derivations

of the reciprocal of causative *asuyɣɣuɣɣaɣ* ‘blacken each other’ discussed above (§18.4.1.2).

A sigmatic causative derivation can be applied to a reciprocal verb. For instance, *awuwum* ‘gather together’ (see 75 in §18.4.1 above) yields the verb *sɣwuwum* ‘gather’, whose meaning is close to that of the base verb *wum* ‘gather’ (see example 76 above and the related discussion), but lacking the extended meanings of this verb and more commonly used to express the meaning ‘gather’ with human objects.

râkshasî PL IFR-CAUS-RECIP-gather LNK
‘She gathered the râkhasîs together.’ (2011-05-nyima)

Such double derivations are by no means rare. The causative+reciprocal *sɣtuta* ‘separate’ (of two persons that are fighting with each other, as in 86) is considerably more commonly used than the simple reciprocal *atuta* ‘release each other’ (from *ta* ‘put’).

- (86) *ɣuɣ-sɣu-ɣ-tuɣ~te-a ri tce mɣzɣu ku-o-nduɣ~ndo-ndzi*

The verb *asɣmuɣm^huɣm^hɣm* ‘inform each other’, which presents two instances of the reciprocal derivation, is treated in (§18.4.2).

18.4.1.3 Lexicalized reciprocal

The meaning of reciprocal verbs is not always fully predictable from that of the base verb; some reciprocal verbs express naturally collective action (§18.4.1) and may have a meaning that is more restricted than that of the base verb.

In some cases, the meanings of the reciprocal form has changed to such an extent that the two verbs have become synchronically unrelated. The clearest example is the intransitive verb *ahulɣt* ‘fight’, which requires a non-singular subject and can select a comitative phrase (§8.2.5) as in (87), like regular reciprocal verbs (§18.4.1).

- (87) *vduxpa kxrpu yw u-tcw c^ho azo a-tcw nuw*

 ‘Gdugpa dkarpo’s son and my son fought with each other, and my son
 was about to be killed.’ (28-smAnmi) {0004063#S237}

This verb originates from the transitive verb *lyt* ‘release’, which is used as a light verb in several collocations related to fight. In these constructions, the syntactic object of *lyt* is the instrument used to hit or shoot, such as weapons (*scapa* ‘sword’, *tudi* ‘arrow’, *ɕɪmuydu* ‘gun’ etc) or body parts (*txŋk^hut* ‘fist’ etc) as objects (88, 89 and also 211 in §8.3.4.3), while the semantic patient (the entity that is hit or shot at) is marked by the relator noun *u-tax* ‘on, above’ (§8.3.4.3).

 fox 3SG.POSS-on EMPH again arrow DEM INDEF IFR-release
 ‘He too shot an arrow at the fox.’ (140507 jinniao-zh) {0003931#S80}

The reciprocal derivation here originally expressed mutual action between the subject and the oblique argument (marked by *u-tax* ‘on, above’) of the base verb; the original meaning may have been ‘shoot at/hit each other (with X)’, and it can be surmised that the verb *alulxt* ‘fight’ used to require a semi-object corresponding to the instrument used for hitting/shooting at an earlier stage. The verb *alulxt* became fully lexicalized when it ceased to co-occur with a semi-object, and when its meaning became narrowed to the meaning ‘fight’, as opposed to all the other possible meanings of the light verb *lyt* (§22.4.2.2).

In some cases, the base verb does not exist anymore but its possible form can be easily recovered. For instance, the reciprocal *anurŋyruru* ‘look at each other’s face’ (example 90) is derived from a lost base verb †*nurŋyru*, an incorporating verb made from the intransitive *ru* ‘look at’ (§15.1.2.4) and the nominal root of *tu-rŋa* ‘face’, with the denominal prefix *nu-* (§20.13.2).

- (90) *nunuw c^ho ci kx-anurŋyruru-ndzi tce*
 DEM COMIT a.little AOR-look.at.each.other-DU LNK
 ‘They exchanged a look with each other’. (2010-07, pear story)

Finally, we find a few intransitive verbs that resemble reciprocal verbs formally (presence of *a-* prefix and verb stem reduplication) and syntactically (non-singular subject, select comitative phrases), but whose verb root is not otherwise attested in Japhug: *amumi* ‘be on good terms’ (§8.2.5), *azuuzu* ‘wrestle’ and *asusu* ‘copulate’ (the latter perhaps related to *susu* ‘live’).

18.4.2 Reciprocal *amu-* prefix

In addition to the reduplicated reciprocal (§18.4.1), a second reciprocal pattern is attested in Japhug: the prefix *amu-*. As shown by the examples in Table 18.3, the *amu-* prefix can derive reciprocal verbs from ditransitive, transitive, semi-transitive and intransitive verbs. When prefixed to *a-* initial verbs such as *atuy* ‘meet’, no vowel contraction takes place (the reciprocal is *amutuy* ‘meet each other’ rather than †*amɣtuy* as could have been expected).

Table 18.3: Examples of the *amu-* reciprocal prefix

	Base verb	Reciprocal verb
indirective	<i>ti</i> ‘say’ <i>st^haβ</i> ‘put against’ <i>rpu</i> ‘bump into’	<i>amuti</i> ‘say to each other’ <i>amust^haβ</i> ‘be one against the other’ <i>amurpu</i> ‘bump against each other’
mono-transitive	<i>mtō</i> ‘see’ <i>mts^hɣm</i> ‘hear’	<i>amumtō</i> ‘see each other’ <i>amumts^hɣm</i> ‘hear each other’
semi-transitive	<i>tso</i> ‘know, understand’ <i>atuy</i> ‘meet’	<i>amutso</i> ‘understand each other’ <i>amutuy</i> ‘meet each other’
intransitive	<i>fse</i> ‘be like’ <i>aribat</i> ‘be near’ <i>arq^{hi}</i> ‘be far’	<i>amufse</i> ‘know each other’ <i>amuribat</i> ‘be close to each other’ <i>amurq^{hi}</i> ‘be far from each other’

The verbs that are compatible with *amu-* derivation can be divided into four groups: indirective, perception, semi-transitive and stative.

18.4.2.1 *amu-* reciprocalization of indirective verbs

Indirective verbs (§14.4.1) such as *ti* ‘say’ become semi-transitive (§14.2.3) when subjected to the *amu-* reciprocal derivation.

The reciprocal verb *amuti* ‘say to each other’ is compatible with a semi-object (noun phrase or reported speech complement clause as in 91 and 92) corresponding to the object of the base verb. The reciprocal derivation here expresses mutual action between the subject and the dative recipient of *ti* ‘say’.

The reciprocal *amu-* prefix expresses reciprocity between the subject and other oblique arguments, for instance those marked by the relator noun *u-taβ* ‘on, above’ (§8.3.4.3). For instance, the verb *amusthaβ* ‘be one against the other’ (93) is derived from *st^haβ* ‘put against’, a ditransitive verb which selects a phrase in *u-taβ* (94).

The verb *amurpu* ‘bump against each other’ is a similar case (see example 3, §6.1), but its base verb *rpu* ‘bump into’ is labile (§14.5.2).

18.4.2.2 *amu-* reciprocalization of perception verbs

The perception verbs *mto* ‘see’, *mts^hɣm* ‘hear’ are also compatible with the *amu-* prefix. Unlike the indirective verbs discussed in §18.4.2.1 their reciprocal forms *amumto* ‘see each other’ and *amumts^hɣm* ‘hear each other’ (or ‘hear from each other’) express reciprocal action between the subject (experiencer) and the object (stimulus) of the base verb. As shown by (95), these verbs also select the comitative like other reciprocal forms.

- (95) <liangshanbo> *c^hondɣre pju-ɣmu-mto-ndzi mu-pjɣ-jɣ tce*

 ‘She and Liang Shanbo were not allowed to see each other.’ (150826
 liangshanbo zhuyingtai-zh) {0006244#S155}

18.4.2.3 *amu-* reciprocalization of semi-transitive verbs

In the case of the semi-transitive verbs *tso* ‘know, understand’ and *atuy* ‘meet’, the *amu-* derivation targets the semi-object.

The verb *amutso* can be used with the reciprocal meaning of ‘understand each other’ as in (96). It also has an additional meaning ‘be clear, be understandable (of speech)’, which reflects the homophonous *amu-* distributed property derivation (§18.7). As discussed in §18.7, the reciprocal and distributed property *amu-* prefixes are historically related, and the verb *amutso* is one of the pivot forms between them.

Some reciprocal verbs derived either from dynamic transitive verbs (*amu^haβ* ‘be one against the other’ in 93) or from stative verbs (*amurmbat* ‘be close to each other’ in 97) are stative, and often appear with emphatic reduplication. This reduplication is different from that of reduplicated reciprocal verbs (§18.4.1), which is one of the morphological exponents of that reciprocal formation.

18.4.2.5 Causativivization of *amu-* reciprocal verbs

The sigmatic causative can be added to *amu-* reciprocal verbs. For instance, *amu-mto* ‘see each other’ discussed above yields the causative form *sɣmumto* ‘cause to see each other’, which also selects the comitative like its base verb,¹⁶ as shown by (99).¹⁷

- (99) *jo-suu-ye tce iɕq^ha <gengqubing> nuu c^ho*

pjɣ-suu-ɣmuu-mto.
 IFR-CAUS-RECIP-see
 ‘The [old man] brought them in and had them meet Geng Qubing.’
 (150906 qingfeng-zh) {0006366#S53}

The verb *asɣmumts^humts^hɣm* ‘inform each other’ underwent three derivations from the base verb *mts^hɣm* ‘hear’: *amu-* reciprocal derivation (*amumts^hɣm* ‘hear each other’, ‘hear from each other’), sigmatic causative (*sɣmumts^hɣm* ‘cause to hear from each other’) and then finally the reduplicated reciprocal derivation (*a-sɣmumts^hu~mts^hɣm*, §18.4.1.2). Unlike the non-volitional reciprocal verb *amumts^hɣm* ‘hear each other’ from which it is derived, *asɣmumts^humts^hɣm* is a verb of speech, and expresses a volitional action (see 100 below and 7 in §5.1.1.3).

¹⁶The Chinese original passage from which (99) is translated is 老翁便领着那两个少男女出来与耿去病见面 <lǎowēng biàn lǐngzhe liǎngge shǎonǎnnǚ chūlái yǔ Gèng Qùbīng jiànmiàn> ‘The old man then brought the girl and the boy to meet with Geng Qubing’, and the presence of comitative could in principle be an effect of calquing of the preposition 与 <yǔ> ‘with’, but additional elicitation has confirmed that this construction is grammatically correct.

¹⁷The absence of plural indexation in (99) is expected since in direct 3→3’ forms only the number of the subject is indexed on the verb (§14.3.2.2).

 ‘The boy told one of his companions, and that one went and told
 another one, and all one hundred and eight [boys] went and informed
 each other.’ (2005 Norbžang)

The first two clauses in (100) provide a native gloss on the meaning of this reciprocal verb.

18.4.3 Reciprocal *andžu-* prefix

The transitive verb *βri* ‘protect’ (an irregular causative of *ri* ‘remain’, see §17.3.1), has the reciprocal *andžuβri* ‘protect each other’ with the unique *andžu-* prefix, historically related to the denominal *andži-* (§20.2.5; on the difficult question of the /i/ vs. /w/ contrast in this context, see §3.5.2).

- (101) *teizo andžu-βri-tei ra*
 1DU RECIP-protect:FACT-1DU be.needed:FACT
 ‘The two of us have to look out for each other.’ (elicited)

18.4.4 Verbs of co-participation

The compound verb *amɣrk^ho* ‘give and take’, which derives from the transitive verbs *mja* ‘take’ and *k^ho* ‘give’ (§19.7.3, §14.4.1) is not formally reciprocal but implies an action performed by more than one person. Contrary to a reciprocal or a reflexive, this collective action is not mutual or directed towards oneself: rather, it expresses that two distinct actions performed by different referents take place (near-)simultaneously and are linked with one another. Example (102) illustrates that one of the two people referred to by the third dual subject hands over the child (a semi-object, §8.1.5) and that the other person takes the child from her hands. Note the non-iconic order in the compound, where the root *mja* occurs before *k^ho*, also the action of giving necessarily temporally precedes that of taking.

- (102) *tceri tx-rjit nuw ɲu-ɣmɣk^ho-ndzi q^he koŋla*

 ‘She_i hands the child_j to him_k and he_k takes him_j, but they_{i+k} don’t get
 the time to exchange any words and she_i is taken back to heaven.’
 (150828 donglang) {0006312#S165}

Despite the presence of a reciprocal verb *a-ruɰmu~cɰmi* ‘talk to each other’ (§18.4.1) in this passage, since there is no exchange of roles in the compound action described by the verb *amɣk^ho* ‘give and take’, it is preferable to refer to this type of construction as ‘co-participation’ (more precisely, ‘unspecified co-participation’ in Creissels and Voisin’s 2008 terminology). This verb is isolated, as none of the other compound verbs recorded up to now have a meaning of this type.

18.5 Anticausative

18.5.1 Morphology

18.5.1.1 Prenasalized-unvoiced alternation

Voice derivations in Japhug are mainly concatenative and prefixal. An important exception is the alternation between unvoiced stops/affricates and their voiced prenasalized counterparts (which are to be analyzed as single phonemes, §3.2.1), reflected in verb pairs whose unvoiced member is transitive, and whose voiced prenasalized member is intransitive.

There are 29 known examples of this alternation, involving both unvoiced unaspirated obstruents (Table 18.4) and aspirated stops/affricates (Table 18.5).

In Table 18.4, the verb *nuwɣɣt* ‘part ways’ has a lexicalized autive *nu-* integrated in the verb stem (§19.1.6), but the bare stem *ɣɣt* is found in nominalized forms such as *u-sɣ-ɣɣt* ‘place where X part ways’ (§5.5.1.1).¹⁸

¹⁸The verb pairs *x^hom* ‘put horizontally’ / *ndom* ‘lie horizontally’ and *ftsi* ‘melt’ (vt) / *ndzi* ‘melt’, which have a cluster in the transitive form but a single prenasalized stop in its intransitive counterpart, are discussed in §18.5.1.3.

Table 18.4: Prenasalized anticausative verbs from unaspirated roots (21 examples)

transitive verb	intransitive verb
<i>plut</i> ‘destroy’	<i>mblut</i> ‘be destroyed’
<i>prxt</i> ‘break’ (vt, of thread)	<i>mbrxt</i> ‘break’ (vi)
<i>pri</i> ‘tear’	<i>mbri</i> ‘be torn’
<i>pyaʁ</i> ‘turn over’ (vt)	<i>mbyaʁ</i> ‘turn over’ (vi)
<i>χtʁr</i> ‘scatter’	<i>ɛndʁr</i> ‘be scattered’
<i>tɕʁβ</i> ‘burn’ (vt)	<i>ndzʁβ</i> ‘be burned’
<i>tɕyaʁ</i> ‘squeeze out’	<i>ndzyaʁ</i> ‘be squeezed out’
<i>tʂaβ</i> ‘cause to fall/roll’	<i>ndzaβ</i> ‘fall/roll’ (vi)
<i>ftʂi</i> ‘melt’ (vt)	<i>ndzi</i> ‘melt’ (vi)
<i>cu</i> ‘open’ (vt)	<i>ɲju</i> ‘open’ (vi)
<i>kʁɣ</i> ‘bend’	<i>ɲgʁɣ</i> ‘be bent’
<i>kio</i> ‘cause to glide’	<i>ɲgio</i> ‘slip’, ‘glide’
<i>kra</i> ‘cause to fall’	<i>ɲgra</i> ‘fall’
<i>qaʁ</i> ‘peel’ (vt)	<i>ngʁaʁ</i> ‘peel, shed skin’ (vi)
<i>qxt</i> ‘separate’ (vt)	<i>nuŋgxt</i> ‘part ways’
<i>qia</i> ‘tear down’	<i>ngia</i> ‘come loose’
<i>qlut</i> ‘break’ (vt, of long objects)	<i>nqlut</i> ‘break’ (vi)
<i>qraʁ</i> ‘tear’	<i>ngraʁ</i> ‘be torn’
<i>qrxz</i> ‘shave’	<i>ngrxz</i> ‘break’ (vi, of hair, dry leaves etc)
<i>qrui</i> ‘break’ (vt, of hard objects)	<i>nqrui</i> ‘break’ (vi)
<i>sar</i> ‘filter out’ (vt)	<i>ndzar</i> ‘drip dry’ (vi)

18 Valency-decreasing derivations

Table 18.5: Prenasalized anticausative verbs from aspirated roots (8 examples)

transitive verb	intransitive verb
<i>p^haʁ</i> ‘split’ (vt)	<i>mbaʁ</i> ‘split, break’ (vi)
<i>u-ʁo + p^hi</i> ‘be disappointed by’	<i>u-ʁo + mbi</i> ‘be discouraged’
<i>sɣp^hɣr</i> ‘wipe off’	<i>mbɣr</i> ‘be wiped off’
<i>t^hu</i> ‘built’ (road, bridge)	<i>ndu</i> ‘be spread’ (road, bridge)
<i>xt^hom</i> ‘put horizontally’	<i>ndom</i> ‘lie horizontally’
<i>ts^hoʁ</i> ‘attach’	<i>ndzoʁ</i> ‘be attached’
<i>c^hɣβ</i> ‘flatten, crush’	<i>ɣɣβ</i> ‘be crushed, flattened’
<i>q^hruut</i> ‘completely scratch’	<i>ngruut</i> ‘be completely scratched’

In the absence of a clearly identifiable derivational affix, the direction of the derivation is not completely obvious. It is conceivable in principle that the intransitive verbs in Tables 18.4 and 18.5 are derived from their transitive counterparts, but the opposite direction is equally possible.

The latter direction could even seem more likely when looking at the meaning of some of the transitive verbs in these tables from a West European-cum-Chinese perspective: for instance, the meaning of *kra* ‘cause to fall’ has to be glossed in a way that makes it seem like it is derived from the intransitive verb *ɳgra* ‘fall’.

A cognate phenomenon is well-known in other branches of the Trans-Himalayan family such as Old Chinese, Tibetan and Lolo-Burmese, and several traditions of research analyse these cases as devoicing of the voiced initial by the sigmatic causative prefix (for instance Shefts-Chang 1971; Dai 1994; Gerner 2007) while other scholars argue for the opposite direction (Sagart & Baxter 2012; Jacques 2012b; see a summary of several opinions on this matter in Handel 2012).

18.5.1.2 Evidence for the directionality of the anticausative derivation

In Japhug (and other Gyalrong languages), three independent pieces of evidence clearly indicate that the direction of derivation must be from the transitive verb to the intransitive one.

First, the transitive verbs in these pairs can have either unaspirated onset (see the examples in Table 18.4), an aspirated onset (Table 18.5) or even a fricative onset (the pair *sar* ‘filter out’ vs. *ndzar* ‘drip dry’). In the hypothesis that the intransitive verbs derive from their transitive counterpart, this observation can be

trivially explained: the aspiration contrast is neutralized by the prenasalization, as illustrated in Table 18.6 (some of the aspirated affricates are indicated in brackets in this table, as no examples are attested).

Table 18.6: Prenasalization and aspiration neutralization

$p-$, p^h-	$\rightarrow mb-$
$t-$, t^h-	$\rightarrow nd-$
$ts-$, ts^h- , $s-$	$\rightarrow ndz-$
$tʃ-$, ($tʃ^h-$)	$\rightarrow ndʒ-$
$tʂ-$, ($tʂ^h-$)	$\rightarrow ndʑ-$
$c-$, c^h-	$\rightarrow ɲj-$
$k-$, k^h-	$\rightarrow ɲg-$

On the other hand, in the hypothesis that the intransitive verbs are primary, the origin of aspiration contrast on the transitive counterparts requires an additional set of explanations.

Second, the verb $\chi t\gamma r$ ‘scatter’ (Table 18.4) is borrowed from Tibetan གཏོར *gtor* ‘scatter’. The prenasalized form $\text{ɲnd}\gamma r$ ‘be scattered’ has no Tibetan equivalent, and its onset ɲnd- is incompatible with the phonotactics of Tibetan consonant clusters. Thus, this intransitive verb must be a Gyalrong-internal creation from a Tibetan base,¹⁹ and it follows that the direction of derivation should be from the transitive verb to the intransitive one.

Third, all scholars favouring the hypothesis that the intransitive verb is primary suppose that the onset of transitive verbs has been devoiced by the addition of a sigmatic causative. In Japhug, this hypothesis makes no sense, because the sigmatic causative (§17.2) is not only attested but fully productive (§17.2.1), with a considerable number of allomorphs but without ever devoicing either sonorant nor obstruents onsets.²⁰ In addition, causativization of prenasalized verbs is attested in Japhug (§18.5.6) and other Gyalrong languages such as Tshobdun (Sun 2014a), for instance *suy-ndzi* ‘melt (vt)’ from *ndzi* ‘melt’ (vi) (compare with the transitive *fʃsi* ‘melt’ vt).

¹⁹Cognate pairs also exist in Zbu ($\chi t\acute{o}r$ / $\text{ɸ}^{\text{d}}\acute{o}r$, Gong 2018: 271) and in Tshobdun ($\chi t\acute{o}r$ / $\text{ɸ}^{\text{d}}\acute{o}r$, Sun & Blogros 2019: 345; 241), showing that this derivation goes back at least to the common ancestor of these three languages.

²⁰The same is incidentally true of various other languages of the Trans-Himalayan family, including Tibetan (Jacques 2012b; Hill 2014a) and Jinghpo (Dai & Xu 1992: 78), where anticausative derivation also exists.

18 Valency-decreasing derivations

Since the intransitive verbs in Tables 18.4 and 18.5 have a non-volitional meaning (§18.5.2), it is likely that the prenasalization is a fossilized form of the autive *mu-* prefix (§19.1.7) in its ‘spontaneous event’ function, like the isolated case of prenasalization in the verb pair *sqlum* ‘collapse’ vs. *arnglum* ‘be caved in’ (§19.7.9).

While traces of the voicing (prenasalization) alternation can be brought to light in most languages of the Trans-Himalayan family, Japhug and the other Gyalrong languages are the only branch of the family where the origin of this alternation is still visible. The study of the prenasalization derivation in Japhug is thus of considerable interest for comparative Trans-Himalayan.²¹

18.5.1.3 Absence of clusters in the anticausative form

Among the pairs in §18.5.1.1, two verbs stand out in having a preinitial consonant in the transitive form without equivalent in the intransitive one: *ft̥si* ‘melt’ (vt), with a *f-* (phonologically /w/) prefixal element (the expected form of the intransitive *ndz̥i* ‘melt’ would be †*mdz̥i*) and *xt^hom* ‘put horizontally’ with a *x-* element (the expected form of *ndom* ‘lie horizontally’ would be †*yndom*).

No decisive explanation can be provided to account for this idiosyncrasy, found in other Gyalrongic languages including Tangut. Two mutually incompatible hypotheses can be considered. First, it is possible that in these two pairs both the intransitive and the transitive verbs are derived from a common root with different fossil derivational prefixes. Second, the reconstructed nasal prefix responsible for the anticausative prenasalization might have caused cluster simplification (**N-ptri* → **N-tri* → *ndz̥i*).

In the second hypothesis, the anticausative form *ɛndɣr* ‘be scattered’ from the Tibetan loanword *χtvr* ‘scatter’ would be phonetically irregular, possibly a clue of it being analogically created on the basis of other anticausative derivations.

18.5.2 Function

The discussion in the previous section has shown that the transitivity alternation exhibited by the verb pairs in Tables 18.4 and 18.5 was a valency-decreasing derivation, turning a transitive verb with unvoiced obstruent onset into an intransitive verb with voiced prenasalized onset (following the rules in Table 18.6).

²¹Independent evidence against the hypothesis that the voicing alternation originates from sigmatic prefixation is also found in Tibetan (Jacques 2020). Further evidence in Gyalrongic is provided by Gates et al. (forthcoming).

Like the passive (§18.1), the only argument of the prenasalized intransitive verb corresponds to the object of the base verb. Unlike the passive derivation however, prenasalized intransitive verbs have a dynamic meaning (rather than expressing a resultative state) and also imply that the action took place spontaneously, semantically removing the agent. For instance, while the passive *a-pryt* of the verb *pryt* ‘break’ (of a thread) implies the existence of an agent (103), the prenasalized intransitive *mbryt* expresses a spontaneous action without external agent (104).²² For this reason, this derivation is henceforth referred to as ‘anticausative’.

(103) *pjɣ-k-ɣ-pryt-ci*

IFR-PEG-PASS-break-PEG

‘It has been broken (by someone).’

INTERJ 1SG.POSS-lady PL 3PL.POSS-necklace AOR-ACAUS:break

‘My lady, your necklace broke!’ (2003 Kunbzang)

While anticausativized verbs are not compatible with external volitional agents, they are however attested with an explicit expression of the cause and/or of an involuntary and indirect agent. For instance in (105) the capsizing of the ship (expressed by the anticausative *mbyaɣ* ‘turn over’ (vi) from *pyaɣ* ‘turn over’ (vt)) is due to a storm mentioned in the previous clause, however without explicit marking of the causal relationship.

(105) *ndzi-zmbruu c^hɣ-mbyaɣ*

‘(One day, there was a terrible storm on the ocean, and) their boat capsized.’ (140511 xinbada-zh) {0003961#S18}

In (106), the anticausative *ngruu* ‘break’ (vi) occurs even though the human subject of the preceding clause is the identified agent of the verb *pjɣ-nuu-cluy* ‘she dropped it’ and the involuntary indirect cause of the breaking action.

(106) *popo pjɣ-nuu-cluy tce, pjɣ-NGRUU*

earthenware IFR-AUTO-DROP LNK IFR-ACAUS:break

‘She dropped the earthenware and it broke.’ (2003gesar)

²²The anticausative meaning of the prenasalization derivation is a plot device in (104). The context of this sentence is that the queen arrives in a room whose floor is tiled with turquoise and coral (see example 277, §19.7.9), and unsure whether it is safe to walk on it (worrying that it might yield under her weight), she willfully breaks her necklace, spreading the pearls on the floor. Her servants, unaware that she did it on purpose, enter the room first to pick up the pearls, and seeing that the floor does not collapse, she then follows them.

18 Valency-decreasing derivations

Anticausative verbs can also follow their corresponding base transitive verbs, as illustrated by the pair *qlut* ‘break’ (of long objects, vt) and *nqlut* ‘break’ (vi) in (107). Instead of non-volitional action, what the anticausative *nqlut* expresses in this case is the successful realization of the action: the subject of *qlut* controls his decision to *attempt* at breaking an object, but cannot control his success in performing this action.

- (107) *pju-tu-qlut* *q^he pju-nqlut* *ɲu-cti*.

 ‘[Twigs of willow that grow in lower altitude] break as soon as one breaks it.’ (07-Zmbri) {0003438#S6}

18.5.3 Anticausative and dummy subject constructions

The verb *ts^hoβ* can be used as a prototypical transitive verb with the meaning ‘attach, plant’, as in (108) (see also 65, §19.4) or ‘fix’ (something on something else).

- (108) *fsaŋ* *c-pju-ta-nu* *ɲu*. *tce loŋrta* *ra*

 ‘(In the morning of the first day of the year), People go [there] and make fumigation, plant prayer flags...’ (140522 Kamnyu zgo) {0004059#S296}

It is also one of the few transitive verbs to occur in the dummy subject construction (§14.3.5) in the meaning ‘grow’ (of fruits, leaves and flowers), as in (109).

- (109) *tce tu-k^hɣl* *nuɬcu*, *χsu-cɣβ*, *kuβde-cɣβ* *jamar ku-ts^hoβ*
 LNK one-place DEM:LOC three-pod four-pod about IPFV-attach
 ‘In each place (in each section on the stalk of the plant), three or four pods grow.’ (09-stoR) {0003470#S39}

The anticausative *ndzoβ* ‘be attached’ occurs with exactly the same meaning as *ts^hoβ* ‘attach’ in the dummy subject construction. In (110), the intransitive subject *βnu-cɣβ*, *χsu-cɣβ* ‘two or three pods’ of *ndzoβ* corresponds to the object *χsu-cɣβ*, *kuβde-cɣβ* of *ts^hoβ* in (109).

- (110) *tu-k^hɣl* *ri*, *βnu-cɣβ*, *χsu-cɣβ* *jamar ku-ndzoβ* *c^ha*
 one-place LNK two-pod three-pod about IPFV-ACAUS:attach can:FACT
 ‘In each place (section on its stalk), two or three pods can grow.’
 (09-stoR) {0003470#S15}

This is not the only use of *ndzov*, which is one of the few anticausatives that are compatible with a volitional meaning (compare with 120, §18.5.5).

18.5.4 Collocation

Among the pairs in Table 18.4, the verbs *u-ɓo + p^{hi}* ‘be disappointed by’ and *u-ɓo + mbi* ‘be discouraged’ are remarkable in that both are noun-verb collocations, taking the same inalienably possessed noun *u-ɓo* (otherwise unattested) as object or intransitive subject,²³ Showing that the anticausative prenasalization, like several other derivations (§22.4), affects collocations as a whole despite being only morphologically expressed on the verb stem.

The intransitive *mbi* ‘be discouraged, feel frustrated, lose heart’ is always in 3SG form (§14.2.7), and the possessor on *u-ɓo* indicates the experiencer, as in (111) where the form *ndzi-ɓo* takes a 2DU possessive prefix coreferent with the subject of the previous verb (see also 31 in §14.2.7).²⁴

- (111) *stɣβts^hɣt mɯ-pɯ-tɯ-nɯ-c^ha-ndzi cti tce,*
 contest NEG-AOR-2-AUTO-can-DU be.AFF:FACT LNK

 ‘[It is not that I don’t want to give her to you], it is that you failed in the contest, don’t feel frustrated.’ (2003 sras)

The transitive verb *p^{hi}* occurs with the meaning ‘disappoint’, encoding the stimulus as transitive subject and the experiencer as possessor of the object as in (112). The argument structure of the two verbs thus only differs by the loss of the subject (stimulus) in the intransitive form *mbi* meaning ‘be disappointed’.

- (112) *a-ɓo nɯ-tɯ-p^{hi}*
 1SG.POSS-disappoint(1) SENS-2-disappoint(2)
 ‘I am disappointed by you.’ (elicited)

A reflexive meaning ‘be disappointed in oneself’ can be expressed by combining the same person as subject of *p^{hi}* and possessor of *u-ɓo* (1SG in 113) with the autive prefix *nu-* in its ‘self-affectedness’ function (§19.1.3).

²³The noun and the verb are glossed with the same expression, but using the indices (1) and (2) (§22.4.3.2).

²⁴This collocation has an exact Tshobdun cognate *o-ɓe? + ^hbi* ‘lose morale’ (Sun & Blogros 2019: 708).

18 Valency-decreasing derivations

- (113) *kuuki si ki u-qa c^hu-tu-tcxt,*

 ‘If you succeed in uprooting this tree and carrying it away, I will admit defeat.’ (140428 yonggan de xiaocaifeng-zh) {0003886#S74}

The anticausativized collocation *u-ɓo* + *mbi* can undergo additional derivations, such as the facilitative (see 207 in §18.9.1), and the incorporating verbs *sɣɓombi* ‘be discouraging’, ‘be hopeless’ and *nɣɓombi* ‘lose hope’ also derived from it (§20.13.1).

18.5.5 Volitionality

An important proportion of anticausative verbs are only compatible with inanimate subjects, for instance *ngru* ‘break’ (example 106 in §18.5.2), *ndzi* ‘melt’ as in (114) or *ndzyaɓ* ‘be squeezed out’ (example 17, §5.1.2.3), and therefore express non-volitional actions.

- (114) *txjpa ku-xteu~xtci ka-lɣt ri,*
 SNOW SBJ:PCP-EMPH~be.small AOR:3→3’-release LNK

 NEG:SENS-be.serious still IPFV-ACAUS:melt SENS-can
 ‘There was a bit of snow, but it is not serious, it can still melt.’
 (conversation 15-12-17)

Even anticausative verbs that are compatible with human or animal subjects are poorly compatible with volitional meaning. For instance, *ndzaɓ* ‘fall/roll’ (from *tɕaɓ* ‘cause to fall/roll’) expresses involuntary fall as in (115), but cannot be used for voluntary rolling motion. The reflexive form of the base transitive verb *zyɣtɕaɓ* ‘cause oneself to fall/roll’ is required instead for this meaning (§18.3.2).

- (115) *ɸu-ndzaɓ q^he, ɸaɣci ra ɸa-nu-lwoɓ tce,*
 AOR:DOWN-ACAUS:cause.to.fall LNK apple PL AOR:3→3’-AUTO-spill LNK
 ‘He fell down and spilled the apples.’ (2010 Tshendzin pear story)

However, a few anticausative verbs are compatible with various degrees of volitionality. The verb *mbɣaɓ* ‘turn over’ (vi) (from *ɸɣaɓ* ‘turn over’) can be used for controllable actions such as tossing over one’s bed (116), and its distributed

action derivation (§19.4) *nyṁbyaḅlav* ‘turn over here and there’ occurs to express voluntary actions as in (117).

- (116) *k^hri u-taḅ nuṁtḅu ko-mbyaḅ ny*

18.5.6 Compatibility with other derivations

Even though the anticausative prenasalization probably originates from the au-
 tive *nuw-* prefix (§18.5.1.2), both derivations are compatible with each other, as
 shown by examples such as *puw-nuw-ŋgra* (121) (from *kra* ‘cause to fall’) in a con-
 cessive clause (§19.1.4, §25.2.3) or with the spontaneous function (example 23 in
 §19.1.4).

Like most intransitive verbs, anticausative verbs can undergo the subject-ori-
 ented facilitative (§18.9.1) *γγ-* derivation. For instance, *nglut* ‘break’ (vi), *ngru* ‘break’
 (vi) and *mbyaḅ* ‘turn over’ (vi) have the derived forms *γγnglut* ‘breaking easily’
 (122), *γγngru* ‘break easily’ and *γγmbyaḅ* ‘turning over easily’ (of cars on a slip-
 pery road).

- (122) *nuw-rom kunv̄ mv̄-γγ-nglut*
 AOR-be.dry also NEG-FACIL-ACAUS:break:FACT
 ‘Even after it has dried up, [the wood of high mountain willow twig]
 does not break easily.’ (07-Zmbri) {0003438#S52}

The subject-oriented facilitative of the anticausative and the object oriented facilitative *nuyuu-* (§18.9.2) of the base transitive verb has very close meanings: for instance from *pryt* ‘break’ (vt) and *mbryt* ‘break’ (vi) have the facilitative forms *nuyuu-pryt* and *γx-mbryt*, both of which can be translated as ‘break easily’; the former implies however the presence of an external agent, while the latter expresses a spontaneous action.

The propriative *sx-* derivation (§18.8) is also attested with some anticausative verbs, in particular *sxγgio* ‘be slippery’ from *γgio* ‘slip’.

The distributed action derivation (§19.4) occurs with anticausative verbs expressing a motion event, such as *nɣndzaβlaβ* ‘roll again and again/in all directions’ and *nɣmbyaβlaβ* ‘turn over again and again’ from *ndzaβ* ‘fall/roll’ *mbyaβ* ‘turn over’ (vi), with a repeated motion; *nɣmbyaβlaβ* can describe a (possibly volitional) rolling motion in both lateral directions (remaining at the same place, as in 123 below and 117 in §18.5.5), as opposed to *nɣndzaβlaβ*, used for a rolling motion either in one direction (124), or rolling motion in disorderly fashion.

The anticausative verb *γgio* ‘slip’ has two distributed action forms, the regular one *nɣgiolo* which can be translated as ‘slip/glide/move around over and over’ (125) and *nunγiolulo*, which rather has a volitional meaning ‘glide, slide (in no particular direction)’ (126).

A few anticausative verbs can take the sigmatic causative prefix. For instance, the causative *suyndzi* ‘melt’ (vt) of *ndzi* ‘melt’ (vi) can be elicited. This form can express indirect causation, as in (127),²⁶ as opposed to the base transitive verb *ft̥si* ‘melt’ which is used for volitional activities (128).

²⁶The same semantic contrast appears to be found in Zbu (Gong Xun, p.c.) and Tshobdun (Sun 2014a).

18.5.7 Other cases of voicing alternation

The anticausative derivation is not the only type of voicing alternation in Japhug.

Among verbs, two cases of non-anticausative voicing alternations are found, the isolated pair treated in §19.7.9 and the irregular sigmatic causative *ʒNGOʒ* ‘hang’ (vt) from *ŋQOʒ* ‘hang’ (vi). The onset *ʒNG-* in *ʒNGOʒ* ‘hang’ (containing the irregular *ʒ-* allomorph of the sigmatic causative prefix, §17.2.2.4) apparently results from the voicing of an earlier cluster like **ʕ-Nq-* due to phonotactic constraints (§4.2.1.5).

In ideophones, voicing alternations with or without prenasalization are also attested, as shown by the pair *quqli* and *ŋGUŋgli*, both meaning ‘eyes wide open’ (§10.1.5.3). In addition, at least one ideophone, *dzOʒ* ‘kneeling suddenly and respectfully’, which appears in collocation with the transitive verb *tsʰOʒ*, originates from the anticausative verb *ndzOʒ* ‘be attached’ (§10.1.6).

18.6 Antipassive

The antipassive derivation converts a morphologically transitive verb into an intransitive one, removing the object and preserving the subject. As in the closely related Tshobdun language (Sun 2006b: 8), two antipassive prefixes are found in Japhug: *rx-* and *sr-*.

18.6.1 *rx-* antipassive

The *rx-* antipassive prefix is productive, and it is thus impossible to provide a complete list of all examples. Table 18.7 provides a representative sample of this derivation, which includes a number of verbs of Tibetan origin (for instance *fsOʒ* ‘earn’ and *βzjoz* ‘learn’ from *བསྐྱེད་པ་* *bsogs* ‘accumulate’ and *སྦྱངས་* *sbʰaŋs* ‘learn’, respectively). As in Tshobdun (Sun 2006b: 8), this prefix is typically used when the suppressed argument is non-human (§18.6.7.2), though a few exceptions exist (§18.6.4).

This derivation takes as input mono- or ditransitive verbs (§18.6.4), and one labile verb (*suso* ‘think’, see §14.5.1.3).

The main morphosyntactic differences between transitive verbs and their corresponding antipassive forms are illustrated the following examples. In (131), the base verb *βzjoz* ‘learn’ is fully transitive, selecting the type-C preverbs in the non-local direct Aorist (§14.3.1, §15.1.1.1). The object is the topic studied (in 131, the nominalized verb *tu-sŋaʒ* ‘sorcery’) and the transitive subject, the person learning, is taking the ergative case.

Table 18.7: Examples of the antipassive prefix *rx-*

Base verb	Derived verb

 'I have a daughter, and she has learned sorcery.' (140512 fushang he
 yaomo-zh) {0003967#S134}

The antipassive verb *ɾɿβzjoz* 'learn things' in (132) is morphologically intransitive, selecting the type-A preverbs (§14.3.1) in the Aorist (*pu-* instead of *pa-*, §15.1.1.1). It is used to avoid mentioning a specific topic of study, and it is often better to translate this verb as 'go to school/university'. Like the transitive subject of *βzjoz* 'learn', the subject of *ɾɿβzjoz* 'learn things' corresponds to the person(s) acquiring knowledge. However, when overt, its subject occurs in absolutive form as *u-me nu* 'her daughter' in (132).

- (132) *u-me nu pu-ɾɿ-βzjoz ri t^ham u-<gongzuo>*

 'Her daughter went to school (studied things) but has no job now.'
 (17-lhazgron)

Although example (132) only illustrates one of the seven morphological criteria for transitivity (§14.3.1), all have been successfully tested with antipassive prefixes.

The non-orientable antipassive verbs select as lexicalized orientation the same one as that of their base verb. For instance, *ɾɿmbi* 'give to someone' selects the EASTWARDS preverbs like its base verb *mbi* 'give' (§15.1.5.10).

The object affected by the *ɾɿ-* derivation is not only demoted morphologically but also removed syntactically, and verbs with the antipassive prefix cannot take an overt patient corresponding to the object of the base verb, even as semi-object or with an oblique case (the antipassive *ɾɿfɛɾt* 'report' is however an exception, see §18.6.3).

The antipassive verbs are generally understood as having a generic/indefinite patient. In Table 18.7, their meaning is translated using the most usual patient associated with a particular activity, for instance 'clothes' in the case of *ɾɿ-tɕuβ* 'sew' and *ɾɿ-ɕp^hɿt* 'patch'. The patient that has been demoted from object status by the *ɾɿ-* prefix is nearly always an inanimate entity, but there are some examples of verbs (such as *ɾɿmtɕ^ha* 'butcher') with animal patient, and even demoted

human recipient in the case of some secundative verbs (§18.6.4). The semantic contrast between the *rx*- and *sx*- antipassive derivations is described in (§18.6.7), and morphosyntactic constructions competing with antipassive derivations to express indefinite objects are discussed in §18.6.8.

Although the meaning of the derived verbs is not fully predictable in each case (§18.6.3), the formation of the *rx*- antipassive is almost perfectly regular. There are only three *rx*- antipassive verbs with irregular morphology. First, *rxnŋa* ‘have a debt’ from *ŋa* ‘buy on credit, owe’ (a verb selecting as object the amount of money owed, 133) has an additional *-n* element.

- (133) *squ-mpcar* *kx-ŋa-t-a*
 TEN-money.unit AOR-owe-PST:TR-1SG
 ‘I bought [it] on credit and owe [him] ten renminbi.’ (elicited)

Second, *rxtsye* ‘do business’ from *ntsye* ‘sell’ lacks the *n*- preinitial found in the base verb. Third, *rususo* ‘think’ from *suso* ‘think’ (about) (§14.5.1.3) has *ru-* instead of *rx-*. These cases are accounted for in §20.10.1.

Apart from these irregularities, the allomorphy of the *rx*- antipassive is limited to the variant *ra-* found with verb roots with an onset with uvular preinitial (§3.5.4) as in *raxtu* ‘do shopping’. The antipassive *rx-* prefix is formally similar to the denominative *rx-* (§20.4.1),²⁷ to the extent that synchronic ambiguity exists between these two prefixes. In particular, the verb *rxznde* ‘make a wall’ (vi) can be synchronically analysed either as a denominal form of *znde* ‘stone wall’ or of the transitive verb *znde* ‘make a wall’. Note that both options are equally likely, as the prefix *rx-* is attested with other denominal expressing the building of the base noun, for instance *tx-lox* ‘nest’ → *rxlox* ‘make a nest’ (vi). The historical implications of this observation are explored in §20.10.1.

Not all transitive verbs with non-human patients can be antipassivized. In particular, when an intransitive verb having the meaning of the expected antipassive verb already exists, antipassivization is less likely. For instance, *ti* ‘say’ lacks a *rx*- antipassive form, as the intransitive *ruçmi* ‘speak’ (which can have an overt dative recipient, 19, §14.2.4, but no reported speech complement clause) already serves as its ‘lexical antipassive’. The verbs of ingestion *ndza* ‘eat’ and *ts^{hi}* ‘drink’ share the compound verb *rundzrxts^{hi}* ‘have a meal’ (§20.4.1, §20.12) as their intransitive counterpart.

²⁷In addition, there is a residue of *rx-* prefixed verb that can neither be analyzed as antipassive nor as denominal derivations (§19.7.5).

18.6.2 *sr-* antipassive

Like the *rx-* antipassive, the *sr-* antipassive is productive. Table 18.8 presents a list of representative examples, including Tibetan loanwords such as *fstɔt* ‘praise’ from བསྐྱོད་ *bstod* ‘praise’. Unlike the *rx-* antipassive, the *sr-* prefix is used when the demoted patient is human or equivalent (§18.6.7.2, see Sun 2006b: 8 on Tshobdun), except in the case of some secundative verbs (§18.6.4). The *sr-* antipassive derivation can also demote animal patients in specific contexts (§18.6.7.2).

The only cases of allomorphy with the antipassive *sr-* are the allomorph *sa-* occurring when the prefix is followed by a complex onset whose first element is a uvular fricative (§3.5.4), and the allomorph *srz-* which appears with some polysyllabic stems whose first syllable has a sonorant initial *srzyɣmuu* ‘praise people’.

The *sr-* prefix is homophonous with the rogative (§18.2), the proprietive (§18.8) and denominal derivations (§20.3), as well as with the oblique participle *sr(z)-* (§16.1.3). Potential ambiguity exists with the proprietive derivation. For instance, the transitive *nuzduy* ‘worry about’ has two homophonous intransitive derived verbs *sr-nuzduy*, an antipassive meaning ‘worry about people’, and a proprietive ‘causing worry to people’.

Most *sr-* antipassives derive from monotransitive verbs, but a handful of them are based on ditransitive verbs (§18.6.4). In addition, the labile verbs *nrre* ‘laugh’ and *srŋo* ‘listen’ are also compatible with the *sr-* prefix. The antipassive forms *srŋo* ‘listen to advice’ and *srnrre* ‘laugh at people’ derive from the meanings ‘listen to’ and ‘laugh at, mock’ that these two verbs have when conjugates transitively (§14.5.1.3).

Some of *sr-* antipassive verbs can either be dynamic verbs or stative verbs, in the latter case expressing a general tendency/propensity of the subject to do the action. For instance, *sr-ndza* from *ndza* ‘eat’ can mean ‘eat people, eat someone’ (as in 157, §18.6.7.1), but also ‘be a man-eater’, ‘prick’ (134) or ‘be carnivorous’ (animal eating other animals, 159a, §18.6.7.2).

18.6.3 Lexicalized antipassive

Most antipassive verbs have meanings that are predictable from that of their base verbs. However, in some cases antipassivization not only demotes the patient from object status, but restricts the range of meanings of the verb root.

The meaning of the transitive verb *pyaɓ* ‘turn over’ differs depending on the objects it occurs with; its possible meanings include ‘turning (clothes) inside out’,

‘open (the cover of a box)’, ‘cross (mountains, rivers)’ (20, §15.1.2.1) or ‘plough (fields)’ (see 136 below and 138 in §9.1.6.4).

- (136) *nu-ji ra ku-dw~dyn ku-ju~jom*

lo-pɣaβ-nw
 IFR:UPSTREAM-turn.over-PL
 ‘They had ploughed many wide fields for them.’ (2002 qajdoskAt)
 {0003366#S90}

By contrast, its antipassive *ɾɣɣaβ* ‘reclaim land’²⁸ only preserves the last meaning of the base verb, with ‘land’ or ‘field’ as implicit patient as in (137). Note in addition that the antipassive selects the UPSTREAM preverbs (*lu-* in 137) like the verb *pɣaβ* in the meaning ‘plough’ (*lo-* in 136).

- (137) *zgoku tu-ce q^he lu-ɾɣ-pɣaβ nɣ,*

 IPFV-stay IFR.IPFV-be
 ‘[The old man] lived by going to the mountain, clearing fields and
 planting crops.’ (150831 jubaopen-zh) {0006294#S3}

Similarly, while the transitive verb *tɕɣβ* ‘burn’ can take various types of referents as objects (including humans, as in 88, §14.3.3.3), the antipassive *ɾɾtɕɣβ* ‘burn land’²⁹ is also restricted to its use in agriculture, with ‘land’ as demoted patient.

The expected meaning of *ɾɣɣaβ* ‘reclaim land’ and *ɾɾtɕɣβ* ‘burn land’ if they had been regular antipassives would have been ‘turn things over’ and ‘burn things’, respectively. Despite the absence of an incorporated noun, these two verbs include information about the demoted patient. This semantic irregularity has implications for the study of the origin of the antipassive prefixes in Japhug, as discussed in §20.10.1.2 .

The verb *ɾɣfɕɾt* ‘report’ from *fɕɾt* ‘tell’ stands out among antipassive verbs from the point of view syntax. While *ɾɣfɕɾt* is morphologically intransitive, as is shown by the form *ku-ɾɣfɕɾt* in (138) with the intransitive subject generic prefix *ku-* (§14.2.1.2), the patient of this verb can nevertheless be overt as a semi-object

²⁸The meaning of this verb corresponds to Chinese 开垦 <kāikǎn> ‘reclaim land’, ‘clear a wild area for cultivation’.

²⁹The meaning of this verb is translated as 烧荒 <shāohuāng> ‘clear land by fire’ in Chinese.

(in 138, the demonstrative *numura*, anaphorically referring to the previous complement clauses). The object of the base verb *fɕxt* ‘tell’ is thus only demoted to semi-object status (§8.1.5), and not syntactically removed. The dative recipient is also preserved by the antipassive derivation.

18.6.4 Antipassive forms of ditransitive verbs

Among ditransitive verbs, indirective verbs (§14.4.1) build their antipassive derivations the same way as monotransitive verbs.³⁰ For instance, *t^hu* ‘ask’ has the two antipassive forms *ryt^hu* ‘ask questions’ and *syt^hu* ‘ask in marriage’ depending on whether the demoted patient is inanimate or human (see examples 156b and 160, §18.6.7).

Three secundative verbs, *mbi* ‘give’, *ɕtsu* ‘entrust with’ and *jts^{hi}* ‘give to drink’, behave differently in this regard. Their object (semantically the recipient) is generally human, but the *sx-* antipassive prefix does not occur with these verbs: the corresponding forms (for instance *symbi* ‘ask for’) exist, but do not have antipassive meaning (they exemplify the rogative derivation, §18.2). Instead, their antipassive forms *rymbi* ‘give to someone’, *ryɕtsu* ‘entrust someone with’ and *ryjts^{hi}* ‘give to someone to drink’ take the *ry-* prefix. These verbs are henceforth referred to as ‘*ry-* antipassivized secundative verbs’.

The demoted recipient of *ry-* antipassivized secundative verbs can be indefinite and non-specific as in the case of most antipassive verbs (§18.6.7), as in (139).

- (139) *uzyy u-βra ku-rku-rkun ntsu ma*

 ‘He would only keep a little for himself, and give away the rest.’ (150902 hailibu-zh) {0006316#S6}

³⁰Note however the morphosyntactic peculiarities of the lexicalized antipassive *ryfɕxt* ‘report’ from the indirective verb *fɕxt* ‘tell’ (§18.6.3).

However, often, as in (140) and (141), the identify of the recipient is known to the speaker, but the antipassive is chosen to leave it unspecified, either because the information is irrelevant (because the addressee does not know the people in question) or to hide information.

In addition, antipassivization of secundative verbs does not removes the recipient: it can be demoted to oblique argument status, with dative marking, as in (142) and (144).

- (142) *azo tx-tcuw ra nuu-cki c^ha puu-ry-jts^hi-a*
 1SG INDEF.POSS-son PL 3PL.POSS-DAT alcohol IPFV-APASS-give.to.drink
nygryl
 be.usually.the.case:FACT
 ‘I (usually) give a drink to the guys.’ (elicited)

Although the three *ry-* antipassivized secundative verbs *rymbi* ‘give to someone’, *ryctšuu* ‘entrust someone with’ and *ryjts^hi* ‘give to someone to drink’ are morphologically intransitive like all other antipassives, as shown by the absence of past transitive *-t-* suffix in (141), and of C-type orientation preverb in (144), they do preserve more transitivity features than most antipassive verbs.

First, the three *ry-* antipassivized secundative verbs differ from other antipassive verbs in terms of case marking: their subject can receive ergative marking in some contexts.

18 Valency-decreasing derivations

With third person arguments and no overt recipient as in (143), the subject *a-mu a-wa ni* is in absolutive form.

- (143) *a-mu a-wa ni a-k^huna ɲɣ-ɣɣ-ɱbi-ndzi*
 1SG.POSS-mother 1SG.POSS-father DU 1SG.POSS-dog IFR-APASS-give-DU
 ‘My parents gave my dog away.’ (elicitation, 2019-11-30)

However, ergative marking on the subject occurs in (144) with a 1SG recipient, and in (145) below with a 1SG semi-object (theme).

- (144) *a-wa ku a-ɓi a-cki*
 1SG.POSS-father ERG 1SG.POSS-younger.brother 1SG.POSS-DAT
kɣ-ɣɣ-ctɕuu.
 AOR-APASS-entrust.with
 ‘My father entrusted me with my younger brother.’ (elicited)

Second, an even more unusual feature of the three *ɣɣ*- antipassivized secundative verbs is that the morphosyntactic status of the theme of the giving action. In all the examples above from (139) to (142), the theme is a third person semi-object (§8.1.5), and its number cannot be indexed even with a 1SG subject (§14.3.2.6).

However, in the very rare cases when the theme is first or second person, the verb *ɣɣmbi* ‘give to someone’ exceptionally occurs with inverse *wy*- or local scenario indexation affixes (*ta*- 1→2 and *ku*- 2→1, see §14.3.2.3) prefixes, as if the verb were morphologically transitive, and the theme were a direct object. No such example is found in the corpus, but forms such as (145) can be elicited (§14.4.2.2).

- (145) *a-wa ku azo nú-wy-ɣɣ-ɱbi-a*
 1SG.POSS-father ERG 1SG AOR-INV-APASS-give-1SG
 ‘My father gave me away.’ (elicited)

This puzzling construction is not only possible, but it is actually the only way to express a non-third person theme with the verb *mbi* ‘give’.

Not all secundative verbs however select the *ɣɣ*- antipassive like *mbi* ‘give’ and *ɱts^hi* ‘give to drink’. For instance, *suxɕɣt* ‘teach’, which encodes the recipient/addressee as object (the 2SG in 146, as indicated by the *ta*- portmanteau prefix), is not compatible with *ɣɣ*- prefix: the only antipassive form of this verb is *sɣsuxɕɣt* ‘teach people’, ‘work as a teacher’, as in (147).

- (146) *txfsɣri kɣ-βzu ci pju-ta-suxɕɣt.*

 IPFV-APASS-teach-1SG PST.IPFV-be
 'I too became a teacher, and I was teaching there.' (12-BzaNsa)
 {0003484#S17}

Similarly, the secundative verb *nusuk^{ho}* 'rob, extort' has the antipassive form *sxnusuk^{ho}* 'rob people', also with the *sx-* prefix (example 169, §18.6.9).

18.6.5 Reduplicated antipassive

The intransitive verb *rx^tut^{he}* 'inquire', 'ask for information' derives from *t^hu* 'ask' like *rx^tu* 'ask questions' (156b, §18.6.7, §18.6.4), with the rare reduplication in *-e* in addition to the *rx-* prefix. This reduplicated antipassive form is isolated, but this type of reduplication is attested in a few other forms (§19.4.2.1).

As shown by (148), *rx^tut^{he}* 'inquire' is an intransitive verb: the type A orientation preverb *nu-* is selected instead of type C if the verb were morphologically transitive (§15.1.1.1). This verb also selects an oblique argument in the dative, like its base verb (§14.4.1).

- (148) *a-cki yuu-nuu-rx^tut^{he}*

 [permission] at all.' (ma he lu-zh)

³¹The ergative on the subject *mbro nuu kuu* 'the horse' is due to the main verb *pjx-q^{ha}* 'he hated that...'

18.6.6 Antipassive and past imperfective

Antipassive verbs, unlike most dynamic verbs (§21.5.3.1), are compatible with Past Imperfective *pu-* and Inferential Imperfective *pjɣ-*. This question is however difficult to study for three reasons.

First, many of the transitive base verbs in Tables 18.7 and 18.8, for instance *βzjoz* ‘learn’ and *ɸp^hɣt* ‘patch’, select the DOWNWARDS preverbs as one of their lexicalized orientation (see for instance the perfective form *pa-βzjoz* ‘she learned it’ in 131 above). As a consequence, there is syncretism for these verbs between Aorist and Inferential on the one hand, and Past Imperfective and Inferential Imperfective on the other hand (§21.5.3.1). For instance, the form *pu-rɣ-βzjoz* ‘she went to school’ in (132) above is Aorist, but in a different context the same form can be analyzed as a Past Imperfective ‘she was studying’.

Second, while simple Past and Inferential Imperfective are attested with antipassive verbs, they are also compatible with the Periphrastic Aorist and Inferential Imperfective (§21.5.3), combining the Imperfective verb form (§21.2.2) with a copula in Inferential Imperfective (*pjɣ-ŋu*) or in Past Imperfective (*pu-ŋu*) as illustrated by example (150). It is unclear whether any function difference exists between non-periphrastic and periphrastic tenses for these verbs, apart from the fact that the latter are unambiguously imperfective.

- (150) *tce u-me* *nunu* <*xianzhong*> *nutcu* *pju-rɣ-βzjoz*
 LNK 3SG.POSS-daughter DEM district.school DEM:LOC IPFV-APASS-learn
pu-ŋu ri,
 IPFV-be LNK
 ‘(At the time when) her daughter was going to school, (her father was drinking alcohol and neglected his parental duties).’ (17-lhazgron)

Third, since some of the *sɣ-* antipassives can be used as stative verbs (propensity antipassives, §18.6.2), they are thus compatible with Aorist and Inferential Imperfective anyway.

Despite these difficulties, unambiguous examples of non-periphrastic Aorist and Inferential Imperfective are not common in the corpus even with verbs selecting the DOWNWARDS orientation. In (151), it is clear from the context that *pjɣ-rɣ-βzjoz* is Inferential Imperfective rather than Inferential Perfective both due to the context, the presence of the adverb *ntsu* and the unambiguous Inferential Imperfective with Progressive *pjɣ-k-rsu-ndun-ci* ‘he was reading it’ in the following clause.

- (151) <caichen> *nuunu pjɣ-rɣ-βzjoz* *ntsu. juryi ntsu*

18.6.7 The uses of the antipassive derivations

18.6.7.1 Antipassive derivations and indefinite patients

In Japhug, non-overt objects of (non-labile) transitive verb are always interpreted as transitive, even when a particular verb form happens to lack unambiguous markers of transitivity (§14.3.1). The minimal example (153) with the 1SG→3 Aorist of *βzjoz* ‘learn’ could in principle be an intransitive form (due to the fact that the past transitive *-t* suffix cannot surface with a close syllable stem, §14.3.2.1). Yet, this example cannot mean ‘I studied something’ or ‘I went to school’, but necessarily implies that the object has been previously mentioned in the discourse.

- (153) *χsu-sla* *pu-βzjoz-a*
 three-months AOR-learn-1SG
 ‘I have learned [how to make ploughshares] for three months.’ (2010-09)

The antipassive derivations, which not only demote the object, but suppress it syntactically (except for ditransitive verbs, see §18.6.4), are a way to express a non-referential indefinite patient, either a non-specific patient (translatable as ‘something’), or a whole range of possible patients. For instance in the case of *ɣβzjoz* ‘learn things’, the implicit patient can be a school curriculum (‘go to school, study’) as in (154) below and (132) above, or a non-specific topic ‘study something’ as in (151) in §18.6.6.

- (154) *nura nu-p^he* *nutcu, χsu-xpa nu pu-rɣ-βzjoz-a.*
 DEM:PL 3PL.POSS-DAT DEM:LOC three-years DEM PST-APASS-learn-1SG
 ‘I have studied with them for three years.’ (160721 XpWN) {0006181#S28}

Example (155) also illustrates the contrast between the transitive verb *t^{hu}* ‘ask’³² with an overt object *uzxy nu* ‘his own (question)’ and the corresponding antipassive verb *ryt^{hu}* ‘ask questions’ with an non-specific patient (the prohibition against asking additional questions anymore is not limited to the one he forgot to ask).

- (155) *uzxy nu ky-nu-t^{hu} na-nu-jmut nu-ŋu, t^{eri} nu*
 3SG:GEN DEM INF-AUTO-ask AOR:3→3’-AUTO-forget SENS-be LNK DEM

 apart.from IPFV-APASS-ask NEG-AOR-be.allowed SENS-be
 ‘He had forgotten to ask his own [question], but he was not allowed to ask questions anymore.’ (divination, 2005)

In rarer cases, the demoted patient is referential and semantically recoverable from the context. In (156b) for instance, by contrast with (155), the demoted patient of *ryt^{hu}* ‘ask questions’ corresponds to the previous sentence (156a): taking the context into consideration the verb form *ko-ry-t^{hu}-nu* means ‘They consulted the lama (about the reason why the man was about to die and what to do about it)’.

- (156) a. *ty-t^{cu} nu ku-si to-ryŋgat.*

 lama IFR-search-PL LNK IFR-APASS-ask-PL LNK
 ‘They looked a lama and consulted him/ask for his advice.’
 (rkongrgyal2.2002)

Similarly, in (157), the implicit patient of the verb *sx-ndza* ‘eat (someone)’ is not ‘people’ in general, but rather the group of characters present at the moment of the action with the demoness, and it is thus in fact partially referential.

- (157) *tce ku-sx-ndza tu-oywyu ri,*
 LNK SBJ:PCP-APASS-eat IPFV-prepare LNK
 ‘[The rākshasī demoness] (revealed her true nature) and was about to eat someone (one of them), but ...’ (28-smAnmi) {0004063#S378}

³² Although *t^{hu}* ‘ask’ is ditransitive, since it has indirective alignment, it does not behave differently from monotransitive verbs regarding antipassivization (§18.6.4).

18.6.7.2 The contrast between *ry-* and *sy-* prefixes

The semantic difference between the *ry-* and *sy-* antipassive prefixes involves a contrast in humanity (following Sun 2006b on Tshobdun) and animacy.

The *ry-* prefix is required for inanimate/abstract indefinite patients. In the case of verbs of speech, the removed object corresponds to a reported speech complement clause (as in 156b above, §24.2.5). Some *ry-* antipassives however have animate non-human patients, in particular *ryftɛɾz* ‘castrate’ and *ryntɛ^ha* ‘butcher’ (from *ftɛɾz* ‘castrate’ and *ntɛ^ha* ‘kill, butcher’), which can only refer to animals.

The *sy-* prefix by contrast is mainly used to express generic human objects (with a meaning often close to that of the generic object indexation marker *ku-* §18.6.8) or indefinite humans (sometimes even semantically recoverable from the context, as in 157). However, the *sy-* prefix when used as a propensity antipassive can demote animal patients, as in (158) where *sy-sat* is a stative verb meaning ‘have killing power, be lethal’ (rather than ‘kill people’).

- (158) *tce nunu ju-lyt-nu tce tce nunu wuma zo ju-sy-sat*

In addition, when both agents and patients are (non-human) animals, the prefix *sy-* can also be used to demote the object, as in the case of the verb *symts^{hi}* ‘lead the way’ (from *mts^{hi}* ‘lead’) which can be applied to packs of animals. Note also that the antipassive *syndza* from *ndza* ‘eat’, can both mean ‘eat someone’ (as in 157 above) or ‘eat other animals’ as in (159a) (a sentence which can be glossed by 159b).

- (159) a. *ruɖaɓ nu u-ɲgu ku-sy-ndza nu, kuɲɲi*

 3PL.POSS-name all beast IPFV-GENR-say be:FACT
 ‘All those that eat the other animals, their name is ‘beasts.’ (150822
 kWrNi) {0006260#S7}

The human vs. non-human contrast between the two prefixes can be observed on a handful of verbs that are compatible with both *rx-* and *sr-* antipassives. The indirective verb *t^hu* ‘ask’ takes the *rx-* prefix when the demoted patient is an action/state of affair (as in *rx^ht^hu* ‘ask questions’ in 156b above), but takes the *sr-* prefix when asking for someone in marriage (§18.6.4), as in (160).

- (160) *azo ku-sr-t^hu* *ce-a*
 1SG SBJ:PCP-APASS-ask go:FACT-1SG
 ‘I am going to ask for (the girls) in marriage.’ (2003 Kunbzang)

A less lexicalized minimal pair is provided by *ɕar* ‘search’, which has the antipassive forms *rxɕar* ‘search things’ and *srɕar* ‘search someone’.

18.6.7.3 Avoidance

The *sr-* antipassive can be used as a strategy to avoid overtly referring to a particular entity. In (161) for instance, despite the use of the antipassive *srnurtɕa* ‘tease people’ (from *nurtɕa* ‘tease’), the implicit patient of this verb is not indefinite: it is a type of local deity called *zuɔɔdaʁ* (from *གཞི་བདག་ gzi.bdag* ‘local deity’).³³

ɲw-ɲu
SENS-be

‘When there was no rain at all, people would go there and do teasing, make fumigations and dance, and cause rain to come. They call the place where these activities were performed *ɲɲɲɲma*.’ (140522 Kamnyu zgo) {0004059#S237}

Tshendzin explicitly provided the sentence (162) as a gloss to the verb form *ɕ-ku-sɻ-nurtɕa-nu* in this context.

- (162) *ɲwβdaβ* *ɕ-kú-wɻ-nurtɕa*
mountain.god TRAL-IPFV-INV-tease
‘One teases the mountain gods.’ (gloss of example 161).

The ‘teasing’ in question refers to the belief that rain resulted from the wrath of mountain deities. The aim of this ceremony, rather than appeasing the gods, was to anger them. It has not been practiced for decades, and memory of this practice only survives in this toponym *ɲɲɲɲma*, whose etymology is discussed in more detail in §16.1.3.10.

18.6.7.4 Participial forms of antipassive verbs

The subject participle of antipassive verb is the preferred strategy to build nominals referring to persons with a particular activity of profession, as illustrated by the forms in Table 18.9 (see also §16.1.1.7), or having a particular habit (see 107, §5.5.5.2). These nominalized forms are frequently used but not lexicalized, and their meaning is predictable from that of the base verb.

Table 18.9: Subject participles of antipassive verbs

Base verb	Subject participle of antipassive
<i>βzjoz</i> ‘learn’	<i>ku-rɻ-βzjoz</i> ‘learner, student, scholar’
<i>tɕuβ</i> ‘sew’	<i>ku-rɻ-tɕuβ</i> ‘tailor’
<i>rɻt</i> ‘write, draw’	<i>ku-rɻ-rɻt</i> ‘writer, painter’
<i>ntɕ^ha</i> ‘kill, butcher’	<i>ku-rɻ-ntɕ^ha</i> ‘butcher’ (person who slaughters animals)
<i>suxɕɻt</i> ‘teach’	<i>ku-sɻ-suxɕɻt</i> ‘teacher’
<i>mts^hi</i> ‘lead’	<i>ku-sɻ-mts^hi</i> ‘leader’ (in a dance, of a pack of animals)

18 Valency-decreasing derivations

Oblique participles (§16.1.3.10) also need to undergo antipassivization to be used to derive nouns of instruments or of location without overt object. For instance, the antipassive participle *u-z-rʁ-rʁt* (3SG.POSS-OBL:PCP-ANTIP-write) is used to express the meaning ‘writing implement, pen’ (§16.1.3.6).

18.6.7.5 Reflexive use of the antipassive

The indefinite patient interpretation is not the only meaning of the *rʁ-* antipassive derivation. For instance, the verb *raχtci* ‘wash’ (vi) from *χtci* ‘wash’ (vt) does not mean ‘wash things’ as could have been expected, but has a reflexive meaning ‘wash one’s face’ or ‘have a shower/bath’ (see example 103, §19.7.5).³⁴ The regular reflexive form *zʁrχtci* ‘wash oneself’ is also attested with this verb (§18.3.1.5).

18.6.8 Other strategies used to express indefinite patients

As a means of expressing indefinite patients, the antipassive derivations compete with five alternative constructions: indefinite object pronouns (§18.6.8.1), generic object nouns (§18.6.8.2), light verb constructions with action nominal (§18.6.8.3), incorporation (§18.6.8.4) and pairs of denominal verbs (§18.6.8.5).

18.6.8.1 Indefinite pronouns

Indefinite pronouns (§6.6), in particular *t^huci* ‘something’ (§6.6.2) or *ts^hitsuku* ‘whatever’ (§6.6.3) as object functionally overlap to some extent with the *rʁ-* antipassive derivations. However, indefinite pronouns are preferred if the indefinite patient is referential, as in (163).³⁵

- (163) *uʒo ku ts^hitsuku ɲʁ-ndum tce k^hndum ra ɲʁ-βzu*
3SG ERG whatever IFR-read LNK recitation PL IFR-read
‘He recited something, he recited a formula.’ (140510 sanpian yumao-zh)
{0003947#S95}

18.6.8.2 Generic marking

The generic noun *turme* ‘person’ (§6.2.2) and generic person indexation of the object (§14.3.2.5) compete with the *sʁ-* antipassive. As shown by examples (164)

³⁴A typologically similar irregularity is found with the antipassive-durative verb *niza-lā* ‘wash oneself’ in Bezhta (Khalilova et al. 2016: 554).

³⁵Examples of antipassive verbs with referential implicit patient are however attested, as in (157) and (156b) above.

and (165)³⁶ the meaning of the antipassive *sʁmtsuy* ‘bite people’ (‘be a biting/stinging entity’) and that of the generic object *ku-mtsuy* ‘X bites people’ in the Factual are very close semantically. The antipassive of propensity, being a stative verb, is however more often used in a comparative construction such as that in (164) (§26.3.1.4). Example 135 above (§18.6.2) presents a minimal pair of the same type.

 ‘Both black and white nettle sting.’ (11-mtshalu) {0003472#S24}

18.6.8.3 Nominal+light verbs collocation

Collocations involving transitive light verbs and their objects have a functional overlap with antipassive verbs, when their objects, either action nominals or nouns describing the product of the action, are generic and not referential. For instance, the collocation *ɬɣ-ɕpʰɣt + ta* ‘patch, make patches’ (from the inalienable noun *ɬɣ-ɕpʰɣt* ‘patch (n)’ and the transitive verb *ta* ‘put’) has a meaning close to that of the antipassive *ɬɣɕpʰɣt* ‘patch clothes’ (from *ɕpʰɣt* ‘patch’, the verb from which the noun *ɬɣ-ɕpʰɣt* itself is derived, §16.4.6) when the possessive prefix on *ɬɣ-ɕpʰɣt* is indefinite. As illustrated by example (166), where the participial form of this collocation *ɬɣ-ɕpʰɣt u-kuw-ta* ‘(person) who makes patches’ occurs in opposition to the participle of an antipassive verb *kuw-ɬɣ-tɕuβ* ‘(person) who sews clothes, tailor’.

 (12-kAtsxWb) {0003486#S100}

³⁶On the absence of dual indexation on *ku-mtsuy* ‘they bite people’, see §14.3.2.5 and §14.6.1.

18 Valency-decreasing derivations

The collocation $tv\text{-}cp^h\gamma t + ta$ can however occur with a 3sg possessive prefix on the object $u\text{-}cp^h\gamma t + ta$ and refer to a definite patient, encoded as possessor of the object.

Other light verbs occurring in this type of collocation include βzu ‘make’, $lv\gamma t$ ‘release’ and $t\epsilon\gamma t$ ‘take out’ (see 75, §20.10.1).

18.6.8.4 Incorporating verbs

Object-saturating incorporating verbs (§20.13.3.2) are intransitive verbs derived from transitive bases whose intransitive subject corresponds to the subject of the base verb. The incorporated noun corresponds to the object of the base verb, and is indefinite and non-referential, and thus functionally close to an antipassive, in particular to lexicalized ones (§18.6.3).³⁷ For instance, the incorporating verb $\gamma u <piozi> fso\beta$ ‘earn money’ from 票子 $<pi\grave{a}ozi>$ ‘ticket, paper money’ and $fso\beta$ ‘earn’ has a meaning and usage identical to the antipassive $rvfso\beta$ ‘earn money’.

18.6.8.5 Denominal pairs

Transitive denominal verbs with the $nu\text{-}/n\gamma\text{-}$ prefix can in some cases have $s\gamma\text{-}$ antipassives (§18.6.2), but never $rv\text{-}$ antipassives. Instead, intransitive $ru\text{-}/r\gamma\text{-}$ denominal verbs from the same noun occur as the functional equivalents of the antipassive. For instance, the transitive verb $n\gamma ma$ ‘do’ (work) derived by the prefix $n\gamma\text{-}$ (§20.7.2) from the inalienably possessed noun $ta\text{-}ma$ ‘work’ (§5.1.2.1), does not have an antipassive form such as $\uparrow rv\text{-}n\gamma ma$. Rather, the intransitive $rvma$ ‘work’ from the same noun (see example §19.1.5, §37 and 171, §16.2.1.7) occurs to express the meaning that would have been expected from such an antipassive form (§20.4.3). In addition to the semantic similarity with antipassive verbs, $rvma$ ‘work’ is compatible with non-periphrastic Past Imperfective and Inferential Imperfective (§21.5.3) like antipassive verbs (§18.6.6).

18.6.9 Compatibility with other derivations

The $s\gamma\text{-}$ antipassive derivation can be take as input applicative and tropative verbs. The most commonly attested examples of double derivations are however from verbs whose applicative or tropative prefix is synchronically unanalyzable, such as $s\gamma n\gamma k^hu$ ‘invite people’ (167) and $s\gamma n\gamma k^he$ ‘bully people’ (168) from $n\gamma k^hu$ ‘invite’ (lexicalized applicative of ak^hu ‘call’, §17.4.3) and $n\gamma k^he$ ‘bully’ (lexicalized tropative of k^he ‘be stupid’, §17.5.3), respectively.

³⁷This closeness in function is also correlated with a closeness in origin, since both incorporating verbs and antipassive derivation come from denominal derivations (§20.13.1).

 2SG-NMLZ:DEG-APASS-bully DEM NEG-be.needed:FACT
 ‘You are out of line.’ (‘you should not bully people like that.’)
 (28-qajdoskAt) {0003718#S14}

Antipassive forms from non-lexicalized applicative and tropative verbs are not attested in the corpus, but can be elicited, for instance *sɣ-nuw-rga* APASS-APPL-like ‘like people’ from *nurga* ‘like’ (vt) (§17.4.1.2) and *sɣ-nɣ-mpɕɣr* APASS-TROP-be.beautiful ‘find people beautiful’ from *nɣmpɕɣr* ‘find beautiful’ (§17.5).

Only one causative verb takes the *rɣ-* antipassive: *ɲts^hi* ‘give to drink’ (§18.6.4), an irregular causative from *ts^hi* ‘drink’ (§17.2.2.5), which competes with the regular one *suu-ts^hi* ‘make/let drink, drink with’.

Other causative verbs are only attested with the *sɣ-* antipassive, for instance *sɣ-suu-rtov* APASS-CAUS-look) ‘show to people’. The lexicalized causative *musuk^ho* ‘rob, extort’, which historically derives from *k^ho* ‘give’ by the combination of the sigmatic causative *suu-* and the autive *nuw-* prefixes (see 15, §17.2.3), has two *sɣ-* antipassive forms (§18.6.4): the *sɣ-* can be directly prefixed to the complex verb stem as in *sɣmusuk^ho* ‘rob people’ (169) (historically *sɣ-nuw-suu-k^ho* APASS-AUTO-CAUS-give), but the alternative form *nuw-sɣ-suu-k^ho* (AUTO-APASS-CAUS-give) with the autive prefix *nuw-* switching position with the antipassive is also possible (§19.1.6).

- (169) *icq^ha tcaɣpa nurra kuw li, laxte^ha*

 TRAL-IFR-APASS-rob-PL
 ‘The robbers had gone and robbed some people from their things.’
 (140512 alibaba-zh) {0003965#S107}

Applicative verbs can serve as input for the sigmatic causative derivation. With the *rɣ-* antipassive, the *z-* allomorph of the causative is selected (§17.2.1.1) as in *z-rɣ-rɣt* (170) and *z-rɣ-tsuβ* (171) from *rɣrɣt* ‘write/draw things’ and *rɣtsuβ* ‘sew things’ (antipassives of *rɣt* ‘write, draw’ and *tsuβ* ‘sew’, respectively, §18.6.1).

18 Valency-decreasing derivations

In combination with the antipassive, both the permissive/precative ‘make *X*, let *X*, ask to *X*’ (as in 170) and the instrumental ‘*X* with’ (171) uses of the sigmatic causative are attested.

 (13-tAsAsqAri) {0003496#S30}

18.7 Distributed property

The *amu-* prefix expressing a distributed property can be applied to a handful of transitive and semi-transitive verbs.

With the cognition verbs *suz* ‘know’ and *tso* ‘know, understand’ (semi-transitive, see §14.2.3), the meaning of this derivation is ‘be Xed by everybody, be Xable’, as shown by *amutso* ‘be clear (of speech)’ (172) and *amusuz* ‘be well-known’.

- (172) *nuu* *tu-kuu-ti* *tce* *myzuu* *amuu-tso*.
 DEM IPFV-GENR-say LNK even.more DISTR-understand:FACT
 ‘If one says this, it is clearer (easier to understand).’ (heard several times during elicitation sessions)

The verb *amutso* also has a reciprocal reading ‘understand each other’, corresponding to the *amu-* reciprocal derivation (example 96, §18.4.2). It is possible that *amutso* was the pivot form between the two derivations. A reanalysis from reciprocal to ‘distributed property’ may have taken place through the causative of the reciprocal *suu-ymuu-tso* ‘cause people to understand each other’, which originally took as objects causee (see 173) and as optional semi-object the speech/words.

It is also used metaphorically to describe the spread of information as in (177). This example illustrates two verbs with distinct sub-functions of the distributed property *amu-* prefix occurring with a common subject, suggesting a path of reanalysis from the first sub-function ('be known by everybody' → 'be known to everybody') to the second one ('be Xed everywhere').

- (177) *kuuki yu u-te^ha nunu, nu^cimuma zo rʃxlk^hyβ*

 'The news about this spread in the whole kingdom like fire and became known to everyone.' (150820 meili de meiguihua-zh) {0006286#S79}

The verb *amuzyut* 'be evenly distributed', derived from the motion verb *zyut* 'arrive', also illustrates the spatially distributed meaning of the prefix *amu-* (originally 'reach everywhere'). Note that despite the fact that the root *zyut* generally causes a /u/ → /ɣ/ vowel change on derivational and inflectional prefixes directly attached to it (§14.2.2), it is not the case with *amu-*.

This verb *amuzyut* mainly occurs in a serial verb construction (§25.4.1). In (178), it shares the same subject and TAME category as the following verb *ɲu-tob* '(it) comes out'. It expresses the manner in which the action takes place, and has to be translated as the adverb 'evenly'.

- (178) *tɣ-ndɣr nunu, [...] nu-βri rcanu,*

IPFV-smear SENS-be.needed

'[The jar maker] also to apply butter evenly to the opening and the bottom of the alcohol jar.' (30-kWrAfcAr) {0003740#S58}

The distributed property *amu-* prefix is restricted to a handful of very lexicalized verbs. Hence, if the hypothesis of reanalysis from reciprocal presented above is valid, this process must have taken place in the remote past. The opposite hypothesis of reanalysis from the distributed property function to the reciprocal function also deserves to be taken into consideration.

18.8 Propriative

The propriative *sv-* prefix³⁹ derives stative verbs from verbs of perception, feeling or some verbs of involuntary action. Table 18.10 presents representative examples of this derivation, which include some loanwords from Tibetan (*scit* 'be happy', *rga* 'like' and *βzi* 'get drunk' from རྩིད *sk'id* 'be happy', དགའ *dga* 'like' and བཞི *bzi* 'be drunk', respectively), showing that the propriative prefix is productive.

The base verbs are mainly intransitive (propriative verbs derived from semi-transitive and transitive verbs are treated in §18.8.3 and §18.8.4), and encode as subject the experiencer (*mu* 'be afraid', *scit* 'be happy') or a patientive argument suffering from the action (*cke* 'get burned', *ngio* 'slip').

The propriative derivation removes this experiencer or patientive argument from the argument structure and promotes instead the stimulus to subject status. Compare for instance the base verb *mu* 'be afraid' whose subject is the experiencer feeling fear (180) with the propriative *svɣmu* 'be frightening' (181) whose subject is the entity causing fear to people.

(180) *nɯ rɣɣtpu nɯ pɣɣ-mu tce,*
DEM old.man DEM IFR.IPFV-be.afraid LNK

'The old man was afraid.' (140426 xiaohaizi he hua de shizi-zh)
{0003832#S10}

Example (181) also shows that the subject of the propriative verb *svɣ-mu* is the same referent as the object of the applicative verb *nɯɣ-mu* 'be afraid of' derived from the same verb root (§17.4.1).

³⁹This category was previously referred to as 'deexperiencer' in previous publications, such as Jacques (2012c).

18 Valency-decreasing derivations

 (28-smAnmi) {0004063#S17}

In the case of the intransitive verbs *mtsur* ‘be hungry’ and *ɕpaβ* ‘be thirsty’, the propriative derivation removes the experiencer from the argument structure of the verb without adding a stimulus and the resulting propriative verbs *sɣmtsur* ‘be a famine’ and *sɣɕpaβ* ‘be a lack of drink’ have dummy subjects, as in (183).

- (183) *tu-xpa tce, wuma pjɣ-sɣ-mtsur*
 one-year LNK really IPFV.IFR-PROP-be.hungry
 ‘One year, there was a famine.’ (elicited)

18.8.1 Allomorphy

The main allomorph of the propriative prefix is *sɣ-*. The variant *sa-* occurs when prefixed on a verb stem containing a cluster with a uvular preinitial (§3.5.4).

The propriative prefix, like other derivations (§17.2.1.4), had at an earlier stage the allomorph *sɣɣ-* with intrusive *-ɣ*, but it ceased to be productive and remains on only three verbs: *sɣɣnat* ‘be exhausting’, *sɣɣmu* ‘be frightening’ and *sɣɣduy* ‘be unpleasant’.

18.8.2 Propriative derivation and generic marking

With verbs that can undergo propriative derivation (see above), the generic intransitive subject *ku-* form and propriative have overlapping uses.

In (184), the generic form *ku-ηgio* ‘one will slip’ expresses a potential consequence of the state described by the propriative verb *juu-sɣ-αβδɣt* ‘it is slippery’. A semantic commonality between generic and propriative verb forms in this example is that both refer to an action to which all humans (including speaker and addressee) are potentially subjected.

ku-fse.
 SBJ:PCP-be.like
 ‘If one walks on [the moss], one will certainly slip, as it is slippery.’
 (03-zhenzhuquan-zh) {0003386#S25}

With experiencer and modal verbs, the semantic closeness of generic and propriative is even more obvious, if one compares for instance the generic of *nɣz* ‘dare’ (185) with the propriative *sɣnɣz* ‘be such that people dare to’ in (186): the

18 Valency-decreasing derivations

experiencer argument of the base verb that has been demoted by the propriative derivation is by default interpreted as generic, unless it can be recovered from the context, or expressed by an oblique case as in (182) above.

- (185) *[kx-ndza] muu-puu-kuu-nyz ma syndy*

 ‘It is such that people do not dare to touch it, as it pricks in one’s hand
 and it hurts.’ (15-babW) {0003512#S52}

In addition, both the generic and the propriative can serve as an indirect way to express first person (§14.6.1.4), as shown by examples (187) and (188), where the generic *juu-kuu-duy* and propriative *juu-sxy-duy* have exactly the same meaning ‘be fed up with X, don’t feel like X’. In both cases, the implicit experiencer is the 1SG referent mentioned in the previous clause.

 {0003426#S41}

18.8.3 Propriative derivations from semi-transitive verbs

The propriative derivation takes some semi-transitive verbs such as *duy* ‘have enough of’, *tso* ‘know, understand’ or *rga* ‘like’ (§14.2.3) as input. In such cases, the intransitive subject of the propriative verb corresponds to the semi-object of the base verb. For instance, in (189), the infinitival complement clause *nu ku-fse ky-rvzi* ‘staying like that’ is semi-object of *duy* ‘have enough of’, while in (190) the complement clause is the intransitive subject of *svy-duy* (the experiencer being unexpressed in this clause).

- (189) [*nu ku-fse ky-rvzi*] *nu-duy-a*.
 DEM SBJ:PCP-be.like INF-stay SENS-have.enough.of-1SG
 ‘I am fed up of living like that.’ (140426 jagou he lang-zh) {0003804#S31}
- (190) [*ky-rvzi wuma zo py-svy-duy*].
 INF-stay really EMPH IFR.IPFV-PROP-have.enough.of
 ‘Living [there] was very difficult to endure.’ (150827 taisui-zh)
 {0006390#S12}

The semi-transitive modal verbs *c^ha* ‘can’ and *nvz* ‘dare’ also have propriative forms *svc^ha* ‘be such that people can’ and *svnvz* ‘be such that people dare to’ which select the same types of complement clauses as those selected by their base verbs, as illustrated by (191) (see also 185) and (186) in §18.8.2 above). These complement clauses are the intransitive subject of the propriative verbs.

- (191) *tu-sji [muntov vnuv xsum jamar lu-wy-tav]*

nu-sv-c^ha
 SENS-PROP-can
 ‘In one day, it is possible to weave two or three patterns (on the belt).’
 (2011-06-thaXtsa)

However, the complement clauses can be elided, and the subject participle forms of the propriative verbs can refer to an argument (generally object) of the (elided or overt) verb in the complement clause. For instance in (192), the participle *ku-sv-c^ha* can be translated as ‘(the mice) that can be (caught)’ (an elided infinitive form such as *ky-ndo* INF-grab is implicit in this example).

18.8.4 Proprietary derivations from transitive verbs

The proprietary prefix occurs with some transitive verb stems, removing the transitive subject and converting the object argument to intransitive subject status, like the passive, anticausative and object-oriented facilitative (§18.9.2) derivations. Proprietary verbs derived from transitive verbs are rare: the derivational *sʷ-* prefix on verbs is more often interpreted as an object-suppressing antipassive (§18.6.2).

In the case of the labile perception verb *mto* ‘see’, one could propose that the proprietary form *sʷmto* ‘be visible’ derives from the stative intransitive use of this verb (meaning ‘have sharp eyesight’, §14.5.1), but this is unlikely from a semantic point of view (the meaning of *sʷmto* is not ‘be such that people have sharp eyesight’). The other transitive verbs deriving proprietary forms in Table 18.10 are not labile, and no such ambiguity exists.

The transitive verbs that can be subjected to the proprietary derivation belong to four related semantic classes: verbs of perception (*mto* ‘see’, *mts^hʷm* ‘hear’), of cognition (*suʷ* ‘know’, *spa* ‘be able’), of obtaining (*rndu* ‘obtain’) and of evaluation (*nuzduy* ‘worry about’, *saxpax* ‘respect’). All of these verbs have experiencer or experiencer-like transitive subjects.

The proprietary of verbs of perception and obtaining such as *sʷmts^hʷm* ‘be audible’ (193) and *sʷrndu* ‘be easy to find’ (194) express a potential state, semantically close to the object-oriented facilitative (§18.9.2).

The case of the verb *sɣmuzduy* ‘causing people to worry’, which is derived from applicative verb *muzduy* ‘worry about’ (§17.4) is treated in §18.8.6.

18.8.5 Lexicalized propriative

The meaning of some propriative verbs is not entirely predictable from their base verbs.

The verb *cke* ‘get burned’ encodes as subject the entity that suffers from burning, as in (197). The expected meaning of its propriative *sɣcke* would be ‘be burning’. While this meaning is indeed attested as in (198), *sɣcke* can also simply mean ‘be hot’, concerning for instance the weather as in (199), without the implication that people subjected to this weather suffer from burns.

 (conversation, 14-05-10)

18.8.6 Compatibility with other derivations

The propriative derivation can take as input anticausative verbs (§18.5.6). For instance, *syŋgio* ‘be slippery’ comes from *ŋgio* ‘slip’, itself from *kio* ‘cause to glide’. The propriative verb *syŋgio* expresses that the action of the base verb *kio* is possible due to the nature of the ground, as shown by (200).

- (200) u-t^hoβ ju-sy-ŋgio tce tcoχtsi ju-wy-kio
 3SG.POSS-ground SENS-PROP-ACAUS:glide LNK table IPFV-INV-glide
 ju-k^hu
 SENS-be.possible
 ‘The ground is slippery, and one can move the table by making it glide on it.’ (elicited)

The verb *muzduy* ‘worry about’ (which could be analyzed as a lexicalized applicative of *zduy* ‘suffer’, §17.4.1.5) has the *sy-* propriative *symuzduy* ‘causing people to worry’, as shown by example (201), homophonous with an antipassive verb meaning ‘worrying about people’.

- (201) ny-wa nu^hamtcɔxt zo t^hu-wxti tce, nu ku-fse

 ‘Your father has become so old, can he go to war like that? He is cause of worry [for all of us].’ (150828 huamulan-zh) {0006396#S19}

Propriative verbs cannot be subjected to (sigmatic *su-* or velar *γr-*) causative derivations. On the other hand, they can take the tropative *nr-* prefix, as shown by the common verbs *nrsvscit* ‘find pleasant’ and *nrsvyduy* ‘find unpleasant’ derived from *svscit* ‘be pleasant’ and *svyduy* ‘be unpleasant’, respectively (§17.5.4).

18.8.7 Relationship with other derivations

The propriative *sɣ-*, like several other voice prefixes (§20.10), is related to the denominal *sɣ-* derivation (§20.10.2). It has a common origin with the antipassive *sɣ-* (§18.6.2; see in particular the propensive function of the antipassive).

The propriative and the *sɣ-* antipassive are however synchronically quite distinct. While only the former can have intransitive or semi-transitive verbs as input, both can occur on transitive verbs, in which case the former is object-oriented (§18.8.4), while the latter is subject-oriented (§18.6.2).

18.9 Facilitative

Japhug has two productive facilitative derivations, the *ɣɣ-* and *nuɣu-* prefixes, deriving stative verbs whose subjects correspond to the subject and the object (or goal) of the base verbs, respectively. Cognates of both prefixes are found in Tshobdun (*wɔ-* and *nwə-*), with an identical functional constrast (Sun 2014a)

These prefixes are only valency-decreasing when prefixed to transitive verbs, and do not change transitivity when the base verb is intransitive.

The meaning of these prefixes is very similar to that of complement clauses headed by the stative verb *mbat* ‘be easy’ (§24.5.8). For instance, (202b) was provided as a gloss for (202a) during an elicitation session.

- (202) a. *ɲu-nuɣu-βzjoz*
 SENS-FACIL-learn
 b. *kɣ-βzjoz ɲu-mbat*
 INF-learn SENS-be.easy
 ‘It is easy to learn.’ (elicited)

A third way of expressing facilitative meaning is by verb compounding; the only example of this type is *apɣmbat* ‘be easy to do’ from the transitive verb *pa* ‘do’ and the stative verb *mbat* ‘be easy’ (§20.12).

18.9.1 Subject-oriented facilitative

The prefix *ɣɣ-*, homophonous with the velar causative *ɣɣ-* (§17.3), generally derives stative verbs meaning ‘become/get X easily’, ‘tend to become/get X’. For instance, from *wxti* ‘be big’ one can derive the stative verb *ɣɣwxti* ‘become big easily’, as illustrated by (203).

18 Valency-decreasing derivations

- (203) *si kuu-wxtu~wxti nu-βze c^ha ma wuma zo*

nu-γs-wxti.
 SENS-FACIL-be.big
 ‘It can grow into a hug tree, as it easily becomes huge.’ (07-Zmbri)
 {0003438#S9}

The facilitative prefix *γs-* is very productive on stative verbs, including on loanwords from Tibetan. For instance, *rgyz* ‘be old’ (from *རྒྱལ་* *rgas* ‘get old’) has a facilitative form *γsrgyz* ‘age quickly’, attested in (204).

- (204) *turme mγ-kuu-ɸɸur, nuuu mγ-kuu-γsrgyz tce tce*

 DEM ANTHR IPFV-call-PL be:FACT
 ‘Persons who don’t change, who don’t age quickly, people call them
 ‘pines.’ (07-tAtho) {0003432#S23}

Some dynamic intransitive verbs are also attested with the *γs-* derivation, with meanings such as ‘X quickly/early/easily’ or ‘X often’. For instance, *mda* ‘be the time’ derives the form *γs-mda*, which can mean ‘be the time (ripen) earlier’, as in (205), and *rɣru* ‘get up’ has the facilitative *γsrɣru* ‘getting up early’, ‘getting up easily’ (as soon as one wakes him/her up).

- (205) *nuura izo ji-ji pu-kγ-z-mγku nuu izo*

 SENS-FACIL-be.the.time
 ‘Our fields, that have been [sowed] first, we harvest they first, because
 the [crops] ripen earlier [than in other places, higher up in altitude].’
 (2010-09)

It also occurs on some anticausative verbs (§18.5); for instance, the intransitive *ngru* ‘break’ has the facilitative form *γs-ngru* ‘easily break’, which has the same meaning as the object-oriented facilitative *nuuyuu-qru* of the transitive base verb *qru* ‘break’ (§18.5.6). It is also attested with denominal verbs such as *sɣmbru* ‘get angry’ (§20.3.1), whose facilitative is *γssɣmbru* ‘get angry easily’.

18.9.2 Object-oriented facilitative

The facilitative *nuyyu-* prefix is one of the rare disyllabic derivational prefix in Japhug. Like *ɣɣ-* (§18.9.1), it is used to build stative verbs meaning ‘be easy to X’. It is most commonly prefixed to transitive action verbs: a typical example is for instance *nuyyu-kɣɣ* ‘be easy to shear’ from *kɣɣ* ‘shear, mow’, as in (210). Additional examples are found in Table 18.11.

- (210) *tce qazo kuu-wxti nura ɣu q^he, nuu-rme juu-rɲɟi*
 LNK sheep SBJ:PCP-be.big DEM:PL GEN LNK 3PL.POSS-hair SENS-be.long

 ‘The big sheep, their wool is long and thus easy to shear, the small ones,
 their wool is short and difficult to shear.’ (160712 smAG) {0006073#S25}

When the base verb is transitive, the *nuyyu-* prefix is a valency-decreasing derivation, removing the transitive subject, and turning the object into an intransitive subject. In (211) for instance, *nuyyumto* ‘be easy to see’ appears in the Factual third singular without stem III alternation, showing that it is an intransitive verb (§14.3.1).

- (211) *ci nuu xɕaj u-mdoɓ tsa u-kuu-ndo nuu*

 ‘The other one, which has the colour of grass, is not easy to see; unless
 you know it very well, you won’t see it.’ (07-Cku) {0003424#S56}

Among the verbs in Table 18.11, the facilitative *nuyyuɟpa* ‘be convenient’ is particularly lexicalized, with both an irregular *-j-* element occurring between the prefix *nuyyu-* and the root *[pa]*, and a non-predictable meaning derivation.

In the case of the verb *tɨ* ‘say’, the facilitative *nuyyuti* can either mean ‘be easy to pronounce’ or ‘be easy to express’, as in example (212), uttered by Tshendzin during an elicitation session.

- (212) *nw múj-nuyw-ti*
 DEM NEG:SENS-FACIL-say

Table 18.11: Examples of the facilitative *nuyw-* prefix in Japhug

basic verb	derived verb
<i>ŋke</i> ‘walk’	<i>nuywŋke</i> ‘be easy to walk (on)’
<i>ŋga</i> ‘wear’	<i>nuywŋga</i> ‘be nice to wear’
<i>ndza</i> ‘eat’	<i>nuywundza</i> ‘be easy/nice to eat’
<i>ntɕ^hoz</i> ‘use’	<i>nuywuntɕ^hoz</i> ‘be easy to use’
<i>mto</i> ‘see’	<i>nuywumto</i> ‘be easy to see’
<i>ti</i> ‘say’	<i>nuywuti</i> ‘be easy to say’
<i>ɕuftaɁ</i> ‘remember’	<i>nuywɕuftaɁ</i> ‘be easy to remember’
<i>jm^hut</i> ‘forget’	<i>nuywujm^hut</i> ‘be easy to forget’
<i>pa</i> ‘do’	<i>nuywujpa</i> ‘be convenient’

Some intransitive verbs are attested with the *nuyw-* prefix. The only common one is *nuywŋke* ‘be easy to walk (on)’ (from *ŋke* ‘walk’); the *nuyw-* derivation appears to be possible on a few other motion verbs and verbs of location (such as *ɾjuy* ‘run’ or *ɾɾzi* ‘stay’), though their acceptability has to be rechecked. The subject of the facilitative verbs derived from such intransitive verbs corresponds to the locative adjunct (213) or goal (214) of the base verb.

 path 3SG.POSS-side SENS-be.close LNK SENS-FACIL-go
 ‘[This place] is close to the road, it is easy to go there.’ (elicited)

The semi-transitive *tso* ‘know, understand’ (§14.2.3) can also undergo the facilitative derivation to *nuywtso* ‘easy to understand’. Semi-transitive verbs in *a-*,

such as *aʒe* ‘have to eat/drink’ or *atuy* ‘meet’, are not compatible with *nuyyu-*, which appears to lack an allomorph with vowel fusion; a form †*nuyyʒe* for instance (intended meaning: ‘easy to get to eat’) is utterly unacceptable.

Since semi-objects, goals and some locative adjuncts do have partial objectal properties (§8.1.5, §8.1.8, §8.1.6, §23.5.4, §23.5.5), it is nevertheless appropriate to describe *nuyyu-* as an object-oriented derivation, following Sun (2014a). The contrast between *nuyyu-* and subject-oriented *yʒ-* is clearest with the transitive verbs *jmut* ‘forget’ and *ʒuftaʒ* ‘remember’, which can be subjected to both derivations: compare object-oriented *nuyyujmut* ‘be easy to forget’ and subject-oriented *yʒjmut* ‘be forgetful’ (§18.9.1).

It is possible to apply the facilitative derivation to an intransitive verb already derived by the sigmatic causative, for instance *nuyyu-suy-ʒaʒ* (FACIL-CAUS-be.black) ‘be easily blackened’. It is also possible to causativize a facilitative verb (with the *z-* allomorph of the sigmatic causative, §17.2.1.1). For example, the causative of *nuyyuntʒʰoz* ‘be easy to use’ is *z-nuyyu-ntʒʰoz* (CAUS-FACIL-use) ‘make easy to use’. The relative order of the facilitative and of the causative prefixes thus reflects their semantic scope (§17.2.8).

19 Other verbal derivations

19.1 Autive

The autobenefactive-spontaneous or autive¹ prefix *nu-* is one of the most productive voice prefixes in Japhug.

In this section, I first present the morphological properties of this prefix (allomorphy and position in the template), and then describe its three main functions: autobenefactive/self-affectedness, spontaneous and permansive (previously identified in Jacques 2015e). Finally, I discuss cases of lexicalized autives and propose historical pathways between the autive and other derivations such as the vertitive and the anticausative.

The anticausative derivation in Japhug does not cause any stem alternation, unlike in other languages such as Bragbar (Zhang 2020).

19.1.1 The autive prefix and verb transitivity

Unlike most voice markers, the autive prefix *nu-* neither increases nor decreases verb valency: whether the base verb is morphologically intransitive, transitive or labile, *nu-* prefixation has no effect on any of the seven transitivity criteria (§14.3.1).

For instance, transitive verbs with *nu-* still have stem III alternation (§12.2.2.1, for instance *-ndo* → *-ndɣm* in 1) or the past tense *-t* suffix (§11.3, see *tx-nu-ndo-t-a* in 2).

- (1) *laβjwɣ nyzo tx-nu-ndɣm je*

2SG FILLER AOR-2-pick.up 1SG AOR-AUTO-take-TR:PST-1SG not.exist:FACT
'It is you who collected [the fruits], I did not take them.' (IWlu 2002)

¹I adopt the concise and elegant term “autive” from Gong (2018) instead of “autobenefactive-spontaneous” used in previous publications (Jacques 2015e).

19 Other verbal derivations

Conversely, intransitive verbs taking the autive prefix present neither stem III alternation nor the *-t* suffix. The autive derivation differs in this regard from the homophonous *nu-* applicative prefix (§17.4).

The autive is compatible with valency-decreasing derivations, including passive (example 4, §19.1.2), reflexive (8) and antipassive (3 below and §18.6.9).

- (3) *lu-nu-ry-ji-nu* *tce, nu-kɣ-ndza* *nura zara*

 IPFV-AUTO-take.out-PL IFR.IPFV-be
 ‘(As they were receiving treatment), they were working in the fields, and earning their own food by themselves.’ (25-khArWm) {0003644#S61}

19.1.2 Position in the verbal template and allomorphy

The position of the autive prefix in the template depends on the structure of the verb form.

When occurring in combination with contracting derivational prefixes, the autive *nu-* is inserted after the contracting vowel, as in (4) with the passive *-ɣ* (§18.1).

- (4) *com ku scov c^hu-kɣ-su-βzu* *nu, tuɬ^hi* *u-ŋgu*
 iron ERG ladle IPFV-OBJ:PCP-CAUS-make DEM rice.gruel 3SG.POSS-in

 ‘Ladles that are made of iron (iron ladles), whenever they are put in rice gruel, they blacken.’ (30-Com) {0003736#S77}

Even when the contracting vowel *a/ɣ-* is not a prefix but part of the verb root (§12.3), the *nu-* prefix is inserted between the *a-* and the rest of the verb stem.²

For example in (5) the *nu-* is actually infixes inside the verb stem of *atɣr* ‘fall’ (see also in example 31 in §19.1.4 the infixation within the suppletive stem II *ari* of the verb *ce* ‘go’). Although other homophonous prefixes exist in Japhug the autive is the only one that is infixable. All other *nu-* prefixes (the applicative §17.4, the vertitive §19.2, the denominal *nu-* §20.7, and inflectional morphemes like the 3PL possessive prefix §5.1.1 and the type A WESTWARDS orientation prefix §15.1.1.1) occupy prefixal slots and undergo vowel contraction with the *a-* of the

²There is only one counterexample where the *nu-* prefix is not infixes, but it concerns a highly lexicalized derivation (§19.1.6).

verb stem (for instance, the applicative yields *nr-* with contracting verb stems, §17.4.2).

- (5) *nunuw ur-bruw nunuw t^hur-rgyz tce tce nuw uzoz*

In all other cases (and excluding lexicalized autives, §19.1.6), the autive *nuw-* occurs on the leftmost side of the verb stem, just before the reflexive (§18.3), but after inflectional prefixes (including orientational, participial, inverse and person indexation prefixes), as shown by the forms *tu-nuw-zyx-raxtc^hyz-i* ‘we treat ourselves’ in (8) and *a-ty-tú-wy-nuw-ndza* in (9).

When occurring in this leftmost slot, forms bearing the autive prefix can be ambiguous: for instance the surface form *nu-ɕe* (from the verb *ɕe* ‘go’) can either be parsed as 3SG Factual autive (AUTO-go:FACT), 3SG Factual vertitive (§19.2, (VERT-go:FACT) or 2SG WESTWARDS imperative (§21.4.2.1, IMP:WEST-go).

In addition to its infixability, the autive prefix has the particularity of being (optionally) realized as geminated *-n-* when it occurs before a verb stem or verb prefix in *nu-*, as in (10).

 {0003945#S117}

19.1.3 Autobenefactive/self-affectedness function

The autobenefactive function of the *nu-* prefix can be subdivided into four sub-cases: subject affectedness, beneficial, exclusive beneficial, and mild imperative.

First, the autive prefix frequently appears with transitive verbs when the object takes a possessive prefix coreferent with the transitive subject, especially in the case of body parts and other inalienably possessed nouns, to emphasize the fact that the agent is affected by his/her own action. For example, in (11), the 2SG possessive prefix on the body part *nx-ku* is coreferent with the subject of the 2SG→3 imperative form *pu-nu-ɣtɕi*.

- (11) *nx-ku pu-nu-ɣtɕi*
 2SG.POSS-head IMP-AUTO-wash
 ‘Wash your head.’ (elicited)

The autive is not restricted to body part objects, but also appears with more abstract possessed objects such as *u-sroʋ* and *u-βɾum* in (12) and (13).

- (12) *uzo kuw u-srov ko-nu-ri nu-ŋu*
 3SG ERG 3SG.POSS-life IFR-AUTO-save SENS-be
 ‘He saved his own life.’ (140512 yufu yu mogui-zh) {0003973#S126}
- (13) *tu-ci u-ŋgu u-brum pjw-kuw-ntc^hyr nu*

pjɣ-nu-mto tce,
 IFR-AUTO-see LNK
 ‘She saw her [own] reflection in the water.’ (140428 mu e guniang-zh)
 {0003880#S55}

Example (14) presents a clear contrast between *mu-to-xtsuy* (no *nu-* prefix) and *to-nu-xtsuy* (presence of *nu-* prefix, coreference between possessor and transitive subject). It also illustrates that the subject affectedness expressed by the autive prefix is not necessarily beneficial, but can also be detrimental.

- (14) *turpa ci to-lyt ri, si nu u-taɣ mu-to-xtsuy kuw uzo*
 axe once IFR-release LNK tree DEM 3SG.POSS-on NEG-IFR-hit ERG 3SG

 GEN 3SG.POSS-hand EMPH IFR-AUTO-hit
 ‘He swung the axe but did not hit the tree, and instead hit his own arm.’
 (140430 jin e-zh) {0003893#S38}

However, the *nu-* prefix is optional in all four sentences: its presence is not required to express subject-object possessor coreference. In addition, non-coreference between subject and object possessor is possible on verbs taking the autive prefix.

Second, the autive prefix can also be found on both intransitive and transitive verbs to focus on the pleasant character of an action for the subject, as in (15).

- (15) *kytsa ra χsum nu ku-scu~scit zo*
 COLL:family PL three DEM SBJ:PCP-EMPH-be.happy EMPH
ku-nu-rɣzi-nu pjɣ-ŋu,
 IPFV-AUTO-stay-PL IFR.IPFV-be
 ‘The three of them lived happily.’ (Gesar 2003)

Third, the autive *nu-* can be used to express that the action only benefits the subject, to the exclusion of other referents. In (16) for instance, the *nu-* prefix on the verbs *tu-nu-ndza-ndzi* ‘they eat it’ and *ku-nu-ts^hi-ndzi* ‘they drink it’ express that the 3DU subject (the two elder sisters) performed these actions without sharing anything with the 1SG referent.

 DEM.PROX:LOC IRR-PFV-2-AUTO-stay-PL
 ‘Grandfathers and grandmothers, have a good time here, recite mantras
 and stay here (pleasantly).’ (2003kandzwsqhaj)

However, it should be pointed out that the autive has an almost opposite (mocking/defiance) function in imperatives in examples such as (33) below in §19.1.4.

19.1.4 Spontaneous function

The spontaneous function of the autive prefix includes six subcases: actions without external cause, self-volitional actions, non-volitional actions, casual action, concessive clauses, and mocking imperatives.

First, the autive prefix expresses actions that are perceived by the speaker as occurring spontaneously by themselves, such as the growth of plants or animals (22) or action taking place due to an unseen force (example 23, with an emphatic pronoun *uzo*, §6.4).

Some verbs such as *jmut* ‘forget’ or *ɕhuy* ‘drop’, generally appears with the autive prefix in the corpus (in the case of *jmut* ‘forget’ in 23 examples out of 28), as in (29)

- (29) *my-xsi ko, nuura jx-nuu-jmut-a*

 ‘I don’t know, I forgot those things.’ (Conversation, 2013-12-24)

Fourth, an extension of the spontaneous value of the prefix *nuu-* is the meaning ‘casually’, ‘at one’s will’, ‘whatever’ (corresponding to Chinese 随便 <suíbiàn> ‘casually’), as in (30).

- (30) “*huaguniang*” *ra tu-nuu-ti-nuu juu-ŋu. nuuura zara ku*

 ‘They say ‘huaguniang’, they call [this type of cows] like that.’ (*implied meaning*: they invented their name, it is not a real name; 28 qapar)
 {0003720#S228}

Fifth, as a further extension of the meaning ‘casually’ seen above, the autive appears in the protasis of alternative (31), scalar (32) and universal (§12.4.3) concessive conditionals (§25.2.3, Jacques 2014a: 298–300). In these constructions, the

19 Other verbal derivations

result described in the apodosis takes place regardless of whether the condition in the protasis is fulfilled or not. The autive prefix expresses the fact that the resulting action is independent of the condition. In this function, it is often realized with a gemination as *-nnu-*.

- (31) *tce tu-suum pu-a<nnu>ri ny ju-kw-ce,*

 ‘This one also grows by its root, as even if it has flowers, [I] have never seen its seeds.’ (17 ndZWnW) {0003524#S149}

Sixth, in the Imperative and the Irrealis, the spontaneous can be used to mock, or express defiance towards the addressee or another person, stating that all his/her actions will be in vain, as in (33).³

- (33) *nyzo nu-nu-γxwu ma, ny-kw-nuy-mu me*
 2SG IMP-AUTO-cry LNK 2SG.POSS-NMLZ:S/A-APPL-be.afraid not.exist:FACT
ma mx-ta-mbi
 LNK NEG-1→2-give:FACT
 ‘You can cry as much as you like, nobody is afraid of you, I won’t give [my daughter] to you (in marriage).’ (2002 qaCpa)

The defying/mocking imperative usage clearly stems from the meaning ‘casually’ of the autive prefix seen above – in a Chinese translation of (33), the imperative *nu-nu-γxwu* was translated as 随便他哭 <suibiàn tā kū> ‘let it cry’ with the adverb 随便 <suibiàn> ‘casually’. In example (34), the verb *ti* ‘say’ appears two times with the autive prefix, in the second instance with the irrealis, expressing both defiance and the ‘casually’ meaning at the same time.

³The autive prefix is however also used to express a mild imperative, as in examples (19) and (20) in §19.1.3, depending on the context.

19.1.5 Permansive function

In addition to the two previous functions, which are relatively straightforward for a middle marker, the autive prefix also presents an aspectual function. It expresses the continuity of an action or a state, like the adverb ‘still’ in English. Two subcases must be distinguished.

First, the autive can mean that the action of the verb goes on despite the occurrence of another action which could have been expected to stop it (as in 35 and 36).

- (35) *tɕ^heme nuw ɲɣ-nuuk^hɣda ri, muw-pjɣ-p^hɣn, tɕ^heme nuw*

The permansive reading of the autive prefix is only possible in non-perfective verb forms, in particular Factual, Imperfective, Past Imperfective and Sensory. The permansive use of the autive *nuu-* is not without typological parallels. One of the clearest cases is the Russian pronominal element *себе*, originally the dative form of *себя* ‘oneself’, and which alongside its autobenefactive value, is used in certain contexts with a permansive value (‘continue to ...’).⁴

This construction is not fully grammaticalized in Russian, but it is nevertheless a good parallel to the permansive value of the autive in Japhug. Since it is clear in Russian that the original meaning of this marker can only have been autobenefactive, not permansive or spontaneous, this fact suggests that the directionality of grammaticalization is more likely to be from autobenefactive to permansive in Japhug too. The following pathway in four stages can be proposed to account for this evolution; note that all four stages represent attested uses of Japhug autive.

1. ‘Do X for/to oneself’ (AUTOBENEFACTIVE, examples 11, 12, 16 in §19.1.3).
2. ‘Do X on one’s own’ (25, §19.1.4).

⁴I am indebted to Dmitry Nikolayev and Pavel Ozerov for pointing out this fact to me and suggesting the grammaticalization path proposed in this section, though I remain responsible for any error.

3. ‘Do X on one’s own, disregarding external conditions’ (24, §19.1.4).
4. ‘Continue to do X, despite (adverse) external factors.’ (PERMANSIVE)

19.1.6 Lexicalized autives

The autive *nu-* is lexicalized in a handful of verbs listed in Table 19.1, whose meaning is not fully predictable from that of the base verb, and which present several morphological properties.

Table 19.1: Lexicalized autive verbs

Base verb	Derived verb
<i>atuy</i> ‘meet’	<i>nɣtuy</i> ‘happen to be’
<i>βde</i> ‘throw’	<i>nuβde</i> ‘lose’
<i>ta</i> ‘put’	<i>nuta</i> ‘wear, take’
<i>st^hoβ</i> ‘push’	<i>nust^hoβ</i> ‘have sex’
<i>kro</i> ‘share’	<i>nukro</i> ‘share among themselves’
<i>syndu</i> ‘exchange’	<i>antsyndu</i> ‘get exchanged (by mistake)’

The clearest example of lexicalized autive is the verb *nɣtuy* ‘happen to be’ (40), which derives from *atuy* ‘meet’. The autive *nu-* prefix, which undergoes here vowel contraction (§12.3), occurs here in spontaneous action function (§19.1.4), but both the meaning of the verb and the position of the prefix are anomalous: the autive is normally infixd rather than prefixed in the case of verbs in *a-* (§19.1.2).

- (40) *ndi na-za-nuu q^he, tɛendi zuu mɣ-kuu-βɣɣt*

 ‘When they started [distributing food] from the west, he always
 happened to be among those who could not get anything.’ (28-qajdoskAt)
 {0003718#S148}

The regular infixd autive, with predictable meaning, is also attested as in (41), in the spontaneous function (§19.1.4).

- (41) *nuni zɣni nur-a<nuu>tuy-ndzi*
 DEM:DU 3DU AOR-<AUTO>meet-DU
 ‘They met each other by themselves (it was not an arranged marriage).’
 (14-siblings) {0003508#S313}

19 Other verbal derivations

The lexicalized autive *nxtuy* can be prefixed by the sigmatic causative as *znxtuy* ‘cause X to be at’ as in (42) or with the volitional meaning ‘make sure to happen to be at’ (43). This is an additional difference from the regular autive, which is placed further away from the stem than the causative prefix (§19.1.2).

- (42) *kuuki ku-ymtçov nunu u-mci*
 DEM.PROX SBJ:PCP-be.pointy DEM 3SG.POSS-saliva

 ‘You will have to make sure to be there at midnight.’ (2003 qachGa)
 {0003372#S26}

The verbs *nuβde* ‘lose’ (44), *nuta* ‘wear, take’ (in particular, ‘take as a wife in marriage’ as in 45), *must^hov* ‘have sex’⁵ and *nukro* ‘share among themselves’, are additional cases of lexicalized autive derivations. The former *nuβde* ‘lose’ reflects the spontaneous function of the *nu-* prefix, and the three other verbs the autobenefactive (‘do for/on oneself’) function.

- (44) *jx-a<nu>ri ri, u-rte ju-nuβde*
 AOR-<VERT>go[II] LNK 3SG.POSS-hat IFR-lose
 ‘He went away, but lost his hat.’ (2010-07-pear story)
- (45) *nuu ku u-rzaβ a-kx-nute ju-nts^hi*

 ‘Let him take her as his wife.’ (140513 shenqi de feitan-zh) {0003981#S175}

The causative forms of these verbs, such as *znuta* ‘let X wear’ (46) and *znukro* ‘share X with’ (47) also have the sigmatic causative prefix placed before the lexicalized autive *nu-*, unlike the expected order. Note also that although the meaning of the autobenefactive *nukro* ‘share among themselves’ from *kro* ‘share’ appears to be compositional and predictable, the causative is both positionally and

⁵This transitive verb requires a male as subject. For a typological parallel, see the obscene sense of Latin *comprimo* ‘press’ (Adams 1990: 182).

19 Other verbal derivations

The verb *antsɻndu* can thus be analyzed as a double active+passive derivation, with the expected placement of the active after the passive (§19.1.2). This verb can be further causativized as *sɻntsɻndu* ‘exchange by mistake’ and even receive a second active prefix as in (50).

- (50) *tei-ŋga* *to-nuu-suu-ɻntsɻndu-tei*
1DU.POSS-clothes IFR-AUTO-CAUS-exchanged.by.mistake-1DU
‘We exchanged our clothes by mistake.’ (elicited)

There are also examples of lexicalized active *nuu-* prefixes that are located in their expected locus in the template, further away from the stem than the causative. This is the case for instance with the verb *nusuk^ho* ‘rob, extort’ (see example 15, §17.2.3), from the causative *suk^ho* ‘cause to give’ of *k^ho* ‘give’. This verb has two *sɻ-* antipassive forms (§18.6.2), the regular one *sɻ-nuu-suu-k^ho* (APASS-AUTO-CAUS-give) ‘rob people’, but also the variant *nuu-sɻ-suu-k^ho* (AUTO-APASS-CAUS-give) with the active prefix *nuu-* moved further away from the stem than the antipassive *sɻ-* (§18.6.2).

Additional possible examples of fossilized active prefixes include *nuungɻt* ‘part ways’ (§18.5.1.2) and *mya* ‘take’ (§19.7.3).

19.1.7 Historical relationship with other derivations

Further semantic evolution of the active prefix with some verbs has led to the development of distinct grammatical categories, the vertitive *nuu-* (§19.2) which remained formally similar to the active, and the anticausative (§18.5), which underwent phonological reduction to a non-concatenative alternation: the shift from unvoiced stops and affricatives to their corresponding prenasalized voiced counterparts.

19.2 Vertitive

The vertitive *nuu-* is exclusively attested with a restricted set of motion (§15.1.2.1) and manipulation verbs (§15.1.2.2), indicated in Table 19.2, expressing that the motion is directed back to the point of origin.

The vertitive meaning developed out of the autobenefactive function of the active ‘take for oneself’ → ‘take to one’s home’ → ‘take back home’. However, the two prefixes are synchronically distinct, and can be combined together, as in example (51); note that in this case the active is generally realized as *-n-* (§19.1.2).

Table 19.2: The vertitive prefix *nu-* in Japhug

Base verb	Derived verb
<i>ɕe</i> ‘go’	<i>nuɕe</i> ‘go back’ (home)
<i>yi</i> ‘come’	<i>nuyi</i> ‘come back’ (home)
<i>p^hyo</i> ‘flee’	<i>nup^hyo</i> ‘flee back’ (home)
<i>tsum</i> ‘take away’	<i>nuts^hsum</i> ‘take back’ (home)
<i>yut</i> ‘bring’	<i>nuyut</i> ‘bring back’ (home)
<i>no</i> ‘drive’ (cattle)	<i>nuno</i> ‘drive back’ (home)
<i>zyut</i> ‘arrive’	<i>nuzyut</i> ‘arrive back’ (home)

- (51) *tce nɯ-tɯ-nɣm* *q^he, tce zara ku-n-nɯ-yi-nɯ*

 ‘(And your cows, are they (still) like that), you let them out of the pen [in the morning], and they come back home on their own, or do you have to chase them home?’ (taRrdo conversation)

All vertitive verbs in Table 19.2 have corresponding homophonous autive forms. Example (52) shows the use of the vertitive form of *tsum* ‘take away’, while (53) illustrates its autive form. It is clear in the case of (53) that *nu-tsum* cannot be interpreted as ‘take back’ (since a river flows in one direction and does not take back floating objects to its source).

 {0006352#S161}

19.3 Abilitative

The abilitative *sui-/z-* prefix occurs on transitive verb bases. It is formally identical to the sigmatic causative, and possibly historically derived from it (§19.3.2). As in the case of the causative, the allomorph *z-* is found on polysyllabic verb bases whose first syllable has a sonorant initial (§17.2.1.1). Since the abilitative only occurs on transitive verbs, there is no equivalent of the *suɿ-* allomorph (§17.2.1.4).

This prefix derives verbs expressing the ability of the transitive subject to perform the action of the base verb, as in *sundza* ‘be able to eat’ from *ndza* ‘eat’ (homophonous with the causative *sundza* ‘make/let eat’, ‘eat with’) in (55) and (56). It seems to be a productive derivation, but abilitative verbs are rare in the corpus, except for the highly frequent verb *znɿɿqa* ‘be able to endure/resist’ from *nɿɿqa* ‘endure’, ‘resist’.

- (55) *azo kumɿ nú-wy-mbi-a, muw-nu-sui-ndza-j tce tɿendɿre <dong>*

knife DEM.PROX NEG:SENS-be.sharp LNK NEG:SENS-can.cut
'This knife is not sharp, it cannot cut.' (elicited)

Both *spa* 'be able' and its base verb *pa* 'do' have cognates in all Gyalrongic languages, including Tangut (𐵄⁰³⁸⁵ .*wji*^{2.60} 'be able to' and 𐵄⁵¹¹³ .*wji*^{1.10} 'do', see Jacques 2014c: 86;255-256), Khroskyabs (Wobzi *fsó* 'savoir faire', Lai 2017: 475) and Stau (*vzə* with metathesis). Although West Gyalrongic languages lack an abilitative derivation, the existence of this cognate set demonstrates that this derivation goes back to at least proto-Gyalrongic, and has been lost in West Gyalrongic except in this lexicalized form.

19.3.2 Historical origin

Although the abilitative derivation goes back at least to the common ancestor of Japhug and Tangut, it is nevertheless likely that it derives from the sigmatic causative (Jacques 2015d: 190).

Although abilitative and causative derivations share little semantic commonalities, there are nevertheless potentially ambiguous sentences, where a *su-* prefix can be interpreted either as causative or as abilitative with very similar meaning, differing only in perspective. These ambiguous clauses may have been the pivot constructions allowing a reanalysis from causative to abilitative.

The main ambiguous construction between causative and abilitative occurs with the presentive meaning of the sigmatic causative in negative form (§17.2.4.4). For instance, in example (63), the verb *su-rqoβ* (from *rqoβ* 'hug') can be analyzed as an abilitative 'be able to hug'.

⁶In Chinese, this verb in negative form is translated as 切不动 <qiēbúdòng> 'cannot cut' or 咬不动 <yǎobúdòng> 'cannot tear by chewing'.

- (63) *turme laβnulaχsum kunx mχ-kχ-su-rqoβ ku-fse*

 SBJ:PCP-be.thick IPFV-grow can:FACT
 ‘[The fir] can grow so thick that two or three people cannot hug [its trunk].’ (08-tWrgi) {0003464#S6}

However, it is also possible to construe the meaning in a different way: ‘The fir can grow so thick that it prevents even two or three people from hugging (its trunk)’, with a causative interpretation. This interpretation is possible due to the ambiguity of the scope of the negation of the causative, which generates the preventive meaning ‘prevent, hinder’ in negative forms (§17.2.4.4), from which a modal meaning ‘not able to’ can be derived, with the causee reanalyzed as the transitive subject of the *su-* prefixed verb. The reanalysis of the causee as transitive subject is made possible in non-finite clauses by the fact that the causer can optionally take the ergative (§14.4.3) and that with the additive focus marker *kunx* ‘also, even’ the ergative cannot surface anyway (§9.1.6.1), so that the surface ambiguity between causee and causer can only be resolved by person indexation.

This hypothesis is made more plausible by the fact that, as discussed above, abilitative verbs almost always occur in negative form.

Another potential pivot construction between causative and abilitative is found with the instrumental use of the sigmatic causative (§17.2.5.8). In (64) for instance, the *su-* prefix is an instrumental causative (‘sew with’) but the context also invites an abilitative interpretation (‘be able to sew’).

19.4 Distributed action

The distributed action derivation has a double morphological exponence, combining a prefix *nχ-* with the partially reduplicated stem of the base verb. Partial

19 Other verbal derivations

reduplication applies to the last syllable of the stem if polysyllabic (§4.1), and the replicant takes the vowel *-u* by default, except in a few cases studied in §19.4.2.1 and §19.4.2.2. The distributed action derivation is not compatible with verbs that already have reduplicated forms or a *ny-* or *nu-* prefix. For instance, *nuqambumbjom* ‘fly’ lacks a distributed action form; to express this meaning, a serial verb construction (§25.4.1.3) with the distributed action derivation *nyɕuɕe* ‘go around’ (from the motion verb *ɕe* ‘go’) is used instead, as in (65).

- (65) *u-bar ra ko-ts^hob-nu tce tceɛɛɛɛre, rɕylpu nu chonɣ*

 IFR-be.possible SENS-be
 ‘They attached wings on her back, and she became able to fly around
 everywhere with the king.’ (150818 muzhi guniang-zh) {0006334#S477}

This derivation is found with both intransitive and transitive verbs, as shown by the examples in Table 19.3, and does not affect valency. It expresses a repeated action, often (with the base verb has a motional meaning) with aimless motion, distributed spatially and/or temporally. It is semantically very close to the Chinese construction X 来 X 去 *X lái X qù*, and distributed action derivation can often be translated by this construction: for instance *nyɕuɕe* ‘run around’ closely corresponds to Chinese 跑来跑去 *pǎo lái pǎo qù*.

The distributed action derivation preserves stem alternation (§12.2.1). The verb *nytuuti* ‘tell around’ has the stem II *-nytuuti* as expected from the base verb *ti* ‘say’ (stem II *-tuuti*), and *nyɕuɕe* ‘go around’ has the stem II *anyɕuɕe* with a prefixed *a-* like the stem II *-ari* of the base verb *ɕe* ‘go’.

The distributed action derivation can be semantically very close to the repetition of the verb with the additive linker *ny*, and both often occur in the same contexts. In the case of motion verbs, repetition with alternation between the EASTWARDS and WESTWARDS orientations (§15.1.4.3) has the same ‘goal-less action’ function as the distributed action derivation. For instance, the meaning of example (66) could be expressed with the verb *nyɕuɕe* ‘run around’.

- (66) *ko-rɕuɕe ny ju-rɕuɕe zo q^he,*
 IFR:EAST-run LNK IFR:WEST-run EMPH LNK
 ‘She ran around.’ (150901 changfamei-zh) {0006352#S104}

Table 19.3: Examples of distributed action derivations

Base verb	Derived verb
<i>ŋke</i> ‘walk’	<i>nŋŋkuŋke</i> ‘walk around’
<i>rjuŋ</i> ‘run’	<i>nŋrjuŋrjuŋ</i> ‘run around’
<i>mtsax</i> ‘jump’	<i>nŋmtsaxmtsax</i> ‘jump around’
<i>ɕe</i> ‘go’	<i>nŋɕuɕe</i> ‘go around’
<i>ɕar</i> ‘search’	<i>nŋɕuɕar</i> ‘search around’
<i>ndo</i> ‘take’	<i>nŋndundo</i> ‘carry around’
<i>ti</i> ‘say’	<i>nŋtuuti</i> ‘tell around’ (or ‘say many times’)
<i>ɕt^huz</i> ‘turn towards’	<i>nŋɕt^huzɕt^huz</i> ‘turn in all directions’
<i>ɛndu</i> ‘hit’	<i>nŋɛnduɛndu</i> ‘hit repeatedly’
<i>t^hu</i> ‘ask’	<i>nŋt^hut^hu</i> ‘ask around’
<i>βji</i> ‘chase’	<i>nŋβjuβji</i> ‘chase around’

However, in the case of allative motion verbs (§15.1.2.1), distributed action derivation and verb repetition can have a different meaning. The former generally expresses the absence of a specific goal as in (67), and often co-occurs with the adverb *axɛnduundɛt* ‘everywhere’ (see 65 above). The distributed action verb *nŋɕuɕe* is only compatible with the unspecified orientation prefixes, and cannot occur with any of the other six orientations (§15.1.3).

- (67) *uɔzo-suɔso ju-nŋɕuɕe mu-pjɣ-jɣɣ*

 ‘[The nightingale] was not allowed to [fly] around freely.’ (140519
 yeying-zh) {0004040#S102}

On the contrary, verb repetition with the same orientation prefix (68) (unlike 66) conveys an idea of continuous and lengthy motion in one specific direction, a meaning that would be incompatible with that of the corresponding distributed action verb *nŋɕuɕe* ‘go around’.

19 Other verbal derivations

With non-motional oriented verbs such as *ɕt^huz* ‘turn towards’ (§15.1.2.4), the distributed action derivation does not imply translational motion, but expresses the idea of turning one’s aim/look/body part towards all directions, as with the verb *nyɕt^huɕt^huz* in (69).

- (69) *u-cna ra nyɕt^huɕt^huz tceri, nyki, tɣ-pxtso*

 ‘[The ogre] pointed his nose in all directions, and discovered the children that had been hidden under the bed because of the smell.’ (160704 poucet4-v2) {0006097#S5}

With verbs of speech such as *ti* ‘say’ and *t^hu* ‘ask’, the distributed action derivation (respectively *nywtuti* ‘tell around’ and *nyt^hut^hu* ‘ask around’) generally implies a repeated activity (generally at different places) directed towards many people as in (70) and (71). These verbs can select dative recipients as their base verbs (§14.4.1), but those are rarely overt and if overt only generic nouns such as *tuurme* ‘person’ are possible.

Stative verbs, including adjectives, are usually incompatible with the distributed action derivation. The resulting form would be formally identical to the tropative (§17.5) with emphatic reduplication (§12.4.3). The only adjective with such a derivation is *snu* ‘be mad’ (from *sm^o* ‘be crazy’), which yields *nyxsnusnu* ‘be a little crazy, do crazy things (intermittently)’, attested in (74).⁷

- (74) *pju-nyxsnusnu ntsu pju-cti tce*
 IPFV-DISTR:be.mad always IFR.IPFV-be.AFF:FACT LNK
 ‘He always did [all sorts of] crazy things.’ (150829 jidian-zh) {0006338#S12}

The distributed action derivation also has the sense of ‘do X in disorderly fashion’: the form *nyxfusfse* (from the similitive verb *fse* ‘be like’) can be interpreted

⁷In this translated example, the form *pju-nyxsnusnu* corresponds to Chinese 疯疯癫癫 <fēngfēngdiāndiān> ‘a little mad’ in the original. However, it seems that the derivation turns the stative verb into a dynamic one.

19 Other verbal derivations

as ‘act foolishly’, as in (75). From this use, *nr̥fsufse* has developed the extended meaning ‘be pretentious’, like that of the auto-evaluative derivation (§19.5).

In addition to regular distributed action verbs, there is one example with the prefix *nr̥-*: *nr̥β̥z̥uβ̥zar* ‘cut into many pieces’ from *β̥zar* ‘cut’.

19.4.1 Lexicalized distributed action verbs

A certain number of verbs have a forms that is similar to a distributed action derivation, combining a *nr̥-* prefix with partial reduplication of the stem, but have no corresponding base verb with exactly the same stem. The intransitive *nr̥rura* ‘look around’ is a particularly good candidate to be analyzed as a fossilized derivation of this type, as its meaning exactly fits that of a distributed action form of a verb meaning ‘look’. It might be an irregular derivation from *ru* ‘look at’ (§15.1.2.4), with unexplained vowel alternation (note that the expected †*nr̥ruru* does not exist).⁸

The transitive verbs *nr̥k^huk^hrut* ‘drag along’, *nr̥ɕuɕi* ‘drag along’ and *nr̥muma* ‘stroke’⁹ are possible candidates for being analyzed as lexicalized distributed action verbs. The verb *nr̥ɕuɕi* might be related to *nr̥ɕi* ‘pull’, but for the other two no known root exist in the language, and if verbs such as **k^hrut* and **ma* did exist at an earlier stage, they have been lost at least in the Kamnyu dialect. Note however that *nr̥ɕuɕi* and *nr̥k^huk^hrut* ‘drag along’ are orientable manipulation verbs (§15.1.2.2), and express an action occurring in one specific direction, as in (76); if these verbs are indeed ancient distributed action derivations, this derivation possibly has the sense of ‘protracted action’ (as in 72 above) rather than distributed action in the proper sense.

⁸Khroskyabs and Western Gyalrongic in general have *-a* reduplication (Lai 2013), but since proto-Gyalrong **-a* is fronted in Khroskyabs, this Japhug pattern cannot be directly cognate.

⁹The verb *nr̥muma* ‘stroke’ is homophonous with the emphatic reduplicated form of the transitive verb *nr̥ma* ‘do’.

The intransitive verb *nɣp^hup^hu* ‘beg’ could superficially seem to be a lexicalized distributed action verb, but it is better to analyze it as a denominal verb (§20.7) from the inalienable noun *u-p^hup^hu* ‘alms’, which selects the person receiving the alms (rather than the one giving them) as possessor, as shown by (78) (see also §5.1.2.13).

19.4.2 Irregular partial reduplication

Partial reduplication with *Cuu-* replicant (§4.1) is not the only way of forming distributed action verbs. Suffixal reduplication in *-IV* (§19.4.2.1) and prefixal reduplication in *Coɤ-* and *Cum-* (§19.4.2.2) are also attested.

19.4.2.1 Replicant in *-IV*

The verbs in Table 19.4 take a suffixed syllable *-le* or *-lu* (*nɣmno* ‘watch’ → *nɣmno-le*), or a syllable in *-IV* whose rhyme replicates that of the verb stem (*mbyaɤ* ‘turn over’ → *nɣmbyaɤ-laɤ*). This exceptional example of rhyme reduplication in Japhug has important consequences for phonological analysis (§3.5.2.1). A similar type of reduplication is observed in pattern IV ideophones (§10.1.2.4).

Apart from *ɕar* ‘search’, which has two alternative distributed action derivations *nɣɕuɕar* and *nɣɕarlar* (both ‘search around, search in all directions’), the other verbs only occur with *-IV* replicant variant. The verb *mtɕur* ‘turn’ has two variants *nɣmtɕurlur* and *nɣmtɕurlu*.

Table 19.4: Examples of distributed action derivations with *-IV* replicant

Base verb	Derived verb
<i>mbyaɤ</i> ‘turn over’ (vi)	<i>nɣmbyaɤlaɤ</i> ‘turn over here and there’ (vi)
<i>ndzaβ</i> ‘fall/roll’	<i>nɣndzaβlaβ</i> ‘roll again and again’ (or in all directions)
<i>ndzaɤ</i> ‘swim’	<i>nɣndzaɤlaɤ</i> ‘swim around’
<i>mtɕur</i> ‘turn’ (vi)	<i>nɣmtɕurlur</i> ‘turn in all directions’ (vi)
	<i>nɣmtɕurlu</i> ‘turn in all directions’ (vi)
<i>nɣmno</i> ‘watch’ (vl)	<i>nɣmnole</i> ‘watch the scenery’ (vi)
<i>tɕaβ</i> ‘cause to fall/roll’	<i>nɣntɕaβlaβ</i> ‘cause to roll in all directions’
<i>pɣaɤ</i> ‘turn over’ (vt)	<i>nɣpɣaɤlaɤ</i> ‘turn over here and there’ (vt)
<i>ɕar</i> ‘search’	<i>nɣɕarlar</i> ‘search around’

With the labile verb *nɣmno* ‘watch’, this derivation has an antipassivizing effect, since the derived verb *nɣmnole* ‘watch the scenery’ is strictly intransitive.

This derivation can be applied to both the base verbs *tɕaβ* ‘cause to fall/roll’ and *pɣaɤ* ‘turn over’ and their anticausatives *ndzaβ* ‘fall/roll’ and *mbyaɤ* ‘turn over’, respectively.

19.4.2.2 Replicant in *Coɤ-* or *Cum-*

A handful distributed action verbs take a replicant other than the regular *-u*. The transitive verb *mp^hur* ‘wrap’ yields *nymp^hoɤmp^hur* ‘preserve (something fragile) by wrapping under several layers’ with *-Coɤ-* reduplicant (this rare type of reduplication is also attested in some passive forms, §18.1.5).

The intransitive verb *nyɤaɤ* ‘have a good time’ has the derived form *nyɤumɤaɤ* ‘play around’ with *-Cum-* replicant, the only example of this type of reduplication in Japhug.

19.4.3 Compatibilities with other derivations

The distributed action derivation is not attested on verbs with prefixal derivations, including the sigmatic causative. However, the *-IV* variant (§19.4.2.1) is found with a handful of anticausativized verbs (§18.5.6).

Further derivations on distributed action verbs are verb rare. The verb *nympole* ‘watch the scenery’ for instance can be causativized with the sigmatic prefix *z-*, as in (80).

- (80) *kɤntɕ^haɤ ra c^hɤ-z-nympole*
 street PL IFR-CAUS-DISTR:watch
 ‘He [took] him to do sightseeing in the city.’ (140511 alading-zh)
 {0003953#S53}

19.5 Auto-evaluative

Like the distributed action derivation (§19.4), the auto-evaluative derivation has a double exponence: the prefix *znɤ-* and verb stem partial reduplication. It takes a stative intransitive verb as input, and derives an intransitive verb meaning ‘think of oneself as *X*, pretend to be *X*’ (where *X* stands for the meaning of the base verb, always expressing a positive characteristic), as in Table 19.5. Although similar to reflexivized tropatives (§17.5), auto-evaluative verbs have a derogatory meaning and imply pretentiousness and vanity or bragging.

When the base verb already has an auto-evaluative meaning (*χpa* ‘be proud’), the auto-evaluative derivation only adds the derogatory nuance (*znɤχpυχpa* ‘be arrogant’).

The verb *znɤjpυjpe* ‘be full of oneself’ (from *pe* ‘be good’) has an irregular form with an inserted *-j-* element (the expected form would be †*znɤjpυpe*), and its meaning is slightly lexicalized ‘be full of oneself’ (from ‘think of oneself as good’).

Table 19.5: Examples of auto-evaluative derivations

Base verb	Derived verb
<i>mpɛɛr</i> ‘be beautiful’	<i>znɛmpɛɛumpɛɛr</i> ‘think of oneself as beautiful’
<i>χɛu</i> ‘be strong’	<i>znɛχɛuχɛu</i> ‘think of oneself as strong’
<i>χpa</i> ‘be proud’	<i>znɛχpuχpa</i> ‘be arrogant’
<i>pe</i> ‘be good’	<i>znɛjpuipe</i> ‘be full of oneself’

 IFR-be.full.of.oneself
 ‘Hearing these words of praise, the king became even more full of himself than before.’ (150830 afanti-zh) {0006380#S89}

Other examples of lexicalized auto-evaluative verbs include *znɛhuli* ‘play the coquette’ (from *li* ‘be spoiled’) and *znɛɲuɲu* ‘be arrogant’, a verb built from the root of the copula *ɲu* ‘be’, whose original meaning was ‘be right’ (§16.1.1.7).

19.6 Attenuative reduplication

In verbal derivation, reduplication occurs to express reciprocal (§18.4.1), distributed action (§19.4) and emphasis (§12.4.3). Combination of *a-* prefix with partial reduplication of the last syllable of the stem is also found with an attenuative meaning in a few stative verbs of colour (Table 19.6). Note that the replicated syllables takes the vowel /ɛ/ instead of /u/ in *a-ɣɛ~ɣrum* ‘be whitish’ and *a-pɛ~pyi* ‘be greyish’, and the absence of *w* in *a-ɣɛ~ɣrum* (on the cluster *wxt-*, see §4.2.1.1).

Since the base verbs in Table 19.6 can also be subjected to emphatic reduplication, we find minimal pairs like *a-ɣɛɛ~ɣrum* ‘be whitish’ and *a-qarɲu~rɲe* ‘be yellowish’ (82) vs. *wɣru~wɣrum* ‘be very white’ (83) and *qarɲu~rɲe* ‘be very yellow’ (84), respectively (§12.4.3).

Table 19.6: Examples of attenuative reduplication

Base verb	Attenuative
<i>wyrum</i> ‘be white’	<i>ayxyrum</i> ‘be whitish’
<i>pyi</i> ‘be grey’	<i>apyxyyi, apxyyi</i> ‘be greyish’

 ‘Its flower is very beautiful, it is very yellow.’ (15-babW) {0003512#S101}

19.7 Fossil affixes and marginal derivations

19.7.1 Volitional *mu-* prefix

The intransitive dynamic verb *munmu* ‘move’ contains a prefix *mu-*, as shown by the existence of the bare root *nmu* in the verb *nmu* ‘shake (of earthquakes)’ (Jacques 2017a), which is only found in collocation with the noun *waju* ‘earthquake’ (85).

- (85) *waju jx-nmu*
 earthquake IFR-shake
 ‘There was an earthquake.’ (elicited)

The Limbu labile verb |*mnt*| ‘move’ (Michailovsky 2002) is probably cognate to the Japhug root (Jacques 2017b: 212, see also §3.3.3 on the absence of coda in Japhug), and since *munmu* means ‘move’ in general (for both animate and inanimate beings), the restriction of the base verb *nmu* to earthquakes specifically cannot be an archaism. Rather, the ancestor of the base verb *nmu* must have had a more general meaning ‘move’ when the proto-form from which *munmu* originates was derived from it. The exact meaning of the ancestor of *nmu*, and the function of the *mu*- prefix in this verb are uncertain, but the following scenario can be proposed: the *n*- element in *nmu* could be a frozen allomorph of the autive (§19.1), and the original meaning of *nmu* could have been ‘move (spontaneously, without external agency)’, and the derived form *munmu* would thus have had the meaning ‘move (voluntarily)’: in Japhug, this verb can refer to volitional actions, and it is used for instance with the imperative and prohibitive (for instance in 86).

- (86) *ma-nu-tu-munmu ma mɣ-pʰɣn*
 NEG-IMP-2-move LNK NEG-be.efficient:FACT
 ‘Don’t move, otherwise it won’t work!’ (2002 qala)

In this interpretation, the original function of the *mu*- in this example would be deriving a volitional verb out of a non-volitional one (itself rendered non-volitional by the autobenefactive prefix).

In other Gyalrong languages, only cognates of the derived verb *munmu* are attested. The Bragbar Situ form *vərmô* ‘bouger’ (Zhang 2020) suggests that *mu*- originates from **wə*- with regressive nasalization from the last syllable. This invalidates a possible comparison with the volitional **m*- prefix reconstructed by Baxter & Sagart (2014: 55) in Old Chinese.

19.7.2 Applicative -*t* suffix

Beside the productive prefixal *nu*- applicative (§17.4), Japhug has vestigial traces of a -*t* applicative suffix, better attested in Kiranti and West Himalayish languages (see Michailovsky 1985, Jacques (2015a) and Jacques 2016c for comparative studies of this suffix). Only two examples of this derivation exist in Japhug: *yut* ‘bring’ and *mdut* ‘be resolved to, be determined to’.¹⁰

¹⁰More examples of -*t* applicative are found in Situ (Lin 2017; Zhang 2020), though all involving verbs of motion.

The verb of manipulation *yut* ‘bring’ derives from the motion verb *yi* ‘come’; the vowel alternation is regular as pre-Japhug **i* changes to /u/ in closed syllables. With a motion verb such as ‘come’, the effect of the applicative (87) is similar to a causative (88).

(87) ‘come with X’ → ‘bring’

(88) ‘cause X to come’ → ‘bring’

The transitive verb *mdut* ‘be resolved to, be determined to’ is historically related to the verb *mdu* ‘live up to’, and constitutes another example of the *-t* applicative, though it is less immediately obvious than in the case of *yut* ‘bring’ because each of the verbs has undergone semantic specialization after the derivation took place.

The verb *mdu* is semi-transitive (§14.2.3), and takes as its semi-object the life-span; it can be applied to plants, animals and humans, as shown by examples (89) and (90). It selects the DOWNSTREAM series of directional prefixes (§15.1.4.1).

 ‘He said: ‘May you live ten thousand years! I want to live one thousand years and one more day.’ (150830 afanti-zh) {0006380#S64}

The meaning ‘live until/up to’ is however a semantic innovation in Japhug: its Situ cognate *mdɔ* means ‘reach’ as a motion verb. Japhug has restricted the meaning of this verb to a very specific context.

The verb *mdut* ‘be resolved to, be determined to’ is morphologically transitive, and can take as its object an infinitive complement as in (91). It shares with *mdu* ‘live up to’ the DOWNSTREAM directional prefixes (*c^hu-*).

19 Other verbal derivations

 1SG Tibetan-language INF-learn DEM IPFV-be.determined EMPH
cti
 be.AFF:FACT
 ‘I am determined to learn Tibetan/Gyalrong.’ (elicited)

The precise meaning of *mdut* is to be determined to do something that one has confidence they can realize. If one accepts the idea that the original meaning of Japhug *mdu* ‘live up to’ was ‘reach’ as in Situ, the meaning ‘be determined to’ of the verb *mdut* has the same relationship to that of the base verb as English ‘reach for’ (‘reach for the stars’) to the verb ‘reach’, with a conative interpretation ‘try/strive to reach’. The addition of the suffix *-t* turns the semi-transitive (morphologically intransitive) *mdu* into a transitive verb whose A corresponds to the S of the base verb. This applicative derivation from a semi-transitive verb is not unique in Japhug; the transitive verb *nurga* ‘like’ from the verb *rga* ‘like’ with the *nu-* applicative is another similar example (§17.4).

19.7.3 Antipassive *-t* suffix

The semi-transitive verb *βxt* ‘obtain’, as proposed by Gong (2018: 310), is related to the orientable manipulation verb *mja* ‘take (from)’, a meaning illustrated by example (92). The two verbs differ by vowel alternation, *-t* suffixation and preninal nasalization.

pjx-ta.
 IFR:DOWN-put
 ‘He took their crowns one after the other and put them on the heads of each of his brothers.’ (160705 poucet5-v2) {0006163#S19}

The transitive verb *mja* can also mean ‘get, obtain’ when used with the DOWNWARDS orientation, as in (93) (§15.1.5.6). Apart from Tshobdun *mjê*, cognates in other Gyalrongic languages (such as Zbu *vjé?*) lack a nasal preinitial, suggesting that the Japhug and Tshobdun forms result from fusion with the autive prefix

(§19.1, Gong 2018: 310). This constitutes an interesting exclusive common innovation shared by Japhug and Tshobdun.

- (93) *tu-sɲi kɣ-mdi tu-ku-rɣma, <gongfen> ɸnu-skɣrma*

pu-ku-xtɕi.
 PST.IPFV-GENR:S/O-be.small
 ‘Working a complete day, I could only get two cents of labour points, as I was young.’ (2010-09)

The verb *βɣɣt*, meaning ‘obtain’ (something that everyone is looking for) is semi-transitive (§14.2.3), optionally taking a semi-object or a complement clause as in (94) and (95), but conjugated intransitively, as shown by the Aorist *pu-βɣɣt* (AOR-obtain) ‘he got (it)’ (with a A-type preverb, §14.3.1).

 ‘The elder boy was upset that he did not get the girl.’ (140513 shenqi de feitan-zh) {0003981#S209}

The verb *βɣɣt* ‘obtain’ is not synchronically derived from *mja* ‘take’: both verbs come from an etymon reflected by Zbu *ɣé?* ‘prendre, obtenir, enlever’ (Gong 2018: 310) whose expected Japhug form would be **βja*. Based on the comparative evidence in Gong (2018: 310–311), this lost verb was transitive and had the same argument structure as Japhug *mja*.

Hence, the *-t* suffix in *βɣɣt* ‘obtain’ used to remove morphological transitivity, turning the transitive subject into a intransitive subject, and the and the object into an (optional) semi-object. Given the fact that some *-t* codas in Japhug originate from earlier **-s* (§11.3), it is possible that this *-t* suffix is related to the reflexive/middle suffix attested in Kiranti, Nungish and West-Himalayish (reflected for instance by Khaling *-si*, Jacques et al. 2016), which has antipassive functions in many languages, including possibly Old Chinese (Jacques 2021).

19.7.4 Other detransitive prefixes

The transitive verb *t^hu* ‘ask’ (with indirective alignment, §14.4.1), in addition to the regular antipassives *rx^ht^hu* ‘ask questions’ and *srx^ht^hu* ‘ask in marriage’ (§18.6.7), has two isolated intransitive derived forms: *rx^hmu^ht^hu* ‘ask around’ and *ɕu^hmt^hu* ‘ask a lot of questions’ (96), from which the compound *ɕu^hmt^huspo^hɕ* ‘child who likes to ask a lot of question’ is derived (with *spo^hɕ* ‘have a hole’ as second element).

- (96) *nxzo ndyre nx-tu-ɕu^hmt^hu* *nui!*
 2SG LNK 2PL.POSS-NMLZ:DEG-ask.a.lot.of.questions SFP
 ‘You really [like to] ask a lot of questions!’ (elicited)

It is possible that the *-m(u)-* element in these complex prefixes is historically related to the *amu-* reciprocal and distributed property prefixes (§18.4.2, §18.7).

19.7.5 *rx-* prefix

Some verbs have *rx-* prefixes that can neither be analyzed as antipassive (§18.6.1) nor as denominal (§20.4) derivations, at least synchronically, and whose function is not clearly identifiable.

The verbs *rxwum* ‘tidy up’ and *rx^hts^hɣt* ‘try’ are clearly derived from *wum* ‘gather’ and *ts^hɣt* ‘try’, respectively. However, they cannot be analyzed as antipassives, since they are morphologically transitive like their base verbs.

The verb *rxwum* can mean ‘tidy up’ as in (97), taking as object a place (house or room) or ‘collect (and put in order)’ as in (98).

The old man collected the money and the things that [the people] had given [them].’ (150906 toutao-zh) {0006326#S154}

These meanings can also be conveyed by the base verb *wum* ‘gather’, as in (99). However, *wum* has a much wider range of meaning, including ‘fold, close’ (of

umbrellas, wings, see 92, §15.1.4.3) and ‘take as (disciple)’ (24, §8.1.7). The derived verb *rxwum* thus has a more specific and restricted use than its base verb.

 DEM ERG 3SG.POSS-apple PL INF-gather AOR:3→3'-help-PL LNK
 ‘They helped him to pick up his apples.’ (pear story-Tshendzin)

The meaning difference between *rxts^hyt* ‘try’ and *ts^hyt* ‘try’ is more difficult to ascertain, as both verbs can occur with a nominal object as in (100). In the corpus, when the derived verb *rxts^hyt* has an overt object, it is always however a complement clause, and it can have the sense of ‘compare’ as in (101).

19 Other verbal derivations

It has the emphatic reduplicated form *rxmpɕoβ~mpɕɻ* with a rare *-oβ* replicated syllable, and often occurs in the causative form *zrxmpɕɻ* ‘help *X* making up’ or ‘make up/dress up using’, as in (104).

- (104) *tu-kuu-z-rxmpɕɻ-tɕi* *ra*
 IPFV-2→1-CAUS-make.up-1DU be.needed:FACT
 ‘Help us dressing up and making up.’ (140504 huiguniang-zh)
 {0003909#S67}

This use of the *rx-* prefix could be analyzed as a quasi-reflexive ‘make oneself beautiful’, reminiscent of the case of the antipassive *raχtɕi* ‘wash’ (vi) (see 103 and §18.6.7.5), though it cannot be analyzed as an antipassive or a reflexive since the base verb is intransitive.

The transitive verb *rxɻruy* ‘cherish’ comes from the intransitive *ruy* ‘be precious’ with a tropative meaning (‘consider to be precious’, §17.5.5). The derivational prefix here *rxɻ-*, with an intrusive velar fricative (on which see §17.2.1.4 and the references therein).

19.7.6 *yuu-/yɻ-* prefix

A few verbs have *yuu-* or *yɻ-* prefixes that can neither be analyzed as facilitative *yɻ-* (§18.9.1), as causative (§17.3), as denominal (§20.5.2) nor as deideophonic derivations (§20.9).

First, the transitive verb *yɻtɕɻt* ‘select from’, more specifically ‘choose/select (someone) from a group of people’ (in particular, as a leader),¹¹ is derived from *tɕɻt* ‘take out’. It selects as object the person that is chosen, and also takes an essive adjunct (§8.1.7) describing the office/position of the chosen person. In example (105), the verb *yɻtɕɻt* occurs in a finite relative clause (§23.2.2) whose relativized element is the object. The noun *nuu-ηgumdzuy* ‘their leader’ inside the relative is the essive adjunct.

- (105) *tɕe nuu <faliandong> nunuu, [nunuu nuu-ηgumdzuy*
 LNK DEM ANTHR DEM DEM 3PL.POSS-leader

 ‘Feridun, the one they had chosen as their leader, had Zohak attached.’
 (140514 xiee de shewang-zh) {0003994#S99}

¹¹This verb has a Tshobdun cognate *wɔtʃet_{II}* ‘select’ (Sun & Blogros 2019: 209), and this derivation thus goes back at least to their common ancestor.

Its reflexive form *zyryrtcyrt* ‘volunteer’ (to go and go something) has a meaning that is not completely predictable from that of the base verb.

Second, *ylyrt* ‘lock’ is related to *lyrt* ‘release’, which can mean ‘lock’ when occurring in collocation with the noun *sywu* ‘key’ (136, §16.1.3.10, §18.1).

Third, the verb of perception *yuxsrl* ‘realize’ (§24.5.4.2) originates from *χsrl* ‘be clear’ (itself from *གསལ་* *gsal* ‘clear’), with a quasi-tropative meaning ‘clearly perceive that X’.

It is possible that these three transitive verbs originally were denominal verbs from deverbal nouns such as the bare action nominals (§16.4.6), but there is no evidence for the putative nouns from which these verbs could have been derived.

19.7.7 *a-* prefix

In addition to the passive *a-* prefix (§18.1), the reduplicated reciprocal (§18.4.1) and the denominal stative *a-* (§20.2.1) derivations, we find examples of *a-* prefixes with unidentified function in the following examples.

The stative verb *amtçov* ‘be pointy’ appears to be derived from *mtçov* ‘be sharp’. Both are stative verbs, and are obviously close semantically (both can take for instance *mbrutçu* ‘knife’ as intransitive subject, as in 62, §19.3.1).

The verb *ac^hyt* ‘be *X* years apart’ is either plain intransitive, taking the number of years as subject (106), or semi-transitive, selecting the years as semi-object (106b) (see also 62, §9.1.3.3).

- (106) a. *tcizo tci-pyrt^hyβ kumŋu-pyrme ac^hyt*

- b. *tcizo kumŋu-pyrme ac^hyt-tci*
 1DU five-years differ.in.age:FACT-1DU
 ‘We have a five year difference.’ (elicited)

It could potentially be analyzed as a denominal verb in *a-* (§20.2.1) from a lost noun **c^hyt* borrowed from Tibetan *ཁྲ་* *k^hyt* ‘difference’. While the Tibetan origin of the root is beyond doubt, it is also possible that this verb is derived by the *a-* prefix from the semi-transitive *c^hyt* ‘differ by’ (itself from Tibetan), which selects as semi-object not a characteristic other than age, for example the quantity of fern eaten in (107).

- (107) *ku-dyn ku-mpi ci c^hyt-nu ma nu*

19 Other verbal derivations

ɲu-car-nu.

IPFV-search-PL

‘They differ in that some [eat fern] a lot or fewer, but they search a lot [of fern] every year.’ (conversation 140510)

The verb *c^ha* ‘can’, ‘be able’, ‘be fine’ has two derived forms in *a-*: *ac^huc^ha* ‘be capable’ (see 1, §7.1.4) with reduplication *ac^hɣla* ‘be capable’ with suffixed *trtIV* replicated syllable (§19.4.2.1). The meaning of this derivation is both emphatic and antipassive-like: unlike the base verb *c^ha* ‘can’, which can take a complement clause as semi-object (§16.2.1.5, §24.2.3.1), *ac^huc^ha* and *ac^hɣla* are strictly intransitive stative verbs.

19.7.8 Abilitative *j-* prefix

The transitive verb *jqu* ‘be able to lift’ (108) has an intrinsically abilitative meaning. This unusual property suggests that it may be the remnant of a lexicalized abilitative verb whose base **qu* ‘lift’ was lost, and that the *j-* preinitial was an abilitative prefix, possibly an irregular allomorph of the *su-* abilitative (§19.3), reminiscent of the *j-* allomorph of the sigmatic causative (§17.2.2.5).

- (108) *ɲɣjk^hu w-ku* *mɣ-jqe*
yet 3SG.POSS-head NEG-be.able.to.lift[III]:FACT
‘[The baby] is not yet able to lift up his head.’ (elicited)

19.7.9 Prenasalization

In addition to the anticausative derivation (§18.5), prenasalization alternation is found in an isolated pair of intransitive verbs: *sqlum* ‘collapse’ (of the ground)¹² and *arɲglum* ‘be caved in’ (109).

- (109) *w-t^hob* *ɲu-ɣrɲglum*
3SG.POSS-ground SENS-be.caved.in
‘The ground is caved in.’ (elicited)

The form *arɲglum* derives from *sqlum* by addition of a prefix *a-* and prenasalization of the uvular stop /q/ to /ɲg/. In addition, the /s/ was rhotacized to /r/ as result of voicing: the combination *ɲng* is only attested across syllable boundaries

¹²The verb *sqlum* can for instance express the collapse of the ground under the weight of an object or person, as in (277) in §21.7.3.2.

in Japhug, as in the plant name *razngu*,¹³ never in an onset, and this example suggest that a sound change **sng* → *rng* took place.

The combination of prenasalization with *a-* in *arnglum* appears to have a resultative stative meaning, as opposed to the dynamic verb *sqlum*. It is possible that the prenasalization reflects a trace of the autive prefix (§19.1.4).

19.7.10 Comparative derivation?

The pair of stative verbs *sna* ‘be good, be worthy’ and *mna* ‘be better’ are possibly historically related, sharing a common root *-na* with different prefixes *s-* and *m-* (or **w-*, with nasalization, §17.3.1, §4.2.1.9) prefixes. If genuine, this etymological relationship is not synchronically obvious, and a detailed description of the synchronic meanings of these verbs is necessary.

The verb *sna* can either mean ‘be kind, be generous’ as in (110) (see also 9, §14.2.3), ‘be pleasant’ (example 112, §17.4.3) or ‘be worthy, be fit to’, as in (111) and (112) (also 117, §9.1.6.1). In the third case, it selects a semi-object, which can either be a noun or participle (111), or an infinitival complement clause (112).

person INF-eat NEG-be.fit:FACT
‘It is unfit for people to eat.’ (12-Zmbroko) {0003490#S93}

The range of meanings of *mna* only partially overlaps with that of *sna*. First, it can ‘feel better, heal’, taking either the disease/wound (113) (see also example 48, §16.1.1.7), or the person (or body part) afflicted by it (114) as subject. Note that in (113), the verb is in the 3SG form, indexation as intransitive subject the noun *nɣ-ɕq^he* ‘your cough’ rather than the 2SG, showing that this noun cannot be analyzed as an essive adjunct (§8.1.7).

¹³In this word, note also that a form such as †*rarngu* would violate another phonotactic constraint (§3.4.1).

19 Other verbal derivations

- (113) *ny-cq^he* *u-nú-mna?*
2SG.POSS-cough QU-SENS-be.better
'Is your cough getting better?' (many attestations)
- (114) *u-nú-tu-mna*
QU-SENS-2-be.better
'Are you feeling better?' (smAnmi 2003.2)

Second, *mna* occurs in comparative constructions (§26.2) with the standard marker *syz*(*ny*) (§8.2.7) or the comparee marker *ku* (§8.2.2.7), as in (115) (see also 57, §5.1.3). By contrast, *sna* is not attested in comparative constructions in the whole corpus.

- (115) *nuufse pju-kv-fcvt syz u-nú-mna?*
like.that IPFV-INF-tell COMP QU-SENS-be.better
'Is it better [to explain how to weave with video] than simply by telling it like that (without video)?' (vid-20140429090403) {0003776#S161}

The participle *ku-mna* is lexicalized in the sense of 'leader, chief' (example 12, §16.1.1.1).

The data above suggest that *mna* originally was a lexicalized comparative ('be better') of *sna* ('be good'), and that these two verbs have undergone distinct semantic specialization ('be better' ⇒ 'feel better, heal' vs. 'be good' ⇒ 'be worthy, be fit'). The morphological structure of these verbs is however elusive: the *s-* element in *sna* is possibly related to the proprietive *sv-* (§18.8), but the *m-* prefix in *mna* is isolated in Japhug. It could originate from **w-* with regressive nasalization from the *n-* of the root.

19.7.11 Reduplication

Reduplication occurs as a secondary exponent of several verbal derivations, including Distributed action (§19.4), Reciprocal (§18.4.1), and is also found sporadically with other derivations (for instance with the antipassive, §18.6.5).

In addition, reduplication is also attested by itself as the only marking of a valency-changing derivation in the case of *ruru* 'guard', which derives from the intransitive verb *ru* 'look at'. The base verb *ru* selects a goal in the dative or with locative marking (§14.2.4, §15.1.2.4), while *ruru* is transitive (as shown by stem alternation in 116) and the entity taken care of by the subject is encoded as object.

- (116) *tce pəʔtsʰi ɲu-rure* *pjɣ-ŋu ri*,
 LNK hogwash IPFV-take.care[III]:FACT IFR.IPFV-be LNK
 ‘While he was taking care of the hogwash...’ (2014-kWLAG)

The compound noun *βɣru* ‘miller’ includes as second element the non-reduplicated variant of the same root *-ru* with the same meaning as that of *ruru* ‘guard’ (the first element is from the noun *βya* ‘mill’, see §5.5.5.2).

19.7.12 Vowel alternation

The rare verb *rnde* ‘get into trouble’ is only attested in the expression in (117). The *-t-* suffix shows that this verb is morphologically transitive (§14.3.1), despite being unable to take an overt object.

- (117) *kɣ-rndu sɣznɣ pu-rnde-t-a*
 INF-obtain COMIT AOR-get.into.trouble-PST:TR-1SG
 ‘I not only did not obtain anything, but in addition I got into trouble.’
 (elicited)

The co-occurrence of *rnde* with *rndu* ‘obtain’ in the expression exemplified by (117) is probably not only a matter of euphony, but also of morphological relationship (a *figura etymologica*). The verb *rnde* is invariable, but its stem is identical to the stem III (§12.2.2.1) of *rndu* as in (118).

- (118) *uɪzo stusti zo tu-ce qʰe, tce kʰro zo ɲu-rnde*
 3SG alone EMPH IPFV:UP-go LNK LNK a.lot EMPH SENS-obtain[III]
kʰi.
 HEARSAY
 ‘She goes [up there in the mountain], and found a lot of mushrooms
 (they say).’ (conversation 14-05-10)

It is possible to suppose that the verb *rnde* is a backformation from the stem III of *rndu* ‘obtain’. A hypothesis of this type is likely in the case of the defective intransitive verb *βze* ‘grow’ which originates from *βzu* ‘make’ (§12.2.2.3), due to the fact that the stem *βze* never occurs in tenses such as the Aorist and that the verb *βzu* ‘make’ is also used with the meaning ‘grow’ with a dummy subject (§14.3.5).

In the case of *rnde* however, the fact that this rare verb is mainly attested in Aorist forms, where a Stem III is not possible makes the backformation hypothesis less likely. In addition, although the meaning of *rnde* ‘get into trouble’ is

19 Other verbal derivations

relatable to that of *rndu* ‘obtain’ (‘obtain/get problems/trouble’), it is not a simple narrowing of the meaning of *rndu*, a verb all of whose attestations refer to positive events (see 118 above, as well as 249 in §15.2.10.5).¹⁴

Alternatively, one could consider that *rnde* ‘get into trouble’ originates from *rndu* ‘obtain’ by a valency-neutral derivation. The vowel alternation could be accounted for by hypothesizing the existence of a *-*j* suffix (as in the case of the Stem III, §12.2.2.1), whose exact function is difficult to describe in the absence of other examples.

¹⁴For the backformation hypothesis to work, one would need to suppose that at an earlier stage, *rndu* ‘obtain’ with a non-overt object had a negative overtone ‘get/obtain it’ → ‘get into trouble’.

20 Denominal derivations

20.1 Introduction

Denominal verbalizing derivations turn nouns into verbs. Their source can either be an inalienably or an alienably possessed noun (§5.1.2), an isolated nominal root or a compound.

These derivations are referred to simply as “denominal” (without specifying “verbalizing”) in this chapter and everywhere else in the grammar, since the only non-verbalizing denominal derivations, the denominal adverbs (§5.8), are relatively marginal.

Japhug boasts a considerable number of denominal prefixes, most of which are highly productive (in particular, they can be applied to Tibetan and even Chinese loanwords). A consequence of the existence of these derivations is that conjugated verbs in Japhug are not a closed class, unlike in otherwise morphologically rich languages of the Trans-Himalayan family such as Kiranti (Jacques 2017b),¹ where light verb constructions are the only productive way of forming predicates from nouns.

In the rest of the grammar, the denominal prefixes are not distinguished from the nominal root in the glosses (the prefixes and the nominal roots are treated as a single stem). By contrast, in this chapter, the denominal prefixes are segmented and glossed as DENOM.

This chapter provides a detailed account of all attested denominal prefixes (sections §20.2 to §20.7). It also describes non-prefixal denominal derivations (§20.8) and deideophonic verbalizing prefixes (§20.9).

Some denominal prefixes are historically related to various valency-changing derivations, in particular the antipassive (§20.10). In addition to their basic function of deriving verbs from nouns, denominal prefixes also occur in compound verbs (§20.12), incorporating verbs (§20.13), and in verbs recently loaned from Chinese (§20.11).

¹In the case of Khaling, Jacques et al. (2015) provides an exhaustive list of all primary verbs, which only contains two borrowings from (Thulung and Nepali) and only one clearly denominal verb.

The following subsections present a general overview of the morphological alternations observed in denominal derivations (§20.1.1) and on the functional correspondences between denominal derivations and light verb constructions (§20.1.2), two topics which are treated in more detail in each of the sections in this chapter.

20.1.1 Morphological properties of denominal prefixes

When a noun takes a denominal prefix, the root almost never exhibits any stem alternation. If the base noun is inalienably possessed, the possessive prefix is removed (including in many cases frozen indefinite possessor prefixes in *tu-*/*tx-*, §5.1.2.10). For instance, the *ɣɣ-* denominal verb (§20.5) from the inalienably possessed noun *tx-k^hu* ‘smoke’ is *ɣɣk^hu* ‘be smoky’ (rather than †*ɣɣtxk^hu*), and the same applies even to the noun *txɣɣab* ‘game’ whose *tx-* prefixal element is not an indefinite possessor prefix, but whose denominal form is *ɣɣɣɣab* ‘hunt’. Likewise, when the base noun is a counted noun (§7.3), the numeral prefix is also removed (§20.4.2, §20.5.2). Only action nominalization *tu-* prefixes can be preserved: for example, the lexicalized action nominal *tusqa* ‘wheat gruel’ (from *sqa* ‘cook’, §16.4.4) has the denominal form *rutusqa* ‘eat wheat gruel’ (§20.4.1) rather than †*rusqa*.

Some denominal prefixes, including *su-*/*sɣ-* (§20.3.2), *ru-*/*rɣ-* (§20.4), *ɣu-*/*ɣɣ-* (§20.5.2), *mu-*/*mɣ-* (§20.6) and *nu-*/*nɣ-* (§20.7) have either *u* or *ɣ* vocalism (with the variant *a* when the following syllables has a uvular preinitial, §3.5.4). This vowel contrast is partially based on that of the indefinite possessor prefix (*tu-* vs. *tx-*, §5.1.2.1) when the base noun is inalienably possessed, but many exceptions exist.

A handful of denominal verbs have in addition an intrusive *-ɣ/-x-* velar fricative element (like the sigmatic causative, §17.2.1.4), for instance *ɣɣɣpra* ‘dispatch’ from *txpra* ‘messenger’ (§20.5.2).

Denominal prefixes are nearly always located closest to the root than any non-denominal derivational prefix. Only one exception is known: the causative *sɣz-mbru* ‘anger’ from the denominal verb *sɣmbru* ‘get angry’, whose causative prefix is irregularly inserted between the denominal prefix *sɣ-* and the nominal root *-mbru*: *sɣ-z-mbru* is to be parsed as DENOM-CAUS-anger (§17.2.2.7).

20.1.2 Denominal derivations and light verb constructions

Most denominal derivations described in this chapter are synonymous or near-synonymous with complex predicates involving light verbs such as *βzu* ‘make’,

lɣt ‘release’ or existential verbs like *tu* ‘exist’. Both types of construction serve to integrate a nominal root into a predicate.

For instance, the verb *ruqaju* ‘get worms’ and *rxspu* ‘fester’, with the *ru-/rx-*denominal prefix (§20.4.1) have the same meaning as the collocation of their base noun *qaju* ‘worm’ and *tx-spu* ‘pus’ with the light verb *βzu* ‘make’, as illustrated by (1) where both constructions appear. This example also shows that synonymous denominal and light verb constructions from the same nouns lexically select the same orientation preverbs: UPWARDS in the case of *rxspu/tx-spu* + *βzu* ‘fester, have pus’, and WESTWARDS in that of *ruqaju/qaju* + *βzu* ‘have worms, grow worms’.

 IFR:WEST-DENOM-WORM

‘[Its wing] had pus and worms grew in it, it flew so much that the base of its wing festered and had worms.’ (22-qomndroN) {0003598#S47}

In each of the sections of this chapter on denominal prefixes, the corresponding light verb constructions are systematically indicated.

Although the two constructions are semantically very close, an important difference is that in the denominal construction, the noun cannot take external determiners like numeral and demonstratives (unlike denominal derivation in some Uto-Aztecan languages like Hopi for instance, see Hill 2003). For instance, in (2), the verb *c^hɣ-rx-rjit* (from *tx-rjit* ‘child’, §20.4.1) means ‘gave birth to (a) child/children’, without any indication on the number of children (the unicity of the offspring in this example is deduced from the context of the story).

- (2) [*u-rzaβ* *nu* *u-sk^hru* *mu-nu-ku-βdi*] *nu*,
 3SG.POSS-wide DEM 3SG.POSS-body NEG-AOR-SBJ:PCP-be.well DEM
c^hɣ-rx-rjit
 IFR-DENOM-child

‘His wife, who was pregnant, gave birth to a child.’ (2012 Norbzang) {0003768#S95}

In order to specify the number of children that are born, a collocation with the verb *sci* ‘be born’, its causative *susci* ‘give birth to’ or the corresponding posses-

sive construction with the verb *tu* ‘exist’ are needed instead, as in (3). The same meaning cannot be expressed by combining the verb *c^hɣ-rɣ-rjit* with a numeral.

- (3) *u-rjit* *kungut tɣ-tu*.
 3SG.POSS-child nine AOR-exist
 ‘She had nine children.’ (14-siblings) {0003508#S15}

The only cases when a denominal derivation can preserve the modifier of a noun is when the modifier is fused with the noun root and both undergo the derivation together. For instance, the nominal phrase *tɕ^hitɕun paɕɕi* ‘pear’, which comprises the noun *paɕɕi* ‘apple’ with the placename *tɕ^hitɕun* ‘Chuchen’ as pre-nominal modifier (§9.1.8.2, §5.5.1.1) can be verbalized as *nutɕ^hitɕunpaɕɕi* ‘collect pears’ with the intransitive *nu-* derivation (§20.7.2).

20.2 Contracting prefixes

Contracting denominal prefixes are mono- or disyllabic prefixes which first syllable is *a-*, and undergoes vowel contraction in the contexts discussed in §12.3 like the passive *a-* (§18.1) and the reciprocal derivations (§18.4).

20.2.1 Stative *a-*

The denominal prefix *a-* derives intransitive verbs. Most *a-* denominal verbs are stative, and either mean ‘be *X*’ or ‘have the property of *X*’. The stative denominal function of *a-* is highly productive, and can be applied to Tibetan loanwords.

Denominal verbs in *a-* can express shape, as in *artab* ‘be forked’ from *tr-rtab* ‘branch’. They can also refer to a more abstract property of the base noun, as in the case of *aci* ‘be wet’, which derives from *tu-ci* ‘water’ (on which see §5.1.2.11).

Denominal verbs expressing physical defects are most often built with the *a-* prefix, for instance *aɕkala* ‘be lame’, *aɕɣwu* ‘be lame’ and *aɕquwa* ‘be blind’ from *ɕkala* ‘lame person’, *ɕɣwu* ‘lame person’ (from *ཇའ་ za.ba* ‘cripple’) and *ɕquwa* ‘blind person’, respectively (an exception is *ɣmbyo* ‘be deaf’ with the *ɣɣ-* prefix, §20.5).

Some denominal verbs in *a-* express a property shared by several entities, for instance *aɕɣa* ‘be the same age’ (§14.2.6) from *tu-ɕɣa* ‘tooth’).² Such verbs can have a reduplicated stem, or suffixal syllables, like the verbs *a-fsu~fsu* and *a-fsu-ja* both meaning ‘be of the same size’³ from the inalienably possessed noun *u-fsu* ‘of the same size’ (§20.8.2, §26.3.1.3).

²The semantic extension ‘age’ from ‘tooth’ is also found in other Gyalrongic languages, see for instance Lai (2017: 524).

³On the causative form of *a-fsuja* ‘be of the same size’, see §17.2.5.9 (in particular example 62).

Not all *a*-denominal verbs are stative. Dynamic intransitive verbs in *a*- include for instance *arju* ‘speak’ (§15.1.5.8) from *tu-rju* ‘word’, ‘utterance’, and the verbs *amqaj* ‘fight’ (scold each other) and *ayro* ‘play’ (with non-singular subjects), from *tu-mqaj* ‘scolding’ and *tryro* ‘game’⁴, which are almost always attested with infixation of the autive *nu*- as *a < nu > mqaj* and *a < nu > yro*.

Compound nouns of dimension (§5.5.2.2) can derive compound verbs (§20.12) meaning ‘of uneven/unequal *X*’ or ‘spread along the dimension *X*’ with the *a*-prefix, as shown in Table 20.1. Among them, *ajpomxts^hum* ‘have uneven thickness’ presents an unexplained alternation between /u/ and /o/ alternation: the denominal verb has *o* in the first syllable, while the compound noun *jpumxts^hum* ‘thickness’ and the base verb *jpum* ‘be thick’ have *u*.

Table 20.1: Denominal verbs from nouns of dimension

Base compound noun	Denominal verb
<i>jpumxts^hum</i> ‘thickness’ (diameter)	<i>ajpomxts^hum</i> ‘have uneven thickness’
<i>jaɁmba</i> ‘thickness’ (of a sheet)	<i>ajaɁmba</i> ‘have uneven thickness’
<i>xtɁuxte</i> ‘size’	<i>axtɁuxte</i> ‘have uneven size’
<i>taɁki</i> ‘up and down’	<i>ataɁki</i> ‘be aligned on the vertical axis’
<i>lot^hi</i> ‘upstream and downstream’	<i>alot^hi</i> ‘be aligned on the riverine axis’
<i>kundi</i> ‘east and west’	<i>akundi</i> ‘be aligned on the east-west axis’

The causative form of these verbs, regularly built with vowel fusion *su-ɣ*- (§17.2.1.3), means ‘align/put along the *X* dimension’ as in (4) (where the upstream-downstream dimension refers to the head-tail dimension of the body of the butterfly).

⁴The noun *tryro* ‘game’ is however also possibly interpretable as a deverbal noun, see §16.4.

*lu-suu-γ-lo-t^{hi}**ɲu-ŋu.*

IPFV:UPSTREAM-CAUS-DENOM-up-downstream SENS-be

‘[The butterfly] has four wings, on each side a big one and a small one.
 (...) When it flies, it aligns [its wings] along the ‘upstream-downstream’
 axis.’ (26-qambalWla) {0003680#S45}

The verbs *ataški*, *alot^{hi}* and *akundi* and their causative forms select the UPWARDS, UPSTREAM (as in 4) and EASTWARDS preverbs, respectively.

Noun-verb pairs where the verb has *a-* and the noun is an inalienably possessed noun selecting the *tx-* indefinite possessor prefix (for instance the verb *aq^{he}* ‘cough’ and the inalienably possessed noun *tx-aq^{he}* ‘cough’) can be interpreted as *a-* denominal derivation, but the opposite directionality (the inalienably possessed noun as a nominalized form of the *a-* prefixed verb) is also possible (see §16.4.6 for a more detailed discussion). Another problematic example of *a-* denominal derivation is *ac^hɣt* ‘be *X* years apart’ (§19.7.7).

In some cases, semantic changes either in the verb or the noun have obscured the etymological relationship between them. For instance, it is possible that *aro* ‘own’ is historically related to *tx-ro* ‘surplus, leftover’ (§14.2.3), though there is no synchronic link between these two words.

A certain number of intransitive verbs in *a-* can be suspected of being denominal verbs whose base noun has been lost. This is particularly clear in the case of some verbs expressing shape such as *aβzurχsum* ‘have a triangular shape’ from a noun **βzurχsum* unattested in Japhug, but attested in Tibetan as ཟུར་གསུམ་ *zur.gsum* ‘triangle’. Even when the nominal source is not recoverable, as in the case of *artum* ‘be round’, the hypothesis that the *a-* verb comes from a lost noun (in this case, something like **rtum* ‘round object, circle’) can never be ruled out.

The deideophonic *a-* derivation (§20.9.3) is also likely to have a historical relationship with the stative *a-* denominal prefix.

20.2.2 Similitive *aru-*

The prefix *aru-* derives stative verbs meaning ‘be *X*-like, be similar to *X*’ from a nominal base. Table 20.2 presents a few representative examples of this prefix. Although these verbs (with the exception of *aruldzaŋku* ‘be green’) are relatively rare in the corpus, this derivation is extremely productive and can be applied to Tibetan loanwords, for instance *ɕoβɕoβ* ‘paper’, *ldzaŋku* ‘green’ and *muntob* ‘flower’ (from ཤོག་ཤོག་ *ɕog.ɕog* ‘paper’, ལྗང་གུ་ *ldzaŋ.gu* ‘green’ and མེ་ཏོག་ *me.tog* ‘flower’, respectively). It is even found on Chinese loanwords such as 喇叭 <lǎba> ‘horn’.

Inalienably possessed nouns such as *tx-tɕu* ‘son’, ‘boy’ are denominalized together with their indefinite possessor prefix (§5.1.2.4).

The *aru-* derivation can take not only noun roots, but also noun phrases as input. For instance, the phrase *gro-mke u-mdoɕ* (pigeon-neck 3SG.POSS-colour) ‘purple, colour of the pigeon’s neck’ can be denominalized as *aruqromkemoɕ* ‘be purple’.

Table 20.2: Examples of the *aru-* simulative denominal prefix

Base noun	Denominal verb
<i>ɕoɕɕoɕ</i> ‘paper’	<i>aruɕoɕɕoɕ</i> ‘be like paper’
<i>fsapax</i> ‘animal’	<i>aruɕsapax</i> ‘be like an animal’
<i>k^hutsa</i> ‘bowl’	<i>aruk^hutsa</i> ‘be like a bowl’
<i>taqaɕ</i> ‘needle’	<i>arutaqaɕ</i> ‘be like a needle’
<i>ldzaŋku</i> ‘green’	<i>aruldzaŋku</i> ‘be green’
<laba> ‘horn’	<i>arulaba</i> ‘be shaped like a horn’
<i>sujno</i> ‘grass’	<i>arusujno</i> ‘be like grass’
<i>tx-tɕu</i> ‘son’, ‘boy’	<i>arutxtɕu</i> ‘be boyish’
<i>txjpa</i> ‘snow’	<i>arutxjpa</i> ‘be like snow’
<i>muntoɕ</i> ‘flower’	<i>arumuntoɕ</i> ‘be like a flower’

With colour nouns, including those borrowed from Tibetan like *ldzaŋku* ‘green’ and *ɕmɔɔsmuɔ* ‘dark red’ (§5.2.2) and others like *gro-mke u-mdoɕ* ‘purple’, the denominal verbs in *aru-* simply mean ‘be *X*, have the colour *X*’, as in (5).

- (5) *tce kumax ɕɕaj nura aru-ldzaŋku ku-fse ma*

 {0003584#S103}

Denominal verbs in *aru-* are often used in simulative constructions with degree nominals, either as nominal predicates as in (6) (§16.3.3) or in the degree construction (7) (§16.3.4). Note that the connotation of these simulative verbs can be culture-specific: although *arumuntoɕ* ‘be like a flower’ can be understood as ‘be as beautiful as a flower’, its most natural interpretation is surprisingly ‘worthless’ (because flowers are viewed as not lasting long, and prone to withering).

- (6) *u-tu-ɔru-muntoɕ nu!*

Additional examples of simulative constructions involving these verbs can be found in Jacques (2018c) and §26.3.3.2.

20.2.3 Proprietary *ary-*

The *ary-* denominal prefix has a proprietary meaning, and is generally correlated with partial reduplication of the nominal stem as in *aryrq^hurq^hioɓ* ‘be grooved’ (9) from *tx-rq^hioɓ* ‘groove’.

- (9) *u-ru* *nuura* *tx-ku-yry-rq^hu-rq^hioɓ* *ku-fse* *ci*
 3SG.POSS-stalk DEM:PL AOR-SBJ:PCP-DENOM-groove SBJ:PCP-be.like INDEF
ŋu *q^he*,
 be:FACT LNK
 ‘Its stalk is like it has had many groovings on it.’ (14-sWNgWJu)
 {0003506#S41}

The *ary-* prefix can also be used to derive verbs from counted nouns as for instance *aryɣuɣryz* ‘be striped’ from *tu-ɣryz* ‘one stripe’. The verb *aryk^humk^hɣl* ‘be clustered in patches’, ‘not homogeneously distributed’ from *tu-k^hɣl* ‘one place’ has the very rare partial reduplication pattern in *-um* (*ary-k^hum~k^hɣl*, §19.4.2.2).

Non-reduplicated *ary-* denominal verbs are also found, for instance *aryts^hi* ‘be cooked like rice gruel’ (from *tu^hts^hi* ‘rice gruel’, a lexicalized nominalization from *ts^hi* ‘drink’) and *aryryy* ‘happen at the predicted time’ from *u-ryy* ‘predicted time’ (on which see §8.3.5).

- (10) *azo a-zuβ* *ɲɣ-k-ɣɣɣ-ɣɣɣ-ci*
 1SG 1SG.POSS-sleep IFR-PEG-DENOM-predicted.time-PEG
 ‘I feel sleepy at the expected time.’ (elicited, can be said when one feels
 sleepy at the same hour in the afternoon when one went to sleep the
 previous days)

Like other compound denominal prefixes (§20.2.4.2), the *arɣ-* prefix loses its *a-* element when subjected to causative derivation. For instance, *arɣts^{hi}* ‘be cooked like rice gruel’ has the causative form *zɣɣts^{hi}* ‘cook like rice gruel’ (§17.2.2.8).

The *arɣ-* prefix should not be confused with the reciprocal from transitive verbs in *ɣɣ-*. For instance *arɣzduzda* ‘call each other’ (before departure) does not directly come from the noun *tu-zda* ‘companion’, but is rather the reduplicated reciprocal (§18.4.1) of the denominal verb *ɣɣzda* ‘call before departure’ derived from this noun.

20.2.4 Proprietary *ayu-*

The prefix *ayu-* derives proprietary stative verbs meaning ‘have a lot of *X*’ or ‘produce a lot of *X*’. For instance, Tshendzin provided the definition in (11) for the proprietary denominal *ayu-mdzu* from *ɣɣ-mdzu* ‘thorn’.

- (11) *ɲu-ɣɣu-mdzu*, *u-taβ* *ɣɣ-mdzu* *ɲu-dɣn*

kɣ-ti *ɲu-ɣu*.
 OBJ:PCP-say SENS-be
 ‘[The word] *ɲu-ɣɣu-mdzu* means ‘there are a lot of thorns on it.’ (elicited)

When the base noun is inalienably possessed (§5.1.2) or when it is a counted noun (§7.3), the denominal prefix is directly attached to the root, and the indefinite possessor prefixes *tu-*, *ɣɣ-*, *ta-* or the numeral prefixes are removed, as shown in the examples in Table 20.3. The *ayu-* prefix is invariable, without an allomorph such as †*ayɣ-* as could have been expected (§5.1.3) when the base noun selects the indefinite possessor prefix *ɣɣ-*.

This prefix is very productive, and occurs on nominal bases borrowed from Tibetan (such as *ɣɣul* ‘silver’, *u-mdoβ* ‘colour’, *tuy* ‘poison’ and *smɣn* ‘medicine’ (respectively from དུལ་ *dɣul* ‘silver’, མངོག་ *mdog* ‘colour’, དུག་ *dug* ‘poison’ and མཁའ་ *smān* ‘medicine’) and even Chinese (*tu-ɣɣaw* ‘a pair’ from 双 <shuāng> ‘pair’).

Table 20.3: Examples of the *ayu-* propriative denominal prefix

<i>u-duχun</i> ‘fragrance’	<i>ayuduχun</i> ‘be fragrant’
<i>tuy</i> ‘poison’	<i>ayutuy</i> ‘be poisonous’
<i>smɣn</i> ‘medicine’	<i>ayusmɣn</i> ‘have a medical effect’
<i>u-mdox</i> ‘colour’	<i>ayumdox</i> ‘be the same colour’
<i>u-ɲgu</i> ‘inside’	<i>ayunɲguɲgu</i> ‘have a lot of layers’
<i>tu-jax</i> ‘hand, arm’	<i>ayujujax</i> ‘have a lot of arms’
<i>tu-mi</i> ‘foot, leg’	<i>ayumumi</i> ‘have a lot of legs’
<i>tu-ɣrax</i> ‘shoulder’	<i>ayurɣrax</i> ‘go along well’
<i>tu-ɣwaj</i> ‘a pair’	<i>ayuɣwaj</i> ‘be a match’

Another possible meaning of the *ayu-* prefix is ‘be the same *X*’, as in the case of *ayumdoɣ* ‘be the same colour’ from *u-mdoɣ* ‘colour’. These types of verbs have non-singular intransitive subjects, as in (12) with a comitative phrase (§8.2.5).⁵

- (12) *u-ru* *c^ho* *u-fkaβ* *ra ayumdoɣ* *zo*

arŋi.
 be.green:FACT
 ‘Its stalk and its cap are the same green colour.’ (of a species of
 mushroom) (22-BlamajmAG) {0003584#S114}

A few *ayu-* denominal verbs, such as *ayutuɣ* ‘be poisonous’ from *tuɣ* ‘poison’, have a more abstract proprietive function (‘have the property of *X*’) like that of the *sy-* prefix (note the synonym *syndɣy* ‘be poisonous’, §20.3.1). Other semantic values of the *ayu-* prefix are discussed in §20.2.4.3.

The *ayu-* denominal prefix has cognates in other Gyalrong languages, for example *ɖwə-* in Tshobdun (Sun 2014a).

20.2.4.1 Reduplication

Emphatic reduplication (§12.4.3) is possible as an option on denominal verbs, but some verbs in *ayu-* occur with obligatory reduplication of the nominal root, for instance *ayujujajɣ* ‘have a lot of arms’ and *ayumumi* ‘have a lot of legs’ (13). Note that the alternative form *ayujajɣ* without reduplication is also attested, but with a completely different meaning (§20.2.4.3).

- (13) *ŋgoɣna ɲu-ɣɣu-ju~jajɣ* *ɲu-ɣɣu-mu~mi*, *u-mɣlɣjajɣ*
 spider SENS-DENOM-EMPH~arm SENS-DENOM-EMPH~leg 3SG.POSS-limbs
ɲu-dɣn
 SENS-be.many
 ‘The spider has many arms and legs, its limbs are numerous.’ (elicited)

20.2.4.2 Causative

Only a few causative verbs derived from *ayu-* denominal verbs are attested. Instead of expected vowel fusion (*†su-ɣɣu-* → *sɣɣu-*, see §17.2.1.3), the *a-* element is dropped and replaced by the *z-* allomorph of the sigmatic causative (§17.2.2.8).

⁵Concerning the absence of dual indexation on the verbs in (12), see §14.6.1.1.

20 Denominal derivations

For instance, the stative verb *ayungungu* ‘have a lot of layers’ (from *u-ŋgu* ‘inside’, with reduplication, §20.2.4.1) has the causative form *zyungungu* ‘put on a lot of layers’ as in (14).

20.2.4.3 Lexicalized denominal verbs

The semantics of the *ayu-* derivation is not always trivially predictable.

Some of the lexicalized meanings are relatable to one of the basic functions of this prefix. For instance, *ayuşwaŋ* ‘be a match’ (to each other) (15) from *tu-şwaŋ* ‘a pair’ presumably derives from an earlier ‘have the property of being a pair’.

- (15) *tce [u-kyri ta-tut] c^ho [u-q^hu*
 LNK 3SG.POSS-before AOR:3→3-say[II] COMIT 3SG.POSS-after

 ‘The things he said in the beginning and those that he said later did not
 correspond to each other.’ (contradicted each other) (2011-10-qajdo)

Other denominal verbs have meanings that are completely unpredictable. For example, the denominal verb *ayujax* from *tu-jax* ‘hand, arm’, rather than meaning ‘have arms’ as expected (see however §20.2.4.1), either occurs in the sense of ‘fidget, touch other peoples’ things (like a thief)’ or ‘do things (with one’s hands) quickly’. The metaphorical extensions on which the unpredictable meanings of *ayu-* are sometimes shared with other denominal derivations. For instance, *ayurpax* ‘go along well’ (with non-singular subject) from *tu-rpax* ‘shoulder’ presents the same semantic derivation as the transitive denominal verb *nrpax* ‘go along well with’ (from ‘carry on the shoulder’, §20.7).

Some lexicalized *ayu-* denominal verbs additionally present unusual argument structure. Unlike other *ayu-* verbs which are plain intransitives, *ayuruuz* ‘inherit from’ (either from *u-ruuz* ‘species’, borrowed from *རིགས rigs* ‘race’, or from *རུས rus* ‘bone, lineage’) is a semi-transitive verb (§14.2.3), taking as semi-object the person or group of people one inherits a trait from as in (16).

 mother’s [lineage] have good tooth quality, then one will (also) have
 good tooth quality.’ (27-tWCGArgu) {0003708#S11}

20.2.4.4 Comitative adverbs

The *ayu-* denominal derivation has served as the basis for the development of a separate morphological category: denominal comitative adverbs (Jacques 2017d, §5.8.1).

Comitative adverbs are built by combining the prefix *kɣyu-* (or *kɣ-*, a borrowing from Tshobdun, §5.8.1) to the partially reduplicated stem of the base noun, as in *kɣyu-rtu~rtab* ‘together with its branches’ from *tx-rtab* ‘branch’ or *kɣyu-rju~rjit* ‘together with his/her/its children’ from *tx-rjit* ‘child’. These adverbs are formally homophonous with the *ku-* subject participles (§16.1.1) or stative infinitives (§16.2.1.1) of the *ayu-* denominal verbs with emphatic reduplication (§20.2.4.1). For example, the surface form /kɣyurturtab/ can be parsed either as a comitative adverb *kɣyu-rtu~rtab* ‘together with its branches’ or as the participle *ku-ɣyu-rtu~rtab* ‘the one which has many branches’ as in (17).

- (17) *si ku-ɣyu-rtu~rtab* *ki ku-fse* *pu-car-nu*
 tree SBJ:PCP-DENOM-EMPH~branch this SBJ:PCP-be.this.way IPFV-search-PL
 ‘They search for a tree having a lot of branches like this.’ (elicited)

Examples (18a) and (18b) present a minimal pair contrasting the participle ‘have many children’ on the one hand and the comitative adverb ‘with his/her children’ on the other hand (both pronounced /kɣyurɣurjit/).

- (18) a. *icq^ha* *tɕ^heme nu ku-ɣyu-rju~rjit* *ci*
 the.aforementioned woman DEM SBJ:PCP-DENOM-EMPH~child INDEF

- b. *kʏyʉ-rʃʉ-rʃit zo jo-nʉ-ʒe-nʉ*
 COMIT-children EMPH IFR-VERT-go-PL
 ‘She/They went back with their children.’ (elicited)

The comitative adverbs result from the reanalysis of a non-finite form of propriative *ayʉ-* denominal verb, possibly a subject participle or an infinitive in converbial function (§16.2.1.7), with a trivial semantic change from propriative ‘have many *X*’ to comitative ‘together with *X*’ (on the semantic proximity of the two categories, see for instance Sutton 1976; Patz 1991; Stassen 2000; Stolz et al. 2006; Arkhipov 2009).

20.2.5 Collective *andzi-*

The *andzi-* collective denominal prefix is attested in only one example: *andzirya* ‘be neighbours’ from *tr-rya* ‘neighbour’, as in (19).

- (19) *ɲʉ-ʏndzi-rya-ndzi*
 SENS-DENOM-neighbour-DU
 ‘They are one next to the other.’ (elicitation)

This prefix is historically related to the *andzu-* reciprocal (§18.4.3), and the social collective *kʏndzi-* prefix (§5.7.8.1) derives from the combination of the denominal *andzi-* with the *ku-* subject participle prefix (§16.1.1). The surface form /*kʏndzirya*/ is ambiguous between the collective ‘neighbours’ and the participle ‘who are neighbours to each others, placed one next to each other’ as in (20).

- (20) *tʒeri tu-tʉ-rdoʋ tu-tʉ-rdoʋ ɲʉ-ɲʉ ma*

 ‘[This type of mushroom grows] one by one [in isolation], not one next to the other (clustered together), not in patches.’ (24-zwArqhAjmAG)
 {0003630#S77}

Although none of the other social collective nouns has a corresponding *andzi-* stative verb synchronically, this derivation must have been more widespread at an earlier stage. It is possible that the *ndzi-* element of this prefix is related to the dual *ndzi-* found in the possessive paradigm and pronouns (§6.1), though how exactly this prefix was built remains unclear.

20.3 Sigmatic denominal prefixes

20.3.1 Proprietary *sɣ-*

Proprietary verbs in *sɣ-* are derived from nouns in *tx-*, either from inalienably possessed nouns selecting the indefinite possessor prefix *tx-* (§5.1.2) or from nouns with a frozen *tx-* prefix. These stative verbs are almost always paired with corresponding dynamic verbs in *nɣ-* (more rarely *nu-*, §20.7.3). As shown by Table 20.4, the base nouns can either be entities (*tx-ndɣɣ* ‘poison’) or actions (*tx-re* ‘laugh (n)’). The proprietary denominal verbs, like *sɣ-* proprietary verbs (§18.8), take as intransitive subject the stimulus of the action (perceptible by or affecting other entities). They have a meaning very close to that of the *ayuu-* proprietary denominal verbs (§20.2.4), in particular *ayutuuy* ‘be poisonous’ from *tuy* ‘poison’, which has the same meaning as *sɣndɣɣ* ‘be poisonous’.

The corresponding *nu-/nɣ-* verbs can be either intransitive, transitive or labile (§14.5.1.2). Their subject corresponds to the experiencer of the perception/feeling caused by the stimulus. When used transitively, these verbs select the stimulus as object, like tropative verbs (§17.5): the intransitive subject of *sɣre* ‘be ridiculous’ and *sɣmts^hɣr* ‘be strange’ is the same entity as the object of *nɣre* ‘laugh at’ and *nɣmts^hɣr* ‘find strange’.

Table 20.4: Examples of the denominal *sɣ-* proprietary denominal prefix and corresponding *nɣ-* denominal verbs

Base Noun	<i>sɣ-</i> denominal (stimulus)	<i>nɣ-</i> denominal (experiencer)
<i>tx-ndɣɣ</i> ‘poison’	<i>sɣndɣɣ</i> ‘be poisonous’ (vi)	<i>nɣndɣɣ</i> ‘be poisoned’ (vi)
<i>tx-re</i> ‘laugh (n)’	<i>sɣre</i> ‘be ridiculous’ (vi)	<i>nɣre</i> ‘laugh’ (vi), ‘laugh at’ (vt)
<i>txmts^hɣr</i> ‘strange thing’	<i>sɣmts^hɣr</i> ‘be strange’ (vi)	<i>nɣmts^hɣr</i> ‘find strange’ (vt)
<i>rɣɣom</i> ‘outrage’, ‘vexation’	<i>sɣrɣɣom</i> ‘outrage’	<i>nurɣɣom</i> ‘be outraged’ (vt)
<i>tx-mbruu</i> ‘anger’	<i>sɣmbruu</i> ‘get angry’ (vi)	<i>nɣmbruu</i> ‘get angry with’ (vt)

The presence of the loanword *-mts^hɣr* from *མཚན་* *mts^har* ‘wondrous, strange’ among the verbs in Table 20.4 shows that both denominal derivations are productive.

The historical relationship between denominal *sɣ-* and *nɣ-* prefixes on the one hand, and propriative and tropative prefixes on the other hand, is explored in §20.10.2.

Propriative denominal verbs in *sɣ-* do not have tropative forms, and instead form the corresponding *nɣ-* denominal verb instead. For instance *sɣŋaβ* ‘be unpleasant’, ‘be embarrassing’ (21) lacks a tropative †*nɣ-sɣŋaβ*, and instead requires the corresponding transitive denominal tropative *nɣŋaβ* ‘consider to be unpleasant’, ‘be embarrassed by/to’ (22).

 ‘The demoness pretended to be to be embarrassed to say it for a long
 time.’ (28-smAnmi) {0004063#S40}

Example (21) also illustrates that some denominal verbs in *sɣ-* can select complement clauses as intransitive subjects. In those cases, the corresponding *nɣ-* denominal verbs are found with complement clauses as objects (22).

The verb *sɣŋaβ* ‘be unpleasant’ is also remarkable in that it appears as first element of a the nominal compound *sɣŋaβdi* ‘unpleasant smell’ (§5.5.6).

Some of the denominal verbs in *sɣ-* and *nɣ-* have semantic extensions that are not immediately predictable from the base verb. For instance, the denominal verbs from *tɣa* ‘visible’, ‘in the open’ are lexicalized: *sɣa* is used in the sense of ‘be accessible and safe’ (of roads, places), and *nɣa* is a stative verb meaning either ‘be completely visible’ or ‘not feel vertigo (while being in a steep place)’ (24).

- (23) *ts^hɣwɣre nuunu, aβɣnduɣt zo tce, u-jaβ-pa nuu wuma*

 cliff 3SG.POSS-on SENS-not.feel.vertigo
 ‘He does not feel vertigo on the cliff.’ (elicited)

The denominal verb *sɣmbɾu* ‘get angry’, which derives from the noun *tɣ-mbrɾu* ‘anger’ with the prefix *sɣ-*, differs from all propriative denominal verbs in Table 20.4 in that it selects as subject the experiencer rather than the stimulus, as shown by (25) with 2SG indexation. The verb used to express the corresponding propriative meaning is *sɣmbɾuŋgu* ‘be detestable’ (‘cause people to get angry’, a denominal incorporating verb, §20.13.1, §22.4.3.2). The corresponding transitive verb *nɣmbɾu* ‘get angry with’ is the functional applicative of *sɣmbɾu* ‘get angry’, as both verbs encode the same type of referent as subject.

- (25) *ma-tɣ-tw-sɣ-mbrɾu*
 NEG-IMP-2-DENOM:PROP-anger
 ‘Don’t get angry!’ (140425 shizi lang huli-zh)

Another unexplained irregularity of *sɣmbɾu* ‘get angry’ is the causative form *sɣzmbɾu* ‘anger’, with the causative *z-* infix between the denominal prefix and the nominal root (§17.2.2.7).

20.3.2 Causative/instrumental *sV-*

The sigmatic prefix *su(ɣ)-/sɣ-* has a causative ‘cause to be/have *X*’ or instrumental ‘use *X*’ denominal function. As illustrated in Table 20.5, most of the denominal verbs derived with this prefix are morphologically transitive, the only exceptions being *sɣweɟlu* ‘be left-handed’ (‘use the left hand’) and *sundzɯpe* ‘sit without crossing legs’.

The *su(ɣ)-/sɣ-* allomorphy of this denominal prefix has similarities with that of the sigmatic causative (§17.2.1). The allomorph *sɣ-* is selected when the base noun is an inalienably possessed noun selecting the *tɣ-* indefinite possessor prefix (such as *tɣ-k^hu* ‘smoke’) or with frozen *tɣ-* prefix (such as *tɣɣt* ‘comb’), *suy-/*

sux- occurs with monosyllabic nominal roots without cluster and uvular or velar onsets such as *ts^hab* ‘sieve’ (a context similar to that of the *su(y)-* allomorph of the sigmatic causative, §17.2.1.4), and *su-* is found in all other contexts, including inalienably possessed nouns selecting the *tu-* indefinite prefix (*tu-jabndzu* ‘finger’) and/or non-inalienably possessed nouns with initial clusters.

Table 20.5: Causative/Instrumental denominal verbs

Base noun	Denominal verb
<i>βejlu</i> ‘left-handed’	<i>suβejlu</i> ‘be left-handed’ (vi)
<i>ndzupe</i> ‘sitting position’ (without crossing legs)	<i>sundzupe</i> ‘sit without crossing legs’ (vi)
<i>tuqartsu</i> ‘kicking’	<i>suqartsu</i> ‘kick’ (vl)
<i>labrdyβ</i> ‘kicking with forelegs’	<i>suqartsu</i> ‘kick’ (with forelegs) (vl)
<i>tx-k^hu</i> ‘smoke’	<i>sxk^hu</i> ‘smoke’ (vt)
<i>tx-rmi</i> ‘name’	<i>sxrm</i> ‘give a name’ (vt)
<i>tx-yur</i> ‘fence’	<i>sxyur</i> ‘enclose’ (with a fence) (vt)
<i>txçxt</i> ‘comb’ (n)	<i>sxçxt</i> ‘comb’ (vt)
<i>txmcar</i> ‘tongs’	<i>sxmcar</i> ‘take with tongs’ (vt)
<i>txtšu</i> ‘lamp’	<i>sxtšu</i> ‘illuminate with a lamp’ (vt)
<i>tu-jabndzu</i> ‘finger’	<i>sujaabndzu</i> ‘point’ (with the finger) (vt)
<i>tu-çtši</i> ‘sweat’	<i>suçtši</i> ‘cause to sweat’ (vt)
<i>fsaŋ</i> ‘fumigation’	<i>sufsaŋ</i> ‘fumigate’ (vt)
<i>ts^hab</i> ‘sieve’ (n)	<i>suxts^hab</i> ‘sieve’ (vt)
<i>ts^hwi</i> ‘dye’ (n)	<i>suxts^hwi</i> ‘dye’ (vt)
<i>ftçaka</i> ‘method’	<i>sxftçaka</i> ‘prepare’ (vt)

Denominal verbs in *su(y)-/sx-* do not correspond to a single light verb construction. In the case of *sundzupe* ‘sit without crossing legs’, the denominal derivation has a meaning similar to that of the base noun *ndzupe* ‘sitting position of women on the ground, without crossing legs’ in collocations with the light verb *βzu* ‘make’ (§22.4.2.1) as in (26).

- (26) *te^heme nuu ky-kuu-γ<nuu>mdzu tce ndzupe ntsu*

 IPFV-INV-make PST.IPFV-be.needed
 ‘Women, when they sat, had to sit with both legs folded on one side,
 without crossing legs.’ (31-khAjmu) {0004079#S24}

With nouns expressing striking actions such as *tuuqartsu* ‘kicking’,⁶ *su-* derives labile verbs like *suqartsu* ‘kick’ (§14.5.1.2) corresponding to collocations with *lɛt* ‘release’ (§22.4.2.2).

Other verbs such as *suɛtɕi* ‘cause to sweat’ and *sɛrmi* ‘give a name’ (‘cause to be named’), have the same meanings as collocations of the base nouns with the verb *tɛɣt* ‘take out’, as shown by the pair (27a) and (27b) from the same story, and example (28).

 {0003640#S86}

The verb *sɛk^hu* can either mean ‘burn to make smoke’ (taking a noun such as *ɛɣɣ* ‘juniper’ as object) or ‘smoke out by directing smoke towards X’. In the second case, this verb is equivalent to the combination of the base noun *ɛɣ-k^hu* ‘smoke’ with the causative form *sux-ɛe* ‘send, cause to go’ as shown by example (29), where both the denominal *sɛk^hu* and the noun-verb collocation appear.

⁶The *tu-* prefix on *tuuqartsu* ‘kicking’ may either be a frozen possessor prefix, action nominal prefix or numeral ‘one’ prefix.

Other denominal verbs such as *sufsaŋ* ‘fumigate’ lack a corresponding light verb construction with the same meaning: although a construction combining the noun *fsaŋ* ‘fumigation’ and the verb *ta* ‘put’ exists (§22.4.2.6), it means ‘make fumigations’ and cannot take a patient like the object *k^hɣdaβ* ‘khatag’ in (30).

- (30) *k^hɣdaβ* *to-su-*fsaŋ** *q^he*, *c^hɣ-mqlaβ* *q^he*,
 Khatag IFR-DENOM:CAUS-fumigation LNK IFR-swallow LNK
 ‘She fumigated the khatag and swallowed it.’ (Gesar 2003)

The verb *sɣftɕaka* ‘prepare’ stands out among transitive verbs with a sigmatic denominal prefix in lacking the causative/instrumental meaning. The semantics of this denominal verb does not directly derive from that of the base noun *ftɕaka* ‘method’, but rather from the collocation *ftɕaka + βzu*, one of whose meanings is ‘prepare’ (§24.6.3.1, Jacques 2016a: 240). The semantic near-identity between *sɣftɕaka* and *ftɕaka + βzu* is illustrated by the examples (31) and (32). Other denominal verbs derived from *ftɕaka* have the same meaning ‘prepare’ §20.4.3.

- (31) *u-ndzɣts^hi* *nw* *ku-mu~mu* *zo* *tu-sɣftɕake* *q^he*

 1PL.POSS-meal manner IMP-make[III]
 ‘Prepare a meal for us!’ (meimeidegushi)

The *sɣ-* denominal derivation is productive, as shown by the presence of several words of Tibetan origin in Table 20.5, including *tɣɕɿt* ‘comb’, *fsaŋ* ‘fumigation’, *ts^haβ* ‘sieve’, *ts^hwi* ‘dye’ and *ftɕaka* ‘method’ from བཏེ་ *ɕad* ‘comb’, བསང་ *bsaŋ* ‘fumigation’, ཚལས་ *ts^hags* ‘sieve’, ཚལ་ *ts^hos* ‘dye’ and བཟའ་ཀྱ་ *bca.ka* ‘tool’, respectively.

Unlike other denominal prefixes such as *nu-/nr-*, which can be paired with other prefixes (§20.7.3), verbs derived by the *su(y)-/sr-* generally don't appear in sets. The groups of denominal verbs including a transitive *sV-* prefix are all different from each other. There is one case of *sr-/ɣr-/nr-* contrast between *srk^hu* 'smoke' (by directing smoke towards), 'burn into smoke' (see 29 above) and the intransitive verbs *ɣrk^hu* 'be smoky' with the *ɣr-* prefix (example 44, §20.5) and *nrk^hu* 'be smoked' (§20.7.1). Another group of denominal verbs comprising *sr-ftɕaka* 'prepare' with a contrast between *sr-*, *ru-* and *nu-* is discussed in §20.4.3.

The verb *sxrmi* 'give a name' (§14.4.4) could be analyzed as an irregular causative of *rmi* 'be called' (§17.2.2.7), but the vocalism of the prefix is better accounted for by analyzing it instead as a denominal verb from the noun *tr-rmi* 'name', which may itself originate from the base verb *rmi* 'be called'.

The historical relationship between the sigmatic causative and the denominal *su-* prefix is explored in more detail in §20.10.3. Another related derivation is that of the *sr-* transitive deideophonic verbs (§20.9.1).

20.4 Rhotic denominal prefixes

The *ru-/rx-* prefix is among the most productive denominal prefixes in Japhug, and has a wide range of meanings. Although not used in deideophonic derivations, it is used to borrow verbs and adjectives from Chinese (§20.11).

20.4.1 Intransitive denominal verbs

The *ru-/rx-* denominal prefix is mainly used to derive intransitive verbs, of which Table 20.6 provides a representative sample.

With the exception of adjectives from Chinese (§20.11), denominal verbs in *ru-/rx-* are dynamic, and have three main meanings.

First, they can mean 'produce/grow/get *X*' when the base noun corresponds to a part of the referent designated by the subject of the denominal verb (for instance *rxjwax* 'grow leaves' from *tr-jwax* 'leaf'), or an excrescence/offspring growing out of it. The intransitive subjects of such verbs are typically plants, inanimate objects (including body parts), but also humans or animals with meanings such as 'give birth to *X*' (for instance *rxrjit* 'have a child' from *tr-rjit* 'child').

These denominal verbs have meanings similar to collocations involving several light verbs. For instance, *rxjwax* 'grow leaves' and *rxmat* 'grow fruits' are synonymous with complex predicates comprising their base nouns *tr-jwax* 'leaf' and *u-mat* 'fruit' combined with the light verbs *lxɿ* 'release' and *βzu* 'make', as

Table 20.6: Intransitive denominal verbs in *ru-*/*ry-*

Base noun	Denominal verb
<i>muntob</i> ‘flower’	<i>rumuntob</i> ‘bloom’
<i>kuɕnom</i> ‘ears’ (of corn)	<i>rukuɕnom</i> ‘shoot out into ears’
<i>qaju</i> ‘worm’	<i>ruqaju</i> ‘get worms’
<i>ɕom</i> ‘milk skin’	<i>ryɕom</i> ‘form (of milk skin)’
<i>tx-jwab</i> ‘leaf’	<i>ryjwab</i> ‘grow leaves’
<i>u-mat</i> ‘fruit’	<i>rymat</i> ‘grow fruits’
<i>tx-spu</i> ‘pus’	<i>ryspu</i> ‘fester’, ‘have pus’
<i>u-cxβ</i> ‘pod’ (of beans)	<i>rycxβ</i> ‘grow pods’
<i>txrka</i> ‘twins’	<i>ryrka</i> ‘have twins’
<i>tx-puu</i> ‘offspring, young’ (of animal)	<i>rypu</i> ‘have young’
<i>tx-rjit</i> ‘child’	<i>ryrjit</i> ‘have a child’
<i>k^ha</i> ‘house’	<i>ryk^ha</i> ‘build a house’
<i>(yzy-)-zga</i> ‘honey’	<i>ryzga</i> ‘make honey’, ‘gather pollen’
<i>juli</i> ‘flute’	<i>rujuli</i> ‘play the flute’
<i>u-stu</i> ‘truth, truly’	<i>rystu</i> ‘be truthful’
<i>k^hramba</i> ‘lie’	<i>rुक^hramba</i> ‘tell lies’
<i>k^hycxl</i> ‘discussion’ (n)	<i>rुक^hycxl</i> ‘chat’
<i>ndzxts^hi</i> ‘meal’	<i>rundzxts^hi</i> ‘have a meal’
<i>jyγxt</i> ‘terrace’, ‘toilet’	<i>rujyγxt</i> ‘go to the toilet’
<i>ɕoŋβzu</i> ‘woodwork’	<i>ruɕoŋβzu</i> ‘do woodwork’
<i>qartsxβ</i> ‘harvest’	<i>ruqartsxβ</i> ‘do harvesting’
<i>skyrwa</i> ‘circumambulation’	<i>ruskyrwa</i> ‘do circumambulations’
<i>xpuun</i> ‘monk’	<i>ryxpuun</i> ‘become a monk’
<i>ftɕaka</i> ‘method’	<i>ruftɕaka</i> ‘do preparation’
<i>tu-ɕmi</i> ‘word’	<i>ruɕmi</i> ‘speak’
<i>tu-jroβ</i> ‘trace’	<i>ryjroβ</i> ‘leaving traces’
<i>tusqa</i> ‘wheat gruel’	<i>rutusqa</i> ‘eat wheat gruel’
<i>tufcɔr</i> ‘pottery’	<i>ryfcɔr</i> ‘do pottery’
<i>tukryz</i> ‘discussion’	<i>rykryz</i> ‘have a discussion’
<i>tx-loβ</i> ‘nest’	<i>ryloβ</i> ‘make a nest’
<i>ta-ma</i> ‘work’ (n)	<i>ryma</i> ‘work’

shown in (33). Additional examples of denominal verbs belonging to this category that are synonymous with complex predicates in βzu ‘make’ are discussed in §20.1.2.

- (33) *nui* [*u-jwaʁ* *ɲu-lɪt*] *tcendɻe* [*u-mat* *ɲu-βze*]

 ‘[The Zanthoxylum] makes leaves and grows fruits.’ (07-tCGom)
 {0003434#S21}

Second, a related meaning of the *ru-/rɻ-* denominal prefix is ‘build *X*’, when the product of the action results from a volitional action and is separate from the body of the agent, encoded as intransitive subject. Denominal verbs of this type, such as *rɻloʁ* ‘make a nest’ and *rɻk^ha* ‘build a house’, systematically correspond to complex predicates with the verb βzu ‘make’, such as *k^ha + βzu* ‘build a house’ and *rɻ-loʁ + βzu* ‘make a nest’. These constructions select human or animal subjects.

Third, when the base noun refers to an activity rather than an object, the meaning of the *ru-/rɻ-* denominal verb is ‘do *X*, perform a *X*’. There are two types of complex predicates corresponding to this subtype of denominal verbs.

On the one hand, as in the previous subtypes, verbs such as *rɻk^hramba* ‘tell lies’ (from *k^hramba* ‘lie’) or *rɻkrɻz* ‘have a discussion’ (from *tɻkrɻz* ‘discussion’), *rustunmu* ‘marry’ (from *stunmu* ‘marriage’)⁷ are synonymous with constructions in βzu ‘make’, *k^hramba + βzu* and *tɻkrɻz + βzu*, respectively.

On the other hand, verbs such as *rɻskɻrwa* ‘do circumambulations’ (from *skɻrwa* ‘circumambulation’) and *rɻjɻɻɻt* ‘go to the toilet’ (from *jɻɻɻt* ‘terrace’, ‘toilet’) instead correspond to collocations with the motion verb *ʁe* ‘go’ (§22.4.1.1).

Third, in a few cases such as *rɻjɻli* ‘play the flute’ (from *jɻli* ‘flute’), the meaning of the denominal derivation is ‘use *X*’, and the corresponding complex predicate selects the light verb *lɻt* ‘release’ (*jɻli + lɻt* ‘play the flute’, see 151, §15.1.5.8).

Fourth, *ru-/rɻ-* denominal verbs from nouns of profession can have the meaning ‘become *X*’, for instance in the case of *rɻɻɻpun* ‘become a monk’ from *ɻɻpun* ‘monk’. The corresponding complex predicate involves the transitive verb *ndo* ‘take’ (§22.4.2.4). Most nouns of this type however take the intransitive denominal *nui-* to derive a verb with this meaning (§20.7.1).

In addition to nouns, the *ru-/rɻ-* denominal derivations also takes as input lexicalized nominalized verb forms. For example, the lexicalized participles *kuŋu* ‘right thing’ and *ku-maʁ* ‘bad thing’ (from the subject participles *ku-ŋu* ‘the one that is’ and *ku-maʁ* ‘the one that is not’, §16.1.1.7) take the *ru-* denominal prefix to

⁷Tibetan loanwords are common in this category; the three base nouns in the examples given here come from ལྷ་རྩལ་ *k^hram.ba* ‘liar’, གྲོས་ *gros* ‘discussion’ and སོན་མོ་ *ston.mo* ‘banquet’, respectively.

form the verbs *rukunju* ‘do the right thing’, ‘take good care of one’s family’ and *rukumas* ‘do bad things’, respectively.⁸ Another example is *rutusqa* ‘eat wheat gruel’, discussed in more details in §16.4.4 and §20.1.1.

The *ru-/rx-* prefix also has a deadverbial function, as in the case of *ruwlywur* ‘happen suddenly’ which comes from the adverb *lywur* ‘suddenly’ (itself borrowed from *ᑭᑭᑭᑭᑭᑭ* *glo.bur* ‘sudden’). This verb expresses an action taking place spontaneously as in (34), as opposed to that expressed by the corresponding *nu-*verb *nuwlywur* ‘do suddenly’ (§20.7.1).

- (34) *k^hyrum nuunuu, tu-mte^{hi} uu-taḅ zmbḅr*

 ‘[The disease called] *k^hyrum* is an ulcer which appears on the mouth. It happens very suddenly.’ (25-khArWm) {0003644#S2}

20.4.2 Transitive denominal verbs

Transitive denominal verbs in *rx-* are also attested, but are considerably rarer. Table 20.7 presents most attested examples.

Table 20.7: Transitive denominal verbs in *ru-/rx-*

Base noun	Denominal verb
<i>tu-tya</i> ‘one span’	<i>rxtya</i> ‘measure by handspan’
<i>tu-jom</i> ‘one fathom’	<i>rxjom</i> ‘measure by fathom’
<i>tu-γdxt</i> ‘one section’	<i>rxγdxt</i> ‘cut into sections’
<i>tu-rzuuy</i> ‘one section’,	<i>rxrzuuy</i> ‘cut into sections’
<i>tu-txrzuuy</i> ‘one section’	
<i>tu-spra</i> ‘one handful’	<i>rxspra</i> ‘take a handful of’
<i>u-p^{hu}</i> ‘price’	<i>rxp^{hu}</i> ‘give a price for’
<i>u-nqra</i> ‘broken one’	<i>rxnqra</i> ‘do in an incomplete way’

Most transitive denominal verbs in *rx-* take counted nouns (§7.3) as input. Three different meanings can be distinguished. First, *rx-* denominal verbs from

⁸The corresponding complex predicate selects the verb *nyma* ‘do’, see 44 in §16.1.1.7.

counted noun expressing units of lengths (see Table 7.11, §7.4) mean ‘measure by *X*’, as in the case of *rxtya* ‘measure by handspan’ (35).

- (35) *t^hystuy ku-ra nuu c^hú-wy-rx-tya*
 how.much SBJ:PCP-be.needed DEM IPFV:DOWNSTREAM-DENOM-handspan
 ‘One measures how long [the clothes have to be weaved] by handspan.’
 (vid-20140429092115)

Second, when the base noun has the meaning ‘(one) section’, the *rx*-denominal verb derived from it means ‘cut/turn into *X*’, like corresponding complex predicates with either *lyt* ‘release’, *βzu* ‘make’ or the causative *suxce* ‘send’, ‘cause to go’. Example (36) illustrates the parallel uses of the denominal verb *rxrzuy* ‘cut into sections’ and the complex predicate *X-rzuy + lyt*. Emphatic reduplication on the verb *pjŷ-wy-rx-rzuu~rzuy* contributes to express the fact that the patient is cut into more than two sections.

- (36) *pjŷ-wy-rx-rzuu~rzuy tce kuβde-rzuy zo tó-wy-lyt,*

pjŷ-wy-sat.
 IFR-INV-kill
 ‘[The thief] killed him by cutting him into four pieces.’ (140512 alibaba-zh)
 {0003965#S109}

Third, in the case of the counted noun *tu-spra* ‘one handful’ which refers to the volume contained in a handful, the denominal verb means ‘take a handful of’, ‘hold in one hand’ as in (37).

- (37) *u-juu, u-sx-ndo [tu-jab ku*

 IPFV-INV-peel/sharpen
 ‘One sharpens its handle until it can be held in one’s hand.’
 (13-tAsAsqAri) {0003496#S21}

There are two transitive denominal verbs in *rx*- that are not derived from counted nouns: *rxp^hu* ‘give a price for’ from the inalienably possessed noun *u-p^hu* ‘price’ and *rxnqra* ‘do in an incomplete way’ from the property noun *u-nqra*

The additional object argument of the *nV*- verb which can be a noun phrase as in (39), with a *figura etymologica* *u-ma + nɣma* ‘do *X*’s work’ in (40).

- (39) *k^ha nura ɲu-nɣ-me.*
 house DEM:PL SENS-DENOM:TR-work[III]

 3SG ERG king 3SG.POSS-work IPFV-DENOM:TR-work[III]
 ‘He did the work of a king.’ (2003 qachGa) {0003372#S196}

In the case of other verbs pairs such as *rɣkɣɣz* ‘have a discussion’ and *nukɣɣz* ‘discuss’ (something), the object of the *nV*- verb is an infinitive complement clause, as in (41). In some cases the transitive verb *nukɣɣz* has the additional meaning ‘discuss and decide that *X*’.

- (41) *k^hu c^hondɣre mbro ni to-rɣ-kɣɣz-ndzi.* [...] [*...*]
 tiger COMIT horse DU IFR-DENOM:INTR-discussion-DU

 ‘The tigress and the mare had a discussion, they discussed how long it
 would take for the child to be born after one gets pregnant.’ (20-tArka)
 {0003566#S33}

The relationship between the *rV*- and the *nV*- verbs is functionally similar to a base verb and its applicative counterpart, or to an antipassive verb and its corresponding base verb (§18.6.8.5, §20.7.3). The high degree of productivity of this type of denominal pair is shown by the presence not only of Tibetan loanwords among the examples, but also of loanwords from Chinese such as *ruk^hɣɣxiwi* ‘have a meeting’ and *nuk^hɣɣxiwi* ‘meet about’ (from 开会 <kāihui> ‘have a meeting’, §20.11).

The semantics of the verbs *ruftɕaka* ‘do preparation’ and *nuftɕaka* ‘prepare’, like that of *syftɕaka* ‘prepare’ (§20.3.2), derives from the collocation *ftɕaka + βzu* ‘prepare *X*, prepare to *X*’ (the other meanings of this collocation are discussed in Jacques 2016a: 240, §16.2.1.5 and §16.2.1.2) rather than from the noun *ftɕaka* ‘method’ itself. Both *nuftɕaka* and *ftɕaka + βzu* can occur with infinitival complement clauses (42) or nouns (32 in §20.3.2) as objects. The intransitive *ruftɕaka* occurs as the functional antipassive counterpart of both *nuftɕaka* and *syftɕaka*.

- (42) *li kɣ-tɣβ kú-wɣ-nu-ftɕaka ra [...]*

 ‘(After...), one has to prepare the threshing, the men prepare to thresh
 [the crops].’ (2010-10)

20.5 Velar denominal prefixes

The *ɣɣ-* denominal prefix (and its rarer variant *ɣu-* has a considerable variety of meanings, and can be used to derive both transitive and intransitive verbs. It is commonly paired with *nu-/nɣ-* (§20.5.3). In addition, it is among the denominal prefixes used to borrow adjectives from Chinese (§20.11) and to build incorporating verbs (§20.13).

20.5.1 Intransitive denominal verbs

The *ɣɣ-* prefix can derive several types of intransitive verbs, of which Table 20.9 lists a representative sample.

Some *ɣɣ-* denominal verbs are stative proprietive, like those in *ayu-* (§20.2.4), such as *ɣɣrcob* ‘be muddy’ from *tɣrcob* ‘mud’. The base nouns can be inalienably possessed nouns, nouns with a frozen *tɣ-* prefix, alienably possessed nouns (such as *rdul* ‘dust’) and also property nouns (such as *u-jlu* ‘uncooked’, §5.3). The only example of a Tibetan loanword among these nouns is *rdul* ‘dust’ (from ξ^{24} *rdul* ‘dust’). Unlike *ayu-*, the *ɣɣ-* prefix can derive verbs from abstract nouns, such as *ɣɣndzo* ‘be cold’ from *tɣndzo* ‘cold weather’.

Different nouns belonging to the same semantic categories do not necessarily select the same denominal prefix. For instance, the inalienably possessed noun *u-duɣɣun* ‘fragrance’ is the base for the denominal verb *ayuduɣɣun* ‘be fragrant’ with the *ayu-* prefix, while the noun *tɣ-di* ‘smell’ (from which *u-duɣɣun* ‘fragrance’ is derived) takes the *ɣɣ-* denominal prefix (*ɣɣdi* ‘have a smell’, ‘stink’). Similarly, while most denominal verbs expressing physical defects are built with the *a-* prefix (§20.2.1), the verb *ɣɣmbyo* ‘be deaf’ (from *tɣmbyo* ‘deaf person’) has the *ɣɣ-* prefix.

The meaning of the *ɣɣ-* prefix is slightly different from that of *ayu-*. Some nouns can take both prefixes, such as *tɣ-mdzu* ‘thorn’, which is the base for two denominal verbs: *ayumdzu* ‘have a lot of thorns’ (see the Japhug definition of this verb in 11, §20.2.4) and *ɣɣmdzu* ‘have thorns’.

Table 20.9: Intransitive denominal verbs in *γuu-/γx-*

Base noun	Denominal verb
<i>rduul</i> ‘dust’	<i>γxrdul</i> ‘be dusty’
<i>txrcov</i> ‘mud’	<i>γxrcov</i> ‘be muddy’
<i>txmbyo</i> ‘deaf person’	<i>γxmbyo</i> ‘be deaf’
<i>txndzo</i> ‘cold’ (weather)	<i>γxndzo</i> ‘be cold’ (of weather)
<i>txcu</i> ‘coolness’	<i>γxcu</i> ‘be cool’ (of a place)
<i>uu-βre</i> ‘authority’	<i>γxβre</i> ‘be respected’ (of a person)
<i>uu-jlu</i> ‘uncooked’	<i>γxjlu</i> ‘be uncooked’
<i>tx-di</i> ‘smell’ (n)	<i>γxdi</i> ‘have a smell’, ‘stink’
<i>tx-mdzu</i> ‘thorn’	<i>γxmdzu</i> ‘have thorns’
<i>tx-tcuuy</i> ‘tree shoot’	<i>γxtcuuy</i> ‘grow shoots’ (of trees)
<i>tuu-tca</i> ‘mistake’	<i>γxtca</i> ‘be wrong’
<i>tx-k^huu</i> ‘smoke’	<i>γxk^huu</i> ‘be smoky’
<i>tx-tsur</i> ‘crack’	<i>γxtsur</i> ‘have cracks’, ‘develop cracks’
<i>txwu</i> ‘cry’ (n)	<i>γxwu</i> ‘cry’ (vi)
<i>txxβav</i> ‘game’ (n)	<i>γxβav</i> ‘hunt’ (vi)
<i>coηtca</i> ‘timber’	<i>γucoηtca</i> ‘chop timber’

The *ayuu-* denominal prefix indicates the presence of an important quantity of the substance or entity referred to by the base noun (‘have a lot of *X*’ or ‘produce a lot of *X*’), while *γx-* prefix rather can be simply glossed as ‘have *X*’, without specification of quantity, as shown by the definition in (43).

- (43) *γuu-γx-mdzu* *tce tx-mdzu* *γxzu* *kx-ti*
 SENS-DENOM:PROP-thorn LNK INDEF.POSS-thorn exist:SENS OBJ:PCP-say
ηu *ma ku-dyn* *mx-ku-dyn* *nwra mav*
 be:FACT LNK SBJ:PCP-be.a.lot NEG-SBJ:PCP-be.a.lot DEM:PL not.be:FACT
 ‘[The word] *γuu-γx-mdzu* means ‘it has thorns’, it does not [specify whether] there are many or not.’ (elicited)

Another meaning of the *γx-* prefix is ‘from which *X* comes out, emitting *X*’. For instance *γxrdul* ‘be dusty’ has the specific meaning ‘emitting dust’ (of a dusty road) rather than ‘be covered in dust’ (see §20.5.3). The verb *γxk^huu* (from *tx-k^huu* ‘smoke’) has two different meanings: ‘be smoky’ (of a place) or ‘have smoke coming out’ (44).

- (44) *k^ha* *ɲu-ɣɣ-k^hu-nu*
 house SENS-DENOM-smoke-PL
 ‘There is smoke coming out from their house.’ (2012 Norbzang)
 {0003768#S194}

Among these verbs, *ɣɣtɕa* ‘be wrong’ is one of the few intransitive verbs that can be reflexivized with the *ɣɣɣ-* prefix (§18.3.1.4), with a reflexive tropative meaning *ɣɣɣɣtɕa* ‘recognize one’s mistake’.

Some *ɣɣ-* denominal verbs are clearly dynamic verbs. For instance, the denominal *ɣɣtsur* ‘have cracks’ (45a) has the same meaning as the collocation combining the base noun *tu-tsurr* ‘crack’ with the verb *ɕe* ‘go’ (45b).

- (45) a. *u-rnom-ɕɣru* *lo-ɣɣ-tsur*
 3SG.POSS-rib-bone IFR:UPSTREAM-DENOM-crack
 b. *u-rnom-ɕɣru* *ɣu u-tsurr* *lo-ɕe*
 3SG.POSS-rib-bone GEN 3SG.POSS-crack IFR:UPSTREAM-go
 ‘His ribs got fractured.’ (elicited)

Some of the dynamic intransitive denominal verbs in *ɣɣ-* such as *ɣɣtsur* ‘have cracks’ and *ɣɣwu* ‘cry’ have patientive intransitive subjects, but a few other verbs such as *ɣɣɣɣɣ* ‘hunt’ and *ɣuɕoɣtɕa* ‘chop timber’ have agentive subjects like the transitive denominal *ɣu-/ɣɣ-* verbs treated in the following section.

The intransitive deideophonic *ɣɣ-* prefix (§20.9.1) is probably historically related to the *ɣɣ-* intransitive denominal prefix.

20.5.2 Transitive denominal verbs

The *ɣu-/ɣɣ-* prefix can also derive transitive verbs, either from inalienably possessed nouns or counted nouns (see Table 20.9). The correlation between the vocalism of the indefinite possessor prefix *tu-/tu-* and that of the denominal prefix *ɣu-/ɣɣ-* is less consistent than for other derivations.

The verb *ɣɣɣpra* ‘dispatch’ has the unique allomorph *ɣɣɣ-* with an intrusive velar fricative *-x-* like some voice derivations (§17.2.1.4), even though this is not found in the base noun *tuɣpra* ‘messenger’ and the other denominal verb *ɣɣpra* ‘be dispatched’ (§20.5.3).

When the base noun refers to a concrete object, the corresponding *ɣu-/ɣɣ-* denominal verb expresses the action prototypically associated with the use of that object, for instance *ɣuri* ‘thread’ (pass a thread through beads/a needle’s eye) from *tu-ri* ‘thread’.

Table 20.10: Intransitive denominal verbs in *yu-/yɣ-*

Base noun	Denominal verb
<i>tx-ri</i> ‘thread’ (n)	<i>yuri</i> ‘thread’ (vt) (beads, needle)
<i>tx-fkum</i> ‘bag’	<i>yufkum</i> ‘put in a bag’
<i>txjtsi</i> ‘pillar’, ‘post’	<i>yujtsi</i> ‘support’ (as a pillar supporting the roof)
<i>tu-lɣn</i> ‘answer’ (n)	<i>yulɣn</i> ‘answer’ (vt)
<i>tu-tɕ^ha</i> ‘information, news’	<i>yutɕ^ha</i> ‘answer’ (vt) (to someone)
<i>tu-scur</i> ‘a double handful’	<i>yuscur</i> ‘hold with both hands’
<i>tu-ɕkat</i> ‘one load’	<i>yuɕkat</i> ‘load’ (a burden on an animal)
<i>tu-jmŋo</i> ‘dream’ (n)	<i>yɣjmŋo</i> ‘dream of’
<i>txpra</i> ‘messenger’, ‘envoy’	<i>yɣxpɾa</i> ‘dispatch’ (someone)
<i>u-txju</i> ‘addition’ (§25.6.2.3)	<i>yɣju</i> ‘add’
<i>tx-ro</i> ‘surplus, leftover’	<i>yɣro</i> ‘add’, ‘do/give more’

Denominal verbs in *yu-/yɣ-* have meanings that are close to those of highly lexically-specific noun-verb collocations, and the correspondences between the argument structures of the denominal verbs and those of the corresponding collocations are not uniform.

For instance, the verb *yutɕ^ha* ‘answer’ is semantically close to the complex predicate involving the base noun *tu-tɕ^ha* ‘information, news’ and the ditransitive verb *k^ho* ‘give’, and the recipient (person who receives an answer to his message) is encoded as the possessor of the inalienably possessed noun *tu-tɕ^ha* in the collocation (49, §5.1.2.13), and as direct object of the denominal *yutɕ^ha*. However, the possessor of the base noun does not necessarily always correspond to the object of the *yu-/yɣ-* denominal verb. For example, in the case of the transitive verb *yɣjmŋo* ‘dream of’ and its near-synonymous collocation *tu-jmŋo* + *ntɕ^hɣr* ‘appear in X’s dream’ (from *tu-jmŋo* ‘dream’ with the intransitive verb *ntɕ^hɣr* ‘appear’), the possessor of the base noun *tu-jmŋo* encodes the experiencer (the person dreaming), corresponding to the *transitive subject* of *yɣjmŋo* as in (46).

- (46) [azo [...] *qarts^{hi} ɲɣ-k-xpa-a-ci*] *pu-yɣ-jmŋo-t-a*
 1SG cricket IFR-PEG-become-1SG-PEG AOR-DENOM-dream-PST:TR-1SG
 ‘I dreamed that I had become a cricket.’ (150904 cuzhi-zh) {0006322#S178}

Some transitive *yuu-* denominal verbs can be subjected to the *a-* passive derivation (§18.1). The resulting verbs, for instance *ayučkat* ‘be loaded with’ (47), superficially resemble *ayuu-* proprietive denominal verbs (§20.2.4), and it is possible that the *ayuu-* derivation originates from a combination of the passive with the transitive denominal *yuu-*.

- (47) *ki* *tyrka ki* *tyr-ryku* *a-yuu-ckat*
 DEM.PROX mule DEM.PROX INDEF.POSS-CROP PASS-DENOM-LOAD:FACT
 ‘This mule has been loaded with (burdens containing) crops.’ (elicited)

The *γr-/yuu-* denominal prefix is cognate with Tshobdun *wɔ-*, for instance *wɔ-ri?* ‘thread a needle’ from *ri?* ‘thread’, (Sun 2014a), which exactly corresponds to Japhug *yuri* ‘thread’.

20.5.3 Pairing with other denominal prefixes

A considerable number of nouns can take both *yuu-/γr-* and *nuu-/nr-* denominal prefixes. Table 20.11 presents a list of pairs of denominal verbs derived with these prefixes; the base nouns are not included in this table for lack of space, but are indicated in Tables 20.9 and 20.10 above.

These pairs can be classified into three groups, depending on the transitivity of the verbs and the semantic correspondences between them.

Table 20.11: Pairs of denominal verbs in *yuu-/γr-* and *nuu-/nr-*

<i>yuu-/γr-</i> denominal verbs	<i>nuu-/nr-</i> denominal verbs
<i>γyndzo</i> ‘be cold’ (of weather) (vi)	<i>nrndzo</i> ‘feel cold’ (vi)
<i>γrɕu</i> ‘be cool’, ‘be shady’ (vi)	<i>nrɕu</i> ‘cool off’ (vi) (in the shades)
<i>γrk^hu</i> ‘be smoky’ (vi)	<i>nrk^hu</i> ‘be smoked’ (vi)
<i>γrdul</i> ‘be dusty’ (vi) ‘emit dust’	<i>nurdul</i> ‘be dusty’ (vi) ‘becovered in dust’
<i>γrwu</i> ‘cry’ (vi)	<i>nrwu</i> ‘cry for’ (vt)
<i>γrɔɔɔ</i> ‘hunt’ (vi)	<i>nrɔɔɔ</i> ‘hunt for’ (vt)
<i>γrxpra</i> ‘dispatch’ (vt)	<i>nrpra</i> ‘be dispatched’ (vi)
<i>γymŋo</i> ‘dream of’ (vt)	<i>nuymŋo</i> ‘appear in dream’ (vi)
<i>yučkat</i> ‘load’ (vt) (a burden on an animal)	<i>nučkat</i> ‘carry loads’ (vi) (on animals)

First, we find pairs of intransitive verbs, where the *γu-/γx-* verb expresses either a property associated with a place ('have *X*', 'emitting *X*'), or with a dummy intransitive subject (*γyndzo* 'be cold'), while the *nu-/nx-* denominal verbs takes as subject an experiencer (*nyndzo* 'feel cold').

In the case of the pair of intransitive verbs *γxrduul* and *murduul* (from *rdul* 'dust') however, the subject of *murduul* is not an experiencer, the semantic difference between the two verbs being explained in (48).

- (48) *ku-γx-rduul* *nu, uzo u-taβ* *rdul*

 'ku-γx-rduul means that dust is coming up from it, and ku-nu-rduul means that dust is attached on it.' (elicited definition)

Second, there are cases in which the *γu-/γx-* denominal verb is intransitive, and the corresponding *nu-/nx-* verb is transitive, such as *γrwu* 'cry' and *nxwu* 'cry for'. The transitive subject of the *nu-/nx-* verb corresponds to the same entity as the intransitive subject of its counterpart in *γu-/γx-*, and has the same functional relationship to it as an applicative derivation (§17.4) to its base verb, as the object of the transitive verb in *nu-/nx-* expresses a patientive argument.

Third, the opposite situation, with transitive denominal verbs in *γu-/γx-* and intransitive verbs in *nu-/nx-*, is also attested. These are passive-like configurations, where the subject of the intransitive verb corresponds to the object of its transitive counterpart (as in *γxpra* 'dispatch' / *nxpra* 'be dispatched'), and antipassive-like configurations, where the subjects of both verbs are the same (*γuɕkat* 'load' / *nuɕkat* 'carry loads').

20.6 Labial nasal denominal prefixes

The most common function of the *mɣ-* denominal prefix to derive intransitive verbs of relative location from locative relator nouns (§8.3.4.2), as illustrated in Table 20.12. Note the presence of Tibetan loanwords in this list, including *u-pɕi* 'outside' and *u-χɕɣɿ* 'center' from མཉེ *p^{hi}* 'outside' and འཇུམ་ *dk^{hi}* 'center', a fact that demonstrates the productivity of this derivation.¹⁰

¹⁰The first syllable of *u-pɣrt^hɣβ* 'between' is also borrowed from བར *bar* 'space between'.

Table 20.12: Denominal verbs of location in *mɣ*-

Base noun	Denominal verb
<i>tu-ku</i> ‘head’, <i>u-ku</i> ‘top of’	<i>mɣku</i> ‘be first’
<i>u-q^hu</i> ‘after, behind’	<i>maq^hu</i> ‘be after’
<i>u-pɛi</i> ‘outside’	<i>mɣpɛi</i> ‘be outside’
<i>u-ŋgu</i> ‘inside’	<i>mɣŋgu</i> ‘be inside’
<i>u-χcɣl</i> ‘center’	<i>mɣχcɣl</i> ‘be in the center’
<i>u-pɣrt^hɣβ</i> ‘between’	<i>mɣpɣrt^hɣβ</i> ‘be in the middle’

The *mɣ*- denominal prefix is possibly related to the *maŋ*- prefix which derives verbs of relative locations from locational adverbs, for instance *maŋlo* ‘be upstream’ from *lo* ‘upstream’ (§15.1.3.4).

In addition to their semantic similarity, verbs of location in *mɣ*- and *maŋ*- have in common the fact that they are among the very few intransitive verbs that can be reflexivized (§18.3.1.4): *ɣɣ*- prefixation yields volitional motion verbs such as *ɣɣmɣpɣrt^hɣβ* ‘put oneself in between’ or *ɣɣmaŋlo* ‘put oneself upstream’, from *mɣpɣrt^hɣβ* ‘be in the middle’ and *maŋlo* ‘be upstream’.

The causativization of *mɣ*- denominal verbs has several outcomes. With *mɣku* ‘be first’ and *maq^hu* ‘be after’, which can have temporal meanings (§7.1.5), the sigmatic causative forms *z-mɣku* and *z-maq^hu* generally mean ‘do first’ or ‘do after/ later’ with complement clauses as in (49) (see also examples 30, §17.2.4.6 and 205 §18.9.1).

- (49) *sulɣmɣruβdɣn ku* [*u-t^hu*] *tɣ-tu-z-mɣku-t*
 ANTHR ERG 3SG.POSS-BARE.INF:ask AOR-2-CAUS-be.first-PST:TR
ŋu tce
 be:FACT LNK
 ‘Bsod.nam sgrub.lɔn, you were the first to ask [her hand in marriage].’
 (sras 2003)

The causative *z-maq^hu* also has the straightforward causative meaning ‘cause to be late, delay’ (examples 51, §14.3.2.4 and 75, §14.3.3.1).

With other verbs, for which a temporal interpretation is not possible, the causative derivation means ‘put in *X*’, where *X* corresponds to the relator noun. For instance, *z-mɣŋgu* and *z-mɣpɛi* occur in the sense of ‘wear (some clothes) inside’ and ‘wear outside’. In addition, *z-mɣpɛi* can be used in the metaphorical sense of ‘treat as a stranger’.

In addition to generating verbs of relative location, the denominal *mu-* and *mɣ-* prefixes are also attested with other functions, illustrated by the examples in Table 20.13.

Table 20.13: Other denominal verbs in *mu-/mɣ-*

Base noun	Denominal verb
<i>-sti</i> ‘alone’	<i>musti</i> ‘be alone’
<i>tu-lum</i> ‘size’, ‘dimensions’	<i>mɣlum</i> ‘be big in size’
<i>tx-mu</i> ‘mother’	<i>mɣmu</i> ‘be the most important’
<i>tx-rʒaβ</i> ‘wife’	<i>mɣrʒaβ</i> ‘marry’ (of a girl)
<i>tx-tɕu</i> ‘son’	<i>mɣtɕu</i> ‘be adopted as a son’
<i>tu-rpaβ</i> ‘shoulder’	<i>mɣrpaβ</i> ‘carry on the shoulder’

First, they derive stative intransitive verbs of quantity or size such a *mɣlum* ‘be big in size’ from *tu-lum* ‘size’. Most of the examples in this category are highly lexicalized: *musti* ‘be alone’ derives from the stem *-sti* ‘alone’ which is only used in the Kamnyu dialect in compounds with pronouns as first element (§22.2.2.4) or as the reduplicated adverb *stusti* ‘alone’, and *mɣmu* ‘be the most important’, is presumably derived from *tx-mu* ‘mother’, though not by a direct semantic change.

To these examples, it is possible to add *mɣmbur* ‘protruding’, which probably comes from a lost noun **mbur* borrowed from Tibetan འབྲས་ *bur* ‘bulge, protuberance’, and *muخته* ‘be the majority’, which may originate from the obsolete property noun **u-te* ‘big’ (§5.7.4), though there is also the possibility of an isolated derivation from *wxti* ‘be big’ with ablaut (see for instance the form *-xte* in the compound noun *xtɕuxte* ‘size’, §5.5.2.2 and §20.2.1 above).

Second, the *mɣ-* prefix is used to build intransitive verbs meaning ‘become someone’s *X*’ from kinship terms, as in *mɣrʒaβ* ‘marry’ (of a girl) and *mɣtɕu* ‘be adopted as a son’¹¹ from *tx-rʒaβ* ‘wife’ and *tx-tɕu* ‘son’, respectively.

Third, there is one transitive verb derived with the *mɣ-* prefix: *mɣrpaβ* ‘carry on the shoulder’ from the inalienably possessed body part *tu-rpaβ* ‘shoulder’, anomalous both because of the vocalism of the denominal prefix (*mu-* is expected) and because of its isolated meaning, similar to the *nɣ-* denominal verb *nɣrpaβ* ‘carry on the shoulder’ (§20.7.2).

¹¹This verb has the additional meaning of Chinese 入赘 <rùzhui> ‘marry into one’s wife’s household’.

20.7 Dental nasal denominal prefixes

The denominal prefixes *nu-/nr-* have a high degree of productivity, and present a wide range of functions. They can derive both intransitive and transitive verbs from nouns.

20.7.1 Intransitive

Intransitive denominal derivations in *nu-/nr-* have at least six different meanings, illustrated in Table 20.14. All six categories contain examples of borrowings from Tibetan and even Chinese in some cases, such as *u-mdob* ‘colour’, *rdul* ‘dust’ and *xpunbu* ‘master’ from མདོག་ *mdog* ‘colour’, རྩལ་ *rdul* ‘dust’ and དཔོན་པོ་ *dpon.po* ‘lord’, respectively.

First, some denominal verbs in *nV-* are stative, including proprietive verbs like *nrmar* ‘be oily’ from *ta-mar* ‘butter’, with a meaning quite different from *ayumar* ‘produce a lot of butter’ with the *ayu-* prefix (§20.2.4). Borrowed Chinese adjectives taking the *nu-* prefix (§20.11) also belong to this category.

Among these stative verbs, *numdob* ‘look like’ from *u-mdob* ‘colour’ is semi-transitive, as shown by (50), where its semi-object is the headless relative *u-sni mx-ku-nab* ‘who is not evil (whose heart is not black)’.

- (50) <*maji*> *numu* [*u-sni* *mx-ku-nab*]

pjx-nu-mdob
 PST.IFR-DENOM-colour
 ‘Ma Ji looked like someone who was not evil.’ (160702 luocha)
 {0006135#S45}

The ability of this verb to take a semi-object derives from the grammaticalized use of *u-mdob* ‘colour’ as a complement-taking nominal predicate meaning ‘it looks like...’ (§21.8.3.1). This is one of the few cases where the synthetic construction corresponding to a denominal derivation is not a noun+verb complex predicate (§20.1.2).

Second, the *nu-/nr-* denominal derivation can mean ‘get (covered by) X, suffer from X’, as in *nujur* ‘suffer from frost’ (from *tujur* ‘frost’). This verb selects as subject plants (51), and differs from the corresponding light verb construction *tujur + ta* (52) (§22.4.2.6) whose transitive subject is dummy (§14.3.5).

Table 20.14: Intransitive denominal verbs in *nu-*/*nx-*

Base noun	Denominal verb
<i>u-βzuγ</i> ‘appearance’	<i>nuβzuγ</i> ‘be pleasing to the eye’
<i>ta-mar</i> ‘butter’	<i>nxmar</i> ‘be oily’
<i>u-mdob</i> ‘colour’	<i>numdob</i> ‘look like’
<i>ɣa</i> ‘rust’	<i>nusɣa</i> ‘get rust’
<i>rdul</i> ‘dust’	<i>murdul</i> ‘be dusty’ (be covered in dust)

 frost AOR:3→3-put SBJ:PCP-be.many EMPH NEG-AOR:3→3-put
 ‘There was a bit of frost, but not much.’ (conversation, 15-12-17)

Third, the *nu-/nɣ-* denominal prefixes can also derive verbs of motion towards a location, such as *nɣχcɣl* ‘go to the center’ (from *u-χcɣl* ‘center’). These verbs differ from the verbs of location derived with the *mɣ-* prefix such as *mɣχcɣl* ‘be in the center’, which express a static position without motion (Table 20.12, §20.6).

Fourth, these prefixes can be used to build verbs describing an activity related to the base noun. The denominal verbs can have the same meaning as a light verb construction in *βzu* ‘make’, as in the case of *nurɣyo* ‘sing’ (§15.1.5.8) and *rɣyo + βzu* ‘sing’. Alternatively, the corresponding complex predicate can be an existential construction (§22.4.1.3): compare the use of the denominal verb *nusaxsu* ‘have lunch’ in (53a) with that of the base noun *saxsu* ‘lunch’ combined with the existential verb *tu* ‘exist’ in (53b).

- (53) a. *u-tɣ-tu-nu-saxsu?*
 QU-AOR-2-DENOM-lunch
- b. *nɣ-saxsu u-pɰ-tu?*
 3SG.POSS-lunch QU-PST.IPFV-exist
 ‘Did you have lunch?’ (both heard in context several times)

The *nu-/rɣ-* denominal prefix is more commonly used for these meanings (in examples such as *rundzɣts^{hi}* ‘have a meal’ from *ndzɣts^{hi}* ‘meal’, §20.4.1), and the choice between the nasal and the rhotic denominal prefixes is lexically determined.

Fifth, when the base noun expresses a profession or social status, the denominal verb in *nu-* means ‘become X’ (54a), synonymous with the light verb construction with *ndo* ‘take’ (§22.4.2.4) as in (54b).

- (54) a. *jaβmɣ^huqa lɣ-nu-χpumbu*
 ANTHR AOR:UPSTREAM-DENOM-master
 ‘Yagmakhyiqa became the master.’ (2003-kWBRa)

- b. *xpuunbu la-ndo*
 master AOR:3→3:UPSTREAM-take
 ‘He became the master.’ (elicited)

The rhotic prefixes also appear in this function, though only on two nouns: *xpuun* ‘monk’ and *tɛɣmuu* ‘nun’ (*ɾɾxpuun* ‘become a monk’ and *rutɛɣmuu* ‘become a nun’, §20.4.1). Using the *nu-* denominal prefix instead of the rhotic prefixes with these two nouns is not ungrammatical, but less unfelicitous.

The verb *nuwɛjɔv* from *ɛjɔv* ‘servant’ is labile, and means ‘work as a servant’ in intransitive use (see §14.5.1.4 and §20.7.2 for further discussion).

Sixth, when the base noun designates an animal or a plant, the *nu-/nɾ-* prefix most often means ‘search/look for/collect X-’. This highly productive function corresponds semantically to the combination with the verb *p^hut* ‘take out, cut’ in the case of plants: in (55) for instance, the same action is redundantly referred to by the verb *numts^halu* ‘search for nettle’ and by *mts^halu* ‘nettle’ followed by *p^hut*.

- (55) *ku-nu-mts^halu*, *mts^halu u-ku-p^hut* *jo-ɣi*

pjɿ-ŋu *tce*,
 IFR.IPFV-be LNK
 ‘[The fisherman] always went fishing before daybreak.’ (140512 yufu yu mogui) {0003973#S8}

Like the rhotic prefix, the *nu-* denominal prefix also has a deadverbial function, and occurs in *nuwɛɿwuur* ‘do suddenly’ from *ɛɿwuur* ‘suddenly’ (compare with *nuwɛɿwuur* ‘happen suddenly’, §20.4.1).

A possible irregular reduced allomorph *n-* of the intransitive denominal *nu-* prefix is possibly found in the verb *ngo* ‘be ill’, which is derived from the inalien-

ably possessed noun *tu-ηgo* ‘disease’: the group *ng-* represents /nng-/ phonologically (§4.2.1.9). This irregular allomorph appears to also be attested with some transitive verbs (§20.7.2).

20.7.2 Transitive

The *nu-/ny-* denominal prefix is also used to derive transitive verbs, with a considerable variety of meanings, all with high productivity. In the following, in order to clarify the glosses, *X* represents the base noun, and *Y* the object of the corresponding transitive *nu-/ny-* denominal verb.

First, transitive denominal verbs in *nu-/ny-* can have a tropative function ‘treat/consider *Y* as *X*’, as in the case of *nuβgra* ‘treat as an enemy’ from *βgra* ‘enemy’. The verb *nuβjov* ‘give orders to’ (from ‘treat as a servant’) from *βjov* ‘servant’ is labile, and means ‘work as a servant’ when conjugated intransitively. It is one of the very few verbs with ergative lability in Japhug (see §14.5.1.4).

The opposite (anti-tropative) meaning ‘be treated as *X* by *Y*’ is found in *nyrme* ‘be adopted as a daughter’ (from *tu-me* ‘daughter’: ‘become *Y*’s daughter’), the transitive equivalent of the *ny-* derivation found in the intransitive verb *nytɕu* ‘be adopted as a son’ (from *ty-tɕu* ‘son’, §20.6).

Second, the transitive *nu-/ny-* denominal has an instrumental function like the sigmatic denominal (§20.3.2). This function can be subdivided into two cases: ‘use *X* to do to *Y*’ as in *nytar* ‘hit with a stick’ (selecting the entity being hit as object) from *tytar* ‘stick’ and ‘use *Y* as an *X*’ as in *nyji* ‘use as a walking stick’ from *tyji* ‘walking stick’ (selecting as object the implement used to replace a walking stick, as shown by 57).

- (57) *u-rkoŋtoŋ* *numu ci* *to-ndo* *tce* *to-ny-pi* *tce*

 ‘He picked one of its femurs up and used it as a walking stick.’ (140511
 xinbada-zh) {0003961#S70}

Third, when the base noun refers to the body part (or a substance coming from) of a plant or an animal, the denominal verb can mean ‘take the *Y* from the *X*’, the object *X* being the possessor of that body part. The meaning of this derivation is similar to that of the verbs *p^hut* ‘take out, cut’ and *tɕyt* ‘take out’ with the corresponding base nouns:¹² for instance, *nyrme* ‘remove the hair’ (shear) expresses the same meaning as *ty-rme* ‘hair’ with *p^hut* in example (58).

¹²The same is true of the intransitive denominal verbs in *nu-/ny-* meaning ‘search/look for/collect *X*’ discussed above.

Table 20.15: Transitive denominal verbs in *nu-*/*nx-*

Base noun	Denominal verb

 (25-qarmWrwa) {0003648#S16}

With the counted noun *tu-rdoɁ* ‘one piece’ (§7.3.2.2) the transitive denominal derivation yields the distributed action meaning *murdɔɁ* ‘pick up one by one’.

Fourth, when the base noun is an abstract noun, the transitive denominal in *nu-/nɣ-* expresses an action directed toward a patient or stimulus, as in *nɣmbru* ‘get angry with’ (from *tv-mbru* ‘anger’, see also §20.3.1). Among these verbs, *nɣre* ‘laugh, laugh at, mock’ from the inalienably possessed noun *tv-re* ‘laugh (n)’ is labile (§14.5.1.3).

Fifth, denominal verbs in *nu-* can have idiosyncratic meanings associated with a noun+verb collocation. For instance *nusk^hru* ‘be pregnant with’ (41, §20.4.3) from *tu-sk^hru* ‘body’ derives from the collocation *tu-sk^hru + NEG + βdi* ‘be pregnant’ (§22.4.1.5), but it did not integrate the verbal root *βdi* ‘be well’ and the negative prefix.

Irregular allomorphs of the transitive denominal *nu-* prefix include the reduced form *n-* in *ntsye* ‘sell’ from *tutsye* ‘commerce’ (§20.10.1.1), and *nuN-* with an intrusive homorganic nasal in the transitive motion verb *nuŋq^hu* ‘go along, follow’ (§15.1.2.1) which derives from *u-q^hu* ‘after, behind’.

20.7.3 Pairing with other denominal prefixes

The *nV-* denominal prefixes are most commonly paired with *rV-* prefixes (§20.4.3). When a transitive *nV-* denominal verb (§20.7.2) occurs in pair with an intransitive *rV-* verb (§20.4.1), for instance *nukrɣz* ‘discuss’ vs. *rɣkrɣz* ‘have a discussion’, the intransitive verb serves as the functional antipassive of the transitive one, and the *nV-* verb cannot take the antipassive *rɣ-* prefix (§18.6.8.5).

The *nɣ-* denominal prefix also derives dynamic verbs (both transitive and intransitive) paired with propriative denominal verbs in *sɣ-* (§20.3.1).

These verbs are not compatible with the propriative *sɣ-* derivation (§18.8): the corresponding stative *sɣ-* denominal is used instead. For instance, the transitive denominal verb *nɣŋaβ* ‘consider to be unpleasant’, ‘be embarrassed by’ (from *tvŋaβ* ‘unpleasant thing, wrong’) lacks a propriative form such as †*sɣ-nɣŋaβ*, and

the denominal *svŋaβ* ‘be unpleasant’, ‘be embarrassing’ (21 in §20.3.1) is used instead.

Denominal verbs in *nv-* can however take the *sv-* antipassive prefix (§18.6.2), for example *svnvrre* ‘laugh at people’ from *nvrre* ‘laugh’ (§14.5.1.3).

Some *sv-/nv-* denominal pairs have lost their base noun. For instance, there is no abstract noun †*tvɛqa* in Kamnyu Japhug corresponding to the pair *svɛqa* ‘be bearable’/*nɛqa* ‘endure’. Nevertheless, like synchronic denominal verbs such as *nvŋaβ* ‘consider to be unpleasant’, the transitive form in these pairs cannot undergo the proprietive derivation: the denominal *svɛqa* (59) is used instead of a putative form such as †*sv-nɛqa*.

- (59) *a-χpwm* *juu-mŋɣm ri*, *mv-kuu-svɛqa* *maŋe*
 1SG.POSS-knee SENS-hurt LNK NEG-SBJ:PCP-be.bearable not.exist:SENS
 ‘My knee hurts, but nothing unbearable.’ (elicited)

Pairing with other denominal prefixes such as *γuu-/γv-* (§20.5.2) is also attested, but with less straightforward semantic correspondences between the two verbs.

20.8 Other denominal verbs

20.8.1 Zero-derivation or backformation?

While there are non-finite verbs and deverbal nouns lacking any specific nominalization affix (bare infinitives §16.2.2 and bare action nominals §16.4.6), there is little evidence in Japhug for denominal zero-derivation.

Table 20.16 includes cases of noun-verb pairs in which the semantics of the verb is innovative: the nouns have the same meanings as those of their cognates in other Trans-Himalayan languages such as Chinese and Tibetan (for evidence that these nouns are not borrowed from Tibetan, see Jacques 2004: 162 and Hill 2014c), but there is no trace of the corresponding verbs outside of core Gyalrong languages.

The inalienably possessed nouns *ta-mar* ‘butter’, *tv-mkum* ‘pillow’ and *tvjpyom* ‘ice’ formally look like bare nominalizations (§16.4.2, §16.4.6) from the corresponding verbs. The etymological relationship between *ta-mar* ‘butter’ and *mar* ‘smear’, while not completely obvious, is supported by the existence of the *figura etymologica* in (60) and the typological parallel provided by the French denominal verb *beurrer* ‘smear’ (not necessarily butter) from *beurre* ‘butter’.

A possible scenario for the backformation hypothesis is that a *nu-* denominal verb (§20.7) was first derived from the base noun, and its *nu-* prefix was then reinterpreted as an autive prefix (§19.1).¹³ As a consequence of this backformation, a prefixless verb, whose stem is identical to that of the base noun, was created, following the pathway in (63).

- (63) *ndzom* ⇒ **nu-ndzom* ⇒ **nu-ndzom* ⇒ *ndzom*
 bridge ⇒ *^{DENOM}-bridge ⇒ *^{AUTO}-form.a.bridge ⇒ form.a.bridge

A synchronic example of ongoing reanalysis of the *nu-* denominal prefix as an autive prefix is provided by the transitive verb *numgla* ‘step over’, ‘cross’, which derives from the counted noun *tu-mgla* ‘one step’. An anomalous form *ja-mgla* (64) without the *nu-* prefix is found in the corpus, and can be explained as having been backformed from *ja-nu-mgla* (see 20, §15.1.2.1, with a similar context) by this mechanism.

- (64) *riryβ* *t^hystay* *ja-pyav*, *tu-ci* *t^hystay*

20.8.2 Vowel alternation

The inalienably possessed noun *u-fsu* ‘of the same size’, used in one of the equative constructions (§26.3.1.3, §5.1.1.5, Jacques 2018c), is etymologically related to the stative verb *fse* ‘be like’. This *u / e* alternation, which is similar to that of Stem III (§12.2.2.1) and a few other isolated examples (§19.7.12), is possibly due to a **-j* suffix.

20.9 Deideophonic verbs

In addition to nouns (and some adverbs such as *βlyrwur* ‘suddenly’, §20.4.1), some verbalizing prefixes can take ideophones as input.

¹³Both the spontaneous (§19.1.4) and the permansive (§19.1.5) functions of the autive would be compatible with the meaning of the verb *ndzom* ‘form a bridge of ice’.

20.9.1 *ɣɣ*- and *sɣ*- deideophonic verbs

The most productive deideophonic prefixes are *ɣɣ*- and *sɣ*-. Verbs derived with these prefixes can be built from most (though not all) ideophonic roots, either from the reduplicated root (type I) or from a root with partial reduplication in *l*- (type II).

Type I deideophonic verbs can be illustrated by the intransitive verb *ɣɣplawplaw* ‘flick, extend and retract’ (of a snake’s tongue) (65a) and its transitive counterpart *sɣplawplaw* (65b).

- (65) a. *qapri ɣw w-mdzu ɣw-ɣɣ-plawplaw zo*

- b. *qapri kw w-mdzu ɣw-sɣ-plawplaw zo*
 snake ERG 3SG.POSS-tongue SENS-DEIPH:TR-flicking EMPH
 ‘The snake is flicking its tongue.’ (elicited)

Despite the fact that the reduplicated root *-plawplaw* in these verbs resembles the type II ideophonic pattern (which has a stative meaning, §10.1.2.2), its meaning corresponds to that of the type III pattern ‘dynamic action’ ideophone, namely *plawɣplaw* ‘flickering’ (§10.1.2.3).¹⁴ Compare (65b) with the corresponding light verb construction (66), which uses the simulative verb *stu* ‘do like’ (§10.1.7.3). In this particular case, the deideophonic verb in (65b) expresses a faster motion than the construction in (66), but this semantic difference is not generalizable to all deideophonic verbs.

- (66) *qapri kw w-mdzu plawɣplaw zo ɣw-ɣsw-stu*
 snake ERG 3SG.POSS-tongue IDPH(III):flickering EMPH SENS-PROG-do.like
 ‘The snake is flicking its tongue.’ (elicited)

As a general rule, type I verbs in *ɣɣ*- and *sɣ*- have a meaning that corresponds to that of the type III ideophone based on the same root. They differ from each other in that the prefix *ɣɣ*- builds intransitive verbs, whose synthetic counterpart is a light verb construction with an intransitive verb such as *ɣɣstu* ‘act like’ (§10.1.7.3), whereas *sɣ*- derives transitive verbs with a causative meaning ‘make X do/be’ like the construction with *stu* ‘do like’ (66).

Type II deideophonic verbs have partial reduplication of the ideophonic root in *l*-, and semantically correspond to pattern IV (§10.1.2.4), expressing spatially

¹⁴The type II pattern *plawplaw* of the ideophonic root *-plaw* has a entirely unrelated meaning: ‘completely white’.

distributed action (note that the distributed action derivation also presents the *l*-reduplication, §19.4). Most ideophonic roots either derive type I or type II deideophonic verbs. For instance, there is no verb †*ɣɣ-plaɁ-laɁ* from the root *-plaɁ* discussed above (the verb in 65a is *ɣɣ-plaɁ-plaɁ*), and the type II deideophonic verb *ɣɣctɕaŋlaŋ* ‘balance’ from *-ctɕaŋ* has no correspond type I verb †*ɣɣctɕaŋctɕaŋ* despite the fact that a type III pattern ideophone *ctɕaŋnɣctɕaŋ* ‘balancing’ does exist.

An example of an ideophonic root allowing four deideophonic patterns is *-ɣɣɣɣ*. The type I verbs *ɣɣɣɣɣɣɣ* (vi) and *sɣɣɣɣɣɣɣ* (vt), like the corresponding ideophone *ɣɣɣnɣɣɣɣ*, mean ‘shake’, while the type II verb *ɣɣɣɣɣɣɣ* (vi) and *sɣɣɣɣɣɣɣ* (vt) instead mean ‘wiggle, squirm, creep’, expressing a great number of individuals and/or motion in all directions; these verbs are particularly appropriate to refer to insects, snakes or fishes (see for instance 67), but can also be applied to describe a crowd of people.

- (67) *tce qapri qacpa [...] pɣɣ-ɣɣ-ɣɣɣɣɣɣ zo cti*
 LNK snake frog IPFV.IFR-DEIDPH:INTR-wiggling EMPH be.AFF:FACT
 ‘There were [many] snakes and frogs wiggling [everywhere].’ (2003
 kWBRa)

This meaning can also be conveyed by the type IV ideophone *ɣɣɣnɣɣɣɣ* ‘wiggling’.

The deideophonic functions of *ɣɣ*- and *sɣ*- are certainly related to their denominal function. The prefix *ɣɣ*- is also used to derive dynamic intransitive verbs such as *ɣɣwu* ‘cry’ (from *tɣwu* ‘cry’ (n), §20.5.1), and the meaning of *sɣ*- as a deideophonic prefix is reminiscent of the causative/instrumental function of sigmatic denominal prefixes (§20.3.2).

Tshobdun has cognate prefixes *wɔ*- and *sɔ*- with similar functions (Sun & Shidanluo 2004; Sun 2014a).

20.9.2 *nu*- deideophonic verbs

Deideophonic verbs in *nu*- are built on non-reduplicated ideophonic roots, but like the *ɣɣ*- and *sɣ*- prefixes (§20.9.1), they have a meaning based on that of type III pattern ‘dynamic action’ ideophones. The *nu*- derivation yields transitive verbs which differ from *sɣ*- deideophonic verbs in lacking a causative meaning. For instance, the verb *nuxur* ‘turn around’ (68) from the root *-xur* ‘turn’ expresses rotational motion of the subject (with a complex predicate involving the motion verb *skɣrwa* + *ce* ‘make circumambulations’, §22.4.1.1), like the type

III ideophone *xurnyxur*, which occurs with the corresponding denominal verb *nu-skyrwa* ‘make circumambulations’ (§20.4.1).

(68) *skyrwa* *ky-nu-xur-a* *zo* *ky-ari-a*

IDPH(III):turn EMPH AOR-DENOM-circumambulation-1SG
‘I made circumambulations [again and again].’ (elicited)

By contrast, the corresponding transitive verb *syxurxur* ‘cause to turn’ (again and again, quickly) expresses induced motion of the object.

In some cases the *nu-* and *sx-* deideophonic verbs are very close semantically, as illustrated by *nu-byβ* (70a) and *sx-bybyβ* (70b). Both of these express the action of repeatedly throwing down heavy objects which make a loud noise when reaching the ground, with no care for safety. The difference between the two verbs is subtle, *sx-bybyβ* putting more focus on the speed and the quantity of objects.

- (70) a. *rdystax pa-nu-byβ* *zo* *pa-βde*

IDPH(III):heavy.object EMPH AOR:3→3:DOWN-throw
‘He threw [stones] down, going ‘boom’ [on the ground] again and again.’ (elicited)

20.9.3 *a-* and *ny-* deideophonic verbs

A few verbs in *a-* can be built from reduplicated ideophonic roots, with a meaning equivalent to the type II ideophonic pattern (§10.1.2.2). For instance, the ideophone *boβboβ* ‘in a group, in a cluster’ (71) is the source of the intransitive verb *aboβboβ* ‘cluster around’, ‘huddle’.

PST.IPFV-PEG-PROG-DEIDPH-in.group-PL-PEG

‘Children from rich [families] were grouped around a girl.’ (160630 abao-zh) {0006197#S84}

It is possible to analyze *nɣ-* deideophonic verbs as applicative derivations (§17.4) from *a-* deideophonic verbs with regular vowel fusion *nu-ɣ-* → *nɣ-* (§17.4.2), promoting oblique arguments in *u-taʋ* ‘on, above’ to object status.

In addition to ideophones expressing ‘grouping, clustering’ like *boʋboʋ*, the *a-* derivation is also compatible with ideophones of shape like *alulju* ‘be cylindrical’ from *ljulju* ‘cylindrical’. Such verbs do not have a *nɣ-* counterpart.

20.10 The denominal origin of voice prefixes

There is a remarkable similarity in Japhug between some valency-changing prefixes on the one hand, and denominal prefixes on the other hand, as illustrated by Table 20.17. These correspondences suggest that a historical relationship exists between these pairs of prefixes.

The resemblance between these two series of prefixes is not specific to Japhug, and found in all Gyalrongic languages, in particular Khroskyabs (Lai 2017: 527).

Table 20.17: Voice derivations and denominal prefixes

Voice		Denominal derivation	
Sigmatic causative <i>su(ɣ)-/z-</i>	§17.2	Instrumental/ causative denominal <i>su(ɣ)-/sɣ-</i>	§20.3.2
Applicative <i>nu(ɣ)-</i>	§17.4	Transitive denominal <i>nu-</i>	§20.7.2
Tropative <i>nr(ɣ)-</i>	§17.5	Transitive denominal <i>nr-</i>	§20.7.3
Passive <i>a-</i> ,	§18.1	Stative denominal <i>a-</i>	§20.2.1
Reciprocal <i>a-</i>	§18.4.1		
Antipassive <i>rx-</i>	§18.6.1	Intransitive denominal <i>ru-/rx-</i>	§20.4.1
Antipassive <i>sɣ-</i>	§18.6.2	Proprietary denominal <i>sɣ-</i>	§20.3.1
Proprietary <i>sɣ-</i>	§18.8	Proprietary denominal <i>sɣ-</i>	§20.3.1

The following sections (in particular §20.10.1) provide evidence that these resemblances are due to the fact that the derivations in Table 20.17 actually historically originate from the corresponding denominal derivations (see also Jacques 2014b; 2015d, Lai 2017: 527–529, Lai under review).

Not all valency-changing prefixes in Japhug are related to denominal derivations: the reflexive *zɣɣ-* in particular derives instead from the incorporation of the 3SG pronoun (§18.3.7 and Jacques 2010b), and some derivations such as the autive and anticausative are probably inherited from proto-Trans-Himalayan (§19.1.7, §18.5, Sagart & Baxter 2012, Jacques 2015e).

20.10.1 The origin of the *rx-* antipassive prefix

The resemblance between the *rx-* applicative (§18.6.1) and the intransitive denominal *rx-* prefix (§20.4.1) suggests that a historical relationship between these prefixes is possible. In addition, the fact that the antipassive only has cognates in Tshobdun and Zbu (Sun 2006b; 2014a, Jacques 2021) makes it unlikely that this derivation is very ancient.

A few antipassive verbs have formal and semantic irregularities (§18.6.1). In this section, I show that these irregularities are shared with corresponding action nominals (§20.10.1.1, §20.10.1.2), and that this observation is a crucial piece of evidence to propose that the antipassive prefix originates from the denominal derivation of action nominals from transitive verbs (§20.10.1.4).

20.10.1.1 Formal commonalities between antipassive verbs and action nominals

Two antipassive verbs have irregularities in stem formation: *rɣŋŋa* ‘have a debt’, ‘owe money’ from *ŋa* ‘buy on credit, owe’ has an intrusive *-n-* element between the antipassive *rɣ-* prefix and the stem *-ŋa*, and *rɣtsye* ‘do business’ presents the opposite situation: the corresponding transitive verb *ntsye* ‘sell’ has an extra prefixal *n-* element (§18.6.1).

These morphological specificities are not isolated: the action nominals *tu-ŋŋa* ‘debt’ (§16.4.6) and *tutsye* ‘commerce’ (§16.4) have the same stem as the corresponding antipassive verbs.

This commonality between action nominals and the corresponding antipassive verbs is explainable if one assumes that the latter derive from the former by a denominal *rɣ-*, on the model of *rɣkrɣz* ‘have a discussion’ and *rɣma* ‘work’ from *tukrɣz* ‘discussion’ or *ta-ma* ‘work’ (n) (§20.4.1), rather than directly from the corresponding transitive verbs.

The *n-* element in *tu-ŋŋa* ‘debt’ may be analyzable as a nasalized dental nominalization prefix (**-t-ŋa* → *-ŋŋa*, §16.4.6), and the relationship between *rɣŋŋa* and the base verb *ŋa* is thus indirect, as shown in (74).

(74) *ŋa* ‘owe’ → *-ŋŋa* ‘debt’ → *rɣŋŋa* ‘have a debt’

The verb *rɣtsye* ‘do business’ is also directly derived from *tutsye* ‘commerce’ rather than from the transitive *ntsye* ‘sell’. The *n-* element on *ntsye* is explainable as a reduced allomorph of the transitive denominal *nu-* prefix (§20.7.2). Thus, while *rɣtsye* ‘do business’ is synchronically perceived as deriving from *ntsye*, both verbs historically actually derive from the action nominal *tutsye*, as shown in Figure 20.1.

Figure 20.1: The derivational history of *ntsye* and *rɣtsye*

20.10.1.2 Semantic commonalities between antipassive verbs and action nominals

Commonalities between antipassive verbs and action nominals are not restricted to stem formation as in §20.10.1.1 above.

The formally regular antipassive verb *rxpyav* ‘reclaim land’, ‘clear land for farming’ has a restricted meaning in comparison with the corresponding transitive verb *pyav* ‘turn over’: while the latter can occur with a wide range of objects, the former is exclusively used to refer to turning uncultivated land into fields (from the meaning ‘plough’ of the base verb, §18.6.3). The same semantic restriction is also observed with the action nominal *tupyav* ‘land clearing’, used in collocation with *txvt* ‘take out’ with a meaning close to that of the antipassive *rxpyav*.

- (75) *mu-lo-nx-tsov-ndzi* *ku tupyav*
 NEG-IFR-DENOM-silverweed-DU ERG field.clearing
lo-txvt-ndzi
 IFR:UPSTREAM-take.out-DU
 ‘They did not collect silverweed, and cleared fields for farming (instead).’
 (31-deluge) {0004077#S144}

This common semantic restriction suggests that the action nominal *tupyav* and *rxpyav* are related, and can be accounted for by assuming that the latter is a denominal derivation from the former, rather than directly deriving from *pyav* ‘turn over’, as shown in (76).

- (76) *pyav* ‘turn over’, ‘plough fields’ → *tupyav* ‘land clearing’ → *rxpyav* ‘clear land for farming’

20.10.1.3 Irregular prefix

Another irregular antipassive involves the prefix rather than the stem: the verb *rususo* ‘think’, ‘ponder’ (§14.5.1.3) from *suso* ‘think’ has *ru-* rather than the regular *rx-* prefix. This irregular form is easily accounted for by the hypothesis that antipassive verbs are denominal derivations from action nominals: *rususo* is the expected regular rhotic denominal from the bare action nominal *tu-suso* ‘thought’ (§16.4.6).

20.10.1.4 Pathway of reanalysis

Evidence from irregular antipassive verbs presented above in §20.10.1.1, §20.10.1.2 and §20.10.1.3 suggest that the formal resemblance between the *rx*- antipassive prefix and the intransitive rhotic denominal *ru*-/*rx*- prefix is not simply a coincidence, but that the antipassive derivation came into being from the verbalization of an action nominal, following the pathway presented in Figure 20.2.

Figure 20.2: The origin of the antipassive *rx*-

The transitive verb first undergoes nominalization into either an action nominal in *tu*- (§16.4) or into a bare action nominal (taking either a definite or an indefinite possessive *tu*- or *tx*-, §16.4.6). This action nominal then takes the rhotic intransitive denominal prefix. The rhotic prefix removes the *tu*-/*tx*- prefix irrespective of whether it is an indefinite possessor prefix or a dental nominalization prefix, following a general property of denominal derivations in Japhug (§20.1.1, §16.4.4).

With the exception of the few verbs studied in the section above, where a morphological or semantic irregularity in the action noun left a trace on the antipassive verb, the intermediate step leaves no traces. It is possible that once a sufficient number of verbalized denominal action nouns had been created by this process, the antipassive derivation became productive and that antipassive verbs were directly derived from the transitive base verbs.

Even if the antipassive prefix has become functionally separate from the intransitive denominal *rx*- in Japhug, many antipassive verbs remain synchronically ambiguous: for instance, the verb *rxɕp^hɣt* ‘patch clothes’ can either be analyzed as the antipassive equivalent of *ɕp^hɣt* ‘patch’ or as a denominal from *tx-ɕp^hɣt* ‘patch (n)’ (§18.6.8.3).

The pathway in Figure 20.2 is not specific to Gyalrong languages; antipassive affixes from ancient light verb constructions with action nominals have been documented in Mande and elsewhere (Creissels 2012, Sansò 2017), providing a

parallel example of the functional overlap between denominal verbalization and light verb constructions in Japhug (§20.1.2).

The same two-step mechanism can be used to account for the other resemblances between denominal prefixes and valency-changing derivations in Table 20.17. More generally, action nominalization neutralizes the transitivity of the verb stem, and the new argument structure of the derived verb is determined by the denominal prefix.

20.10.2 The proprietic and antipassive *sɣ*- prefixes and their tropative counterpart

The form and meaning of the proprietic *sɣ*- derivation (§18.8) are close to that of the denominal proprietic *sɣ*- (§20.3.1). The *sɣ*- denominal verbs often occur in pairs with transitive or intransitive *nɣ*- denominal verbs from the same noun (§20.7.3), as in *sɣre* ‘be ridiculous’ and *nɣre* ‘laugh’, ‘laugh at’ (from *tr-re* ‘laugh (n)’), Table 20.4, §20.3.1).

Both the proprietic *sɣ*- (§18.8) and the tropative *nɣ*- (§17.5) can be accounted for by assuming a pathway similar to that of the antipassive (Figure 20.2), by supposing *sɣ*- and *nɣ*- denominal derivations from abstract nouns (§16.4.2) or degree nominals (§16.3). The intermediate abstract nouns are actually attested in many cases, as in (77) and (78).

(77) *mu* ‘be afraid’ → *tumu* ‘fear’ → *sɣymu* ‘be frightening’

(78) *mpɕɣɣ* ‘be beautiful’ → *trmpɕɣɣ* ‘beauty’ → *nɣmpɕɣɣ* ‘find beautiful’

In addition, the proprietic verb *sɣɣnat* ‘be exhausting’ (from *nat* ‘be tired’) with the allomorph *sɣɣ*- presents the same intrusive *-ɣ*- element as the abstract noun *trɣnat* ‘tiredness’, supporting the idea that this noun was indeed the intermediate step between the base verb and its proprietic form.

When the base verb undergoing action nominalization and proprietic verbalization is transitive, there is a potential ambiguity, since the proprietic derivation selects as intransitive subject a referent either possessing a particular property or having the tendency or propensity to perform a particular action. With action verbs such as *mtsuy* ‘bite’, the most natural interpretation will be ‘have the propensity to bite’ rather than ‘tend to be bitten’ (79), yielding an antipassive derivation (§18.6.2).

(79) *mtsuy* ‘bite’ → **tumtsuy* ‘action of biting’ → *sɣmtsuy* ‘bite people’

With verbs of cognition, an ambiguity is possible; for instance the *sv*- derivation from the transitive verb *nuzduy* ‘worry about’ is interpretable either as propriative *svmuzduy* ‘causing people to worry’ (§18.8.4) or as the antipassive ‘worry about people’ (§18.8.6). Both of these meanings can be explained as propriative denominal derivations from an abstract noun **tV-muzduy* ‘worry’.

20.10.3 Applicative, sigmatic causative and passive

Following the same type of pathways as for antipassive, propriative and tropative derivations, the applicative *nu(γ)*- (§17.4), the causative *su(γ)*- (§17.2) and the passive *a*- can be analyzed as having historically originated from the transitive *nu*- (§20.7.2), the causative/instrumental *su(γ)*- (§20.3.2) and the stative *a*- (§20.2.1) denominalizations from an action nominal, as illustrated in (80).

- (80) a. *mu* ‘be afraid’ → *tumu* ‘fear’ → *nuymu* ‘be afraid of’
 b. *nat* ‘be tired’ → *trynat* ‘tiredness’ → *suynat* ‘exhaust’, ‘cause to be tired’
 c. *ts^hoβ* ‘attach’ → **tu-ts^hoβ* ‘attachment’¹⁵ → *ats^hoβ* ‘be attached’

The reduplicated reciprocal (§18.4.1) originates from a stative denominal verb with reduplication expressing plural subject (as in *Stau*, where not only reduplication but even triplication is attested with this meaning, Gates 2017), from which the reciprocal function was a pragmatic inference.

While the applicative, like the antipassive, is restricted to the Core Gyalrong languages and is certainly a recent innovation, the situation is more complex in the case of the passive and the causative.

The *a*- passive, which originates from **ηa*-, is probably related to the valency-decreasing *ηV*- prefix found in Kuki-Chin (Jacques & Chen 2007), which also expresses reciprocal, reflexive and even antipassive in some cases (So-Hartmann 2009: 203–209, Mang 2006: 57, Konnerth 2021). The sigmatic causative, which has highly complex morphology across Gyalrongic languages (Sun 2007a; Lai 2016), is also widespread in the Trans-Himalayan, and has been discussed in a considerable number of works, including Conrady (1896), Sagart & Baxter (2012), Mei (2012), Handel (2012) and Jacques (2015d).

The existence of the cognates of the valency-changing prefixes *a*- and *su(γ)*- in other branches of Trans-Himalayan could be seen as contradicting the hypothesis that they originate from denominalization prefixes. However, two pieces of

¹⁵This hypothesized action nominal is indirectly attested as the bare infinitive in (181) (§16.2.2.1).

- (82) *ɲu-ruu-<fuza> wo*
 SENS-DENOM-complicated SFP
 ‘It looks complicated!’ (heard in context)

For action verbs, the choice of the *ruu-* and *nuu-* prefixes is conditioned by transitivity (§20.4.3): *ruu-* denominal verbs are intransitive, for example *ruk^hɲjxwi* ‘have a meeting’ (from 开会 <kāihui> ‘have a meeting’), while their *nuu-* counterparts are transitive (*nuuk^hɲjxwi* ‘meet about’). In some cases a light verb construction with the Chinese verb borrowed as a noun also exists; for instance, in addition to *ruk^hɲjxwi* ‘have a meeting’, it is possible to use *k^hɲjxwi* ‘meeting’ in collocation with *βzu* ‘make’ as in (83).

- (83) *k^hɲjxwi ɲu-ɣsu-βzu-nu*
 meeting SENS-PROG-make-PL
 ‘They were having a meeting.’ (17-lhazgron)

Borrowed verbs, although they have undergone denominal derivation, sometimes preserve morphosyntactic peculiarities of the corresponding verb in Chinese. For instance, although the manipulation verb *mut^haj* ‘carry’, like 抬 <tái> ‘lift, carry’, specifically means ‘lift up and carry (something heavy, of more than one person)’ with a constraint on the number of the subject (see example 21, §15.1.2.2).

20.12 Compound verbs

Compound verbs combine two verb roots (henceforth referred to as ‘*V*₁’ and ‘*V*₂’ following the Kirantological tradition) within the same stem. Unlike bipartite verbs (§11.6.3, Jacques 2018a), the two verb roots are not separable and cannot take redundant person indexation affixes.

Most compound verbs have a denominal prefix (Table 20.18). In some cases, the *V*₁ preserves the form of the independent verb, but in other cases occurs in bound state (§5.4), as in *apɣmbat* ‘be easy to do’, where the root of the base verb *pa* ‘do’ undergoes /-a/ → /-ɣ/ vowel alternation. Alternations in the *V*₂, as in the case of *axtɕuxte* ‘be of uneven size’ (with /xti/ → /xte/ alternation, §20.2.1), are much rarer.

Some compound verbs clearly derive from a compound noun by denominal derivation. This is the case of stative verbs derived from compound nouns of dimension such as *axtɕuxte* ‘be of uneven size’ (Table 20.1, §20.2.1, §5.5.2.2), and

Table 20.18: Denominal compound verbs in Japhug

<i>nxtsuɣyut</i> ‘take away and bring back’ (vt)	<i>tsum</i> ‘take away’ (vt)	<i>yut</i> ‘bring’ (vt)
<i>nundzɣmbyom</i> ‘be in a hurry to eat’ (vi)	<i>ndza</i> ‘eat’ (vt)	<i>mbyom</i> ‘be in a hurry’ (vi)
<i>nundzɣqɣr</i> ‘not let eat together’ (vt)	<i>ndza</i> ‘eat’ (vt)	<i>qɣr</i> ‘choose’ (vt)
<i>nurkorlut</i> ‘be obstinate’ (vi)	<i>rko</i> ‘be hard’ (vi)	<i>arlut</i> ‘be many’ (vi)
<i>nurɣumbri</i> ‘make noise in the bed’ (vi)	<i>ɣɣu</i> ‘lie down’ (vi)	<i>mbri</i> ‘cry, sing’ (vi)
<i>raxtutsye</i> ‘do business’ (vi)	<i>ɣtu</i> ‘buy’ (vt)	<i>ntsye</i> ‘sell’ (vt)

also *rxjoxβzur* ‘tidy up’, whose corresponding compound action noun *joxβzur* ‘tidying up’ is used in collocation with the light verb *βzu* ‘make’ (§5.5.2.1).

The verb *argyle* ‘be extremely happy’ does not derive from a compound noun **rgyle*, but rather from the bipartite verb *rga = le*, which only occurs in non-finite forms (§11.6.3).

The other verbs in Table 20.18 lack a corresponding compound noun. For instance, although *apɣmbat* ‘be easy to do’ presumably derives from a noun **pɣmbat* ‘easiness to do’ rather than directly from *pa* ‘do’ and *mbat* ‘be easy’, there is no such noun in Kamnyu Japhug. It is probable that such a noun used to exist, and that only its derived denominal verb was preserved.

A clue that denominal compounds do not directly derive from their base verbs is offered by *raxtutsye* ‘do business’. The V₂ *-tsye* has the same form as that found

in the action noun *tutsye* ‘commerce’ and the antipassive *rvtsye* ‘do business’, ‘sell things’ (§18.6.1), while the corresponding transitive verb *ntsye* ‘sell’ has an additional *n-* prefix. The explanation for the absence of *n-* in *raxtutsye* is that this verb comes from a compound **χtutsye* ‘commerce’ directly built from the action noun *tutsye* rather than from the transitive verb *ntsye* ‘sell’. Although **χtutsye* is not in common usage, it is considered to be marginally acceptable by Tshendzin.

Some compound verbs lack denominal prefixes, as shown in Table 20.19. However, the fact that the V_1 occurs in bound state in the case of *ngxjts^{hi}* ‘feed’ (*ngx-* from *ngu* ‘feed’) and that all the V_1 of all of these verbs have a prenasalized onset may suggest a denominal origin: since the denominal *nuu-* prefix has an irregular *n-* or homorganic *N-* allomorph (§20.7.1, §20.7.2), it is possible that the denominal prefix here was absorbed by the preexisting prenasalization of the V_1 : **n-ngx-çt^{hi}* → **ngx-çt^{hi}* → *ngxjts^{hi}*.

Table 20.19: Compound verbs without denominal prefix

Compound verb	V_1	V_2
<i>mpumnu</i> ‘be soft and smooth’ (vi)	<i>mpu</i> ‘be soft’ (vi)	<i>mnu</i> ‘be smooth’ (vi)
<i>mtsurçpaß</i> ‘be hungry and thirsty’ (vi)	<i>mtsur</i> ‘be hungry’ (vi)	<i>çpaß</i> ‘be thirsty’ (vi)
<i>ngxjts^{hi}</i> ‘feed’ (vt)	<i>ngu</i> ‘feed’ (vt)	<i>jts^{hi}</i> ‘give to drink’ (vt)
<i>mbijts^{hi}</i> ‘give to eat and drink’ (vt)	<i>mbi</i> ‘give’ (vt)	<i>jts^{hi}</i> ‘give to drink’ (vt)

The semantic relationship between the V_1 and the V_2 differs across compound verbs. In most cases, the compound has an additive meaning ‘do V_1 and V_2 ’, as in *nrtsummyut* ‘take away and bring back’ (in particular, all verbs in Table 20.19 are of this type). Another possibility is a head-complement relationship, as that illustrated by *apxmbat* ‘be easy to do’, whose meaning is equivalent to a construction with *mbat* ‘be easy’ taking a complement clause containing the verb *pa* ‘do’ (§18.9).

20.13 Incorporation

Japhug has few dozen complex verb stems comprising a nominal and a verbal root. Nearly all of these verbs contain a denominal prefix, and incorporation is

thus analyzed in Japhug as a subtype of denominal derivation (Jacques 2012d).

Although noun incorporation is not a frequent phenomenon in Japhug, its productivity is undeniable, as it applies to loanwords, as shown by the verb *yuu* <*piaozhi*>*fsob* ‘earn money’ (84), whose base noun 票子 <*piàozi*> ‘ticket’, ‘paper money’ is from Chinese and whose base verb *fsob* ‘earn’ comes from Tibetan བསོགས་ *bsogs* ‘accumulate’.

 (Lobzang 2005)

20.13.1 Incorporation and denominal derivation

A considerable proportion of incorporating verbs in Japhug are denominal derivations from Noun-Verb action nominal compounds (§5.5.5.2, §5.5.5.3) which are still synchronically attested. Table 20.20 presents a sample of incorporating verbs with the corresponding action nouns, as well as the base nouns and base verbs. These action nominals also occur in collocation with light verbs, with meanings similar to those of the incorporating verbs (§20.1.2, §20.13.4).¹⁷

When the incorporating verb is transitive, its direct object corresponds in some cases to an oblique argument in the light verb construction. For instance, the verb *nuzgrut^hu* ‘give a nudge’ encodes the patient (the person receiving the nudge) as object (85), while in the light verb construction with the compound *zgrut^hu* ‘nudge’, the patient is marked by the relator noun *u-tax* ‘on, above’ (86) (§8.3.4.3).

- (85) *tý-wy-nu-zgruu-t^hu-a*

 1SG.POSS-on 2SG.POSS-elbow-stab NEG-IMP-2-release LNK SENS-hurt
 ‘Don’t give me a nudge, it hurts.’ (elicited)

Alternatively, the patientive argument can be encoded as a possessive prefix on the base nominal compound. For instance, the object of the *nusnuηnax* ‘harm’

¹⁷Japhug (pseudo-)incorporating verbs are typologically similar to the type of οικοδομέω ‘build’ in Greek (Benveniste 1966a).

Table 20.20: Examples of incorporating verbs from noun-verb compounds

Incorporating verb	Noun	Verb
<i>ɣu-c^hɣ-ts^hi</i> 'drink alcohol' (vi)	<i>c^ha</i> 'alcohol' ⇐ <i>c^hɣts^hi</i> 'alcohol drinking'	<i>ts^hi</i> 'drink' (vt)

Table 20.20 only includes examples with the denominal prefixes *ɣu-* (§20.5) and *nu-/nɣ-* (§20.7), but other denominal prefixes are attested in this construction. In particular, the alternative forms *ruɣɣuʋfoʋ* ‘accumulate a fortune’ (with the rhotic denominal, §20.4) and *suzgruɕʰu* ‘give a nudge’ (with the instrumental sigmatic denominal, §20.3.2) are attested alongside *ɣuɣuʋfoʋ* ‘accumulate a fortune’ and *nuzgruɕʰu* ‘give a nudge’.

This use of the term “incorporation” to refer to this construction is debatable, since unlike prototypical incorporation, which originates from noun-verb coalescence (Mithun 1984), in the case of Japhug a two-step process has to be posited: (i) action nominal compounding followed by (ii) denominal derivation. However, this derivation process is not isolated cross-linguistically: similar constructions are found in Ancient Greek (Benveniste 1966a) and may be posited for proto-Algonquian (Garrett 2004; Jacques 2012d).

Not all incorporating verbs derive transparently from Noun+Verb compounds. In spite of the presence of a denominal prefix on the verb, the expected action nominal is not always attested. For instance, the intransitive verb *nujlxɣ* ‘herd hybrid yaks’ (from *ɣla* ‘male hybrid yak’ and *lxɣ* ‘graze’) might have been derived from a noun such as **ɣlx-lxɣ*, but no such noun exists anymore.

In some cases, denominal derivations are derived directly from a Noun+Verb collocation. Table 20.21 presents examples of denominal verbs in *nu-/nɣ-* and *sɣ-* coming from lexicalized complex collocations. In these constructions, the base verb is intransitive, and the base noun its subject (§20.13.3.1). Some of the nouns and/or verbs are orphan lexemes (§22.4.3.1, §22.4.3.2), and are not attested as free elements.

Three types of denominal derivations are found in Table 20.21, all independently attested with simple nouns. First, we find stative intransitive verbs in *nu-* (§20.7.1), whose intransitive subject corresponds to the possessor of the base noun as in the case of *nuɣɣmkʰe* ‘be skinny’ (compare 89a and 89b).

Table 20.21: Incorporating verbs from noun-verb collocations

Incorporating verb	base noun	Noun+verb collocation
<i>nuɣɪɪmk^he</i> ‘be skinny’ (vi)	<i>u-ɣɪɪm</i> ‘flesh’	<i>u-ɣɪɪm + k^he</i> ‘be skinny’
<i>nuɣɪɪmsu</i> ‘be plump’ (vi)	<i>u-ɣɪɪm</i> ‘flesh’	<i>u-ɣɪɪm + su</i> ‘be plump’
<i>sɣzɪloɔ</i> ‘be disgusting’ (vi)	<i>tu-zɪ</i> ‘nausea’	<i>tu-zɪ + loɔ</i> ‘have nausea’
<i>ɲɣzɪloɔ</i> ‘have nausea’ (vi)	<i>tu-zɪ</i> ‘nausea’	
<i>sɣmbruŋgu</i> ‘be detestable’ (vi)	<i>tɣ-mbru</i> ‘anger’	<i>tɣ-mbru + ŋgu</i> ‘be angry’
<i>ɲɣɣɣmɣɪɪm</i> ‘cherish’ (vt)		<i>u-ɣɛa + mɣɪɪm</i> ‘cherish’
<i>sɣɔombi</i> ‘be discouraging’, ‘be hopeless’ (vi)		<i>u-ɔo + mbi</i> ‘be discouraged’, §18.5.4
<i>ɲɣɔombi</i> ‘lose hope’ (vt)		
<i>nuɣsroɔmbɣɪt</i> ‘be in agony’	<i>tu-sroɔ</i> ‘life’	<i>mɣɪt</i> ‘break’, ‘be cut’ §18.5

- (89) a. *ɲuu-tu-ɲu-ɣɪɪm-k^he*

‘You are skinny.’ (heard in context)
- b. *ɲɣ-ɣɪɪm* *ɲuu-k^he*
2SG.POSS-flesh SENS-be.skinny
‘You are skinny.’ (140517 mogui de jing zh) {0004022#S22}

Second, some verbs make use of the *sɣ-* proprietive denominal prefix (§20.3.1). The verb *sɣzɪloɔ* ‘be disgusting’ is paired with the *ɲɣ-* denominal *ɲɣzɪloɔ* ‘have nausea’ (other verb pairs of the same type are found in Table 20.4), while *sɣmbruŋgu* ‘be detestable’ instead corresponds to the simple denominal *sɣmbru* ‘get angry’ (§20.3.1).

Third, the transitive verbs *ɲɣɣɣmɣɪɪm* ‘cherish’ and *ɲɣɔombi* ‘lose hope’ have a tropative meaning (§20.7.2). Their transitive subjects corresponds to the possessor of the base noun, as shown by (90a) and (90b).

- (90) a. *a-tɕuu* *ɲuu-ɲɣ-ɣɣ-mɣam-a*

- b. *a-tɕuu* *a-ɣɛa* *mɣɪɪm*
1SG.POSS-son 1SG.POSS-cherish(1) cherish(2):FACT
‘I cherish my son.’ (elicited)

Other incorporating verbs probably originate from a Noun+Cerb collocation which does not exist anymore. For instance, *αμπαχτς^hυμ* ‘be petty’ (91) derives from *tu-μπαβ* ‘eye’ and *xtς^hυμ* ‘be thin’ with the denominal prefix *a-*, but no collocation **tu-μπαβ+xtς^hυμ* exists, though the etymological relationship with the base noun and verb is still synchronically transparent.

- (91) *πω-τω-γ-μπαβ-τς^hυμ*
 SENS-2-DENOM-eye-be.thin
 ‘You are petty-minded.’ (elicited)

There are also a handful of incorporating verbs without a dedicated denominal prefix, as illustrated by Table 20.22.

Table 20.22: Incorporating verbs without dedicated denominal prefix

Incorporating verb	base noun	base verb
<i>αμυβυ</i> ‘have rickets’ (vi)	<i>tu-mi</i> ‘foot, leg’	<i>αβυ</i> ‘be bent’ (vi)
<i>ακυμτζοβ</i> ‘be pointy-headed’ (vi)	<i>tu-ku</i> ‘head’	<i>αμτζοβ</i> ‘be pointy’ (vi)
<i>κτυπα</i> ‘tell’ (vt)	<i>κτ-τι</i> ‘the thing that is said’	<i>πα</i> ‘do’ (vt)

In the case of *αμυβυ* ‘have rickets’ and *ακυμτζοβ* ‘be pointy-headed’, the nominal stems *μγ-*, *κγ-* and *su-* in bound state appear to be infixes within the stem of the base verbs *αβυ* ‘be bent’ and *αμτζοβ* ‘be pointy’. The stem *a <μγ> βυ* in addition lacks the *-j-* preinitial found in *αβυ*.

Infixation is not the only possibility to account for these two verbs however, since the initial *a-* syllables themselves are probably frozen denominal prefixes (see also §19.7.7). An alternative hypothesis is that both the apparent base verbs and the incorporating verbs are derived. The intransitive verb *νυσυζβε* ‘transport wood’ provides a possible model. This compound verb, which comes from the compounding of *σι* ‘wood’ (with vowel alternation *su-*, §5.4.1) and the root of *νυζβε* ‘transport’, at first glance seems to be a case of noun infixation within the stem *νυζβε*. However, the existence of the action nominal *συζβε* ‘firewood transportation’ shows that *νυσυζβε* ‘transport wood’ is a trivial example of denominal incorporation like the verbs in Table 20.20 above. The anomaly here is the verb *νυζβε* ‘transport’, whose *νυ-* prefix must be secondary – a likely explanation for this prefix is that *νυζβε* is a denominal derivation from a lost action nominal **tu-ζβε* ‘transportation’.

Figure 20.3: The derivational history of *nususuzbe* ‘transport wood’

Hence, as illustrated in Figure 20.3, *nususuzbe* ‘transport wood’ is only indirectly related to *nuzbe* ‘transport’, and the infixation hypothesis is certainly wrong in this case. A scenario in the same lines is possible for *amɣɣu* ‘have rickets’ and *akɣmtɕoɕ* ‘be pointy-headed’.

The only example of nominal incorporation without a denominal prefix is the defective verb *kɣtuɣa* ‘tell’ (its conjugation is presented in Table 14.15, §14.3.4), which comes from the compounding of the object participle *kɣ-ti* ‘the thing that is said’ (§16.1.2) with *pa* ‘do’. Non-denominal incorporating verbs are much more common in Khroskyabs (Lai 2017: 388–411) than in core Gyalrong languages.

20.13.2 Incorporation and other derivations

Like other denominal verbs, incorporating verbs undergo productive voice derivations. In some cases, only the derived verb exists: for instance, the intransitive *amurɣɣururu* ‘look at each other’s face’ has the form of a reduplicated reciprocal (§18.4.1) from a transitive verb **nu-rɣɣ-ru* ‘look at X’s face’ (from *tu-rɣa* ‘face’ and *ru* ‘look at’, §20.13.3.3), but no such base verb exists at least in the Kamnyu dialect of Japhug (§18.4.1.3).

20.13.3 Syntactic function of the incorporated word

The incorporated nouns have four syntactic functions: intransitive subject, object/semi-object, goal/location adjunct and instrument. There are no examples of incorporated transitive subjects in Japhug.

20.13.3.1 Incorporation of intransitive subject

Intransitive subject incorporation is found in verbs deriving from noun+intransitive verb collocations such as those listed in Table 20.21 above such as *nusroɕm-brɣt* ‘be in agony’ from *tu-sroɕ* ‘life’ and *mbrɣt* ‘break’, ‘be cut’. None of these

verbs has a dummy intransitive subject: the incorporated subject does not saturate the subject function. Rather, either the possessor of the base noun (see examples 89a and 89b above in §20.13.1) or an external referent is promoted to intransitive subject status (or to object status in the case of transitive verbs such as *nxrcʰmɣɣm* ‘cherish’).

There are no clear examples of subject incorporation among verbs deriving from noun+verb action nominals.

20.13.3.2 Incorporation of object

Object incorporation is found in some incorporating verbs that derive from noun+verb action nominal compounds such as those presented in Table 20.20 (§20.13.1) and others which probably originate from lost compounds. It is a saturating incorporation, which removes the object from the argument structure of the verb: incorporating verbs of this type are all intransitive, while their base verbs are all transitive. Typical examples include *yuc^hɣts^hi* ‘drink alcohol’ (from *c^ha* ‘alcohol’ and *ts^hi* ‘drink’) or *nxp^huxtsu* ‘break clods of earth’ (from the stem of *tx-p^hu* ‘clod’ (of earth) with *xtsu* ‘pound’) (§20.13.4).

Some lexicalized noun+verb collocations have an incorporating form. For instance, the transitive verb *ru*, which only¹⁸ occurs with the noun *zruy* ‘louse’ with the meaning ‘pick lice off’, can also incorporate the same noun to yield *muzruyru* ‘pick lice off’.

The semi-transitive verb *rga* ‘like’ (§14.2.3) can incorporate a semi-object, as in *muçmurga* ‘be talkative’, ‘like to talk a lot’ (with the bound state *çmu-* of the inalienably possessed noun *tu-çmi* ‘word’) and *nuc^hɣrga* ‘like to drink alcohol’ (with *c^hɣ-* from *c^ha* ‘alcohol’).

20.13.3.3 Incorporation of goal/location adjunct

Goals or locational adjuncts can also be incorporated. Unlike objects (§20.13.3.2), they do not saturate the object function of the verb and the incorporating verb has the same transitivity as that of the base verb. For instance, the verb *nxq^hɣɣga* ‘put on’ (of clothes worn on the shoulders on the top of other clothes) is transitive as is the base verb *ɣga* ‘wear’ and selects as object the garment that is worn, typically a raincoat (see 187, §9.2.3). The incorporated noun *u-q^hu* ‘after, behind’

¹⁸This verb must (at least synchronically) be distinguished from two homophonous verbs: the intransitive *ru* ‘look at’ (§15.1.2.4) and the transitive *ru* ‘fetch, bring’ (which requires an associated motion prefix, §15.2.9).

(in bound state $q^{h\gamma}$ -) here indicates the location where the piece of garment is worn ('wear on the back').

However, goal argument saturation occurs when the base verb requires a goal argument. For instance, *ru* 'look at' selects a goal or dative arguments (§14.2.4), but the incorporated verb *nxq^haru* 'look back', which contains the locational noun *u-q^hu* 'after, behind' (with the bound form q^{ha} - rather than $q^{h\gamma}$ -), is strictly intransitive.

The intransitive verb *nuk^hryngu* 'lie down to rest' provides an example of locational adjunct incorporation. It derives from the noun *k^ha* 'house' ($k^{h\gamma}$ -) and the intransitive verb *ryngu* 'lie down', 'sleep'. The original sense of this verb was probably 'lie down (somewhere) in the house' or perhaps even more specifically 'lie down in the dining room' (the term *k^hryjmu* 'dining room' contains the bound state $k^{h\gamma}$ - as first element), but it has now lexicalized further, meaning 'lie down to rest in a casual way' in a place unfit for this purpose and not necessarily within the house (as illustrated by 92).

- (92) *smxt tumda rjylpu nura yu nu-sakaβ tʂu nutcu*

 'He went to the water well of the king of Smad, and stayed there. He lay
 down on the ground in a casual way.' (2005-stod-kunbzang)

20.13.3.4 Incorporation of instrument

Instrument incorporation, like object incorporation (§20.13.3.2), is found in denominal verbs deriving from action nominal compounds (Table 20.20). Like goal and locational adjunct incorporation (§20.13.3.3), it does not saturate the object function: the verb *nuzgrut^hu* 'give a nudge' from *tu-zgru* 'elbow' and *t^hu* 'gore, stab' is transitive like its base verb, as shown by example (85) (§20.13.1 above).

Some instrument incorporating verbs are lexicalized, for instance *nu-rmbu-χtci* from *tu-rmbi* 'urine' (regular bound state *rmbu-*) and *χtci* 'wash' does not mean 'wash with urine'; *χtci* is to be understood here as 'drench' (as in 'drenched in the rain' in 13, §26.1.1.4), and although *mu-rmbu-χtci* probably originally meant 'piss on', its present meaning is instead 'spray a liquid on', in particular of a species of ants (93).

- (93) *tee nutcu tee qro nu u-mjaβ u-ηgu ra ku-εe,*

 ‘(When the bear comes to eat them), the ants go into its eyes, bite its eyes
 and spray acid on them.’ (26-qro) {0003682#S45}

Instruments other than body parts can be incorporated, for instance *tx-jlxβ* ‘steam’ in the verb *nɣjlxβsqa* ‘stew’ from *sqa* ‘cook’. However, this is also a lexicalized incorporating verb, which does not mean ‘cook with steam’ as could have been expected, but rather ‘stew for a long time’.

Instrument incorporation is more common with transitive verbs, but examples also exist with intransitive verbs, for instance *numbrumtsaβ* ‘skip rope’ from *tumbri* ‘rope’ (*mbru-*) and *mtsaβ* ‘jump’.

20.13.4 Incorporation and other constructions

Incorporating verbs occur in the same contexts as the corresponding non-compounded syntactic constructions when these exist, both in the case of incorporating verbs from noun+verb collocations such as *nujɣmk^he* ‘be skinny’ (94) (see also 89a and 89b above) and of those from action nominal compounds such as *nɣp^huxtsu* ‘break clods of earth’ (95).

- (94) *icq^ha qazo nu-nɣm ku-su nuura q^he*

- (iii) *cu nu-p^hut-t-a*
stone AOR-take.out-PST:TR-1SG
- ‘I cleared the stones [from the field].’ (elicitation)

The non-compounded construction (iii) is the only one that can occur if the argument is referential or takes a determiner (unlike languages like Hopi which allow determiners to have scope over an incorporated noun, see Hill 2003; Haugen 2008). In the light verb construction with the action nominal compound *cup^hut* ‘taking stones’ (out of the fields, before ploughing) (i) and the incorporating verb *yucup^hut* ‘take out stones’ (ii), the bound nominal element *cu-* cannot be used to refer to specific stones that have been previously mentioned. A similar constraint is observed with other denominal verbs (§20.1.2). The light verb construction (i) is used to highlight that an action takes a long time or effort, or occurs many times in this particular example.

The usage differences between (i)–(iii) in (96) however are not generalizable to all incorporating verbs, in particular because the existence of an incorporating verb does not imply that the constructions in (i) and (iii) also exist, and because compounding is not always compositional. The triplet of constructions in (97) with *nxq^haru* ‘look back’ (§20.13.3.3), the compound *q^haru* ‘look back’ (§20.13.1) and the non-compounded construction with *u-q^hu* ‘after, behind’ and *ru* ‘look at’, illustrate a different situation.

The examples above show that the collocation of *u-q^hu* ‘after, behind’ and *ru* ‘look at’ is semantically quite different from the compound *q^haru* ‘look back’ and its corresponding denominal incorporating verb: its range of meanings includes ‘be turned behind, towards the back’ (iii.a), ‘look behind X’ (iii.b) or ‘look at X from behind’ (iii.c). The light verb construction (i) and the incorporating verb (ii) by contrast can only be used in the sense of ‘look back’. Unlike in (96), the light verb construction (i) is not used to express either protracted or repeated action since *q^haru* ‘look back’ is semelfactive, but rather occurs in (97) to put more emphasis on the negation of the action (he did not look back in the slightest).

The contrast between the three constructions in (96) and (97) also has to do with the relative frequency of the verbal forms in which they appear. In particular, an important proportion of incorporating verbs in the corpus are subject participles (as in 94 above) or generic forms (as in 95).

21 Tense, aspect, modality and evidentiality

21.1 Introduction

All finite verb forms in Japhug have one primary TAME (tense, aspect, modality, evidentiality) category, encoded by orientation preverbs (§21.1.1), stem alternations (§21.1.2) and additional affixes in some cases (§21.1.3). Primary TAME categories can be combined with secondary aspectual and modal prefixes (§21.6, §21.7).

Table 21.1 summarizes the primary TAME categories in Japhug. Labels such as ‘Imperfective’ or ‘Egophoric Present’ are conventional names for Japhug-specific morphological verbal categories, and therefore capitalized in this chapter and in the whole grammar following the convention proposed by Haspelmath (2010: 674) and others. The use of these terms makes no implication that they have any crosslinguistic validity or that the Japhug categories are amenable to direct comparison with TAME categories in other languages.

Apart from the Factual Non-Past, all primary TAME categories take one orientation preverb. Some categories, such as the Sensory, are marked by the same preverb on all verbs. Other categories select a preverb belonging to one of the four series (A, B, C or D, see Table 21.2 below and Table 21.1.1, §15.1.1.1), whose orientation is lexically specified by the verb (§15.1.5).

Primary TAME categories in Japhug are divided into four groups: Non-Past (Factual, Egophoric Present, Sensory, §21.3), Imperfective (which is mainly used in subordinate clauses or in periphrastic constructions, §21.2), Past (Aorist, Inferential, §21.5) and Modal (Imperative, Irrealis, Dubitative, §21.4). This classification is based on both semantic and formal features, and is justified in each of the sections of this chapter.

In addition to the primary categories, periphrastic TAME categories are built by combining finite verbs with the copula *ɲu* ‘be’. The main verb can be in the Imperfective (§21.2.2), §21.5.3.5), in the Factual Non-Past to express periphrastic Proximative (§21.6.2.1) or in the Inferential (§21.5.2). The use of the copula as

Table 21.1: Primary TAME categories

		Stem	Preverb	Reference
Factual Non-Past	FACT	1 or 3	no preverb	§21.3.1
Sensory	SENS	1 or 3	<i>juu-</i>	§21.3.2
Egophoric Present	PRS	1 or 3	<i>ku-</i>	§21.3.3
Imperfective	IPFV	1 or 3	B	§21.2
Aorist	AOR	2	A or C	§21.5.1
Past Imperfective	PST.IPFV	2	<i>pu-</i>	§21.5.3
Inferential	IFR	1	D	§21.5.2
Inferential Imperfective	IFR.IPFV	1	<i>pjɣ-</i>	§21.5.3
Irrealis	IRR	1 or 3	<i>a-</i> + A	§21.4.1
Imperative	IMP	1 or 3	A	§21.4.2, §21.4.3
Dubitative	DUB	1 or 3	<i>ku-</i> + autive	§21.4.4

postverbal TAME auxiliary should not be confused with its focalizing function (§22.5.3.2).

21.1.1 Preverbs

Some of the Primary TAME categories require the same preverb with all verbs (Egophoric Present, Sensory, Dubitative). The other categories (Imperfective, Aorist, Inferential, Irrealis, Imperative) only specify preverb type (§21.1.1.1), while the orientation of the preverb is either lexically determined, or expresses spatial orientation (in the case of orientable verbs §15.1.2).

21.1.1.1 Morphology

Orientation preverbs in Kamnyu Japhug come in four series, which contribute (in combination with other formatives and morphological devices) to mark TAME, transitivity and person. Each series comprises seven orientations, divided into Upper orientations (up, upstream, eastwards), Lower orientation (down, downstream, westwards) and unspecified orientation (§15.1.1.1). Table 21.2 lists the rules of preverb formation. The *C-* is the initial consonant of the preverb, which encodes the orientation: *t-* UPWARDS, *p-* DOWNWARDS, *l-* UPSTREAM, *t^h-/c^h-* DOWNSTREAM, *k-* EASTWARDS, *n-/ŋ-* WESTWARDS and *j-* ‘unspecified’.

Upper vs. Lower orientation preverbs have a different vocalism (except for type C preverbs, whose vowel is neutralized to *Ca-*), and type B and D lower orientation preverb have a palatalized onset, realized as *cʰ-* for DOWNSTREAM preverbs (rather than *†tʰj-*) and as *ɲ-* for WESTWARDS preverbs. A complete list of all preverbs is presented in Table 15.1 (§15.1.1.1). Only types A and B are attested on non-finite forms (§16.1.1.2).

Table 21.2: Orientation preverbs and TAME categories

	Upper	Lower	TAME categories
A	<i>Cɣ-</i>	<i>Cuu-</i>	AOR, PST.IPFV, IMP, IRR
B	<i>Cu-</i>	<i>Cjuu-</i>	IPFV, SENS, PRS, DUB
C	<i>Ca-</i>	<i>Ca-</i>	AOR (3→3')
D	<i>Co-</i>	<i>Cjɣ-</i>	IFR, IFR.IPFV

21.1.1.2 Ambiguity with type A preverbs

Type A preverbs occur with a wide range of TAME categories. In particular, Aorist and Imperative both select the type A preverb, without any additional prefix. A few ambiguous forms do exist in the case of intransitive verbs in particular: for instance, *kɣ-ɣɣzi* with the type A EASTWARDS preverb *kɣ-* and the verb *ɣɣzi* ‘stay’ can either be analyzed as an 2SG imperative ‘stay!’ or as a 3SG Aorist ‘he stayed’. However, four additional morphological marks can help disambiguate between the two categories in some contexts.

First, Aorist selects stem II (§12.2.1), and Imperative stem III (§12.2.2, §21.1.2). Second, transitive verbs in Aorist take type C preverbs instead of type A. Third, the *-t* past tense suffix is found in the Aorist, but not in the Imperative (§21.1.3). Fourth, the rules of vowel contraction (§12.3) are different across TAME categories: the contracting vowel of the stem merges with the preverb as *Ca-* in the Aorist and Past Imperfective, and as *Cɣ-* in the Imperative and the Irrealis. For instance, a contrast can be observed between the 3SG Aorist /kamdzuu/ (*kɣ-amdzuu*, AOR-sit) ‘s/he sat down’ and the 2SG Imperative /kɣɣmdzu/ (*kɣ-ɣmdzuu*, IMP-sit) ‘sit!’.

Syncretism occurs in the cases of verbs whose lexical orientation is WESTWARDS and EASTWARDS, the Imperfective of such verbs is identical to the Ego-phoric Present or Dubitative on the one hand, and the Sensory on the other hand (except in specific contexts, see §13.1.1, §22.5.1.2). For instance, the form

ku-omdzuu-a of the verb *amdzu* ‘sit’, which takes the EASTWARDS preverbs, can either be analyzed as Imperfective (IPFV-sit-1SG) or Egophoric Present (PRS-sit-1SG) depending on the context.

Likewise, verbs selecting the DOWNWARDS orientation have Aorist and Inferential forms that are identical to their Past Imperfective and Inferential Imperfective forms, respectively. Given the constraints on the occurrence of the non-periphrastic Past Imperfective (§21.5.3), however, such cases are much rarer.

21.1.1.3 Orientation preverbs and aspect

The Past Imperfective and Inferential Imperfective preverbs *pu-* and *pjɣ-* correspond to the DOWNWARDS preverbs of series A and D, respectively. The grammaticalization process from ‘downward’ orientation to imperfective has occurred (probably independently) in all core Gyalrong languages, and is discussed in detail in Lin (2011).

There are two additional less grammaticalized cases of orientations used with a specific aspectual meaning, and overriding the intrinsic orientation of the verb.

First, the DOWNSTREAM orientation occurs with stative verb to express progressive change of state occurring naturally, in particular to describe the growth of plants and animals (§15.1.5.5). This usage is common with the adverb *zuruzɣri* ‘progressively’, and is observed across various TAME categories, including for instance the Inferential (1), the Imperfective (2, 3) and the Aorist (3). The verbs *mts^hɣt* ‘be full’, and *wxti* ‘be big’ normally select the UPWARDS orientation (see example 118, §15.1.5.5), and *yurni* ‘be red’ the WESTWARDS orientation.

 ‘It progressively becomes red, and after it has become red it ripens.’
 (16-RIWmsWsi) {0003520#S17}

Second, the UPWARDS orientation in the Aorist overrides the lexical orientation of stative verbs to indicate a point of temporal reference in temporal clauses. For instance, the negative existential verb *me* ‘not exist’ (§15.1.5.7), whose intrinsic orientation is WESTWARDS, occurs with the UPWARDS orientation as in (4) in the meaning ‘when there is no...’ without inchoative aspect ‘when ... disappears’ as is usually found in the Aorist (see also §21.5.1.4, Jacques 2014a: 283, fn 10).

 ‘When there is nothing other than than this, people cut it.’ (140427
 qamtsWrmdzu) {0003854#S12}

21.1.1.4 Orientation preverbs and evidentiality

The Sensory *nu-* and Egophoric Present *ku-* markers correspond to the WESTWARDS and EASTWARDS preverbs of series B, respectively. It is unlikely that a pair of preverbs encoding the solar dimension (§15.1.3.3) was directly grammaticalized to express an evidential contrast.

However, an extended function of the EASTWARDS/WESTWARDS contrast is the expression of centripetal vs. centrifugal orientation (§15.1.4.3). The centripetal meaning of the EASTWARDS orientation goes back at least to proto-Gyalrong, since it is attested in Situ, and the metaphorical use of centripetal/cislocative marker to express speaker affectedness could have been further grammaticalized as an egophoric marker.

21.1.2 Stem alternation

Stem alternation (§12.2) has a lower functional load than preverbs to encode TAME, since stem II is only attested on a handful of irregular verbs (§12.2.1) and stem III, although found on an important number of transitive verbs (§12.2.2.1), is restricted to only a small subset of the paradigms, as it marks both TAME and person/number (§12.2.2.2).

Three cases of systematic redundancy between stem alternation and orientation preverbs are observed. First, stem III alternation is redundant as a TAME marker (but not as a transitivity marker, §14.3.1) with B type preverbs in the Imperfective, the Sensory and the Egophoric. Second, in 3→3' configurations, stem II and C type preverbs redundantly mark Aorist (§12.2.1). Third, stem III is redundant with the contrast between A and C type preverbs to distinguish between Imperfective and Aorist forms in the case of transitive verbs; taking *ndza* 'eat' as an example of an alternating transitive verb, its 2SG→3 Imperative *tv-ndze* 'eat it!' (stem III, A preverb) differs from its 3SG→3' Aorist *ta-ndza* 's/he ate it' (base stem, C preverb) by both the preverbs and the stems.

Since intransitive verbs lack the contrast between A and C type preverbs (and also stem III), stem II is the only clue to disambiguate between the third person Aorist and Imperative, which are both marked by A type preverbs: for instance, while non-alternating verbs such as *rxzi* 'stay' have ambiguity between these two forms (§21.1.1.2), irregular alternating verbs such as *ce* 'go' make a clear distinction between Aorist 3SG (*jx-ari* AOR-go[II] 's/he went') and Imperative 2SG (*jx-ce* IMP-go 'go!') and the corresponding dual and plural forms. It is the only case when stem alternation is critical for distinguishing between two TAME categories.

21.1.3 Other affixes

Aside from preverbs and stem alternation, there are a few formatives used to mark primary TAME categories.

The negative prefixes (slot -5, §11.2.1) have different forms depending on TAME categories, and one of them, the Sensory Negative *múj-* (§13.1.1) is a portmanteau encoding both polarity and TAME.

The Past Transitive *-t* (slot +1, *-z* in some dialects of Japhug, §11.3) is a secondary exponent of some TAME categories, only found in the 1/2sg→3 person configurations (§14.3.2.1) of Aorist, Perfective and Imperfective Inferential, Past Imperfective (§21.5) and Apprehensive (§21.7.1.1), unless the Progressive *asu-* is also present (§21.6.1.1).

The prefix *a-* in slot -6 (§11.2.1) is the main marker of the Irrealis (§21.4.1.1), together with type A preverbs and (when applicable) stem III.

Secondary TAME categories (§21.6, §21.7) are encoded by several prefixes in slots -6 and one in -1 (the Progressive §21.6.1).

21.1.4 Evidentiality and person

As in many languages with evidential systems (Sun 2018), person and evidentiality present some degree of interaction in Japhug.

The Sensory (§21.3.2) and Inferential (§21.5.2) have restrictions on the use of first person in declarative clauses. First person subjects are not impossible, but have very specific meanings (see §21.3.2.6 and §21.5.2.3).

The Egophoric Present, on the other hand, is not compatible with second person in declarative clauses, and with first person in interrogative ones.

Like most languages of the Tibetosphere, interrogative sentences generally adopt the perspective of the addressee rather than that of the speaker, causing a phenomenon referred to as ‘anticipation rule’ (Tournadre & LaPolla 2014: 244) or ‘flipping’ (San Roque et al. 2017): the speaker anticipates the answer of the addressee and uses the form that he expect the addressee will choose to respond to the question. For instance, in example (5), the speaker uses the Factual because she expects and answer with the Factual such as *suz-a* (know:FACT-1SG) ‘I know’.

- (5) *nɣj ur-túr-suz?*
 2SG QU-2-know:FACT
 ‘Do you know it?’ (19 GzW) {0003536#S8}

As a result of this change of perspective, compatibilities between evidential markers and first vs. second person are always reversed between declarative and interrogative sentences (§21.3.3.2).

The addressee perspective however is not a syntactic rule. The addressee is free to adopt the evidential form suggested by the speaker who asked the question, or to choose another form if he sees fit: see Garrett & Bateman (2007) for an account of this phenomenon in Tibetan. It is also possible to have in the same question two verbs referring to the addressee with the Egophoric Present in one case and the Sensory in the other, as in (6).

- (6) *wo, ur-kú-tur-pe, ur-nú-tur-c^ha?*
 INTERJ QU-EGOPH-2-be.good QU-SENS-2-be.fine
 ‘Are you feeling well, are you fine?’ (140425 shizi huli he lu-zh)

21.2 Imperfective

The Imperfective is one of the most common finite verb forms in Japhug, but rarely appears on its own without an auxiliary verb. It mainly occurs in periphrastic TAME constructions (§21.2.2) and subordinate clauses (§21.2.3, §21.2.4).

A specific hortative function (§21.2.5) has developed from its use in complement clauses with a modal auxiliary. In addition, verbs of perceptions are used in the Imperfective in specific contexts (§21.2.7).

21.2.1 Morphology

The Imperfective selects type B preverbs (§21.1.1.1, §15.1.1.1), and stem III (§12.2.2.1, §21.1.2) when appropriate. The preverb orientation is not neutralized. Table 21.3 shows the Imperfective 3SG→3' and 3PL→3' forms of some transitive verbs, illustrating all six orientation preverbs and alternation between stem III (in 3SG→3') and stem I (in 3PL→3').

Table 21.3: Examples of Imperfective verb forms (3→3' transitive configurations)

Verb	Orientation	Imperfective
<i>ndza</i> 'eat'	UPWARDS	<i>tu-ndze, tu-ndza-nuu</i>
<i>ko</i> 'prevail over'	DOWNWARDS	<i>pju-kɣm, pju-ko-nuu</i>
<i>lya</i> 'dig'	UPSTREAM	<i>lu-lye, lu-lya-nuu</i>
<i>βlu</i> 'burn'	DOWNSTREAM	<i>c^hu-βli, c^hu-βlu-nuu</i>
<i>ndo</i> 'take'	EASTWARDS	<i>ku-ndɣm, ku-ndo-nuu</i>
<i>suso</i> 'think'	WESTWARDS	<i>jnu-susɣm, jnu-suso-nuu</i>

Table 21.4 presents the Imperfective paradigms of the transitive verb *ndza* 'eat' (UPWARDS) and of the intransitive contracting verb *amdzu* 'sit' (EASTWARDS), with vowel contracting of the preverb and the vowel of the stem in the first and third person subject forms.

Verbs selecting the EASTWARDS or WESTWARDS orientation (§15.1.3.3, §15.1.4.3, §15.1.5) present syncretism between Imperfective on the one hand, and Egophoric Present or Sensory on the other hand. For instance, the 3SG→3' form *jnu-susɣm* of the verb *suso* 'think' (which requires the WESTWARDS preverbs), can either be Imperfective or Sensory (§21.3.2.1, §21.2.6). Similarly, the 1SG forms *ku-rɣzi-a* and *ku-omdzuu-a* of the verbs *rɣzi* 'stay' and *amdzu* 'sit' (whose lexical orientation is EASTWARDS, see Table 21.4), can be Imperfective or Egophoric Present (§21.3.3.1).

Verbs selecting other orientations do not have such ambiguity; for instance, the verb *rɣma* 'work' (selecting UPWARDS orientation) has different Imperfective, Egophoric Present and Sensory forms: *tu-rɣma*, *ku-rɣma* and *jnu-rɣma*, respectively.

Table 21.4: Examples of Imperfective paradigms

1SG(→3')	<i>tu-ndze-a</i>	<i>ku-omdzuu-a</i>
1DU(→3')	<i>tu-ndza-tçi</i>	<i>ku-omdzuu-tçi</i>
1PL(→3')	<i>tu-ndza-j</i>	<i>ku-omdzuu-j</i>

2PL(→3')	<i>tu-tuu-ndza-nuu</i>	<i>ku-tuu-γmdzuu-nuu</i>
3SG(→3')	<i>tu-ndze</i>	<i>ku-omdzuu</i>
3DU(→3')	<i>tu-ndza-ndži</i>	<i>ku-omdzuu-ndži</i>
3PL(→3')	<i>tu-ndza-nuu</i>	<i>ku-omdzuu-nuu</i>
1→2SG	<i>tu-ta-ndza</i>	
2SG→1SG	<i>tu-ku-ndza-a</i>	
3'→3SG	<i>tí-wy-ndza</i>	

21.2.2 Use in periphrastic TAME categories

Periphrastic TAME categories with a main verb in the Imperfective are used to express habitual or ongoing actions. In these constructions, the main verb expresses person/number and aspect, while the copula encodes tense, modality and evidentiality.

The examples in (7) (with the verb *ndza* ‘eat’ in the 3SG→3’ configuration) illustrate attested possibilities. With a copula in the Factual Non-Past *ηu* (7a) or in the Sensory *ηuu-ηu* (7b), the periphrastic construction has a non-past meaning with an evidential contrast between non-Sensory and Sensory (there is no Periphrastic Egophoric). When the copula is in the Past Imperfective *pu-ηu* or in the Inferential Imperfective *pjγ-ηu*, the interpretation is that of a past habitual ‘used to X’ or a Past progressive (§21.5.3.5). Additional periphrastic constructions are also attested with Secondary Modal prefixes on the copula (§21.7).

- (7) a. *tu-ndze ηu*
 IPFV-eat[III] be:FACT
 ‘S/he/it eats/is eating it.’ (Periphrastic Imperfective)
- b. *tu-ndze ηuu-ηu*
 IPFV-eat[III] SENS-be
 ‘S/he/it eats/is eating it.’ (Periphrastic Sensory)

- c. *tu-ndze pu-ŋu*
 IPFV-eat[III] PST.IPFV-be
 ‘S/he/it used to eat/was eating it.’ (Periphrastic Past Imperfective)
- d. *tu-ndze pjʰ-ŋu*
 IPFV-eat[III] IFR.IPFV-be
 ‘S/he/it used to eat/was eating it.’ (Periphrastic Inferential Imperfective)
- e. *tu-ndze a-pu-ŋu*
 IPFV-eat[III] IRR-IPFV-be
 ‘If s/he eats it...’ (Periphrastic Irrealis)

In these constructions, the copula never takes any person/number indexation markers or associated motion, which can only be found on the main verb. For instance, in (8), the 1SG indexation suffix *-a* can only occur on *tu-ndze-a*, and putting it on the copula *ŋu* here is categorically rejected (although the copula *ŋu* ‘be’ is compatible with indexation affixes, §14.2.3)

- (8) *tx-mt^hum tu-ndze-a pu-ŋu ri,*
 INDEF.POSS-meat IPFV-eat[III]-1SG PST.IPFV-be LNK
 ‘I was eating the meat.’ (150909 qandZGi) {0006358#S3}

Negation can be expressed in these constructions by using the suppletive negative copula *maʰ* ‘not be’ (§13.1.2, §13.2, §22.5.3.1), as in (9).

- (9) *ma lonba tuturca tu-mŋʰm pu-maʰ.*
 LNK all together IPFV-hurt PST.IPFV-not.be
 ‘[My whole head] was not hurting all at the same time.’ (24-pGArtsAG)
 {0003624#S74}

Chains of verbs in the Imperfective can share the same copula, which appears at the end, following the last verb. In (10), the Inferential Imperfective copula *pu-ŋu* has scope over no less than ten verbs in the Imperfective (marked in red), sharing the same subjects and expressing a list of actions repeatedly occurring in a particular order every day (the first verb *ku-rtəʰ* ‘he saw that..’ does not belong to this chain, see §21.2.7). One verb in the Aorist (marked in blue) appears in the middle of the Imperfective chain to set a point of temporal reference ‘when they reach (the ground)’.

 heavens, and as they reached the ground, they would shake themselves,
 shed the pigeon skins and put them aside, and three beautiful girls would
 come out from [the skins], and they would collect *Potentilla anserina*, and
 in the evening, they would take the *Potentilla*, wrap themselves in their
 pigeon skin, shake themselves and disappear into the heavens one after
 the other.’ (07-deluge) {0003886#S62}

Aside from the habitual and progressive meaning in (7a), the combination of a main verb in Imperfective with a copula in the Factual Non-Past can also express imminent future, as in (11) and (12). In (11), it also appears in the apodosis of a conditional construction to express the result if the condition in the protasis is verified.

- (11) *c-tu-ru-a* *ηu* *tce, turme ju~ju-ηu* *nx,*

The existence of Periphrastic TAME categories, in addition to the primary and secondary categories, makes the Japhug TAME system extremely complex. At the present stage of my knowledge of the language, the semantic differences between some categories still eludes me.

For instance, the (Primary) Sensory and the Periphrastic Sensory can both express habitual or generic actions, as in (14) where both forms appear redundantly (with tail-head linkage, §25.1.7).

- (14) *tce ma nunu duduut nu ku tcyom* *kunx ju-ndze.*

‘The dove also eats xanthoxylum. It also eats xanthoxylum, and makes it fall (from the tree).’ (22-CAGpGa) {0003586#S31}

There is overlap between the use of postverbal copulas in the periphrastic TAME constructions and their function as focus marker (§13.2, §22.5.3.2). In (15), the negative copula *maʋ* and the emphatic affirmative *ɕti* are used both to build the Periphrastic Imperfective, and to express contrastive focus on the dative recipient.

21.2.3 Use in temporal clauses

Chains of verbs in the Imperfective without subordinating relation, but possibly sharing a tense-marking copula, can indicate a succession of events, as in (10) above. The Imperfective also occurs in subordinate temporal clauses expressing precedence or simultaneous action.

Temporal clauses of temporal precedence headed by the postposition *ɕuŋgu* ‘before’ (§8.2.11, §25.3.2.1, Jacques 2014a: 286–287) require the Imperfective, to the exclusion of all other finite and non-finite verb forms. In (16) and (17) for instance, only *lu-fsoʋ* and *ku-lɣt* can occur with *ɕuŋgu*, and neither infinitive (§16.2) or Aorist forms (§21.5.1) are possible, regardless of the TAME form of the verb of the main clause (Inferential in 16, Past Imperfective in 17).

In temporal clauses with *u-k^huuk^ha* ‘while’, Imperfective express an action occurring simultaneously with that of the main clause, as in (18) and (19). However, unlike *ɕuŋgu*, *u-k^huuk^ha* does not select the Imperfective and other finite TAME forms are possible (§25.3.4.2).

 {0003536#S36}

21.2.4 Use in complement clauses

The Imperfective is common in complement clauses, in particular with modal verbs. In such clauses, no auxiliary copula is required.

Imperfective occurs in S-complement clauses with modal verbs such as *ra* ‘be needed’, ‘be necessary’ (20, 21), *jɣy* ‘be allowed’ (22), *nts^hi* ‘have better’ and *k^hu* ‘be possible’.

- (20) *atu pyɣtɕw nu pjú-wy-sat pjw-ra*

 IPFV-2→1-help-1SG QU-be.possible:FACT
 ‘Could you help me?’ (150901 dongguo xiansheng he lang-zh)
 {0006336#S32}

The aspectual auxiliary *ηgrɣl* ‘be usually the case’ (§24.5.6.4) most often selects a complement in the Imperfective, expressing recurring actions or situations, as in (23).

- (23) *qala ku nuwa ku-fse βlaβlu tu-βze*

pjɣ-ηgrɣl.
 IFR.IPFV-be.usually.the.case
 ‘The hare used to do tricks like that.’ (31-qala) {0004081#S78}

The Imperfective is also found in object or semi-object complement clauses with modal verbs such as *spa* ‘be able’ (24) or *c^ha* ‘can’ (example 213, §21.5.2.4).

- (24) *ju-krym múj-spe qhe, tɛendsre nuwu u-pu*

Imperfective complement clauses are found with main verbs in all primary TAME categories, including perfective ones like the Inferential (213, §21.5.2.4) or the Aorist.

21.2.5 Hortative

The Imperfective used without any copula or auxiliary can have a hortative meaning similar to the one it has when combined with a modal auxiliary such as *ra* ‘be needed’ or *nts^hi* ‘have better’ (§21.2.4).

The hortative function occurs in first person subject forms, with either transitive or intransitive verbs (25).

- (25) *ku-zɣɣct^huz-a ma zduɣpa*
 IPFV-reveal.one’s.true.nature-1SG LNK poor
 ‘Let me show him who I am, poor him.’ (2003kandzwsqhaj)

It is also found instead of the Imperative in the 2→1 configurations (26, 27, 28, 29), since the Imperative only allows 2→3 forms (§21.4.2.1).

- (26) *ku-kw-nxjo-a je*

 QU-IPFV-make.a.mistake-1SG ADD IPFV-2→1-CAUS-correct-1SG
 ‘If I make a mistake (when speaking), correct me.’ (elicited)

The hortative meaning of the Imperfective occurs in three main contexts: (i) when the clause containing the verb in the Imperfective followed by a causal clause, with the linker *ma* in between, as in (25) and (28); (ii) when the verb is followed by the sentence final particle *wo* (§10.4.1), as in (27); (iii) in the apodosis of conditional constructions (29).

21.2.6 Inchoative

With stative verbs, like the Aorist (§21.5.1) and the Inferential (§21.5.2) the Imperfective always expresses ongoing change, whether it appears in main clauses in a Periphrastic tense (30), or in a complement clause (31).

Verbs selecting the WESTWARDS or EASTWARDS preverbs as intrinsic orientations have syncretism between Imperfective on the one hand, and Sensory or Egophoric Present on the other hand (§21.2.1). For instance, the form *ɲu-ɲaʸ* is (inchoative) Imperfective in (33), and (stative) Sensory in (34) (illustrating the comparative use of the Sensory, §21.3.2.5). The only formal difference between them is the presence of the auxiliary *ɲu* in (33).

 LNK 3SG.POSS-tail DEM ERG SENS-be.black
 ‘It tail is blacker.’ (23-qapGAmtWmtW) {0003608#S58}

21.2.7 Perception verbs

The verbs *ɾoʸ* ‘look’ and *sʸɲo* ‘listen’, which normally express volitional perception, occur in the Imperfective in an unusual construction which has three main characteristics.

First, the object or semi-object (§14.5.3) of the verb is non-overt, and cataphorically refers to the immediately following clause(s), which describe(s) the perceived event, as in (35). These clauses are in coordinating relationship with the clause of the perception verb, and are not subordinate complement clauses (§24.4.4).

- (35) *u-zda ra ku ku-rtoβ-nu tce, [nuunu rdɣstax*
 3SG.POSS-companion PL ERG IPFV-look-PL LNK DEM stone

 ‘His companion saw that he had been turned to stone, and regretted very
 much [not having trusted him].’ (150902 hailibu-zh) {0006316#S145}

Second, despite having an Imperfective form, the verbs can express a semelfac-
 tive perception (note in particular the presence of the adverb *ɣɣwuuɣ* ‘suddenly’
 in 36 below), rather than an ongoing or recurrent perception when the following
 clause is in the Aorist or in the Inferential (as in 35, 36, 37 and 38 below)

- (36) *spjaŋku ku ɣɣwuuɣ zo ku-rtoβ tce, k^huna ɣu u-mke*

 DEM:LOC scar INDEF IFR-see SENS-be
 ‘The wolf suddenly saw [that there was] a scar on the dog’s neck.’
 (140426 jiagou he lang-zh) {0003804#S37}

Third, the perception is non-volitional: the verbs in this construction can be
 translated as ‘notice’ (of something unexpected), as shown by the fact that the
 verb of non-volitional perception *mto* ‘see’ occurs in the following clause in (36)
 to redundantly express the same perception event as *ku-rtoβ*.

The clauses referring to the perceived event (shown in square brackets below)
 in the Inferential either express actions that had taken place before the percep-
 tion event, and whose results only are perceptible (§35, §38), or actions that are
 immediately perceived as they occur (§37).

- (37) *a-wa ku-ruɲɣɣt ɲɣ-ce ri, ɲu-sɣŋo tce,*

 3SG.POSS-up DEM:LOC man INDEF IFR:WEST-come
 ‘My father had gone to the bathroom, and heard someone coming
 upstairs.’ (08-kWqhi) {0003454#S10}

The cataphoric object of the perception verb can comprise more than one
 clause, as shown by (38).

- (38) *icq^ha* *ku-nuicɣɣmbumbjom nuw c^hɣ-sta*, [...] *tcendɣre*

 ‘The racer woke up, and saw that his water had been spilled, and that the
 princess had already gone far away.’ (140505 liuhaohan zoubian
 tianxia-zh) {0003913#S121}

In this construction, the Imperfective forms *ku-rtoɓ* and *nuw-sɣno* can also refer to generic or recurrent events if the following clause is in the Imperfective too, as in example (10) above (§21.2.2).

The Imperfective of perception should be distinguished from the regular uses of the perception verbs *rtoɓ* ‘look’ and *sɣno* ‘listen’ in the Imperfective. In (39) and (40) for instance, the direct objects of the verb *rtoɓ* do not cataphorically refer to the following clause, but rather to concrete entities (the leopard’s head in 39, two birds in 40), and there is no non-volitional perception interpretation.

21.3 Non-past categories

This section discusses Factual Non-Past (§21.3.1), Sensory (§21.3.2) and Egophoric Present (§21.3.3), three TAME categories which have two commonalities. First, they almost always occur in sentences referring to Non-Past events (one exception is discussed in §21.3.2.7). Second, they do not have an inchoative meaning when used with stative verbs, unlike the Imperfective (§21.2.6). Like the Imperfective and the Modal categories, they select stem III in transitive direct configurations with singular subject and third person object (§12.2.2.2).

Minimal pairs between these three categories can be found in specific contexts (Jacques 2019a), and the tripartite evidential contrast between them is discussed in §21.3.4.

21.3.1 Factual Non-Past

21.3.1.1 Morphology and glossing

The Factual is the only finite TAME category in Japhug without an orientation preverb and any other prefix in slot -3.¹ In the case of verbs without stem III alternation (i.e. transitive verbs with a non-alternating rhyme and intransitive verbs), it is realized as the bare stem. It selects the negative prefix *mɣ-* (§13.1.1).

Complete paradigms of transitive and intransitive verbs in the Factual Non-Past are presented in §14.3.2, and need not be repeated here.

In spite of the absence of overt marking for most verbs, the gloss FACT is nevertheless always specified on verbs in the Factual in this grammar, whether or not stem alternation occurs. This gloss is marked as a suffix (verb:FACT), rather than as a prefix, to avoid confusion with derivational prefixes, since suffixes (§11.3 are fewer than prefixes (§11.2), and also because stem III, which occurs in Factual singular subject forms, is suffixal in origin (§12.2.2.1).

¹The term Factual’, taken from Oisel’s (2013) study of modern Lhasa Tibetan, corresponds to the category referred to as ‘assertive’ in older publications on Tibetan languages (Lhasa Tibetan *yod.pa.red*).

The formation of the Factual is regular. However, the copula *ηu* ‘be’ lacks an Egophoric Present form ($\dagger ku\text{-}\eta u\text{-}a$ is not accepted, see §21.3.3), and it thus appears that the preverbless forms of this verb are syncretic, analyzable either as Factual or Egophoric Present (however, no attempt will be made at distinguishing those two categories in the glosses).

A few verbs, such as *κτυπα* ‘tell’ and *mv-xsi* ‘one does not know’, cannot take orientation preverbs and are only attested in the Factual (§14.3.4).

Due to the absence of orientation preverbs, vowel contraction with prefixes located before slot -3 (§11.2.1) only occur in first or third person forms of the Factual (§12.3). Otherwise, contracting verbs surface with initial *a-* in Factual Non-Past non-negative form.

21.3.1.2 Main clauses

The Factual has two main functions when used in an independent clause without an auxiliary verb.

First, in the case of stative verbs, the Factual occurs to describe facts considered to belong to everybody’s common knowledge. Example (42) illustrates five verb forms in the Factual in this use (highlighted in bold), including copulas and adjectives.

- (42) *tce kumpyxtew nunu pyxtew nu-rca, ku-xtci ci*

 ‘Among the birds, the sparrow is tiny and cute. Although it is small it is very smart. Its eyes are surrounded by black [feathers], and above that there are some red [dots]. Its belly is white from the throat to the tail.’ (22 kumpGatCW) {0003590#S3}

The Imperfective cannot occur in this function with stative verbs, since it has an inchoative meaning (§21.2.6). With dynamic verbs however, the Imperfective does occur to express general knowledge, especially in generic forms (as in *tú-wy-fskvr* IPFV-INV-surround ‘it surrounds it’ above) or with a dummy subject (S/A) (*pjuu-ze* IPFV-begin[III] ‘it begins’ above).

The Factual also is also found in this function with dynamic verbs, in particular when the subjects are overt and/or definite, as in (43).²

- (43) *u-ku ku-mpu nu nú-wy-p^hut tce, nuŋa ra ku*
 3SG.POSS-head SBJ:PCP-be.soft DEM IPFV-INV-pluck LNK COW PL ERG

 eat:FACT-PL pig ERG NEG-eat:FACT
 ‘One plucks the [leaves] on the extremities, the soft ones, cows eat it, pigs don’t.’ (06 qaZmbri) {0003416#S19}

Second, with dynamic verbs, the Factual can express immediate future. In assertive sentences with first person subject (44), or in interrogative sentences with second person subjects (45), the Factual can be interpreted as indicating the intention to perform an action.

 ‘Mother, poor us, this evening the tiger is probably coming (for us).’ (The tiger)

21.3.1.3 Use in complement clauses

The Factual is found in the complement clause of modal auxiliaries such as *ra* ‘be needed’ and *ɲɣ* ‘be allowed’, but occurrences are considerably fewer than those of the Imperfective (§21.2.4). It is used to refer to actions just about happen at the time of utterance (as in 49 and 50), rather than generic statements.

- (49) *nuuna-j* *ú-ɲɣ*

 1SG SBJ:PCP-SCOOP go:FACT-1SG be.needed:FACT
 ‘I have to go to scoop water.’ (2014-kWlAG)

21.3.1.4 Use in Periphrastic TAME categories

The Factual occurs in fewer Periphrastic TAME constructions than the Imperfective (§21.2.2).

With the Past Imperfective *pu-ŋu* and Inferential Imperfective *pjɣ-ŋu* forms of the copula *ŋu* ‘be’, it is used to build the Periphrastic Proximative (§21.6.2.1).

Some speakers (in particular Kunbzang Mtsho) combine the Factual with the Sensory *ŋuu-ŋu* of the copula to express the same meaning as the Inferential in narratives, notably with the verb *ti* ‘say’, where the constructions in (51) occurs instead of *to-ti* (IFR-say) ‘s/he said’ (§21.5.1.8).

- (51) ‘...’ *ti* *ŋuu-ŋu*
 say:FACT SENS-be
 ‘S/he said: ‘...’ (many examples)

This form may however not be Factual in the proper sense, but rather the trace that *ti* ‘say’ (a highly irregular verb, §12.2.1.1) used to have irregular preverbless forms (§15.1.1.5). The archaic form *k^hu-ti* ‘s/he said’ provides additional support for this idea (§21.5.4).

21.3.2 Sensory

21.3.2.1 Morphology

The assertive Sensory form of regular verbs is build by combining the B type WESTWARDS *ŋuu-* preverb with stem I or stem III depending on person and transitivity (§12.2.2.2; stem II also occurs in one case, see 55 below). It is thus potentially ambiguous with the Imperfective of verbs selecting WESTWARDS as their intrinsic orientation. Examples (33) and (34) in §21.2.6 illustrate this syncretism between Sensory and Imperfective.

The negative Sensory is marked by the portmanteau prefix *múj-* (§13.1.1), differing from the negative Imperfective form *mu-ŋuu-* of verbs selecting the WESTWARDS preverbs. The *múj-* prefix is not compatible with contracting verbs (§12.3) however: their negative Sensory form is *mu-ŋuu-*, as in (52).

- (52) *yzut^huz ndvre, sujno tci mu-ŋuu-ɣ-rtsi, si tci*

 NEG-SENS-PASS-COUNT
 ‘The *Selaginella* can be counted neither as a species of grass nor as a tree.’
 (16-RIWmsWsi) {0003520#S93}

The Sensory commonly appears in combination with the Progressive *ŋuu-ɣsuu-/ŋuu-ɣz-* with transitive verbs. The negative form of the Sensory progressive is *mu-ŋuu-* (53), like that of a contracting verbs.

- (53) *tu-mu pyjk^{hu} mu-ju-ysu-lxt ri, qale*
 INDEF.POSS-sky yet NEG-SENS-PROG-release LNK wind
ju-ysu-βzu.
 SENS-PROG-make
 ‘It is not yet raining, but there is wind.’ (conversation, 15-06-05)

The Sensory form of the verb *ti* ‘say’ has stem I *ju-ti* when occurring without the Progressive (54), but unexpectedly selects stem II *ju-ysu-tut*, *ju-ys-tut* with Progressive (55), which also presents the irregular allomorph *-ys-* (§21.6.1.1).

The irregular existential verbs *γzū* ‘exist’ and *maŋe* ‘not exist’ are the suppletive Sensory forms of *tu* ‘exist’ and *me* ‘not exist’ (§13.1.2, §14.2.2). They are the only verbs whose Sensory forms is not marked by a prefix.

21.3.2.2 Direct perception

The Sensory is used to express access to information (Tournadre & LaPolla 2014) through any of the senses, most commonly vision, but also hearing (56), touch (57), smell (58) and taste (59). It implies the discovery of a previously unknown fact or confirmation of an uncertain fact.

Although in the above examples there is no implication that the person producing the sound or the objects mentioned in the sentences are not visible to the speaker, in these contexts vision is largely irrelevant to determine the property in question, and there is no ambiguity as to which sensory channel was responsible for obtaining the information.

21.3.2.3 Endopathic and extra-sensorial perception

As in other languages of the area, but unlike Lhasa Tibetan (Tournadre & LaPolla 2014), the Sensory form is used for endopathic sensations (pain, itch, cold etc) relating to the speaker, as in example (60).

- (60) *t^ham tce múj-c^ha-a, a-mi pʸw-mŋʸm.*
 now LNK NEG:SENS-can-1SG 1SG.POSS-foot SENS-hurt
 ‘I can’t now, my foot hurts.’ (21-kuGrummAG) {0003574#S61}

In (61), the Sensory is used in a generic sentence, when the speaker has experienced himself the feeling and recounts his experience while presenting it as a generic fact (§14.6.1.4), and thus do not count as a real example of endopathic Sensory with an experiencer other than the speaker.

- (61) *kuw-maq^hu q^he tuw-cʸa pʸw-mŋʸm*
 SBJ:PCP-be.after LNK GENR.POSS-tooth SENS-hurt
 ‘Afterwards our teeth hurt.’ (27-tApGi) {0003706#S66}

In (62), which describes the effects of foot and mouth disease on cattle, the speaker uses the Sensory to describe an inference about the endopathic feelings of the cattle suffering from the disease (they are in pain), based on information from vision and hearing (their whining and behaviour).

- (62) *nur-mci ky-rywum maka múj-c^ha-nur tce nur-mci*

 of gold (buried) at the root [of the tree]_i, if [the tree]_i asks someone to
 take it out, that will solve its_i problems.’ (2003 divination)

21.3.2.4 The expression of surprise

Japhug has several interjections specifically used to express surprise (§10.2.1), *amaj* and *mts^hɣri* ‘how strange’.

The Sensory often occurs in such contexts, as in (65), as expected for a direct visual perception (§21.3.2.2). This use of the Sensory evidential is what motivated

its analysis as a mirative marker in some languages (Hill 2012, DeLancey 2012, Aikhenvald 2012).

 3SG-NMLZ:DEG-be.surprising SFP
 ‘It is so funny, so surprising!’ (150830 baihe jiemei-zh) {0006368#S111}

21.3.2.5 Other functions

The Sensory is commonly used instead of the Factual for describing facts about animals that do not live in Tibetan areas. Compare for instance the forms of the stative verbs *syŋmu* ‘be frightening’ and *mpɕyr* ‘be beautiful’: they appear in the Factual when referring to spiders or flowers found in the area (67 and 68) and in the Sensory when referring to lions and gnus, which the speaker has only seen in zoos or in the television (69 and 70). The choice of the Sensory instead of the Factual in such context might be a way for the speaker to highlight the fact that this information comes from his/her own personal experience, because s/he may not take for granted that everybody shares this knowledge.

(70) *<jiaoma> nuw ɲu-mɲɛʒɹ*
 gnu DEM SENS-be.beautiful
 ‘Gnus are beautiful.’ (20-RmbroN) {0003560#S126}

The Sensory is also common in all finite comparative constructions (§26.2), whether the comparee is marked with the ergative (71) (§8.2.2.7) or the standard takes the comparative postposition (72) (§8.2.7). The presence of the Sensory in such constructions might be due to the fact that comparisons require an evaluation of the respective positions of the standard and the comparee on a scale, and that the result of this comparison is thus ‘freshly’ obtained information.

(71) *slɛzʉm kuw ɲu-dʒn, tce tu-xpa tce ɲnu-ɣjɹn jamar*

 ‘Its ears are bigger than those of the horse.’ (20-tArka) {0003566#S5}

The use of the Sensory is not obligatory in such constructions: the Factual is also possible.

21.3.2.6 Sensory evidential and person

With second person subjects, the Sensory is very commonly used to state a fact about the addressee that the speaker noticed (not something he knew previously). For instance, in contrast to (74) in the Factual in which the addressee’s (recent) actions are irrelevant, a sentence such as (73) can be used if the speaker witnessed something revealing the proficiency of the addressee.

(73) *ɲu-tu-mk^hʒz*

 ‘You are the best, do it!’ (150822 laoye zuoshi zongshi duide-zh)
 {0006298#S37}

With first person subjects, the Sensory is not rare. It is common with verbs such as *rga* ‘be happy’ whose intransitive subject is the experiencer, as in (75) (see §21.3.4 on the contrast between Sensory, Egophoric Present and Factual in such contexts).

 ‘I am [so] ugly that even a hunting dog does not want to bite me.’ (140519
 chou xiaoya-zh) {0004034#S79}

21.3.2.7 Tense and aspect

The Sensory never has an inchoative meaning with stative verbs, unlike the Imperfective (§21.2.6). It can be used to describe both ongoing events or habitual/generic situations (§21.3.2.5). With transitive verbs, it often occurs with the progressive (§21.3.2.1).

The Sensory is mainly found in non-past contexts. However, unlike the Factual and the Egophoric, the Sensory can refer to past events. In (77), the verb *juu-ti-nu* ‘they say/said’ concerns an event that had occurred decades before.

³This example is taken from the translation of Andersen’s story ‘The Ugly Duckling’, when a hunting dog appears before the eponymous character but does not bite him.

- (77) *azo a-p^he* “*nyzo ju-tu-ce ra*” *ju-ti-nu.*
 1SG 1SG.POSS-DAT 2SG IPFV-2-go be.needed:FACT SENS-say-PL
 ‘They said to me: ‘You have to go.’ (2010-09)

The Sensory *ju-ti* of the verb *ti* ‘say’ is the normal way to report the words uttered by a third person, when the speaker has heard them directly (as is obviously the case in 77). The Aorist *ta-tut*, which is used to describe past events directly witnessed by the speaker (§21.5.1.2), is never found in conversations to quote someone else’s words (it occurs in temporal §21.5.1.4 and relative §21.5.1.6 clauses).

The Sensory also occurs in future contexts in the apodosis of conditional clause to express the prediction of a likely outcome, as in (78) (see also 64, §21.3.2.3).

- (78) *nu tu-ŋu tce tce, si lú-wy-γxju, smi a-tx-wxti tce*

21.3.3 Egophoric Present

21.3.3.1 Morphology

The Egophoric Present is built combining the B type EASTWARDS *ku-* preverb with stem I or stem III depending on person and transitivity (§12.2.2.2). Verbs selecting EASTWARDS as their intrinsic orientation therefore have syncretism between Imperfective and Egophoric. For instance, the form *ku-rxzi-a* is in the Egophoric Present in (80) and in the Imperfective in (81) (see §21.2.4 on this use of the Imperfective).

- (80) *kuure ku-rxzi-a*
 DEM.PROX:LOC PRS-stay-1SG
 ‘I am here.’ (heard in context)

- (81) *kutcu ku-rxzi-a juw-łob*
 DEM.PROX:LOC IPFV-stay-1SG SENS-be.needed
 ‘I had better (have no choice but to) stay here.’ (28-qajdoskAt)
 {0003718#S75}

Unlike the Sensory (§21.3.2.1), the Egophoric Present does not have a special negative form, and selects the *mu-* negative prefix, as in (82).

- (82) *kuw-xrq^{hi} ky-ce mu-ku-c^ha-a*
 SBJ:PCP-be.far INF-go NEG-PRS-can-1SG
 ‘I cannot go very far.’ (for now, due to an accident; conversation 17-09-21)

The Egophoric Present form of the existential verbs *tu* ‘exist’ and *me* ‘not exist’ is regular: *ku-tu* and *ku-me* (83), respectively. The copulas *ju* ‘be’ and *max* ‘not be’ lack an Egophoric Present form.

- (83) *azo kuure a-va ku-me tuw-mgo*

 ‘(These days) we are eating only meat, as (farm) animals have been dying
 in great numbers (due to a disease).’ (2003 kandZislama)

21.3.3.2 Egophoric Present and first/second person indexation

The Egophoric Present, while common in conversations, is nearly non-existent in narrative and procedural texts (outside of quotations) unlike the Factual and the Sensory.

In declarative sentences, Egophoric Present can occur with first person subject, whether intransitive subject as in *ku-nuna-j* ‘we are resting’ (85) or transitive subjects as in *ku-taʁ-a* ‘I am weaving it’ (86).

- (85) *kuure ku-nuna-j*
 here EGOP-rest-1PL
 ‘(Today, on the National Holiday), we are resting here.’ (conversation,
 16-10-01)
- (86) *<kuabao> u-spa ci ku-taʁ-a*
 satchel 3SG.POSS-material INDEF PRS-weave-1SG
 ‘I am weaving a satchel.’ (conversation, 14-11-25)

No example of Egophoric Present with second person subject in declarative sentences has been found in the corpus, nor could such example be elicited. However, second person objects are possible, as in (87).

- (87) *kuure ku-ta-nɣjo*
 DEM.PROX:LOC PRS-1→2-wait
 ‘I am right here waiting for you.’ (heard in context)

As a result of the anticipation rule (§21.1.4), the person constraint on the Egophoric Present is reversed in interrogative sentences. As shown by (88) and (89), the Egophoric Present appears with second person subjects, and is not attested with first person. These two questions expect answers such as (93) and (80) (in §21.3.3.1) with first person and Egophoric.

- (88) *u-kú-tu-scit-nu?*
 QU-PRS-2-be.happy-PL
 ‘Are you (and your family) happy?’ (2002 qaCpa)
- (89) *ɲotcu ku-tu-rɣzi?*
 where PRS-2-stay
 ‘Where are you?’ (heard in context)

The person constraints described above are the reason for calling the TAME category discussed in this section “egophoric”, designating a type of evidentiality specifically marking ‘information as known through conscious personal involvement’ (Hill 2020).⁴

21.3.3.3 Egophoric Present and third person

The Egophoric Present can occur with third person subjects. This use is particularly common in declarative sentences when the subject is a noun with a first person possessive prefix, whether an abstract inalienable noun as in the case of *a-ka* ‘my free time’ in (83), or kinship terms as in (90).

- (90) *a-wi* *c^ho* *a-wa* *ni nɣzo nɣ-ndza*

 ERG really EMPH PRS-worry-DU LNK
 ‘Grandmother and Father are very worried because of you.’ (150819
 haidenver-zh) {0006314#S462}

Conversely, Egophoric is also frequent with second person possessors in interrogative sentences, such as *nɣ-ma* ‘your work’ as in (91a).

- (91) a. *nɣ-ma* *u-kú-dɣn?*
 2SG.POSS-work QU-PRS-be.many
 ‘Do you have a lot of work?’ (heard in context)
- b. *a-ma* *ku-dɣn*
 1SG.POSS-work PRS-be.many
 ‘I have a lot of work.’

⁴Hill argues in favour of replacing “egophoric” with the term “personal evidential”.

With non-possessed subjects nouns, it also occurs when the first person is a beneficiary, marked either as a possessor (92) or with oblique flagging as in the clause *a-taβ wuma ku-sna* ‘he is nice to me’ in (93) above.

- (92) *χpɣltcin ku a-ma ra ku-oz-nɣma*

The use of Egophoric with third person subjects is an instance of what has been termed ‘broad egophoric’ by (Gawne 2017: 89). Japhug appears to allow a wider range of third person referents to occur with egophoric than most languages. There are examples of Egophoric Present with third person subjects in which the personal involvement of the speaker is not immediately obvious.

In (94), we find Egophoric Present on the main verb, even though the transitive subject and the speaker were not together at time of utterance.⁵

- (94) *alan nɣki, βduɣɣt ri <shangban> ku-osu-βzu*
 ANTHR FILLER TOPO LOC office.work PRS-PROG-do
 ‘Alan, she is doing office work in Gdongbrgyad (these days).’
 (conversation, 2014-12-24)

In (95), the use of the Egophoric Present is not straightforward.⁶

- (95) *ku-ngo wuma zo rkun, <abazhou> [...]*
 SBJ:PCP-be.sick really EMPH be.few:FACT Rngaba
pu-nu-mu~me cti q^he, pɣjk^hu
 PST.IPFV-AUTO-EMPH~not.exist be.AFF:FACT LNK still
ku-nu-me.
 PRS-AUTO-not.exist

⁵There is however a relationship between them, since the subject of (94) is the daughter of the speaker.

⁶It is possible that the speaker selects this form because she describes a situation that directly concerns herself, since she is among the inhabitants of the district, who are not sick from the disease.

‘There are few people sick (from Covid), (here) in Rngaba district there never was anyone, and even now there is not (a single) one.’
(conversation 2020-07-31)

Tshendzin explains the form *ku-nuu-me* ‘there is not’ here as (96) with the Factual Non-Past.

- (96) *tʰam kuuŋ me* *kɣ-ti ɲu-ŋu.*
now also not.exist:FACT INF-say SENS-be
‘It means ‘not even now’.’

21.3.3.4 Tense and aspect

The Egophoric Present expresses ongoing events or repeated actions occurring during a short time range around the present time. Thus, the sentence (97) can either mean ‘What are you doing *right now*?’ or ‘What are you doing *these days*?’.

- (97) *tɕʰi ku-tu-nɣme?*
what PRS-2-do[III]
‘What are you doing (now, these days)?’ (heard in context)

These two meanings are also possible when the Egophoric Present is combined with the Progressive, as shown by (98) and (94).

- (98) *alan ku ji-pɣri ku-osu-βzu.*
ANTHR ERG 1PL.POSS-dinner PRS-PROG-make
‘Alan is preparing the dinner for us (right now).’ (conversation, 15-01-02)

The Egophoric Present marks actions or states that are temporary. For instance, *mu-ku-cʰa-a* ‘I cannot do it’ in (99) (and 82 in §21.3.3.1 above) means that the speaker describes a non-permanent situation: she previously was able to do it, and will presumably be soon able to do it again when she has fully recovered.

- (99) *ɣɣjkʰu kuuŋ uzo ku ku-oz-nɣma ɕti ma ɣɣjkʰu*

NEG-PRS-can-1SG SFP
‘Even now, he is still doing [the housework], as I am still unable [to do it] (due to an accident).’ (conversation, 17-09-01)

The Factual (100) or the Sensory are used instead when describing situations that have become permanent.

- (100) *tham a-pw-ŋu, tu-ndze-a maka mɣ-c^ha-a*
 now IRR-IPFV-be IPFV-eat[III]-1SG at.all NEG-can:FACT-1SG

The Egophoric Present is restricted to present tense. In (101), the form *ku-ta-nɣjo* ‘I (will) be waiting for you’ referring to a future event is rather analyzable as an Imperfective, given the syncretism between these two in the case of this verb.

- (101) *a-jɣ-tuu-ɣuut tce, azo c^ho [...] tɣcime nuu ku nunuu kyntc^haB*

 ‘When you bring [the bird], the princess and I will be waiting for you outside of the town.’ (140507 jinniao-zh) {0003931#S281}

The Egophoric Present can also occur in the case of periods of time including the present and the past. For instance, when asked whether she had seen a particular person, who was present at the time in Mbarkham, Tshendzin said the sentence (102) with the Egophoric Present.

- (102) *mu-ku-otuy-a*
 NEG-PRS-meet-1SG
 ‘I have not been meeting him (these days).’ (conversation 16-03-10)

21.3.4 Tripartite contrast

The tripartite contrast between Egophoric Present (103), Sensory (104, 105) and Factual (106) with the experiencer stative verbs such as *scit* ‘be happy’ in declarative sentences with a first person subject can help understanding the semantics of these TAME categories in this context.

- (103) *ku-scit-i*
 PRS-be.happy-1PL

amumi-j
 be.on.good.terms:FACT-1PL
 ‘We have been together for three years now, we are so happy together.’
 (2005 Norbzang)

In (106), the speakers (humans stranded on an island) include the addressees (rākshasis in human shape) in the first plural, and state their happiness together as an commonly agreed fact (the first step in a plan to cheat the rākshasis), hence the use of the Factual.

In (105), the selection of the Sensory here may be due to the presence of a comparative construction (§21.3.2.5). In (104) the choice of the Sensory rather than the Egophoric Present expresses that when thinking about it, the speaker feels that she is happy. The Egophoric Present in (103) entails the continuous conscience of being in a state of happiness, and that this state is temporary.

21.4 Modal categories

21.4.1 Irrealis

21.4.1.1 Morphology

The Irrealis has three exponents: a dedicated prefix *a-* in slot -6 (§11.2.1), a type A preverb in slot -3, and stem III in appropriate forms (§12.2.2.1, §21.1.2), as illustrated by (107a). A cognate verb form with identical triple exponence is found in Tshobdun (Sun 2007b).

With dynamic verbs, the preverb follows the lexically selected orientation of the verb (for instance *ty-* UPWARDS in 107a). Stative verbs take the DOWNWARDS *pu-* preverb like the Past Imperfective (§21.5.3.1) when used with a stative meaning, as in (107b), and the intrinsic orientation (*westwards* in 107c) when occurring with an inchoative meaning.

- (107) a. a^{-6} - ty^{-3} -*ndze*
 IRR-PFV-eat[III]
 ‘Let it/him/her eat/ if s/he/it eats’
- b. a^{-6} - pu^{-3} -*me*
 IRR-IPFV-not.exist
 ‘If it does not exist’
- c. a^{-6} - nu^{-3} -*me*
 IRR-PFV-not.exist
 ‘If it disappears’

Unlike the Imperative (§21.4.2.1), the Irrealis is compatible with all person configurations.

21.4.1.2 Main clauses

In main clauses, the Irrealis has four main functions. The first three (wish, jussive and uncertainty) are treated in this section, and the fourth one (delayed imperative) in §21.4.1.3.

First, it can express a wish, often in combination with the predicative noun *smulym* ‘prayer’ (§21.8.3.2; see also in Tshobdun Sun 2007b: 804), as in (108), or with the sentence final particle *ku* (§10.4.2) as in (109).

- (108) *pja mundzamuχtcuγ nu-skvt a-pu-tu-tso smulym*
 bird all.kinds 3PL.POSS-speech IRR-IPFV-2-understand prayer

- (109) *turme ci a-nu-γpa-a ku*
 human INDEF IRR-PFV-become-1SG SFP
 ‘If only I could become a human!’ (150819 haidenver-zh) {0006314#S229}

While in (109) the wish is virtual, example (10) is a magical formula pronounced by a lama, and the Irrealis has a performative function, conveying to the addressee the ability it describes.

Second, the Irrealis can occur with third person referents with a jussive meaning (see also Sun 2007b: 811 on Tshobdun), expressing either that the speaker allows the subject to perform the action (110), a request or an order. Jussive Irrealis clauses can be used in a purposive complementation strategy (§21.4.1.6).

- (110) *a-t^hw-yi*, *a-t^hw-yi*
 IRR-PFV:DOWNSTREAM-COME IRR-PFV:DOWNSTREAM-COME
 ‘Let him come, let him come (as he wishes).’ (2003 Kunbzang)

In combination with the Autive (§19.1), the jussive Irrealis expresses that the speaker does not care about the actions of the third person subject, as in (111) (compare with the Autive Imperative, §21.4.2.3).

- (111) *w-ɲú-wy-sat-a* *ny a-pú-wy-nw-sat-a* *ma mɣ-p^hyo-tci*
 QU-SENS-INV-kill-1SG add IRR-PFV-INV-AUTO-kill-1SG LNK NEG-flee-1DU
 ‘If she is to kill me let her kill me, we will not flee.’ (2002nyimavodzer)

With second persons, the Irrealis is found instead of the Imperative to express non-controllable actions. In (112), compare for instance the non-controllable verb *mna* ‘be better’ in the Irrealis with the controllable one *ɣzi* ‘stay’ in the Imperative.

- (112) *pɣjk^hu a-tɣ-tw-mna*, *mɣzɯ kɣ-ɣzi*
 still IRR-PFV-2-be.better yet IMP-stay
 ‘[Wait till] you get better, stay a little more.’ (said to a convalescent person who wants to leave the place where she is taken care of.)
 (12-BzaNsa) {0003484#S97}

The negative Irrealis is also more felicitous than the Prohibitive (§21.4.3) with non-controllable verbs, such as *nwtɕ^homba* ‘catch a cold’ in (113).

- (113) *a-mɣ-tɣ-tw-nwtɕ^homba* *ra* *ma tɕe nɣ-ɕq^he*

ɲw-t^hw *ɲw-ɲu* *wo*
 SENS-be.serious SENS-be SFP
 ‘Don’t catch a cold, otherwise your cough will be become even more serious.’ (conversation 17-09-01)

Third, in interrogative clauses, the Irrealis can express the uncertainty of the speaker on his/her ability to realize the action, as in (114).

- (114) *andi ki st^huuci smar kuw-wxti izo ky-suu-βzur tɕ^hi*

a-tɕ-stu-j?
 IRR-PFV-do.like-1PL
 ‘How can we move such a huge river? (2005 tAwakWcgraR)’

21.4.1.3 Delayed imperative

The Irrealis can be used as a delayed or postponed imperative. This function indicates, according to Sun’s (2007b: 809) apt description of the same phenomenon in Tshobdun, ‘the speaker’s physical inaccessibility as an eyewitness, rather than simply delayed compliance.’

In (115), the verb in the Irrealis *a-tɕ-tuu-ti* refers to an action to be realized at a future moment expressed by the temporal clause in the Aorist *js-tuu-azyut* ‘when you arrive...’ (§21.5.1.4), when the speaker will not be present to remind the addressee to perform the action.

- (115) [*k^ha ky-mto js-tuu-azyut*] *tce q^hihihi χsu-ŋka a-tɕ-tuu-ti*

ra
 be.needed:FACT
 ‘When you arrive within seeing distance from the house, say *q^hihihi*
 three times.’ (qachGa 2012) {0004087#S160}

The contrast between the Irrealis and the Imperative to express delayed command can be illustrated by the following pair of examples from two versions of the same story, referring to the same action (the method to pass a dangerous place where a pair of magical boulders crush all people coming between them) but from a different perspective.

In (116), a *nâga* explains the method to the main character (Nyima ’Odzer). The *nâga* is not coming with him; only Nyima ’Odzer and his horse intend to cross the boulders. Therefore, the Irrealis verb forms *a-ky-tuu-βraβ* and *a-tɕ-tuu-zyɣ-ɣɣ-zo* are selected, as the *nâga* will not be present when Nyima ’Odzer will have to realize these actions.

- (116) *nui-tuu-armbat-ndzi tce, nɣ-mbro u-jme zuu*

‘When you approach [the boulders], attach a branch of *Potentilla fruticosa* to the tail of your horse, make yourself as light as a feather, and may your horse be as quick as the wind.’ (Smanmi2003.2)

By contrast, in (117), it is the horse Rtamchog Rinpoche who explains to Nyima ‘Odzer how to cross the boulders. Since these two characters will do the crossing together, the horse uses the Imperative *tx-zɣɣ-ɣɣ-zo* instead of the Irrealis (§21.4.2.2).

(117) *azo nuu, qale jamar zo tu-zɣɣ-ɣɣ-mbjom-a nyzo nuu*

 INDEF.POSS-feather about IMP-REFL-CAUS-be.light

‘I will make myself as quick as the wind, make yourself as light as a feather.’ (28-smAnmi) {0004063#S111}

In negative forms likewise, the Irrealis is better than the Prohibitive (§21.4.3.2) if the addressee is to refrain from doing an action in the absence of the speaker who issued the order/request/suggestion not to do it, as in (118), where both assertive and negative Irrealis verbs in delayed imperative function are found.

21.4.1.4 Complement clauses

According to Sun’s (2007b: 807) description of Tshobdun, the Irrealis is required when occurring with matrix verbs expressing desire or intention. In particular,

he points out that the verb *səsi?* means ‘think’ when the complement clause is in realis mode, and ‘desire, want’ with a complement clause in the Irrealis.

In Japhug, the cognate verb *suso* ‘think’ has the meaning ‘want’ rather with Infinitive or Imperfective complement clauses (§24.5.4.1), such as (119).

- (119) [*nw wuma zo tu-ndze-a*] *ɲw-susam-a*
 DEM really EMPH IPFV-eat[III]-1SG SENS-think[III]-1SG
 ‘I want to eat it very much.’ (140506 woju guniang-zh) {0003929#S35}

Complement clauses in the Irrealis with *suso* ‘think’ as matrix verb are in all cases reported speech, reflecting functions such hypothetical protasis and apodosis (§21.4.1.5) in (120) or jussive (§21.4.1.2) as in (121) and (122).

- (120) *χawo zo ku-dur~dyn ku a-ky-nuuts^hβ-nw tce*

 ‘He thought: ‘I will take a few (olives from the jar) so that she [can] eat some.’ (140516 yiguan ganlan-zh) {0004014#S39}

The used of reported speech with *suso* ‘think’ in (122) is a semi-grammaticalized purposive construction (§21.4.1.6), where the Irrealis is not obligatory: similar purposive clause with other TAME categories are also attested.

- (122) “*a-mi nunw a-ty-mna*” *ɲw-susam-a tce, nura*
 1SG.POSS-leg DEM IRR-PFV-be.better SENS-think[III]-1SG LNK DEM

 PRS-CAUS-treat-1SG be:FACT
 ‘In order for my leg to get better, I am treating it (with footbaths).’
 (conversation 2013-11-12)

The Irrealis in jussive function in a reported speech clause (‘I am thinking ‘may my leg get better’’) is semantically close to ‘want’ (‘I want my leg to get better’).

This may explain how the Irrealis became required with the Tshobdun matrix verb *səsi?* in the meaning ‘want’.

Like the Imperative (§21.4.2.4), the Irrealis occurs in subject complement clauses with modal auxiliary verbs such as *ra* ‘be needed’, *nts^hi* ‘have better’ and *ǰɣ* ‘be allowed’, with a jussive meaning as in (123) and (124), or a delayed imperative, as in (115) above (§21.4.1.3).

21.4.1.5 Conditional clauses

In the protasis, the Irrealis competes with initial reduplication (§12.4.1.2), Prohibitive (§21.4.3.2) and Interrogative (§21.7.4.2). When the apodosis is in the Factual Non-Past, the Irrealis protasis expresses a condition whose probability of being realized may not be high, but which, if it is verified, almost certainly brings the outcome expressed in the apodosis (at least in the speaker’s opinion), as in (125).

- (125) *nu* *a-ǰɣ-ce* *tce* *tcet^ha* *kɣ-zyut* *mɣ-c^ha* *tce* *si*

 ‘If we had that (much cattle and fields), we would not be wandering
 around like this.’ (2005 Kunbzang)

21.4.1.6 Purposive

The Irrealis occurs in purposive complementation strategies. Two constructions are attested. First, as in (127), the Irrealis clauses express the purpose of an action referred to in another clause.

- (127) *k^hγxtu cuw-nγwaw-tci tce, [nγ-kγrme a-tγ-zbaγ]*

 ‘Let us go to the rooftop platform to rest, so that your hair can dry (after
 bathing).’ (2002 qaCpa)

Second, with a similitive verb such as *fse* ‘be like’ or *stu* ‘do like’ and interrogative pronoun as in (128), the Irrealis clause rather corresponds to the action needed to realize the purpose, which is indicated by a coordinated clause *γuw-p^hγn* ‘(so that) it is efficient/it works/it solves it’.

- (128) [*nuw t^hi a-tγ-fse*] *tce γuw-p^hγn*

 ‘If one were to dive (in the water), comb and wash one’s hair, it would be
 very nice!’ (140515 congming de wusui xiaohai-zh) {0003998#S24}

It replaces the Imperfective Irrealis (§21.4.1.1) in the case of telic verbs (see §21.5.3.5).

21.4.2 Imperative

21.4.2.1 Morphology

The Imperative is built by combining type A preverbs with stem I or stem III depending on transitivity and number (§21.1.2). It only has second person subject forms, which are however never marked with the second person *tu-* prefix, unlike in other TAME categories (§14.2.1.2). In addition, transitive verbs can only take a third person object; 2→1 configurations cannot be expressed with the Imperative, and the Imperfective in hortative function is used instead (§21.2.5).

The Imperative can occur with an overt second person pronoun referring to the subject (see examples 135, §21.4.2.3 and 138, §21.4.2.4).

Table 21.5 illustrates the Imperative paradigms of *ndza* ‘eat’, a transitive verb with stem III alternation (§12.2.2), *amdzu* ‘sit’, an intransitive contracting verb (§12.3), and *ce* ‘go’, a verb with stem II alternation (§12.2.1)

Table 21.5: Examples of Imperative paradigms

Person	<i>ndza</i> ‘eat’	<i>amdzu</i> ‘sit’	<i>ce</i> ‘go’
2SG(→3)	<i>tx-ndze</i>	<i>kx-ɣmdzu</i>	<i>jx-ce</i>
2DU(→3)	<i>tx-ndza-ndzi</i>	<i>kx-ɣmdzu-ndzi</i>	<i>jx-ce-ndzi</i>
2PL(→3)	<i>tx-ndza-nuu</i>	<i>kx-ɣmdzu-nuu</i>	<i>jx-ce-nuu</i>

For intransitive verbs which are neither contracting nor have stem II alternation, the Imperative forms are identical to the third person Aorist forms (§21.1.1.2).

The Imperative lacks negative forms: the Prohibitive (§21.4.3) or negative Irrealis (§21.4.1.2) are used instead.

21.4.2.2 Main clauses

The Imperative expresses actions that the speaker wishes the addressee to realize. It is appropriate for blunt orders (§130), requests (131), and also polite invitations (§132).

- (130) *jx-ce!*
 IMP-go
 ‘Go away!’ (many examples)

- (131) *toɓde tce jɣ-lyt je ma a-<dianhua>*
 a.moment LNK IMP-release SFP LNK 1SG.POSS-phone
u-ku-lyt ɣɣzu
 3SG.POSS-SBJ:PCP-release exist:SENS
 ‘Call me in a moment, there is someone calling me on the phone!’
 (conversation, 22-08-2018)
- (132) *<guazi> tɣ-ndza-ndzi*
 melon.seed IMP-eat-DU
 ‘Eat some melon seeds!’ (conversation 14-05-10)

The Imperative is not restricted to immediate commands/requests. In (133), the actions referred to by the Imperative verbs *lx-rɣci* ‘pull it’ and *t^hu-sɣtɣt* ‘add firewood’ are to be realized (in the presence of the speaker) at two points of reference in the future indicated by temporal clauses in the Aorist (§21.5.1.4).

- (133) “*a-wi smi t^hu-sɣtɣt*” *tɣ-tut-a tce*

 ‘When I say ‘grandmother, add firewood’, remove the firewood, and
 when I say ‘grandmother, remove the firewood’, add firewood.’ (2005
 Kunbzang)

As in Tshobdun (Sun 2007b: 809), the Irrealis is found instead of the Imperative to express actions to be performed at a point in the future in the absence of the speaker (§21.4.1.3).

The Imperative does not commonly occur for non-controllable verbs, especially stative verbs. However, this constraint is more pragmatic than morphosyntactic, and in some contexts, even a verb like *mbro* ‘be high’ can be used in the Imperative, as in (134). In this type of example, the Imperative *tɣ-mbro* is identical to the 3SG Aorist.⁷

⁷In principle, the quotation in (134) could also mean ‘It grew by one node per day’, but Tshendzin is positive that an Imperative was meant here.

- (134) *tce nunu cɣr tce tu-mbri tce “совсовсовсовсов совсовсовсовсов”*

 night, making the sound *совсовсовсовсов*, people say that it_i tells (the
 crops) ‘Grow by one node everyday!’ (23-scuz) {0003612#S105}

21.4.2.3 Imperative and autive

With the Autive prefix (§19.1), the Imperative has two distinct and nearly opposite meanings.

First, it can indicate a mild suggestion or a request for a favour (§19.1.3), as in (135).

- (135) *labɣuɣ nɣzo tɣ-nu-ndɣm je tce, azo jɣɣt ci*

lu-ce-a nɣ
 IPFV:UPSTREAM-go-1SG SFP
 ‘Take the staff, I am going to the toilet.’ (2005 khu)

Second, it is also used in a mocking way to express defiance (§19.1.4), as in (136) and (137).

- (136) *nu-nu-nɣre ma nɣzo qacpa nɣ-rzab nɣ-ku-mbi*

ku-sɣ-ekur~cke ci tɣ-nu-ndze
 SBJ:PCP-PROP-EMPH~burn INDEF IMP-AUTO-eat[III]
 ‘Farewell, old demon, eat my hot shit!’ (2005 tWJo)

21.4.2.4 Complement clauses

The Imperative is commonly used in complement clauses of modal verbs. The combination of the modal auxiliary *jɣɣ* ‘be allowed’ with an Imperative complement clause expresses that the speaker politely allows the addressee to undertake an action that the addressee himself intends to do, as in (138) and (139).

- (138) *[nɣzɔ tɣ-nu-ndɣm]* *jɣɣ*

21.4.2.5 Serial verb constructions

Two verbs in the Imperative can be used in a Serial Verb Construction (§25.4.1), the first verb conveying the manner in which the action is performed, as in (142).

- (142) *tɣ-mbɣom* *zɔ* *tɣ-ce* *ra*
 IMP-be.in.a.hurry EMPH IMP:UP-go be.needed:FACT
 ‘Hurry up and go upstairs!’ (160706 poucet6) {0006109#S5}

The first verb can be in the prohibitive (§21.4.3), a construction meaning ‘do V_2 without doing V_1 ’ (143).

- (143) *kuuki tʂu ki ma-nu-tu-βde zo jʂ-ɕe*
 DEM.PROX path DEM.PROX NEG-IMP-2-throw EMPH IMP-go
 ‘Go along this path without leaving it!’ (140507 jinniao-zh)
 {0003931#S207}

21.4.3 Prohibitive

21.4.3.1 Morphology

The Prohibitive is built by combining the dedicated negative prefix *ma-* (§13.1.1), a type A preverb and the stem III of the verb when appropriate (§12.2.2.1, §21.1.2). In second person subject forms, unlike the Imperative (§21.4.2.1), the second person prefix obligatorily occurs, as in *ma-nu-tu-te* ‘don’t put him/her/it’ (144).

- (144) *nuuɕu ma-nu-tu-te ma tʂ-pʂtso ra nuu-sta*

cti
 be.AFF:FACT
 ‘Don’t put her there, it is the place for the children.’ (2003kAndzwsqhaj2)

Unlike the Imperative (§21.4.2.1), the prohibitive has no constraints on person. It can occur in 2→1 configurations (145), but also with a first person intransitive (146) or transitive subject (147) and also in very rare cases in the third person (148).

- (145) *ma-tʂ-ku-ndza-a tɕet^ha nʂ-χpi pju-fcat-a*

cti.
 be.AFF:FACT
 ‘[The *Arisaema consanguineum*]_i mustn’t get on one’s tongue_j, as it_i
 makes it_j numb and swell up.’ (14-sWNgWJu) {0003506#S133}

The preverb is optional in second person prohibitive forms. For instance with *ti* ‘say’, *ma-tu-ti* (NEG:IMP-2-say) and *ma-tɣ-tu-ti* (NEG-IMP-2-say) both occur in free variation.

Despite the clear morphological differences between the Prohibitive and the Imperative, given the fact that these two categories are in complementary distribution and there is no risk of confusion, the type A preverb is glossed as IMP and the negation as NEG (to avoid a redundant gloss PROHIB on both prefixes). When the preverb is elided, the negative *ma-* is glossed as NEG:IMP.

21.4.3.2 Functions

The Prohibitive with a second person subject is essentially the negative counterpart of the Imperative, with exactly the same range of functions (§21.4.2.2), including orders, requests and polite suggestions, such as the polite expression *ma-tɣ-tu-raβle* (149), which corresponds to Chinese 不用客气 < búyòngkèqì > ‘you’re welcome’.

- (149) *ma-tɣ-tu-raβle, tɣ-zɣɣ-cu-fka je*
 NEG-IMP-2-be.polite IMP-REFL-CAUS-be.full SFP
 ‘Please eat your fill!’ (heard in context)

The prohibition can refer to an action to happen in the future, as in (150), where the moment when the action is to be avoided is indicated by the temporal clause in the Aorist (§21.5.1.4).

- (150) *tçetu tɣ-ari-tçi tce, u-tu-ɣɣndzo*

 ‘When we go up there (in the sky, near the moon), it will be extremely
 cold, but don’t say ‘brrr’.’ (07-deluge-64) {0003426#S62}

The negative Irrealis can also be used as a delayed prohibitive (§21.4.1.3) as in (151), contrasting with the Prohibitive in the same way as the Irrealis in delayed imperative function contrasts with the Imperative (§21.4.2.2): the Prohibitive and Imperative imply that the speaker will be present when the action is to be realized or avoided (as in 150), while the Irrealis occurs when the speaker will not be present.

- (151) *icq^ha* *ruɔaβ ra ku ta-tuɔ* *nuɔra, tuɔrme*

 3SG.POSS-DAT IRR-NEG-PFV-2-say LNK
 ‘You will have to avoid telling humans what the animals say.’ (150902
 hailibu-zh) {0006316#S80}

Like the Imperative (§21.4.2.4), the prohibitive also occurs in subject complement clauses with auxiliaries such as *ra* ‘be needed’ (147, §21.4.3.1).

A construction with the same verb occurring in the Imperfective followed by its Prohibitive form in the first person, with the alternative interrogative particle *ci* (§10.4.2) in between, is used to express hesitation between two possibilities (152).

- (152) *ku-ɕe-a* *ci ma-kɣ-ɕe-a* *ku*
 IPFV:EAST-go-1SG SFP NEG-IMP-go-1SG SFP
 ‘[I wonder] whether to go or not.’ (elicited)

The Prohibitive is also used in manner clauses meaning ‘without doing *X*’, sharing their subject (and also possibly object) with another verb in the Imperative or the Imperfective, as in (153) (see also 143, §21.4.2.5).

- (153) *syt^ha ku-ɣrɔ^hi* *zu pjuɔ-wy-lyt* *ma-puɔ-wy-sat*
 place SBJ:PCP-be.far LOC IPFV:DOWN-INV-release NEG-IMP-INV-kill
ra
 be.needed:FACT
 ‘One has to take it far away (from the house) without killing it.’ (2010-11)

The Prohibitive is also found in the protasis of conditionals (§25.2), as in (154). This type of ‘warning’ conditional construction expresses a possible undesirable result occurring if the subject fails to perform the action designated by the verb in the Prohibitive.

- (154) *ty-mt^hum kunx kx-kx-sqa nuura zatsa*

21.4.4 Dubitative

The Dubitative *ku-* is formally identical to the B type EASTWARDS preverbs, which also marks the Imperfective and the Egophoric Present (§21.3.3). It always occurs with the Autive *-nu-* prefix (§19.1 and with the polar question *ci* particule (§10.4.2, see example 156), the interrogative *ku* (§10.4.2, 158) or the alternative polar question construction (combining a positive followed by the equivalent negative verb form as in 157).

ma
 SFP
 ‘I don’t know whether it is efficient or not (as medicine).’ (19-GzW) {0003536#S100}

In addition, dubitative verb forms are followed either by the sentence final particles *kuma* or *kuye* (§10.4.2) as in (156) or a verb form such as *mɔ-xsi* ‘one does not know’ (§ 157).

The dubitative is mainly used to express doubts while reporting opinions from other people (as in 156 and 157), but with the interrogative *ku* as in (158), its meaning is rather that of emphasis on the fact that the speaker has no clue about the answer to the question (as in French *donc...bien* in ‘*Qui donc cela peut-il bien être?*’).

- (158) *wɔ, nu ɛw ci ku-nu-ŋu kw?*

21.5 Past categories

The Aorist, Past Imperfective, Inferential Perfective and Inferential Imperfective all strictly express past tense events or states when occurring in main clauses. In addition, they all take the past transitive *-t* suffix (§21.1.3) in 1SG→3 and 2SG→3 forms of open stem verbs (see §21.5.1.1, §21.5.2.1 and §21.5.3.1).⁸

This section describes the morphology of these TAME categories, their uses in main clauses and subordinate clauses, and also the semantic contrast between them in various contexts.

21.5.1 Aorist

21.5.1.1 Morphology

The Aorist is built by combining stem II (§12.2.1, or stem I for non-alternating verbs) with either A-type (159) or C-type preverbs (160) depending on person configuration and transitivity (§15.1.1.1, §21.1.1.1): the latter are restricted to transitive direct 3→3’ configurations (§14.3.2.2).

- (159) *tɔ-ye-j*
 AOR:UP-come[II]-1PL
 ‘We came up.’ (many attestations)

⁸The only non-past TAME category that is compatible with the *-t* suffix is the Apprehensive (§21.7.1).

- (160) *ta-tut*
 AOR:3→3'-say[II]
 'S/he said it.' (many attestations)

In addition, like the Inferential, the Aorist takes the 1/2SG→3 Past transitive suffix *-t* (§11.3, §21.1.3). Complete paradigms of transitive and intransitive verbs in the Aorist are presented in §14.3.2, and need not be repeated here.

Some Aorist verb forms are ambiguous and could be interpreted as belonging to other TAME categories. The ambiguity with the Imperative (§21.4.2.1) is discussed in detail in §21.1.1.2. A more difficult case is that between Past Imperfective *puu-* (§21.5.3) and the Aorist of stative verbs selecting DOWNWARDS as their intrinsic orientation (§15.1.5). The only way of differentiating between the two is the clear inchoative meaning of stative verbs in the Aorist (§21.5.1.3), showing that *puu-rom* in (161) can only be analyzed as an Aorist '(when) it has dried' rather than as a Past Imperfective 'it was dry' (see also example §21.2.6, §33).

- (161) *uu-jwab rcanuu puu-rom kuunx uu-mdzu nuu*

 (18-NGolo) {0003530#S66}

21.5.1.2 Main clauses

The Aorist occurs in main clauses to express past perfective events that the speaker has witnessed him/herself. It is used to report actions that the speaker has performed himself, as in (162) and (163), unlike the Inferential, which is only compatible with first person in very specific contexts (§21.5.2).

- (162) *nuu ku-fse rcanuu, <qibajin> zo*

 AOR-buy-PST:TR-1SG LNK freeze AOR-make-PST:TR-1SG
 '[Nettles] like that, I bought seven or eight pounds. Then I put them in the refrigerator.' (conversation, 14-05-10)

In the absence of any adverb with a function comparable to English 'already' in Japhug, the Aorist is used to express this meaning, in combination with a tense adverb as in (163).⁹

⁹Tshendzin said (163) answering a question I had already asked a few days before.

 1SG.POSS-adapted EMPH SENS-make[III]
 ‘I already told you a few days ago, [the shoes you have sent me] fit me really well.’ (conversation, 2019-05-26)

Actions that the speaker has witnessed as a passive participant are also expressed with the Aorist rather than the Inferential.

- (164) *a-kuu-rtoβ jy-ye tce yuu-nú-wy-mbi-a*
 1SG.POSS-SBJ:PCP-look AOR-come[II] LNK CISL-AOR-INV-give-1SG
 ‘He came to see me and gave it to me.’ (conversation, 17-09-21)

In (165), the choice of the Aorist *ka-lxt* and the Past Imperfective *puw-wxti* reflects the fact that the speaker has directly seen the snowfall (rather than deducing its occurrence from the presence of snow on the ground). By contrast, the Inferential *to-ndzi* ‘it melted’ (rather than the Aorist *tx-ndzi*) indicates that the speaker has not witnessed the melting, and only deduced that it has occurred due to the absence of snow, despite the snowfall in the previous night (§21.5.2.2).

- (165) *kutcu hanuni juw-yndzo. jufcucyr txjpa*

 AOR:3→3’-CAUS-stand-PL
 ‘There were some children playing (there), they came, helped him to collect the apples (that had been spilled) and helped him up.’ (chen-pear)

For events that have occurred in a more remote past, the requirement on direct (visual) perception may be less strict. For instance, in (167), the verbs in the Aorist express a series of events that have happened to a member of the speaker's extended family. They did not live in the same household, and did not meet very frequently, and the speaker did not witness all of the events, but is familiar enough with the situation to feel entitled to use the Aorist rather than the Inferential.

 'Their mother got ill, and survived seven years, sometimes looking like she had died, sometimes looking like she was getting better.'
 (14-siblings) {0003508#S31}

21.5.1.3 Change of state

In main clauses, stative verbs (other than copulas, §22.5.1.1) in the Aorist always express a change of state, whether adjectival verbs such as *dɣn* 'be many' (168) or existential verbs (169).

- (168) *nure kuɕmav pɕov <banqian> jɣ-kuw-ye nura*

- (169) *nɣ-<dian> nwu-me*
 2SG.POSS-electricity AOR-not.exist
 'Your [cellphone] is out of battery.' (you don't have any electricity anymore) (heard in context)

The Aorist is however found on stative verbs in some temporal subordinate clauses (§21.5.1.4) without change of state meaning.

In addition to stative verbs, some modal verbs such as *c^ha* 'can' select the UPWARDS orientation with an inchoative meaning, as illustrated by example (17) (§24.2.3.1) (see also §21.5.2.4).

21.5.1.4 Temporal subordinate clauses

The Aorist is used in subordinate clauses to mark a point of temporal reference. It occurs in generic statements to indicate the period when an event takes place. For instance in (170), the temporal clause *ftcar kx-ndzov* ‘when summer arrives’ must select the Aorist; no other TAME category would be possible here.

- (170) *u-fsaq^he, [ftcar kx-ndzov] q^he li tu-łov.*
 3SG.POSS-next.year summer AOR-ACAUS:attach LNK again IPFV-come.out
 ‘The next year, when the warm season (spring) arrives, it comes out again.’ (of a perennial plant, 18-qromJoR) {0003532#S134}

Direct visual perception is irrelevant in temporal clauses. In (171), the Aorist *jx-ye* occurs even though the speaker is only reporting a story about a parrot that she has not witnessed personally, and only heard from someone else. Here the meaning of the Aorist is simply to state the temporal condition when the following actions (utterance of human speech) take place.

- (171) *turme jx-ye tce <laikerenle> tu-ti, tce <nihao>*
 person AOR-come[II] LNK a.guest.has.arrived IPFV-say LNK hello
tu-ti.

 ‘(Of a parrot which is able to say a few words) When someone comes, [the parrot] says ‘A guest has arrived’, and says ‘hello’.’ (24-qro)
 {0003626#S102}

With stative verbs, the Aorist can exceptionally be used without inchoative meaning (§21.5.1.3) in temporal clauses, but always with the UPWARDS *tx-* preverb. For instance in (172), *tx-jpum* and *tx-xts^hum* mean ‘when it is thick’ and ‘when it is thin’, not ‘when it becomes thick/thin’, which would be expressed with the intrinsic WESTWARDS preverbs (see also 140, §15.1.5.7 and 4, §21.1.1.3).

- (172) *tx-jpum tce tce^hndxre tuu-sji k^hro lú-wy-ta^h*
 AOR-be.thick LNK LNK one-day much IPFV-INV-weave
juu-kuu-c^ha ma tx-xts^hum tce tce, koŋla

lú-wy-ta^h múj-sx-c^ha
 IPFV-INV-weave NEG:SENS-PROP-can
 ‘When [the threads] are thick, one can weave a lot in one day, when they are thin, it is not possible to weave.’ (2011-06-thaXtsa)

Apart from stative verbs, a similar use of the UPWARDS orientation is found with the transitive verb *suso* ‘think’, ‘want’ in some contexts (§24.5.4.1).

While the Aorist is restricted to past events in main clauses, it is found in temporal clauses to express points of time reference in the future. In (173) and (174), the Aorist forms *pu-tu-nu-ye-nu* ‘when you come back’ and *pu-tu-ari* ‘when you go down’ refer to events that have not yet taken place at the time of utterance. The use of the Aorist in future contexts is also observed in conditional clauses (§21.5.1.5).

- (173) *nuzo pu-tu-nu-ye-nu nwtcu cupark^hyrk^hyt*

 ‘When you go down there, turn [this magical object] in their direction (of the *rākshasas*), and they will go back (from where they are from).’ (2011-04-smanni)

In (175), both the temporal clause and the main clause contain a verb in the Aorist, but in the latter, that verb *nu-me* ‘it disappeared’ is embedded in a complement clause headed by the noun *u-ndza* ‘cause’ (§25.5.2, §24.6.3.5, with elided possessive prefix), while the main verb *nu* ‘be’ is in the Factual.

- (175) *a-ba tu ri, t^het^ha nu-mbrxt tce tce*

 1SG.POSS-electricity AOR-not.exist reason be:FACT
 ‘I have time (to talk with you), but in a moment when [the phone line] disconnects, it will be because [my cellphone] is out of battery.’ (conversation)

The Aorist in subordinate clauses is not always used to fix a point of temporal reference, however. It can also refer to an event preceding those of the following clauses, and which the speaker has witnessed (as in main clauses, §21.5.1.2). In (176), the clause *tx-mt^hum nú-wy-mbi-a* is not to be translated as ‘when (s/he/ someone) gave/gives meat’ (a translation that is possible in other contexts), but rather as ‘(someone) had given me’ with as pluperfect, as a background event that took place before the whole story begins.

21.5.1.5 Conditional clauses

In the protasis of reduplicated conditional (§12.4.1.2), the Aorist has a purely aspectual function, and does not express absolute past tense, but past tense relative to the apodosis.

The Aorist occurs in the protasis in generic contexts, as in (177).

- (177) *txci, qaj, stov stavpu nuura mu~mɣ-t^hú-wy-yndzur nɣ*
 barley wheat broad.bean peas DEM:PL COND~NEG-AOR-INV-grind ADD

 INF-eat NEG-be.possible:FACT

‘If we don’t grind barley, wheat, broad beans and peas, they cannot be eaten.’ 06-BGa) {0003408#S5}

It is also found in conditional constructions referring to future events, as in (178) and (179). This usage reminds of the use of the Aorist in future temporal clauses (such as 173, §21.5.1.4).

- (178) *tur~tx-tur-tut nɣ tce pju-ta-sat ŋu*
 COND~AOR-2-say[II] add LNK IPFV-1→2-kill be:FACT

 IPFV-INV-take.off be.needed:FACT
 ‘If he fails, we will decapitate both of you.’ (140505 liuhaohan zoubian
 tianxia-zh) {0003913#S103}

The Aorist is less felicitous in the protasis of counterfactuals (§25.2.4), where the Irrealis is used instead (§21.4.1.5).

21.5.1.6 Relative clauses

The Aorist commonly occurs in finite relative clauses (§23.2.2), as in the object head-internal relative in (180).

- (180) *icq^ha* [*sruɯnloʋ-pwi ku-fse* *na-k^ho*] *nɯɯɯ*
 the.mentioned ring-DIM SBJ:PCP-be.like AOR:3→3-give DEM

 ‘He_i turned the little ring that [Smanmi Metog Koshana] had given him_i
 in their direction (of the rākshasas). (28-smAnmi) {0004063#S161}

The verb in the relative can also undergo totalitative reduplication of the first syllable (§12.4.1.5), as *tu~ta-stu* ‘all (the ways) in which she had done it’.¹⁰

- (181) [*w-pi* *ku tu~ta-stu*] *nɯ to-stu* *q^he*
 3SG.POSS-elder.sibling ERG TOTAL~AOR:3→3’ -do.like DEM IFR-do.like LNK

‘She did everything like her elder sister.’ (2014-kWLAG)

In relative clauses, the contrast between Aorist and Inferential is neutralized, as only the Aorist can appear. Thus, in both (180) and (181) above, the verb of the relative clause is in the Aorist, while that of the main clause is in the Inferential. The events referred to in the Aorist in these relative clauses occur in the Inferential earlier in the stories: compare for instance the Inferential *ɲɣ-k^ho* in the main clause in (182) with the Aorist *na-k^ho* in the relative in (180).

¹⁰The object of the verb *stu* ‘do like’ refers to the manner in which the action is performed, not its patient (§14.4.2).

ring-DIM SBJ:PCP-be.like INDEF IFR-give
‘[Smanmi Metog Koshana] gave him something like a little ring.’
(28-smAnmi) {0004063#S150}

21.5.1.7 Complement clauses

Some finite complement clauses take the Aorist when the main verb is also in the Aorist, as in (183).

- (183) *azo [nu-z-nyre-t-a] pw-c^{ha}-a*
1SG AOR-CAUS-laugh-PST:TR-1SG AOR-can-1SG
‘I succeeded in making her laugh.’ (140430 jin e-zh) {0003893#S166}

21.5.1.8 Periphrastic Narrative

Some speakers (in particular Kunbzang Mtsho) use the Periphrastic Narrative instead of the Inferential as the main TAME category of narration when telling traditional stories.

The Periphrastic Narrative combines a verb in the Aorist with the copula in the Sensory *nu-nyu*. In (184), the periphrastic construction *t^{hu}-sta-nu nu-nyu* ‘they woke up’ corresponds to an Inferential *c^{hy}-sta-nu* in a similar story told by another speaker (185).

- (184) *nu vmaβ ku~ku-tu zo t^{hu}-sta-nu nu-nyu.*
DEM soldier TOTAL~SBJ:PCP-exist EMPH AOR-wake-PL SENS-be
‘All the soldiers woke up.’ (2003 qachGa) {0003372#S39}
- (185) *içq^{ha} ku-ruru vmaβmi nuura c^{hy}-sta-nu.*
the.mentioned SBJ:PCP-guard soldiers DEM:PL IFR-wake-PL
‘The guards woke up.’ (140507 jinniao-zh) {0003931#S145}

As in the case of other periphrastic TAME constructions (see in particular 10, §21.2.2 concerning the Periphrastic Imperfective), a chain of several verbs in the Aorist can share one copula. In (186) for instance, the copula *nu-nyu* has scope over two clauses, each containing a verb in the Aorist (*ta-tut* and *mu-ta-tut-ndzi*, respectively).

- (186) *tce* [*kuw-wxti ni ndzi-p^he ta-tut*] *ri*, [*kuw-wxti ni*
 LNK SBJ:PCP-big DU 3DU.POSS-DAT AOR:3→3'-say[II] LNK SBJ:PCP-big DU

 'He told it_i to the two elder [sisters]_j, but they_j did not tell it_i [to their_j
 parents].' (2005-stod-kunbzang)

In the case of the verb *ti* 'say', while the regular Periphrastic Narrative is attested (186), we also find a periphrastic form *ti ɲu-ɲu* (187) with the Factual *ti* instead of the Aorist *ta-tut*.

- (187) "*a-pi ɲu-ɕpav-a" ti ɲu-ɲu*
 1SG.POSS-elder.sibling SENS-be.thirsty-1SG say:FACT SENS-be
 'She said: 'Sister, I am thirsty.'" (2003 Kunbzang)

The verb *ti* 'say' in the Factual can share a copula with verbs in the Aorist in Periphrastic Narrative chains. In (188), the Factual form *ti* belongs to the same chain as the following Aorist form *ta-tut*, and *ɲu-ɲu* has scope over both of them. This periphrastic construction is similar to that of (186) above, but with a verb in the Factual instead of the Aorist in the first clause.

 (2003 Kunbzang)

21.5.2 Inferential

In this section, the term "Inferential" is used as abbreviation for "Inferential Perfective", as opposed to the Inferential Imperfective discussed in §21.5.3.

21.5.2.1 Morphology

In the Kamnyu dialect of Japhug, the Inferential is built from the stem I of the verb with type D preverbs (§15.1.1.1, §21.1.1.1). For instance, the verb *ɕe* 'go' (whose stem II is *-ari*, §12.2.1), has the Inferential 3SG form *jo-ɕe* (IFR-say) 'he said' with the indefinite orientation type D preverb *jo-* and the stem I *-ɕe*.

In the Xtokavian dialects of Japhug, there are only two series of preverbs (A and B), and the Inferential is marked by combining the B type preverbs with the Inferential prefix *a-*. The second person prefix *tu-* is inserted between the preverb and the Inferential *a-* (compare 10a and 10b, §15.1.1.3).

Transitive verbs with open syllable stem with first and second person singular subjects and third person object in addition select the *-t* past tense suffix (§11.3, §21.1.3, *-z* in some dialects of Japhug), as illustrated by (189), (192) and (190) (see also 203, §21.5.2.3).

- (189) *azo c^ha k^hro ko-ts^hi-t-a*
 1SG alcohol much IFR-drink-PST:TR-1SG
 ‘I drank a lot of alcohol.’ (aesop zuoke de gou-zh)

 1SG.POSS-son 3SG.POSS-life IFR-2-save-PST:TR LNK
 ‘I have to return the favour, as you have saved my son’s life.’
 (2011-04-smanni)

The verb *ti* ‘say’ is irregular in lacking this suffix in the Inferential; the 1SG and 2SG Inferential of this verb are thus *to-ti-a* and *to-tu-ti* as in (191), not †*to-ti-t-a* and †*to-tu-ti-t*.

- (191) *tɕe nu u-q^hu tɕe tɕ^hi to-ti-a?*
 LNK DEM 3SG.POSS-after LNK what IFR-say-1SG
 ‘What did I say after that?’ (140522 Kamnyu zgo) {0004059#S159}

The Inferential occurs with the negative prefix *mu-* (§13.1.1), as in (192).

- (192) *mu-to-ta-t-a*
 NEG-IFR-put-PST:TR-1SG
 ‘I did not put [the tea on the oven].’ (Conversation, 28-04-2018, Dpalcan)

In the Kamnyu dialect, the preverbs are prevented from merging with the initial *a-* of contracting verbs (§12.3) by insertion of the peg circumfix (§11.4), to avoid confusion with the Imperfective (since the result of the vowel merger of B type and D type preverbs with *a-* is identical). This insertion occurs in third (193) and first person (see 205, §21.5.2.3) forms.

- (193) *koŋla turme ɲɣ-k-ɣβzu-nu-ci*

 {0006197#S143}

Table 21.6 presents the paradigms of a regular transitive verb (*ts^{hi}* ‘drink’), the irregular *ti* ‘say’ (both with a 3SG object) and an intransitive contracting verb (*aβzu* ‘become, grow’) in the Kamnyu dialect.

Table 21.6: Inferential paradigms

Subject	<i>ts^{hi}</i> ‘drink’	<i>ti</i> ‘say’	<i>aβzu</i> ‘become, grow’
1SG(→3’)	<i>ko-ts^{hi}-t-a</i>	<i>to-ti-a</i>	<i>ɲɣ-k-ɣβzu-a-ci</i>
1DU(→3’)	<i>ko-ts^{hi}-tɕi</i>	<i>to-ti-tɕi</i>	<i>ɲɣ-k-ɣβzu-tɕi-ci</i>
1PL(→3’)	<i>ko-ts^{hi}-j</i>	<i>to-ti-j</i>	<i>ɲɣ-k-ɣβzu-j-ci</i>
2SG(→3’)	<i>ko-tu-ts^{hi}-t</i>	<i>to-tu-ti</i>	<i>ɲɣ-tu-ɣβzu</i>
2DU(→3’)	<i>ko-tu-ts^{hi}-ndzi</i>	<i>to-tu-ti-ndzi</i>	<i>ɲɣ-tu-ɣβzu-ndzi</i>
2PL(→3’)	<i>ko-tu-ts^{hi}-nu</i>	<i>to-tu-ti-mu</i>	<i>ɲɣ-tu-ɣβzu-mu</i>
3SG(→3’)	<i>ko-ts^{hi}</i>	<i>to-ti</i>	<i>ɲɣ-k-ɣβzu-ci</i>
3DU(→3’)	<i>ko-ts^{hi}-ndzi</i>	<i>to-ti-ndzi</i>	<i>ɲɣ-k-ɣβzu-ndzi-ci</i>
3PL(→3’)	<i>ko-ts^{hi}-nu</i>	<i>to-ti-nu</i>	<i>ɲɣ-k-ɣβzu-nu-ci</i>

The contrast between upper A-type (*tr-*, *lr-*, *kr-*, *jr-*) and D-type preverbs (*to-*, *lo-*, *ko-*, *jo-*) is neutralized when followed by the inverse prefix (see Table 15.2, §15.1.1.1), so that transitive verbs without stem II alternation selecting the upper orientations have syncretism between Aorist and Inferential. For instance, the phonetic form [kóyndo] is ambiguous between the Aorist 3’→3 *kɣ-wɣ-ndo* (AOR-INV-take) and the Inferential 3’→3 *kó-wɣ-ndo* (AOR-INV-take), both translatable as ‘someone/it/s/he grabbed him/her’.

21.5.2.2 Evidentiality

In main clauses, the Inferential is used to express past perfective event, like the Aorist (§21.5.1.2). The contrast between these two categories is of an evidential nature: the Aorist is selected if the speaker had directly witnessed the event, while the Inferential occurs when only indirect clues allow him/her to deduce that the action has taken place.

For instance, (195a) in the Aorist can be uttered if the speaker has seen the snowfall, while (195b) in the Inferential is chosen if the speaker infers that a snowfall has taken place from the presence of snow on the ground.

- (195) a. *txjpa ka-lyt*
 snow AOR:3→3-release
 b. *txjpa ko-lyt*
 snow IFR-release

‘It snowed.’ (elicited, see 165 above)

In the case of predicates involving a change of state, selecting the Aorist is only possible if the speaker has witnessed the whole process. For instance, to express the meaning ‘the water boiled’, the Aorist in (196a) is possible only if the speaker has observed the change of phase of water to ebullition, while the Inferential form (196b) is used when the s/he notices that the water has already started boiling.

- (196) a. *tuw-ci* *ty-ala*
 INDEF.POSS-water AOR-boil
 b. *tuw-ci* *to-k-yla-ci*
 INDEF.POSS-water IFR-PEG-boil-PEG

‘The water boiled.’ (elicited)

In narratives concerning the speaker, the Aorist is used in the case of actions that s/he has directly seen, while the Inferential is chosen for events that s/he has not directly perceived. For instance, in (197), the speaker selects the Inferential *pjx-yi* to describe the coming of the falcon, as she had not noticed the presence of that bird until the piece of meat in her hand was snatched away. Selecting the Aorist *pu-ye* (AOR:DOWN-come[II]) ‘it came down’ instead would mean that the speaker had seen the falcon approaching. The Aorist *ta-nu-mja* ‘it took it away’ expresses that the speaker felt and saw the meat being taken away; choosing Inferential *to-nu-mja* instead would have implied that the speaker had not even

noticed the snatching event, and had only realized the disappearance of the meat after it had been taken away.

- (197) *k^hxxtu ri pu-ryzi-a tce tx-mt^hum tu-ndze-a*

‘I was on the terrace eating meat, and suddenly a falcon came down without me noticing, and took away the [piece of] meat in my hand.’
 (150909 qandZGi) {0006358#S4}

The Inferential can occur to express events seen in dreams, as in (198).

- (198) [*azo [...] qarts^{hi} ɸɤ-k-ɤpa-a-ci* *pu-ɤɤjmŋo-t-a*
 1SG cricket IFR-PEG-become-1SG-PEG AOR-dream-PST:TR-1SG
 ‘I dreamed that I had become a cricket.’ (150904 cuzhi-zh) {0006322#S178}

In retellings of narratives observed on film, such as the *Pear stories*, the Aorist is used for most events that have appeared in the video (§21.5.1.2). The Inferential is used when only the result of action is visible. For instance in (199), the Inferential *to-su-mts^hɤt* instead of the Aorist *ta-su-mts^hɤt* occurs because the filling process is already completed in the beginning of the *pear story* video.

- (199) *tceŋdɤre ʋnu-kuxtco to-su-mts^hɤt tce*
 LNK two-basket IFR-CAUS-be.full LNK
 ‘[The man] had filled two baskets (with the pears).’ (chen-pear)

The Inferential can also be used in a more subtle way: to express that one of the characters in the film has not witnessed an event, even though the narrator may have seen it. For instance, the stealing of the pears is described using the Aorist *ja-nu-tsum* ‘he took them away’ in (200) since it is visible on the video, but when describing the point of view of the old man discovering that the pears have disappeared when climbing down his ladder, the Inferential *jo-nu-tsum* ‘he took them away’ occurs instead (201).

- (200) *nunu kw u-paxci tu-kuxtco nu ja-nu-tsum*

 'When the old man came down from the tree, he realized that [the pears]
 had been taken away, but could not do anything about it.' (chen-pear)

The Inferential is the main TAME category to describe actions occurring in traditional stories, though some speakers rather prefer the Periphrastic Narrative construction (§21.5.1.8). Example (202) illustrates this narrative function, where the succession of the verbs in the Inferential reflects the relative temporal order of the actions. The choice of the Inferential rather than the Aorist here is motivated by the fact that the fictional events described in these stories have not been witnessed by the speaker.

 (07-deluge) {0003426#S14}

The Inferential Imperfective occurs for imperfective events and states in narratives (§21.5.3.2).

In narratives told in the Inferential, the Aorist is restricted to temporal (§21.5.1.4) and relative (§21.5.1.6) subordinate clauses.

21.5.2.3 Inferential with first person

The Inferential is not rare with first person subjects in assertive clauses, but has specific meanings. With volitional verbs, this combination can be uttered when

a speaker notices that s/he forgot to do or did not properly do an action. For instance, in (203), the speaker (Tshendzin) selects the Inferential when realizing that she forgot to put the water to boil (see 192, §21.5.2.1 for a similar example).

- (203) *tu-ci mu-to-suu-yla-t-a*
 INDEF.POSS-water NEG-IFR-CAUS-be.boiling-PST:TR-1SG
 ‘I did not put the water to boil.’ (Conversation, 01-05-2018, Tshendzin)

The Inferential with first person is also found when the speaker realizes a fact that s/he had failed to notice or not fully understood before.

For instance, in (204), Inferential 1SG *ny-k-ytu-y-a-ci* ‘I have met’ occurs in a sentence uttered when the speaker has ascertained that the person he has met is a Daoist master, after a long conversation.

- (204) *a-k^hi ma kuiki konla nu ny-k-ytu-y-a-ci*
 1SG.POSS-luck LNK DEM.PROX real DEM IFR-PEG-meet-1SG-PEG
 ‘I am lucky, I (finally) met a real [Daoist master].’ (150907
 laoshandaoshi-zh) {0006398#S33}

Similarly, in (205), the speaker (a horse) uses the Inferential *ny-k-yβzu-a-ci* ‘I have become’ (as opposed to the Aorist *mu-aβzu-a*) to express his sudden realization that it has been tricked into becoming a domesticated animal.

- (205) *turme yu u-βjov ny-k-yβzu-a-ci*
 man GEN 3SG.POSS-servant IFR-PEG-become-1SG-PEG
 ‘I have become a slave of the men.’ (aesop ma he lu-zh)

Example (206) illustrates the contrast between Aorist and Inferential with first person subjects: the speaker did put the water on the oven, but forgot to open the oven, hence the use of the Inferential for the second verb.

- (206) *tu-ci ky-ta-t-a ri, <dian> mu-to-zwar-a*
 INDEF.POSS-water AOR-put-PST:TR-1SG LNK electricity NEG-IFR-burn-1SG
 ‘I put the water [on the oven], but did not open the electricity.’
 (Conversation, 04-05-2018, Tshendzin)

The Inferential with first person can also be used when the speaker did the action he intended but on the wrong object.

For instance, in (207), a sentence said after Tshendzin realized (by looking into the pot) that she mistakenly warmed the wrong pot (not the one containing nettles). Here *mts^halu* ‘nettle’ is focalized using the copula *nyu-maβ* (§22.5.3.2).

- (207) *mts^halu ko-γχ-ndzam-a* *ɲu-maβ*
 nettle IFR-CAUS-be.warm-1SG SENS-not.be
 ‘It is not the nettles that I warmed.’ (Conversation, 07-05-2018,
 Tshendzin)

The Inferential with first person is particularly common with verbs expressing uncontrollable and non-volitional actions, such as (208).

- (208) *kχ-nuɹuβ ko-rdal-a*
 INF-sleep IFR-overshoot-1SG
 ‘I overslept.’ (elicitation)

The inferential does not however express by itself non-volitionality; the autive prefix *-nu-* (§19.1.4) is used in conjunction with the inferential to insist on the non-volitional character of a particular action, as in (209).

- (209) *ɲχ-nu-jmuut-a*
 IFR-AUTO-forget-1SG
 ‘I forgot.’ (many attestations)

With non-volitional perception verbs such as *mto* ‘see’ and *mts^hχm* ‘hear’, Inferential first person negative can be employed to express failure to perceive (210) (see also example 220, §21.5.3.2), or alternatively to state that the speaker has not witnessed a fact of doubtful truthfulness (211).

- (210) *juɹɛur a-<dianhua>* *jχ-tu-lyt* *ri mu-ɲχ-mts^ham-a,*

 ‘I have never seen anyone like you among my subjects.’ (Smanmi 2003-2)

21.5.2.4 Change of state

When used with stative verbs, the Inferential Perfective expresses change of state, like the Aorist (§21.5.1.3) and the Imperfective (§21.2.6). In (212), *mpɛχr* ‘be beautiful’ thus means ‘become beautiful’ in the Inferential.

- (212) *mɣzɯ zo to-mɸɛɣr*
 even.more EMPH IFR-be.beautiful
 ‘[The Phoenix] became even more beautiful than before.’ (150901
 bainiaochaofeng-zh) {0006296#S77}

The verb *c^ha* ‘can’, which normally selects the DOWNWARDS preverbs (§21.5.3.1) to express both Imperfective Inferential/Past Imperfective (‘was able to do X’) and Inferential/Aorist (‘succeeded in doing X’), has an inchoative meaning ‘became able to do X’ when occurring with the UPWARDS orientation, as shown by (213) (see also 17, §24.2.3.1).

- (213) *mɯrmɯmbju ɯ-pɯ nuɯɯ [...] ɯ-tɯɣmaz ra*

 IFR-be.better LNK IPFV-fly IFR-can
 ‘The swallow’s wounds healed, and it was able to fly [again].’ (150825
 huluwa-zh) {0006346#S43}

21.5.2.5 Subordinate clauses

The Inferential rarely appears in subordinate clauses, as in most contexts the contrast between Aorist and Inferential is neutralized, and only the former is attested. In particular, in finite relative clauses, the Inferential is not found (§21.5.1.6).

In complement clauses, the Inferential is only found when the verb of the main clause is also in the Inferential, as in (214).

- (214) *ɲimawozɣr nɯ kɯ, [srɯnmɯ nɯ pɲɣ-ftɯl], [...] [rɲɣɯ*
 ANTHR DEM ERG rākshasî DEM IFR-subdue boulder
kɣ-kɯ-nɣɣtɕɣn ra pɲɣ-ftɯl], tɕe iɕq^ha srɯnmɯ nɯ ɣɯ

 and also succeeded in inviting Smanmi Metog Koshana to the east, as
 the rākshasî had requested. (2011-04-smanmi)

In this sentence, the scope of the verb *pɲɣ-c^ha* is ambiguous: it could be restricted to the last verb *ɕ-ko-nɣɣdɣn*, but could also be understood as encompassing the first two clauses (whose main verb is *pɲɣ-ftɯl*).

Examples of Inferential in the protasis of conditional constructions are presented in §25.2.1 (example 16).

21.5.3 Past Imperfective and Inferential Imperfective

21.5.3.1 Morphology

The Past Imperfective and Inferential Imperfective are built exactly in the same way as Aorist (§21.5.1.1) and Inferential Perfective (§21.5.2.1), but with the DOWNWARDS preverbs *pu-* and *pjɣ-* instead of the preverb corresponding to the intrinsic lexicalized orientation, a peculiarity observed in most Gyalrong varieties (Lin 2011). Thus, verbs selecting DOWNWARDS as their intrinsic orientation present syncretism between Aorist and Past Imperfective, and between Inferential and Imperfective Inferential.

For instance, the form *pu-rom* of the verb *rom* ‘be dry’, which selects the DOWNWARDS orientation, can either be interpreted as an Aorist ‘it became dry/when it becomes dry’ (§21.5.1.1) or as a Past Imperfective ‘it was dry’.

Another case of syncretism is provided by the modal verb *c^ha* ‘can’ which takes the DOWNWARDS orientation to express the meaning ‘succeed in doing *X*’ (where *X* refer to the content of the complement clause), as the Inferential Perfective *pjɣ-c^ha* in (215).

- (215) [*zdum kw-ɲaɓ* *nɯ c^hɣ-sw-jɣɣt*] *pjɣ-c^ha*
 cloud SBJ:PCP-be.black DEM IFR:DOWNSTREAM-CAUSE-turn.back IFR-can
ɲu-ɲu.
 SENS-be
 ‘He succeeded in making the black cloud retreat.’ (25-kAmYW)
 {0003642#S61}

When the verb of the complement clause is in the Imperfective, the same form *pjɣ-c^ha* is rather an Inferential Imperfective, and means ‘s/he was able to do *X*’ instead, as in (216).

- (216) *c^hu-mɣci-ndzi* *mɯ-pjɣ-c^ha-ndzi*
 IPFV-be.rich-DU NEG-IFR.IPFV-can-DU
 ‘They were unable to become rich.’ (Divination)

In Japhug, not all verbs have Past and Inferential Imperfective forms. Only stative verbs (including adjectives, existential verbs, copulas and passive verbs, §18.1.1), some stative transitive verbs with (such as tropative verbs, §17.5.2) and

some atelic intransitive dynamic verbs (such as *rxzi* ‘stay’) are compatible with these two TAME categories in main clauses. Table 21.7 provides examples of these three categories of verbs, with minimal pairs taken from the text corpus.

Table 21.7: Examples of contrast between Inferential Perfective and Imperfective

Type	Inferential Perfective	Inferential Imperfective
Stative	<i>to-mpɕɣr</i> ‘s/he became beautiful’	<i>pjɣ-mpɕɣr</i> ‘s/he was beautiful’
Tropative	<i>ɣɣ-nɣ-mpɕɣr</i> ‘s/he found him/her/it beautiful’	<i>pjɣ-nɣ-mpɕɣr</i> ‘s/he was finding him/her/it beautiful’
Atelic dynamic	<i>ko-rɣzi</i> ‘s/he stayed (there)’	<i>pjɣ-rɣzi</i> ‘s/he was staying (there)’

Atelic dynamic intransitive verbs include the following: some verbs of location such as *rxzi* ‘stay’, some modal verbs such *rga* ‘like’ and *ch’a* ‘can’, antipassive verbs (§18.6.6) and also some verbs expressing activities requiring a certain amount of time such as *taɣ* ‘weave’ or *rxma* ‘work’.

Like the Aorist and the Perfective Inferential, the Past and Inferential Imperfective require the past suffix *-t* in the 1/2→3 forms of open syllable stem transitive verbs (§11.3, §21.1.3). However, since only very few transitive verbs are compatible with these two categories, relevant examples such as (217) are very rare (see also 226, §21.5.3.4).

- (217) *pu-nɣ-pe-t-a*
 PST.IPFV-TROP-be.good-PST:TR-1SG
 ‘I used to like it.’ (elicited)

Most transitive verbs need to take the progressive *asu-* prefix (§21.6.1) build Past and Inferential Imperfective forms. The peg circumfix *k-...-ci* is inserted between the *pjɣ-* preverb and the progressive prefix (§11.4) in first and third person forms (§21.5.2.1), as shown by (218). The past transitive suffix *-t* does not occur with the progressive (§21.6.1).

- (218) *rgɣnmur nuw kuw li icq^ha <yuwang> nuw*
 old.woman DEM ERG again the.mentioned net DEM
pjɣ-k-ɣsw-ɬsuβ-ci
 IFR.IPFV-PEG-PROG-sew-PEG
 ‘The old woman was sewing nets (like before).’ (140430 yufu he tade qizi-zh) {0003900#S283}

One context however where all verbs appear to be found without restriction in the Past Imperfective is in the apodosis of counterfactual conditionals (§21.5.3.4).

In other cases, the Periphrastic Past and Inferential Imperfective (§21.5.3.5) are used instead.

21.5.3.2 Main clauses

In main clauses, the Past and Inferential Imperfective indicate a previous state or habitual situation. For instance, in (219), the use of the Past Imperfective to refer to the presence of warts (*pu-tu* ‘there used to be’ and *pu-dɣn* ‘there were many’) is necessary because of their subsequent disappearance, explicitly mentioned in the following clauses.

- (219) *a-jab ri li kukura ntsu pu-tu tce*

 ‘I had [warts] on my hand there, and there were a lot. But later, the [wart] that had first come out disappeared by itself, and [the rest] disappeared.’ (24-pGArtsAG) {0003624#S48}

The Past and Inferential Imperfective also express an ongoing process in the past, during which additional events have occurred, as in (220).

- (220) *juwɕur k^hu-k^hro zo jo-tu-lyt ri muw-pjɣ-mts^ham-a ma*

pɯ-nu-ɣɣwu ɕti
 PST.IPFV-AUTO-cry be.AFF:FACT
 ‘I comforted the girl, but to no avail, [as] she was still crying.’ (2003
 zrAntCW tWrme)

The Inferential Imperfective is the standard TAME category used in traditional stories to describe states and ongoing actions, as illustrated by the chain of verbs marked in red in (222). It is the counterpart of the Inferential Perfective in narrative function (§21.5.2.2).

 chess.’ (150902 qixian-zh) {0006258#S114}

21.5.3.3 Temporal clauses

The Past Imperfective, like the Aorist (§21.5.1.4), is used in temporal subordinate clauses. The clause in the Past Imperfective expresses an ongoing process in the middle of which the event referred to in the main clause (in the Aorist or in the Inferential Perfective) takes place, as illustrated by (223).

- (223) *wuma zo pu-asu-ndza-ndzi, pu-pe jamar zo tce*

 ‘While/Right at the moment when they were eating [the sweets] in big quantity and were [enjoying it], the door of the house opened.’ (140507 tangguowu-zh) {0003933#S83}

21.5.3.4 Apodosis

The Past Imperfective is also used in the apodosis of counterfactual conditionals (with an Irrealis in the protasis, §21.4.1.5), as shown by the form *pu-pe* in (224).

- (224) *nunu muɣzɯsapa nu tceki nu tce a-pu-ɣ-ɣxt tce*

In this very restricted context, all verbs can have a Past Imperfective form. For instance, *rpu* ‘bump into’ (§14.5.2), which normally selects the EASTWARDS orientation (the preverb *kɣ-* in 225), takes the *pu-* Past Imperfective preverb in (226).

 ‘When I came to your house, if I had lowered my head, I wouldn’t have bumped it [into the door frame].’ (elicited)

The Inferential Imperfective is not attested in this construction.

21.5.3.5 Periphrastic Past and Inferential Imperfective

Only atelic verbs, in particular stative verbs, are compatible with Past Imperfective and Inferential Imperfective (§21.5.3.1) in contexts other than the apodosis of counterfactuals (§21.5.3.4).

To express the meanings otherwise conveyed by the Past Imperfective with telic verbs, two strategies are possible. First, the Progressive *asu-* makes all transitive verbs compatible with these two tenses (§21.5.3.1, §21.6.1). Second, the Periphrastic Past Imperfective and Inferential Imperfective, which combine the Imperfective form of the verb with the copula in the Past Imperfective *pu-ŋu* and the Inferential Imperfective *pjɣ-ŋu*, respectively (§21.2.2). For instance, instead of the incorrect form †*pjɣ-ndza* (Inferential Imperfective of the telic transitive verb *ndza* ‘eat’), the periphrastic construction in (227) is used.

- (227) *tu-ndze pjɣ-ŋu*
 IPFV-eat[III] IFR.IPFV-be
 ‘S/he/it used to eat/was eating it.’ (many examples)

Just in the same way as the Aorist can be combined with the Sensory copula *pu-ŋu* to build the Periphrastic Narrative (§21.5.1.8), the Past Imperfective with *pu-ŋu* expresses an Periphrastic Imperfective Narrative, with the same meaning as the Inferential Imperfective. For instance, the construction in (228) is equivalent to the Inferential Imperfective *pjɣ-taɁ* (IFR.IPFV-weave) ‘s/he was weaving’.

- (228) *te^heme ci pu-taɁ pu-ŋu*
 girl INDEF PST.IPFV-weave SENS-be
 ‘A girl was weaving.’ (2003 tWxtsa)

21.5.4 Archaic form

The archaic 3SG *k^hu-ti* ‘s/he said’ and 3PL *k^hu-ti-nuu* ‘they said’ forms with the isolated preverb *k^hu-*, are attested in a few occurrences in stories told by Tshendzin’s mother. They are glossed by Tshendzin with the Inferential forms 3SG→3 *to-ti* and 3PL→3 *to-ti-nuu*, respectively.

- (229) “*ɕu ku nu-tú-wy-mbi tɣ-ti ma mɣ-jɣɣ*”
 who ERG AOR-2-INV-give IMP-say apart.from NEG-be.possible:FACT
k^hu-ti-nuu.
 ???-say-PL
 ‘Who gave this to you, you must tell us.’ (2003-kWBRa)

These forms are not found in texts by younger speakers. No other trace of this preverb is found in Japhug. A possible origin for it would be the hearsay sentence final particle *k^{hi}* (§10.4.3), which sometimes occur in the reported speech complements (§24.2.5.1) of the verb *ti* ‘say’, sometimes even in direct contact with the stem of this verb as in (230), in its irregular preverbless inferential form (§21.3.1.4).

- (230) *nɣ-kɣɣcɣl* *nɣ-bru* *nɯ* *pju-tu-p^hut* *tee*
 2SG.POSS-top.of.head 2SG.POSS-horn DEM IPFV-2-take.off LNK
kɣ-nu-ɕe *ju-k^hu* *k^{hi}*” *ti* *ju-ŋu*
 INF-AUTO-go SENS-be.possible SFP say:FACT SENS-be
 ‘He said: “If you remove the horn on the top of your head, it will be possible for you to go wherever you want.”’ (divination 2005,101)

The preverb *k^hu-* would thus result from the procliticization and eventual absorption of a sentence final particle from a preceding clause into the verbal word, a scenario similar to that proposed for the Apprehensive *ɕu-* (§21.7.1.3). If this hypothesis is correct, the form *k^hu-ti* may not be the residual form from an ancient paradigm, but rather an unsuccessful Japhug innovation that has eventually died out.

21.6 Secondary Aspectual categories

There are two secondary aspectual prefixes in Japhug, the Progressive (§21.6.1) and the Proximative (§21.6.2). They can be combined with several primary TAME categories, but cannot occur together in the same verb form.

21.6.1 Progressive

21.6.1.1 Morphology

The Progressive prefix *asu-* is located in slot -1 of the outer prefixal template (§11.2.1). It is only compatible with transitive verbs, and does not appear with perfective TAME categories such as Aorist and Inferential Perfective. Its is almost only attested with finite verb forms; the only examples of non-finite Progressive forms are object participles (see example 60, §16.1.2.2).

The Progressive prefix has six regular allomorphs, as shown in Table 21.8. The monosyllabic variants *az-*, *-ɣz-* and *-oz-* are found in the same context as the *z-* allomorph of the sigmatic causative (§17.2.1.1): in non-monosyllabic verb bases, when the first syllable has a sonorant initial (*mV-*, *nV-*, *ɣV-* or *rV-*). They are illustrated with the verb *nɣjo* ‘wait’ in Table 21.8. The disyllabic allomorphs *asu-*,

-rsu- and *-osu-* are found in all other contexts (illustrated with the monosyllabic *ndza* ‘eat’ in Table 21.8).

Table 21.8: Allomorphs of the Progressive prefix

Allomorph	Context	Examples
<i>asu-</i>	Factual	<i>asu-ndza</i> PROG-eat:FACT
	Past Imperfective	<i>pu-asu-ndza</i> PST.IPFV-PROG-eat
<i>az-</i>	Factual	<i>az-nxjo</i> PROG-wait:FACT
	Past Imperfective	<i>pu-az-nxjo</i> PST.IPFV-PROG-wait
<i>rsu-</i>	Sensory	<i>nu-rsu-ndza</i> SENS-PROG-eat
	Inferential	<i>pjx-k-rsu-ndza-ci</i> IFR.IPFV-PEG-PROG-eat-PEG
<i>xz-</i>	Sensory	<i>nu-xz-nxjo</i> SENS-PROG-wait
	Inferential	<i>pjx-k-xz-nxjo-ci</i> IFR.IPFV-PEG-PROG-wait-PEG
<i>osu-</i>	Egophoric Present	<i>ku-osu-ndza-a</i> PRS-PROG-eat-1SG
<i>oz-</i>	Egophoric Present	<i>ku-oz-nxjo-a</i> PRS-PROG-wait-1SG

The vocalism of this prefix follows the same alternations as the initial *a-* of contracting verbs (§12.3).

The *asu-/az-* allomorphs are found in word-initial position, in first or third person Factual Non-Past (see for instance 240), following the Past Imperfective *pu-*, with the negative *mx-* and the Rhetorical Interrogative *uβrx-* (§21.7.3, *uβrx-asu-ndo* RH.Q-PROG-take:FACT ‘it does not have (this colour), does it?’).

The *-osu-/oz-* allomorphs are restricted to Egophoric Present forms with the prefix *ku-* (§21.3.3.1).

The *-rsu-/xz-* allomorphs are the most common, attested with the Sensory *nu-*, with the peg circumfix (§11.4, in Inferential Imperfective form) and also in the Irrealis Imperfective with the preverb *pu-* (for instance *a-pu-rsu-ndo* IRR-IPFV-PROG-take ‘may it have (this colour)’).

Like contracting verbs, the Progressive prefix selects the peg circumfix *ku-...-ci* (§11.4) in the Inferential Imperfective (§21.5.3.1), as shown by the form *pjɣ-k-ɣsu-car-ci* ‘it was searching/looking for it’ in (231).

ɲu-ɣ<nu>su-ŋga
 SENS-PROG<AUTO>-wear
 ‘His clothes are torn to shreds, but he is still wearing them.’ (elicited)

When both inverse and autive are combined with the Progressive, the *-su/z-* element is removed, and only the first vowel of the Progressive remains, as in (234).

- (234) *u-zda ku ɲu-ɣ-wɣ-nu-nyjo*
 3SG.POSS-companion ERG SENS-PROG-AUTO-wait
 ‘His_i companion is waiting for him_i.’ (elicited)

An irregular allomorph *-ɣs-* is found in the Sensory Progressive *ɲu-ɣs-tut* (SENS-PROG-say[II]) ‘s/he is saying/said’ of the verb *ti* ‘say’ (§21.3.2.1), a form also unusual by the presence of Stem II.

Transitive verbs with the Progressive prefix lack some of the morphological exponents of transitivity (§14.3.1).

First, in Sensory, Egophoric, Irrealis and Factual, Stem III alternation does not occur in SG→3 configurations of alternating verbs (§12.2.2.2); for instance, the Progressive Sensory 3SG→3' of *ndza* 'eat' is *ɲuu-ɣsu-ndza* (SENS-PROG-eat) 's/he/it is eating it' with Stem I, unlike the plain Sensory *ɲuu-ndze* which selects Stem III (see example 14, §21.2.2). Combining Stem III with the Progressive (something like †*ɲuu-ɣsu-ndze*) is categorically rejected by native speakers.

Second, the past *-t* suffix (§21.1.3) does not occur in 1/2SG→3 forms of Past Imperfective and Inferential Imperfective of verbs with the Progressive prefix. For instance, the 1SG→3SG form *pu-asu-βzu-a* (PST.IPFV-PROG-make-1SG) 'I was making it' (see for instance example 220, §21.5.3.2) lacks the *-t* suffix, and inserting it (†*pu-asu-βzu-t-a*) is not accepted by speakers.

Other exponents of transitivity, such as C-type preverbs (§14.3.2.2), subject participles (§16.1.1.1) and bare infinitives (§16.2.2) cannot be tested, due to the incompatibility of the Progressive with most non-Finite forms on the one hand, and the undetectability of the *pu-/pa-* contrast when followed by the vowel contracting *asu-*: the surface form /pasuβzu/ 's/he/it is making it' is equally analyzable as *pu-asu-βzu* (PST.IPFV-PROG-make) or as *pa-asu-βzu* (PST.IPFV:3→3'-PROG-make). The former analysis is adopted in this grammar.

The 1→2 *ta-* seems to be incompatible with the progressive. For instance, to express the meaning 'I am waiting for you', only the simple Egophoric Present *ku-ta-ɲɔjo* (PRS-1→2-wait) is possible, the surface form /kutazɲɔjo/ can only be analyzed as a causative Imperfective *ku-ta-z-ɲɔjo* (IPFV-1→2-CAUS-wait) 'I will have you wait for him', not as an Egophoric Progressive †*ku-ta-ɣz-ɲɔjo*.

Other person configurations, including inverse mixed scenarios 3→1/2 (§14.3.2.1) and local scenario 2→1 (§14.3.2.3) can be elicited with the Progressive, as in (232) and (235), though no such examples have yet been found in the corpus.

- (235) *ɲuu-kuu-ɣsu-zgroβ-a*
 SENS-2→1-PROG-attach-1SG
 'You are tying me up.' (elicited)

21.6.1.2 Functions

The Progressive indicates the non-telicity of the verbal action. It occurs in the case of habitual (236) and ongoing actions (including events being protracted for a long time period, as in 237) (see also 98 and 94 in §21.3.3.4).

pu-ra ri
 PST.IPFV-be.nEEDED LNK
 ‘We are looking for the prince’s wife, we had to walk for three years.’
 (2003 sras)

With the Factual and the Sensory, the Progressive precludes an imminent future interpretation (§21.3.1.2). For instance *tu-mu asu-lyt* in (238) means ‘(when) it is raining’ (as part of general knowledge), while the corresponding plain Factual *tu-mu lyt* (239) is to be understood as ‘it will rain’.

Temporal clauses with the Progressive and the relator noun *u-raj* ‘the time when, while’ can express simultaneity (§25.3.4.1) with the action of the main clause. In this construction, the verb can be in the Factual even when the main clause is in the Aorist or the Inferential, as in (244).

- (244) *tce [tx-pxtso ra ku az-nurdoB-nu u-raj] zo*

 ‘They bought milk and apples for me, and Gong Xun (龚勋) said, speaking in our language: ‘We bought milk and apples for you.’ (conversation, 17-08-21)

21.6.1.3 History

The Japhug Progressive prefix *asu-* is obviously related to the Tshobdun *vsɔ-* (Sun & Shidanluo 2002: 89) and the Zbu *vsɔ-/vsə-* (Gong 2018: 199–201) progressive prefixes, but no cognates are found in the rest of Gyalrongic, even in Situ. It is a possible northern Gyalrong common innovation.

As in Japhug, the Progressive *vsɔ-* in Zbu and Tshobdun is incompatible with Stem III and the past transitive *-z* suffix (cognate to Japhug *-t*, §21.1.3), but its distribution is considerably more restricted. Zbu *vsɔ-* is not compatible with orientation preverbs and the inverse prefix; the allomorph *vsə-* optionally occurs with verbs taking the sigmatic causative prefix (Gong 2018: 199–200).

The infixability of the inverse and the active prefixes within the Progressive in Japhug (§21.6.1.1) is a clue that *asu-* and its cognates are etymologically composite, comprising two elements *a-* and *-su-*. Possible candidates for the former include the Passive (§18.1) and the Denominal *a-* (§20.2.1), and for the latter the oblique participle *sɣ-* (§16.1.3) or the sigmatic causative *su-* (§17.2).

21.6.2 Proximative

The Proximative *ju-*, located in slot -6 of the outer prefixal chain (§11.2.1), corresponds to the Tshobdun *jə-* prefix (Prospective 前瞻体, Sun 2008: 142–143) and the Zbu *jə-* or *wə-* prefixes (depending on the dialect, Gong 2018: 9;201-202).

It mainly appears in the corpus in combination with the Aorist (246, 247) or the Inferential (248, 249) expressing that the action was almost realized, but not completed. The adverb *zumi* ‘almost’ is commonly used together with the proximative, as in (246) and (247).

21.6.2.1 Periphrastic proximative

The Proximative is in competition with the Periphrastic Proximative constructions, which combines the Factual Non-Past with the 3SG copula in various TAME categories.

With the Past Imperfective copula *pu-ŋu* (254) or the Inferential Imperfective *pjɣ-ŋu* (255), the periphrastic construction means ‘was about to do *X*, almost/nearly did *X*’.

- (254) *ɓdɯxpɑ naχpu ywɪ w-tɕw kwi a-tɕw sat*

 IPFV:WEST-turn.towards-1SG
 ‘When they are about to catch up with you, I will turn my left [hand] in their direction. (2011-04-smanmi)

In the non-past, the Periphrastic Proximative selects the Sensory copula *ɲu-ŋu*, and expresses imminent future ‘is about to *X*’ as in (257) and (258). With the copula in the Factual Non-Past, clear examples of proximative meaning are difficult to ascertain, as postverbal copulas have additional functions (§22.5.3).

21.7 Secondary Modal categories

Secondary Modal categories include the Probabilitative (§21.7.2), Rhetorical Interrogative (§21.7.3) and Interrogative (§21.7.4) which can be combined with primary TAME categories, and the Apprehensive (§21.7.1), which presents morphological commonalities with the Aorist (§21.5.1.1).

21.7.1 Apprehensive

21.7.1.1 Morphology

The Apprehensive prefix *ɕu-* presents a series of unique morphological properties in Japhug. It occupies the slot -3 of the outer prefixal chain (§11.2.1), the same as orientational preverbs (§15.1.1.1). It is the only finite TAME category apart from the Factual Non-Past (§21.3.1) to lack orientation preverbs.

On transitive verbs, the 3→3’ direct form of the Apprehensive is *ɕa-*, with a vowel alternation identical to that found with type C preverbs in the Aorist (§14.3.2.2, §15.1.1.1, §21.1.1.1) as illustrated by the contrast between the intransitive (Anticausative, §18.5.1) *ɕu-ŋgru* ‘(I am afraid that) it will break’ and its counterpart transitive *ɕa-nu-qrú* ‘(I am afraid that) he will break it’, with the same vocalism as that on the preverb *ta-* prefix on the Aorist *ta-ndo* ‘s/he took it’.

Table 21.9 summarizes the morphological commonalities between Apprehensive and Aorist (as opposed to Imperfective, §21.2.1).

The Apprehensive is not only incompatible with all TAME markers, but also with associated motion prefixes (§15.2.1) and non-finite verb forms. On the other hand it appears with all person indexation markers (1SG in 263, 2SG in 262, and even 2SG→1SG in 265) and the negative prefix *mu-* (262 and 264).

Table 21.9: Comparison of Apprehensive, Aorist and Imperfective forms

 (2003 sras)

21.7.1.2 Functions

The Apprehensive is used to indicate worry or even fear that the event referred to by the verb might happen. Several verbs with the meaning 'fear' exist in the language (in particular the Applicative verb *nuymu* 'be afraid of', §17.4), but none is a complement taking verb meaning 'be afraid that *X*'.¹¹ The Rhetorical Interrogative (§21.7.3) can have a meaning similar to that of the Apprehensive, but conveying a milder degree of concern.

- (263) [*cuu-maq^hu-a ku zo*] *ɣɣ-susoo-nuu tce rcanuu, pɕoβzi*
 APPR-be.after-1SG SFP EMPH IFR-think LNK unexpectedly corner
kuβde zo jo-yi-nuu.
 four EMPH IFR-come-PL
 'Afraid of being late (thinking 'I am afraid that I will be late'), they came from the four corners of the world.' (150906 toutao) {0006326#S19}

The Apprehensive exclusively expresses the fear of the speaker, not that of the agent, though in the case of reported speech this may be a person different from the present speaker (as in 263).

¹¹The clause *ɕu-maq^hu-a ku zo ɣɣ-susoo-nuu* in (263) creatively translates the Chinese expression 争先恐后 <zhēngxiānkǒnghòu> 'vie with each other in order to'.

Despite its Aorist-like morphological features (§21.7.1.1), the Apprehensive is exclusively refers to fear for a future event at the time of utterance; for instance, (261c) above in cannot be interpreted as meaning ‘I am afraid that he may already be gone.’ In complement clause with a matrix verb in the Aorist, it can however refer to an event which has already happened ‘(I) was afraid that it might X’, as in (264).

- (264) *mwi-ɕwi-k^hwi* *kwu nuw-suso-t-a*
 NEG-APPR-be.possible SFP AOR-think-PST:TR-1SG
 ‘I thought it would not work.’ (conversation, 02-05-2018; after opening a washing machine, expecting it would not open)

The apprehensive prefix only occurs either in independent clauses with the exclamative sentence final particle *kwu* (265), and in reported speech with the verb *suso* ‘think’ (264, 262, 263). It is strictly impossible in any other type of complement clause.

- (265) *ɕwi-kwi-mpɕa-a* *kwu!*
 APPREHENSIVE-2→1-scold-1SG SFP
 ‘I am afraid that you will scold me.’ (elicited)

It is possible to use the Apprehensive in clauses with precautioning or preventive meanings (as in 259 and 263), but it is not the usual way of expressing these meanings in the language (§25.5.6).

21.7.1.3 Historical origin

The Apprehensive *ɕwi-* is superficially similar to the translocative associated motion prefix *ɕwi-*, which is grammaticalized from the verb *ɕe* ‘go’ (§15.2.1.2), but the two prefixes do not occupy the same prefixal slot (-3 vs. -4, §11.2.1) and do not share the same morphological alternations, and are not semantically close. It is unlikely that they are historical related.

A possible origin for the apprehensive *ɕwi-* might be the alternative interrogative particle *ɕi* ‘whether ... or’ (§10.4.2), which can coordinate two clauses (the second clause being the negative counterpart of the first one) to express hesitation or worry that an action might not take place, as in (266) (see also 152, §21.4.3.2).

- (266) *c^ha-a* *ci* *mɣ-c^ha-a* *mɣ-xsi*, *pɣjk^hu*
 can:FACT-1SG QU NEG-can:FACT-1SG NEG-GENR:know:FACT still
xtci-a *cti*
 be.small:FACT-1SG be.AFF:FACT
 ‘I don’t know whether I will be able to do it, I am still young.’ (2010-09)

Although generally clause-final, the particle *ci* can be prosodically attached to the second clause, and could have been absorbed into the verbal template (Lai accepted describes similar processes in Khroskyabs). In this hypothesis, the Apprehensive was first grammaticalized in negative forms, with reordering of the Apprehensive and of the Negative prefix (267), and the non-negative Apprehensive forms were created by backformation.

- (267) *ci mɣ-c^ha* ⇒ **ciu-mɣ-c^ha* ⇒ *mu-ciu-c^ha*
 ‘[I don’t know] whether he [will be able to do it] or not be able to do it’
 ⇒ ‘I worry that he might not be able to do it.’

This idea should still be viewed as speculative, since it does not account for the Aorist-like morphological features of the Apprehensive.

The *a* vocalism of the Apprehensive prefix with 3→3’ transitive forms is a clue that the C-type preverbs in Japhug originate from the fusion of A-type preverbs with an Aorist 3→3’ **a* prefix (§15.1.1.3). Given the ability of the Aorist to refer to future events in temporal clauses (§21.5.1.4), it is possible that in pre-Japhug or proto-Gyalrong, there was a TAME category without preverb but taking stem II and the 3→3’ **a* prefix expressing perfective future tense, and that the grammaticalization of *ci* as a prefix occurred on a form of this lost category.

21.7.2 Probabilitative

The Probabilitative prefix *umɣ-*, located in slot -6 of the outer prefixal template (§11.2.1), is transparently grammaticalized from the combination of the Interrogative *u-* (§21.7.4) with the negative *mɣ-* (§13.1.1). It is compatible with the Aorist (268), the Imperfective (§21.7.2.2) and the Factual Non-Past (269), and has the epistemic modality meaning ‘probably, presumably’.

- (268) *umɣ-jɣ-azyut*
 PROB-AOR-arrive
 ‘He probably has already arrived.’ (elicited)

- (269) *tci-taβ nunu, tci-taβ umx-pe*
 1DU.POSS-MZ DEM 1DU.POSS-ON PROB-be.good:FACT
 ‘(Now that we have money), maybe our stepmother will treat us better.’
 (140507 tangguowu-zh) {0003933#S151}

Although Probabilitative with Aorist (268) can be elicited, no such example is attested in the corpus. Instead, a periphrastic construction with the Factual Probabilitative form of the copula *umx-ηu* ‘maybe it is’ combined with the Aorist is found, as in (270).

- (270) *nx-ja ndzi-cki ty-tut-a ri,*
 2SG.POSS-sister 3DU.POSS-DAT AOR:3→3’-say[II]-1SG LNK
mu-ta-tut-ndzi umx-ηu ma

 ‘I have told your two elder sisters, but they presumably have not told [your parents] about it (since they have not given any answer).’
 (2014-kWLAG)

When the speaker hesitates in his degree of confidence regarding a particular statement, s/he can alternate between the Factual copula *ηu* and the Probabilitative form *umx-ηu* ‘maybe it is’, as in (271).

- (271) *ɕyr tce tu-mbri tce, “qaqaqaqa” tu-ti ηu tce nunu*
 night LOC IPFV-cry LNK INTERJ IPFV-say be:FACT LNK DEM
pyxnaβ ηu. “pyxnaβ ηu” tu-ti-nu, ηu tce
 pheasant be:FACT pheasant be:FACT IPFV-say-PL be:FACT LNK
umx-ηu ma mx-xsi matci ɕyr ndyre
 PROB-be:FACT LNK NEG-GENR:know:FACT LNK night LOC
múj-sx-mto tce.
 NEG:SENS-PROP-see LNK
 ‘It sings at night, it makes the sound *qaqaqaqa*, that is the pheasant *Pucrasia macrolopha*. They say it is the *Pucrasia macrolopha*, maybe it is, we don’t know, at night it is not visible.’ (23-pGAYaR) {0003606#S7}

The Probabilitative prefix is not compatible with negative prefixes or negative copulas: forms such as †*umx-maβ* (intended meaning ‘maybe it is not’) are incorrect. To express the meaning ‘maybe not *X*’, the Rhetorical Interrogative *uβrx-* with *peg* circumfix occurs instead (§21.7.3.3).

21.7.2.1 Possible modality with peg circumfix

The Probabilitative prefix can be combined with the peg circumfix (§11.4), with an epistemic modality of substantial doubt ‘maybe’, as in (272).

- (272) *pya ra kuw tu-ndza-nuw umɣ-kuw-ŋu-ci ma*
 bird PL ERG IPFV-eat-PL PROB-PEG-be-PEG LNK
 ‘Maybe birds eat it.’ (17-thowum) {0003526#S39}

This form is compatible with verbs in the Sensory, as in (273); with the meaning ‘it seems, it looks like’.

- (273) *alo tɕu rɕunba ci ɣɣzu umɣ-kuw-ŋu-ci tɕe*
 upstream LOC temple INDEF exist:SENS PROB-PEG-be-PEG LNK
 ‘It looks like there is a temple up there.’ (2003 Kunbzang)

21.7.2.2 Probabilitative with Imperfective

The combination of the Probabilitative prefix with the Imperfective form (§21.2) expresses optative modality ‘if only...’, as in (274) and (275).

- (274) *umɣ-c^huw-mɣci-a*

21.7.3 Rhetorical interrogative

21.7.3.1 Morphology

The Rhetorical Interrogative prefix *uβrɣ-*, located in slot -6 of the outer prefixal template (§11.2.1), mainly occurs with verbs in the Factual Non-Past (277) in the corpus, but forms with the Aorist (278) or the Imperfective are also attested. It is not compatible with negative prefixes.

- (277) *rcanuw mti pjuwɯ ʋʃa zo tɣɣmɕk^ho pu-ŋu*

 ‘In the evening, their lama arrived and said: ‘You did not go and say *joβ*
 (to the girl), did you?’ (2003kandZislama)

21.7.3.2 Functions

The Rhetorical Interrogative has two main functions, both in the form of negative rhetorical questions.

First, it expresses concern on part of the speaker that the action described by the verb might happen (279) or might have already happened (278 above), depending on the TAME category of the verb. In this function, it is frequently combined with the sentence final particle *ma* (§10.4.4) as in (277) and (279).

- (279) “*a-tab nutcu, loḅbutc^{hi} nu uβrx-γw-rḅgu ma*”
 1SG.POSS-ON DEM:LOC elephant DEM RH.Q-CISL-lie.down:FACT SFP
ḅw-susym tce, nu ntsu w-kx-nuzduy ḅw-ḅu
 IPFV-think[III] LNK DEM always 3SG.POSS-OBJ:PCP-worry/about SENS-be
k^{hi}
 HEARSAY
 ‘[The marmot]_i thinks: ‘The elephant_j won’t come and sleep on my
 [hole], will it_j?’, this is what it_i worried about.’ (28-qapar) {0003720#S43}

In this use, *uβrx-* normally carries a negative presupposition ‘it will not X, will it?’. This negative meaning appears to be absent only in a handful of examples such as (280), where *uβrx-* is found with the final particle *ye*: in another version of the story from which this example is taken, the corresponding quotation has the verb *yi* ‘come’ in affirmative form without the Rhetorical Interrogative, and instead the sentence final particle *t^haj* (see 48, §21.3.1.2).

- (280) *a-mu, juwymur tce k^{hu} uβrx-yi ye!*
 1SG.POSS-mother this.evening LNK tiger RH.Q-come:FACT SFP
 ‘Mother, the tiger will come this evening (to eat us), won’t it?’ (X1-khu)
 {0004085#S3}

In this function, the prefix *uβrx-* has some overlap with the Apprehensive prefix *cu-* (§21.7.1.2), though the latter conveys a higher degree of worry.

Second, the Rhetorical Interrogative occurs in interrogative clauses expressing polite requests, as in (281).

- (281) *nyki nu-txpi w-tab kx-ryt nu*
 DEM:MEDIAL 2PL.POSS-staff 3SG.POSS-ON OBJ:PCP-write DEM
uβrx-kw-z-nxmpo-a-nu?
 RH.Q-2→1-CAUS-watch-1SG-PL
 ‘You wouldn’t show me what is written on that staff of yours, would you?’ (2003 sras)

This function is common in particular with the Rhetorical Interrogative form *uβrx-jry* of the modal verb *jry* ‘be allowed’ selecting a complement clause in the Imperfective, as in (282).¹²

¹²The noun *a-rzaβ* ‘my wives’ in (282) is an essive adjunct (§8.1.7).

- (282) *nuzo ra χsum nu, [a-rzaβ c^hu-tu-yi-nu]*
 2PL PL three DEM 1SG.POSS-wife IPFV:DOWNSTREAM-2-come-PL
uβry-jyγ?
 RH.Q-be.possible:FACT
 ‘The three of you, would you come [to my palace and become] my
 wives?’ (Norzang 2005)

The prefix *uβry-* also occurs in polite inquiries about a person’s health, expressing sincere concern about a possible illness as in (283).

- (283) *ny-kw-mnym uβry-ku-tu, ny-cq^he*
 2SG.POSS-SBJ:PCP-hurt RH.Q-PRS-exist 2SG.POSS-cough
uβry-ku-t^hu?
 RH.Q-PRS-be.serious
 ‘You don’t have a disease (these days), do you? Your cough is not serious,
 is it?’ (conversation, 2016-03-20)

A more marginal use of *uβry-* is found in (284), where it appears on two antonymic verbs linked by the adversative *ri* to express the meaning ‘if I don’t X, at least I will not Y.’ In another version of the story from which (284) is taken, the same meaning (285) is expressed by verbs in the negative Factual Non-Past with the sentence final particle *t^haj* (§10.4.4).

- (284) *p^hyn uβry-pju-tu-a ri βduy nu*

 (several occurrences) {0003368#S20}

21.7.3.3 Rhetorical Interrogative with peg circumfix

The combination of the Rhetorical Interrogative with the peg circumfix (§11.4) is not compositional. Despite the absence of any negative prefix (§13.1), it is the negative counterpart (in functional terms) of the Probabilitative prefix (§21.7.2), expressing the meaning ‘it looks like/seems that *X* is/does not’, as in (286)¹³ and (287).

(286) *k^hro uβrɣ-kw-pe-ci*

 ‘The elephant, it seems that it does not have hair (on its body).’
 (19-RloNbutChi) {0003550#S8}

21.7.3.4 Historical origin

The prefix *uβrɣ-* is probably related to the Tshobdun interrogative prefix *vré-* (Sun & Blogros 2019: 397), though the two prefixes are not entirely similar: Tshobdun *vré-* is monosyllabic, and the vowel *-e* (from earlier **a*) has not undergone reduction to *v* as could have been expected in the view of its Japhug cognate. The fact that Japhug *uβrɣ-* contains two syllables, and that it occurs in the left-most (-6) slot of the verbal template suggests that it may have been grammaticalized relatively recently in comparison with other elements of the prefixal chain. In view of the formal differences between the two languages, one cannot exclude at this stage the possibility of independent grammaticalization, though the source is unclear.

Possible sources (from a formal point of view) could include the noun *u-βra* ‘his share’ (cognate to Tshobdun *ó-vre*) or the adverbial noun *u-βra* ‘it is *X*’s turn to...’ (§5.1.2.12). However, the semantic link between these meanings and that of the Rhetorical Interrogative is unclear.

¹³In (286), *uβrɣ-kw-pe-ci* translates Chinese 这好像不太好吧 <zhè hǎoxiàng bú tài hǎo ba> ‘This does not look good/nice’.

21.7.4 Interrogative

21.7.4.1 Morphology

The Interrogative *u-*, found in slot -6 of the outer prefixal template (§11.2.1), is a stress-attracting prefix (§11.2.3). When attached to a monosyllabic base, like the Factual Non-Past 3SG of monosyllabic stem verbs, the stress is on the Interrogative prefix itself, as in *ú-jɣɣ* ‘it is possible to’ (288) (see also 49, §21.3.1.3 above).

- (288) *kwiki ɲu-tu-kʰɣm ú-jɣɣ*
 DEM.PROX IPFV-2-give[III] QU-be.possible:FACT
 ‘Could you pass [me] this thing?’ (2003, conversation taRrdo)

If the base is polysyllabic, the stress is on the second syllable just following the Interrogative, whether this syllable is a prefix (289) or part of the verb stem (290).

- (289) *nyj u-tú-suz?*
 2SG QU-2-know:FACT
 ‘Do you know it?’ (19-GzW) {0003536#S8}
- (290) *ki sakaβ u-rkuw nwtcu si u-ɣʻzu?*
 DEM.PROX well 3SG.POSS-side DEM:LOC tree QU-exist:SENS
 ‘Are there trees near this well?’ (140517 mogui de jing-zh) {0004022#S95}

When occurring in direct contact with the stem of a contracting verb (§12.3), the Interrogative *u-* does not merge with the initial *a-*. Instead, an epenthetic *-j-* is inserted between the prefix and the verb stem (see examples 4, §12.3 and 23, §18.1.3).

21.7.4.2 Functions

The Interrogative prefix *u-* has two main functions. First, it expresses a polar question (as in 291a for instance), expecting an answer with the same verb in affirmative or negative form (291b), a question studied in more detail in §21.1.4 and §21.3.3.2. An alternative way of marking polar questions is the sentence final particle *ɛi* (§10.4.2).

- (291) a. *wortɕʰi zo a-tɣ-tu-tʰe ú-jɣɣ?*

 ‘Can you ask [for me]?’ (divination 2002)

- b. *jɣɣ*, *jɣɣ!*
 be.possible:FACT be.possible:FACT
 ‘Yes, yes!’ (divination 2002)

Second, it occurs in the protasis of conditionals (§25.2.1) in free variation with initial reduplication (§12.4.1.2). In this construction, the verb is generally followed by the additive marker *nɣ*, as in (292).¹⁴

- (292) “*nɣ-nmaɁ nu a-tɣ-susu*” *u-nú-tu-susɣm nɣ, kuiki*

 IMP-eat[III]
 ‘If you want your husband to live, eat this!’ (150909 hua pi-zh)
 {0006278#S164}

21.7.4.3 Historical perspectives

Many languages of the Trans-Himalayan family, including Chinese, Tibetan and Gyalrongic varieties, have vocalic prefixes marking polar interrogatives similar to Japhug *u-* (Sun 1995). However, it remains unclear whether these prefixes reflect genuine common inheritance: in particular, although some Tibetan languages do have an interrogative prefix *e-*, it is not attested in Old Tibetan texts (Hoshi 2012), and may therefore be an innovative feature. If this prefix is not an archaic feature in Tibetan, the Japhug Interrogative *u-* and its equivalent in other Gyalrongic languages such as Khroskyabs *â-* (Lai 2017: 340) may be better analyzed as borrowings from Amdo Tibetan.

21.7.5 Periphrastic modal constructions

There are two constructions involving a negative copula/existential verb and expressing specialized modal meaning.

21.7.5.1 Mistaken expectation

The negative existential verb *me* ‘not exist’ (§22.5.1.2) occurs in combination with the exceptive postposition *ma* ‘apart from’ (§8.2.8) and the indefinite *ci* (§22.2.1) following a verb in the Non-Past, in collocation with the verb *suso* ‘think’, to

¹⁴The second person prefix *nɣ-* in (292) is a case of hybrid indirect speech (§24.2.5.2).

express a wrong expectation ‘believe/be confident that ... is true’¹⁵ (whereas in fact it is not the case), as in (293).

 AOR-think-PST:TR-1SG LNK AOR-be.the.time LNK IFR.IPFV-PEG-be.far-PEG
 ‘I thought that I would arrive quickly, but it turns out that it was very far.’ (elicited)

21.7.6 Pseudo-concessive

The negative copula *maβ* ‘not be’ is used with the restrictive focus marker *cinɣ* ‘(not) even one’ (§9.1.6.4) in a construction meaning ‘(anyway) it is not the case that...’, semantically close to the apodosis of a universal concessive conditional (§25.2.3.3).

- (295) *qajdo ku tɕ^hi mɣ-nu-ti cti nɣ, a-tɣ-nu-ti*
 crow ERG what NEG-AUTO-say:FACT be.AFF:FACT LNK IRR-PFV-AUTO-say

‘What wouldn’t a crow say (a crow tells only lies), let it say what it wants, in any case none of it is true, let us live [together] happily rather (than worrying about that).’ (28-qajdoskAt) {0003718#S24}

¹⁵Tshendzin translates it into Chinese as 满以为是 <mǎnyǐwéishì> ‘be confident that it is...’.

21 Tense, aspect, modality and evidentiality

The copula *maʁ* in this construction is invariable: only the verb preceding the *cinʁ maʁ ku* sequence receives person indexation, as shown by (296).

- (296) *ku-murku ɲu-a cinʁ maʁ ku*
SBJ:PCP-steal be:FACT-1SG even not.be SFP
'Anyway it is not I who am the thief.' (elicited)

In addition to *ɲu* 'be', a few other verbs such as *fse* 'be like' can occur in this construction.

21.8 Non-verbal TAME markers

Verbal morphology and periphrastic constructions are not the only ways to encode TAME in Japhug. Three other grammatical categories contribute to mark TAME.

21.8.1 TAME adverbs

Tense, aspect and modality can be expressed by primary aspectual adverbs such as *pxjk^hu* 'still', *ʒuruʒɹri* 'progressively' or *ntsui* 'always' (§22.2.1), time ordinals (§7.5.2), temporal counted nouns (§7.5.1), time adverbs derived from nouns (§7.5.3) and adverb of epistemic modality (§22.2.5).

21.8.2 Sentence-final particles

Many sentence final particles contribute to the expression of modality and evidentiality. Some particles are dedicated markers: the hearsay particle *k^{hi}* (§10.4.3) is specifically encodes evidentiality, *t^haj* indicates epistemic modality (§10.4.4) and *je* has a hortative/imperative meaning (§10.4.1). Other particles such as *wo* (§10.4.1) have meanings that are more difficult to describe exclusively in terms of modality or evidentiality. No sentence final particle expresses tense or aspect.

21.8.3 Nouns and the expression of modality

Two nouns of Tibetan origin, *u-mdov* 'colour' and *smulɣm* 'prayer' occur sentence-finally as modal markers. These sentence-final uses probably originate from complement-taking nouns (§5.1.2.6) used predicatively (§22.3).

21.8.3.1 The noun *u-mdoḅ* ‘colour’

The noun *u-mdoḅ* ‘colour’, borrowed from Tibetan མངོག་ *mdog* ‘colour’, occurs with the highly grammaticalized modal meaning ‘it looks like’, as in (297) and (298).

- (297) [*u-mɣlɣjab nu*, [...] *kuɾcɣ-lɔza jamar ɣɣzu*] *u-mdoḅ*

 SENS-be.enough 3SG.POSS-colour
 ‘It looks like [the meat from one of those] is enough [for the lions] to eat
 for several days.’ (20-sWNgj) {0003562#S55}

This construction occurs with the Sensory in the complement clause (§21.3.2) as in the examples above, or with the Inferential to express a past event/situation (see 22, §11.6.2). The combination of Inferential with *u-mdoḅ* is semantically close to the Probabilitative with *peg* circumfix (§21.7.2.1, see also 15d, §11.4).

The denominal verb *numdoḅ* ‘look like’ derived from this construction (§20.7.1) has the same meaning, but rather selects a subject participle in the complement clause as in (299), with subject coreference between the main clause and the complement (compare 299 and 300).

 ‘I wish that you will become rich.’ (elicited)

22 Simple clauses

This chapter focuses on the syntax of simple clauses, that is clauses which do not involve multiclausal constructions.

Five topics are discussed: word order within the clause (§22.1), sentential adverbs (§22.2), verbless sentences (§22.3), noun-verb collocations (§22.4) and copulas (§22.5).

22.1 Word order

With a few exceptions (§22.3), Japhug sentences require a finite verb to be complete, while all other constituents are optional. The main verb is generally sentence-final: only a handful of words (§22.2.7) and dislocated constituents (§22.1.3), can occur after it.

22.1.1 Basic word order

This section describes the word order patterns involving verb and core arguments attested in the corpus (with the exception of right dislocation, §22.1.3) when all arguments are overt. The question of non-overt arguments is treated in §22.1.2, and the position of adverbials in §22.2.

22.1.1.1 Intransitive verbs

When overt, core arguments and adjuncts are located before the verb. In (1) for instance, the intransitive subject *u-mu u-wa ni* ‘his mother and his father’ (§9.2.2.2) in the dual is placed before the adverb *ɓaɓɓa* ‘both’ and the main verb *ɲɣ-si-ndzi* ‘they_{du} died’. The dual suffix on the verb here indexes the number of the intransitive subject (§14.2.1.2).

- (1) [*u-mu* *u-wa* *ni*] *ɓaɓɓa* *ɲɣ-si-ndzi*
3SG.POSS-mother 3SG.POSS-father du both IFR-die-DU
‘His parents had both died.’ (150828 donglang) {0006312#S8}

22 Simple clauses

In the case of semi-transitive verbs (§14.2.3), which have two absolutive arguments, it is very rare to have both an overt intransitive subject and an overt semi-object (except if the semi-object is a complement clause, see §24.3.2). The semi-object can follow (2) or precede (3) the subject, but in the second case there is a pause, indicative of left dislocation.

- (2) *kukura <xuexiao> ju-rga-nuu.*
 DEM.PROX:PL school SENS-like-PL
 ‘Those (the children) like school.’ (conversation, 14-05-10)
- (3) *txci nuu, pya ra nuust^{hi} mɣ-rga-nuu.*
 barley DEM bird PL that.much NEG-like:FACT-PL
 ‘The barley, the birds don’t like it so much.’ (23-pGAYaR) {0003606#S23}

With intransitive verbs selecting a locative phrase (§14.2.4), the locative phrase is generally located between the intransitive subject and the verb (4).

- (4) [*u-pi ni*] *tʂu ku-wxti nutcu jo-ɕe-ndzi*
 3SG.POSS-elder.sibling DU road SBJ:PCP-be.big DEM:LOC IFR-go-DU
 ‘His two elder brothers went [along] the big road.’ (2003 qachGa)
 {0003372#S23}

However, it is possible to put the locative phrase before the subject, especially when it refers to the source of the motion (§15.1.2.1), as in (5) and (6).

- (5) *tumumɣmk^{ha} nutcu [qro ɣsum] pjw-ɣi-nuu*
 heaven DEM:LOC pigeon three IPFV:DOWN-come-PL
 ‘(Every day), three pigeon came down from heaven.’ (02-deluge)
 {0003376#S48}
- (6) *mts^{hu} yw u-ŋgu nutcu [mts^hoɓlan] to-nw-ɬoɓ*
 lake GEN 3SG.POSS-in DEM:LOC water.monster IFR-AUTO-come.out
 ‘A water monster came out of the lake.’ (2011-04-smanni)

Likewise, the standard of comparison (marked by the postposition *sɣz*, §8.2.7) can either precede or follow the intransitive subject (§26.2.1).

Oblique phrases with the relator noun *u-taɓ* ‘on, above’ selected by the main verb (§8.3.4.3) are located between the intransitive subject and the verb, as in (7) and (8).¹

¹With the motion verb *ɕe* ‘go’, in (8) in stem II *ari*, *u-taɓ* specifically indicates the means of transportation (§8.3.4.3).

- (7) [u-yli nu] li ty-ryku u-taβ wuma zo
 3SG.POSS-dung DEM again INDEF.POSS-crop 3SG.POSS-on really EMPH
 pe
 be.good:FACT
 ‘Its dung is good (as fertilizer) for the crops.’ (05-qaZo) {0003404#S89}
- (8) tcendyre [zɣni pya ni] zmbrow u-taβ ky-ari-ndzi ju-ɣu.
 lnk 3DU bird DU boat 3SG.POSS-on AOR:EAST-go[II] SENS-be
 ‘The two of them [including the bird] departed on the boat.’ (2005
 Norbzang)

Unlike intransitive subjects, essive adjuncts (§8.1.7) are closer to the verb than oblique arguments, as shown by *turme* ‘person’ in (9), which is not an intransitive subject (‘the people are nice to me’) but an essive phrase ‘as people’ (see also 18, §8.1.7).

- (9) tce <zhoujikong> tce myzu li a-taβ turme
 LNK center.for.disease.control LNK even.more again 1SG.POSS-on person
 pe-nu ma
 be.good:FACT-PL LNK
 ‘At the district center for disease control, they are also very nice to me (as people).’ (140501 tshering skyid) {0003902#S139}

22.1.1.2 Monotransitive verbs

When the main verb is transitive, the transitive subject (with the ergative post-position, §8.2.2.1) is found before the direct object (in absolutive form, §8.1.3), as in (10).

- (10) kw-γyβaβ nuwa kw qarts^haz w-pw nu pjy-mto-nu
 SBJ:PCP-hunt DEM:PL ERG deer 3SG.POSS-little DEM IFR-see-PL
 ‘The hunters saw the little deer.’ (140429 jiedi-zh)

The object of a transitive verb only rarely precedes the subject, except for object complement clauses (§24.3.1), and examples exhibiting this order are all analyzable as left-dislocated topicalized constituents, as in (11).

22 Simple clauses

- (11) *a-tcu, ji-rya ra nu-mbala ku*
 1SG.POSS-son 1PL.POSS-neighbour PL 3PL.POSS-ox ERG
t^ha-nutsum tce nunuu u-ku-car
 AOR:3→3-AUTO-take.away LNK DEM 3SG.POSS-SBJ:PCP-search
ce-tci
 go:FACT-1DU
 ‘My son_i, the neighbour’s ox has taken him_i away, and we are looking for him_i.’ (tWJo 2012) {0004089#S40}

In (12), the object *u-mp^huz nunuu* is topicalized, and in addition the ergative phrase *txjpyom ku* is not a real agent.

- (12) *u-mp^huz nunuu txjpyom ku pjx-ndo*
 3SG.POSS-buttocks DEM ice ERG IFR-take
 ‘(The leopard’s) buttocks had been caught in the ice.’ (140427 qala)
 {0003852#S34}

The object-subject-verb order is however found to focalize the subject, together with a postverbal copula (§22.5.3.2) as in (13), where the transitive subject *nunuu ku* follows the object (Chunjie).

- (13) <*chunjie*> *nunuu ku ja-nu-tsum nu t^han*
 ANTHR DEM ERG AOR:3→3’-VERT-take.away be:FACT SFP
 ‘It is probably him who took away Chunjie.’ (150825 huluwa-zh)
 {0006346#S115}

Note that without intonation, (13) is ambiguous, as [*<chunjie> nunuu ku*] could also be analyzed as a single constituent (since personal names can optionally take demonstrative determiners, §5.3.4), and in this case the translation of the sentence would be ‘Chunjie probably took him.’ The above translation however is the correct one in the context of the story.

22.1.1.3 Secundative verbs

The recipient (direct object) generally precedes the theme (semi-object) of secundative verbs (§14.4.2) as in (14).

- (14) *u-ki tumgo pjx-mbi*
 3SG.POSS-younger.sibling food IFR-give
 ‘He gave food to his younger brother.’ (nyima 2003-2)

In noun-verbs collocations where the verb is secundative such as *tu-nuu + jts^{hi}* ‘breastfeed’ as in (15), placing the recipient (*u-puu*) after the them (*tu-nuu*) is never attested.

- (15) *u-puu tu-nuu ju-jts^{hi} kuu^h zo*
 3SG.POSS-young INDEF.POSS-breast IPFV-give.to.drink also EMPH
 ‘Even when [the monkey mother] nurses her baby,...’ (19-GzW)
 {0003536#S25}

However, with the verb *mbi* ‘give’ there are examples of the opposite order as in (16), where the theme (*qajyi ky-ku-cke nura* ‘pieces of bread that had burnt’) precedes the recipient (*ku-lxy nu* ‘the shepherd’).

- (16) *t^heme nu ku qajyi ky-ku-cke nura ku-lxy nu*
 girl DEM ERG bread AOR-SBJ:PCP-burn DEM:pl SBJ:PCP-herd DEM
na-mbi
 AOR:3→3’-give
 ‘The girl gave the shepherd pieces of bread that had burnt (to eat).’ (2003
 Kunbzang)

22.1.1.4 Causative verbs

Causative verbs (§17.2) derived from plain intransitive verbs behave like mono-transitive verbs (§22.1.1.2), but those derived from transitive (§14.4.3) or semi-transitive (§14.4.4) verbs are ditransitive.

Causative derivations from transitive verbs have a causee (§8.2.2.6), whose syntactic status is intermediate between subject and object: it can be marked with the ergative, but is indexed as if it were an object if it is first or second person while the object is third person (§14.4.3). The causee in the ergative is normally placed before the object (17), even when it serves as instrument (§17.2.5.8) as in (18).

- (17) *u-mbro ku qapri tu-rdov nu pjx-z-rytca^h*
 3SG.POSS-horse ERG snake one-piece DEM IFR-CAUS-trample
 ‘He made his horse trample one of the [two] snakes.’ (smanmi 2003)
- (18) “*zmbriu-βaj nu nu ku c^ha nu tu-wy-suu-cmi tce c^ha*
 boat-oar DEM ERG alcohol DEM IPFV-INV-CAUS-mix LNK alcohol
mum” *tu-ti-nu pu-ŋu ma*

 ‘People used to say that if one mixes the alcohol [using] a boat oar, it is
 tasty.’ (31-cha) {0003764#S41}

22 Simple clauses

The object can be located before the causee, but it is always a left dislocated constituent, followed by a pause as *u-ɕnyz numu* ‘its head/extremity’ in (19).

- (19) *qandze yu, (...) u-ɕnyz numu, u-mte^{hi} ku*
 earthworm GEN 3SG.POSS-extremity DEM 3SG.POSS-mouth ERG
ku-su-ndym tce
 IPFV-CAUS-take[III] LNK
 ‘[The earthworm’s head] extremity, [the crow] takes it with its beak.’
 (140511 qajdo) {0003955#S11}

In the case of causative verbs from semi-transitive verbs (§14.4.4), such as *syrmi* ‘give a name’ (from *rmi* ‘be called’, §17.2.2.7), the direct object (the person to whom a name is given) is always located before the semi-object (the name given), as in (20).

- (20) *tce ndzi-tcu nu jima^{wozyr} to-syrmi-nu*
 LNK 3DU.POSS-son DEM ANTHR IFR-give.a.name-PL
 ‘They called their son Nyima ‘Odzer.’ (2011-05-nyima)

22.1.1.5 Indirective verbs

Dative arguments (§8.3.1) of indirective verbs (§14.4.1) follow the transitive subject as in (21).²

- (21) *icq^{ha} numu ty-tcu nu ku [u-mu*
 the.aforementioned DEM INDEF.POSS-son DEM ERG 3SG.POSS-mother
nu u-cki] (...) to-ti.
 DEM 3SG.POSS-DAT IFR-say
 ‘The boy said to his mother (...).’ (2014-kWLAG)

Dative phrases can be located either after the theme or before it, as shown by examples (22a) and (22b) redundantly describing the same action in the same story.

- (22) a. *<alading> nu ku, nxkinu, icq^{ha} tyt^{su} nu*
 ANTHR DEM ERG FILLER the.aforementioned lamp DEM
[u-mu u-cki] jx-k^{ho} tce,
 3SG.POSS-mother 3SG.POSS-DAT IFR-give LNK
 ‘Aladin gave the lamp to his mother.’ (140511 alading-zh)
 {0003953#S159}

²For reason of place, the theme (the reported speech clause) is not reproduced here and simply indicated by (...), but corresponds to example (173 in §21.5.1.4).

- b. [*u-mu* *u-eki*] *txʃu nuw ɲɣ-k^ho*.
 2SG.POSS-mother 3SG.POSS-DAT lamp DEM IFR-give
 ‘He gave his mother the lamp.’ (140511 alading-zh) {0003953#S161}

The first pattern (object-dative) is rarer than the second one, but attested for all indirective verbs, including verbs of speech, as in (23), where the reported speech clause occurs before the dative phrase (compare with 21 above, the more common pattern).

- (23) [*nuw-kw-lɣy* *lu-ɕe-a* *u-ɲú-pe*
 2DU.POSS-SBJ:PCP-herd IPFV:UPSTREAM-go-1SG QU-SENS-be.good
a-tɣ-tu-ti ra] *kuw-wxti* *ni ndzi-p^he ti*

ɲu-ɲu
 SENS-be
 ‘He told the two elder [sisters] ‘Ask [your parents] whether it would be appropriate for me to go herding [cattle] for you.’ (2003 Kunbzang)

Most oblique arguments also follow the subject and precede the object. It is the case of the goal argument marked by the relator *u-taʃ* (§8.3.4.3) in (24).

- (24) *kuw-ɣɣɣbaʃ* *kuw [pri u-taʃ]* *tudi to-lyt*
 SBJ:PCP-hunt ERG bear 3SG.POSS-on arrow IFR-release
 ‘The hunter shot an arrow at the bear.’ (elicited)

22.1.2 Overt and non-overt arguments

Sentences with two or three overt arguments such as those discussed in §22.1.1 are a minority in Japhug. Most clauses comprise a verb with only one, or even without any overt arguments.

22.1.2.1 Core arguments

Non-overt core arguments, including subjects and objects, are always definite, and anaphorically refer to a previously mentioned entity. For instance, example (25) with a bare verb necessarily means ‘S/he/it ate it’, and cannot be interpreted as ‘S/he/it ate/had a meal’ with indefinite object or as ‘someone ate it’ with indefinite subject.

22 Simple clauses

- (25) *ta-ndza*
AOR:3→3'-eat
'S/he/it ate it.' (elicited)

To express indefinite core arguments, non-overtness is an option only in the case of labile verbs (§14.5.1), but requires the conversion of the verb to the intransitive conjugation. Only a handful of verbs are labile (§14.5.1.1, §14.5.1.2), and for the rest of the verbs either an indefinite pronoun (§6.6) or a valency-decreasing derivation such as antipassive (§18.6), passive (§18.1) or proprietive (§18.8) must be used instead.

Semi-objects (§8.1.5), like objects, are interpreted as definite where non-overt, as shown by (26) with the semi-transitive verb *βjyt* 'obtain' (§14.2.3, §19.7.3).

- (26) *te^hemɣpu nuu kuu ɲɣ-wɣ-nuusuk^ho tce muu-pjɣ-βjyt.*
girl DEM ERG IFR-INV-rob LNK NEG-IFR-obtain
'The girl had robbed him_i of it_j, he_i had not obtained it_j.' (150829 taishan zhi zhu-zh) {0006350#S131}

22.1.2.2 Oblique arguments

Unlike core arguments, oblique arguments can be interpreted as indefinite when non-overt. For instance, when motion verbs like *ce* 'go' and *yi* 'come' (§15.1.2.1), lack both an overt goal and a purposive clause (§24.4.2.1), two different meanings are possible. First, a previously mentioned goal can be understood as implicit as in (27).

- (27) *qapri tu-ce ri múj-c^ha tce*
snake IPFV:UP-go also NEG:SENS-can LNK
'Snakes cannot go up (there in the chimney) either.' (22-kumpGatCW)
{0003590#S61}

Second, there is a minority³ of cases when no definite goal can be semantically recoverable, as in (28) where the two verbs *ku-ce* and *ɲuu-yi* indicate back and forth distributed motion, without any clear direction.

³However, when the motion verb takes a supine purposive clause, the goal is very frequently non-overt and indefinite, as can be observed in the majority of the examples in §24.4.2.1.

- (28) *u-zda nu-car nu-susym tce tceɲɲre, ki*
 3SG.POSS-companion IPFV-search SENS-think LNK LNK DEM
ku-fse ku-ce ny nu-γi
 INF:STAT-be.like IPFV:EAST-go ADD IPFV:west-come
 [That ant] wants to search for its companion, and goes here and fro like
 that.' (conversation 140501-01)

Likewise, when the oblique argument of indirective verbs (§14.4.1, §22.1.1.5) is non-overt, it can be interpreted as either definite or indefinite.

For instance, the indirective collocation *tudi + lɲt* 'shoot an arrow', which selects an oblique argument (goal) in *u-taɁ* (§8.3.4.3, see 24 above in §22.1.1.5), lacks an overt oblique in (29). In this example, it is clear that the subject must have aimed before shooting, and therefore that a covert definite oblique is implied, as confirmed by the choice of a specific orientation 'towards east' rather than the indefinite orientation preverb.

- (29) *nuɲu xpun nu ku tudi ci ko-lɲt tceɲɲre icq^ha,*
 DEM monk DEM ERG arrow INDEF IFR:EAST-release LNK FILLER
qapri nu γu u-rpaɁ zo to-xtsuy
 snake DEM GEN 3SG.POSS-shoulder EMPH IFR-hit
 'The monk shot an arrow, and it hit the snake in the shoulder.' (150820
 qaprANar) {0006246#S22}

By contrast, in (30), also without overt goal, the command is to shoot arrows without aiming, simply to see whose arrows will reach the farthest, as confirmed by the choice of the indefinite orientation preverb. The absence of relator nominal clause in *u-taɁ* in this example is to be interpreted here as absence of goal.

- (30) *tudi jɲ-lɲt-nu*
 arrow IMP-release-PL
 'Shoot arrows!' (elicited, based on a story)

In (31), the verb of speech *ti* 'say' lacks an overt dative argument (§8.3.1), and it is obvious in this context not only that there is no definite addressee, but that there is no addressee at all, since *ti* here means 'utter (a sound)'.

- (31) *u-tu-muɲtaɁ zo pjɲ-ηu ri, jɲ-nɲcqa q^he,*
 3SG.POSS-NMLZ:DEG-be.cold EMPH IFR.IPFV-be LNK IFR-endure LNK
 "ute^hutɁ^hu" mu-to-ti
 INTERJ NEG-IFR-say
 'Although it was very cold, he (successfully) endured it, and did not say
 'How cold!'. (07-deluge) {0003426#S72}

22 Simple clauses

To force a definite goal/addressee interpretation, the presence of an overt re-lator noun with a 3SG prefix is necessary, as in (32).

- (32) a. **u-taʁ** *tudi to-lyt*
 3SG.POSS-on arrow IFR-release
 ‘S/he shot **at it**.’ (elicited)
- b. **u-çki** (...) *to-ti*
 3SG.POSS-DAT reported.speech IFR-say
 ‘S/he told (...) **to him/her**.’ (many examples)

The difference between core vs. oblique arguments is therefore distinct from the parameter of indexibility (§14.2, §14.3): core arguments are those with obligatory definite interpretation when non-overt, including (transitive and intransitive) subjects, objects and semi-objects, while oblique arguments lack this property.

22.1.2.3 Focalization

Focalized noun phrases are always overt, if limited to a demonstrative pronoun. They can be formally indistinguishable from non-focalized ones even by intonation, as the demonstrative *nuu* in the last clause of example (33).

- (33) *mt^humʁ ɣu u-zbron nuu, tu-nu-łoʁ ɲu-ɲu.*
 seal GEN 3SG.POSS-pattern DEM IPFV:UP-AUTO-come.out SENS-be
tu-mʁmbur ku-fse ɲu-ɲu tce nu

ɰndzi ɲu-maʁ-a
 demon SENS-not.be-1SG
 ‘You are evil, not me, you are the real demon, not me.’ (2002 lhandzi)

There is no dearth of strategies to explicitly indicate focus, including focus particles (§9.1.6), pseudo-clefts (§23.6.1) and postverbal copulas (§22.5.3.2).

22.1.3 Right dislocation

While word order is rigid in Japhug, and the verb is normally located after all arguments and adjuncts (§22.1.1), left and right dislocation is attested, though accompanied with a specific intonation.

22.1.3.1 Dislocated constituents

All arguments and adjuncts can be right dislocated, including transitive subjects with ergative marking (35), possessor with genitive (§36), locative and time adjuncts (§37).

- (35) *sla tu-ngo ηu tu-ti-nu ηu, kuru ra ku.*
 moon IPFV-be.sick be:FACT IPFV-say-PL be:FACT Tibetan PL ERG
 ‘They say that moon is getting sick, the Tibetans.’ (29-mWBZi)

 (23-RmWrcWftsa) {0003610#S106}

In (41), the consequence clause *βmurtsu nu syre* ‘The *Berchemia yunnanensis* is funny’ is right-dislocated together with the linker *ma* (here meaning ‘because’), while the causal clause (§25.5.2) serves as the main clause. This example provides evidence that the linker *ma* can form a syntactic constituent with the preceding clause, even though it is most often prosodically linked to the causal clause following it.

- (41) *yujpa ku-fse nure ri tce u-muntov ju-lyt,*
 this.year SBJ:PCP-be.like DEM:LOC LOC LNK 3SG.POSS-flower IPFV-release
fsaq^he tce tce u-mat ju-βze ηu,

 3SG.POSS-husband DEM ERG
 ‘The father_i did not realize that she_j was a rākshasî, her_j husband_i.’
 (28-smAnmi) {0004063#S57}

22.1.3.2 The functions of right dislocation

Right dislocation in Japhug has three main functions, similar to those identified by Honkasalo (2019: §13.7.2) in the Geshiza language.

The main function of right dislocation is that of afterthought, used to identify a referent that has not been mentioned previously (35), provide additional side comments (38, 41), complementary information (37) or even redundant information that can contribute to identify a referent (42).

Right dislocation is also used to reactivate a constituent in discourse (Honkasalo 2019: §13.7.2), to avoid ambiguity with other referents. In (43) for instance, the referent *u-k^ha* ‘its house/shell’ is found more than twenty clauses after its previous occurrence.

- (43) *tce nuⁿu ju-rko, u-k^ha nu.*
 LNK DEM SENS-be.hard 3SG.POSS-house DEM
 ‘It is hard, its house (i.e. the shell of the snail).’ (26-tWcipaR)
 {0003694#S68}

Finally, right dislocation can serve to mark emphasis on a topical referent. In (44) for instance, the noun *u-mylyjaβ* is both left- and right-dislocated, showing that this instance is neither an afterthought nor a constituent reactivation.

- (44) *u-mylyjaβ nu, nuⁿu, ku^rcy-lɔza jamar yɣzu rca,*
 3SG.POSS-limb DEM DEM eight-piece about exist:SENS UNEXP:DEG
u-mylyjaβ nu.
 3SG.POSS-limb DEM
 ‘Its limbs, it has eight ones, its limbs.’ (26-mYaRmtsar)

In some cases, the exact function of right dislocation is ambiguous. In (39) for instance, the purposive phrase could be emphasized by dislocation, but alternatively it is also possible to interpret it as an afterthought.

22.2 Sentential adverbs

This section describes non-derived sentential adverbs, excluding those derived from nouns (§5.8), lexicalized converbs (§16.6) ideophones (§10.1), but including adverbs with non-synchronically transparent etymology and loanwords from Tibetan.

22.2.1 Tense and aspect

Absolute tense is mainly expressed by time ordinals (§7.5.2) and other time adverbials derived from nouns (§7.5.3). There are in addition a few aspectual adverbs that are not transparently derived from nouns.

The adverb *pɣjk^hu* has a permansive meaning ‘still’ when used with a positive verb form (45).

- (45) *izo a-mu nuw t^hamt^ham kuwrcɣsqaptuɣ t^hu-azyuut ɲu.*
 1PL 1SG.POSS-mother DEM now eighty.one AOR-arrive be:FACT
pɣjk^hu ji-paɣ pju-nge c^ha.
 still 1PL.POSS-pig IPFV-feed[III] can:FACT
 ‘Our mother is now eighty-one years old, she can still feed our pigs.’
 (2010, 9.2)

Contrary to what could have been expected, *pɣjk^hu* ‘still’ is only rarely used with a verb prefixed with the Autive in permansive function (§19.1.5). Examples like (46) with redundant marking of permansive aspect are attested but uncommon.

- (46) *mts^hoβlanɣ nuwu pɣjk^hu maka zo pjɣ-n-nuɣuɣβ*
 water.monster DEM still completely EMPH IPFV.IFR-AUTO-sleep
cti ma
 be.AFF:FACT LNK
 ‘The aquatic monster was still asleep.’ (140508 benling gaoqiang de si xiongdi-zh) {0003935#S184}

With a negative predicate, *pɣjk^hu* means ‘not...yet’, as shown by (47) and (48).

- (47) *azo pɣjk^hu tuw-sla muw-pu-tsu-a*
 1SG still one-month NEG-PST.IPFV-pass-1SG
 ‘It has not yet been a month since I have [come here].’ (2003 tWxtsa)
- (48) *ma u-me kuwɣ ɲɲɣsqamnuɣz-pɣrme t^hu-azyuut, tce*
 LNK 3SG.POSS-daughter also twenty.eight-years.old AOR-arrive LNK
nuwu pɣjk^hu u-χti ra muw-na-ɕar ma
 DEM yet 3SG.POSS-companion PL NEG-AOR:3→3’-search LNK
 ‘His daughter is twenty-two years old, but she does not yet have a companion (husband).’ (14-siblings) {0003508#S284}

This adverb is generally located before the object (examples 45, 48) but after the intransitive subject (46, 47). It can also occur without a main verb, in combination with the sentence final particle *je* (§10.4.1) as *pɔjk^hu je* ‘wait’, hence the interjection *pɔk^hije* ‘wait’ (§10.2.1) with irregular fusion.

The reduplicated forms *zuruɔzɔri* ‘progressively’ and the rarer *zɔrɔzɔur*,⁴ are frequent with gradable stative verbs to express a progressive change of state as in (49), sometimes with incremental initial reduplication of the verb (§12.4.1.4).

- (49) *zuruɔzɔri tce tce c^hu-yurni ŋu.*
 progressively LNK LNK IPFV-be.red be:FACT
 ‘It progressively becomes red.’ (11-qarGW) {0003480#S55}

They are also found with dynamic verbs, in particular with temporal clauses in *u-juja* ‘along with’ (§25.3.4.2) as in (50).

- (50) *tce t^hu-wxti u-juja nɣ, (...) ku-wxti ra ku*
 lnk AOR-be.big 3SG.POSS-along ADD SBJ:PCP-be.big PL ERG
nu-kɣ-ndza, tɕ^hi tu-ndza-nu ku-ŋu nu zuruɔzɔri tce

ɲu-mbi-nu.
 IPFV-give-PL
 ‘As the child_j grows older, the adults_i progressively give [him/her]_j their_i food, whatever it is they_i eat.’ (140426 tApAtso kAnWBdaR)

The highly polyfunctional *ci*, whose functions range from the numeral ‘one’ (§7.1.1) to various indefinite, partitive or non-identity markers (§6.6.1, §6.8, §6.7.2, §9.1.4.1, §9.1.7), is used as an aspectual adverb ‘once’ as in (51) (see also for instance 142, §22.4.2.5).⁵ The attenuative adverb *ci* presumably derives from this meaning (§22.2.4).⁶

- (51) “*q^hihih*” *ci ta-tut ɲu-ŋu*
 INTERJ once AOR:3→3’-say[II] SENS-be
 ‘He said *q^hihih*.’ (2003 qachGa) {0003372#S162}

⁴It is possible that these forms are borrowed from 偶然 *zɔr* ‘incidentally’, though the semantics is unclear.

⁵Semelfactive meaning is however more often expressed with a sentential counted noun (§7.3.2.5) with the ‘one’ prefix (for instance *tu-yɣɣn* ‘one time’).

⁶Chinese 一下 <yíxià> ‘one time, a little’ has a similar range of meanings.

22 Simple clauses

Its reduplicated form *ci ci* has the meaning ‘sometimes, in some cases’, often repeated in two or more clauses in parataxis ‘sometimes *X*, sometimes *Y*’ as in (52).⁷ In (52), *ci ci* combines with the Autive prefix in spontaneous function (§19.1.4) to indicate the unpredictability of the alternative events.

- (52) *u-me* *múj-nuβdaβ* *q^he* *tcendvɾe u-me*

 IFR-discuss-DU
 ‘He returned again (up there), and had again a discussion with Smanmi Metog Koshana (as he had done previously).’ (28-smAnmi)
 {0004063#S183}

In combination with the adverbial *ci*, it can mean ‘one more, another one’ as in (54) (like Chinese 再 <zài> ‘again’). Alternatively however, *ci* in context can also be interpreted as an attenuative adverb (§22.2.4).

- (54) *ama u-tu-mpɕɿr* *nu! li* *ci* *pu-fɕɿ!*

 ‘Wow, what a beautiful [story]! Tell [me] another one.’ (2005 tWJo)
 {0003368#S41}

The adverb *ntsu* ‘always’ is used as a temporal universal quantifier ‘all the time’ (55) or ‘every time’ as in (56), a function from which it has become a distributive quantifier (§9.1.3.3). It is one of the few adverbs that can be used postverbally (§22.2.7).

⁷See also 167 (§21.5.1.2) and 9 (§25.1.6) for representative examples of this adverbial locution.

 ‘He said again and again ‘Please, don’t eat me.’ (140427 bianfu yu
 Huangshulang-zh) {0003838#S11}

Other temporal adverbs include *ɛlywuur* ‘suddenly’ from Tibetan ལྷོ་བྱུང་ *glo.bur* ‘sudden’, used with Aorist or Inferential verb forms to express an abrupt change of state (58), *tobde* ‘a moment’, which can also mean ‘suddenly’ (example 197, §21.5.2.2), and also ‘in a moment’ referring to a future event (131, §21.4.2.2) or ‘for a moment’ (59), and *iɕq^ha* ‘just now’⁸ (on which see also §9.1.5.2).

22.2.2 Quantification

This section presents adverbial quantifiers that are not temporal or aspectual markers, as those are treated in the previous section (§22.2.1).

⁸Its meaning is close to Chinese 刚才 <gāngcái> ‘just now, a moment ago’.

22.2.2.1 Universal quantifiers

The universal quantifiers *kʷsufse* ‘all’ and *lonba* ‘all’ can have scope over a single noun phrase (§9.1.3.1). When following an intransitive subject or object in preverbal position as in (60), it is not clear whether the scope of the quantifier is on the preceding noun phrase or on the whole sentence.

- (60) *rgʷtʷpʷ rɡʷnmʷ ni kʷ [kʷki tʷ-pʷtso ɣsʷm ki]*
 old.man old.woman DU ERG DEM.PROX INDEF.POSS-child three DEM.PROX
kʷsufse zo cʰʷ-ʷʷ-wxti-ndzi.
 all EMPH IFR-CAUS-be.big-DU
 ‘The old man and the old woman raised all these three children.’ (140514 huishuohua de niao-zh) {0003992#S58}

The postnominal *mutʷʰimuruz* ‘all kinds’ (§9.1.3.5) appears in (61) stranded from the noun *tu-ŋga* ‘clothes’ by the unexpected degree marker *rca* (§26.1.1.4), suggesting that it could be analyzed here as a sentential adverb.

- (61) *tu-ŋga rca mutʷʰimuruz cʰúr-wy-βzu*
 INDEF.POSS-clothes UNEXP:DEG all.kinds IPFV-INV-make
kʰʷ
 be.possible:FACT
 ‘One can make all kinds of clothes (using it).’ (05-qaZo) {0003404#S65}

22.2.2.2 Everywhere

The adverb *awnduundʷt* ‘everywhere’ can be used on its own, but also together with overt locative adjuncts (or goals); it can both precede (63) or follow it (62, 64).

- (62) *tu-ji w-ŋgʷ awnduundʷt zo tu-ʔoβ*
 INDEF.POSS-field 3SG.POSS-in everywhere EMPH IPFV-come.out
cti.
 be.AFF:FACT
 ‘It grows everywhere in the fields.’ (12-ndZiNgri) {0003488#S146}

Locative adjuncts used with *awnduundʷt* often take the plural *ra* (§9.1.1.2) to mark approximate location as in (63) and (64).

- (63) *awnduundʷt suŋgʷ ra kʷmʷ tu-ʔoβ cti.*
 everywhere forest PL also IPFV-come.out be.AFF:FACT
 ‘It also grows everywhere in the forest.’ (14-sWNgWJu) {0003506#S159}

- (64) *abɣnduundɣt zo k^ha ra c^hu-rɣpu. tu-ji u-ngu ra*
 everywhere EMPH house PL IPFV-litter INDEF.POSS-field 3SG-inside PL
c^hu-rɣpu
 IPFV-litter
 ‘[Mice] have litter everywhere in the house, in the fields.’ (27-spjaNkW)
 {0003704#S156}

There are a few examples where *abɣnduundɣt* is followed by the locative post-position *ri* (§8.2.4.1) as (65) like a locative noun phrase. However, no sentences with *abɣnduundɣt* ‘everywhere’ as core argument (like ‘everywhere is quiet’) are found in the corpus, indicating that it would be clumsy to analyze it as a pronoun (§6.7.1).

- (65) *nufse zo abɣnduundɣt ri tu-nnu-tob q^he, u-zrɣm*
 like.that EMPH everywhere LOC IPFV-AUTO-come.out LNK 3SG.POSS-root
nura ku-tu mane.
 DEM:PL SBJ:PCP-exist not.exist:SENS
 ‘It grows simply like that everywhere, it has no roots.’ (20-sWrna)
 {0003564#S68}

When *abɣnduundɣt* ‘everywhere’ occurs under the scope of negation, it never expresses the meaning ‘nowhere’, as shown by (66) and (67).

- (66) *stɣmku nura, tu-ci u-rku nura tu ma*
 plain DEM:PL INDEF.POSS-water 3SG.POSS-side DEM:PL exist:FACT LNK
abɣnduundɣt st^huci me
 everywhere so.much not.exist:FACT
 ‘It is found in plains, or next to rivers, but it is not found everywhere.’
 (14-sWNgWJu) {0003506#S50}
- (67) *tce cɣr tce c^hu-nu-tob-nu tce, abɣnduundɣt*

 ‘[This mushroom] grows among oaks, among firs, among willows, among
 red or white birch forests, you find it everywhere, whether on plains or
 in forest.’ (23-mbrAZim) {0003604#S224}

22.2.2.3 Restrictive ‘only, always’

The adverb *bja* ‘completely’, which can be used to mark restrictive focus on a noun phrase (§9.1.6.5), also occurs with scope over the whole sentence in the meaning ‘all, only, always’ as in (69), where it follows the ergative *ku* (compare with 146 in §9.1.6.5, where the ergative is located before *bja*).

- (69) *tu-ηga me, tu-xtsa me nu*
 INDEF.POSS-clothes whether INDEF.POSS-shoe whether DEM
tx-tcu ra ku bja zo c^hw-tʂuβ-nu pjx-ηu.
 INDEF.POSS-SON PL ERG completely EMPH IPFV-sew-PL IFR.IPFV-be
 ‘Whether clothes or shoes, it was always the boys (not the ladies) who
 sewed them.’ (12-kAtsxWb) {0003486#S99}

In copular sentences (§22.5.1.1), when *bja* has scope over the nominal predicate, that nominal predicate can be preposed, as in (69) (see also example 277 in §21.7.3.2).⁹

⁹Example 165 in §9.1.8.2 is superficially similar, but the constituent [noun+*bja zo*] in that example is a prenominal modifier of the following noun, while in (70) *tx-tcu bja zo* cannot be a prenominal modifier of *ku-ry-tʂuβ* ‘tailor’, otherwise the existential verb *px-tu* rather than the copula *px-cti* would be expected.

- (70) *kuwɕungwu tce [tx-tcu vʃa zo] ku-rɣ-tʃuβ*
 in.former.times LNK INDEF.POSS-son completely EMPH SBJ:PCP-APASS-sew

 ‘In former times, only boys were tailors (all tailors were boys), there were
 no women tailors.’ (12-kAtsxWb) {0003486#S95}

22.2.2.4 Restrictive ‘alone’

To express the meaning ‘alone’, two constructions based on the root *-sti* ‘alone’ are used.

The root *-sti* can be directly combined with personal pronouns in forms such as *azo-sti* with the 1SG *azo* ‘1SG’ or *užo-sti* with the 3SG *užo* ‘he’ (§6.1.2) as in (71).

- (71) *nɣ-rca tu-yi-a ra ma kutcu azo-sti*

 ‘It is always I alone who goes to fetch water.’ (150830 san ge heshang)
 {0006416#S44}

22.2.3 Identity

The adverb *anamana* ‘identical’ is borrowed from the Amdo Tibetan form ལ་ན་མ་
 ལ་ *?a.na.ma.na* ‘identical’. It occurs with the copula *ŋu* (§22.5.1.1) as in (75). It is
 similar in meaning to the reduplicated participle *ku-naχtɕu~χtɕuy* ‘completely
 identical’ of *naχtɕuy* ‘be the same’ (§9.1.7) but does not occur as noun modifier.

- (75) *u-βri rcanu, qaɕpa u-βri nu anamana zo*

 SENS-be
 ‘The body of the [turtle] is identical to the body of a frog.’ (140510 wugui)
 {0003951#S8}

22.2.4 Adverbial Intensifiers

Intensifiers used to express high degree (‘much’) and quantity (‘much, for a long
 time’) are discussed in §26.1.1. Negative intensifiers are discussed in §13.4.3.

The attenuative *ci* is derived from the adverbial function ‘once’ (§22.2.1) of
 the numeral ‘one’ (§7.1.1). It conveys a milder and more polite tone to Impera-
 tive (§21.4.2) and Irrealis (§21.4.1) verb forms, in particular with modal verbs in
 interrogative form (§24.5.3.1) as in (76).

- (76) *wortɕ^{hi} zo, azo a-bi ci a-pu-mtam-a*
 please EMPH 1SG 1SG.POSS-younger.sibling a.little IRR-PFV-see[III]-1SG
ú-jɣɣ
 QU-be.allowed:FACT
 ‘Could I see my younger sister, please?’ (140511 1001 yinzi-zh)

Due to the high polyfunctionality of *ci*, in examples such as (77), the attenuative
 function is not always clearly distinguishably from its semelfactive one.

- (77) *li ci tx-ti*
 again a.little.once IMP-say
 ‘Say it again!’ (many attestations)

The intensifier *koŋla*, whose first syllable originates from the reduction of the lexicalized participle *ku-ŋu* ‘the one that/who is (really)’ (Table 16.2, §16.1.1.7),¹⁰ originally means ‘really’, a meaning still attested in (78). In this meaning it can also serve as prenominal modifier (§9.1.8.2).

- (78) *wo a-mu, aʒo koŋla jx-azyut-a*
 INTERJ 1SG.POSS-mother 1SG really AOR-arrive-1SG
 ‘Mother, it is really me who arrived (i.e. not someone else pretending to be me).’ (2012 Norbzang) {0003768#S187}

The secondary meanings ‘(doing) well, correctly’ (79) and ‘completely’ (80) developed out the etymological sense of ‘really’.

- (79) *ma koŋla mu-kx-rtov-a ri, u-mɣlyjɔv nuura ju-dɣn,*

 ‘We had no opportunity to meet, as there were no transportation means at all, (...) and we had no choice but to go on foot (whenever there was a meeting).’ (12-BzaNsa) {0003484#S19}

¹⁰The non-reduced form of *koŋla*, *kuŋula*, corresponds to Tshobdun *kəŋólb* ‘well’ (Sun & Blogros 2019: 55).

22.2.5 Epistemic modality

The adverbs *c^hɣlɣnnɣ* ‘maybe’ and *zgruy* ‘certainly’ can contribute to the expression of epistemic modality, together with verbal morphology (§21.4, §21.7) and sentence final particles (§10.4).

The former *c^hɣlɣnnɣ* ‘maybe’, ‘perhaps’ originates from an Inferential form of the verb *lɣt* ‘release’, followed by the additive *nɣ*, perhaps originally the protasis of a conditional construction (§25.2.1). It is often combined with the sentence final particle *t^haŋ* (§10.4.4) as in (82), or with a verb in Probabilitative form (§21.7.2).

22.2.6 Orientation adverbs

The tridimensional system found in orientation preverbs (§15.1.1.1), egressive postpositions (§8.2.10, Table 8.1) and locative relator nouns (§8.3.4.1) is also reflected by locative adverbs (Table 22.1). There is a one-to-one correspondence between these adverbs and the corresponding nouns and preverbs (§15.1.1.4).

There are four series of adverbs shown in Table 22.1. With the exception of the adverbs of the vertical dimension (UPWARDS and DOWNWARDS), the other series are trivially derived from the bare adverbs by prefixation of *a-*, *tce-* (perhaps related to the postposition *tce* §8.2.4.3) and *-c^hu* (§8.2.4.2).

The bare adverbs are most often directly placed before an orientable verb (§15.1.2) bearing a preverb encoding the same orientation, as in (84) and (87). The adverb *ku*, though homophonous with the ergative in isolation (§8.2.2), is often pronounced [ku] as in the recording of (87), due to regressive assimilation from the preverb *ko-*.

Table 22.1: Orientation adverbs

Orientation	Bare	Basic	Distal	Approximate
Upwards	<i>taɁ</i>	<i>atu</i>	<i>tɕetu</i>	
Downwards	<i>pa</i>	<i>aki</i>	<i>tɕeki</i>	
Upstream	<i>lo</i>	<i>alo</i>	<i>tɕelo</i>	<i>loc^hu</i>
Downstream	<i>t^hi</i>	<i>at^hi</i>	<i>tɕet^hi</i>	<i>t^huc^hu</i>
Eastwards	<i>kuu</i>	<i>akuu</i>	<i>tɕekuu</i>	<i>kuc^hu</i>
Westwards	<i>ndi</i>	<i>adi</i>	<i>tɕendi</i>	<i>nduc^hu</i>

- (84) *tx-mpja tɕe t^hi c^hu-yi, tx-ɣɛndzo*
 AOR-be.warm LNK downstream IPFV:DOWNSTREAM-COME AOR-be.cold
tɕe lo lu-ɕe
 LNK upstream IPFV:UPSTREAM-COME
 ‘(Contrary to expectations), when [the weather] becomes warm it comes downstream, and when it becomes cold it goes upstream.’ (24-kWmu)
 {0003618#S25}

This is not the exclusive function of bare orientation adverbs however: they can also refer to a static location unrelated to the orientation of the verb, and non-adjacent to it (85). However, the basic and distal adverb are more often used in this function.

- (85) *kuu ri ci (...) pju-suu-ɣtsa-nuu, ndi ri li ci*
 east LOC one IPFV:DOWN-CAUS-be.planted-PL west LOC again one
pju-suu-ɣtsa-nuu
 IPFV:DOWN-CAUS-be.planted-PL
 ‘(In former times, when people installed the loom), [they] would plant one [sharpened peg] in the east (i.e. left), another one in the west (i.e. right) (to attach the upward extremity of the warp threads).’
 (vid-20140429090403) {0003776#S119}

All four series of orientation adverbs can be followed by the core locative postpositions (§8.2.4.1) as in (85), (86) and (87).

22 Simple clauses

- (86) *qaliab nutcu lu-zo tce akw ri ku-ru, andi ri*
 eagle DEM:LOC IPFV-land LNK east LOC IPFV:EAST-look west LOC
ɲu-ru
 IPFV:WEST-look

‘Eagles land there and look around (to the east and the west, looking for food).’ (140522 Kamnyu zgo) {0004059#S214}

Example (87) shows that distal orientation adverbs can occur in the same context as locative relator nouns in *-cu* (§8.3.4.1).

- (87) *w-ndycu nutcu, duxpakyrpu yw w-me nuw kuw k^hri*
 3SG.POSS-west DEM:LOC ANTHR GEN 3SG.POSS-daughter DEM ERG seat
ɲjɣ-ta tce kuw ko-ru. tce tcelo nutcu ɲimawozɣr
 IFR:DOWN-put LNK east IFR:EAST-look LNK upstream DEM:LOC ANTHR
yw w-k^hri nuw ɲjɣ-ta-nuw tce, t^hi
 GEN 3SG.POSS-seat DEM IFR:DOWN-put-PL LNK downstream
c^ho-ru-nuw tce
 IFR:DOWNSTREAM-look-PL LNK

‘On the west side, the daughter of Gdugpa Dkarpo placed her seat and turned it towards the east. On the downstream side, [the servants] placed Nyima ’Odzer’s seat, and turned it towards the upstream direction.’ (2011-04-smanmi) {0004063#S352}

The bare adverbial stems can be compounded to build nouns of dimension (§5.5.2.2)

In addition to the adverbs in Table 22.1, we also find *txton* ‘uphill’, UPWARDS and *txzun* ‘downhill’, DOWNWARDS specifically indicating orientation upwards and downwards a slope. They can be associated with both the vertical (UPWARDS, DOWNWARDS) and the fluvial (UPSTREAM, DOWNSTREAM) orientations, as shown by (88), where the motion verb *ce* ‘go’ and the manipulation verb *tsum* ‘take away’ take the fluvial orientation UPSTREAM with *txton*, but the vertical orientation DOWNWARDS with *txzun*.

- (88) *tce txton lu-ce pupuɲunɣ, snama txton tsa*

 3SG.POSS-crupper IPFV:DOWNSTREAM-CAUS-be.tight-PL SENS-be.needed
 ‘When it_i goes uphill, [that is] if they need to lead the beast_i of burden on
 an upward slope, they need to tighten the front strap of the saddle for it_i
 to pull [the burden]. When it_i goes downhill, they need to tighten the
 crupper.’ (30-tAsno) {0003758#S92}

Despite their *-n* coda (§3.3.3), these adverbs are native words, as shown by their Tshobdun cognates *tɔ̄təm* ‘uphill’ and *tɔ̄jət* ‘downhill’ (Sun & Blogros 2019: 123–4). The expected Japhug forms would be †*tyrtom* and †*tyrɯut*, respectively. The coda *-n* probably results from the coalescence of the inherited adverb with the demonstrative *nu*. These adverbs probably originate from nominalizations of elevational motion verbs, which are lost in Northern Gyalrong but attested in Situ (for instance Bragbar *t^hɔ̄* ‘move upwards’ and *jɔ̄* ‘move downwards’, respectively, see Zhang 2020: §9.1 and Lin 2017).

22.2.7 Postverbal elements

The only part of speech that is always located after the main verb is the sentence final particles (§10.4, §21.8). With the exception of right dislocated constituents (§22.1.3), only a handful of other words can occur post-verbally.

Some ideophones (mainly pattern II, §10.1.7.4) can be put after the verb, optionally with the emphatic *zo* as in (89), even in some relative clauses (§23.3.6).

- (89) *nuwe* *tu-rŋɣɣβ-nu* ***prɯŋprɯŋ*** ***zo***
 DEM:LOC IPFV-attach-PL IDPH(II):solidly EMPH
 ‘They attach [the plough] there (on the hybrid yaks’ horns) solidly.’
 (25-stuxsi) {0003660#S11}

Only three adverbs can occupy postverbal position. First, the emphatic marker *zo* (§26.1.1.5) commonly occurs after the main verb in constructions expressing high degree (§26.1), as in (90).

- (90) *tce* *numu tɯ-wy-ndza* *rca* *u-tu-tɕur*

 ‘Pears (Chuchen apples), their leaves are not as round as [those of] our
 apples, but a bit longer.’ (07-paXCi) {0003430#S48}

Third, the temporal adverb and quantifier *ntsʉ* ‘always’ has the same ranges of meaning as when in preverbal position (§22.2.1) when following the main verb: it can either indicate a constant state (92) or a recurrent action (93).

- (92) *tʉxpalyʂkʂr a<nuw>rɲi ntsʉ.*

 (2003 kandZislama)

22.3 Non-verbal predicates

While a Japhug sentence generally requires a finite verb forms to be complete, there are nevertheless some constructions in which a noun or a nominalized verb form serves as predicate by itself.

First, zero copula predicate nominals are attested, in particular to name a referent (object or person) by showing it/him/her. For instance, in (94), the subject is the demonstrative *kuki* ‘this’ and the nominal predicate *sɲndʂr* ‘thimble’.

- (94) *kuki sɲndʂr. kuki sɲndʂr. izora kuruw ra tce sɲndʂr*
 DEM.PROX thimble DEM.PROX thimble 1PL Tibetan PL LNK thimble
tu-ku-ti ɲu.
 IPFV-GENR-say be:FACT
 ‘(Pointing to a thimble.) This is a thimble. This is a thimble. We Tibetans
 call it ‘thimble’.’ (video-2014-04-29-09-5104)

However, the zero copula construction is not restricted to such contexts, and is also found when the demonstrative pronouns are anaphoric, as in (95).¹¹

- (95) *nunu tɕ^heme tu-ma.*
 DEM girl GENR.POSS-work
 ‘This (the actions described in the previous sentences) is the work of women.’ (12-kAtsxWb) {0003486#S97}

Absence of copula is also attested in multiclausal constructions, for instance in alternative concessive conditionals (§25.2.3.2) as in (96).

- (96) *tɕe tu-ci nunu, pu-nu-xtei nɣ tate^hoŋtɕ^hoŋ,*
 LNK INDEF.POSS-water DEM PST.IPFV-AUTO-be.small ADD waterfall
pu-nu-wxti nɣ tate^hoŋtɕ^hoŋ.
 PST.IPFV-AUTO-be.big ADD waterfall
 Water [falling down from a cliff], whether it is big or small, [is called] a ‘waterfall’: (hist 180428 tatChoNtChoN)

The zero copula construction is however considerably rarer than the copular construction (§22.5.1.1), even in the same context, when the speaker names a referent and points it/him with the finger as in (97).

- (97) *kuuki enat ŋu*
 DEM.PROX heddle be:FACT
 ‘(Pointing to a heddle.) This is a heddle.’ (vid-2014-04-29-09-0403)
 {0003776#S26}

Second, exclamative expressions with a degree nominal (§16.3.3), exclamative nouns (§5.1.2.8) can also be used as main predicate, followed by a sentence final particle such as *nu*, without any finite verb form.

Third, inflectionalized phatic expressions (§14.7.1) and interjections (§10.2.1) such as *mts^hɣri* ‘how strange’ as in (98) can form complete utterances on their own without any verb.

- (98) *ki mts^hɣri, kuuki a-βyo ki a-taɕ*
 DEM.PROX how.strange DEM:PROX 1SG.POSS-FB DEM:PROX 1SG.POSS-on
u-tu-pe nu
 3SG.POSS-NMLZ:DEG-be.good SFP
 ‘How strange, this uncle of mine is so nice to me.’ (140511 alading-zh)
 {0003953#S54}

¹¹The generic possessor prefix in (95) is due to the fact that *tɕ^heme* ‘girl’ serves here as a generic noun, and also because the speaker includes herself in this group (§5.1.3).

Fourth, the nouns *u-mdoɤ* ‘colour’ and *smulɣm* ‘prayer’ have been grammaticalized as sentence-final modality markers (§21.8.3).

22.4 Noun-verb collocations and light verb constructions

While Japhug has a very productive system of denominal verbalizer prefixes described in Chapter 20, it is also possible to build predicates out of nouns using noun-verb collocations, built in particular from a few highly frequent light verbs.

Apart from nouns, ideophones are also used with light verbs, but this question is studied in §10.1.7.

22.4.1 Intransitive verbs

In collocations involving intransitive verbs, the associated noun is the intransitive subject, so that the verb form is invariably 3SG (§14.2.7).

22.4.1.1 Motion verbs

The motion verbs *yi* ‘come’ and *ɕe* ‘go’ (§15.1.2.1) are used with the nouns of cognition *u-sum* ‘mind’ and *u-ɓjiz* ‘wish’ in the lexicalized collocations *u-sum* + *ɕe*/*yi* ‘want’ and *u-ɓjiz* + *yi* ‘wish’, which take complement clauses (§24.6.3.3).

They also occur with temporal nouns. The verb *ɕe* ‘go’ occurs with *tx-rzab* ‘time’ and *ta-ɓa* ‘free time’ to express the meaning ‘spend (one’s time)’, as in (99), an excerpt from a conversation where Tshendzin describes her daily activities. In this function, the whole collocation can be subjected to the facilitative *ɣr*-derivation (§18.9.1).

It also expresses the occurrence of specific events like catastrophes (102).

- (102) *taji to-yi*
 drought IFR-come
 ‘There was a drought.’ (25-kAmYW) {0003642#S1}

The combination of *ɕe* ‘go’ with the locative noun *u-pa* ‘below, under’ (§8.3.4.1), in addition to the trivially predicatable meaning ‘go below *X*’, is also used in the sense of ‘take all of *X* for oneself (of things that do not exclusively belong to oneself)’ (103) when the verb has the Autive *nu-* (§19.1.3). In this construction, the agent (the person taking the things) is encoded as possessor of *u-pa*, and the patient (the things taken) as the intransitive subject of *nu-ɕe*.

- (103) *uwo u-pa ɲɣ-nu-ɕe*
 3SG 3SG.POSS-down IFR-AUTO-go
 ‘S/he took all of it for him/herself.’ (elicited)

The verb *ɕe* ‘go’ also occurs in collocation with a few nouns designating places or objects to express the meaning ‘go and do’, in particular with *skɣrwa* ‘circumambulation’ and *jɣɣɣt* ‘terrace’, ‘toilet’¹² as in (104) and (105).

- (104) *skɣrwa ko-ɕe*

 ‘I am going to the toilet.’ (2005 khu)

¹²In traditional houses in the Japhug-speaking area, toilets are built on a remote side of the covered terrace surrounding the house. The term as now been extended to modern flush toilets.

22 Simple clauses

These collocations correspond to denominal verbs in *ru-* (§20.4.1).

The ablative motion verb *toɔ* ‘come out’ (§15.1.2.1) is commonly found in the meaning ‘grow’ (of plants), but also occurs in a few more lexicalized collocations, with *tx-re* ‘laugh (n)’ as in (106) or with *tx-rmi* ‘name’ (107). More of these collocations have corresponding transitive constructions with *tɕɣt* ‘take out’ (§22.4.2.3), such as *tx-re + tɕɣt* ‘mock’ and *tx-rmi + tɕɣt* ‘give a name’.

- (106) *u-re* *pjɣ-toɔ*
3SG.POSS-laugh IFR-come.out
‘S/he laughed.’ (elicited; refers to an involuntary action)

- (107) *u-rmi* *to-toɔ.*
3SG.POSS-name IFR:UP-come.out
‘He became famous.’ (elicited)

22.4.1.2 The anticausative verb *ndzox* ‘be attached’

The anticausative *ndzox* ‘be attached’ (§18.5.3), in addition to its function as a quasi-existential verb (§22.5.1.2) and also its dynamic meaning ‘cling onto, lean on, grab’ (example 120, §18.5.5) or ‘land’ (with flying creatures),¹³ occurs in lexicalized collocations with a few nouns. With nouns referring to plant parts, it can mean ‘grow’ (§18.5.3); with *tx-rjit* ‘child’ or *tx-puu* ‘offspring, young’, its meaning is ‘become pregnant’ (of humans or non-human animals), as in (108).

- (108) *icq^ha* <*sanshengmu*> *nui* *ɣui* *u-rjit*
the.mentioned ANTHR DEM GEN 3SG.POSS-offspring
ko-ndzox
IFR-ACAUS:attach
‘Sanshengmu became pregnant with a child.’ (150826 baoliandeng)
{0006370#S53}

With time periods such as *qartsu* ‘winter’ or *ftɕar* ‘summer’, it is synonymous with the motion verb *ɣi* ‘come’ above (§22.4.1.1) as shown by (109).

¹³The meaning ‘land’ is more commonly expressed with the verb *zo* ‘land’, probably borrowed from the Tshobdun cognate of *ndzox* ‘be attached’.

- (109) *tce ur-fsaq^he ftear kɣ-ndzov q^he li*

tu-ʈov.
 IPFV-come.out
 ‘The next year, when the warm season (spring) arrives, it comes out
 again.’ (8-qromJoR) {0003532#S134}

It can also be used like the dummy transitive *ta* ‘put’ (§22.4.2.6) with the noun *sya* ‘rust’ (110) in the meaning ‘become rusted, get rust’, with a function similar to that of the *nu-* denominal prefix (compare *nusya* ‘get rust’, §20.7.1).

- (110) *sya ko-ndzov*
 rust IFR-ACAUS:attach
 ‘It became rusted.’ (elicited)

22.4.1.3 Existential verbs

Existential verbs (§22.5.1.2) commonly take inalienably possessed nouns as subjects. Some of these collocations can be analyzed as instances of the *mihi est* possessive construction (§22.5.2). For instance, the combination of *ta-va* ‘free time’ with the existential verbs has the compositional meaning ‘have time’ (83, §21.3.3.2, 175, §21.5.1.4), and apart from the fact that it can take complement clauses (§24.6.3.4), this collocation does not stand out as particularly lexicalized. The present section focuses on cases where the meaning of the collocation is not straightforwardly derivable from that of its constituent parts.

The noun *tu-sumpa* ‘mind’ (borrowed from རེབས་པ་ *sems.pa* ‘mind’), occurs with the existential verb *tu* with the meaning ‘keep/have in mind, remember’, with the experiencer marked as possessor, for instance 1SG in (111).

- (111) *txjmxɣ ur-sɣ-tu nuu a-sumpa tu*
 mushroom 3SG.POSS-OBL:PCP-exist DEM 1SG.POSS-mind exist:FACT
 ‘I have in mind (I know, I did not forget) the places where there are
 mushrooms.’ (elicited)

The collocation of the noun *u-grɣl* ‘order, rule’ (from Tibetan གྲལ་ *gral* ‘row’, a meaning still preserved in the intransitive denominal verb *nu-grɣl* ‘be in a row’) with the negative existential verbs *me* or *maŋe* is very commonly used to indicate high degree, in particular in the degree nominal construction (§26.1.2.1), as in (112).

22 Simple clauses

- (112) *u-tu-sɣ-mu* *u-grɣl* *maŋe*
 3SG.POSS-NMLZ:DEG-PROP-fear 3SG.POSS-order not.exist:SENS
 ‘It is extremely frightening/fearsome.’ (khu 2012) {0004085#S41}

It is also compatible with dynamic verbs, as in (113).

- (113) *tʂu u-tu-mbuɪt* *u-grɣl* *maŋe*
 road 3SG.POSS-NMLZ:DEG-ACaus:take.off 3SG.POSS-order not.exist:SENS
 ‘The road had collapsed to a considerable extent.’ (2010-1)

This collocation has a second unrelated meaning: ‘be impudent, be shameless, act in an outrageous way’ as in (114), where the possessive prefix can be other than 3SG.

- (114) *tu-si* *tɣ-mda* *kuɪnɣ nuw ku-fse* *ɲu-tu-nɣre, nuw*

 (17-lhazgron)

While the constructions above do not have any equivalent denominal derivation, the collocation of existential verbs with nouns relating to meals such as *tʂ^ha* ‘tea, breakfast’, *saxsu* ‘lunch’ or *tɣ-ɣɣri* ‘dinner’ has the same meaning as the intransitive *nu-/nɣ-* denominal prefix (§20.7.1). For instance, (117) with the denominal verb *nɣɣri* ‘have dinner’ is a natural answer to (116) with the existential verb (see also 53b, §20.7.1).

- (116) *ny-pɣri* *u-pú-tu?*
2SG.POSS-dinner QU-PST.IPFV-exist

3SG.POSS-excess IFR-pass.X.years
'We have known each other for more than forty years.' ('More than forty years passed', 12-BzaNsa) {0003484#S3}

It is not possible in this construction to replace the bare numeral by the counted noun *tu-xpa* 'one year'. For a historical perspective on this construction, see §7.3.1.7 and §7.3.4.3.

22.4.1.5 Other intransitive collocations

The categories listed above do not exhaust all lexicalized collocations involving intransitive verbs. Table 22.2 provides additional examples. In addition, there are also frozen collocations with nouns and/or verbs not otherwise attested (§22.4.3).

Some of these collocations resemble Chinese constructions, and may have been calqued, for instance *tu-ro* + *ngɣr* 'be petty-minded' (compare with 心胸狭窄 <xīnxiōng xiázhǎi> 'be petty-minded'). In other case, the resemblance with Chinese may be a parallel development: the use *ngɣr* 'be torn', 'break(vi)' (§18.5.1) in *ɕɣrkʰa* + *ngɣr* 'break (of dawn)' reminds of 破晓 <pòxiǎo> 'daybreak', but this metaphor is not limited to Chinese.

The collocation meaning *tu-skʰru* + *NEG* + *βdi* 'be pregnant' (119) requires a negative prefix (§13.1.3) on the verb form. The denominal verb *nuskʰru* 'be pregnant with' (§20.7.2) derived from this construction however is only based on the noun, and does not integrate the verbal root as could have been expected (§20.13.1).

22 Simple clauses

Table 22.2: Other intransitive collocations (excluding orphan nouns/verbs)

Noun	Verb	Meaning
<i>çark^ha</i> ‘dawn’	<i>ngrax</i> ‘be torn’	‘break (of dawn)’

 blood.’ (27-qartshaz) {0003702#S106}

22.4.2 Transitive verbs

22.4.2.1 *βzu* ‘make’

The verb *βzu* ‘make’, borrowed from བོ བཟོ ‘make; manufacture’, serves as a causative auxiliary (§24.5.1.1), and occurs in a wide range of complex predicates, in particular with action nominals (§24.4.3.1), simultaneous action nominals (§16.4.3, §24.4.3.2) and compound action nouns (§24.4.3.3). In this section, we focus on constructions with nouns that are not derived from verbs.

The verb *βzu* is found with noun meaning ‘method’ or ‘manner’ such as *ftçaka* and *kowa* in complement-taking collocations meaning ‘try to *X* by any means’ or ‘prepare’ (§24.6.3.1).

It also occurs with nouns of speech activity (of Tibetan origin), as in *k^hramba + βzu* ‘tell lies’ (147, §21.4.3.1), *tu-skɣrt + βzu* ‘do/say something meaning *X*’ (§24.6.3.2) or *tu-lɣn + βzu* ‘give an answer’ (with the addressee as possessor of the object, 120).

- (120) *a-lɣn* *na-βzu*
 1SG.POSS-answer AOR:3→3’-make
 ‘He gave me an answer.’ (elicited)

22.4 Noun-verb collocations and light verb constructions

With names of languages, *βzu* means ‘speak *X*’ as in (121). It is also found with abstract nouns and also relator nouns in a variety of collocations (Table 22.3).

- (121) *mbroχpa-skvt ky-βzu ju-mk^hyz-nu.*
 nomad-language INF-make SENS-be.expert-PL
 ‘They speak the nomad language (i.e. Amdo Tibetan) very well.’ (140522
 RdWrJAt) {0004061#S121}

Table 22.3: Collocations of *βzu* ‘make’ with abstract nouns

Noun	Meaning when used with <i>βzu</i>	Reference
<i>u-rtsot</i> ‘vengeance’	‘get revenge on’	
<i>u-ts^hyt</i> ‘instead of, on behalf of’	‘do instead of, replace’	§8.3.3
<i>u-sci</i> ‘instead of’	‘do instead of, replace’	
<i>u-q^hu</i> ‘after, behind’	get revenge on, answer ‘support, back up’	§8.3.4.2

The verb *βzu* ‘make’ is attested in the dummy subject construction (§14.3.5) with three types of nouns.

First, it occurs with nouns of natural phenomena (Table 22.4), as illustrated by (122).

- (122) *numu qale a-tx-βze q^he, icq^ha nu*
 DEM wind IRR-PFV-make[III] LNK the.aforementioned DEM
yw-nu-tsum q^he,
 INV-AUTO-take.away:FACT LNK
 ‘Whenever there is wind, it blows [this insect] away.’ (28-kWpAz)
 {0003714#S150}

Second, it is found with parts of plants or animals in the meaning ‘grow’ or ‘develop’, as in *tx-spu + βzu* ‘fester, have pus’ (§20.1.2). A defective verb *βze* ‘grow’ based on the third stem of *βzu* has been created by backformation from this function (§12.2.2.3).

Third, the abstract nouns *u-ts^hyt* ‘with proper measure’ (distinct from its use in Table 22.3, see §8.3.3) and *u-tsa* ‘with proper measure, fit, adapted’ are found in a transitive but subjectless construction meaning ‘*X* fit/be the right size/quantity/degree for *Y*’ which encodes the referent *Y* as possessor, and *X* as an absolutive

22 Simple clauses

Table 22.4: dummy subject collocations with *βzu* ‘make’ (natural phenomena)

Noun	Orientation	Meaning
<i>qale</i> ‘wind’	upwards	‘blow (of wind)’
<i>tyŋe</i> ‘sun’	westwards, upwards	‘appear (of the sun)’

nuu-βze
 SENS-make[III]
 ‘The shoes that you have sent me fit me very well.’ (conversation,
 2015-04-18)

Many of the locutions in *βzu* have a semantics close to denominal derivations in *ru-/ry-* and *nu-* (§20.1.2). In addition, *βzu* corresponds to the *yu-* prefix in the case of *yulyŋ* ‘answer’ (§20.5.2), a verb similar in meaning to *tu-lyŋ + βzu* (120) and also to *su-* in *sundzupe* ‘sit without crossing legs’ (§20.3.2).

22.4.2.2 *lyt* ‘release’

The basic meaning of the verb *lyt* is ‘throw’ when employed with an inanimate object (like *tudi* ‘arrow’, see 24, §22.1.1.5), ‘pour’ when applied to liquids or containers (§128, §18.5.6) and either ‘release, let go’ (72, §8.2.3.2) or ‘see X off’ with a human object (144, §8.2.9). It is very productively used with noun-verb compounds with *rpu* ‘bump into’ or *tɕ^hu* ‘gore, stab’ as second element (see examples 231 and 232, §16.4.7).

Like *βzu* ‘make’, *lyt* is attested with *tu-* action nominals (§24.4.3.1), though this construction is less productive and limited to a few items such as *tu-murβuuz + lyt* ‘make a scratch’ (from *murβuuz* ‘scratch’) or *tu-rkyz + lyt* ‘make an engraving’ (from *rkyz* ‘carve’). It also occurs with the inalienably possessed bare action nominal *tu-suso* ‘thought’ (§16.4.6). From *tu-suso + lyt* ‘think’, the antipassive verb *rususso* ‘think’, ‘ponder’ (§18.6.1) was derived by denominal derivation.

22.4 Noun-verb collocations and light verb constructions

With iterative counted nouns (§7.3.2.5) as object, *lxt* is highly common with the meaning ‘do *X* times’, where *X* represents the numeral prefix on the counted noun (124).

- (124) *mbro nuu ku riryβ ranri χsuw-txxur ta-lxt*
 horse DEM ERG mountain each three-lap AOR:3→3'-release
 ‘The horse made three laps around each mountain.’ (2003 Kunzang)

With the counted nouns *tu-rzuuy* ‘one section’ and *tu-ydxt* ‘one section’, *lxt* means ‘cut into *X* pieces’, as in (125).

- (125) *kuβde-rzuuy zo tó-wy-lxt pjʻ-wy-sat*
 four-section EMPH IFR-INV-release IFR-INV-kill
 ‘[The thief] killed him by cutting him into four pieces.’ (140512 alibaba-zh) {0003965#S109}

Example (125) shows that the counted noun is not the direct object: the inverse (§14.3.3.3) on both verbs *tó-wy-lxt* and *pjʻ-wy-sat* (§25.4.1.4) shows that both share the same (obviative) object, and therefore that the object is the patient (the person that was killed), not the counted noun. This referent is also relativized like an object (§23.5.3) using an object participial relative (126).

- (126) *k^ha ku-qanuw~nuu u-ηguu zuu, nʻkinuu,*
 house SBJ:PCP-EMPH~be.dark 3SG.POSS-in LOC FILLER
tu-cpʻβ kuβde-rzuuy tʻ-kʻ-lxt nunuu

 ‘(not only this, but) I am (even) able to put together a corpse that had been cut into four pieces in a dark house.’ (140512 alibaba-zh) {0003965#S152}

With *tu-* action nominals, *lxt* also has an iterative meaning, but the number of occurrences of the action is indicated by a numeral after the noun as in (127).

- (127) *tu-muurtswy χsum to-lxt*
 NMLZ:ACTION-pinch three IFR-release
 ‘He pinched him three times.’ (elicited)

Noun expressing hitting actions such as *tuqartsu* ‘kicking’¹⁴ in collocation with *lɿt* also indicate the number of hits by a free numeral (128). In this construction, the patient is not encoded as direct object, but as an oblique argument with the relator *u-taɁ* ‘on, above’ (§8.3.4.3).

- (128) *u-taɁ nuɿtɕu tuqartsu Ɂnuɿz to-lɿt*
 3SG.POSS-ON DEM:LOC kicking two IFR-release
 ‘He kicked two times on it.’ (150824 kelaosi-zh) {0006276#S61}

A handful of action nominals such as *tu-tɕuɁ* ‘sewing’ can however take numeral prefixes to indicate the number of iterations, as in (129).

- (129) *Ɂnuɿ-tu-tɕuɁ ntsu c^hú-wɿ-lɿt ra.*
 two-NMLZ:ACTION-sew always IPFV-INV-release be.needed:FACT
 ‘It has to be sewed two times.’ (12-kAtsxWb) {0003486#S70}

Table (22.5) presents examples of collocations with *lɿt* ‘release’. From the meaning ‘throw, release’ (an arrow), *lɿt* acquired the sense of ‘shoot’ with shooting weapons, and then ‘hit’ with body parts or other weapons. Additionally, it came to mean ‘use’ with various types of instruments and implements.

The verb *lɿt* is the productive way to derive predicates from recent Chinese loanwords designating machines. Combined with 电话 <diànhuà> ‘telephone’ (131, §21.4.2.2, 210, §21.5.2.3) and 汽车 <qìchē> ‘car’ it means ‘phone’ and ‘drive a car’, respectively. It also occurs with nouns expressing actions derived from verbs such as 放假 <fàngjià> ‘have a holiday’, with a 3PL generic subject (§14.6.2) in (130).

- (130) *a-ye ra ɿu pɿjk^hu zatsa <fangjia> múj-lɿt-nu*
 1SG.POSS-grandchild PL GEN yet early vacation NEG:SENS-release-PL
 ‘My grandchild [and the rest of his class] are not yet on vacations.’
 (conversation, 2014-12-24)

Some nouns occurring with *lɿt* are also compatible with other light verbs, with slightly different semantics. For instance, from the noun *rɿɿo* ‘song’, the locution *rɿɿo + βzu* has the trivial meaning ‘sing, sing a song’ (87, §24.4.3.1), synonymous with the denominal *nurɿɿo* ‘sing’ (§20.7.1), while *rɿɿo + lɿt* means ‘play a tune on an instrument’, reminiscent of the use of *lɿt* with musical instruments.

¹⁴The *tu-* prefix on this noun synchronically neither an action nominal prefix nor a numeral prefix).

22.4 Noun-verb collocations and light verb constructions

Table 22.5: Examples of collocations with *lɔt* ‘release’

Noun	Orientation	Meaning
<i>tu-mci</i> ‘saliva’	UPWARDS	‘spit’
<i>txɣk^hut</i> ‘fist’	UPWARDS	‘punch’
<i>ɕɣmuɣdu</i> ‘gun’	UPWARDS	‘shoot (with a gun)’
<i>mdaxzuy</i> ‘bow’	UPWARDS	‘shoot (with a bow)’
<i>ts^ha</i> ‘salt’	DOWNWARDS	‘put salt (on)’
<i>taqaβ</i> ‘needle’	UPWARDS	‘prick with a needle’
<i>tu-mke</i> ‘neck’	DOWNWARDS	‘slit X’s throat’
<i>tx-mtsu</i> ‘button’	UPWARDS	‘button up’
<i>tx-mtu</i> ‘knot’	‘up-, down-, eastwards, downstream’	‘tie a knot’
<i>sɣcu</i> ‘key’	DOWNWARDS	‘lock’
<i>zɳgro</i> ‘Jew’s harp’	WESTWARDS	‘play the Jew’s harp’
<i>juli</i> ‘flute’	DOWNSTREAM	‘play the flute’
<i>paβtsa</i> ‘piglet’	DOWNSTREAM	‘bear a piglet’

The verb *lɔt* is also found with nouns referring to meteorological phenomena in the dummy subject construction (§14.3.5), for instance with *tu-mu* ‘sky, weather’ (131) and *txjpa* ‘snow’ (132). In both examples, it takes the C-type EASTWARDS preverb *ka-* (*tu-mu* also occurs with the orientation DOWNWARDS).

- (131) *tu-mu ka-lɔt u-mp^hru nu tu.*
 INDEF.POSS-sky AOR:3→3’-release 3SG.POSS-after DEM exist:FACT
 ‘It is found after it has rained.’ (23-mbrAZim) {0003604#S72}

- (132) *qartsu tce tɕendɣre txjpa wuma zo ka-lɔt tce*
 winter LNK LNK snow really EMPH AOR:3→3’-release LNK
 ‘In winter, when a lot of snow has fallen,’ (24-kWmu) {0003618#S20}

Collocation with *lɔt* correspond to various denominal derivations: *ru-* (*juli* + *lɔt* ‘play the flute’ → *rujuli* ‘play the flute’, §20.4.1), *nu-* (*ɕɣmuɣdu* + *lɔt* ‘shoot with a gun’ → *nuɕɣmuɣdu* ‘shoot at’, §20.7.2) and *su-* (*tuqartsu* + *lɔt* ‘kick’ → *suqartsu* ‘kick’, §20.3.2).

22.4.2.3 *tɕɣt* ‘take out’

The manipulation verb *tɕɣt* ‘take out’ (§15.1.2.2) has a wide range of derived meanings, including the relatively straightforward ‘remove’ (3, §26.1.1.1), ‘expel, banish’ (29, §6.5), ‘take off (clothes)’ (24, §23.3.4), but also ‘raise (a child)’ (46, §6.5.1) and ‘earn (food)’ (25, §6.4). It occurs as auxiliary in a marginal causative construction (111, §24.5.1.1).

Unlike *βzu* and *lɣt*, it almost never used with *tu-* action nominals, except with the lexicalized noun *tupɣaβ* ‘land clearing’ (§16.4.5), from which the irregular antipassive *rɣpɣaβ* ‘reclaim land’ is derived by denominal derivation (§18.6.3).

Table 22.6 collects the most common collocations with *tɕɣt*. Most of the nouns in this table are inalienably possessed. In the case of body parts, with the meaning ‘stick out’, the possessive prefix is coreferent with the transitive subject (3SG in 133).

- (133) *ts^hut^ho-pu tu-rdoβ ku u-ku to-tɕɣt.*
 kid-DIM one-piece ERG 3SG.POSS-head IFR-take.out
 ‘One of the little kids stuck its head out of [the wolf’s belly].’ (140430
 lang he qizhi xiaoshanyang-zh) {0003895#S131}

In the collocations whose gloss contains an X, the possessive prefix corresponds to this X referent, for instance the recipient in *u-ftɕɣfkɣt + tɕɣt* (134).

- (134) *a-ftɕɣfkɣt ci tɣ-tɕɣt tce jisɲi tɕ^hi zo pu-nɣme-a*

 be.good:FACT
 ‘Make me a suggestion, what should I do today?’ (140515 jiesu de
 laoren-zh) {0004004#S119}

The nouns in the first section of Table 22.6 are also compatible with *ɬoβ* ‘come out’ as light verb (§22.4.1.1). In most cases, the *ɬoβ* collocations are functional anticausatives of the *tɕɣt* collocations, as in *u-tɕ^haβ + ɬoβ* ‘have a handicap, be mutilated’ vs. *u-tɕ^haβ + tɕɣt* ‘cause a handicap, mutilate’ (135b) (a noun borrowed from 减少 *tɕ^hag* ‘decrease, break’) or *tu-sroβ + ɬoβ* ‘lose one’s live’ vs. *tu-sroβ + tɕɣt* ‘cause to lose one’s life’. The only exception is *tɣ-rmi + ɬoβ* ‘become famous’, whose semantics is not derivable from *tɣ-rmi + tɕɣt* ‘give a name’.

- (135) a. *a-mi u-tɕ^haβ pu-ɬoβ*

<i>u-ftɕɿfkɿt</i> ‘idea’, ‘advice’	UPWARDS	‘make a suggestion to X’
<i>tɿndɿyri</i> ‘illegitimate child’	DOWNWARDS	‘have an illegitimate child’
<i>rɿama</i> ‘completion’	DOWNSTREAM	‘put to completion’
<i>tɕ-qa</i> ‘paw, root’	‘upwards, downstream’	‘uproot, ‘put X to completion, do X until the end’

- b. *azo kunɿ, a-tɕ^haɕ* *pju-tu-tɕɿt* *ju-ŋu*
 1SG also 1SG.POSS-handicap IPFV-2-take.out SENS-be
 ‘(Not only did you do all these crimes), you also mutilate me.’ (tou
 dongxi de xiaohai-zh)

The noun *u-βlu* ‘trick’, ‘idea’ forms its corresponding intransitive construction with the existential verb *tu* (example 163, §22.5.1.2).

The collocation of *tɕɿt* with *u-qa* ‘(its) root’ can have the compositional meaning ‘uproot’ (136) like the denominal verb *nɿqa* ‘uproot’ (§20.7.2), but it also used in the sense of ‘do completely, until the end’ as in (137). This meaning is also found with the nouns *rɿama* (from 尾 *rɿa.ma* ‘tail’), *tɕ-rme* ‘hair’ and the relator noun *u-ndo* ‘edge, border’ (§8.3.4.2).

22 Simple clauses

Some of the collocations in *tɛɣt* correspond to denominal verbs in *nu-*, for instance *nuqay* ‘fish’ (§20.7.1) or *nɣre* ‘laugh’, a labile verb meaning ‘mock’ when transitive (§14.5.1.3) like *ɣr-re + tɛɣt*. Alternatively, *ɣr-rmi + tɛɣt* ‘give a name’ and *tu-ɕtʂi + tɛɣt* ‘cause to sweat’ rather correspond to sigmatic causative denominal verbs (§20.3.2).

22.4.2.4 *ndo* ‘take’

The basic meaning of *ndo* is ‘take’ (1, §19.1.1) or ‘have in the hand’ with the UPWARDS orientation, ‘catch’ (24 §16.1.1.2), ‘grab’ (56, §14.3.2.5), or ‘get attach to, stick on’ (138) with the EASTWARDS preverbs.

- (138) *ɲʉu-wɣ-nɣmɣle tu-jab ku-ndɣm zo ɕti ma,*

 ‘One has to control whether one needs three or four threads (for a given colour).’ (vid-2014-04-29-092115)

In addition to *ry^lpu* ‘king’ in Table 22.7, *ndo* can be used with all nouns referring to a status or a charge (such as *χ^pun* ‘monk’) to mean ‘become X, assume the charge of X’. In this function, collocations in *ndo* correspond either to *ru-/ry-* (§20.4.1) or *nu-* (§20.7.1) denominal derivations.

With numerals, *ndo* indicates ‘be moving into one’s X’, without using the counted noun *-pyrme* ‘X years old’, as shown by (140).

- (142) *ju-kw-ce* *ty-zɣɣpa* *nɣ*, *kum nu ci* *la-cu*, *ci*

 'Let us be friends!' (smanmi 2003.1)

22.4.2.6 *ta* 'put'

The manipulation verb *ta* 'put' also means 'leave (vt)' (168, §14.6.1.5) and 'let go' like *lɔt* 'release' (a polysemy reminiscent of Chinese 放过 <fàngguò> 'let pass'). Its lexicalized agentless passive *ata* 'be on' (§18.1.2) is used as an existential verb (§22.5.1.2).

Unlike *βzu* (§22.4.2.1) and *lɔt* (§22.4.2.2), it is not used with *tu-* action nominals, except for the lexicalized nominalization *tupu* 'moxibustion' (on which see §16.4.5).

Table 22.8 presents a representative sample of collocation in which it occurs.

The collocations *tɕ^ha + ta* 'make tea' and *k^hon + ta* 'steam' derive from 'put X on (the hearth tripod)', a meaning that is still obvious in examples such as (145).

Table 22.8: Examples of collocations with *ta* ‘put’

Noun	Orientation	Meaning
<i>tu-ku</i> ‘head’	UPSTREAM	‘lie down’
<i>tu-mi</i> ‘foot, leg’	DOWNWARDS	‘tread’
<i>u-taʁ</i> ‘on, above’	EASTWARDS	‘leave X with, put the fault on’
<i>tx-ɕp^hɣt</i> ‘patch (n)’	EASTWARDS	‘put a patch’
<i>tupu</i> ‘moxibustion’	EASTWARDS	‘use moxibustion’
<i>fsaŋ</i> ‘fumigation’	DOWNWARDS	‘make fumigations’
<i>k^hon</i> ‘steamer’	EASTWARDS	‘cook by steam’
<i>tʂ^ha</i> ‘tea, breakfast’	EASTWARDS	‘made tea’
<i>tx-rte</i> ‘hat’	UPWARDS	‘put on, wear’

- (145) *tx-tɕu* *nu ku qapi* *ɕsum nu pa-ta*

 ‘The boy placed the three stones (on the ground), and they made their tea on it.’ (2003 Kunbzang)

With head covers or implements worn on one’s body such as *ɕɕrlmuɣ* ‘glasses’, the verb *ta* occurs with the autive in the meaning ‘put on, wear’.

In dummy subject construction (§14.3.5), *ta* ‘put’ is also attested with nouns such as *ɕja* ‘verdigris’ or *tx-rq^hu* ‘hull, skin’ to express spontaneous growth on a surface, as in (146) with the orientation ‘toward east’ *ku-* and stem III.

- (146) *zaŋ* *c^ho* *raʁ* *ni* *ɕnaʁna zo* *ɕja* *ku-te* *ɲu-ŋu*

 ‘Both copper and brass get verdigris.’ (30-Com) {0003736#S99}

22.4.2.7 *rku* ‘put in’

The manipulation verb *rku* ‘put in’ occurs in considerably fewer collocations than the previous verbs. In addition to its basic meaning, it can be used in the sense of ‘pour (water, grain) into a container’ (example 82, §8.2.3.2), ‘give a parting present’ (236, §16.5.1) and also ‘fix a joint dislocation’.

Prefixed with the Autive *nu-* (§19.1.3), it occurs with the relator noun *u-pa* ‘below, under’ (§8.3.4.1) and *tu-ku* ‘head’ in *u-pa + nurku* ‘subjugate, vanquish’ (147), literally ‘put *X* under oneself’ and *tu-ku + nurku* ‘meddle into (other people’s business)’. In both cases, the possessive prefix on the noun is coreferent with the subject.

- (147) *nw rɣɣlpu ku~ku-tu* *nu pjw-cw-nɣam-a,*

22.4.2.8 *ts^hoɕ* ‘attach’

The verb *ts^hoɕ* ‘attach’ (§18.5.3) only occurs in a handful of collocations with non-dummy subject: *tu-ɣpum + ts^hoɕ* ‘knee’ (§17.2.4.9) and *k^huna + ts^hoɕ* ‘hunt with dogs’.

In the dummy subject construction (§14.3.5), *ts^hoɕ* has the sense of ‘grow’ with nouns referring to plant parts (§18.5.3), in particular *u-mat + ts^hoɕ* ‘bear fruits’ (see examples 160, §8.2.11 or 67, §23.5.3.4). Its anticausative *ndzoɕ* ‘be attached’ (§22.4.1.2) also occurs with the same meaning.

22 Simple clauses

22.4.2.9 Other transitive collocations

Table 22.9 presents a list of collocations with verbs other than those discussed above. The manipulation verb *mja* ‘take’, ‘pick up’ (whose historical morphology is discussed in §19.7.3) and *cu* ‘open’ each occur in a few non-compositional expressions. Note that *tutso* ‘experience’ is the lexicalized action nominal of *tso* ‘know, understand’ (§14.2.3).

Table 22.9: Other transitive collocations (excluding orphan nouns/verbs)

Noun	Verb	Meaning
<i>u-mp^hru</i> ‘after, following’	<i>mja</i> ‘take’, ‘pick up’	‘continue (after a break), change shift’
<i>tutso</i> ‘experience’	<i>mja</i> ‘take’, ‘pick up’	‘have experience’
<i>tu-rnoB</i> ‘brain’	<i>cu</i> ‘open’	‘deafen’
<i>tʂu</i> ‘road’	<i>cu</i> ‘open’	‘give way’
<i>tu-nja</i> ‘debt’	<i>sti</i> ‘block’	‘pay a debt by labour’
<i>ʂʂts^hoB</i> ‘nail’	<i>no</i> ‘drive’ (cattle)	‘hammer nails’

Although the noun *ʂʂts^hoB* ‘nail’ probably derives from *ts^hoB* ‘attach’ (§22.4.2.8), the two cannot be used as a collocation, and *ʂʂts^hoB* rather selects *no* ‘drive’ or the causative verb *sʂtsa* ‘prick, pierce’ with the DOWNWARDS preverbs to express the meaning ‘hammer nails into’.

22.4.3 Frozen collocations

The noun-verbs collocations studied in the previous sections involve partially grammaticalized verbs that can be combined with a considerable variety of nouns. The following focuses on more opaque collocations, which comprise either nouns or verbs that are not otherwise attested (§22.4.3.1, §22.4.3.2) and/or which are borrowed from Tibetan (§22.4.3.3).

22.4.3.1 Orphan noun

Orphan nouns do not exist in free form, and are only found in collocations, or as members of frozen compounds.

Some orphan nouns are found in collocations with (mainly transitive) light verbs (§22.4.2). A few items from this list originate from Tibetan verbs: *ʂaB* is

22.4 Noun-verb collocations and light verb constructions

from མྱེག་ *sreg* ‘burn’, *ndaŋ* from འདད་ *ndaŋ* ‘think about, long for’ and *mt^hoŋ* from མཐོང་ *mt^hoŋ* ‘see’, while *u-rtsa* is from the noun རྩ་ *rtsa* ‘root’. Pure Tibetan collocations are treated in §22.4.3.3.

The orphan noun *u-sjuurzu* is borrowed from ལྷོང་བཞོལ་ *sjuŋj.bzos* ‘comfort’; the variant *u-smuurzu* is semi-nativized by reanalyzing the *sjuu-* from ལྷོང་ *sjuŋj* ‘heart’ as the bound state *snuu-* of its native cognate *tuu-sni* ‘heart’.

The nouns *tx-rtɕ^hyaɕ* and *u-smuurzu* are otherwise attested as the bases from which the denominal verbs *sɣrtɕ^hyaɕ* ‘quibble about’ and *ɣɣrtɕ^hyaɕ* ‘quibble’ on the one hand, and *musnuurzu* ‘comfort’ on the other, are derived.

Table 22.10: Orphan nouns used with light verbs

Noun	Light verb	Orientation	Meaning
<i>u-mt^hoŋ</i>	<i>ʎoɕ</i> ‘come out’	<i>nuu-</i>	‘be exposed’
<i>ngartuum</i>	<i>ɣut</i> ‘bring’	<i>puu-</i>	‘dive’ (of birds of prey)
<i>jasɑ</i>	<i>tɑ</i> ‘put’	<i>tx-</i>	‘respect’
<i>prɣɣɣja</i>		<i>puu-</i>	‘claw around, make a mess’
<i>ɕɑɕ</i>		<i>kɣ-</i>	‘brand’ (with iron)
<i>tɑmbra</i>	<i>lɣt</i> ‘release’	<i>tx-</i>	‘jump’ (of horse)
<i>txɣɣo</i>		<i>kɣ-</i>	‘catch with a lasso’
<i>u-ndaŋ</i>		<i>puu-</i>	‘think about’
<i>u-pu</i>	<i>pɑ</i> ‘do’	<i>tx-</i>	‘keep well, preserve’
<i>tx-rtɕ^hyaɕ</i>	<i>tɕɣt</i> ‘take out’	<i>nuu-</i>	‘hinder’
<i>u-rtsa</i>		<i>nuu-</i>	‘investigate, get at the root of’
<i>uŋaj</i>	<i>βzu</i> ‘make’	<i>nuu-</i>	‘be self-satisfied’
<i>u-smuurzu,</i> <i>u-sjuurzu</i>		<i>nuu-</i>	‘comfort’

Some of the orphan nouns in Table 22.10 are treated as direct object (for instance *txɣɣo*, *ɕɑɕ*, *u-smuurzu*), and other ones are semi-objects. The noun *ndaŋ* can have both grammatical functions; in (150a) it is direct object (and the stimulus is encoded as its possessor), whereas in (150b) it is semi-object (and the stimulus is encoded as direct object and is indexed on *lɣt*).

- (150) a. *nɣ-ndaŋ* *lat-a* *ɕti*
 2SG.POSS-think.about release:FACT-1SG be.AFF:FACT

22 Simple clauses

- b. *ndaŋ ta-lxt cti*
 think.about 1→2-release:FACT be.AFF:FACT
 ‘I will think about/be considerate of you.’ (elicited)

Other collocations with orphan nouns listed in Table 22.11 involve verbs not otherwise used in light verb constructions.

Table 22.11: Orphan nouns in lexicalized collocations

Noun	Light verb	Meaning
<i>u-rça</i>	<i>mɣɣm</i> ‘feel pain’	‘cherish’
<i>u-tsu</i>	<i>rnaʁ</i> ‘be deep’	‘keep the secret’
<i>u-ndzuy</i>	<i>maʁ</i> ‘not be’	‘be terrible’
<i>u-rka</i>	<i>ɣɣn</i> ‘be evil’	‘harbour bad intentions’
<i>u-lu</i>	<i>cui</i> ‘open’	‘lose consciousness’

Most of the verbs in Table 22.11 are intransitive; the experiencer/main referent is encoded as the possessive prefix on the intransitive subject, as the 2SG in (151).

- (151) *nx-tsu ju-rnaʁ*
 2SG.POSS-secret SENS-be.deep
 ‘You are keeping the secret very well.’ (elicited)

The collocation *u-lu + cui* is a transitive dummy construction (§14.3.5): the experiencer is marked as possessor of the object *u-lu* (152), and no overt subject can appear. To express the meaning ‘cause to lose conscience’, the causative *su-cui* is needed.

- (152) *a-lu pjɣ-cui k^hi*
 1SG.POSS-lose.conscience(1) IFR-lose.conscience(2) HEARSAY
 ‘I lost conscience (people said).’ (elicited)

Some of the nouns in Table 22.11 have etymologies. The noun *u-tsu*, though not otherwise attested, presumably originally meant ‘secret’, as it serves as the base of the denominal transitive verb *nɣtsu* ‘hide’. The nominal root *-lu* is possibly related to the last syllable of *mukulu* ‘be lost’, ‘lose one’s way’, a denominal verb (§20.7.1) from the *ku-* participle (§16.1.1.7) of a verb **lu*, from which *u-lu* would be derived (§16.4.2, §16.4.6).

The noun *u-rça*, though non-attested on its own, occur in several collocations, respectively *u-rça* + *mjɣm* ‘cherish’ with *mjɣm* ‘feel pain’ (example 90b, §20.13.1),¹⁶ *u-rça* + *χtɣt* ‘concentrate, focus’ with the transitive *χtɣt* ‘lean on’, and *u-rça* + *ts^ha* ‘be thoughtful and considerate of the feelings of others’ with the orphan verb *ts^ha* (§22.4.3.2).

22.4.3.2 Orphan verbs

Orphan verbs are much fewer than orphan nouns. Among the verbs in Table 22.12, *ri* (example 132, §14.5.1.4) is the transitive labile counterpart of *ri* ‘remain’, ‘be left’ (§14.5.1.4), and *ts^ha* and *loɓ* are borrowed from Tibetan ཚ་ *ts^ha* ‘hot’ and ལོག་ *log* ‘be upside down’. The rest of the verbs are obscure.

Table 22.12: Orphan verbs

Noun	Verb	Meaning
<i>tu-sroɓ</i> ‘life’	<i>ri</i> (vt)	‘save X’s life’
<i>tu-sroɓ</i> ‘life’	<i>nuwɣtku</i> (vt)	‘risk one’s life’
<i>tu-tça</i> ‘mistake’	<i>nujɣt</i> (vt)	‘make amends, apologize’
<i>tɣ-mbruu</i> ‘anger’	<i>ŋgu</i> (vi)	‘get angry’
<i>tu-mtç^hi</i> ‘mouth’	<i>χo</i> (vi)	‘talk big, exaggerate’
<i>u-rça</i>	<i>ts^ha</i> (vi)	‘be thoughtful and considerate’
<i>tu-zi</i>	<i>loɓ</i> (vi)	‘have nausea’
<i>sala</i>	<i>zruu</i> (vt)	‘be in the way, be a hindrance’
<i>u-ɓo</i>	<i>p^hi</i> (vt)	‘be disappointed by’

The lower half of the Table includes collocations comprising both a orphan noun and an orphan verb. In such cases, the noun and the verb are given the same gloss, with the indices (1) on the former and (2) on the latter, as in (153).

- (153) *nuwɣu tɣ-rɣru ma sala ɲu-tu-zri*
 DEM:LOC IMP-get.up LNK be.a.hindrance(1) SENS-2-be.a.hindrance(2)
ɲu-ŋu
 SENS-be
 ‘Get up from there, you are in the way.’ (elicited)

¹⁶This collocation can be denominalized as *ɲɣrçɣmjɣm* ‘cherish’ (Table 20.21, §20.13.1).

22 Simple clauses

Several orphan verbs are denominalized together with their noun in an incorporating construction (Table 20.21, §20.13.1).

Some orphan verbs can be subjected to voice derivations. For instance, *u-xo + p^{hi}* ‘be disappointed by’ has an anticausative form *u-xo + mbi* ‘be discouraged’ (§18.5.4), which can further receive the facilitative *ɣɣ-* prefix (§18.9.1). The verb *ŋgu* selects the irregular *ɕu-* allomorph of the causative prefix (§17.2.2.1).

22.4.3.3 Borrowed collocations

Several synchronically opaque noun-verb collocations (with orphan verbs and/or nouns) have been borrowed as a whole from Tibetan, unlike some constructions described in previous sections which combine a noun or a verb from Tibetan with a native word.

Among Tibetan collocations, *t^hurzi + zuu* ‘ask for mercy’ comprises the noun *t^hurzi* ‘mercy’ (from རྒྱལ་ལ་རྩེ་ལྷ་ *t^hugs.rdze* ‘compassion’), which has many functions in Japhug (§8.3.6.2), while the transitive verb form *zuu* (from ལྷ་ *zu* ‘ask’) is not otherwise attested,¹⁷ with the meaning ‘ask for mercy’ (154).

- (154) “*wortc^{hi} nɣ wojɣr*” *to-ti-nuu t^hurzi to-zuu-nuu*.
 please ADD please IFR-say-PL mercy IFR-ask-PL
 ‘[The boys] asked for mercy, saying ‘please’ one after the other.’ (160704 poucet4-v2) {0006097#S25}

In other collocations, both the noun and the verb are orphan forms. For instance, *t^hax + tɕ^hot* ‘take a decision’ was borrowed from the locution རག་ཚད་ *t^hag.tɕ^hod* ‘be decided’, built from the noun རག་པ་ *t^hag.pa* ‘rope’ and the intransitive verb ཚད་ *tɕ^hod* ‘be cut off’, neither of which are attested as independent words into Japhug. It does not take complement clause, and is better translated as ‘take a decision’ rather than ‘decide’. The verbal element *tɕ^hot* is transitive (unlike Tibetan ཚད་ *tɕ^hod* ‘be cut off’), and the person making the decision is indexed as subject (155).

- (155) *t^hax pu-tɕ^hot-a*
 decide(1) AOR-decide(2)-1SG
 ‘I took a decision.’ (elicited)

Similarly, the intransitive impersonal constructions *t^ho + t^huy* ‘match up’, ‘be compatible’, ‘be conform to each other’ (156) from མོ་ཐུག་ *t^ho.t^hug* ‘match’, and *u-ŋgu + t^hon* ‘be well-off’, ‘able to take care of oneself’ (157) from འགོ་ཐོག་ *ŋgo.t^hon* ‘able

¹⁷Note however the verb *ndzu* ‘accuse’, which is probably borrowed from a non-classical present from **ndzu* of the verb ལྷ་ *zu* ‘ask’.

to take care of oneself’ are synchronically opaque from a Japhug-internal perspective.

- (156) *uʒo kwi ta-tuʔt c^ho nɣj tu-tuʔ-ti nuw t^ho*

 ‘One of them is very old, the other one is very young, they are not able to take care of themselves, I will not come (to the palace and leave them behind).’ (2011-05-nyima)

In addition, there are also partially compositional collocations, both of whose elements independently exist in Japhug. For instance, although *tu-sum* + *βdi* ‘be relieved’ (§22.4.1.5) takes its specific meaning from Tibetan རེ་མཁས་བདེ་ *sems.bde* ‘be relieved’, both *tu-sum* ‘mind’ (§24.6.3.3) and *βdi* ‘be well’ are otherwise found, and also used in a variety of constructions not calqued from Tibetan.

There is at least one case of collocation from Situ: *k^hɣli* + *rgi* ‘be respected, have good reputation’, from *k^hali* ‘wind, reputation’ (cognate of *qale* ‘wind’ and *u-ble* ‘reputation’, §5.1.2.2), with a verb from དགེ *dge* ‘virtuous’.

22.5 Copulas and existential verbs

Copulas and existential verbs stand out not simply by their morphological specificities (suppletive negation §13.1.2, infixed person index §14.2.2 and other §22.5.5), but also by their uses as auxiliaries in periphrastic tenses (§21.2.2), and various additional functions, including possessive constructions (§22.5.2), emphasis (§22.5.3.1), focalization (§23.6.1, §22.5.3.2), universal negation (§22.5.4), superlative (§26.4.3) and concessive conditionals (§16.2.2.2).

22.5.1 Basic functions

22.5.1.1 Copulas

With the exception of a handful of predicative nouns (§22.3), a copula is required to make a noun phrase or a pronoun predicative in Japhug.

The copulas are a distinct subclass of semi-transitive verbs (§14.2.3), whose semi-object is the nominal predicate. There are two assertive copulas, the neutral *ɲu* ‘be’ and the emphatic affirmative *ɕti* ‘be’, and one suppletive negative copula *maɣ* ‘not be’ (§13.1.2). The emphatic affirmative copula occurs in particular to express contrast, as in (158).

- (158) *azo βzu ɕti-a ma, nyki, pya maɣ-a*
 1SG mouse be.AFF:FACT LNK FILLER bird not.be:FACT
 ‘(The bat said:) I am a mouse, not a bird.’ (140427 bianfu yu
 Huangshulang-zh) {0003838#S7}

The copulas cannot be used with inchoative meanings (‘become’) in the Aorist (§21.5.1.3) or the Inferential (§21.5.2.4) unlike other stative verbs. The Aorist of the copulas are only attested to fix a point of temporal reference (§25.3.4.1) and in periphrastic tenses (examples 256 in §21.6.2.1 and 94 in §25.5.3). The lexicalized passives *apa* and *aβzu* (§18.1.2) replace the copula to express inchoative meaning, as shown by (159).

- (159) *azo tumwukumpci ra nuu-tcuw pu-ɲu-a ri, [ki*
 1SG heaven PL 3PL.POSS-SON PST.IPFV-be-1SG LNK DEM.PROX
ku-fse] nuu-aβzu-a
 SBJ:PCP-be.like AOR-become-1SG
 ‘I used to be a son of heaven, but I became like that.’ (divination 2003)

Person indexation on copula generally follows the subject, in particular when both subject and semi-object are non-third person as in (160).

- (160) *azo nyzo maɣ-a ku, a-mu mɣ-nymqe-a.*
 1SG 2SG not.be:FACT-1SG ERG 1SG.POSS-mother NEG-scold:FACT-1SG
 ‘I am not you, I will not scold my mother.’ (elicited)

However, when the predicate is a first or second person pronoun and the subject third person, the copula indexes the non-third person argument. In the pseudo-cleft (161) for instance, it would not be grammatical to replace *azo ɕti-a* with a third 3SG copula †*azo ɕti*. (see also 126 in §23.6.1).

- (161) [pʉ-kʉ-c^ha] nu azo cti-a
 AOR-SBJ:PCP-can DEM 1SG be.AFF:FACT-1SG
 ‘The one who succeeded [in doing these things] was me.’ (qachGa 2003)

We also find examples of indexation with a (third person) predicative noun, as in (162), where the verb has plural indexation like the predicative noun phrase *stʉmku nura*, whereas the subject is in the singular. Note that the plural *nura* here cannot be interpreted as approximate location (§9.1.1.2), because in the next sentence the grasslands are analogically referred to by the plural demonstrative pronoun *nura* (§6.9.1).

- (162) *stu w-sʉ-dʉn* nu [stʉmku nura] ʉu-nu. tce

 ‘The place where it is most numerous is the grasslands, and it grows there.’ (19-qachGa mWntoR) {0003546#S23}

22.5.1.2 Existential verbs

Unlike other languages of the area such as Khroskyabs (Lai 2017: 250–252), Ja-phug is relatively poor in existential verbs. The verb *tu* ‘exist’ and its suppletive forms (the Sensory *ʉʉʉ* §14.2.2, the negative *me* ‘not exist’ and the Sensory negative *maʉe*, §13.1.2) have no selection restrictions on their subjects, and are compatible with abstract nouns (163), inanimate objects (164) and humans (165, 166).

- (163) *azo a-βlu* ci tu
 1SG 1SG.POSS-trick INDEF exist:FACT
 ‘I have an idea.’ (150829 taishan zhi zhu-zh) {0006350#S196}
- (164) *kuʉʉʉgu* nu nuʉtcu k^hʉNqra ci pʉʉ-tu.
 in.former.times DEM:LOC house.in.ruin INDEF IFR.IPFV-exist
 ‘In former times, there used to be a house in ruin there.’ (140522 Kamnyu zgo) {0004059#S247}

The existential verbs index the person of the intransitive subject, as shown in (165) (see §23.7 on this construction).

22 Simple clauses

- (165) [juymur ku-nɣpɣri] azo ma me-a.
 this.evening SBJ:PCP-have.dinner 1SG apart.from not.exist:FACT-1SG
 ‘This evening nobody is having dinner (at home) apart from me.’
 (conversation, 16-04-28)

With third person subjects, number indexation is possible as in (166), but optional (§14.6.1.1), and never found in the possessive construction (§22.5.2).

- (166) kuɕuŋguw ɓɣɣmi ci pɣɣ-tu-ndzi
 in.former.times couple INDEF IFR.IPFV-exist-DU
 ‘In former times, there was a husband and his wife.’ (rkangrgyal 2002.2)

The assertive existential verbs can mean ‘be located’, and take associated motion prefixes (§15.2) as in (167).

- (167) ɲotcu ɕ-pw-tu-tu-nw?
 where TRAL-PST:IPFV-2-exist-PL
 ‘Where (in which places) have you been?’ (2003 sras)

Other meanings include ‘be alive’ as in (168), and ‘be present’ (especially in converbial form *X ku-tu zo* ‘in X’s presence’, see 172, §16.2.1.7).

- (168) nɣj ku-tu-tu ú-ɲu
 2SG PRS-2-exist QU-be:FACT
 ‘Are you [still] alive?’ (Nyima Wodzer 2003.2)

The negative existential verb *me* is also employed in one of the comparative constructions (§26.2.5), and with infinitives in a construction expressing impossibility (§16.2.1.6, §24.4.2.4).

Unlike copulas, existential verbs can be used in Aorist, Inferential and Imperfective with an inchoative meaning (see 130 in §15.1.5.6 and 137 in §15.1.5.7).

The lexicalized agentless passives (§18.1.2) *ata* ‘be on’ and *arku* ‘be in’, are nascent existential verbs. They do not have semantic restrictions on the subject as in Khroskyabs or Stau (they are attested with first or second person human subjects, as in 6, §18.1), but indicate the location of the subject: on a surface or in a building in the case of *ata* (169) and inside a closed and narrow space (or inside a compact matter) for *arku* (170).

22.5.2 Possessive constructions

There are two main possessive constructions in Japhug. In the first one, illustrated by (172a), the possessum is the intransitive subject of an existential verb (§22.5.1.2) and the possessor is indicated by a possessive prefix on the possessum (§5.1.1.2) and (optionally) a genitive phrase (example 173 below, §8.2.3.1). In the second one (172b), involving the semi-transitive verb *aro* ‘own’ (§14.2.3), the possessor is subject, and the possessum semi-object (§8.1.5); when the possessum is an inalienably possessed noun (§5.1.2), it selects the indefinite possessor prefix.

- (172) a. *a-mkuum* *tu*
 1SG.POSS-pillow exist:FACT
 b. *tx-mkuum* *aro-a*
 INDEF.POSS-pillow have:FACT-1SG
 ‘I have a pillow.’ (elicited)

22.5.2.1 *Mihi est* possessive

The *mihi est*-type construction in (172a) is by far the most frequent one. It differs from the usual existential construction in that the number of the possessum (intransitive subject) is never indexed on the verb: in (173) for instance, the subject *u-tɕuu* takes the numeral *sqaptuy* ‘eleven’ but the existential verb *pjɣ-tu* lacks

plural indexation. Although number indexation in the existential construction is optional (§22.5.1.2, §14.6.1.1), its presence is however more common than its absence. The non-indexation in (173) is thus indicative of a significant syntactic difference between the existential and the possessive constructions, despite superficial similarity.

- (173) *rʃɿlpu nunu yu w-tcu sqaptuy zo pjɿ-tu.*
 king DEM GEN 3SG.POSS-son eleven EMPH IFR.IPFV-exist
 ‘The king had eleven sons.’ (140520 ye tiane-zh) {0004044#S4}

Inalienably possessed possessums normally take a possessive prefix coreferent with the possessor, even when the possessor is overt and marked with the genitive.¹⁸

In (174), we observe a string of possessive clauses in parataxis, each sharing the same possessor with the genitive (*tu-tupu raŋri yu*). The possessums of all of these clauses are inalienably possessed nouns (farm animals). In the first three clauses, the expected 3PL possessor prefix is present. In the last two however the possessive prefix is absent; this is one of the very rare cases where the possessor is not marked on the possessum in this construction in the corpus.

- (174) *tu-tupu raŋri yu, nɿkinu, nu-**mbro** pjɿ-tu,*
 one-household each GEN FILLER 3PL.POSS-horse IFR.IPFV-exist
nu-**ja* pjɿ-tu, nu-**nuŋa** pjɿ-tu, qazo*
 3PL.POSS-hybrid.yak IFR.IPFV-exist 3PL.POSS-cow IFR.IPFV-exist sheep

 IFR.IPFV-exist goat IFR.IPFV-exist
 ‘Every household used to have horse(s), cow(s), hybrid yak(s), sheep and goat(s).’ (150820 kAnWCkat) {0006256#S2}

The *mihi est* construction can be causativized by subjecting the existential *tu* to the *ɣɿ-* derivation (§17.3.2.3), yielding the verb *ɣɿtu* ‘cause to have’, which marks the beneficiary (corresponding to the possessor of the intransitive construction) with the genitive case, as *nɿzuy* in (175), or a as possessor of the object (as in 81, §17.3.2.3).

¹⁸Possessor marked with the dative also exist, but only express temporary alienable possession (example 179, §8.3.1).

- (175) *tu-βze-a* *kx-c^ha* *nura* *lonba zo* *nyzuy*

 ‘I endowed you with all the things I could make.’ (140425 shizi
 puluomixiusi he daxiang-zh) {0003798#S15}

When the *mihi est* possessive construction undergoes relativization, there is ambiguity as to whether the relativized element is the possessum or the possessor, since both intransitive subjects (§23.5.10.1) and possessors (§23.5.1) are relativized by means of (mostly head-internal) subject participial relatives (§16.1.1.4). In (176), the relativized element is the possessum, and in (177) it is the possessor, but these two relative clauses have exactly the same surface structure.

- (176) [*nurcuŋgu* *yw* *w-laxtɕ^ha* *pu-kw-tu*] *nura*

‘Among animals, the dog is the most loyal one.’ (i.e. among animals,
there isn’t any one whose loyalty like that of a dog) (05-khWna)
{0003398#S4}

Some possessive constructions, involving in particular abstract nouns, are lexicalized and are better described as noun-verb collocations (§22.4.1.3).

22.5.2.2 Non-genitive possessor

There is in addition a third construction, intermediate between those illustrated in (172), involving an existential verb, but in which the possessor is rather intransitive subject, indexed on the verb. It is only attested in double negative, with the negative existential verb *me* ‘not exist’ and a negative verb participle such as *mɣ-ku-pe* ‘(something) that is not good’ as possessum: compare the *mihi est* construction (180a) with this third construction (180b), where the verb has 1SG indexation. Only one example is found in the whole corpus (identical to example 180a, but with 1PL possessor).

- (180) a. *azuy mɣ-ku-pe ku-me*
1SG:GEN NEG-SBJ:PCP-be.good PRS-not.exist
b. *azo mɣ-ku-pe ku-me-a*
1SG NEG-SBJ:PCP-be.good PRS-not.exist-1SG
‘I don’t have any problem/anything bad.’ (elicited, based on real examples)

22.5.3 Postverbal copulas

Copulas are commonly found in postverbal position, in periphrastic TAME constructions (§21.2.2, §21.5.1.8, §21.5.3.5, §21.6.2.1) and in emphatic and focalization functions, as detailed below.

These constructions have in common that the copula remains in 3SG form, regardless of the core arguments of the preceding verb. In (181) for instance, the

copula *ŋu* lacks the 1SG suffix found on the verb *ɕe-a*, and using here the 1SG form *ŋu-a* would be ungrammatical.

- (181) *nutɕu ɕe-a ŋu*
 DEM:LOC GO:FACT-1SG be:FACT
 ‘(For all these reasons) I am going there.’ (2011-04-smanni)

A question concerning the syntactic structure of these constructions is whether part of the clause preceding the copula (*nutɕu ɕe-a*) is a subordinate clause, the copula being the main verb of the sentence. The fact that post-verbal adverbs such as *ntsui* (§22.2.7) can be located between the verb and the sentence-final copula, as in (182), is a clue that the part of the sentence preceding the copula is a syntactic constituent.

- (182) *tur~tv-tur-nɣma-t rcanuu, pe ntsui*
 TOTAL~AOR-2-make-PST:TR UNEXP:DEG be.good:FACT always
ɕti
 be.AFF:FACT
 ‘Everything that you do is always good.’ (150822 laoye zuoshi zongshi duide-zh) {0006298#S222}

The pre-copula constituents (*nutɕu ɕe-a* and *pe ntsui*) cannot be analyzed as finite relative clauses (§23.2.2), since this type of relatives are restricted to relativizing objects (§23.5.3) and goals, and are thus not attested with most intransitive verbs, whereas the postverbal copula constructions are found with all intransitive verbs without restriction. Another possibility would be to analyze the pre-copula constituents as complement clauses (§24), whose function would be that of semi-object of the copula (§22.5.1.1). In this hypothesis, example (181) would literally be ‘it is (the fact that) I am going there’, and (182) ‘it is that it is always good’.

22.5.3.1 Emphatic assertion/negation

The postverbal copulas can have scope over the whole sentence. Copulas of opposite polarity *ŋu/ɕti* and *maɸ* can be used to mark an emphatic contrast between two predicates, as in (183) and (184) (§13.2).

- (183) *tú-wɣ-ɕtɕo ŋu ma tú-wɣ-skɣr maɸ*

 AOR-say[II]-1SG not.be:FACT QU-be:FACT
 ‘Didn’t I say: ‘Do not bring back anything, not even a hair (from her head).’ (2014-kWLAG)

22.5.3.2 Focalization of a constituent

The most common focalization construction in Japhug is not a pseudo-cleft construction (§23.6.1) or a focus marker (§9.1.6), but the combination of an overt noun phrase or pronoun (§22.1.2.3) with a postverbal copula, as in (187).¹⁹ The focalized constituents are indicated in bold. In this construction, the copula is never adjacent to the focalized constituent, which is also marked by a specific intonation.

¹⁹These sentences are from a story where a child at school is bullied by another pupil, who forces him to bring water for him; the teacher (who guessed that the first child was being bullied) asks (187a) to have him tell the one who forced him to do it, but the bullied child replies (187a), as he fears reprisals.

- (187) a. *nyzo ny-tu-ci* *c-tx-tu-nu-ru-t*
 2SG 2SG.POSS-INDEF.POSS-water TRAL-AOR-AUTO-bring-PST:TR
ú-ŋu?

- b. *azo c-tx-nu-ru-t-a* *ŋu*
 1SG TRAL-AOR-AUTO-bring-PST:TR-1SG be:FACT
 ‘I brought it for myself.’

Given the fact that many periphrastic TAME categories use copulas (§21.2.2, §21.5.1.8, §21.5.3.5, §21.6.2.1), there are many cases where this focalizing function of the copula is ambiguous (for this reason, most of the examples presented below involve verbs in Aorist and Inferential form, which do not occur with the copulas in periphrastic tenses).

The postverbal copula construction is used to indicate focus on all core arguments, including intransitive subject (188), transitive subject (189, 190, with optional ergative on the overt pronoun, §8.1.2) and object (191, 192).

In (§187b), although the focalized argument is in transitive subject function, it is not focalized as subject (‘it is I who brought it’) but as beneficiary (‘it is for myself that I brought it’), as this referent has both functions, the latter marked by the autive prefix *nu-* (§19.1.3).

All three copulas (§22.5.1.1) are found in this construction, including the emphatic affirmative *cti* (188, 191) and the negative *maʁ* (191, 193).

- (188) *tceri, u-pi* *mu-pjʁ-rʁzi* *q^hendʁe, u-ʁaʁ*

 ‘It was not because of this that shed died.’ (150907 srWn) {0006360#S22}

The postverbal copula can be nominalized, and the whole sentence turned into a non-finite clause. This type of construction is also used for constituent focalization as in (194). The form *ku-ŋu* is ambiguous between a stative infinitive and a subject participle (§16.2.1.1), and therefore the non-finite clause is either analyzable as an infinitival complement clause (§16.2.1.5) or a participial clause in semi-object function (§24.4.1).

22.5.4 Postverbal negative existential verb

Like the negative copula *maʔ* (§22.5.3.1), the negative existential verbs *me* and *maŋe* occur postverbally as periphrastic negative construction (§13.2).

With transitive verbs, this construction can express universal negative object (‘nothing’), in particular with the adverbial intensifier *maka* (§22.2.4), which can be located either before the main verb (195a) or directly before the negative existential verb (195b).

- (195) a. *maka zo puu-mto-t-a me*
 at.all EMPH AOR-see-PST:TR-1SG not.exist:FACT

 EMPH AOR-see-PST:TR-1SG at.all not.exist:FACT
 ‘I did not see anything/any of it at all.’ {0006336#S58}

With secundative verbs (§14.4.2), negative meaning can apply either to the object or to the theme (semi-object). In (196), the object (*ŋjul* ‘silver’) is definite, while the non-overt theme (the manner) is universal negative.

- (196) *azo ŋguu cti-a qhe, ŋjul ste-a me*
 1SG boulder be.AFF:FACT-1SG LNK silver do.like:FACT-1SG not.exist:FACT

 ‘I am a boulder, I have no use of [this] silver, may this be your reward
 (for helping me), take it.’ (divination) {0003364#S98}

The postverbal negative construction can also indicate a non-specific, but not completely indefinite entity (‘not any *X*, none of the *X*’ rather than ‘nothing’). In (197), the zero object anaphorically refers to *qumdroŋ* ‘crane’ (§22.1.2.1), the main topic of the story from which this sentence is taken.

- (197) *tce jinde aj puu-mto-t-a me ri,*

 ‘I have not seen any [wild crane] recently, but when we were young, we
 did see (some).’ (22-qomndroN) {0003598#S31}

The scope of the negation is however not necessarily restricted to the object. In (198) for instance, the non-overt object anaphorically refers to *jima* ‘maize’ mentioned in the previous sentences, but the scope of negation is rather on the essive

22 *Simple clauses*

participial clause *zara nu-ky-nu-ndza* ‘as food for themselves/for themselves to eat’ (§8.1.7): the villagers do plant maize, but for a different purpose.

me
 not.exist:FACT

‘I am staying near the water and drinking (water) there, I did not go into the water at all, I am not walking around in it.’ (aesop lang he yang-zh)

The intransitive stative verb *sna* ‘be good, be worthy’ (§19.7.10) is commonly used with negative existential verbs, with the meaning ‘not good for anything’, as in (200). The scope of universal negation in this case is on the essive adjunct (for instance *nuŋa u-ndza* ‘cow fodder’ in the first clause of 200).

- (200) *nuŋa u-ndza sna ma nu ma sna*

 (2011-04-smanni)

22.5.6 Other constructions

Apart from the constructions discussed above, existential verbs are attested in an unusual type of alternative concessive conditional (§25.2.3.2), combined with the bare stem of the verb (§16.2.2.2), and in periphrastic modal constructions (§21.7.5).

Existential verbs can also occur with the adverb *jamar* ‘about’ to build an equative construction ‘as big as *X*’ (§26.3.1.4) as in (204).

- (204) *ki azo a-jab ki jamar yɣzu.*

23 Relative clauses

23.1 Introduction

This chapter, building on previous work by Sun (2006a); Sun & Lin (2007) on Tshobdun and Situ, and on Jacques (2016d) on Japhug, presents an overview of relativizing constructions in Japhug.

Three different ways of classifying relative clauses are outlined, respectively based on the form of the verb and the structure of the clause (§23.2), on the position of the relativized element (§23.4) and on its function in the relative clause (§23.5).

Various morphosyntactic phenomena specific to relative clauses (including resumptive pronouns, case marking etc) are discussed in §23.3, and some potential ambiguities between relative and complement clauses are analyzed in §23.8.

Two sections are devoted to the functions of relative clauses other than noun modification: focalization (using pseudo-clefts, §23.6.1) and quantification (universal quantification and expression of indefiniteness, §23.7).

Since an important proportion of relative clauses in Japhug are participial clauses, section §16.1 in a previous chapter partially overlaps with some of the sections of this chapter.

23.2 Subtypes of relative clauses

23.2.1 Participial relative clauses

Participles (§16.1) are the main way of building relative clauses in Japhug. Three types of participles are found: subject *ku-* (§16.1.1), object *kr-* (§16.1.2) and oblique *sr-/z-* (§16.1.3).

The subject participle (§16.1.1.4) is the only available strategy to relativize subjects (whether from intransitive §23.5.1 or transitive verbs §23.5.2) and possessor of subjects (§23.5.10.1).

The object participle is used to relativize objects and semi-objects (§16.1.2.4). It competes in this function with finite relative clauses (§23.5.3, §23.5.4). It can also marginally relativize locative arguments (§16.1.2.5, §23.5.5) and possessor of

23 Relative clauses

objects (§23.5.10.2). Unprefixed object participles in *kr-* are not easily distinguishable from subject participles of passive forms *ku-γ-*, due to vowel contraction (§16.1.2.3).

The oblique participle can relativize many non-core functions, including locative adjuncts (§16.1.3.5), instruments (§16.1.3.6) and other adjuncts (§16.1.3.7), and compete in these functions with pronominal finite relatives (§23.5.5, §23.5.9).

Since participial relative clauses are described in detail in chapter 16, the reader is referred to the relevant sections in that chapter for a focused discussion.

23.2.2 Finite relative clauses

Some relative clauses in Japhug have a verb in finite form, with person indexation and TAME marking. For instance, the verb *pu-mto-t-a* in 1SG→3 (§14.3.2.1) Aorist form of the headless relative clause in (1) could stand on its own as a complete sentence meaning ‘I saw/have seen it’. The only clue that this appositive clause is a relative is the presence of the determiner *nuu*, whose status in this context is discussed in §23.3.5.2.

- (1) *ma wzo u-mdov nuuu, [aj pu-mto-t-a] nuu,*
LNK 3SG 3SG.POSS-colour DEM 1SG AOR-see-PST:TR-1SG DEM
‘[The wolves] that I have seen, the colour [of their fur is brown]’
(27-spjaNkW) {0003704#S21}

Finite relative clauses are not however completely identical to the corresponding independent clauses, even when the head is internal (§23.4.3). Four main morphosyntactic differences can be observed.

First, the verb of finite relative clauses can be subjected to totalitative reduplication (§23.3.2), a morphological category that is restricted to relative clauses, and not found in main clauses or other types of complement clauses.

Second, possessor prefixes in finite relative clause can undergo possessor neutralization (§23.3.4).

Third, some TAME categories are not allowed in relative clauses, including Modal categories such as Irrealis (§21.4.1) and Imperative (§21.4.2) and Evidential categories such as Inferential (§21.5.2), Sensory (§21.3.2) and Egophoric Present (§21.3.3). The TAME categories attested in finite relatives are Imperfective (§21.2), Factual Non-Past (§21.3.1), Aorist (§21.5.1, as in 1 above) and Past Imperfective (§21.5.3).

Fourth, there are some restrictions on person indexation in finite relative clauses. Monotransitive verbs are not attested in the corpus in local forms, and in

inverse non-local forms (§23.5.3.1). Only *ditransitive* verbs allow inverse and local person forms in relatives.

Finite relative clauses are not compatible with subject relativization, but they can be used when relativizing objects (§23.5.3), semi-objects (§23.5.4), possessors of objects (§23.5.10.2), goals (§23.5.5.1), objects embedded in object complement clauses (§23.5.11.3) and some time adjuncts (§23.5.9).

23.2.3 Genitival relative

Both participial and finite prenominal relatives (§23.4.2) are attested with a genitive marker *ɣu* (§8.2.3.3) before the head noun, which generally does not take a possessive prefix in this construction. This type of construction is common in texts translated from Chinese, and is certainly due to calquing from Chinese in many cases, for instance in (2).

- (2) [uzo ku-ryzi] ɣu si u-pa nutcu jx-azyut-nu
 3SG IPFV-stay GEN tree 3SG.POSS-down DEM:LOC AOR-arrive-PL
 ‘They arrived at the bottom of the tree where he was staying.’ (140512
 alibaba-zh) {0003965#S22}

A similar tendency to calque Chinese relative constructions with the genitive is observed in other Gyalrongic languages (Lai 2018). For this reason, examples of genitival relative clauses from translated stories will not be taken into account in this chapter.

In non-translated texts and in conversations, prenominal genitival clauses are also marginally attested to relativize core arguments, as in (3), though this is uncommon. Finite prenominal genitival clauses are however often used for locative and temporal adjunct relativization (§23.5.5.1).

- (3) [tu-ɕɣru ɣu sm..., u-ku-nuismɿn] ɣu
 INDEF.POSS-bone GEN *incomplete word* 3SG.POSS-SBJ:PCP-treat GEN
smɿnba ɳu.
 doctor be:FACT
 ‘It is a doctor who treats bone [fractures].’ (140426 laXthAB)
 {0003810#S34}

This type of clause should not be confused with superficially similar constructions such as that of complement-taking nouns (§5.1.2.6), and with true genitival constructions with a headless relative clause possessor, as in (4), where the noun following the genitive (*tu-ɳa* ‘one’s face’) is not an argument of the relative clause.

23 Relative clauses

 IPFV-SBJ:PCP-CRY GEN GENR.POSS-face DEM a.little SENS-be.like LNK
 ‘It looks a bit like the face of someone crying.’ (18-qromJoR) {0003532#S97}

23.2.4 Relator nouns

Three inalienably possessed nouns, *u-stu* ‘place’, *u-sta* ‘place’ and *u-spa* ‘material’, are semantically bleached when used as head of prenominal relatives (§23.4.2), and are in the process of becoming grammaticalized as relativizers.

These three nouns are fossilized oblique participles (Table 16.4, §16.1.3.10). The former two are used to relativize locative adjuncts, more exceptionally goals (§23.5.5.3), while *u-spa* ‘material’ serves to build instrument (§23.5.6) and in some cases object relative clauses.

The noun *u-spa* still preserves its original meaning in examples such as (5), from which its other uses derive.

- (5) tu-jav ve nu ku [kɣ-ɕp^hyt] u-spa nu
 GENR.POSS-hand left DEM ERG OBJ:PCP-patch 3SG.POSS-material DEM
 ɲju-wy-su-st^hoɕ ɲu
 IPFV-INV-CAUS-press be:FACT
 ‘One presses with the left hand on the piece of cloth that is to be patched.’
 (12-kAtsxWb) {0003486#S33}

From the purposive object relative meaning ‘(material) that is to be Xed’ as in (5), an instrumental interpretation ‘(material) that is used to X’ arose: example (6) illustrates the semantic proximity between oblique instrumental relative clauses (§16.1.3.6) and the *u-spa* clauses. Purposive clauses in *u-spa* (§25.5.4) also derive from this type of constructions.

- (6) [pav u-sɣ-χsu] ɲu, [pav kɣ-mbi] u-spa
 pig 3SG.POSS-OBL:PCP-feed be:FACT pig OBJ:PCP-give 3SG.POSS-material
 ɲu
 be:FACT
 ‘It is pig fodder, it is [something that can] be given to pigs.’ (150822 laoye zuoshi zongshi duide-zh) {0006298#S170}

The relator nouns differ from other nouns serving as heads of relative clause in that they can occur even when an overt non-generic head noun is present, such as *k^huna* ‘dog’ in (7) and *kuspoɕ* ‘hole’ in (8).

- (7) *тырвабкци нун иц^hа, ку-гырваб, [кы-тсум]*

- (8) [*βzu у-сы-γи*] ***у-сту*** *куспор нутцу,*
 mouse 3SG.POSS-OBL:PCP-come 3SG.POSS-place hole DEM:LOC
иц^hа нуну з-ну-рку-ну.
 the.mentioned DEM TRAL-IPFV-put.in-PL
 ‘People put [the flower of the burdock] in the holes which mice come out from (as a trap).’ (13-tCamu) {0003498#S67}

These examples are very rare, and not unproblematic¹ but nevertheless suggest that *у-спа*, *у-сту* and *у-ста* are advancing in the grammaticalization cline. In the closely related language Khroskyabs (Lai 2017: 580), the clitic = *spi*, exact cognate of *у-спа* (Table 16.4, §16.1.3.10), has become the main object relativizer.²

23.2.5 Interrogative pronouns and correlative constructions

All interrogative pronouns, including *тс^hи* ‘what’ (§6.5.1), *цу* ‘who’ (§6.5.2), *ηотцу* ‘where’ (§6.5.4) and *т^hытцу* ‘when’ (§6.5.3), can be used in correlative relative constructions as free-choice indefinites ‘whoever/whatever/whenever’ (§6.6.6). The pronoun can occur on its own or in apposition with an overt head noun as in (9).

- (9) *узo ку [<cai> тс^hи та-ндза] нун гу у-мдоб нун*
 3SG ERG vegetable what AOR:3→3'-eat DEM GEN 3SG.POSS-colour DEM
ну-ндым ну-ну.
 IPFV-take[III] SENS-be
 ‘It takes the colour of whatever vegetable it has eaten.’ (25-caiqajW)
 {0003634#S18}

When a postclausal relator noun head (§23.4.2, §23.5.5.3) is present as in (10), the interrogative pronoun remains *in situ*.

¹It could be alternatively possible to analyze *ку-спор* as a subject participle (Table 16.2, §16.1.1.7), and argue that *у-сту ку-спор* is a participial relative ‘the place that has a hole’.

²The clitic = *spi* has a function that is still close to that of *у-спа* in examples such as (6): Lai (2017: 514) explains that it refers to ‘un objet spécifiquement destiné à subir l’action.’

23 Relative clauses

- (10) [*ɲotɕu jɣ-kuu-ɣri*] *u-stu* *nutɕu kuu-mɣrɕaβ*

 ‘People say that whatever place [the ladybug] flies to, is where one has to go to get married.’ (26-kWLAGpopo) {0003670#S38}

Correlative relatives can be participial (10, 11) or finite (9), depending on the function of the relativized element (§23.5).

- (11) [*u-jab* *tɕ^hi nuu-kuu-ye* *zo*] *tu-ndze*
 3SG.POSS-hand what AOR:WEST-SBJ:PCP-come[II] EMPH IPFV-eat[III]
 ‘It eats whatever it can get its hands on.’ (28-qapar) {0003700#S103}

In (12), the fact that the interrogative pronoun *ɕuu* ‘who’ takes the ergative shows that it belongs to the same clause as the transitive verb *lu-kɣ-tɕɣt*, as the matrix verb *c^ha* ‘can’ is intransitive (§14.2.3): it is therefore embedded within the complement clause.

- (12) [[*ɕuu kuu [kuu-muurkuu kuu-ɲu]* *lu-kɣ-tɕɣt*] *puu-kuu-c^ha*] *nuu*,
 who ERG SBJ:PCP-steal SBJ:PCP-be IPFV-INF-take.out AOR-SBJ:PCP-can DEM

 ‘Whoever_i [it is] whose_i fields happen to be [the ones that are to be ploughed by the whole village_j], those people_i cook meat (for the village_j).’ (150909 kWnWjIAmtshi) {0006306#S17}

Correlative relatives have commonalities with universal concessive conditionals (§25.2.3.3), but in the latter the subordinate clause and the main clause do not necessarily share a common element.

23.3 Morphosyntactic specificities of relative clauses

This section presents morphosyntactic phenomena distinguishing relative clauses from independent sentences or complement clauses, including resumptive pronouns (§23.3.1), case marking (§23.3.3), possessive prefix neutralization (§23.3.4), determiner replication (§23.3.5) and totalitative reduplication (§23.3.2).

It also shows that the demonstrative-like elements *nu* that follow the relatives are not complementizers (§23.3.5.2), and discusses word order within the relative, in particular the presence of postverbal elements in head-internal relative clauses (§23.3.6).

23.3.1 Resumptive pronouns

A resumptive third person pronoun *užo* occurs in conjoined relative clauses with the correlative additive focus marker *ri* (§9.1.6.2). It is obligatory in this construction when the relativized element is the intransitive subject, as in the clause *užo_i ri ku-sna* in (14).

- (14) *nunuw [u_i-p^hur ri ku-wxti] [užo_i ri ku-sna]*

 ‘The disgusting creature (the toad) came, it was big and disgusting.’
 (150818 muzhi guniang-zh) {0006334#S84}

³The Chinese original has 这只癞蛤蟆又大又丑 <zhè zhī làiháma yòu dà yòu chǒu> ‘the toad was big and ugly’.

in relative clauses. A more detailed discussion of this phenomenon is provided in §12.4.1.5.

Totalitative reduplication is specificity to relative clauses, and does not occur in complement clauses. It can be used as a test to distinguish between the two types of clauses in ambiguous cases (§23.8).

23.3.3 Genitive possessor

In object relative clauses (§23.5.3), transitive subjects can sometimes be marked by the genitive instead of the ergative, in particular when the agent can be construed as a possessor of the object, as in the finite headless relative in (20).

- (20) *azuy [nu-nu-βde-t-a] nu ú-ηu*
 1SG:GEN AOR-AUTO-throw-PST:TR-1SG DEM QU-be:FACT
 ‘Is it the one that I lost?’ (140427 bianfu jingji he shuiniao-zh)
 {0003836#S28}

Example (21) illustrates the hesitation between the ergative in the first relative clause, and the genitive in the second one (where the agent is the *former* possessor of the object).

- (21) *tce [atu tumwukyr̃ji kuw u-jav nu-kx-k^ho] nu,*
 LNK up.there heavenly(god) ERG 3SG.POSS-hand AOR-OBJ:PCP-give DEM

 ‘He turned [the magical object] that the god from heaven had given him,
 that Smanmi Metog had given him, [in the direction of the rākshâsas].’
 (2011-04-smanmi)

In the case of participial object relatives with a possessive prefix, the transitive subject/possessor does not require genitive marking, just in the same way as possessive prefixes on the possessum (with optional genitive) are sufficient to mark possession between two nouns (§5.1.1.2, §8.2.3.1). In (22) for instance, the pronoun *uzo* ‘it’ (the camel) directly precedes the participle *u-kx-ts^hi* ‘the (water) that it drinks’ without either ergative or genitive marker.

- (22) *u-zgo u-ηguw nuwcu uzo [u-kx-ts^hi]*
 3SG.POSS-mountain 3SG.POSS-inside DEM:LOC 3SG 3SG.POSS-OBJ:PCP-drink

 IPFV-AUTO-put.in[III] SENS-be.possible
 ‘[The camel] can store the [water] that it drinks in its hump.’
 (19-rNamoN) {0003552#S48}

23 Relative clauses

The transitive subject in these constructions is formally a possessor, external to the relative clause. In (23) in particular, the presence of the degree adverb *stu* ‘most’ (§26.4.1) between the pronoun *užo* and the head noun *u-sytč^ha* ‘its place’ is a clue that *užo* is not included in the relative clause.

- (23) *tceri užo [stu u-sytč^ha u-ky-nu-rga] nu,*
 LNK 3SG most 3SG.POSS-place 3SG.POSS-OBJ:PCP-APPL-like DEM
 ‘The place that it likes most...’ (20-xsar 10) {0003568#S10}

23.3.4 Possessive prefix neutralization

In relative clauses, the possessor of inalienably possessed nouns can be neutralized to the indefinite possessor prefix *tu-/tɣ-* (§5.1.3), even when the possessor is definite. In (24) for example, the possessor of *-ŋga* ‘clothes’ is the transitive subject of both sentences (the main character of the story), and is marked with the 3SG prefix *u-* in the first sentence. In the second sentence, the noun *-ŋga* is located in a head-internal relative clause (§23.5.4), and even though the possessor is the same as in the previous sentence, the indefinite prefix *tu-* appears.

- (24) *tcendyre u-ŋga ra jɣ-tɣyt tce icq^ha, [rgɣnmui ku*
 LNK 3SG.POSS-clothes PL IFR-take.off LNK FILLER old.woman ERG
tu-ŋga nu-ky-mbi] nura jɣ-tɣyt tce

 ‘He took off his clothes, he took off the (magical) clothes that the old woman had given him.’ (140508 shier ge tiaowu de gongzhu-zh)
 {0003937#S165}

Some inalienably possessed nouns have constraints on the syntactic function of the referent indexed by the possessive prefix (§5.1.2.13). In particular, *tɣ-pɣro* ‘present’ indexes the agent (the person giving the present) as possessor, never the recipient, as shown by (25), where a 2SG *nɣ-pɣro* or an indefinite possessor *tɣ-pɣro* would be agrammatical (see also examples 46 and 47 in §5.1.2.13).

- (25) *a-pɣro ju-ta-mbi ŋu*
 1SG.POSS-present IPFV-1→2-give be:FACT
 ‘I am giving it to you as a present.’ (elicited)

In relative clauses (whether participial or finite ones), it is possible to index the agent like in main clauses (26), but possessor neutralization is also possible, as in (27).

23.3 Morphosyntactic specificities of relative clauses

- (26) [*a-pɣro* *nuu-mbi-t-a*] *nuu a-rjit* *ɲu*
 1SG.POSS-present AOR-give-PST:TR-1SG DEM 1SG.POSS-child be:FACT

a-tɕu *ɲu*
 1SG.POSS-son be:FACT
 ‘The child to whom I gave a present is my son.’ (elicited)

Relative clauses are not the only syntactic contexts where possessor neutralization is attested: it also occurs when inalienably possessed nouns take prenominal modifiers (§5.1.4).

23.3.5 Determiners

23.3.5.1 Determiners on internal head

In head-internal and postnominal relatives, postnominal determiners such as the indefinite marker *ci* (§9.1.4.1) or the demonstrative *nuu* (§9.1.5.4) can appear both on the internal head noun and repeated following the relative clause. In (28) for instance, *ci* occurs after the noun *rɣɣɿpu* ‘king’ and at the end of the relative after the participle *kuu-ɲɣn* ‘(the one) who is evil’.

- (28) [*wuma zo* *rɣɣɿpu ci* *kuu-ɲɣn*] *ci* *pjɣ-tu* *tce*,
 really EMPH king INDEF SBJ:PCP-be.evil INDEF IFR.IPFV-exist LNK
 ‘There was a very evil king.’ (140511 1001 yinzi-zh) {0003963#S9}

In (29), the indefinite *ci* is also repeated after the head noun *kuuspoɐ* ‘hole’ (a lexicalized participle, §16.1.1.7) and following the participle *sɣz-nuu-tɔɐ* ‘which (the smoke) comes out from’ (with locative §16.1.3.5 or instrumental §23.5.6 relativizing function). In this case the relative can be analyzed as either postnominal or head-internal.

- (29) [*kuu-spoɐ* *ci* *tx-k^hu* *sɣz-nuu-tɔɐ*]

ci *ɲu-βze*
 INDEF IPFV-make[III]
 ‘[The potter] makes a hole which the smoke comes out from.’
 (30-kWrafcAr) {0003740#S27}

23 Relative clauses

Determiner repetition is also found with relativized transitive subjects marked with the ergative (see 44 in §23.4.3.2).

Examples like (28) and (29) are however relatively rare, in most cases the determiner either follows the relative (see for example 53 in §23.5.1) or the head noun (30)

- (30) [pɣɣtɕu ci ku-mɕɕu~mɕɕɣ zo] jɣ-ɣe
 bird INDEF SBJ:PCP-EMPH~be.beautiful EMPH AOR-come[II]
 ‘A beautiful bird came.’ (2003 qachGa) {0003372#S14}

In the case of prenominal relatives, the determiner *ci* can be found between the head noun and the relative clause, as in (31). This usage is not to be confused with that of prenominal *ci* (§9.1.7).

- (31) tɕe [nu ku-fse] ci qajw ɣɣzu.
 LNK DEM SBJ:PCP-be.like INDEF bug exist:SENS
 ‘There is a bug (invertebrate animal) that is like that.’ (hist180421 haixing)
 {0006113#S27}

23.3.5.2 Determiner or complementizer

An important proportion of relative clauses are followed by the forms *nu* and *nunu*, whose functions in other contexts include distal demonstrative pronouns (§6.9), demonstrative determiners (§9.1.2) or topic markers (§9.1.5.4, §9.1.4.3), and *ra* (and *nura*), a plural marker (§9.1.1.2). In the case of finite relative clauses (§23.2.2), whose main verb generally has the same form as that of the corresponding independent sentence (in 32 for instance), the presence of these words may be the only clue that the clause is a relative.

- (32) [izo ndɣre pu-χsu-j] nu, tu-rdoɓ tɕ^{hi} mu-pu-nnu-pe
 1PL LNK AOR-feed-1PL DEM one-piece what NEG-PST.IPFV-AUTO-be.good

 NEG-GENR:know LNK DEM like.that IFR-die
 ‘Of the [tortoises] that we raised, one [of them] died just like that, I don’t know what went wrong.’ (140510 wugui) {0003951#S51}

Given the fact that many languages have complementizers, including relative pronouns, which are homophonous with (and historically related to) demonstratives (for instance ‘that’ in English), it is legitimate to wonder whether such an analysis is possible for the *nu* or *nura* that follow relative clauses.

23.3 Morphosyntactic specificities of relative clauses

However, in prenominal relatives such as (33), *nu* is located *after* the head noun, for instance *čku* ‘Allium’ in (33), never before it. If it were a subordinator, one would expect *nu* to be located between the head noun and the relative.

 ‘These are the [plants belonging to the gender] *Allium* that I know about.’
 (07-Cku) {0003424#S160}

Another clue that *nu*, *numu* and *nura* in this context are better analyzed as demonstrative determiners (§9.1.2, with or without topicalizing function, §9.1.5.4, §9.1.4.3) is that relative clauses can take circumposed demonstratives (exactly like circumnominal demonstratives, §9.1.2), as shown by the pre- and post-clausal *numu* in (34).

- (34) *numu [pyrnoβ kx-ti] numu tyjmxγ tyxca ŋu-ŋu*

 ‘That [thing that] is called *pyrnoβ* is probably [to be classified] among
 the fungi.’ (22-BlamajmAG) {0003584#S130}

23.3.6 Postverbal elements

Although Japhug is a strict verb-final language, some words can appear postverbally in independent sentences, including sentence-final particles (§10.2.1), ideophones (§10.1.1) and some adverbs (§22.2.7).

Relative clauses never take sentence-final particles (unlike some complement clauses, §24.2.5.1), but some postverbal elements are nevertheless possible.

First, the adverb *tsa* ‘a little’ can occur postverbally with a semantic scope clearly restricted to the relative clause, as in (35)

- (35) [*nu-luz t^hu-ku-ye tsa*] *nura tce, vduɽɣɣt*
 3PL.POSS-age AOR-SBJ:PCP-come[II] a.little DEM:PL LNK TOPO
u-skɣt tu-βze-a ŋu-tso-nu,

 ‘Those who are a little older understand when I speak the [Japhug]
 language of Gdongbrgyad. (150901 tshuBdWnskAt) {0006242#S11}

Ideophones are very commonly postverbal even in relative clauses, as in (36), though mainly with stative verbs in subject participle form.

23 Relative clauses

- (36) *tce nuu u-βri u-taβ nura qandzi*
 LNK 3SG.POSS-body 3SG.POSS-TOP DEM:PL be.dark:FACT SBJ:PCP-be.like
ku-fse, aɣɣɣrum ku-fse ma [ku-wyrɯ~wyrum zo

 ‘The top part [of the mushroom called *kuyrumɣy* ‘white mushroom’] is dark, whitish, it is not pure white.’ (21-kuGrummAG) {0003574#S2}

The emphatic *zo* (§26.1.1.5) is also analyzable as a postverbal adverb especially when followed by a demonstrative determiner as in (37) (see also 16 and 18, §23.3.2).

- (37) [*skɣm-ndzi ku-jɯ~jaβ*], [*stu ku-jaβ zo*] *nuu*
 ox-skin SBJ:PCP-EMPH~be.thick most SBJ:PCP-be.thick EMPH DEM
tu-qɣr-nuu tce
 IPFV-select-PL LNK
 ‘People select very thick ox skin, the thickest.’ (24-mbGo) {0003621}

However, the indefinite determiner *ci* is also attested before the emphatic *zo* as in (38), showing that it is external to the relative in this case, since *ci* itself must be external (otherwise it would be located just after the head noun *smar* ‘river’, §23.3.5.1).

- (38) [*smar ku-wxtɯ~wxti*] *ci zo pu-tu nu-ŋu*
 river SBJ:PCP-EMPH~be.big INDEF EMPH PST.IPFV-exist SENS-be
 ‘There was a huge river.’ (2005 Kunbzang)

In the absence of determiner (as in 16, §23.3.2), it is unclear whether postverbal *zo* belongs to the relative or not.

23.4 Position of the relativized element

Pre-, post-nominal and head-internal relative clauses are all attested in Japhug, though the position of the relativized element is not free and depends on various factors, in particular its function in the relative clause.

23.4.1 Headless

An important proportion, if not a large majority of the relatives in the corpus lack an overt head. For instance, in (39), minimal relative clause *pu-ku-si* ‘(the one(s)) that has/have died’ only contains a verb in participial form (§16.1.1.4).⁴

- (39) [*pu-ku-si*] *u-ca* *nu tu-ndze* *ɲu* *ma*.
 AOR-SBJ:PCP-die 3SG.POSS-flesh DEM IPFV-eat[III] be:FACT LNK
 ‘[Crows] eat the flesh of [animals] that have died.’ (22-qajdo)
 {0003596#S15}

Nominal heads are optional in relative clauses (as they are in the noun phrase in general, §9.3). The only non-optional heads are the resumptive pronouns that occur in a very specific construction (§23.3.1) and the possessive prefixes on the possessee in relatives whose heads are possessor of subject or object (§23.5.10).

23.4.2 Prenominal

Three types of prenominal relatives must be distinguished, depending on the nature of the relationship between the head noun and the relative clause.

First, *genitival* prenominal relatives are those in which the genitive marker *ɲu* is inserted between the subordinate clause and the head noun (§23.2.3).

Second, *relator noun* prenominal relatives take generic inalienably possessed noun such as *u-spa* ‘material’ (§23.5.6, §23.2.4), *u-stu* ‘place’ (§23.5.5.3) or *u-sɲi* ‘the day when’ (§23.5.9). This type of prenominal clauses are common in the case of adjunct relativization.

Third, *standard* prenominal relative clauses have head nouns without possessive prefixes (unless the head noun is inalienably possessed, in which case possessor neutralization may take place, §23.3.4). They are the preferred relativization type in the case of transitive subjects (§23.5.2), and are also available for other core arguments (§23.5.3, §23.5.1).

23.4.3 Head-internal

When the head noun of the relative is overt, it can occur within the relative at the position that would be expected in the corresponding independent sentence: for instance, the noun *tu-ɲga* ‘clothes’ is located between the instrumental adjunct and the verb both in the head-internal relative in (40) and in the independent clause in (41).

⁴The noun *u-ca* ‘its meat/flesh’ in (39) is not the head of the relative, but the possessee of that head (§23.2.3).

The following subsections focus on the conditions where head-internal relatives are selected rather than prenominal ones (§23.4.3.1), and on the criteria that can be used to distinguish between head-internal and postnominal relatives (§23.4.3.2).

23.4.3.1 Head-internal vs. prenominal relatives

Core argument relatives can be either head-internal or prenominal. When the relativized element is the transitive subject, prenominal position is more common (§23.5.2), but for intransitive subject (§23.5.1), direct object (§23.5.3) and quasi-objects (§23.5.4), head-internal relatives are by far the most common type.

When the relativized element is a noun such as *tu-tɕ^ha* ‘information, news’ or *ftɕaka* ‘method’ which can take adnominal complements (§24.6), only head-internal relatives are possible, as prenominal clauses are interpreted as complements instead of relatives. For instance, the head noun *tu-tɕ^ha* in (42) cannot be moved after the participle: †*a-tɕu ku jɣ-kɣ-ɣut tu-tɕ^ha nu* is not accepted.

- (42) [*a-tɕu* *ku tu-tɕ^ha* *jɣ-kɣ-ɣut*] *nu ɲu-pe*
 1SG.POSS-son ERG INDEF.POSS-news AOR-OBJ:PCP-bring DEM SENS-be.good
 ‘The information that my son has brought is pleasing.’ (elicited)

23.4.3.2 Head-internal vs. postnominal relatives

Since Japhug has strict verb-final order (§22.1.1), in head-internal relative clauses the verb follows the head noun, as it would in a postnominal relative. In many cases it is indeed impossible to ascertain whether the head-noun belongs or not to

23 Relative clauses

In the case of object relatives, the presence of the transitive subject (*tx-tɕu nu ku* ‘the boy’ in 46), of an adjunct (the instrumental phrase *rɲul ku* ‘from silver’ in 47) or of an adverb (*at^{hi}* DOWNSTREAM in 48) belonging to the relative before the head noun are sufficient criteria to show that the relative is head-internal, and cannot be analyzed as post-nominal.

23.4.4 Postnominal

There are only few unambiguous postnominal relative clauses in Japhug, since most relative clauses comprising a noun and a verb can be analyzed as minimal head-internal relatives. The only clear cases are provided by transitive subject (§23.5.2) participial relative clauses in *ku-* (§16.1.1.4). In these cases, the head noun, being a transitive subject, must take the ergative *ku* (§8.2.2.1) if embedded in the clause. The presence or absence of ergative flagging can therefore be used as a criterion to distinguish between postnominal and head-internal clauses (§23.4.3.2). Examples are rather uncommon, since transitive subject relative clauses are most commonly prenominal (§23.5.2).

Many examples of postnominal relatives are preceded by a pause, as in (49), and are appositive clauses, rather than truly subordinate clauses.

- (49) *tx-mu* *ci*, [*tu-sɲaβ* *ra*
 INDEF.POSS-mother INDEF NMLZ:ACTION-cast.a.spell PL

 ‘There was an old woman who knew spells.’ (150818 muzhi guniang-zh)
 {0006334#S15}

Several examples of postnominal clauses are found with perception verbs with totalitative reduplication, such as (50) below, (19) in §23.3.2 above and (56) in §23.5.2.

- (50) [*turme ra [pu~pu-ku-mto]]* *ku* “wo, *nu*

 3SG.POSS-NMLZ:DEG-be.good SFP always IFR-say-PL
 ‘All the people who saw it said ‘It is so nice!’.’ (150827 mengjiangnv-zh)
 {0006290#S24}

When the relativized element is the intransitive subject, head-internal and postnominal relatives can be distinguished by the relative position of head nouns and adjuncts. It is particularly clear in the case of the comparative construction (§23.5.1.2).

23.5 Function of the relativized element

This section presents a classification of relative clauses based on the syntactic function of the relativized element inside the relative.

Core arguments, possessor of core arguments as well as a certain number of adjuncts can be relativized using participial or finite clauses. The syntactic functions that are not accessible to relativization are listed in §23.5.12.

23.5.1 Intransitive subject

The only way to relativize intransitive subjects in Japhug is by a subject participial relative in *ku-* (§16.1.1.4).

23.5.1.1 Position of the head noun

When the head noun of an intransitive subject relative is overt, it is generally located before the participle as in (51). This example can be analyzed either as a postnominal relative (§23.4.4) or as minimal head-internal relative (§23.4.3).

23 Relative clauses

- (51) [*tr-rzaβ* *jɣ-kw-ye*] *nunw k^hro*
 INDEF.POSS-wife AOR-SBJ:PCP-come[II] DEM much
mw-pw-sna *ɲw-ɲu.*
 NEG-PST.IPFV-be.good SENS-be
 ‘The wife who had come [to their house] (i.e. that they had married) was not nice.’ (meimeidegushi)

The presence of adjuncts, such as *ku-mɣku* ‘before’ (§16.2.1.8) before the head noun offers evidence that, in some cases, the head-internal relative analysis is preferable (§23.4.3). Example (52) also illustrates that head-internal relatives with embedded purposive complements located between the head noun and the verb are possible.

- (52) *icq^ha* [*kw-mɣku* *tcaɣpa* [*kw-nɣrura*]
 the.mentioned INF:STAT-be.before thief SBJ:PCP-look.around

 AOR-SBJ:PCP-go[II] DEM two DEM IFR-kill
 ‘He killed the two thieves who had gone scouting just before.’ (140512 alibaba-zh) {0003965#S188}

Prenominal clauses (§23.4.2) are less common than head-internal or postnominal ones in the case of intransitive subject relativization, but still attested, especially in the case of multiple relative clauses sharing the same head noun, as in (53).

- (53) [*muŋji kɣ-kw-ye*] *ɣpwn* [*t^hw-kw-rgvz*] *ci*
 TOPO AOR:EAST-SBJ:PCP-come[II] monk AOR-SBJ:PCP-be.old INDEF
pjɣ-tu *tce*
 IPFV.IFR-exist
 ‘There was an old monk who had come from Mengi.’ (08-kWqhi) {0003454#S18}

Participles of adjectival stative verbs in attributive function are one of the most common type of subject relative clauses (this construction is discussed in more detail in §9.1.8.3).

23.5.1.2 Comparee

The compared element of comparative constructions is relativized like a normal intransitive subjects, but with an overt standard. Head-internal (54a), postnominal (54b) and prenominal (54c) relatives are all attested and equally common, and

can be distinguished by the relative position of the head noun and the standard of comparison *užo svz* ‘than him/her/itself’.

- (54) a. [*užo svz rudaš ku-xtci*] *nura tu-ndze*

mɣ-xsi ma
 NEG-GENR:know LNK
 ‘I don’t know whether it eats the bugs that are smaller than itself.’
 (26-kWrNukWGndZWt) {0003672#S48}

23.5.2 Transitive subject

Transitive subjects are exclusively relativized using subject participial relative clauses in *ku-* (§16.1.1.4) like intransitive subjects (§23.5.1), but take a possessive prefix coreferent with the object (§16.1.1.1), unless another prefix is present (§16.1.1.2).

In a minority of cases, the transitive subject head noun can occur before the verb. In this position, it sometimes takes the ergative, as illustrated by the phrase *tx-nmaš nu ku* in (55).

- (55) [*tx-nmaš nu ku u-rzaβ ku-ɣntc^hu*
 INDEF.POSS-husband DEM ERG 3SG.POSS-wife SBJ:PCP-be.several
ju-ku-nu-car], [*aβyndumdvt tɣndɣri*
 IPFV-SBJ:PCP-AUTO-search everywhere illegitimate.child
tu-ku-βzu] *pjɣ-tu.*
 IPFV-SBJ:PCP-make IFR.IPFV-exist
 ‘There were men who had several female companions, and had
 illegitimate children everywhere.’ (140427 tAndAGri) {0003858#S3}

The presence of the ergative here unambiguously indicates that the relative is head-internal and that the transitive subject is embedded inside it, since the main verb *pjɣ-tu* ‘there used to be’ is intransitive (§23.4.3.1).

Alternatively, the transitive subject can occur in absolutive form (for example *turme* ‘person’ in 56),⁶ showing that the relative is postnominal (§23.4.4).

- (56) [*turme* [*pu~pu-ku-mto*]] *ku pu-nɣ-mpɕɣr-nu* *tɕe*
 person TOTAL~AOR-SBJ:PCP-see ERG SENS-TROP-be.beautiful-PL LNK

 SENS-be.good IPFV-say-PL IFR.IPFV-be
 ‘All the people who saw it found it beautiful and said it was nice.’ (140510
 sanpian yumao-zh) {0003947#S83}

There are no examples of double ergative marking, with a head-internal relative in transitive subject function in the main clause itself, taking the ergative both on the head noun and at the end of the clause, for instance as construction such as ?[*turme ku pu~pu-ku-mto*] *ku* instead of [*turme [pu~pu-ku-mto]*] *ku* in (56).

23.5.3 Object

Relativization of direct objects allows for a greater variety of constructions than that of subjects: both finite and participial relative clauses are possible.

In object participial relatives, the participle can be prefixed with an orientation preverb as in (57), or with a possessive prefix coreferent with transitive subject. In the first case (restricted to third person subjects), the relatives are most commonly head-internal (or postnominal) as in (57), but other constructions are possible. Attested types of object participial relatives are described in §16.1.2.4.

- (57) [*tɕ^heme pu-kɣ-sat*] *nu pyɣtɕu ci* *to-sci* *q^he*,
 girl AOR-SBJ:PCP-kill DEM bird INDEF IFR:UP-be.born LNK
 ‘The girl who had been killed was reborn as a bird.’ (2014-kWLAG)

Since object participles cannot take both possessive prefixes and orientation preverbs (§16.1.2.1), finite relativization is the only way to specify both TAME and person in an object relative, as in (58) and (59).

⁶In (56), the ergative *ku* follows the relative clause, which has transitive subject function in the main clause. The head noun *turme* itself is not assigned ergative case by the transitive participle *pu~pu-ku-mto*.

- (58) *nu [qajw kw-ɲax tu-ti-a] nu nu kw-fse*

 ‘Try the chisel that you have just whetted.’ (150902 luban-zh)
 {0006268#S116}

Object finite relatives with overt head noun are mainly head-internal, as (59) (see also §23.4.3.2), or ambiguous between postnominal and head-internal as in (58). Prenominal finite relatives are attested, but rarer. All four possibilities to relativize objects (finite vs? participial, head-internal vs. prenominal) are illustrated in (60).

- (60) a. *[a-tɕw kw ɲya pa-mto] nu*

 d. *[a-tɕw kw pu-kɣ-mto] ɲya nu*
 1SG.POSS-SON ERG AOR-OBJ:PCP-see bird DEM
 ‘The bird that my son saw’ (elicited)

There are some contexts where finite relatives have to be head-internal or postnominal and where the prenominal position is agrammatical (§23.4.3.1).

23.5.3.1 Monotransitive verbs

When the object of monotransitive verbs are relativized using a finite relative, the verb must be in direct form, even when the transitive subject of the relative has a possessive prefix coreferent with the object. For instance, in (61), only the 3→3' form *ka-nurov* is possible, the inverse 3'→3 configuration *kɣ-wy-nurov* is not possible in the context.

23 Relative clauses

- (61) [*u_i-mu* *ku ka-nuipov*] *tv-prtso_i* *nuu*
 3SG.POSS-mother ERG AOR:3→3'-kiss INDEF.POSS-child DEM
 'The child whose mother kissed him' (elicited)

In addition, only third person object forms (excluding inverse 3→1/2 and local configurations) of monotransitive verbs can be relativized. This constraint does not apply to triactantial causative (§23.5.3.3) or secundative verbs (§23.5.4.2).

23.5.3.2 Theme of indirective verbs

The theme of indirective verbs such as *k^ho* 'give' or *ti* 'say' (§14.4.1) has the same morphosyntactic status as the direct object of a monotransitive verb, both from the point of view of person indexation and of relativization: it is also relativizable by both finite clauses (62) and object participial clauses (63).

- (62) *tytcupu nuu ku [icq^ha mbala-do nuu ku tv-ky-tut]* *nuu*

23.5.3.3 Object of causativized transitive verbs

Causativized transitive verbs are triactantial (causer, causee and object, §14.4.3) and differ from monotransitive verbs (§23.5.3.1) in that their object can be relativized using finite relatives with a verb in inverse configuration (64) or with a first or second person object (including local configurations, as in 65).

- (64) [*tç-wy-z-nymno*] *nuura ku~ku-fsu~fse* *zo*

 'She saw the calf that you had me take back home.' (140512 fushang he
 yaomo1-zh) {0003969#S128}

In examples (64) and (65), the person configuration indexes causer and causee, not the direct object.

The theme of secundative verbs can be relativized using the same type of constructions (§23.5.4.2).

23.5.3.4 Only argument of transitive verbs with dummy subjects

The only argument of dummy transitive verbs (§14.3.5), despite resembling a direct object, is relativized with subject participles, as *tu-kuu-rku* in (66) (§22.4.2.7) and *ku-kuu-ts^hoɕ* in (67) (§22.4.2.8).

- (66) *nure ri tɕ^huwuur tu-rke ɲu tce, tce [tɕ^huwuur*

 (19-khWlu) {0003540#S85}

Finite clauses and object participial clauses cannot be used to relativize these arguments. This is one of the clues (§16.2.3, §14.3.5) that the verbs in these constructions are only partially transitive.

23.5.4 Quasi-objects

A certain number of absolutive arguments that are not indexed as direct objects on the verb (§14.3.2)) have objectal properties: the semi-objects of semi-transitive verbs (§14.2.3) and the themes of secundative verbs (§14.4.2). They can be relativized like direct objects of monotransitive verbs, both with finite and participial relatives (Jacques 2016d).

23.5.4.1 Semi-objects

Semi transitive verbs like *rga* ‘like’, *βɣɿt* ‘obtain’ or *aro* ‘own’ are morphologically intransitive and their subject is marked in the absolutive (§14.2.3), but they take in addition an absolutive semi-object (§8.1.5). The semi-object can be relativized with either object participial relatives (68) or finite relative clauses as in (69) and (70).

- (68) [*pya ra nuu-ky-rga*] *nuu qaj ntsu ɲu*
 bird PL 3PL-OBJ:PCP-like DEM wheat always be:FACT
 ‘[The food] that birds like is always wheat (not barley).’ (23 pGAYaR)
 {0003606#S24}

- (70) [*azo qazo aro-a*] *nuu kuuki ɲu*
 1SG SHEEP OWN:FACT-1SG DEM DEM.PROX be:FACT
 ‘The sheep that I own is this one.’ (elicitation)

23.5.4.2 Theme of secundative verbs

Secundative verbs such as *mbi* ‘give’ or *suxɕɿt* ‘teach’ index the recipient as direct object, but also take a non-indexed absolutive argument referring to the theme (§14.4.2). When both the subject and the direct object are third person, theme can be relativized either with a finite clause (71, 72) or an object participial clause (example 24, §23.3.4). Head-internal clauses are most common (71), but prenominal and even genitival ones (§23.2.3) are also found, as in (72).

- (71) [*sla ku, nyki, kumpyɣ-ɲɣum nú-wy-mbi*] *nuu pjɣ-qruw*

 ‘He taught his three wives the mantra that the Buddhas had taught him.’
 (2012 Norbzang) {0003768#S311}

In finite relative clauses, the inverse 3'→3 configuration is most often found when the transitive subject of the main clause corresponds to the direct object (recipient) of the relative clause, as in (71) and (72), and the relativized element is the theme. Secundative verbs resemble in this regard causativized transitive verbs (§23.5.3.3) and differ from monotransitive verbs, whose objects cannot be relativized using a finite 3'→3 configuration (§23.5.3.1).

The themes of secundative verbs being relativized with the same constructions as their direct objects, ambiguity can arise especially in the case of short relatives. For instance, the participle *a-ky-suxcɛxt* of *suxcɛxt* 'teach' can be understood as relativizing the direct object/recipient (73a) or the theme (73b). The antipassive can be used to disambiguate: since this derivation removes the object, the only interpretation left for the antipassive participle *a-ky-sɣ-suxcɛxt* is theme relativization 'the (subject) that I taught' (see also example 80, §16.1.2.4).

- (73) a. [*a-ky-suxcɛxt*] *nw ɬamu pu-ŋu*.
1SG-OBJ:PCP-teach DEM ANTHR PST.IPFV-be

1SG.POSS-son INDEF.POSS-present AOR-give-PST:TR-1SG DEM toy
pu-ŋu
PST.IPFV-be
'The present I gave my son was a toy.' (elicited)

Finite clauses are needed to specify both TAME and a first or second person subject, as in (74a) and (74b), as object participles cannot index the subject (73a) while at the time taking an orientation preverb.

23 Relative clauses

Finite relative clauses are also required to index a first or second person direct object (recipient), for instance in local configurations such as ‘the thing that I have (taught/given) you’ in (75). This type of clause is only interpretable as theme relativization.

- (75) *a-tɕu tu~tu~ŋu nɣ, [pu-ta-suixɕt] nu ci nu-ndun*

23.5.5 Goal and locative

Relativization of locative/goal adjuncts or arguments with oblique participial clauses is described in §16.1.3.5. This section presents the relativization of locative phrases with finite clauses, object participles and relator nouns.

23.5.5.1 Finite relativization

Locative marking on goals and locative arguments and adjuncts is optional, and they can occur in absolutive form (§8.1.8), like semi-objects (§8.1.5). Another commonality between goal/locative arguments and semi-objects is the ability to be relativized using finite relative clauses (§23.5.4.1).

Finite locative relative clauses are most often prenominal, in particular with a genitive marker (§23.2.3), as in (76).

- (76) [*zara ku-lyy nu-ce-nu*] *yu tɕu ci tu tɕe*
 3PL SBJ:PCP-herd IPFV:WEST-go-PL GEN path INDEF exist:FACT LNK
 ‘(At that place), there is a path which they take to go herd [cattle].’
 (140522 Kamnyu zgo) {0004059#S292}

Headless (77) and head-internal (78) finite locative relatives are also attested. In the latter case, the head noun cannot receive locative case, and must be in absolutive form.

- (77) [*ku-ryzi*] *nu k^hu u-sta cti ndɣre*
 IPFV-stay DEM tiger 3SG.POSS-place be.AFF:FACT LNK
 ‘The place where he is [now] is a tiger’s lair.’ (2003kandZislama)

 house IFR-INV-take.away-PL DEM all iron ERG
nur-ky-suu-βzu] *k^ha pjy-ŋu*
 AOR-OBJ:PCP-CAUS-make house IFR.IPFV-be
 ‘The house where [the king] had taken them, it was a house completely
 made of iron’ (140505 liuhaohan zoubian tianxia-zh) {0003913#S149}

Non-permanent and non-specific location can be relativized with finite relative clauses, as in (77) and (78). Thus, the finite relative *ku-ryzi nuu* in (77) can be translated as ‘the place where he happens to be’ while ‘the place where he stays (permanently), his staying place’ is better expressed with an oblique participle *u-(sy)z-ryzi* (§16.1.3.5).

23.5.5.2 Object participle

The negative object participle of the perception verbs *mto* ‘see’ and *mts^hym* ‘hear’ has a special use: in (79) for instance, *u-mx-ky-mto* means ‘(somewhere) s/he cannot see him/her’, the relativized element being locative rather than object (see §16.1.2.5 for further discussion). This type of relative clauses are always headless.

- (79) [*icq^ha qacpa kuw u-mx-ky-mto zo*] *jo-ce*
 the.aforementioned frog ERG 3SG.POSS-NEG-OBJ:PCP-see EMPH IFR-go
 ‘She went to [a place] where the frog would not find her.’ (150818 muzhi
 guniang-zh) {0006334#S143}

23.5.5.3 Relator noun

The two inalienably possessed nouns *u-stu* ‘place’ and *u-sta* ‘place’, both originating from lexicalized oblique participles (Table 16.4, §16.1.3.10) can be used as relator nouns of prenominal locative relative clauses.

The noun *u-stu* ‘place’ either selects subject participial clauses, as in (80) and (81), or oblique participial clauses (82). The relativized element can be a static location, but also a goal (see 10, §23.2.5).

- (80) [*užo kuw-ryzi u-stu zo nuu kú-wy-suu-ysuy*].
 3SG SBJ:PCP-stay 3SG.POSS-place EMPH DEM IPFV-INV-CAUS-be.tight
 ‘One presses the place (in the cow’s hide) where [the bug] is.’
 (25-akWzgumba) {0003666#S11}

23 Relative clauses

- (81) [nunu tu-yntym ly-kw-za] u-stu nu

 3SG.POSS-rump IPFV-GENR-say be:FACT
 ‘(When one goes upstream), the place where [the slope of the mountain] starts getting flatter (i.e. the point of inflection in the slope of the mountain) is called the ‘rump’ (of the mountain).’ (150908 Wmphsku) {0006302#S8}

- (82) zara [nu-sy-ynbaʃ] u-stu nutcu
 3PL 3PL.POSS-OBL:PCP-hide 3SG.POSS-place DEM:LOC
 jo-nu-ʈob-nu tce,
 IFR-AUTO-come.out-PL LNK
 ‘They came out of their hiding place.’ (140426 luozhi he qiangdao-zh) {0003814#S23}

The noun *u-sta*, though also compatible with subject participial clauses, is more often found with finite relative clauses, as illustrated by (83) and (85).

- (83) [pu-nvŋkuŋke] u-sta nuura rcanu, tu-cnaʃ
 PST.IPFV-DISTR:walk 3SG.POSS-place DEM:LOC UNEXP:DEG INDEF.POSS-snot
 pu-kx-βde zo fse
 AOR-OBJ:PCP-throw EMPH be.like:FACT
 ‘The places where [the slug] has passed look like snot has been spilled [on them].’ (26-qro) {0003682#S128}

While *u-stu* and *u-sta* have very close meanings, in the case of verbs taking a goal such as *ru* ‘look at’ (§15.1.2.4), a semantic difference can be observed: the former specifically indicates the goal (84a), while the latter is used to indicate the place where the action takes place (84b).

- (84) a. ly-ru u-stu nutcu
 AOR:UPSTREAM-look 3SG.POSS-place DEM:LOC
 ‘The direction (upwards) he looked.’ (elicited)
 b. ly-ru u-sta nutcu
 AOR:UPSTREAM-look 3SG.POSS-place DEM:LOC
 ‘The place where/from which he looked upwards.’ (elicited)

For instance, in (85), the clause *t^hu-nvq^haru u-sta* cannot be understood as ‘the place where he had looked back (in whose direction he looked)’.

- (85) *lo-ce tce tcelo [t^hu-nɣq^haru]*
 IFR:UPSTREAM-go LNK upstream AOR:DOWNSTREAM-look.back

 ‘He went up there, and when he arrived at the place up there that he had looked back from, he looked back again.’ (2003 kAndzwsqhaj.2)

23.5.6 Instrument

Instruments are most commonly relativized using oblique participial relatives (§16.1.3.6). All instrument oblique relatives in the corpus are headless, and often limited to the participle itself. When the nominalized verb is transitive, the participial relative can contain an object as in (86).⁷

- (86) *numu [qandzi c^hu-sɣ-ynda] nu t^hoŋt^hɣr juu-rmi*
 DEM bullet IPF-OBL:PCP-ram DEM ramrod SENS-be.called
 ‘What is used to ram a bullet [into the muzzle of the gun] is called a ramrod.’ (28-CAmWGdW) {0003712#S52}

Instrumental participial relative clauses can take the generic inalienably possessed noun *u-spa* ‘material’ as overt head, to disambiguate with other types of relatives, in particular locative ones, built with an oblique participle (§16.1.3). For instance, in (87), the focus is on the use of the path (a path specially made in order to be able to walk inside the field), rather than simply on the location (‘the place where one walks’).

- (87) *tce tu-ji u-ɣcɣl tu-ku-ŋke*

 path DEM summer.path IPFV-GENR-say be:FACT
 ‘One cannot walk in the middle of the fields, because there are crops. To walk into it, one specially makes a path, and that path is call ‘summer path’.’ (definition, 15-06-05)

⁷Antipassivization is required to demote the direct object even for participial verb forms (§18.6.7.4).

23 Relative clauses

Alternatively, in the case of verbs with a sigmatic causative prefix in instrumental function (§17.2.5.8), the instrument can be relativized as if it were a transitive subject using the *ku-* participle (§16.1.1.4, §23.5.2), for example *u-ku-su-mp^hul* ‘(the thing) that it reproduces with, (the thing) which makes it reproduce’ in (88).

- (88) *tceri nunu [u-ku-su-mp^hul] nu li u-zrym*

 ‘What it reproduces with is its root, not its seeds.’ (11-paRzwamWntoR)
 {0003476#S100}

23.5.7 Comitative

Comitative arguments marked with the postposition *c^ho* (§8.2.5) can be relativized with the oblique participle (§16.1.3.7). Such relatives are generally headless, as in (89).⁸

- (89) *uzo u-χti nu-me tce, nu-syzduxpa tce*
 3SG 3SG.POSS-companion IFR-not.exist LNK SENS-be.pitiful LNK

 mushroom 3SG.POSS-OBL:PCP-be.many EMPH SENS-be now
 ‘Now is a [period] when mushrooms are abundant.’ (conversation,
 16-08-11)

The more common way of relativizing temporal adjuncts is by using finite clauses followed by a temporal relator noun in 3SG possessive form such as *ur-sji* ‘the day when...’ (95), *ur-xpa* ‘the year when...’ (96), or *ur-raj* ‘the time when...’ etc.

- (95) [*slxzun tu*] *c^ho*] [*εmbyuzun tu*] *ur-sji*

 ‘They say that the year when our Chairman Mao passed away, Venus did
 not appear.’ (29-LAntshAm) {0003726#S75}

23.5.10 Possessor

Possessors of intransitive subjects and direct objects can be relativized using the same relative constructions as their possessees. It is unclear whether possessors of other arguments can be relativized (in particular possessors of transitive subjects).

23.5.10.1 Possessor of intransitive subject

Possessors of intransitive subjects are relativized with subject participial clauses (§16.1.1.5). In this construction, the subject of the clause is overt and takes an obligatory possessive prefix, such as the 3PL *nu-* in (97).¹⁰

- (97) [*nu-mte^{hi}* *ku-dɣn*] *nuwa*
 3PL.POSS-mouth SBJ:PCP-be.many DEM:PL
 ‘Those who talk too much’ (24-qro) {0003626#S112}

The head noun can be overt as in (98), with determiner repetition (§23.3.5.1).

- (98) *akuw zuw [qapri ci w-kyɣcɣl w-bruw kuw-tu]*
 east LOC snake INDEF 3SG.POSS-top.of.head 3SG.POSS-horn SBJ:PCP-exist
ci ɣɣzu tce
 INDEF exist:SENS LNK
 ‘In the east, there is a snake with a horn on his head.’ (2005, divinitation)

Prenominal possessor relatives are also attested, but extremely rare, and the third person possessive prefix on the possessee is required as in (99).

- (99) [*w-cu kuw-tu]* *rɣɣyi pɣɣ-cti*
 3SG.POSS-additive SBJ:PCP-exist tsampa IFR.IPFV-be.AFF
 ‘It was tsampa mixed with broad beans.’ (i.e. poor quality tsampa)
 (2003-kWBRa)

Subject possessor relative can also occur in apposition with another relative clause, as in (100).

- (100) [*w-mi kuw-zuw~zri zo]* [*rkaŋraŋ kuw-rmi]*
 3SG.POSS-leg SBJ:PCP-EMPH~be.long EMPH ANTHR SBJ:PCP-be.called
ci puw-tu puw-ŋu
 INDEF PST.IPFV-exist SENS-be
 ‘There was someone called Rkangring who had long legs.’ (2005
 Norbzang)

First or second person possessors can also be relativized, as in (101) and (102) (see also 4, §6.1).

¹⁰This expression may be a nativized calque from Chinese 多嘴 <duōzǔi> ‘big mouth’.

23 *Relative clauses*

- (101) *azo* [*a-χti* *ku-tu*] *ɲu-ɲu-a*
 1SG 1SG.POSS-companion SBJ:PCP-exist SENS-be-1SG
 ‘I am someone with a husband.’ (i.e. whose husband is still alive, unlike hers) (12-BzaNsa) {0003484#S110}

This type of relative can trigger either third person singular indexation, or index the relativized element: both options (3SG *ɲu* ‘s/he/it is’ and 2SG *tu-ɲu* ‘you are’) have been tested and are possible, as shown in example (102).

- (102) [*nyzo ny-mu* *ny-wa* *ku-ts^hoz*]
 2SG 2SG.POSS-mother 2SG.POSS-father SBJ:PCP-be.complete
ɲu/tu-ɲu
 be:FACT/2-be:FACT
 ‘You are someone both of whose parents are still alive.’ (elicited)

In example (103),¹¹ the relativized element corresponds to the *third person component* of the first dual (exclusive) possessive prefix *tçi-* on the noun dyad *tçi-mu tçi-wa* ‘our parents’ (§9.2.2.2).

- (103) [*tçi-mu* *tçi-wa* *ku-naχtcɥy*]
 1DU.POSS-mother 1DU.POSS-father SBJ:PCP-be.the.same
 ‘Those whose parents are the same as mine.’ (140425 kWmdza02)
 {0003786}

Although the verb *naχtcɥy* ‘be the same’ can select a comitative argument (§8.2.5), (103) is not an example of comitative relativization (§23.5.7). Rather, the construction from which (103) has been relativized is the one in (104), where the equality concerns the possessors of the intransitive subject.

- (104) *tçi-mpite^hyz* *ra ɲu-naχtcɥy*
 1DU.POSS-temper PL SENS-be.the.same
 ‘We have the same temperament = She has the same temperament as I.’
 (12-BzaNsa) {0003484#S53}

In the participial relative taking *mɣ-ku-sɣ-mto* ‘the one that is not visible’ as its main verb in (105), the head *smar* ‘river’ is not the possessor of the subject in the proper sense, but the possessor of a noun (*u-βzur* ‘its side’) subject of a clause embedded within another clause (headed by the participle *ku-fse* ‘that is like...’) serving as the subject of *mɣ-ku-sɣ-mto* ‘the one that is not visible’.

¹¹The context of the relative clause (103) is found in example (91) (§23.5.8).

- (105) [maka tcekw ku-kw-ru tce tce^hendi smar [[w-βzur
 at.all east IPFV:EAST-GENR:S/O-look LNK west river 3SG.POSS-side
 tce^hi kw-fse ηu] kw-fse] mɣ-kw-sɣ-mto zo]
 what SBJ:PCP-be.like be:FACT SBJ:PCP-be.like NEG-SBJ:PCP-PROP-see EMPH
 sc^hiz nuw-azyut ηu-ηu.
 APPROX.LOC AOR:WEST-reach SENS-be
 ‘He arrived at a river where if one looked from one bank to the other,
 what was on the other side was not at all visible.’ (Divination 2005)

This particularly convoluted example is however not representative of what is usually found in the corpus.

In (106), we find a prenominal relative containing another verb in subject participle form that can be interpreted a possessor relativization, as in (34): *w-kw-χsu ku-me* ‘having no feeder’.

- (106) [w-pci kw-rɣzi] [w-kw-χsu ku-me]
 3SG.POSS-outside SBJ:PCP-stay 3SG.POSS-SBJ:PCP-feed NMZL:S/A-not.exist
 lulu yɣzu tce nu^hnu kupa kw <yemao> tu-ti ηu
 cat exist:SENS LNK DEM Chinese ERG wild.cat IPFV-say be:FACT
 ‘There are cats that live outside, that nobody feeds, Chinese people call them wild cats.’ (21-IWlu) {0003576#S2}

However, there are cases of relative clauses with the subject participle of the negative existential verb *ku-me* and an *intransitive* verb in participial (or finite) form in the preceding complement clause, for instance *tx-ku-mbri* in (107). It is manifest that here the relativized element is neither the subject of *me* ‘not exist’ nor a possessor, but rather the subject of the verb of the complement clause *mbri* ‘cry, sing’ (see §23.5.11.4).

- (107) pɣɣtɕw nu kumɣ [[tuw-ɣjɣn cinɣ zo tx-ku-mbri]
 bird DEM also one-time even.one EMPH AOR-SBJ:PCP-make.noise
 ku-me], nu to-ɣɣscɣscɣt zo to-mbri ηu-ηu,
 SBJ:PCP-not.exist DEM IFR-do.quickly EMPH IFR-make.noise SENS-be
 ‘Even the bird, which had not even sung once [since it had come to the palace], immediately started singing.’ (2012 qachGa) {0004087#S165}

The clause *tuw-ɣjɣn cinɣ zo tx-ku-mbri ku-me* here is in fact the nominalized version of the postverbal negative construction (§22.5.4). In main clauses, this construction combines a negative existential verb in impersonal (third singular)

23.5.11.1 Intransitive matrix verbs

In the case of modal verbs taking subject complement clauses such as *ra* ‘be needed’, ‘be necessary’ and *k^hu* ‘be possible’, subject participle clauses are attested to relativize not the intransitive subject of these verbs (§23.5.1), but rather arguments of the subject complement clause, including direct objects (110), 111) or transitive subjects (112).

23.5.11.2 **Semi-transitive matrix verbs**

The subject participle of the semi-transitive *c^ha* ‘can’ can be used to relativize the subject of the complement clause, when it is at the same time subject of *c^ha* itself, as in (115) or in (122) below (§23.5.11.4).

- (115) [*si* [*wuma tu-mbro*] *mɣ-kɯ-c^ha*] *ci* *ɲu tce*,
 tree really IPFV-be.high NEG-SBJ:PCP-can INDEF be:FACT LNK
 ‘It is a tree that cannot grow very high.’ (12-Zmbroko) {0003490#S83}

Objects in complement clauses are relativized with the object participle *kɣ-c^ha* as in (116), which can in addition take a possessive prefix coreferent with the transitive subject of the complement clause (§16.1.2.1). In (116) for instance, the prefix *u-* on *u-mɣ-kɣ-c^ha* is coreferent with *qaliaɁ* ‘eagle’.

- (116) [[*qaliaɁ ku*, *ɲkinu*, *nɯcimuɯma ku-susu*
 eagle ERG FILLER immediately SBJ:PCP-be.alive
c^hu-nu-tsum] *u-mɣ-kɣ-c^ha*] *nunwura*

 ‘Those (the animals) that the eagle is not able to carry away while they
 are still alive.’ (150819 RarphAB) {0006356#S1}

23.5.11.3 **Transitive matrix verbs**

With transitive complement-taking verbs such as *ɲno* ‘experience’ (§24.5.6.1) or *spa* ‘be able’ (§24.5.3.4), the subject participle occurs if the relativized element is the (transitive or intransitive) subject of the complement clause, as in (117) or (118).

- (117) *pya* [[*kɣ-ruɯmi*] *u-ku-spa*] *ci*
 bird INF-speak 3SG.POSS-SBJ:PCP-be.able INDEF
 ‘A bird that is able to speak’ (2005 Norbzang)
- (118) [*kɣ-ɕe*] *pu-ku-ɲno* *pjɣ-dɣn-nu* *ri*

 ‘Many people have gone there (those who have gone there were many).’
 (140514 huishuohua de niao-zh) {0003992#S82}

To relativize the direct object of a transitive verb in the complement clause, the complement-taking verb can be in finite form (119) or in object participle form (120), as if the complement-internal objects were the direct objects of the main verb of the relative clause (§23.5.3).

- (119) [*azo [kɣ-mto] pu-rɲo-t-a*] *tɕ^hemɣpu ci tu*
 1SG INF-see AOR-experience-PST:TR-1SG girl INDEF exist:FACT
tce,
 LNK
 ‘There is a girl whom I saw before and...’ (150819 haidenver-zh)
 {0006314#S369}
- (120) [[*ɛmɣɲɲɲɲɲ kwi kɣ-mtsɲɲɲ*] *pu-kɣ-rɲo*] *turme nu*
 mosquito ERG INF-bite AOR-OBJ:PCP-experience person DEM
 ‘Someone who has been stung by mosquitoes before’ (elicited)

The contrast between *pu-kwi-rɲo* in (118) and *pu-kɣ-rɲo* (120) is not as straightforward as it might seem at first glance. The transitive verb *rɲo* lacks non-generic inverse forms, and treats both subjects and objects of its velar infinitive clauses in the same way as transitive subject in the matrix clause, both in terms of indexation and flagging (§24.5.6.1).

23.5.11.4 Complement type

The complements whose arguments or adjuncts are relativized can be either finite (110, 112, 113, 114, 115) or infinitival clauses (111, 117, 119), just like when the complement-taking verbs are in finite form. In addition, the verb of the complement clause can also bear subject participle form if the relativized element is the subject of the complement clause, as in (121) and (122) (see also §16.1.1.5, §16.1.1.6).

- (121) [[*smɣnk^haŋ kwi-ce*] *kwi-ra*] *ɣɣzu.*
 hospital SBJ:PCP-go SBJ:PCP-be.needed exist:sens

 DEM.PROX 3SG.POSS-IPFV-SBJ:PCP-read SBJ:PCP-can INDEF be:FACT
 ‘She is someone who can read this.’ (2003 sras)

Pairs of verbs in subject participle form should not necessarily be analyzed as complement clauses embedded in relatives. In (123), *pu-kwi-nɣlut* ‘(bone) that has been broken, fracture’ is not a (subject) complement of *kwi-t^hu* ‘the one that is serious’ (which is not a complement-taking stative verb). Rather, *wuma zo pu-kwi-nɣlut kwi-t^hu* is simply a head-internal relative clause (§23.4.3) with the subject participle (itself a headless relative clause) *pu-kwi-nɣlut* as its subject.

23.5.12 Constraints on relativizability

Table 23.1 summarizes the syntactic functions accessible to relativization in main clauses in Japhug, indicating the clause types available for relativizing each function. The relatives can be headless in all cases, except that of possessor relativization, where a possessive prefix on the possessee is required (§23.5.10). Intransitive subjects and object are preferentially relativized with head-internal clauses, while transitive subjects, goals and adjuncts are more often relativized by prenominal clauses.

Table 23.1: Summary of relative clauses in Japhug

Function	Participial Clause			Finite Clause
	ku-	kɣ-	sɣ-	
S	✓			
possessor of S	✓			
A	✓			
O		✓		✓
possessor of O		✓		✓
semi-object		✓		✓
theme		✓		✓
goal			✓	✓
dative			✓	
comitative			✓	
instrument	(✓)		✓	
time adjunct			✓	✓ (prenominal)
locative adjunct			✓	✓ (prenominal)

Not all adjuncts are relativizable in Japhug: causees (§8.2.2.6), standards of comparative constructions (marked by the postpositions *sɣz* or *stax*, §8.2.7) and exceptive phrases in *ma* ‘apart from’ (§8.2.8) apparently cannot be relativized, following a well-known cross-linguistic generalization (Keenan & Comrie 1977).

In addition, relativization of the direct object of transitive verbs (in subject participle form) in the purposive clauses of motion verbs is not possible, as discussed in §15.2.10.6. Many arguments or adjuncts from complement clauses can be relativized (§23.5.11), but the limits on relativizability in embedded clauses is a topic for further fine-grained research.

23.6 Relative clauses and focalization

23.6.1 Pseudo-cleft constructions

Among the possible means of focalizing noun phrases, most if not all languages use an equative construction with a headless relative clause (or a relative clause with an overt head noun, if this head noun is different from the focalized noun phrase) in the topicalized position and the focalized noun phrase as the nominal predicate, as in English ‘[What matters] are **his ideas**’ or ‘[The thing that matters] is **meaning**’.

Such constructions are generally referred to as pseudo-clefts, by contrast with cleft sentences, a type of construction (such as English ‘It is **his ideas** [that matter]’) where the focalized noun is the head of the clause defining it, that clause being built like a relative, but sometimes presenting language-specific differences with relative clauses of the same type.¹³

Pseudo-cleft constructions in Japhug consist of a headless relative clause (generally with the determiner *nu* in topicalizing function, §9.1.5.4) followed by a nominal predicate with an affirmative (*ŋu* ‘be’, *ɕti* ‘be’) or negative (*max* ‘not be’, §13.1.2) copula.

Pseudo-clefts in Japhug do occur in intransitive subject (124 and 161), direct object (125 and 126) or semi-objects (68, §23.5.4.1) functions.

- (124) [*stu ku-mɣku jɣ-ku-ye*] *nu rɣɣɣpu pɣɣ-ŋu*

 ‘The one who came first was the king.’ (140514 xizajiang he lifashi-zh)
 {0003996#S62}

¹³Creissels (2006c: 123–124) points out for instance that in French clefting of dative phrases (*C’est à Jean **que** tu as donné le livre*) differs from the corresponding relativization (*La personne à laquelle tu as donné le livre*).

23 Relative clauses

- (125) *u-ky-ndza* *nunu nuu tce, tu-ci* *u-ηguu*

 {0003720#S86}

When the predicate contains a first or second person pronoun, person indexation on the copula is obligatory (on the indexation rules of copulas, see §22.5.1.1). In (126) for instance, replacing the copula in the predicate *nyzo tu-ηu* by third person form †*nyzo ηu* would be completely ungrammatical.

- (126) [*azo a-ky-nuu-rga*] *nuu nyzo tu-ηu tce*

 ‘The one whom I love is you.’ (160708 riquet5) {0006185#S27}

Pseudo-cleft used to focalize transitive subjects (127) are rare, and mainly concerns instruments (§23.5.6) rather than agents.

- (127) [*u-xtypa tu-ku-rqov*] *nuu pxt^hβ ηu*.
 3SG.POSS-belly IPFV-SBJ:PCP-hug DEM belly.band be:FACT
 ‘[The thing that] is attached around (‘hugs’) its belly is the belly band.’
 (30-tAsno) {0003758#S84}

Oblique participles can be used in pseudo-clefts to focalize locative adjuncts (128).

- (128) *ma [u-sy-dyn]* *nuu tsetu rungu ηu*.
 LNK 2SG.POSS-OBL:PCP-be.many DEM up.there pasture be:FACT
 ‘The [place] where they are [most] numerous is up there on the pastures. (17-xCAj) {0003528#S81}

Most pseudo-clefts are participial relatives as in the examples above, but there are also finite object relatives (§23.5.3) as in (129).

- (129) [*tu-tu-mts^hi*] *nunu, mbalx-pu ju-mav*
 IPFV-2-lead DEM OX-DIM SENS-not.be
 ‘What you are leading is not a calf, (but rather...)’ (140512 fushang he yaomo) {0003967#S137}

An alternative (and much rarer) type of pseudo-cleft has the headless relative as the nominal predicate, as in (130).

- (130) *ɲɣ-ɣɣwu matci tɛndɣre nuw [stu zo u-kɣ-nuɣduɣ] nuw*
 IFR-cry because LNK DEM most EMPH 3SG.POSS-OBJ:PCP-WORRY DEM
pɲɣ-cti tɛ
 IFR.IPFV-be.ADD LNK
 ‘He cried because it was what he was most worried about.’ (140506 shizi
 he huichang de bailingniao-zh) {0003927#S64}

Although pseudo-cleft constructions are well-attested in the corpus, they are not the main morphosyntactic device to focalize constituents in Japhug. Other focalizing constructions include sentence-final copulas (§22.5.3.2) and focus particles (§9.1.6). Some focalized noun phrases are also devoid of any specific marking of focalization, even intonational ones (§22.1.2.3).

23.6.2 Non-equative pseudo-cleft

In addition, we find pseudo-cleft constructions whose second member is not a nominal predicate with a copula, but rather a clause which could stand as a complete sentence. The subject participle of *pe* ‘be good’ is commonly used in these constructions in affirmative (*ku-pe* ‘what is good is that...’, ‘fortunately...’) or negative form (*ku-pe* ‘what is bad is that...’, ‘unfortunately...’) as in (131).

- (131) [*mɣ-kw-pe*] tɛ icq^ha, [*u-mu nuw*,

 DEM queen DEM soon IFR-die
 ‘Unfortunately (what is bad is that...), her mother, the queen, died early.’
 (140504 baixuegongzhu-zh) {0003907#S12}

In such constructions, the (topicalized) participial clause is followed by the linker *tɛ* in topicalizing function (§9.1.5.5) rather than the determiner *nuw*.

- (132) *tɛri [mɣ-kw-naχtɕuɣ] tɛ, [u-ndzru ɣɣzu]*.
 but NEG-SBJ:PCP-be.similar LNK 3SG.POSS-claw exist:SENS
 ‘What is different [between the footprints of the bear and those of a
 small child] is that [the former] has claws.’ (21-pri) {0003580#S37}

23.7 Quantification

Relative clauses are found in three quantificational constructions.

First, correlative relative clauses occur with interrogative pronouns used as free-choice indefinites (§23.2.5). In (133) for instance, the relative whose main verb is the participle *ku-tu* has the pronoun *tɕ^{hi}* ‘what’ in apposition with the object participle *nr-kɣ-t^{hu}* ‘(the things) that you ask’ as head, with the meaning ‘any’ or ‘whatever’.

- (133) *[[nr-kɣ-t^{hu}] tɕ^{hi} ku-tu] tɣ-t^{he}*
 2SG.POSS-OBJ:PCP-ask what SBJ:PCP-exist IMP-ask[III]
jɣɣ-o
 be.possible:FACT-SFP
 ‘Ask any/whatever question you [may] have.’ (conversation, 17-09-06)

Second, totalitative reduplication (§12.4.1.5) indicates universal quantification of the relativized element (§23.3.2). In particular, the reduplicated form of the *ku~ku-tu* ‘all those that/who exist’ of the existential verb *tu* ‘exist’ can follow nouns (134), with a meaning similar to the adverbial determiner *t^hamtɕɣt* ‘all’ (§9.1.3.1).

- (134) *a-zda ra ku~ku-tu zo*
 1SG.POSS-companion PL TOTAL~SBJ:PCP-exist EMPH
a-tɣ-buɣ-nu smuɣm
 IRR-PFV-miss.home-PL prayer
 ‘May all of my companions miss home!’ (2005 Norbzang)

Constructions such as that in (134) originate from head-internal (or postnominal) participial relatives (‘all my existing companions’). However, it is unclear whether this analysis is still valid synchronically, and even whether *ku~ku-tu* is still a participle. It may have been reanalyzed as a postnominal quantifier, as suggested by the fact that it can occur with pronouns, as in (135), where an interpretation in terms of a relative clause, whether restrictive (‘all those of you who exist’?) or non-restrictive (‘you, all the existing ones’?) is more difficult.

- (135) *nuzora ku~ku-tu zo lɣ-nu-jɣɣt-nu*
 2PL TOTAL~SBJ:PCP-exist EMPH IMP:UPSTREAM-VERT-turn.back

exist:SENS

‘Among fishes and other marine animals, there are **some** that [whales]_{*i*} eat and **some** that they_{*i*} don’t eat, **some** that they_{*i*} find tasty and **some** that they_{*i*} don’t find tasty.’ (160703 jingyu) {0006169#S21}

Since Japhug lacks negative pronouns (§6.6), the only way to express a meaning corresponding to negative pronouns in Japhug is by combining a headless relative clause with a negative existential verbs (§13.4.2), as in (140).

- (140) *ny-kur-nuy-mu* *me*
2SG.POSS-SBJ:PCP-APPL-be.afraid not.exist:FACT

23.8 Relative vs. complement clauses

This section discusses constructions which present real or apparent ambiguity between relative and complement clauses, and proposes a few syntactic tests to disambiguate the two.

To the cases studied below, the adnominal complement clauses (§24.6), which resemble prenominal relatives (§23.4.2), must be added.

23.8.1 Ambiguity (finite clauses)

Finite relative clauses (§23.2.2), when they occur as objects or semi-object of verbs of perception (*mto* ‘see’, *mts^hym* ‘hear’ etc) or cognition (*tso* ‘know, understand’, ‘know’ etc) may not be easily distinguishable from complement clauses,

as this type of verb can take either nominal objects/semi-objects or complement clauses, and both finite relatives and finite complements are found with the same demonstrative determiners *nu* and *numu* (§23.3.5.2, §24.3.3).

For instance, in (142), the clause *mbrutɕu la-tɕɔt* (§23.5.3) can either be interpreted as a head-internal finite object relative clause (§23.4.3, §23.5.3) ‘the knife that (the butcher) had unsheathed’ or as a complement clause (§24.2.3) ‘that (the butcher) had unsheathed his knife’. Both interpretations would make sense in the context (§24.4.1).

- (142) *spjaŋku bnuz ni ku numu nyki, [mbrutɕu la-tɕɔt] nu*

 ‘The two wolves, seeing that he had unsheathed his knife (or: seeing the knife that he had unsheathed), were very afraid. (150902 liaozhai lang-zh) {0006340#S29}

Three criteria (already mentioned in §23.2.2) can however help disambiguating between the two analyses in specific contexts.

First, the presence of totalitative reduplication (§23.3.2) indicates that the subordinate clause can only be analyzed as a relative, as in (143).¹⁴

- (143) *stu ku-xtɕi nu ku nura [tu~ty-amu-ti-ndzi] nu*
 most SBJ:PCP-be.small DEM ERG DEM:PL TOTAL~AOR-RECIP-say-DU DEM
pjɣ-mts^hɣm.
 IFR-hear
 ‘The youngest [boy] heard all the things that they had said to each other.’ (160630 poucet1) {0006065#S32}

Second, finite subordinate clauses whose verb is in the Inferential, Sensory, Egophoric, Irrealis or Imperative cannot be relative clauses. For instance *mu-pjɣ-pe* in Inferential Imperfective must be a complement clause.

- (144) *tɕe uzo si tɣ-mda kóɣmɔz nɣ nu*
 LNK 3SG die:FACT AOR-be.the.time only.then ADD DEM
[mu-pjɣ-pe] nu ko-tso ri ɲɣ-maq^hu ɲu-ɲu.

 ‘Just before dying, he understood that [what he had done] was not good, but it was too late.’ (aesop nongfu yu she-zh) {0006268#S113}

¹⁴The relativized element of this headless clause is the semi-object, see §18.4.2.1 on the argument structure of *amuti* ‘say to each other’.

Third, finite relative clauses cannot relativize subjects, and therefore ‘plain’ intransitive verbs (excluding semi-transitive verbs §14.2.3 and verbs with goals §14.2.4) cannot occur in finite relative clauses (except in the case of locative and time adjunct relativization, §23.5.9). Therefore, clauses such as *mu-pjɣ-pe* ‘it was not good’ in (144) and *tu-ɣɣwu* ‘it cries/howls’ in (145) cannot be interpreted as subject relatives ‘(the thing) that was not good’ or ‘(the wolf) that howls’.

- (145) *nuw [tu-ɣɣwu] nuw u-mts^hɣm pu-rɲo-t-a*

ma
 LNK
 ‘I did hear [wolves] howl.’ (27-spjaNkW) {0003704#S27}

23.8.2 Ambiguity (non-finite clauses)

Due to the resemblance between the velar infinitives *ku-* and *kɣ-* (§16.2.1) on the one hand and the subject (§16.1.1.3) and especially object participles (§16.2.1.1), distinguishing between infinitival clauses and participial relatives is not always trivial.

In (146), we find a series of non-finite verb forms in *ku-* and *kɣ-* in clauses that are object of the complement-taking verb *fɕɣt* ‘tell’ (§24.2.1). Given the meaning of this example, it could appear to be preferable to analyze these examples as complement clauses, translating <yazi> *ɣɣ-kɣ-murkuw*, *ɣɣ-kɣ-ndza* as ‘(he told him) that he had stolen and eaten a duck’ and *u-βri ...nuw-kuw-ɬoβ* as ‘that his body started itching, and that feathers started growing on it’.

- (146) *tce nuwa [puw~puw-kuw-fse] nuwa, [<yazi>*

 ‘He told [the old man] everything that had happened, about **the duck that he had stolen and eaten, and his body itching, and the duck feathers that had grown on it.**’ (150904 maya-zh) {0006364#S26}

However, the problem with analyzing these clauses as infinitival complement clauses is that the intransitive motion verb *ɬoβ* ‘come out’, being dynamic, never

takes a *ky-* infinitive, and that the form *nu-ku-tov* can only be a subject participle ‘(something) that has come out’. For this reason, the non-finite clauses in (146) have to be analyzed as head-internal and headless (object and subject) participial relative clauses.

An analysis of clauses in *ky-* as infinitive complement clauses is restricted to complement-taking verbs which unambiguously select *ky-* infinitives of plain intransitive verbs (§16.2.1.1, §24.2.1).

23.8.3 Participial clauses in core argument function

Some verbs such as the verbs of pretence *zyypa* ‘pretend’ and *nuɕpuuz* ‘pretend’ ‘dress up as’, ‘imitate’ select subject participle clauses as objects or semi-objects such as *ku-ngo* in (147), which could appear to be similar to the purposive complement of motion verbs (§24.4.2.1).

- (147) [*ku-ngo*] *to-zyypa tce*
 SBJ:PCP-be.sick IFR-pretend LNK
 ‘She pretended to be sick.’ (Nyima Wodzer 2002)

However, there is clear evidence that these clauses are in fact headless relatives: (147) can literally be translated as ‘she pretended to be a sick person’. The difference with purposive clauses can be shown by three tests.

First, unlike motion verbs, pretence verbs can take nouns as objects (as shown by 148 and 156) instead of clauses with subject participles.

- (148) *qacpa to-nuɕpuuz, qacpa u-rq^{hu} to-ŋga,*
 frog IFR-pretend frog 3SG.POSS-skin IFR-wear
 ‘He dressed up as a frog, he wore a frog’s skin.’ (2002 qaCpa)

Second, these verbs can occur with a participial clause whose subject is overt and different from the subject of the verb of the matrix clause, as in (149) where *ty-ptyso* ‘child’ is the subject of the verb *yywu* ‘cry’ in the participial clause, but not the subject of *nuɕpuuz* ‘pretend’, ‘disguise as’, ‘imitate’ (§24.4.2.3). Such a subject mismatch would be completely ungrammatical with a purposive clause.

 ‘I cannot imitate a child crying, but apart from that I can imitate [anything].’ (27-kikakCi) {0003700#S134}

23 Relative clauses

Third, we find examples like (150) where the subject of the verb in the main clause is not coreferent with the subject of the participial clause but with the possessor of the subject. These cases can be accounted for as possessor relative clauses (§16.1.1.5, §23.5.10.1): (150) could thus be literally translated as ‘he pretended to be someone whose leg hurt’.

- (150) *tce [u-mi ku-mŋɣm] to-nuɛpuɔ*
 LNK 3SG.POSS-leg SBJ:PCP-hurt IFR-pretend
 ‘He pretended to feel pain in his leg.’ (140426 lang yisheng-zh)
 {0003808#S9}

23.8.4 Relativized complement clauses

In (151), the clause *ŋaɣspa ku tu~ta-tut* ‘all (the things that) the sorcerer had said’ is a headless object finite relative (§23.5.3); the presence of totalitative reduplication in particular, shows that it cannot be interpreted as a complement clause (§23.3.2).

- (151) *tceri [ŋaɣspa ku tu~ta-tut] nu to-stu*
 LNK sorcerer ERG TOTAL~AOR:3→3'-say[II] DEM IFR-do.like
 ‘He did it everything the way that the sorcerer had said.’ (140511
 alading-zh) {0003953#S85}

The syntactic function of this relative clause in the main clause is semi-object of the secundative verb *stu* ‘do like’, which encodes the manner of the action as semi-object, and the entity subjected to the action as the direct object (§14.4.2).

In view of (151), it is tempting to analyze the clause “*nu a-tr-fse juu-ra*” *tr-tu-tut* ‘(that) you said “it should be (done) like that” in (152), which occurs in the same syntactic context, as a finite object relative clause too, differing from that of (151) by being head-internal (§23.4.3) instead of headless.

- (152) [[“*nu a-tr-fse juu-ra*” *tr-tu-tut*] *nu*
 DEM IRR-PFV-be.like SENS-be.needed AOR-2-say[II] DEM
tr-stu-t-a ju
 AOR-do.like-PST:TR-1SG be:FACT
 ‘I did it [the way that] you said should be done.’ (28-smAnmi)
 {0004063#S315}

What is remarkable about the construction in (152) is that the relativized element is not a noun, but the (object) complement clause *nu a-tr-fse juu-ra* ‘it should be (done) like that’, embedded within the relative.

A common example of relativized complement clause is found when the transitive perception verb *mts^hym* ‘hear’ (§24.5.5) occurs with the object participle *ky-ti* of the verb *ti* ‘say’ as in (153). In this example, *turme nuu ko-nuurŋu* has a double status: it is the object complement clause of *ky-ti* within the relative, and at the same time, it constitutes the relativized element of the head-internal participial clause (§23.5.3).

- (153) ‘[[‘*turme nuu ko-nuurŋu*’] *ky-ti*] *mu-pu-mts^ham-a*
 person DEM IFR-have.pig.disease SBJ:PCP-say NEG-AOR-hear-1SG
 ‘I have never heard of people getting the pig disease.’ (25-khArWm)
 {0003644#S77}

The literal meaning of this construction can be conveyed in English as ‘I have not heard “a man got the pig disease” being said’.

24 Complement clauses

24.1 Introduction

This chapter, based on Sun's (2012) work on Tshobdun and on earlier research on Japhug (Jacques 2008; 2016a), presents an account of complement clauses and complementation strategies¹ in Japhug.

This chapter comprises six sections. The first section following the introduction §24.2 provides a classification of complement clauses based on the form of the main verb in the clause. The second one, §24.4 presents an overview of complementation strategies (including ambiguous relative clauses). The third one, §24.3 analyses a certain number of morphosyntactic specificities of complement clauses (aside from verbal morphology) that distinguishes them from the corresponding independent clauses. The fourth section, §24.5 surveys complement-taking verbs and describes the complement clause types and complementation strategies that they are compatible with. The fifth one, §24.6 discusses complement-taking nouns and noun-verb collocations and how they differ from prenominal (§23.4.2) and genitival (§23.2.3) relative clauses. The sixth section, §24.7 briefly analyzes syntactic errors related to complementation in the corpus.

In this chapter, all complement clauses are systematically indicated between square brackets (with double embedding in some cases).

The sections on participles (§16.1) and infinitives (§16.2) in a previous chapter partially overlap with some of the topics covered in this chapter.

24.2 Complement types

This section illustrates the different categories of complements attested in Japhug. Five main types of complement clauses are distinguished: velar infinitival complements, bare infinitival complements, finite complements, multiclausal complements and reported speech. In addition, Japhug has many different complementation strategies, discussed in §24.4.

¹On the notion of complementation strategy, see (Dixon 2006: 34–40) and §24.4.

24.2.1 Velar infinitive clauses

Velar infinite clauses (§16.2.1) are one of the most common types of complement clauses in Japhug (§16.2.1.5). Two velar infinitives are attested, *ku-* for stative verbs and impersonal intransitive verbs, and *ky-* for dynamic and/or morphologically transitive verbs.

A recurrent problem in the study of subordinate clauses in Japhug is the ambiguity between velar participles and infinitives (§16.2.1.1), making participial clauses and infinitival clauses only distinguishable in specific contexts, and the ambiguity between complement clauses and relative clauses with some complement-taking verbs (§23.8, §24.4.1). As a result, participial (§23.2.1) and finite relative clauses (§23.2.2) are in some case difficult to differentiate from velar infinitival complement clauses (§24.2.1) and finite complement clauses (§24.2.3), respectively.

24.2.1.1 Case marking

While velar infinitives bear no person indexation markers, noun phrases receive the same case markers in infinitive clauses as in independent clauses, showing that infinitives have the same argument structures as finite verb forms.

When an argument is shared between the complement and the matrix clause, it does not necessarily have the same syntactic function in both clauses, as in (1), where *txɕime* ‘lady’ is transitive subject in the complement clause (see §14.4.2 on the argument structure of *stu* ‘do like’) and intransitive subject in the matrix clause (§14.2.3).

- (1) [*txɕime nu ku nura ky-stu*] *pjɣ-c^ha*
 princess DEM ERG DEM:PL INF-do.like.this IFR-can
 ‘The princess succeeded in doing it.’ (140511 alading-zh) {0003953#S241}

In this sentence, the noun takes the ergative marker *ku* in accordance with the verb of the complement clause (§8.2.2.1), showing that it belongs to the complement clause rather than to the matrix clause directly. This is the most commonly observed pattern in Japhug texts: in infinitival clauses, the shared arguments more often take the case marking selected by the verb of the complement clause than that of the matrix clause.

However, when the complement-taking verb is a stative verb, there are cases where the ergative on the transitive subject is optional, as shown by (2) (without ergative on *turme* ‘person’; Tshendzin has confirmed that this example is correct) and (3) (with ergative). The precise conditions for this phenomenon still remain to be investigated.

 DEM people ERG INF-eat be.good:FACT
 ‘It is nice for people to eat.’ (13-NanWkWmtsWG) {0003492#S157}

24.2.1.2 Coreference restrictions

Coreference restrictions between the arguments of complement clauses with *kx*-infinitives and their matrix clauses differ from verb to verb, and four cases can be distinguished.

First, in the case of impersonal verbs such as *ra* ‘be needed’, ‘be necessary’ (§24.5.3.1), there is no argument coreference between the matrix clause and the complement clause. In this case, the arguments are neither indexed on the matrix verb nor on the verb in the complement clause.

Second, with a few transitive complement-taking verbs such as the transitive *spa* ‘be able’ (§24.5.3.4) and the intransitive *nyz* ‘dare’ (§24.5.3.5), coreference between the subject of the matrix clause and that of the complement clause is required.

Third, a handful of verbs, including *suuxc^ha* (§24.5.3.3), the causative of *c^ha* ‘can’ (§17.2.4.8), have coreference between the subject of the complement clause and the *object* of the matrix clause.

Fourth, for most verbs taking infinitives (like the semi-transitive *rga* ‘like’ or the transitive *ɲno* ‘experience’), the subject of the matrix clauses can be coreferential to either the subject of an intransitive verb (4), the subject of a transitive verb (5), the object (6) and also possessors of core arguments (§24.5.6.1).

- (4) *tsuku tce [kx-nuuryyo] wuma zo rga-nuu tce*

 ‘They like to be flattered or praised.’ (140427 yuanhou-zh) (P=S)
 {0003870#S53}

Other types of complement clauses differ from velar infinitive clauses by their constraints on coreference (see §24.2.2.2).

24.2.2 Bare infinitives and dental infinitives

Complement clauses with bare (§16.2.2) and dental infinitives (§16.2.3) are less widespread than those with velar infinitives. Only a limited number of complement-taking verbs select them: phasal verbs (including *za* ‘begin’, *sɣza* ‘begin’, *stʰut* ‘finish’, and *jɣɣ* ‘finish’), causative verbs derived from adjectives, the aspectual verb *ɲno* ‘experience’ and the causative *supa* ‘cause to do’ (§24.5.1.3). With the exception of *jɣɣ* ‘finish’, these complement-taking verbs are all morphologically transitive.

In the Tshobdun corpus Sun & Blogros (2019), the cognate verbs *je?* ‘begin’ and *joy?* ‘finish’ take velar infinitives, and there is no infinitival form comparable to the Japhug dental infinitive.

24.2.2.1 Complementary distribution

Bare and dental infinitives are found in complementary distribution. Bare infinitives occur when the main verb of the complement clause is morphologically transitive (§14.3.1) as in (7).

- (7) *pxjk^{hu} pjw-si cwnɣw zo [w-ca w-ndza]*
 still IPFV-die before EMPH 3SG.POSS-flesh 3SG.POSS-BARE.INF:eat
tu-za-nw cti
 IPFV-start-PL be.AFF:FACT
 ‘[The lions] start eating its flesh before it dies (i.e. while it is still alive).’
 (20-sWNgi) {0003562#S44}

Dental infinitives on the other hand are found when the verb of the complement clause is intransitive as in (8) (including labile verbs §14.5.1.1) or transitive with dummy subject (9) (§14.3.5).

- (8) [*azo a-ku (a-mytsa), tu-mɲɣm*] *ta-za*
 1SG 1SG.POSS-head 1SG.POSS-MZCh INF:II-hurt AOR:3→3'-start
 ‘My head_i, cousin, when it_i starts hurting...’ (TaRrdo 2003 conversation)

- (9) *u-muɔtoɔ nu pu-ŋgra tce [u-ŋgu*
 3SG.POSS-flower DEM AOR-ACAUS:cause.to.fall LNK 3SG.POSS-inside
u-mat tu-βzu] na-za ri tce
 3SG.POSS-fruit INF:II-make AOR:3→3' -start LOC LNK
 ‘When its flower has fallen, and its fruit has started growing inside...’
 (12-ndZiNgri) {0003488#S109}

Since most complement-taking verbs selecting dental infinitives are transitive, case marking on the common subject can either be in the ergative or in the absolutive (§24.3.2).

24.2.2.2 Coreference restrictions

Bare and dental infinitives strongly differ from velar infinitives as to their coreference restrictions. When the verb *ŋno* ‘experience’ occurs with velar infinitives, the subject of the matrix clause can be coreferential with either the subject, the object or even the possessor of the intransitive subject of the complement clause (§24.5.6.1).

The ambiguity between transitive subject or object coreference is particularly clear with the verb *nyk^hu* ‘invite’ (to one’s home as a guest, see examples 10 and 11), as with this verb both arguments are equal in terms of volition and control.

- (10) [*uzo ku ky-nyk^hu*] *pu-rŋo-t-a*
 3SG ERG INF-invite AOR-experience-PST:TR-1SG
 ‘I have been to his house as a guest.’ (= ‘He invited me to come to his house as a guest and I came.’) (P=A)
- (11) [*uzo ky-nyk^hu*] *pu-rŋo-t-a*
 3SG INF-invite AOR-experience-PST:TR-1SG
 ‘He has been to my house as a guest.’ (= ‘I have invited him to come to my house as a guest and he came.’) (A=A)

In the case of bare infinitives, on the other hand, the subjects of the matrix and complement clause must be coreferent, but the object of the matrix clause can, however, be neutralized to third person.

In example (12), the shared subject (referring to the host) is 3SG. The verb of the matrix clause takes the complement clause as a 3SG object (hence the verb takes the 3→3’ form without 1SG marking), while the verb of the complement

24 Complement clauses

clause takes a 1SG object (referring to the guest), marked by the possessive prefix *a-*.²

- (12) [*a-nɣk^hu*] *pa-rɲo*
 1SG.POSS-BARE.INF:invite AOR:3→3'-experience
 'I have been to his house as a guest.' (= 'He invited me to come to his house as a guest and I came.')
- (13) [*uɯzo u-nɣk^hu*] *pu-rɲo-t-a*
 3SG 3SG.POSS-BARE.INF:invite AOR-experience-PST:TR-1SG
 'He has been to my house as a guest.' (= 'I invited him to come to my house as a guest and he came.')

This generalization is observed for all transitive verbs taking bare infinitive complement clauses. However, the intransitive impersonal verb *jɣ* 'finish' takes the bare infinitive clause as intransitive subject, and remains in third person singular regardless of the subject and object of the complement clause, as in (14), where although the subject of the complement clause is third person plural, no plural marker can appear on *jɣ*.

- (14) [*nuɯra u-ti*] *to-jɣ* *tce*
 DEM:PL 3SG.POSS-BARE.INF:say IFR-finish LNK
 'After saying that, (they went to the park)' (140515 congming de wusui xiaohai-zh) {0003998#S15}

With dental infinitives, subject coreference is the same, except in the case of transitive verb with dummy subject (example 9, §24.2.2.1), where the subject of the matrix verb is coreferent with the sole argument of the complement clauses, whose status is intermediate between that of a subject and an object (§8.1.4).

24.2.3 Finite complements

Complement clauses, like relative clauses (§23.2.2), can have a verb in finite, rather than infinitival form in Japhug and other Gyalrong languages. These constructions are called "finite complement clauses" in the present work, corresponding to Sun's (2012: 475-477) "S-like (sentence-like) clauses".³ This category

²In the English translation, the 1SG is rendered as a subject, because translating *a-nɣk^hu pa-rɲo* as 'He invited me' would be inexact, as this English sentence does not imply that the 1SG did attend the invitation.

³I chose "finite" rather than "S-like" to avoid confusion with "S" as abbreviation for "intransitive subject".

excludes reported speech complement, which present different characteristics (§24.2.5).

24.2.3.1 TAME forms

In finite clauses other than reported speech, TAME marking in the complement clause presents some restrictions. Of the 11 primary TAME categories (§21.1), only the Imperfective (§21.2.4) and the Factual Non-Past (§21.3.1.3) are compatible with most if not all verbs selecting finite complement clauses, regardless of the TAME category of the matrix verb. In (15) for instance, the verb of the complement clause is the Imperfective while that of the matrix clause is in the Aorist.

- (15) [*azo a-ŋga ra tu-nu-ŋge-a, jɣɣxt ju-nu-ɕe-a*] *ra*
 1SG 1SG-clothes PL IPFV-AUTO-wear[III]-1SG toilet IPFV-AUTO-go-1SG PL
tɣ-c^ha-a
 AOR-can-1SG
 ‘I am able now to get dressed by myself and use the bathroom by myself
 (again, after an accident).’ (conversation, 17-08-21)

The Irrealis (§21.4.1.4) and Imperative (§21.4.2.4) are also found, but only with modal auxiliaries such as *ra* ‘be needed’ as in (16). Unlike in Tshobdun (Sun 2007b: 807), verbs of cognition such as *suso* ‘think’ do not select the Irrealis; although complement clauses in the Irrealis are found with these verbs, they are best analyzed in Japhug as reported speech (§21.4.1.4, §24.2.5).

- (16) *ndɣre [ku-xtɕu~xtɕi a-mɣ-pú-wy-nu-cluɣ]*

 EMPH IPFV-ACAUS:break SENS-be:AFF
 ‘However, one should not let it drop at all, otherwise, as it is very brittle,
 it would break at once.’ (30-Com) {0003736#S26}

Other TAME categories, such as Aorist (§21.5.1.7) or Inferential (18), are only attested in the complement clause if the matrix verb is also in the Aorist or in the Inferential, respectively.⁴ No semantic difference has yet been ascertained between Imperfective complements (15) and complements whose TAME category is copied from that of the matrix verb (17); the latter are considerably rarer.

⁴This constraint may not apply to complements of perception and cognition verbs such as *mto* ‘see’ (§24.5.5).

24 Complement clauses

- (17) [kuw-xtɕu-xtɕi tɣ-nɣŋkuŋke-a] tɣ-c^ha-a.

 2SG.POSS-cough medicine PRS-2-eat[III] QU-PRS-be.needed
 ‘Do you have to take medicine for your cough (now)?’ (conversation
 2019-08-16)

Examples like (17), (18) and (19) are not analyzable as serial verb constructions, since subject coreference is not always observed, depending on the matrix verb (§24.2.3.3).

24.2.3.2 Coreference restrictions

There are four different patterns of coreference restriction between the arguments of finite complement clauses and those of the matrix verb.

The first type includes verbs like *spa* ‘be able’ (§24.5.3.4), which require coreference between their subject and the (transitive or intransitive) subject of the complement clause. In (21), both the verb of the complement clause and the matrix verb are in 1SG→3 form, with 1SG coreference. The same coreference restriction is observed when this verb takes a velar infinitive complement (§24.2.1.2).

- (21) [*<weixin> tu-lat-a*] *nura múj-spe-a*.
 Wechat IPFV-release-1SG DEM:PL NEG:SENS-be.able[III]-1SG
 ‘I am not able to use Wechat.’ (conversation, 17-03-27)

The second type is represented by the semi-transitive complement-taking verb *rga* ‘like’, which allows co-reference between its subject and either the (transitive or intransitive) subject (22) or the object (23) of the complement clause (Jacques 2016a: 238).

- (22) [*nu ku-nu-ta-j*] *wuma zo rga-j*

 2SG ERG IPFV-2→1-flatter-1SG DEM:PL like:FACT-1SG
 ‘I like it when you flatter me.’ (elicited)

The third type includes impersonal modal and aspectual verbs such as *ra* ‘be needed’, ‘be necessary’ or *nts^{hi}* ‘have better’, which take their complement clause as their intransitive subject (§24.5.3.1. For instance, in (24), the modal auxiliary *nts^{hi}* can only occur in 3SG form, and cannot take the 2SG indexation of the verb in complement clause.

- (24) [*nyzo mxlyn zo pjw-tu-si*] *nts^{hi}*
 2SG absolutely EMPH IPFV-2-die be.better:FACT
 ‘You must die!’ (140512 fushang he yaomo1-zh) {0003969#S22}

Fourth, verbs of perception and cognition such as *mto* ‘see’ (§24.5.5) have no constraints on person indexation and neither require nor prohibit any coreference between main and complement clause.

24.2.3.3 Finite complements vs. serial verb constructions

Some complement-taking verbs such as *c^{ha}* ‘can’ occur with clauses sharing the same subject and the same TAME category, as in (25). This could appear to be analyzable as a serial verb construction (§25.1.5) or pseudocoordination (Lødrup 2014).

- (25) *qajdo nuw ku [tu-ci ko-ts^{hi}] pjx-c^{ha}*.
 crow DEM ERG INDEF.POSS-water IFR-drink IFR-can
 ‘The crow succeeded in drinking water.’ (aesop kouke de wuya-zh)

24 Complement clauses

However, I prefer to analyze these constructions as a particular type of finite complements with TAME agreement between the matrix verb and the complement verb (§24.2.3.1).

Subject coreference is not a specificity of this construction, but rather a property of the complement-taking verb (§24.2.3.2). With impersonal verbs such as *ra* ‘be needed’, which do not require subject coreference, TAME agreement is also attested, as in (26), where the verb *to-ti-nuu* is in the Inferential (a category that does not normally occur in finite complement clauses, §24.2.3.2) by agreeing with the matrix verb *pjx-ra*.

- (26) [*“ya” nɣ “ya” nuu to-ti-nuu*] *pjx-ra*.
 yes ADD yes DEM IFR-say-PL IFR.IPFV-be.needed
 ‘They had no other choice but to say ‘yes.’ (140518 jinyin chengbao-zh)
 {0004028#S54}

Phasal verbs such as *za* ‘begin’ and *st^hut* ‘finish’ (§24.5.6), which generally select bare/dental infinitives (§24.2.2), are marginally used in the construction, as in (§27).

- (27) [*juxco tɕ^hi tɣ-tu-nɣma-t tɣ-tu-za-t*] *zo nuu, ɕɣr*

 ‘That which you have started doing this morning, do it until night.’
 (140515 jiesu de laoren-zh) {0004004#S122}

24.2.4 Multiclausal complements

Complements are not always restricted to one single clause. Example (28) illustrates a finite biclausal complement: *c^ha* ‘can’ (§24.5.3.2) has two complement clauses, the first of which *u-mi pju-suu-ɣtse* specifies the manner of the second one (§25.4.1).

- (28) *ma ju-mtsaɸ ɸfa zo ma nuu ma* [[*u-mi*
 LNK IPFV-jump completely EMPH LNK DEM apart.from 3SG.POSS-foot

tɣ-z-rɣt^he
 IMP-CAUS-be.determined.from[III]
 ‘Determine [the quantity of clothes that you are going to make] based on
 whether the [quantity of] cloth is sufficient.’ (elicited)

With bare and dental infinitives, multiclausal complements are only attested in the simultaneity construction (§24.5.1.3).

24.2.5 Reported speech

Verbs of speech (such as *ti* ‘say’ or *fɔrt* ‘tell’) and cognition (in particular *suso* ‘think’, ‘want’) can take reported speech complements, in which the speaker either (exactly or partially) reproduces a sentence uttered by the person he is quoting, or verbalizes the words he assumes a person is thinking. These clauses have finite verb forms, and are thus a sub-category of finite complement clauses, but present some properties distinguishing them from the complements studied in §24.2.3.

24.2.5.1 Sentence final particles

Reported speech clauses stand out among complement clauses in having no restriction on the verb form, in particular in terms of TAME (§24.2.3.1), and also in their ability to occur with sentence final particles, which are otherwise never found in subordinate clauses, including relatives, complements and other types of clauses .

For instance, the complement clause in (33) contains the imperative/hortative particle *je* (§10.4.1) as well as an interjection, and in (34) we find the utterance mitigation particle *loβ* (§sec:fsp.attitude).

 (150828 donglang) {0006312#S56}

24.2.5.2 Hybrid indirect speech

While Japhug allows direct speech quotation, the corpus reveals examples of mismatches between the viewpoint of the original speaker (the person whose speech or thoughts are quoted, subject of the complement-taking verb of speech/thought which selects the reported speech clause) and the current speaker (the person quoting the words of the original speaker).

In the present work, these phenomena are referred to as Hybrid Indirect Speech (Jacques 2016a following Tournadre (2008)).⁵ In Hybrid Indirect Speech, the verb morphology (in particular person indexation) invariably presents the viewpoint of the original speaker, while pronouns and adverbs follow that of the current speaker.

Since grammatical relations are mainly marked by verb morphology and overt pronouns are not common (§6.1), distinguishing between Direct Speech and Hybrid Indirect Speech is only possible in a minority of cases. Mismatch between pronouns and person indexation only occurs when a pronoun or possessive prefix is overt, *and* that pronoun or prefix indexes a referent that is assigned a different grammatical person by the original speaker and the current speaker.

Example (35) provides an example of this phenomenon. The verb *nuɣi* ‘he comes/will come back (home)’ in the complement clause of the verb *kɣ-suso* ‘think’ is in the Factual Non-Past 3SG. In the same clause we find the 2SG pronoun *nxzo*; there is no pause between the pronoun and the verb, and no indication from the prosody that *nxzo* is left-dislocated.

- (35) *ma nx-wa ku [nxzo nuɣi] kɣ-suso ku k^ha*
 LNK 2SG.POSS-father ERG 2SG come.back:FACT INF-think ERG house
u-rku tce ɁmaɁ ɣsu-tɁxur pa-su-lɁ

cti tce
 be.AFF:FACT LNK

Direct: ‘Your father, thinking ‘He is coming back’, put three rings of soldiers around the house.’

Indirect: ‘Your father, thinking that you are coming back,’

Hybrid indirect: ‘Your father, thinking that ‘you’ is coming back,’ (2003 qachGa) {0003372#S155}

This type of mismatch between pronouns and indexation on the verb is anomalous and never found in independent sentences. Here the verb form corresponds to the point of view of the original speaker (indicated in blue in all following examples), whose original sentence would have been *uzo nuɣi* (3SG come.back:FACT ‘he is coming back’). The pronoun reflects the point of view of the current speaker (in red), for whom the equivalent sentence would be converted to *nxzo tu-nuɣi* (2SG 2-come.back:FACT ‘you are coming back’), since the addressee of the current situation corresponds to the subject of the original situation.

⁵Aikhenvald (2008) also uses the term “Semi-Indirect Speech”.

Examples (36a), (36b) and (38) illustrate that possessive prefixes on nouns undergo the same shift towards the point of the view of the current speaker, while the verb remains in the same form that was either thought or uttered by the original speaker.

In (36a) and (36b), the possessive forms *u-tɕu* ‘his son’ and *u-pi* ‘her brother’ underwent a shift to third person (representing the point of view of the current speaker). The original sentences corresponding to the complement clauses in (36a) and (36b) are presented in (37a) and (37b): the possessive pronoun is first person and coreferential with the subject of the main verb.

 1SG.POSS-elder.sibling GEN 3SG.POSS-revenge IPFV-make[III]-1SG
ra
 be.needed:FACT
 ‘I have to get revenge on my brother.’ (elicitation based on 36b)

Example (38) illustrates the same phenomenon as in (36a) and (36b), but with the verb of speech *ti* ‘say’ instead of *suso* ‘think’. In this example, we know from the context that the girl is the addressee, so that if the sentence were in direct speech, a second person singular prefix form *ny-kumtc^hu* (2SG.POSS-toy) ‘your toy’ would be expected instead.

- (38) *tvɛime nuu kuw pjw-tw-mts^hym tɛe, [nuunu w-kumtc^hu nuu*
 girl DEM ERG IPFV-CONV:IMM-hear LNK DEM 3SG.POSS-toy DEM

Hybrid indirect: ‘As soon as the girl_i heard that there was someone saying “I will bring her_i toy”.’ (140429 qingwa wangzi-zh) {0003890#S49}

In (39), one could be tempted to analyze the pronoun *uzo* ‘he’ as exterior to the reported speech clause, as the subject of the matrix verb *suso* ‘think’. However, since *suso* is transitive and requires its subject to be marked with the ergative (§8.2.2.1), this analysis is not possible. Instead, *uzo* ‘he’ belongs to the complement clause whose verb *ryzi* ‘stay’ is intransitive. The person mismatch, as in (35) above, is due to Hybrid Indirect Speech: the verb form *mu-pu-ryzi-a* with first singular marking reflects the viewpoint of the original speaker (the subject of the verb *juu-nu-susym*), while the pronoun *uzo* ‘he’ corresponds to that of the current speaker (the narrator of the story).

- (39) “*uzo* *χsuw-sɲi χsɣ-rzab ma mu-pu-ryzi-a*”

 IPFV-AUTO-think[III] PST.IPFV-be
Direct: ‘He was thinking “I have only stayed for three days and three nights”.’
Indirect: ‘He was thinking that he had only stayed for three days and three nights.’
Hybrid Indirect: ‘He was thinking that he have only stayed for three days and three nights.’ {0003376#S96}

A potentially even more confusing case occurs when the original speaker is the current speaker's addressee, and when both the original and the current speakers are referred to in the original utterance. This is the situation observed in (40), a sentence pronounced by a fox who helped a prince to succeed in various tasks. Here, the first singular possessive prefix *a-* on the possessed noun *u-tʃʊnlɿn* 'favour' and the first person singular suffix *-a* on the verb *ɲu-nu-fsuy-a* do not correspond to the same referent. The verb form *ɲu-nu-fsuy-a* 'I will pay back' is the sentence that the fox attributes to his addressee (the prince), so that the first person here corresponds to the prince, while the possessive prefix on *u-tʃʊnlɿn* 'favour' reflects the point of view of the fox and thus refers to himself.

- (40) *a-tʃʊnlɿn* *ɲu-nu-fsuy-a* *u-ɲu-tu-susɿm* *nɿ, nu*
 1SG.POSS-favour IPFV-AUTO-pay.back-1SG Q-IPFV-2-think[III] LNK DEM

Direct: 'If you think "I will return the favour (which I received from you)", do like that.'

Indirect: 'If you want to return the favour (which you received from me), do like that.'

Hybrid Indirect: 'If you think "I will return the favour (which you received from me), do like that.' {0003372#S192}

In such a situation, the referents corresponding to first and second person are exactly reversed between the point of view of the current and the original speaker, and therefore between pronouns and possessive prefixes on the one hand and verbal indexation on the other hand.

The corresponding sentence in Direct speech would be (41), with a second person singular possessive prefix on the noun *u-tʃʊnlɿn* 'favour' instead.

- (41) *nɿ-tʃʊnlɿn* *ɲu-nu-fsuy-a*
 2SG.POSS-favour IPFV-AUTO-pay.back-1SG
 'I will return the favour (which I received from you).'

Surprisingly, despite this complex shift of perspective between the original speaker and the current speaker, there is no logophoric pronoun in Japhug (Hagège 1974; Nikitina 2012). A logophoric pronoun is, however, attested in the closely related Stau language, which appears to have a similar system of Hybrid Indirect Speech (Jacques et al. 2017).

Hybrid indirect speech is not rare in Japhug, and this grammar contains additional examples, such as (90) in §10.4.4.

24.3 Morphosyntactic properties of complement clauses

24.3.1 Word order and constituency

Complement clauses, are strictly preverbal in Japhug like other core arguments (§22.1.1), except in the case of right dislocated constituents (§22.1.3) such as the infinitive clause *ky-sy-fstun* ‘to serve’ in (42) (§24.5.7).

- (42) *tc^hi tu-tuu-ste ηu, [ky-sy-fstun]*
 what IPFV-2-do.like[III] be:FACT INF-APASS-serve
 ‘How do you treat people?’ (2002 qaCpa)

While complement clauses are generally located directly before the verb, in examples such as (43) the subject of the matrix verb inserted after the complement clause.

- (43) *[nyzo ky-cuu-nho] azo muu-ɲu-c^ha-a*
 2SG INF-CAUS-be.defeated 1SG NEG-IPFV-can-1SG
 ‘I cannot defeat you anymore.’ (140513 abide he mogui-zh) {0003975#S83}

Discontinuous complement clauses are rare in Japhug. The only clear example in the corpus is (44). In this example, the 1SG pronoun *azo* is the subject of the matrix clause, and has no syntactic role in the complement clause, but it appears between the transitive subject *lulu ku* ‘the cat’ and the object *ɲuuz* ‘two’ of the complement clause. Despite the rarity of this construction, this sentence was not considered to be unusual by Tshendzin when listening again to the recording.

- (44) *[lulu ku azo ɲuuz zo ka-ndo] puu-mto-t-a*
 cat ERG 1SG two EMPH AOR:3→3’-take AOR-see-PST:TR-1SG
 ‘I saw a cat catching two of them.’ (22-kumpGatCW) {0003590#S53}

24.3.2 Case marking

When the verb of the matrix and the complement clauses sharing the same subject have different transitivity values, there is a conflict in case assignment on their common subject, which can either take absolutive (§8.1.1) or ergative marking (§8.2.2).

Examples (45) and (46) provide a minimal pair illustrating this optional treatment. In both examples, the matrix verb *rga* ‘like’ is semi-transitive (and its subject cannot take ergative marking), while *ndza* ‘eat’ is transitive (and thus requires a subject with the ergative).

In (45), the subject *fsapax ra* ‘farm animals’ has no ergative marking, showing that its case marking is assigned by the semi-transitive *rga* ‘like’ (§14.2.3), and therefore that the infinitival complement clause in this example is restricted to the sole infinitive verb form *kx-ndza* ‘to eat’.

- (45) *fsapax ra [kx-ndza] wuma rga-nu*
 animals PL INF-eat very like:FACT-PL
 ‘Farm animals like to eat it.’ (19-qachGa mWntoR) {0003546#S107}

By contrast, in example (46), the common subject *pax ra* ‘pigs’ takes the ergative *ku* selected by the transitive verb *ndza* ‘eat’ in the complement clause, suggesting that it should be analyzed as belonging to the complement clause.

- (46) [*pax ra ku kx-ndza*] *wuma zo rga-nu*
 pig PL ERG INF-eat very EMPH like:FACT-PL
 ‘Pigs like to eat it.’ (12 ndZiNgri) {0003488#S137}

In (46) it is not possible to argue that the case marking on the subject is a case of long-distance ergative (§8.2.2.2), since *pax ra ku* does not serve as subject for a transitive verb located a few clauses afterwards; in fact there is no mention of the pigs in the rest of the text.

Examples (47) and (48) with dental infinitive complements (§24.2.2) containing an intransitive verb (§16.2.3) and the transitive matrix verb *za* ‘begin’ illustrate the opposite situation: the transitive verb requires the ergative on third person subjects (§8.2.2), while the intransitive one precludes it. In (47), the common subject is in the absolutive, showing that it owes its case marking to the intransitive verb *ηke* ‘walk’, and therefore that it belongs to the complement clauses.

- (47) [*<xinbada> nu tce li tu-ηke*] *to-za*
 Sinbad DEM LNK again INF-walk IFR-begin
 ‘Sinbad started to walk again.’ (140511 xinbada-zh) {0003961#S206}

In (48), the common subject is in the ergative following the transitive matrix verb *za* ‘begin’ (§24.5.6.2), and is thus located outside of the complement clause.

- (48) *pyxtcu nu ku [nuçimuma zo tu-nurxyo] c^hx-za*
 bird DEM ERG immediately EMPH INF-sing IFR-begin
 ‘The bird immediately started to sing.’ (140514 huishuohua de niao-zh)
 {0003992#S208}

In the case of transitive matrix verbs such as *ɾno* ‘experience’ that allow coreference between the subject of the matrix clause and either the subject or object of the complement clause, the common argument receives ergative marking even when it is the object in the complement clause, as illustrated by example (169) (§24.5.6.1).

24.3.3 Determiners

Finite (§24.2.3), reported speech (§24.2.5) and infinitive (§24.2.1) complement clauses, like relative clauses (§23.3.5.2), are often followed by *nuu* and *numu* (49) (which occur as demonstrative pronouns and determiners, §6.9, §9.1.2, §9.1.5.4, §9.1.4.3) and/or by the plural marker *ra* (50) (§9.1.1.2), which adds the nuance that other activities may be implied. For instance, in (50), *ɲuu-nuuqambuɓjom ra múj-spe* can be glossed as ‘it is not able to fly (and do other related activities)’.

(49) [*mɣ-kɣ-ɕe*] *nuu mɣ-k^hu ri*
 NEG-INF-go DEM NEG-be.possible:FACT LNK
 ‘[I] have no choice but to go.’ (2005 Norbzang)

 ‘The [inchworm] moves as if it were measuring the ground span by span,
 it is not able fly.’ (26-qambalWla) {0003680#S72}

These markers are analyzed in this grammar as determiners of the entire complement clause rather than as complementizers, the analysis proposed by Sun (2012: 481) concerning a similar construction in Tshobdun. As evidence for the analysis as determiners, note that the position of the markers *nuu* and *ra* relative to complement clauses is exactly the same as that between demonstrative and plural determiners and nouns in a noun phrase (§9.1.2). In particular, circumposed determiners are attested with complement clauses as in (51), where the reported speech complement *tɕ^heme jɣ-yut-a* ‘I brought a girl’ is both preceded and followed by plural markers.⁶

⁶Examples like (51) directly refute my previous claim (Jacques 2016a: 258) that determiners of complement clauses are strictly postclausal.

24 Complement clauses

- (51) *nura [t^heme j_x-yut-a] ra muu-to-ti.*
DEM.PL girl AOR-bring-1SG PL NEG-IFR-say
'He did not say that he had brought a girl home (and the related events).'
(150909 hua pi-zh) {0006278#S50}

Bare and dental infinitival clauses (§24.2.2) rarely take the determiners *nuu* and *ra*, but examples such as (52) are attested in the corpus.

- (52) *[pyyt_{cuu} ra tuu-*mbri*] ra ta-za-*nuu* puu-*tsu**
bird PL INF:II-cry PL AOR:3→3-start-PL PST.IPFV-have.time.to
'[The solar eclipse] lasted long enough for the birds to start singing (as if night had come).' (29-RmGWzWn) {0003730#S30}

24.3.4 Restrictive and additive focus

Various focus markers are inserted between the complement clause and the matrix verb, including the additive/scalar focus marker *kunx* 'also, even' (§9.1.6.1) in (53).

- (53) *[k_x-*nuu*-β*luu*] kunx m_x-*sna**
INF-AUTO-burn also NEG-be.good:FACT
'It is not even good for burning (as firewood).' (11-qarGW) {0003480#S100}

In (54), the exceptive construction *ma nuu ma* 'apart from that' (§8.2.8) located between the infinitival clause *k_x-mts^h_{xm}* and the matrix verb has a different status from *kunx* in (117), as the matrix verb *puu-r_{no}-t-a* (AOR-experience-PST:TR-1SG) in affirmative form can be inserted after the complement clause (*k_x-mts^h_{xm} puu-r_{no}-t-a ma nuu ma muu-puu-r_{no}-t-a*) and its absence in (54) is due to elision.

- (54) *[k_x-mts^h_{xm}] ma nuu ma muu-puu-r_{no}-t-a*

'I only heard about it.' (I did not see it and do not even claim that it exists, of a mythological animal) (20-Rmbrn) {0003560#S108}

24.3.5 Raising of preverb orientation

With the exception of finite complements and some velar infinitives (§16.2.1.2), verbs in complement clauses generally lack orientation preverbs, and only the matrix verb encodes orientation.

24.3 Morphosyntactic properties of complement clauses

While some complement-taking verbs keep the same orientation regardless of the complement type and the lexical orientation of the verb in the complement clause (for instance, *ɾno* ‘experience’ always takes the DOWNWARDS orientation, §24.5.6.1), other matrix verbs, in particular causative verbs (§24.5.1.4) and phasal verbs such as *za* ‘begin’ (§24.5.6.2), select the orientation of the complement verb. This phenomenon is illustrated in Table 24.1 and the following examples.

Table 24.1: Examples of raising of preverb orientation from the complement clause of *za* ‘begin’, Inferential 3SG(→3’)

Orientation	Example		Dental/bare inf. + <i>za</i> ‘begin’	
upwards	<i>to-mna</i> ‘s/he got better’	(213), §21.5.2.4	<i>tu-mna to-za</i> ‘s/he started getting better’	(55)
downwards	<i>pjɾ-fɛɾt</i> ‘s/he told it’	(127), §16.1.3.7	<i>u-fɛɾt pjɾ-za</i> ‘s/he started telling it’	(56)
upstream	<i>lo-fsoɁ</i> ‘the day broke’	(68), §24.4.2.1	<i>tu-fsoɁ lo-za</i> ‘the day started breaking’	(57)
downstream	<i>c^hɾ-lɾt</i> ‘s/he played’ (the flute)	(151), §15.1.5.8	<i>u-lɾt c^hɾ-za</i> ‘s/he started playing’ (the flute)	(58)
eastwards	<i>ko-rjɑɁ-ndzi</i> ‘they danced’		<i>tu-rjɑɁ ko-za-ndzi</i> ‘they started dancing’	(59)
westwards	<i>ɟɾ-munmu</i> ‘s/he moved’		<i>tu-munmu ɟɾ-za</i> ‘s/he started moving’	(60)

As shown in Table 24.1, the orientation preverb on *za* in examples (55) to (60) (in all of these cases a D-type preverb marking the Inferential, §15.1.1.1) is the same as that found when the verb in the complement clause is used as a main verb conjugated in the Inferential.

24 Complement clauses

- (55) *tur-mna to-za tce*
 INF:II-be.better IFR:UP-start LNK
 ‘He started getting better.’ (150907 yingning-zh) {0006264#S52}

 3SG.POSS-story 3SG.POSS-BARE.INF:tell IFR:DOWN-start
 ‘He started telling her a story.’ (140517 buaishuohua-zh) {0004018#S65}
- (57) *tur-fsoɞ lo-za tce,*
 INF:II-be.light IFR:UPSTREAM-start LNK
 ‘The day broke.’ (140511 yinzi-zh) {0003963#S38}
- (58) *juli ur-lɣt c^hɣ-za*
 flute 3SG.POSS-BARE.INF:release IFR:DOWNSTREAM-start
 ‘He started playing the flute.’ (140513 mutong de disheng-zh)
 {0003977#S138}
- (59) *tur-rʃaɞ ko-za-ndzi*
 INF:II-dance IFR:EAST-start-DU
 ‘They started dancing.’ (140504 huiguniang-zh) {0003909#S141}
- (60) *tur-munmu pɣ-za*
 INF:II-move IFR:WEST-start LNK
 ‘It started moving.’ (150904 yaoshu-zh) {0006394#S77}

When an orientable verb (§15.1.2) is found in the complement clause, *za* can take the indefinite orientation preverbs as in (61).

- (61) *li tur-ce jo-za*
 again INF:II-go IFR:INDEFINITE-start
 ‘He started leaving.’ (140511 xinbada-zh) {0003961#S273}

The verb *za* ‘begin’ can also be used with nominal objects as in (62).

- (62) *rɣɣo c^hɣ-za*
 song IFR:DOWNSTREAM-start
 ‘It started singing (i.e. began a song).’ (140519 yeying-zh) {0004040#S75}

If the object in question has a corresponding denominal verb, such as *nurɣɣo* ‘sing’ from *rɣɣo* ‘song’ (§20.7.1), the same orientation preverb that *za* takes when used with the base noun will be the same as that selected by the corresponding denominal verb: for instance, DOWNSTREAM is found in both cases in (62) and (63).

- (63) *pɣɣtcw nuu ku nuucimuma zo tu-nurɣyo c^hy-za*
 bird DEM ERG immediately EMPH INF-sing IFR:DOWNSTREAM-start
 ‘The bird immediately started to sing.’ (140514 huishuohua de niao)
 {0003992#S208}

All phasal verbs (§24.5.6.2) and causative complement-taking verbs behave like *za*. Additional examples of this phenomenon with *st^hut* ‘finish’ are presented in §24.5.6.2.

24.4 Complementation strategies

Dixon (2006) introduces the term “complementation strategy” to refer to constructions with a meaning corresponding to that expressed by complement clauses in some languages, but which either are not core arguments or the verb of the main clause or are not clauses with a complete argument structure (Dixon 2006: 34–40). Complementation strategies include nominalizations (when the verb sheds its argument structure as it becomes a noun), relative clauses (which are formally a modifier of a core argument), serial verb constructions and clause linking.

24.4.1 Relative clauses in core argument function

Some complement-taking verbs can alternatively select (semi-)objects instead of complement clauses. For instance *c^ha* ‘can’ occurs with the noun 考试 <kǎoshì> ‘exam’ (borrowed from Chinese) (64).

- (64) <*kaoshi*> *pu-c^ha*
 exam AOR-can
 ‘He passed the exam.’ (12-BzaNsa) {0003484#S69}

In (65), the clause *tu~ta-tut* superficially resembles a finite complement clause (§24.2.3), but four pieces of evidence indicate that it should rather be analyzed as a headless relative clause in semi-object function like the noun <*kaoshi*> in (64).

- (65) *tx-pytso nuu ku nura [tu~ta-tut] nura*
 INDEF.POSS-child DEM ERG DEM:PL TOTAL~AOR:3→3’-say[II] DEM:PL
pjɣ-c^ha
 IFR-can
 ‘The child had succeeded in doing everything that [the old king] had said.’
 (140428 yonggan de xiaocaifeng-zh) {0003886#S240}

four types of complements and complementation strategies: purposive clauses, constructionalized object relative clauses, essive participial clauses and genuine participial complements.

24.4.2.1 Purposive clauses of motion verbs

The motion verbs *ce* ‘go’, *yi* ‘come’ and *toB* ‘come out’ (§15.1.2.1) select purposive clauses whose verb is obligatorily in participle form (§15.2.10).⁷ The participles in this construction cannot take orientation, polarity and associated motion prefixes.

Both subject and object purposive clauses are found. Subject purposive clauses are subject participial clauses (§16.1.1.6), as in (68) and (69). In this construction, there is obligatory coreference between the subject of the motion verb and that of the purposive clause, unlike other superficially similar constructions (§24.4.2.3).

- (68) *lo-fsoB tce tce tx-mu nu [u-tcu*

u-kw-car] *c^hy-ce tce,*
 3SG.POSS-SBJ:PCP-search IFR:DOWNSTREAM-go LNK
 ‘When the sun came up (in the morning), the mother went to look for her son.’ (tWJo 2012) {0004089#S31}

- (69) *pri nu [u-zda u-kw-car] jo-toB.*
 bear DEM 3SG.POSS-companion 3SG.POSS-SBJ:PCP-search IFR-come.out
 ‘The bear came out to look for its companion (another bear).’ (elicited)

To express coreference with the *object* of the purposive clause (in the case of a transitive verb), the object participle is normally used instead (§16.1.2.6). Coreference between the object of the complement clause and the subject of the matrix clause is possible only if the object has control over the action as in (70); control of the subject of the purposive clause is not necessary in this case.

- (70) [*k^hro ky-mto*] *múj-yi ma u-ky-ndza yvzu.*

⁷This construction is reminiscent of the use of the future participle with motion verbs in Ancient Greek (Vernhes 1996: §177.B).

There is however at least one unexplained exception. The verb *nuβlɣmtɕ^hɣt* ‘ask to perform a task’ (71) consistently occurs in *subject* participle form in the purposive construction in the meaning ‘go/come to perform a task (at someone’s invitation)’, where coreference is thus between the subject of the motion verb and the object of the transitive verb. The *kɣ-* participle is also acceptable with motion verbs, but this construction is not attested in texts. This problem deserves additional research.⁸

(71) *azo βlama tɣ-nuβlɣmtɕ^hat-a*
 1SG lama AOR-ask.to.perform.a.task-1SG
 ‘I asked a lama to perform a [ceremony] for me.’ (elicited)

 ‘(Their lama said:) ‘I have to go to perform [a ceremony at someone’s invitation].’ (160720 kandZislama) {0006147#S5}

When the verb in the subject purposive clause is transitive, the participle has a possessive prefix coreferent with the object as in the case of relative clauses (§16.1.1.1), and the subject can either take absolutive marking following the motion verb (which is morphologically intransitive), as in (68), or ergative marking following the verb of the purposive clause as in (73). This difference in case marking can be analysed as reflecting clausal structure: in (73), the subject *tɣ-rjɪt ra* ‘the children’ belongs to the purposive clauses, whereas in (68), the subject *tɣ-mu nu* lies outside of it.

(73) *u-fso-soz tɕe, [tɣ-rjɪt ra kɯ nu*
 3SG.POSS-tomorrow-morning LNK INDEF.POSS-child PL ERG DEM

 ‘The next morning, the children went (there) to look for him.’ (2012 Norbzang) {0003768#S281}

The goal of the motion verb can, however, occur within the purposive clause, as in (74), where the subject in ergative form *u-wa nu kɯ* ‘his father’ is stranded from the transitive verb *u-kɯ-n-nɣjo* by the goal *k^hapa tɕe* ‘downstairs’.

⁸ Another puzzling feature of this construction is the fact that there is no obligatory possessive prefix on the participle, and that when present, it indexes the subject rather than the object.

- (74) [u-wa nuu ku k^hapa tce u-ku-n-nyjo]
 3SG.POSS-father DEM ERG downstairs LOC 3SG.POSS-SBJ:PCP-AUTO-wait
 pjɣ-yi.
 IFR:DOWN-come
 ‘His father came downstairs to wait for him.’ (140506 loBzi) {0003923#S5}

Motion verbs with purposive clauses have some semantic overlap with the corresponding associated motion prefixes (§15.2.1); the functional difference between the two constructions is discussed in §15.2.10.

Apart from the three motion verbs above, a few verbs expressing imminent aspect such as *ayuyu* ‘be about to’ also selects participial clauses (§24.5.6.3), as shown by (75).

- (75) ku-maq^hu tce, tɣ-tcu nuu [ku-si] to-ryngat
 SBJ:PCP-be.after LNK INDEF.POSS-SON DEM SBJ:PCP-die IFR-be.about.to
 ‘The man was about to die.’ (2002 rkongrgjal2)

Although there is potential ambiguity between purposive clauses and headless participial relative clauses (§23.4.1) used with motion verbs, ambiguous sentences are not common in the corpus. The presence of determiners such as the indefinite *ci* in (76) shows that the participial clause can only be a relative and is not interpretable as a purposive clause. However, *u-ku-mts^{hi} jɣ-ye* without the determiner could indeed be parsed as ‘s/he came to lead it’.

- (76) [ts^hyt u-ku-mts^{hi}] ci jɣ-ye tce
 goat 3SG.POSS-lead INDEF AOR-come[II] LNK
 ‘Someone came leading a goat.’ (chen-pear)

24.4.2.2 Purposive clauses of manipulation verbs

Manipulation verbs such as *tsum* ‘take away’ or *yut* ‘bring’ (§15.1.2.2) occur with non-finite purposive clauses in *kɣ-*, as in (77), rather than subject participles like the motion verbs (§24.4.2.1) despite obligatory subject coreference.

- (77) u-mbro u-ndzi nuura [kɣ-ntsye] jo-tsum
 3SG.POSS-horse 3SG.POSS-skin DEM:PL OBJ:PCP-sell IFR-take.away
 ‘He took the horses’ skins to [the market] to sell them.’ (150814
 kelaosi-zh) {0006276#S82}

The non-finite verb form *kɣ-ntsye* could in principle be either analyzed as an infinitive or as an object participle (§16.2.1.1). Unlike infinitival clauses, the *kɣ*-clauses in this construction can be optionally followed by quantifiers as in (78) and by the relator noun *u-spa* ‘material’ as in (79) and (80).

In addition, all of these examples present coreference between the object of the transitive verb of the main clause and that of the participial clause, reminiscent of the use of object participles in the purposive clauses of motion verbs to express coreference between the intransitive subject of the motion verb and the object of the transitive verb of the purposive clause (see example 70 in §24.4.2.1 above and §16.1.2.6).

- (78) *kutɕu rca [kɣ-ntsye] u-kuxtɕu~xtɕo*

ku-du-dɣn jo-ɣuut.
 SBJ:PCP-EMPH~be.many IFR-bring
 ‘The man brought a lot of things to sell.’ (elicited)

These clauses are (at least historically) to be analyzed as participial clauses in essive function (§8.1.7): *kɣ-ntsye (u-spa)* and *kɣ-sat (u-spa)* in the examples above literally mean ‘(bring/take away) as something to be sold/as someone to be killed’, hence their use in purposive function. This construction is not specific to manipulation verbs: in (81), the verb of the main clause *χsu* ‘raise’, ‘feed’ is also found with the same type of participial clause.⁹

⁹In (81) however, the object of *kɣ-ndza* is not coreferent with that of the main verb, unlike what is found with the manipulation verbs.

- (81) *paβ nura βo luskɪ, [ca kɣ-ndza] u-spa*

24.4.2.3 Constructionalized participial relative clauses

The verbs of pretense select subject participial relative clauses as objects or semi-objects.¹⁰

The status of the clauses with subject participles occurring with these verbs, though superficially similar to the purposive clause (§24.4.2.1), is, however, entirely distinct. These clauses are not specific constructions, but simply headless relative clauses in object or semi-object function. This is shown by the fact that the same verbs are also found with participial head-internal clauses as in (82), where the three nouns *pyɣtɕu* ‘bird’, *k^huna* ‘dog’ and *lulu* ‘cat’ are intransitive subjects of the participial clauses, and are not coreferent with the subject of their matrix verb *tu-nuɕpuz*. This example can be literally translated as ‘it is able to imitate a singing bird, a barking dog and a meowing cat.’ (see also §23.8.3).

- (82) *u-zda nura, [[pyɣtɕu ku-γɣwu], [k^huna ku-ɣndzɔt],*

24.4.2.4 Participial complements

In addition to the constructions studied above, subject participles also occur in a handful of syntactic contexts where an infinitival complement is normally expected; I call these clauses ‘participial complements.’

The velar infinitive + existential verb construction expressing impossibility (§16.2.1.6) has a variant with Imperfective subject participles, as in (83).

¹⁰Unlike the cases discussed in §24.4.1, these verbs cannot take genuine complement clauses, and require participial relatives.

24 Complement clauses

- (83) *tu-ku-yi* *ɲɣ-yɣ-me* *q^he*,
 IPFV:UP-SBJ:PCP-COME IFR-CAUS-not.exist LNK
 ‘She made it impossible for her to come out (again).’ (2003-kWBRa)

In addition, when a complement-taking verb is itself in the subject participle form, it is possible for the complement either to be in the expected form (infinitive or finite), or to be in the subject participle form itself. For instance, in example (84) the subject participle *ku-c^ha* ‘the one who can’ takes a complement whose verb is a subject participle with a possessive prefix coreferent with the object (*ndzi-ku-syndu*), instead of the expected *kɣ-* infinitive (or finite clause).

- (84) *[[rɲuɫ ku ndzi-ku-syndu]* *ku-c^ha]* *ku-fse*

24.4.3 Action nominals

Some light verbs, in particular *βzu* ‘make’ (§22.4.2) are combined with action nominals (§16.4) in highly grammaticalized constructions.

24.4.3.1 *tu-* action nominals

The *tu-* action nominals (§16.4.1) can be combined with the verb *βzu* ‘make’ to express habitual actions, especially actions taking a considerable amount of time. For instance *tu-taβ c^hu-βze* ‘she was weaving’ in (85) and *tu-ɕk^ho pjú-wɣ-nu-βzu* ‘(when) we dry (grains in the field)’ refer to actions taking place every day (and taking up most of the day) during a certain time period.

The main verb *βzu* takes over the orientation selected by the verb in action nominal form (§24.3.5): DOWNSTREAM in (85) (§15.1.4.5) and DOWNWARDS in (86).

- (85) *ɬɣ-tɕu* *nɯ lu-rɣ-ji*, *tɕe tɕ^heme nɯ ku li*

 ‘When we dry things in the sun, when we dry the grains before grinding
 (one grinds them only after they have dried), it comes, steals them and
 eats them.’ (22-CAGpGa) {0003586#S62}

This construction is found with both transitive (86) and intransitive verbs (87). In the former case, the object is not overt. Although *βzu* remains transitive, this construction shares with the antipassive derivations (§18.6) the function of demoting the object (§18.6.8.3).

- (87) *rɣyo ra c^hw-βzu-nu, tuw-rɣaɣ* *ra pjw-βzu-nu*
 SONG PL IPFV-make-PL NMLZ:ACTION-dance PL IPFV-make-PL

 ‘(Every year, when the festival took place), [people] would sing and
 dance.’ (150906 toutao-zh) {0006326#S13}

Action nominals either refer to the action itself or an object affected by the action (§16.4.1). While the collocation with *βzu* ‘make’ probably derives from the first meaning of the action nominals, in some examples we have to take into consideration that the second meaning of the action nominal may intervene. For instance, in (86), *tuwck^ho + βzu* can be understood as ‘to do the action of drying in the sun’, but also as ‘to do the action related to grains that are dried in the sun’, since the grains in question are directly referred to in the next clause as *kɣ-ɣndzɔur u-spa* ‘(grains) to be ground’.

Action nominals can also occur with *lɣt* ‘release’, though this construction is considerably less productive. This collocation can be used to indicate a sudden semelfactive action as in (88), and the object can be overt.

- (88) *tce azo a-mt^hɪwɪm* *ta-nu-tɪwɪm* *q^he, a-jaɣ*

AOR:3→3'-take.out

'The kite took away the meat (that was in my hand), it scratched my hand, and made it bleed.' (150909 qandZGi) {0006358#S9}

Apart from *βzu* and *lyt*, the transitive verb *k^hyt* 'do repeatedly', 'do for a long time' also selects action nominals, but with ergative case marking (§8.2.2.10). The modal verb *ra* 'be needed' (§24.5.3.1) can take degree nominals as subjects (§16.3.5) instead of finite or infinitival complements.

24.4.3.2 Simultaneous action nominals

The simultaneous action nominals, prefixed in *tu-tu-* (§16.4.3), are also used in collocation with *βzu* 'make'. As in the previous construction, there is raising of the orientation preverb onto the main verb *βzu* (§24.3.5). For instance, in (89) the DOWNWARDS orientation preverb *pjɣ-* on *βzu* from the nominalized verb *numdar* 'jump'.

With an intransitive verb, the simultaneous constructions occur with a dual or plural subject, and means that several individuals referred do an action together at the same moment, as *tu-tu-numdar* 'jumping together' in (89). The auxiliary *βzu* can even take the indefinite orientation prefixes *jɣ-* *ja-* as in (214) when occurring with a motion verb.

- (89) *mts^hu u-ŋguw tu-tu-numdar pjɣ-βzu-ndzi*
 lake 3SG.POSS-inside SIMULT-NMLZ:ACTION-jump IFR:DOWN-make-DU
 'They (the two of them) had jumped into the lake together.' (nyima wodzer 2003)

When used with transitive verbs, this construction is only found with dual or plural objects, and implies that several entities were subjected to the action together at the same time, as *tu-tu-tɕaβ* 'causing to roll down together' in (90), or that several object end up being tied together as result of the action as with *tu-tu-tɕuβ* 'sewing together' in (91).

 'He made the basket with the bear [in it] roll down (together).'
 (2011-13-qala)

The comitative (§8.2.5) can be used as in (90) and example (213) in (§16.4.3) to link two nouns referring to the patients that undergo the action together.

- (91) *tu-ŋga tu-tu-tsuβ kx-βzu-t-a*
 INDEF.POSS-clothes SIMULT-NMLZ:ACTION-sew AOR-make:PST:TR-1SG
 ‘I stiched the clothes together.’ (elicited)

In the case of transitive verbs, the verb *βzu* ‘make’ takes the indexation of both subject and object, as in (92) where it takes the portmanteau *ta-* prefix, showing that the simultaneous action nominal does *not* have object function.

- (92) *nuzora tu-tu-qur tx-ta-βzu-nu*
 2PL SIMULT-NMLZ:ACTION-help AOR-1→2-make-PL
 ‘I helped you all at the same time.’ (elicited)

24.4.3.3 Compound action nominals

The verb *βzu* ‘make’ is also combined with noun-verb compound action nominals (§16.4.7) as semi-object. Two such compound nominals have been identified. With *k^hramba* ‘lie’ as first element, this construction means ‘pretend to do *X*’ (where *X* stands for the second element of the compound) as in (93) and (94).

- (93) [*k^hramba-qur*] *ma-tx-ku-βzu-a*

 IPFV-INV-make
 ‘When one mixes flour and water to make bread, one has to knead [the dough] for a long time.’ (160706 thotsi) {0006133#S34}

When the verbal component of the compound action nominal is transitive, both its subject and objects are indexed on the verb *βzu* ‘make’, as shown by the 2→1 configuration in (93). In addition, the orientation preverb on *βzu* reflects the lexicalized orientation of the verb in the compound (§24.3.5), for instance UPWARDS in (93), WESTWARDS in (94) and DOWNWARDS in (95).

The verb *lxt* ‘release’ (§22.4.2.2) is also productively used with action nominal compounds (§16.4.7) comprising a verb root such as *ɾpu* ‘bump into’ or *tɕ^hu* ‘gore, stab’ as second element.

24.4.4 Coordination

Some verbs take post-verbal coordinated clauses instead of complement clauses. A clausal linker is inserted before that clause, showing its non-subordinated status. There are several constructions of this type.

First, some attitudinal verbs such as *ɛnuu* ‘suspect’, *nusumɛɾiz* ‘hesitate’, *nuɔblu-mbuy* ‘guess, estimate’ or *nuɔjuβts^hxt* ‘guess, estimate’ occur in a coordinating construction strikingly similar to that described in Tshobdun by Sun (2012: 487–488): the attitudinal verb is followed by the affirmative copula *ɕti* ‘be’ and a linker such as *ri* or *ma*, as in (96) and (97).

maɔ mɾ-xsi
 not.be:FACT NEG-GENR:know
 ‘I am wondering whether what he said is true or not (suspecting that it is not true).’ (elicited)

Second, the verbs of perception *ɾtoɔ* ‘look’, *ru* ‘look at’ and *sɾŋo* ‘listen’ occur (exclusively in the Imperfective, §21.2.7) in narratives in a coordinating construction with the linkers *tɕe* or *q^he* as in (98) and (99).

- (98) *ku-ɾtoɔ tɕe [tɕ^heme nuu wuma zo pɾɾ-mpɕɾ]*

 {0006386#S42}

the size of the present grammar. For this reason, only a selection of the most frequent complement-taking verbs in the corpus is treated in this section. For each verb, the available complement types and complementation strategies are listed and exemplified.

Negative existential verbs can also take (subject) complements, but are discussed in §22.5.4.

24.5.1 Causative verbs

Some verbs derived with the causative prefixes (§17.2, §17.3) take complements or occur in complementation strategies. Three types of constructions are attested, expressing periphrastic causative, simultaneous events and manner.

24.5.1.1 Periphrastic causative constructions

In addition to the sigmatic and velar causative derivations (§17.2, §17.3), a variety of periphrastic causative constructions are also attested. Four groups of verbs are used as causative auxiliaries, including both causative verbs and non-derived verbs.

First, *βzu* ‘make’ can be combined with subject participles of adjectival stative verbs to express change of state or increase of degree, as in (102) and (74).

- (102) *c^hu-nduul-nu tce [ku-ndu-nduβ] zo c^hu-βzu-nu*
 IPFV-grind-PL LNK SBJ:PCP-EMPH-be.fine EMPH IPFV-make-PL
 ‘They grind [tobacco] and make it very smooth.’ (30-CnAto)
 {0003734#S8}

Example (103) illustrates the fact that the velar causative *γwxti* ‘make bigger’ is semantically similar to the use of *βzu* with the participle *ku-wxti*.

- (103) *u-p^hu ju-wxti tce, nura t^hamtɛxt ma-tɣ-tu-γwxti,*

 ‘It is too expensive, don’t make it that expensive, I will buy it, don’t
 make its price that expensive, offer it for a fair price.’ (Bargaining 12, 12)

This construction is not restricted to stative verbs. It is attested with transitive verbs as in (104) to express indirect causation.

- (104) *cuβjiz ku-fse c^hy-ta tce, u-kur*
 flat.stone SBJ:PCP-be.like IFR:DOWNSTREAM-put LNK 3SG.POSS-mouth

 ‘He positioned [the leaf of a rhododendron] like a flat stone [next to his younger brother’s_i mouth] in such a way that water could flow into his_i mouth.’ (2011-05-nyima)

With dynamic verbs however, the preferred construction is to use an impersonal modal verb such as *k^hu* ‘be possible’ or *ra* ‘be needed’ (§24.5.3.1) in participial form taking a complement verb, as in (105).

- (105) *la-ryci-nu tce, [[lu-nu-ɬob]*

 NEG-SBJ:PCP-be.possible IPFV-make-PL
 ‘They pull [on the thread] (to close the opening) and prevent it from coming out.’ (30-CnAto) {0003734#S38}

Second, the sigmatic causative forms *su-βzu*, *su-pa*, *su-γβzu* and *su-ɣpa* derived from the verbs *βzu* ‘make’, *pa* ‘do’, *aβzu* ‘become, grow’ and *apa* ‘become’ (on the latter two verbs see §18.1.2) are also commonly used as causative auxiliaries.

Like the base verb *βzu*, these causative verbs are also most often used with a modal impersonal auxiliary in subject participle form as in (106), (107) and (110).

 ‘You made it impossible for me to be born.’ (Gesar)

24.5.1.2 Periphrastic tropative

The causative verb *supa* ‘cause to do’ (from *pa* ‘do’, on which see §24.5.2, §22.4.2.5), among other functions (for instance §24.5.1.3), has the meaning ‘consider *X* to be *Y*’.

The parameter *Y* can be a stative verb in participial form, such as *ku-βdi* in (113).

- (113) $t\gamma\text{-}ep^h\gamma t$ $nu\text{-}a\text{-}pu\text{-}\gamma ndz\gamma m\text{-}stu\text{-}tce$, $nu\text{-}[ku\text{-}\beta di]$

 IPFV-CAUS-do-PL be:FACT
 ‘If the patch is level (if it is neatly sewn), people consider it [to have been sewn] well.’ (12-kAtsxWB-29) {0003486#S26}

The object *X* can receive ergative case (§8.2.2.7) to express a comparative meaning ‘consider *X* to be more *Y*’ (§26.2.1), as in (114). Ergative marking in this construction can be ambiguous, since the subject (experiencer) of *supa* also receives ergative case.

- (114) $nu\text{-}u\text{-}spa$ $ra\text{-}nu\text{-}na\chi t\epsilon u\gamma$ ϵti , tce
 DEM 3SG.POSS-material PL SENS-be.the.same be.AFF:FACT LNK
 $t^h o\eta\gamma\alpha\beta$ $nu\text{-}ku\text{-}[ku\text{-}mu\text{-}m]$ $tu\text{-}su\text{-}pa\text{-}nu\text{-}\eta u$
 bucket.alcohol DEM ERG SBJ:PCP-be.tasty IPFV-CAUS-do-PL be:FACT
 ‘Although its ingredients are the same (as those used to make other types of alcohol), [some people] consider alcohol in a bucket to be tastier.’ (30-thoNraR) {0003762#S16}

The combination of *su-pa* with participles is semantically similar to the tropative *ny-* derivation (§17.5). For instance, the second clause in (114) can be glossed as (115) with the tropative verb *ny-mum* ‘find tasty’ (in this example, the ergative on *t^hoηγαβ* ‘alcohol in bucket’ is also a comparee marker, and does not mark transitive subject).

- (115) *t^hoŋraβ nuu kuu ɲu-nɣ-mum-nuu*
 bucket.alcohol DEM ERG SENS-TROP-be.tasty-PL
 ‘They consider alcohol in bucket to be tastier.’ (elicited)

Unlike the *nɣ*- tropative derivation,¹¹ the *su-pa* periphrastic tropative can be used with nouns as parameters, instead of stative verbs. As shown in (116), the direct object is the person/entity that the subject considers to have the property described by the parameter, while the parameter *Y* (here the noun *ŋgumdzuy* ‘leader’) is a semi-object, not indexed on the verb.

- (116) *nɣzo ŋgumdzuy tu-ta-su-pa ŋu*
 2SG leader IPFV-1→2-CAUS-do be:FACT
 ‘I consider you to be [my] leader.’ (elicited)

The participle clauses in the periphrastic tropative construction (such as in 113 and 114 above) can be analyzed as headless participial relative clauses (§24.4.2.3). The literal meaning of this construction is thus ‘consider *X* to be something that is *Y*’.

24.5.1.3 Simultaneity

In addition to its periphrastic causative and tropative functions discussed in the previous section, the causative verb *supa* ‘cause to do’ also occurs in a construction expressing simultaneity between two actions.

This construction requires two complements, either two bare infinitives as in (117) or a combination of a bare infinitive with a dental infinitive as in (118), connected by the comitative *c^ho*.

- (117) *tce u-ti c^ho u-nɣma ra ci zo*

to-su-pa
 IFR-CAUS-do
 ‘As he said it, he did it at the same time.’ (150826 liyu tiao longmen-zh)
 {0006266#S40}

¹¹The *mu*- denominal prefix can be sporadically used with a tropative meaning (§20.7.2), for instance *muβgra* ‘treat as an enemy’ from *βgra* ‘enemy’, but it synchronically different from the tropative *nɣ*-, though these two prefixes are historically related (§20.10.3).

- (118) *nucimuma u-ti* *c^hondyre u-tur-ce* *ci*

24.5.1.4 Manner

Both sigmatic (§17.2) and velar causative (§17.3) causative derivations from adjectival verbs can be used as complement-taking verbs, expressing the manner in which the action described in the complement clause takes place.

This construction is found with dental/bare infinitival complements (120) or velar infinitival complements (121). Additional example sentences are presented in §17.2.4.7 and §17.3.2.2.

24.5.2 *pa* ‘do’

The transitive verb *pa*, which occurs as a light verb (§22.4.2.5) and presents ergative lability (§14.5.1.4), selects imperfective infinitive complements when used in the meaning ‘discuss and agree/decide to do *X*’ (122). All examples of this construction in the corpus occur with B-type orientation preverbs on the infinitive (§16.2.1.2).

- (122) [*nwtcu tce juu-ky-ytwy tce ku-ky-y-nyjuw-jo*] *to-pa-ndzi ri*,

 ‘They_{*i+j*} had a discussion and decided that he_{*i*} would stay and help him_{*j*}.’
 (140512 fushang he yaomo-zh) {0003967#S45}

The verb of speech *kxtupa* ‘tell’, which selects reported speech complements, is derived from *pa* (§14.3.4, §20.13.1).

24.5.3 Modal verbs

Modality in Japhug is encoded by TAME categories (§21.4), derivations such as the abilitative (§19.3), various sentence final particles (§10.4.4), and most importantly by complement-taking modal auxiliaries and noun-verb collocations (§24.6.3.3). This section provides a description of the use of some of the most common auxiliaries.

In addition to the verbs discussed in this section, some verbs of cognition such as *suso* ‘think’ also have modal functions (§24.5.4.1).

¹²This interesting sentence differs from the original Chinese text, which has 酋长... 决定留下来帮助他 <qiúzhǎng juéding liúxiàlái bāngzhù tā> ‘The chieftain ... and decided to stay and help him’. The dual *to-pa-ndzi* is a translation error, but Tshenzin considered the resulting sentence to be grammatical and meaningful, though semantically different from the original text.

24.5.3.1 Impersonal modal verbs

An important number of modal auxiliary verbs in Japhug are intransitive, and take a complement clause as their subject, and are therefore in 3SG invariable form (§14.2.7), regardless of the subject or object in the complement clause. The verbs *ra* ‘be needed’, ‘need’, *ɬoɓ* ‘have to’, ‘have better’,¹³ and *k^hu* ‘be possible’ are used with either finite complements (§24.2.3) or velar infinitives (§24.2.1), as shown by (124) and (125) on the one hand, and (126) on the other hand. In addition, *ra* is also attested with degree nominals (§16.3.5).

- (124) *t^ha* [*azo-suso nu-nu-pe-a*] *k^hu*

 {0003718#S75}

When impersonal verbs are combined with velar infinitive complement, the subject is not indexed anywhere in the clause. This construction occurs with generic person, as in (126) and (127), but not exclusively, as shown by (128) with an implicit 1SG transitive subject in the complement clause, which has the same meaning as that in (124) above.

- (126) [*zara nu-skɣt mɣ-kɣ-βzu*] *múj-k^hu*.

 ‘Now doing these things (i.e. killing whales) is not allowed.’ (160703
 jingyu) {0006169#S41}

Impersonal modal verbs, in addition to finite complements in the Imperfective, are also found with Imperative (§21.4.2.4, §21.4.3.2) and Irrealis (§21.4.1.4) complements.

Verbs without alternation between stem I and stem III (§12.2.2; in particular intransitive verbs) that select the EASTWARDS orientation take the *kɣ*-orientation preverb in the Imperative (§21.4.2.1), a form which can be superficially similar to a velar infinitive. For instance, the form *kɣ-nuu-ɣɣzi* in (134) could in principle either be parsed as an infinitive or an Imperative. However, this is the only possibility here, as demonstrated by the fact that the Imperative dual *kɣ-nuu-ɣɣzi-ndzi* or plural *kɣ-nuu-ɣɣzi-nuu* forms can occur in the same context, while the infinitive does not inflect for person and number.

- (134) [nɣzo kutcu kɣ-nuu-ɣɣzi] jɣɣ
 2SG DEM.PROX:LOC IMP-AUTO-stay be.allowed:FACT
 ‘You can stay here.’ (140504 baixuegongzhu-zh) {0003907#S91}

The impersonal auxiliary *ŋgru* ‘succeed’, on the other hand, is only found with velar infinitive complements, as in (135).

- (135) uu-k^ha kɣ-nuu-βzu mu-pjɣ-ŋgru
 3SG.POSS-house INF-AUTO-make NEG-IFR-succeed
 ‘(As he spends all his time singing rather than working, in the end) he did not manage to build his house.’ (26-NalitCaRmbWm) {0003676#S50}

The verbs *k^hu* ‘be possible’ and *jɣɣ* ‘be allowed’ both encode epistemic modality, but the former is used in the case of possibility due to external circumstances, while the latter expresses permission by the speaker (30, 134), the addressee (in interrogative forms such as *ú-jɣɣ*, see 288, §21.7.4.1), or another referent (136).

- (136) tce [tu-xpa tu-yjɣn ma ɲu-ɣtuɣ-nu] múj-jɣɣ

 ‘You cannot scare me.’ (140516 guowang halifa-zh) {0004008#S52}

24.5.3.3 *suxc^ha* ‘can’

The verb *sux-c^ha* is the sigmatic causative derivation (§17.2) of *c^ha* ‘can’ (§24.5.3.2). It is nearly always in negative form. It can occur with an overt nominal object in the meaning ‘cause to be (un)able to bear’ (example 37, §17.2.4.8). As a complement-taking verb, it requires a velar infinitive complement (§24.2.1), and exclusively occurs in inverse form with a non-overt causer, and has the specific meaning of ‘make (physically) unable to X’, with a non-overt implicit agent, the piglet or lamb in (143) and the bee in (144).

- (143) *t^hu-wxti-nu tsa tce tce, ta-tsum tce tu-ɣɣɣβjɣβ*

 ‘In the case of a (relatively) big [insect] like a bee,_i [the spider]_j cannot
 kill it_i quickly, because it_j is small while the other one_i is bigger.’
 {0003674#S100}

The transitive subject of the infinitival clauses *ky-tsum* and *zaza zo ky-sat* in (143) and (144) is here coreferent with the causee of *sux-c^ha*. Since *c^ha* is morphologically intransitive, this causee is syntactically equivalent to the direct object. It is one of the rare complement-taking verbs with obligatory object-subject coreference (§24.2.1.2).

24.5.3.4 *spa* ‘be able’

The transitive *spa* ‘be able’, ‘know how to’ is historically a lexicalized abilitative of *pa* ‘do’ (§19.3.1). It indicates ability that was acquired through a learning process.

This verb can either select a noun or a noun phrase as object (145, 146).

- (145) *azo kupa-skxt muj-spe-a*
 1SG Chinese-language NEG:SENS-be.able[III]-1SG
 ‘I am not able to [speak] Chinese.’ (160721 XpWN) {0006181#S84}

In Inferential or Aorist forms, it can be understood as ‘learn how to’ (‘acquire the ability to’).

- (146) *coŋβzu ko-spa*
 carpentry IFR-be.able
 ‘He learned carpentry.’ (elicited)

Alternatively, *spa* ‘be able’ takes infinitival (§24.2.1) or finite complement clauses (§24.2.3) as in (147). Subject coreference between *spa* and the verb in the complement clause is required (§24.2.1.2, §24.2.3.2).

- (147) [*a-mu tu-ti u-ju-spe?*
 1SG.POSS-mother IPFV-say QU-SENS-be.able[III]
 ‘Can he (a baby) say “mummy”?’ (conversation, 15-01-13)

24.5.3.5 *nrz* ‘dare’, *p^hot* ‘dare’

The verbs *nrz* ‘dare’ and *p^hot* ‘dare’ (the second is barely used in the Kamnyu dialect) can be used with both infinitival and finite complements. They require subject coreference.

In example (148) with the verb *nrk^hu* ‘invite’ (to one’s home as a guest’ (one of the few transitive verbs implying a volitional action of both subject and object, §24.2.2.2), the interpretation ‘I do not dare to go to his house as a guest’ (with coreference of the object of the complement clause and the subject of the main clause) is not possible, and a different construction is needed to express this meaning (149, with an object participle as explained in §24.4.2.1).

- (148) [*cw-kx-nrk^hu*] *mx-naz-a*
 TRAL-INF-invite NEG-dare:FACT-1SG
 ‘I do not dare to go and invite him.’ (elicited)

- (149) [[*kx-nrk^hu*] *kx-ɕe*] *mx-naz-a*
 OBJ:PCP-invite INF-go NEG-dare:FACT-1SG
 ‘I do not dare to go [to his house] as a guest.’ (elicited)

The verb *nrz* ‘dare’ is attested in a double negation constructions ‘not dare not to X’ (example 23, §13.3).

24.5.4 Verbs of cognition

24.5.4.1 *suso* ‘think’, ‘want’

The verb *suso* describes either a cognitive process (‘think that X’) or volitional deontic modality (‘want to X’).

As a modal verb, it either takes infinitive complement clauses (150, §24.2.1), or finite clauses (151, 152, §24.2.3), with subject coreference between the complement and the main clause.

- (150) [*c^hyci kx-ts^{hi}*] *ta-suso-nw* *tɕe, tɕe ki*
 alcohol INF-drink AOR:3→3’-want-PL LNK LNK DEM.PROX
w-qa *w-t^hum* *nw* *ɲw-χɕov-nw* *tɕe*
 3SG.POSS-bottom 3sg.POSS-cork DEM IPFV-remove-PL LNK
 ‘When people want to drink the alcohol, they remove the cork at the bottom (of the jar).’ (160703 araR) {0006101#S63}

24 Complement clauses

- (151) [ku-yut-a] nu-suso-t-a ri jɣ-nu-jmut-a ma
 IPFV:EAST-bring-1SG AOR-want-PST:TR-1SG LNK IFR-AUTO-forget-1SG LNK
 ‘I wanted to bring it but I forgot it.’ (23-tshAYCAnW) {0003616#S2}
- (152) [a-rɣo ju-tu-sɣo] tɣ-tu-suso-t tce, a-ɣu-jɣ-ku-suy-e-a
 1SG.POSS-song IPFV-2-listen AOR-2-want-PST:TR LNK IRR-CISL-invite-1SG
 q^he nu cti
 LNK DEM be.AFF:FACT
 ‘When you want to listen to my songs, send people to come and invite
 me and that’s it.’ (140519 yeying-zh) {0004040#S227}

The verb *suso* normally selects the WESTWARDS orientation as in (151) (or DOWNWARDS when used in the Past or Inferential Imperfective (§21.5.3), but examples (150) and (152) also show that it sometimes occurs with the Aorist UPWARDS orientation preverbs *tɣ-* or *ta-* in temporal clauses meaning “when *X* wants to *Y*” (§21.5.1.4).

24.5.4.2 *tso* ‘know, understand’, ‘know’, *suɣsvl* ‘recognize’, ‘realize’

The semi-transitive verb *tso* ‘know, understand’, ‘realize’, ‘know’ can take nominal semi-objects (§14.2.3), and occur with three types of complement clauses or complementation strategy. First, it takes finite complete clauses (§24.2.3) as in (153).

- (153) nuunu [tɣ-tcu nu ɣu u-k^ha nutcu tɣ^heme
 DEM INDEF.POSS-SON DEM GEN 3SG.POSS-house DEM:LOC girl
 ku-mɸɸɣr ci ɣɣzu] nu ko-tso-nu.
 SBJ:PCP-be.beautiful INDEF exist:SENS DEM IFR-understand-PL
 ‘They realized that there was a beautiful girl in the boy’s house.’ (150828
 donglang) {0006312#S89}

Second, subject participial clauses in *ku-* occur as semi-objects of this verb (§24.4.1), as in (154).

- (154) li [icq^ha tveime nu mu-pu-ku-si] nu
 again the.mentioned girl DEM NEG-AOR-SBJ:PCP-die DEM
 ko-tso
 IFR-understand
 ‘She realized that the girl had not died.’ (140504 baixuegongzhu-zh)
 {0003907#S174}

Third, *tso* also selects a (finite or participial) correlative clauses with an interrogative pronoun as in (155).

- (155) [*tx-rzab* *t^hystuy* *nw-ari*] *mw-pjɣ-tso*
 INDEF.POSS-time how.much AOR-go[II] NEG-IFR-understand
 ‘He had not realized how much time had passed.’ (28-smAnmi)
 {0004063#S246}

The transitive *suxɣɣl* ‘recognize’, ‘realize’ also takes finite complement clauses (see 210, §15.2.8.1) or participial clauses as in (156).

- (156) *tee nunw ku* [*qazo tx-ku-nwɕpuwz*] *nw pjɣ-suxɣɣl*.
 LNK DEM ERG sheep AOR-SBJ:PCP-disguised DEM IFR-recognize
 ‘He (the shepherd boy) had noticed that the [nobleman] was disguised
 as a sheep.’ (40513 mutong de disheng-zh) {0003977#S58}

However, despite being superficially identical to (154) above, in (157) *suxɣɣl* selects as direct object the 1SG intransitive subject of the participial clause. A possible way to explain this observation is to analyze the participial clause *azo tɕ^heme ku-ŋu* as a relative clause whose head is *azo* (‘me who am a girl’).

- (157) <*liangshanbo*> *nw ku* [*azo tɕ^heme ku-ŋu*] *nw*
 ANTHR DEM ERG 1SG girl SBJ:PCP-be DEM
a-mɣ-pú-wy-suxɣɣl-a

 ‘[I hope that] Liang Shanbo will not realize that I am a girl.’ (150826
 liangshanbo zhuyingtai-zh) {0006244#S73}

24.5.4.3 *βzjoz* ‘learn’ and *suxɕɣt* ‘teach’

The verbs of learning *βzjoz* ‘learn’ and *suxɕɣt* ‘teach’ take infinitive complements, as shown by (158) and (159).

- (158) [*<tuolaji> kɣ-lɣt*] *ra ka-βzjoz*
 tractor INF-release PL AOR:3→3’-learn
 ‘He learned to drive a tractor.’ (14-siblings) {0003508#S208}

In the case of the secundative verb *suxɕɣt* (§14.4.2), the direct object is the person being taught, the 2SG in (159), while the infinitive clause is the theme.

- (159) [*txfsyri kɣ-βzu*] *ci* *pju-ta-suxɕɣt*
 thread INF-make a.little IPFV-1→2-teach
 ‘Let me teach you how to make a thread.’ (vid-20140506043657)

24.5.5 Verbs of perception

The transitive perception verbs *mto* ‘see’ and *mts^hym* ‘hear’, ‘smell’, ‘feel (non-visually)’ express non-volitional perception. The contrast between *ru* ‘look at’ (§24.4.4) and *mto* can be illustrated by (160), where the latter has a meaning close to ‘find’.

- (160) *k^huyɲɲu ra s-c^hy-ru ri mu-pjɣ-mto*
 window PL TRAL-IFR:DOWNSTREAM-look LNK NEG-IFR-see
 ‘She went and looked from the window but did not see him.’ (140505
 xiaohaitu-zh) {0003921#S61}

These two verbs are compatible with finite complements (§24.2.3), as in (161), without any coreference restriction.

- (161) [*suŋgi nuu ɲu-yɣwu*] *nuu pjɣ-mts^hym*
 lion DEM IPFV-cry DEM IFR-hear
 ‘[The mouse] heard that the lion was crying.’ (shizi he laoshu-zh)

They are incompatible with infinitival complements, but often take participial or finite relative clauses as objects (§23.8.2, §24.4.1).

Non-finite verb form in *kɣ-* such as *kɣ-ntsye* in (162) resemble velar infinitives, but since intransitive dynamic verbs do not occur with *kɣ-* in this context, these forms are analyzed as object participles (§16.2.1.1).

- (162) *tce [u-rdov nuu ku-fse kɣ-ntsye] nuu*
 LNK 3SG.POSS-grain DEM SBJ:PCP-be.like OBJ:PCP-sell DEM
mu-pu-mto-t-a
 NEG-AOR-see-PST:TR-1SG
 ‘I have not seen its grains (of buckthorn) sold as is (it is always sold in
 processed form).’ (09-mi) {0003466#S55}

The verb *mts^hym* is often used in combination with the form *kɣ-ti* as in (163). This form could be analyzed as a complementizer, but since positive evidence of its grammaticalized status is not obvious, I analyze *kɣ-ti* here as an object participle taking an object complement clause (*nuu ɲu-sɣ-mtsuy*). That complement clause itself is also the relativized element of the head-internal object participial clause [*“nuu ɲu-sɣ-mtsuy” kɣ-ti*] (§23.8.4), a construction that can be glossed as ‘I have not heard ‘It bites people’ being said’.

- (163) *[[nu pu-sx-mtsuɣ] kx-ti] mu-pú-wy-mts^hym.*
 DEM SENS-APASS-bite OBJ:PCP-say NEG-AOR-INV-hear
 ‘I have not heard that it bites people.’ (28-tshAwAre) {0003722#S69}

With intransitive verbs, the subject participle in *ku-* is always found in the clauses occurring as the object of *mto* and *mts^hym*, as in (164). Such clauses are to be analyzed as participial relatives (§24.4.1).

- (164) *puw-ru q^he [tceki tu-ci w-ŋgu wzo*
 IPFV:DOWN-look LNK down INDEF.POSS-water 3SG.POSS-in 3SG
puw-ku-ntc^hyr] nu pjx-mto.
 AOR:DOWN-SBJ:PCP-appear DEM IFR-see
 ‘He looked down, and saw his own reflection in the water below
 (himself reflected in the water).’ (140519 chou xiaoya-zh) {0004034#S164}

In (165), *mts^hym* even takes as object a head-internal relative clause in *ku-* (rather than *kx-* as in 163 above), with the transitive subject as relativized element (§23.5.2).

- (165) *puw-syŋo tce [icq^ha syaxspa nu ku “txtʂu*
 IPFV-listen LNK the.aforementioned sorcerer DEM ERG lamp
yw-tx-syndu-nu” w-ku-ti] nu pjx-mts^hym tee
 CISL-IMP-exchange-PL 3SG.POSS-SBJ:PCP-say DEM IFR-hear LNK
 ‘She heard the sorcerer saying ‘Come and exchange [your] lamp’.’
 (140511 alading-zh) {0003953#S212}

Verbs of perception and cognition also occur with finite clauses containing interrogative pronouns which look like correlatives (§23.2.5), such as *ŋotcu jx-nu-ɬoɁ* in (166).

- (166) *[ŋotcu jx-nu-ɬoɁ] tci mu-pu-mto-j, [ŋotcu jx-cq^hlyt]*
 where IFR-AUTO-come.out also NEG-AOR-see-1PL where IFR-disappear
tci kx-cuɬtaɁ mu-pjx-c^ha-j
 also INF-remember NEG-IFR-can-1PL
 ‘We neither saw where she came from, nor can we remember which
 way she went.’ (2003 sras)

Although the volitional perception verbs *sŋo* ‘listen’ (labile), *roɁ* ‘look’ (transitive) and *ru* ‘look at’ (§15.1.2.4) can have nominal objects or semi-objects, they do not take complement clauses. However, they do occur in coordinating complementation strategies (§21.2.7, §24.4.4).

24.5.6 Phasal verbs and other aspectual auxiliaries

Aspectual and phasal complement-taking verbs present a much greater variety of constructions than modal verbs. Table 24.2 summarizes the constructions attested with each verb, not all of which are equally common.¹⁴

Table 24.2: Inventory of phasal and aspectual auxiliaries in Japhug

Verb		I.	BI	F.	Compl. strategy
<i>ŋno</i> ‘experience’	tr.	✓	✓		
<i>sɣza</i> ‘begin’	tr.	✓	✓		
<i>za</i> ‘begin’	tr.	✓	✓	§24.2.3.3	
<i>st^hut</i> ‘finish’	tr.	✓	✓	§24.2.3.3	
<i>sɣtɕutɕi</i> ‘continue’	tr.	✓		§24.2.3.3	
<i>nuftɕaka</i> ‘prepare’	tr.	✓		✓	
<i>suɣjɣɣ</i> ‘finish’	tr.	✓			
<i>k^hɣt</i> ‘do repeatedly’	tr.	✓			§24.4.3
<i>jɣɣ</i> ‘finish’	impers.	✓	✓		
<i>ŋgrɣl</i> ‘be usually the case’	impers.			✓	
<i>ɣɣgat</i> ‘be about to’	intr.				§24.4.2.1
<i>ayuyu</i> ‘be about to’	intr.				§24.4.2.1
<i>mda</i> ‘be the time’	impers.	✓		✓	

As shown in §24.2.2.2, verbs in this group have different coreference restrictions depending on the complement type: when transitive verbs select bare/dental infinitive complements, coreference is required between the subject of the complement clause and that of the matrix verb.

24.5.6.1 Experiential

The transitive verb *ŋno* can be used with a nominal object in the meaning ‘try, taste’ (of food), as shown in (167) with the sigmatic causative *su-ŋno* ‘let *X* taste’ (§17.2).

¹⁴The abbreviations are as follows: I. (velar infinitive, §24.2.1), BI (bare infinitive and *tu-* infinitive, §24.2.2), F. (finite complement, §24.2.3), tr. (transitive), impers. (intransitive impersonal).

- (167) *azo nx-paxci ci tu-kuu-suu-rno-a*
 1SG 2SG.POSS-apple a.little IPFV-2→1-CAUS-taste-1SG
 ‘Let me taste your apples.’ (150904 zhongli-zh) {0006348#S15}

As a complement-taking verb, *rno* means ‘have already done...’ (like Chinese 曾经……过 *céngjīng...guò*), and commonly occurs with both bare/dental infinitival complements (§24.2.2) and velar infinitival complements (§24.2.1). These two complement types differ by their coreference restrictions: the former requires subject coreference (§24.2.2.2), while the latter does not.

In example (168), the first sentence *azo kx-mtsuy muu-puu-rno-t-a* is ambiguous, and could be translated as either ‘I have never bitten it’ (subject coreference) or ‘I have never been bitten by it’ (object coreference), regardless of the fact that the 1SG is a transitive subject in both cases as shown by the absence of an inverse prefix and the presence of the *-t-* suffix (§14.3.2.1, §21.1.3). The verb *rno* ‘experience’ lacks inverse forms other than the generic subject (§14.3.2.5), and the 3→1SG inverse form †*muu-pú-wy-rno-a* is rejected, and cannot be used to replace *muu-puu-rno-t-a* in (168).

- (168) *azo [kx-mtsuy] muu-puu-rno-t-a ri, xpvtεun ku*
 1SG INF-bite NEG-AOR-experience-PST:TR-1SG but p.n ERG
pjx-rno
 IFR-experience
 ‘I have never been stung [by a wasp], but Dpalcan has.’ (26-ndzWrnaR)
 {0003678#S19}

In the second sentence, the personal name *xpvtεun* predictably takes the ergative, being the transitive subject of *rno* ‘experience’. However, it is at the same time object of (elided) infinitive *kx-mtsuy* ‘to bite’ present in the first clause, and the absolutive form would be expected if the verb in the complement clause had precedence over the matrix verb, as happens in some cases (§24.3.2). The complete clause without elision would *xpvtεun ku kx-mtsuy pjx-rno* ‘Dpalcan has been stung (by a wasp) before’.

- (169) *xpvtεun ku [kx-mtsuy] pjx-rno*
 p.n ERG INF-bite IFR-experience
 ‘Dpalcan has been stung [by a wasp] before’. (elicitation based on 168)

The sentence (169) is also ambiguous, but can be interpreted as expressing coreference between the transitive subject of *rno* ‘experience’ with the object of

the transitive verb *mtsuy* ‘bite’, with the ergative flagging of the matrix clause taking over the absolutive marking expected in the complement clause.

The subject of *rno* ‘experience’ can also be coreferential with the possessor of the intransitive subject in the complement clause, as in example (170), where the non-overt subject should be *a-xtu* ‘my belly’, as in (171) (§22.4.1.5).

- (170) *azo puw-xtɕu-w-xtɕi-a zo ri tuɕxtɕɕɕm nuw-atuɕ-a tɕe,*
 1SG PST.IPFV-EMPH-be.small-1SG EMPH LOC dysentery AOR-meet-1SG LNK
[nuw kɕ-mɕɕɕm] puw-rno-t-a
 DEM INF-hurt AOR-experience-1SG
 ‘When I was very small, I had dysentery, [my belly] ached.’
 (24-pGArtsAG) {0003624#S116}

- (171) *[a-xtu kɕ-mɕɕɕm] puw-rno-t-a.*
 1SG.POSS-belly INF-hurt AOR-experience-PST:TR-1SG
 ‘I have had stomachache.’ (elicited)

However, despite the fact that *rno* indexes either the subject or the object of its complement clause without difference in the matrix clause as illustrated by (168) and (169) above, their relativization patterns are different. The subject of the infinitive clause is relativized by means of the subject participle *pu-kuu-rno*, while the object is relativized by using either a finite relative clause or the object participle *pu-kɕ-rno* (§23.5.11.3).

24.5.6.2 Phasal verbs

Phasal verbs such as *za* ‘begin’ and *st^hut* ‘finish’ are most often attested with dental or bare infinitives (§24.2.2.1) as in (172). They can also take velar infinitives as in (173).

- (172) *[nuw u-ti] ta-st^hut*
 DEM 3SG.POSS-BARE.INF:say AOR:3→3’-finish
 ‘When she finished saying that...’ (150818 muzhi guniang-zh)
 {0006334#S122}

- (173) *[tuw-nuw kɕ-jts^hi] na-st^hut tɕe tɕe*

 INDEF.POSS-child DEM again 3SG.POSS-bed DEM:LOC IFR-CAUS-lay
 ‘After she had finished breastfeeding, she put back the child on his bed.’
 (140429 jiedi-zh)

In addition, some phasal verbs are also attested with finite complements sharing the same TAME and person indexation (§24.2.3.3), though this construction is considerably rarer.

- (174) [nura pa-βzjoz] pa-st^hut tce u-sloχpun nu ku
 DEM:PL AOR:3→3'-learn AOR:3→3'-finish LNK 3SG.POSS-teacher DEM ERG

 needle one-CL IFR-INV-give
 'When he finished learning this [craft], his teacher gave him a needle.'
 (140508 benling gaoqiang de si xiongdi-zh) {0003935#S95}

Unlike *ɾno* 'experience' (which selects the DOWNWARDS orientation), phasal verbs take the lexical orientation of the verb in the complement clause (§24.3.5), UPWARDS in (172) (§15.1.5.8), EASTWARDS in (173) (§15.1.5.10) and DOWNWARDS in (174).

24.5.6.3 Imminent aspect

The intransitive verb *ɾɲgat* means 'prepare to depart' when used on its own without a subordinate clause. It also selects participial clauses like motion verbs (§24.4.2.1), with the meaning 'be about to'. With subject participial clauses in *ku-* as in (175), there is coreference between the subject of *ɾɲgat* and that of its subordinate clause.

- (175) [ku-si] tɣ-ɾɲgat, tu-ɣɣu mu-nu-c^ha ri, nu

24.5.7 Similitive verbs

The verbs *fse* ‘be like’ and *stu* ‘do like’ are semi-transitive (§14.2.3) and secundative (§14.4.2), respectively. Both select as semi-object the manner in which the action is performed.

These verbs are found with velar infinitive complements (§24.2.1), either with a demonstrative expressing the action (such as *nu* in 184) or in questions with the interrogative pronoun *tɕ^hi* ‘what’ (§6.5.1) as in (185). The demonstrative or the interrogative pronoun are always located closer to the similitive verb than the infinitive clause.

 INF-flee what IRR-PFV-be.like-1PL
 ‘How will we flee?’ (2012 Norbzang) {0003768#S60}

The subject of the infinitival clause is always coreferent with that of *fse* or *stu*, but its object is never indexed on the matrix verb. For instance, although *fsraŋ* ‘protect’, ‘save’ and *buwa* ‘carry on the back’ are transitive verbs that can index first or second person objects (see for instance 44, §14.3.2.3), in (186) and (187) the 2SG object is not indexed on the matrix verb *stu*, otherwise the forms *tu-ta-stu* (IPFV-1→2-do.like) and *a-tx-tú-wy-stu* (IRR-PFV-2-INV-do.like) would be expected. These examples show that the complement clause saturates the direct object of *stu*.

- (186) *[nyzo kx-fsraŋ] tɕ^{hi} tu-ste-a?*

Alternatively, *stu* can also index as object the object of the verb in the infinitival clause, as shown by (188), a sentence whose meaning is the same as that of (186).

- (188) *[nyzo kx-fsraŋ] tɕ^{hi} tu-ta-stu?*
 2SG INF-protect what IPFV-1→2-do.like[III]
 ‘How [can] I save you?’ (elicitation based on 186)

Deixis manner verbs are also often used in a variety of complementation strategies. First, they occur with a coordinated clause (generally in the Factual Non-Past) expressing the purpose of the action, as in (§24.4.4). Second, they can take as semi-object a totalitative relative (§23.3.2) as object (§24.4.1) as in (190) in the meaning ‘do everything in the same way as *X*’ (where *X* is the transitive subject of the relative). Third, *fse* and *stu* are found in serial verb constructions (§25.4.1.2).

Some adjectival verb such as *βzɣβ* 'be careful' select bare infinitive complements (§16.2.2) like their causative form (§24.5.1.4).

24.6 Complement-taking nouns

Not all noun-modifying clauses should be analyzed as relative clauses: only subordinate clauses whose head noun (overt or covert) has a syntactic role in the clause (whether argument, adjunct or possessor) can be considered to be a relative.

24.6.1 Complement-taking nouns and denominal verbs

In examples (197) and (198), the head noun *ftɕaka* 'method', 'manner' is neither a core argument nor an adjunct. It is not possible to convert the infinitive subordinate clauses *mu-tu-kɣ-mbro* 'not become too high' and *qartsɣβ kɣ-kɣ-βzu ra kɣ-tɣβ* 'thresh the (grains) that have been harvested' into independent sentences that would include *ftɕaka*. These clauses should therefore be analyzed as adnominal complement clauses, rather than a prenominal relatives.

- (197) *a-<xuetang>* *u-tu-mbro* *<kongzhi>*
 1SG.POSS-blood.sugar 3SG.POSS-NMLZ:DEG-be.high control
tu-βze-a *ηu.* [*mu-tu-kx-mbro*] ***ftɕaka*** *tu-βze-a*

 harvest AOR-OBJ:PCP-make PL INF-thresh manner INV-make
ra
 be.needed:FACT
 ‘Then one has to prepare to thresh the [grains] that have been harvested.’ (2010.10)

The construction exemplified by (197) and (198) is a collocation combining the complement-taking noun *ftɕaka* with the verb *βzu* ‘make’, meaning either ‘do by any means possible’ (as in 197) or ‘prepare to *X*’ (198). In the latter meaning, the collocation is homonymous with the transitive denominal verb *nuftɕaka* ‘prepare’ (§20.7.2), which also selects velar infinitive complements, as shown by (199), uttered just before (198) in the same recording.

- (199) [*kx-txβ*] *kú-wy-nuftɕaka ra*
 INF-thresh IPFV-INV-prepare be.needed:FACT
 ‘One has to prepare the threshing.’ (2010.10)

The infinitive complement *kx-txβ* in (199) is exactly parallel to the adnominal complement clause in (198). This parallelism between complement-taking noun and the complement-taking denominal verb derived from it is not found in all the cases (§24.6.3), but confirms the observation that the adnominal clause in (198) is not a prenominal relative.

24.6.2 Adnominal complement clause and possessor

Among complement-taking nouns, some like *ftɕaka* ‘method’, ‘manner’ (§24.6.1, §24.6.3.1) and *kowa* ‘manner’ (§24.6.3.1) are alienably possessed nouns, but most (§24.6.3) are inalienably possessed (§5.1.2.6).

Two categories must be distinguished among these inalienably possessed nouns. First, some nouns such as *u-skɣt* ‘language’, ‘sound’ (§24.6.3.2) always take a 3SG

- (202) *a-rjit* *ra nuu-yi-nuu* *cti* *tcet^ha*, [*ky-ndza*]

The complement-taking transitive denominal verbs *nuftçaka* ‘prepare’ and *nu-kowa* ‘prepare’ (§24.6.1) can be derived from these two nouns.

24.6.3.2 Nouns of speech and sound

The inalienably possessed nouns related to speech and noise *u-ti* ‘way of saying’, ‘wording’, ‘expression’, *u-fçxt* ‘story’, *u-skxt* ‘language’, ‘sound’, *tx-zgra* ‘sound’, ‘noise’ and *tu-tç^ha* ‘information, news’ (about someone) (§5.1.2.13), and the alienably possessed *k^hrcxl* ‘discussion’ can occur with finite complement clauses (203, 204) (see also 18, §10.1.2.10) or reported speech complements (205).

- (203) *teeri* [*zlawicçrxβ* *ku* *tç^hoz* *puu-asuu-zgruβ*]

As shown by (203) and (204), *u-fçxt* ‘story’ and *tx-zgra* ‘sound’ can take complements even without a noun-verb collocation.

The noun *u-skɿt* ‘language’, ‘sound’ mainly takes complements when occurring with *βzu* ‘make’ (§22.4.2.1) or *stu* ‘do like’. The collocation with this verbs means ‘do/say something that means X’ as in (205)¹⁷ or (200) (in §24.6.2 above).

The noun *tu-tɕ^{ha}* ‘information, news’ takes reported speech clauses when used in collocation with *yut* ‘bring’ in the meaning ‘(go somewhere) and come back to tell about X’, as in (206) (see also 50, §5.1.2.13). This construction is also compatible with participial complementation strategies (§24.6.4).

- (206) <*dongua*> *c^{ho}* <*qiezi*> *ni tɕ^{hi} zo múj-naɿtɕuɿ]* *yu*
 gourd COMMIT eggplant DU what EMPH NEG:SENS-be.the.same GEN

 3SG.POSS-information IRR-PFV-2-bring need:FACT
 ‘[Go there and come back to] to tell me how gourds and eggplants are different.’ (yici bi yici you jinbu-zh)

Among the nouns of speech and sound, *u-ti* ‘way of saying’ and *u-fɕɿt* ‘story’ are bare action nominals (§16.4.6) deriving from *ti* ‘say’ and *fɕɿt* ‘tell’, respectively. The rest were borrowed from Tibetan as nouns; their sources are སྐད *skad* ‘language’, སྐྱ *sgra* ‘sound’ and བླ *tɕ^{ha}* ‘part’, respectively.

¹⁷The poignant anecdote in (205) shows that the collocations *u-skɿt*+*βzu* and *u-skɿt*+*stu* are used even when the expression is not linguistic but based on gesture and facial expression. The hunter did not have the heart to shoot the monkey mother (see example 82 in §10.4.3).

24.6.3.3 Nouns of cognition

The noun of cognition *tu-sum* ‘mind’ occur in collocation with the motion verb *ce* ‘go’ in the meaning ‘want to *X*’ (§22.4.1.1) with either finite clause as in (207) and (209a) (see also 201 in §24.6.2) or an infinitival one as in (208)(209b).

- (207) *[[nɣzo ju-tu-ce] a-sum múj-ce]] ndza ηu*
 2SG IPFV-2-go 1SG.POSS-mind NEG:SENS-go reason be:FACT
 ‘This is because I don’t want you to leave.’ (140506 shizi he huichang de bailingniao-zh) {0003927#S68}
- (208) *[“ya” kɣ-ti] u-sum mu-pjɣ-ce*

 ‘He did not want to say ‘yes’.’ (140506 shizi he huichang de bailingniao-zh) {0003927#S56}

The possessive prefix on the complement-taking noun encodes the experiencer, while the motion verb *ce* ‘go’ remains in 3SG form. When the complement clause is an infinitival clause, its subject must be coreferent with the experiencer in the main clause as in (209b) and (208). However, when the complement clause is finite, subject coreference is possible (209a, 201) but not required (207).

- (209) a. *[e-ku-nu-rŋgu-a] a-sum múj-ce*

 b. *[e-u-kɣ-rŋgu] a-sum múj-ce*
 TRAL-INF-lie.down 1SG.POSS-mind NEG:SENS-go
 ‘I don’t want to go to sleep.’ (elicited)

The verb *ce* ‘go’ in this construction is never found in the Aorist or the Inferential. To express an inchoative meaning, the motion verb *yi* ‘come’ occurs instead with *tu-sum*, as in (210).

- (210) *daltsutsa tce tce kɣ-nu-ce tsa u-sum to-yi.*
 slowly LNK LNK INF-VERT-go a.little 3SG.POSS-mind IFR-come
 ‘He slowly started thinking of going home.’ (150907 laoshandaoshi-zh) {0006398#S53}

Like *tu-sum*, the noun *u-bjiz* ‘wish’ (a fossil *-z* nominalization, §16.5.1) occurs in collocation with *yi* ‘come’ (§22.4.1.1). This collocation, which means ‘feel like/want to *X*’, has the same morphosyntactic properties as those described above: it is compatible with both infinitive complement clauses (211) and finite ones (212).

 {0003882#S8}

24.6.4 Relative clauses as a complementation strategy

Some inalienably possessed nouns can take subordinate clauses that look like complement clauses but are in fact relatives.¹⁸

For instance, in (215), the clause *tu-ndze* ‘(the thing that) he eats’ is formally a headless finite object relative clause (§23.5.3). The head noun *tv-di* ‘smell’ has no syntactic role in that clause and is not the relativized element. Otherwise, the construction would be nonsensical, its expected meaning being something like ‘the smell that he eats’. The relation between the prenominal clause and its head in (215) is simply the same as that between a possessor and its possessee (§8.2.3.1), and it is preferable not to analyze here *tu-ndze* as a complement clause, since its meaning is not ‘the smell of him eating’ (on the ambiguity between finite relative and complement clauses, see §23.8.1).¹⁹

- (215) *[tu-ndze] nuw yw u-di nuw pjv-mts^hvm-nuw tce tce*

 IFR-come-PL
 ‘[The flies] smelled [the jam] that he was eating and came.’ (140428
 yonggan de xiaocafeng-zh) {0003886#S11}

Example (216) provides a similar case with a head-internal finite relative. It is obvious here that *u-χpi* cannot be the relativized element (since the head noun *ckom* ‘muntjac’ is overt). At the same time, if *azo ckom tu-mts^hi-a* were a complement clause, the expected meaning would be ‘a story about (why) I am leading this muntjac’.

- (216) *kuuki [azo ckom tu-mts^hi-a] ki yw u-χpi*
 DEM.PROX 1SG muntjac IPFV-lead-1SG DEM.PROX GEN 3SG.POSS-story
ci pjw-feat-a
 INDEF IPFV-tell-1SG
 ‘I will tell (you) a story about this muntjac that I am leading.’ (140512
 fushang he yaomo-zh) {0003967#S75}

The adnominal clauses in (215) and (216) are thus relative clauses used as possessors of inalienable nouns.

¹⁸A similar situation occurs with complement-taking verbs (§24.4.1, §23.8.3).

¹⁹The precise meaning of this sentence has been ascertained with Tshendzin. The corresponding passage in the Chinese text from which it has been translated is 果酱味招来了一群苍蝇 <guōjiàngwèi zhāolái le yīqún cāngyíng> ‘The smell of the jam attracted a swarm of flies’: the adnominal construction in (215) is thus not due to calquing from the original.

With non-finite clauses, given the similarity between participles and infinitives (§16.2.1.1), there are cases where deciding whether a clause is a participial relative serving as possessor or an infinitival complement clause is not trivial (on ambiguity between participial clauses and infinitival complements, see §23.8.2).

For instance, in (217), the Chinese borrowing 标准 <biāozhǔn> ‘criterion’ takes as possessor the clause(s) *tɕ^heme ku-pe mɣ-ku-pe*, whose status is ambiguous. If one analyses the form *ku-pe* as a subject participle (§16.1.1), *tɕ^heme [ku-pe] [mɣ-ku-pe]* can be seen as two post-nominal participial relative clauses in apposition sharing the same head noun, implying a translation ‘the criterion (distinguishing between) good and bad women’. If on the other hand *ku-pe* is analyzed as a stative infinitive (§16.2.1), the subordinative clauses are infinitival complements, and the translation would rather be ‘criterion (by which one judges whether) a woman is good or bad’. In this particular case, since both syntactic analyses are meaningful, the fact that the postclausal noun is a Chinese borrowing makes it difficult to reliably use elicitation to distinguish between the two possibilities (for instance, by testing whether a dynamic intransitive verb would rather have a *kɣ-* prefixed form in this context).

- (217) [*tɕ^heme ku-pe mɣ-ku-pe*] *nɯ yu koŋla zo*

u-<biaozhun> ju-ŋu
 3SG.POSS-criterion SENS-be
 ‘It is [one of the] criteria [by which one judges whether] a woman is good or bad.’ (thaXtsa 2002)

Tests can be applied to non-finite adnominal clauses occurring with *tu-tɕ^ha* ‘information, news’. This noun, in addition to finite complement clauses (§24.6.3.2), is compatible with non-finite clauses in *ku-* or *kɣ-* as in (218). The fact that non-stative intransitive verbs in this construction have *ku-* rather than *kɣ-* however (*jɣ-ku-ye* instead of *?jɣ-kɣ-ye*) shows that these clauses are participial clauses, and therefore that they should be analyzed as relative clauses like (215) and (216) above, despite what the meaning of this construction suggests. The constituent [*a-tɕu tɣ-ku-ye*] *u-tɕ^ha* in (218) thus literally means ‘news about my son who came’.

- (218) [*a-tɕu jɣ-ku-ye*] *yɯ u-tɕ^ha ja-yɯt*

 ‘S/he came to tell [me/you] that my son came.’ (elicited)

24.7 Syntactic errors

Example (219) presents an interesting case of incorrect exchange of prefix between the verb in the complement clause and the complement-taking verb.

Since the complement-taking verb *st^hut* ‘finish’ is embedded in a temporal clause in *cuŋgu* ‘before’, it would be expected to be in the Imperfective (§25.3.2.1), while its complement verb should either be in the bare infinitive or the velar infinitive as in (220) (§24.5.6.2).

- (219) †[*uʒo kwi [nuura tu-ryt] ky-st^hut] cuŋgu tce*

- (220) [*uʒo kwi [nuura ky-ryt] tu-st^hut] cuŋgu tce*
 3SG ERG DEM:PL INF-draw IPFV-finish before LNK
 Correction of (219)

In (219) however, the complement-taking verb is in Velar Infinitive form and the complement verb in the Imperfective, the opposite of the correct form (220).

Tshendzin has no hesitation to recognize (219) as a speech error, which is nevertheless unusual enough to deserve mention.

25 Other types of multicausal constructions

25.1 Classification of multicausal constructions

This chapter, based on Jacques (2014a), discusses multicausal constructions other than (headless or noun modifying) relative clauses, complement clauses in core argument function and clauses involving the expression of degree (discussed in chapters 23, 24 and 26, respectively).¹

The constructions treated in this chapter involve different degrees of subordination, from highly dependent (§25.1.1) to loose parataxis (§25.1.6). This section provides an overview of the criteria that can be used to classify subordination subtypes in Japhug.

25.1.1 Marked subordinate clauses

Some subordinate clauses can be distinguished from main clauses by overt morphological marking. Four types of overt marks of subordination can be distinguished.

First, converbs (§16.2.1.7), found in particular in temporal (§25.3.3.2, §25.3.4.2) and manner (§25.4.2) clauses), being non-finite forms, cannot serve as the predicate of main clauses.

Second, verb-initial reduplication (§12.4.1.2) and the prefix *u-* in non-interrogative clauses (§21.7.4) are non-ambiguous markers of the protasis of a conditional construction (§25.2.1).

Third, relator nouns with prenominal complements (§24.6) or prenominal relatives (§23.2.4) in absolutive, locative or ergative form are used to build temporal (§25.3.3.1, §25.3.4.1) and causality (§25.5.2, §25.5.4) clauses.

Fourth, postpositions can either contribute to subordination marking in combination with relator nouns (for instance, the ergative in causal clauses, §25.5.2),

¹Some relative and complement clauses in essive function, or with oblique cases, are however discussed in this chapter (§25.1.1).

25 Other types of multiclausal constructions

or serve on their own as subordinating markers, as in the case of the locative position in temporal clauses (1, see also §25.3).

- (1) *a-bi* *kuu [jɣ-ari]* *nutɕu tce, nykinuu,*
 1SG.POSS-younger.sibling ERG AOR-go[II] DEM:LOC LOC FILLER

 ‘When he_i went (to the forest), our younger brother_i dropped white stones_j; one by one on the way as he was going, and we followed them_j; and found our way home.’ (160701 poucet2) {0006155#S49}

Example (1) also illustrates that in addition to the markers listed above, word order and case marking are important additional clues of subordinating status. The subject *a-bi* ‘my younger brother’ takes ergative case following the transitive verb *jo-rɣmbumbri* ‘he dropped them one by one on the way’ (§8.2.2.2), instead of absolutive case as would be expected if it belonged to the subordinate clause *jɣ-ari nutɕu* ‘when he went there’ (since *jɣ-ari* is intransitive), showing that this clause is embedded within the main clause. In some cases the case marking mismatch is the only evidence that a clause is subordinate (§25.1.4).

25.1.2 Correlative clauses

Correlative constructions comprise two or more clauses with a parallel syntactic structure, each obligatorily marked by overt coordinating markers. With the exception of correlative relatives (§23.2.5), correlative constructions are not very widespread in Japhug: usually only one of the two clauses has obligatory marking.

The correlative additive focus markers *ri* and *tɕi* (§9.1.6.2, §25.6.2) are one of the clearest cases of correlative constructions. As shown by (3), they follow the noun phrase on which they have scope, and the rest of the clause, including the verb, can be repeated as in (2).

- (2) *zakastaka u-mdoɓ tɕi mɣ-kuu-naɣtɕuy ɣɣzu,*
 each.his.own 3SG.POSS-colour also NEG-SBJ:PCP-be.the.same exist:SENS

 3SG.POSS-shape also NEG-SBJ:PCP-be.the.same exist:SENS
 ‘Each of them (species of starfishes) has its own different colour and different shape.’ (180421 haixing) {0006113#S15}

Other examples of correlative construction include the relator noun *u-juja* ‘along with’ with incremental initial reduplication (§12.4.1.4) in the second clause (§25.3.4.2).

25.1.3 Periphrastic tenses and subordination

Japhug has quite a few periphrastic TAME categories, combining a verb in the Imperfective or the Factual with a copula (§21.2.2, §21.4.1.7, §21.5.3.5, §21.6.2.1). It is common to observe chains of verbs in the Imperfective sharing a single copula. For instance, in (3), the copula *ɲu-ɕti* in the Sensory has scope over two verbs, *pju-nuɕurɲo* and *pju-ɲgra*. Such chains can be long, and comprise more than ten verbs in the Imperfective (example 10, §21.2.2).

- (3) *tceri qartsu tce tce u-jwaɕ nu pju-nuɕurɲo tce*
 LNK winter LOC LNK 3SG.POSS-leaf DEM IPFV-redden LNK

 IPFV-ACAUS:cause.to.fall SENS-be.AFF
 ‘In winter, its leaves redden and fall.’ (14-sWNgWJu) {0003506#S10}

In (4), the copula *ɲu-ɲu* occurs two times: the first occurrence has scope over one verb (*tu-nu-ɬoɕ*), and the second one over two verbs (*ɕ-tu-nurdɔɕ* and *tu-ndze*).

- (4) *nunu la-clu-nu c^ho la-lya-nu tce tce qandze*
 DEM AOR:3→3’-plough COMIT AOR:3→3’-dig LNK LNK earthworm
tu-nu-ɬoɕ ɲu-ɲu. tce nu ɕ-tu-nurdɔɕ tce

 IPFV-eat[III] SENS-be
 ‘When [people] plough and dig the earth, earthworms come out, and crows go (into the fields) and pick [the earthworms] and eat them (one by one).’ (140511 qajdo kW qandzxe tundze) {0003955#S20}

Although all verbs in examples (3) and (4) are finite, only the last verb of the chain can be considered to be fully conjugated, while the non-final verbs (*pju-nuɕurɲo* in 3 and *ɕ-tu-nurdɔɕ* in 4) lack an element of their conjugation. For this reason, it is possible to consider that the last member of a periphrastic TAME chain is the main verb, and that all preceding clauses are subordinate.

25.1.4 Unmarked embedded clauses

Embedded clauses such as *tɕ^{hi} a-tɕ-fse-a* in (5) lack any formal subordinating morphology. However, their subordinating status is shown by the fact that they occur inside the main clause, located between two constituents: in (5), the embedded clause is preceded by the transitive subject *tɕime kuw* (which is not an argument of that clause) and followed by the main verb.

- (5) *tɕime kuw [tɕ^{hi} a-tɕ-fse-a] tɕe mɔ́-wy-mto-a kuw*

 ‘What should I do [in order] not to be seen by the princess?’ (140505
 xiaohaitu-zh) {0003921#S77}

In (6), the clause *u-mɲaɓ ɲɔ-z-nɲmbju* is inserted between the main verb *pjɔ-mto* and its transitive subject *ɲɲlpu nuw kuw*. This transitive subject is coreferent with the 3SG possessor of *u-mɲaɓ*, object of the verb *ɲɔ-z-nɲmbju* ‘it dazzled it’ in the embedded clause, and the presence of the ergative *kuw* shows that it receives its case marking from the main verb rather than from the embedded subordinate clause.

- (6) *tɕ-wi nuw kuw tɕ-ri nuw ɲɲlpu*

 so well spun that it was dazzling bright).’ (2012 Norbzang) {0003768#S129}

Unmarked embedding is also found in serial verb constructions. In (7), the manner clause with *stu* ‘do like’ (§25.4.1.2) occurs between the instrument *u-jaɓ kuw* ‘with its paw’ and *lu-z-naɓje* ‘it reaches into it’. The presence of the causative prefix *z-* indicates that the instrumental phrase is selected by *lu-z-naɓje* (§17.2.5.8), not by *tu-ste*.

- (7) *tɕe u-jaɓ kuw [ki tu-ste] lu-z-naɓje*
 LNK 3SG.POSS-hand ERG DEM.PROX IPFV-do.like[III] IPFV-reach.into[III]
ɲu-ɲu
 SENS-be
 ‘[The cat] reaches with its paw [into the whole] like this.’ (27-spjaNkW)
 {0003704#S47}

The examples (5), (6) and (7) above illustrate that unmarked embedded finite clauses have a considerable variety of semantic functions, including purposive clauses (§25.5.4), temporal clauses of simultaneity (§25.3.4.2) and manner clauses (§25.4.1), respectively.

25.1.5 Serial verb constructions

In Japhug, as in Tshobdun (Sun 2012: 490–491), we find serial verb constructions comprising two verbs sharing TAME category and subject (and often, but not in all cases, objects).

One of the verbs expresses the main action, and the other describes the manner in which the action is performed (§25.4.1). Unlike Tshobdun, there is no constraint in Japhug against inserting a linker such as *tɕe* between the two verbs in the serial construction, as shown by example (8).²

- (8) [ʊ-ʋar nɯ ki tu-ste] tɕe
 3SG.POSS-wing DEM DEM.PROX IPFV-do.like[III] LNK

 IPFV-CAUS-make.noise SENS-be
 ‘[The grasshopper] makes noise by [moving] its wings like this.’
 (26-kWrNukWGndZWr) {0003672#S72}

In some cases, embedding of the first clause into the second one can occur (§25.1.4), suggesting that a syntactic hierarchy exists between them.

There are three main types of serial verb constructions in Japhug, involving deideophonic verbs (§25.4.1.1), similitive verbs (§25.4.1.1) and bipartite verbs (treated in §11.6.3 in another chapter). Constructions that are superficially similar to serial verb constructions but better analyzed as finite complement clauses are discussed in §24.2.3.3.

25.1.6 Coordination and parataxis

When none of the four set of criteria described above (§25.1.2, §25.1.3, §25.1.4, §25.1.5) are applicable, there remain a residue of clauses in parataxis or linked by *tɕe* (§8.2.4.3) or *q^he*, without a clear subordinating hierarchy.

In (9), all verbs are in the Imperfective, without correlative element (§25.1.2), final copula (§25.1.3) or embedding (§25.1.4). The verbs *pju-sat* ‘it kills it’ and *ju-yut*

²This construction cannot be considered monoclausal, and thus differs from what is usually understood as ‘serial verb constructions’ in many languages (Aikhenvald 2006: 6), but I keep Sun’s terminology for want of a better term.

25 Other types of multiclausal constructions

‘it brings it’ share the same subject and object, but unlike in serial constructions (§25.1.5) where both verbs express two aspects of the same action, *pju-sat* and *ju-γut* refer to two actions occurring one after the other.

- (9) *tce w-pci ju-ɕe tce, [ci ci pyɣtɕu pju-sat ju-γut],*
LNK 3SG.POSS-outside IPFV-go LNK one one bird IPFV-kill IPFV-bring

IPFV-bring

‘(When her kittens are hungry), [the cat mother] goes out and sometimes kills a bird and brings it, sometimes kills a mouse and brings it, sometimes kills a mole or something and brings it [to them].’ (21-IWLU {0003576#S36})

Simple coordination and parataxis can both express temporal subsequence (§25.3.3.1) as in (9) between the first clause and all the following ones, and between *pju-sat* and *ju-γut* in each of the three clauses. Parataxis can also indicate disjunction (§25.6.4), for instance between the three pairs of clauses (in squared brackets) in (9).

Coordination with *tɕe* and *q^he* can in addition be used to indicate logical consequence (§25.5.1) and neutral addition (§25.6.2.1).

25.1.7 Tail-head linkage

Tail-head linkage is a type of linking strategy whereby an element (generally the verb) of one clause is repeated in the following clause (see de Vries 2005 for a typological overview). Such constructions are well-attested in languages of Western Sichuan (see for instance Zhang 2013: 688–693). In Japhug, they occur predominantly with parataxis and loose temporal succession linking with finite clauses coordinated by linkers such as *tɕe* or *q^he*. It is a very common strategy both for ensuring narrative coherence, and providing time for the storyteller to prepare the narration of the following events without hesitating and using speech fillers (§10.3).

Tail-head linkage can involve an entire sentence, as in (10), but often leaves out a constituent: for instance in (11) the intransitive subject *ɣɣ-pɣtso numu* is not repeated.

- (10) *[nu-me stu ku-xtci nu jx-mbi-nu], tce*

 ‘The boy went again into the forest, and as he went into the forest, the boar saw the boy.’ (140428 yonggan de xiaocafeng-zh) {0003886#S218}

In some cases, the verb form is slightly different in the repeated clause. For instance in (12), the verb form in the first clause is in inverse configuration 3’→3PL (the TAME is probably Inferential, though in this context the contrast between Inferential and Aorist is neutralized, §14.3.2.7) while that in the second clause is in direct configuration 3SG→3’.³

- (12) *sq^hi u-rku nutɕu kó-wy-su-ɣmdzu-nu. sq^hi u-rku*

 ‘[The woman] had them sit by the hearth. She had them sit by the hearth, and said (...).’ (160703 poucet3) {0006107#S46}

25.2 Conditional constructions

Conditional constructions are biclausal, comprising a subordinate clause (the protasis) and a main clause (the apodosis). The apodosis describes a result which takes place if the condition in the protasis is fulfilled. Depending on whether the protasis is a fact or a hypothetical situation, several types of conditionals can

³Aorist is used in the second clause of (12) to mark a point of temporal reference, §21.5.1.4, §25.3.4.1.

be distinguished: real, concessive, counterfactual and hypothetical. Some temporal clauses, such as iterative coincidence (§25.3.1), can also be considered to be a subtype of conditionals, but are treated in §25.3.

25.2.1 Real conditionals

In real conditional constructions, the verb in the protasis has either initial reduplication (§12.4.1.2) or the Interrogative *u-* prefix (§21.7.4.2) and is followed the additive postposition *ny* (§8.2.6), as shown by (13) and (15) on the one hand, and (16) on the other without semantic difference.

Non-past TAME categories, in particular the Factual Non-Past (13) or the Sensory (14) are used when the protasis concern a present state or an ongoing action whose truth value is known to the speaker, as in (13) and (14).

- (13) [pɣnmawombɣr tuw~tuw-ŋu] ny, pu-ta-suxcɣt nuw nuw-nduun

 fracture] has healed, [the splint] is not needed anymore, if it has not
 improved, [the doctor] attaches [the splint] again.’ (140426 laxthab)
 {0003810#S11}

Although the postposition coming after the verb in the protasis is almost always *nɣ* as in the examples above, this is not a requirement; for instance in (17) the form *mu~mɣ-nú-wy-su-q^hruut* ‘if one does not scrape it with it’ in the protasis is rather followed by *q^he*.

- (17) *tɕe [tu-ndzruu ku mu~mɣ-nú-wy-su-q^hruut] q^he*

 NEG:SENS-ACAUS:cause.to.fall
 ‘[Nits] (are firmly attached and) will not detach unless one scrapes them
 with one’s nail.’ (21-mdzadi) {0003578#S62}

In reduplicated conditional forms, the negative prefix *mu-* has the special form *mu~mɣ-* (§13.1.1), while no such vowel alternation occurs with negative prefixes in Interrogative forms (*u-mú-to-pe* in 16) or suppletive negative verbs (14).

Apart from reduplicated conditional and Interrogative, a third way of marking the protasis in a real conditional construction is the Irrealis (§21.4.1.5). While the Irrealis usually marks counterfactuals (§25.2.4) conditionals, it also occurs in real conditionals as in (18) and (19), in particular in the case of possible but not highly frequent events. The Irrealis only very rarely followed by *nɣ*, and most commonly occurs with the linker *tɕe*.

- (18) *a-nu-pat-nu tɕe tu-tɕ^ha nɣ tu-tɕ^ha nu, nɣki*

25.2.3.1 Scalar concessive conditional

In scalar concessive conditionals, the protasis is followed by the scalar focus marker *kunx* ‘also, even’ (§9.1.6.1), and contains a verb in the Past Imperfective (22) or the Imperfective (23) with the autive prefix (§19.1.4).

25.2.3.2 Alternative concessive conditional

Alternative concessive conditional constructions express that the outcome in apodosis will occur irrespective of a list of alternative possibilities, indicated by several protases.

In (24), each of the protases contains copula *pu-nw-ηu* in Past Imperfective (§21.5.3.1) Autive (§19.1.4) form, and share a single apodosis. In the clause *qaju kw tu-ndze pu-nw-ηu*, this copula is combined with the Imperfective verb *tu-ndze* ‘it eats it’ to build a Periphrastic Past Imperfective construction (§21.5.3.5).

 {0003706#S132}

25 Other types of multiclausal constructions

The presence of a periphrastic TAME category with a copula is not required. In (25), the protases contain an Aorist Autive verb form *kx-nuu-rηgu-nuu*.

- (25) [*stxmku ku-fse kx-nuu-rηgu-nuu*], [*suuku u-pa*

‘Whether [travelers] sleep in pastures, under trees or in caves, they put it
on their blankets.’ (30-mboR) {0003748#S34}

The alternative is often between the affirmative and negative versions of the same event (polar alternative concession), a meaning close to that of the scalar concessive conditional. In such cases, the conditional constructions has two protases, the first in affirmative form, and the second with the corresponding negative form as in (26). The same apodosis can be repeated after each protasis.

- (26) [*tuw-suum puw-a<nuu>ri*] *ny ju-kuw-εe*,

‘One had to go whether one liked it or not.’ (14-siblings) {0003508#S194}

The alternative concessive conditional is one of the few constructions where even transitive verbs such as *nyla* ‘agree’ occur in the Past Imperfective (§21.5.3.1).⁴

- (27) [*pa-n-nyla*] *εe-a*, [*muw-pa-n-nyla*]
PST.IPFV:3→3-AUTO-agree LNK IPFV:go-1SG
ny εe-a ra
NEG-PST.IPFV:3→3-AUTO-agree LNK IPFV:go-1SG be.needed:FACT
‘I will go whether he agrees or not.’ (elicited)

A more concise type of alternative concessive construction shown in (28) avoids repeating the content of the protasis and of the apodosis, and marks the alternative by combining the affirmative (*puw-nuu-ηu*) and negative (*puw-nuu-max*) copulas after the verb in the protasis.

⁴The verb *nyla* ‘agree’ selects the UPWARDS orientation, as shown by the form *to-nyla* ‘he agreed’ in example (169), §16.2.1.7.

- (28) [ta-nɣla pu-nu-ŋu pu-nu-maβ] ce-a
 AOR:3→3-agree PST.IPFV-AUTO-be PST.IPFV-AUTO-not.be IPFV:go-1SG
 ra
 be.needed:FACT
 ‘I will go whether he agrees or not.’ (elicited)

Another way to indicate alternative concession is the interrogative particle *ci* (§10.4.2) as in (29).

- (29) [nuŋa ŋu] ci, [mbro ŋu] ma, pju-nɣndɣ
 cow be:FACT SFP horse be:FACT LNK IPFV-be.poisoned
 ju-ŋgrɣl
 SENS-be.usually.the.case
 ‘Whether it is a cow or a horse, they end up poisoned.’ (25-qarmWrwa)
 {0003648#S19}

In addition to these constructions, polar alternative concession ‘whether or not’ can be expressed by a construction combining a negative existential verb with biclausal complements, comprising the same verb in bare root form followed by the bare root prefixed with the negative prefix *mɣ-*, as in (30). This unusual construction is discussed in more detail in §16.2.2.2.

- (30) [[ce] [mɣ-ce] tu-me] ma kɣ-nɣma tu-c^ha

 not.exist:FACT LNK be.the.same:FACT be:FACT
 ‘[It does not matter] whether you go or not, you are not able to do anything, it amounts to the same.’ (elicited)

25.2.3.3 Universal concessive conditional

Universal concessive conditional constructions comprise a protasis with an interrogative pronoun (in free-choice indefinite function, §6.6.6, §23.7) and a main verb in the Aorist or Past Imperfective. In addition, the autive (§19.1.4) occurs either in the protasis, with emphatic reduplication as (31) or (33) or in the main clause as in (32). The emphatic marker *zo* (§26.1.1.5) often follows the subordinate clause.

25 Other types of multiclausal constructions

 (07-deluge) {0003426#S58}

Examples of universal concessive conditionals without active prefix are however also attested, as in (34).

- (34) *[ɲotɕu nuw-tu~toɸ] zo wuma zo sɣɣduw*
 where AOR-EMPH~come.out EMPH really EMPH be.annoying:FACT
 ‘No matter where it grows, it is very annoying.’ (5-khArWm)
 {0003644#S18}

Universal concessive conditionals are semantically close to correlative relative clauses with free-choice interrogative pronouns (§23.2.5) such as (35).

- (35) *kuwz tce [azo tce^{hi} tuw-tɣ-stu-t-a] nuw tɣ-ste*
 INTERJ LNK 1SG what TOTAL~AOR-do.like-PST:TR-1SG DEM IMP-do.like[III]
je
 SFP
 ‘Come on, do everything in the same way as me.’ (i.e. in whatever way I
 act, act in this way) (140511 xinbada-zh) {0003961#S240}

First, the verb *tu~tr-stu-t-a* totalitative initial reduplication (§23.3.2), a specificity of relative clauses.

Second, the interrogative pronoun *tɕ^{hi}* has a different syntactic function in these constructions. In the correlative relative (35), *tɕ^{hi}* is the relativized element, and serves as direct object of both the verb in the subordinate clause and that in the main clause.⁵ In the universal concessive conditionals (31) and (33), *tɕ^{hi}* in the subordinate clauses has no syntactic role in the main clause.

25.2.4 Counterfactuals

In counterfactual constructions, the protasis describes a condition that is known to be false, and the apodosis indicates an outcome that would have occurred if the condition had been true. In Japhug, counterfactual conditionals have strict requirements on TAME marking in both the protasis and the apodosis. The verb in the protasis is in the Irrealis (§21.4.1.5), and the Past Imperfective is required in the apodosis even for transitive dynamic verbs (§21.5.3.4), as illustrated by (36) and (37).⁶

- (36) [*azo nyzo kuw iɕq^ha nutcu yw-tu-kuw-qur-a*

 ‘If only I had legs now, the one next to the prince would have had to be me.’ (said by the little mermaid, who has no legs) (150819 haidenver-zh)
 {0006314#S142}

⁵See §14.4.2 for an account of the argument structure of the simulative verb *stu* ‘do like’.

⁶In a previous publication (Jacques 2014a: 301), I claimed that there were counterfactual constructions with a verb in the Factual Non-Past in the apodosis (example 99), but this was an erroneous interpretation.

25.3 Temporal clauses

25.3.1 Iterative coincidence

Iterative coincidence is a biclausal construction comprising a temporal subordinate clause (*A*) and a main clause (*B*), expressing that each time the event in *A* takes place, that in *B* necessarily follows, and that this has taken place several times in the past. It can be generally translated as ‘each time *A* then *B*’. As shown by (38) and (39), the temporal clause generally takes a verb in the Aorist with initial reduplication (§12.4.1.3) like the protasis of a conditional construction (§12.4.1.2, §25.2.1), followed by the emphatic marker *zo* (§26.1.1.5).

(38) *[turme ra ju~jʌ-ye-nu]* *zo tu-nuirmʌzu pʌ-ŋu tce*
 people PL ITER~AOR-come[II]-PL EMPH IPFV-show.off IFR.IPFV-be LNK

 sky ITER~AOR-release EMPH snail IPFV-AUTO-come.out
ŋu
 be:FACT
 ‘Each time it rains, snails come out.’ (elicited)

Alternatively, unreduplicated Aorist in its function to mark a temporal reference point (§21.5.1.4, §25.3.4.1) can be interpretable as iterative coincidence when the verb in the main clause is in the Imperfective, as in (40).

(40) *tce [lʌ-zo-nu]* *q^he tuturca lu-zo-nu,*

 AOR:DOWNSTREAM-fly-PL LNK together IPFV:DOWNSTREAM-fly-PL
 ‘When they land they all land together, when they fly they all fly together.’ (23-scuz) {0003612#S74}

25.3.2 Precedence

Three types of constructions are used to express temporal precedence between the event described in the main clause precedes that of the temporal subordinate clause: neutral precedence, immediate precedence and terminative.

These temporal clauses normally occur before the main clause, hence resulting in a non-iconic temporal relationship between the two clauses, since the first (subordinate) clause describes an event occurring *after* that in the second one (the main clause).

25.3.2.1 Neutral precedence

There is only one available construction in Japhug to express that the action of the main occurs before that of the temporal clause without further aspectual specifications: clauses with the postposition *ɕuŋgu* ‘before’ (§8.2.11). The verb in *ɕuŋgu* clauses is required to be in the Imperfective (§21.2.3). In (41) for instance, replacing the Imperfective form *ɲu-si* by the corresponding Aorist (*nu-si*), an infinitive (*kr-si* or any other finite or non-finite form would result in a utterly agrammatical sentence.

- (41) [*ɲu-si*] *ɕuŋgu ɲu-nu-NGyt-ndzi*
 IPFV-die before AOR-AUTO-ACAUS:separate-DU
 ‘They had divorced before she died.’ (14-siblings) {0003508#S296}

A syntactic error involving a verb in a temporal clause in *ɕuŋgu* ‘before’ is presented in §24.7.

25.3.2.2 Immediate precedence

Immediate precedence can be expressed by three constructions.

First, a clause in the Factual Non-Past (§21.3.1) with linker *tyk^ha* ‘about to’ can describe a action that took place just before that of the main clause, as in (§42) and (§43).

- (42) *ɬamu ku [yi-ndzi] tyk^ha tce ɲuɯu u-cki uzo ku*

 ‘(When I was aiming), as [the gun] was about to burst (i.e. to go off), I was afraid and my hand moved.’ (28-CAmWGdW) {0003712#S126}

Alternatively, the *ju-* Proximative prefix (§21.6.2) and the Periphrastic Proximative (§21.6.2.1) can be used to express this meaning, as illustrated by (44) and (45).

25 Other types of multiclausal constructions

 (140510 fengwang-zh) {0003939#S55}

25.3.2.3 Terminative

The terminative postposition *mɣɕtɕa* ‘until’ (§8.2.9) occurs with finite clauses to express the end point of the event described in the main clause. In terminative clauses, verbs nearly always take a negative prefix as in (46) and (47), and the polarity contrast is neutralized.

- (46) *nuw-kɣ-k^ho nuw [muw-t^ha-ɕkuut] mɣɕtɕa tu-ndze*

 ‘[The animals] do not swallow until they have chewed it for along time.’
 (19-qachGa mWntoR) {0003546#S186}

25.3.3 Subsequence

Temporal succession can be expressed by simple coordination, the order of the clauses mirroring the temporal sequence of the events they describe (§25.1.6). The present section however focuses on subordinating construction devoted to encoding temporal subsequence between the subordinate clause and the main clause.

25.3.3.1 Neutral subsequence

The most common way to specify temporal succession between two clauses is to use the locative/temporal relator noun *u-q^hu* ‘after, behind’ (§8.3.4.2). The temporal clauses are in finite form, in particular in the Aorist as in (49) and (50).

- (49) [*<weixiao> kuβde-xpa puu-st^hut-a*] *u-q^hu* *tce tceɲɹe*,
 nursing.school four-year AOR-finish-1SG 3SG.POSS-after LNK LNK
<fenpeigongzuo> tce ɓduɹɣɣt lɣ-wɣ-lat-a-nuɹ

 ‘After I finished the four years of nursing school, they assigned me a
 work position and sent me to Gdongbrgyad.’ (140501 tshering skyid)
 {0003902#S116}

The relator noun *u-q^hu* can be optionally followed by the linker *tce*, by locative postpositions such as *ri* (§8.2.4.1) and can even be modified by the adverb *tša* ‘a little’ as in (50).

- (50) [*smuuntɕuɣ nuɲu tu-ɬoɓ*] *u-q^hu* *tša ri tce tce*,
 Pleiades DEM AOR-come.out 3SG.POSS-after a.little LOC LNK LNK

 earthworm IPFV-come.out be:FACT
 ‘The [constellation of the] earthworm appears a little after the Pleiades
 have come out.’ (29-mWBZi) {0003728#S25}

Alternatively, and more rarely, the relator *u-mp^hru* ‘after, following’ (§8.3.5) can be used to indicate temporal subsequence, as in (51).

- (51) [*tu-mu ka-lyt*] *u-mp^hru* *nu tu.*
 INDEF.POSS-sky AOR:3→3’-release 3SG.POSS-after DEM exist:FACT
 ‘It is found after it has rained.’ (23-mbrAZim) {0003604#S72}

25.3.3.2 Immediate subsequence

Temporal clauses with the immediate converb (§16.6.3) describe an event immediately followed by the action referred to in the main clause (52).

- (52) *tce [nu tu-tu-lob] zo q^{he} c^hu-p^hut-nu*
 LNK DEM IPFV-IMM:CONV-COME.out EMPH LNK IPFV-take.out-PL
c^hu-βde-nu cti.
 IPFV-throw-PL be.AFF:FACT
 ‘As soon as it comes out (in fields), [the farmers] pluck it off and throw it away.’ (16-CWrNgo, 35 {0003518#S34})

The main clause can also contain a stative verb, depicting a temporary state beginning just after the event of the converbial clause (53).

- (53) *tce [tu-tu-lob] tce rq^hyrq^hyt zo*
 LNK IPFV-IMM:CONV-COME.out LNK IDPH(II):fresh.and.firm EMPH
ju-pa
 SENS-AUX
 ‘When [this mushroom] has just come out, it is nice and firm.’
 (24-zwArqhAjmAG) {0003630#S15}

Another way to express immediate subsequence is a temporal clause with the temporal postposition *ci^muma* ‘immediately after’ (§8.2.11) taking a clause with a verb in the Aorist. This construction is semantically very close to the immediate converb, but more commonly found when the main verb is a stative verb like *arβurβu* ‘be wrinkled’ in (54).

- (54) *nu tγ-lob ci^muma tce ju-γβurβu*
 DEM AOR-come.out immediately.after LNK SENS-be.wrinkled
 ‘When [the stalk of the fern] has just come out, it is all wrinkled.’
 (13-NanWkWmtsWG) {0003492#S161}

The postposition *kóβmuiz* ‘only after’ (§8.2.11), which imposes no requirement on the TAME category of the verb in the subordinate clause, indicates that the event in the subordinate clause is a prerequisite for that in the main clause to occur, as shown by (55).

- (55) [*ɯ-mi ra ku-xteɣr-nu*] *kóvmuɯz tɣ-lu pju-tɣt-nu*

 ‘People need to tie the legs [of the female hybrid yak] before milking.’ (i.e., they milk it only after they have tied its legs). (05-qambrW) {0003402#S19}

25.3.3.3 Ingressive

The ingressive postpositions *caɲpci* ‘since’, ‘from ... on’ and *pɕintɕɣt* ‘since’ (§8.2.11) can take clauses with a verb in the Aorist, indicating the beginning of a period lasting up until to the current point of temporal reference (utterance time, or a reference point in the past in the case of narratives). The main clause is generally in negative form, as in (56) and (57).

25.3.4 Concurrence

25.3.4.1 Temporal reference point

Aside from indicating the temporal relation and ordering between the events in the subordinate and the main clauses, temporal clauses can also serve to specify a temporal reference point for the main clause. There are four constructions of this type.

First, one of the functions of the Aorist is precisely to fix a temporal reference, for both past and future events (§21.5.1.4).

25 Other types of multiclausal constructions

Second, prenominal clauses with temporal relator nouns in 3SG possessive forms such as *u-sji* ‘the day when...’, *u-xpa* ‘the year when...’, *u-raŋ* ‘the time when...’ or other ones as in (58) can mark the time period when the action in the main clause takes place. These clauses can be formally as a subtype of finite prenominal relative clauses (§23.5.9).

- (58) *[puw-nuɔmdar-ndzi]* *u-ymur* *nutɕu* *tɕe* *mts^hu* *nur*
 AOR-jump-DU 3SG.POSS-evening DEM:LOC LOC lake DEM

 IDPH(II):slowly EMPH LNK INF:II-dry.up IFR:DOWN-start
 ‘In the evening when they jumped [into the lake], the level of the lake started to drop slowly and the lake disappeared’ (2003, Nyimawozer 2)

Third, the locative postpositions *ri*, *tɕu* and *zu* (§8.2.4.1) can also occur with finite clauses, with a temporal meaning even without temporal relator noun as in (59).

- (59) *ununutɕu* *ɔ* *[tuzo puw-kuw-xɕi]* *ri*

 NEG-PST.IPFV-be.usually.the.case LNK
 ‘When we were little, we did not eat it.’ (13-NanWkWmtsWG)
 {0003492#S167}

25.3.4.2 Simultaneity

There are two types of subordinate clauses expressing an ongoing action or event taking place at the same time as that of the main verb without serving as a point of temporal reference, unlike the constructions discussed in §25.3.4.1 above.

First, finite clauses with the relator nouns *u-k^huk^ha* ‘while’ and *u-juja* ‘along with’, ‘while’ describe events that occur together with, and serve as background to the action of the main clause, as in (61) and (62). There are no coreference restrictions on the arguments of the subordinate and the main clauses.

- (61) *tcendɣre [tu-nuismɣn] u-k^huk^ha tu-rɣma-nu*
 LNK IPFV-treat 3SG-the.same.time IPFV-work-PL
 ‘[The lepers]_i worked (there) while [the doctor] was treating them_i.’
 (25-khArWm) {0003644#S60}
- (62) *[nuunuu ju-rɣuɣ] u-k^huk^ha u-se ku-ts^hi*
 DEM IPFV-run 3SG-the.same.time 3SG.POSS-blood IPFV-drink
ɲu-cti.
 SENS-be:AFF
 ‘[The lion] drinks [its prey’s]_i blood while it_i is (still) running.’
 (20-sWNgi) {0003562#S50}

The relator *u-juja* ‘along with’ differs from *u-k^huk^ha* in that it implies a simultaneous gradual change of degree in both the event or state of the subordinate clause and that of the main clause. The verb of the subordinate clause is generally in the Perfective (though a few Imperfective forms are also attested), while that of the main clause can be in any TAM form, in particular with incremental initial reduplication (§12.4.1.4) indicating gradual increase as in (63).

- (63) *[uɣo tɣ-wxti] u-juja tce u-ɣwɔβ nuunuu*
 3SG AOR-be.big 3SG.POSS-along LNK 3SG.POSS-leaf DEM

 INCR~IPFV-be.tiny EMPH SENS-be
 ‘As it grows big, its leaves become more and more tiny.’ (09-mi)
 {0003466#S15}

The clause in *u-juja*, rather than a gradual change of state across time, can indicate change across space, as in (64), where *tɣ-mbro* does not mean that the mountain becomes higher, but rather that the person observing the plants moves higher in the mountain.

- (64) *zɡoku tɣ-mbro u-juja nu ɰmbri tu-tu-ldzuz*

 EMPH be:FACT
 ‘The higher [ones goes] in the mountain, the more the [wood] of the willows is flexible.’ (07-Zmbri) {0003438#S39}

25 Other types of multiclausal constructions

Second, gerundive clauses (§16.6.1.3) are an alternative possibility to indicate a background event or state occurring concurrently with the event of the main clause, as in (65), though in some cases gerunds express manner rather than temporal overlap (§25.4).

- (65) *nunuw jwu-nuw-me ruwci, nuw kunx ku-χse jwu-ra.*

25.3.4.3 Opportunity

The postposition *baz* ‘while ... still’ (and its variant *baznx*; its etymology is discussed in §5.8.3) has a meaning close to that of Chinese 趁着 <chènzhè> ‘while ... still’, ‘taking the opportunity of...’. It requires a finite clause as in (66) and (67).

- (66) *icq^{ha} tuw-ndzi nuw nxki, [γurɲi] baznx*

 ‘Flee while this one [the ogre] is sleeping.’ (160706 poucet6) {0006109#S78}

25.4 Manner clauses

25.4.1 Serial verb construction

The main function of serial verb constructions (§25.1.5) in Japhug is to express manner. The most grammaticalized serial constructions involve deideophonic and simulative verbs.

Serial verbs constructions can themselves occur as complements of a single complement-taking verb, resulting in a multiclausal complement (§24.2.4).

25.4.1.1 Deideophonic verbs

Deideophonic verbs (§20.9) commonly occur in serial verb constructions. The transitive deideophonic verb *nudruß* ‘gore again and again’ for instance, is only attested in serial construction with *tɕʰu* ‘gore, stab’ as in (68). The ideophonic verb can either follow (68) or precede the main verb (69), the latter construction being by far more common.

- (68) *icqʰa* *srunmuu nuu to-tɕʰu to-nudruß* *tɕe*
 the.aforementioned rākshasî DEM IFR-gore IFR-repeatedly.gore LNK

 rākshasî DEM IFR-repeatedly.gore EMPH IFR-gore
 ‘[The rhinoceros] gored the rākshasî repeatedly and killed her.’ (elicited
 on the basis of 68)

25.4.1.2 Similitive verbs

The similitive verbs *stu* ‘do like’ and *fse* ‘be like’⁷ commonly occur in a serial verb construction to indicate the way in which the action takes place. They are always the first verb of the series.

The ditransitive verb *stu* (§14.4.2) is found with transitive verbs, and shares its subject and object with them, as shown by (70) (generic transitive subject) and (71) (3PL→1SG).

- (70) [*u-ru* *nuu ki* *tú-wy-stu*] [*pjú-wy-qlut*]
 3SG.POSS-stalk DEM DEM:PROX IPFV-INV-do.like IPFV-INV-break
 ‘One breaks its stalk like this.’ (14-tasa) {0003510#S76}

In addition, in some cases it takes the orientation of the other verb (EASTWARDS in 71), rather than its intrinsic orientation (UPWARDS as in 70).

⁷I adopt the term “similitive verb” (Creissels 2017b) rather than “manner deixis verbs” that I used in previous publications, since these verbs do not express deixis on their own, and require a demonstrative.

25 Other types of multiclausal constructions

- (71) [azo kuuki ntsu kú-wy-stu-a-nu] tce,
 1SG DEM:PROX always IPFV-INV-do.like-1SG-PL LNK
 [kú-wy-znuuk^hrum-a-nu]
 IPFV-INV-punish-1SG-PL
 ‘They tortured me like this.’ (Gesar)

The demonstratives *ki* and *kuuki* in (70) and (71) are semi-objects that are not shared with the other verb.

With intransitive verbs, *fse* ‘be like’ is used instead of *stu*. It shares its intransitive subject with the other verb, as shown by (72) where both *fse-a* and *ndzur-a* have 1SG indexation.

- (72) azo nuu snicvr zo kutcu [ki fse-a]
 1SG DEM night.and.day EMPH here DEM:PROX be.like:FACT-1SG

 stand:FACT-1SG always SENS-be.needed like
 ‘I have to stand like this night and day.’ (The divination, 2002)
 {0003364#S44}

There are cases when *fse* rather than *stu* occurs with transitive verbs, and which could superficially appear to be cases of serial verb constructions with transitivity mismatch. In (73) the transitive verb *nuc^hymda* ‘drink with a straw’ is preceded by *fse*, with 1PL coreference between the object of the former and the intransitive subject of the latter.

- (73) t^hu-rgyz-i, sna nuu-me-j tce [ki tx-fse-j]
 AOR-be.old-1PL be.good AOR-not.exist-1PL LNK DEM.PROX AOR-be.like-1SG

 ‘Now that we have become old and useless, we became like this, they drink our [blood] with straws (planted in our back).’ (2005 Norbzang)

However, note that although *tx-fse-j* and *c^hú-wy-nuc^hymda-j* share one argument, their TAME category is different, and the two clauses constitute a simple case of coordination rather than a serial verb construction: *ki tx-fse-j* means ‘we became like this’ rather than ‘(they treated) us like this’. The corresponding genuine serial verb construction is shown by (74), where *nuc^hymda* occurs with *stu* as expected, and the two verbs have the same person-number configuration and TAME category (like 71 and 70 above).

- (74) *t^hu-tu-rgyz tce [ki túr-wy-stu]*

 ‘When you become old, they will drink you (your blood) like this with a
 straw (planted on your back)’ (2012 Norbzang) {0003768#S58}

Some non-deideophonic verbs expressing manner such as *nrxcɣt* ‘do with force’ (like its Tshobdun cognate *nrsefet* ‘exert oneself’, Sun 2012: 490–491) can also be used in a serial verb construction.

25.4.1.3 Other verbs of manner

Other verbs of manner can also occur in a serial construction, for instance the distributed action verb *amuzɣut* ‘be evenly distributed’ (examples 178 and 179, §18.7) or atelic motion verbs like *ɲke* ‘walk’ (19, §15.1.2.1) or *nuqambuɓjom* ‘fly’ (example 65, §19.4).

25.4.1.4 Simultaneous action

Serial verb constructions can be used to describe a secondary action simultaneous with the main action, optionally marked with the emphatic *zo* (§26.1.1.5) as *pjɣ-sɲur* ‘it was snoring’ in (75).

- (75) *pjɣ-sɲur zo pjɣ-nuɣwɓ cti ma, maka zo*

 NEG-IFR-realize
 ‘[The aquatic monster] was snoring in its sleep, and did not notice
 anything.’ (140508 benling gaoqiang de si xiongdi-zh) {0003935#S185}

25.4.1.5 Degree

Serial constructions can also describe the degree, intensity or extent of an action (§26.1.3), even for non-gradable predicates. In these constructions, the verb describing the main action or state is in the first position, and a stative verb of degree (such as *arɕo* ‘be finished’, *tɕ^hom* ‘be too much’ or *rtax* ‘be enough’) occurs in second position, as in (76).

25.5 Causality

25.5.1 Consequence

The only specific marker of consequence is the linker *núndza* ‘for this reason’ (85).

25 Other types of multiclausal constructions

- (85) *u-mtu* *ɣʒu* *tce, tce núndza* *qapɣɣmtumtu*

 IPFV-say-PL SENS-be
 ‘It has a crest, and for this reason it is called ‘hoopoe’.
 (23-qapGAmtWmtW) {0003608#S19}

This linker results from the fusion (§5.1.1.5) of the noun *u-ndza* ‘cause’ used in causal clauses (§25.5.2) with the distal demonstrative *nu* in anaphoric function ‘the reason of (the preceding sentence)’ (§6.9.1).⁸

However, consequence is more generally simply indicated by the linkers *tce* and/or *q^he* (§25.1.6), as illustrated by (86).

- (86) *t^hemɣ-pu* *pu-cti-a* *q^he* *tɣ-tcu* *ra nu-cki*

 NEG-PST.IPFV-dare-1SG
 ‘As I was a little girl, I did not dare to stay at a boy’s place, and thus did not dare to eat my fill.’ (17-lhazgron)

25.5.2 Cause

The causal linker *matçi* ‘because’ is the main way to indicate cause in Japhug. In this construction, it is not clear which clause is the main clause, since the linker can be prosodically linked to both the preceding, or the following one, even with a pause after *matçi* as in (87). The clause preceding *matçi* expresses the result/consequence (consequence clause), and the one following it the cause (causal clause).

- (87) *ma nunu* *k^hro* *mɣ-sɣ-mto.* *matçi* *ɲu-xtci.*
 LNK DEM much NEG-PROP-see:FACT because SENS-be.small
 ‘That [species of ant] is barely visible, because it is [so] small.’ (26-qro)
 {0003682#S79}

⁸The phrase *nunu u-ndza* without vowel fusion is also found in exactly the same context in the same text.

Example (88) cannot be analyzed as an attestation of a preposed *matci* causal clause, since the clause that follows *q^he u-yli dɣn* is a redundant consequence clause (§25.5.1), repeating the real consequence clause *paβ ɣu u-yli dɣn*, which is located in the expected place before the linker *matci*.

- (88) *paβ ɣu u-yli dɣn [matci mɣ-ndze zo*

 ‘Pigs create a lot of manure because they eat anything, and so they create
 a lot of manure.’ (05-paR) {0003400#S98}

The shorter form *ma*⁹ can also mark cause as in (89). However, *ma* has many additional functions, including marking precautioning (§25.5.6), adversative (§25.6.1) and exceptive (§25.6.3) clauses.

- (89) *u-jwaβ nu (...) tu-ostɣko zo mɣ-c^ha ma mpuu.*

 ‘Its leaves do not grow straight (i.e. they hang down), as they are soft.’
 (07-kWmCku) {0003428#S12}

Alternatively, the relator noun *u-ndza* ‘cause’ (§8.3.6.2, §24.6.3.5) with ergative (and/or locative) postpositions can serve to build causal clauses, as in (90). In some rare cases, *u-ndza*-clauses can have a purposive meaning (example 214, §24.6.3.5).

- (90) [*nɣzo u-ruuz ɣɣzu” tɣ-tuut-a*
 2SG 3SG.POSS-supernatural.power exist:SENS AOR-say[II]-1SG

 NEG-be.allowed:FACT
 ‘Because I said that you had supernatural powers (§24.2.5.2), my parents
 [said] ‘go together with him into the lake.’(Nyima wodzer 2003.2)

⁹The two forms are historically related: *matci* is probably a combination of *ma* with the additive topic marker *tci* (§9.1.6.2).

Instead of being marked with the ergative, the causal clauses can also serve as predicate of a copular construction (example 175, §21.5.1.4). Predicative causal clauses occur often standalone as in (91), without any overt clause expressing the result.

- (91) [*nuu ma-tɣ-tuu-ste, nuu ma-tɣ-tuu-fse*] *tu-tuu-ti-nuu*] *ndza*

 (his parents always) tell him ‘Don’t act like that, don’t be like that.’
 (unlike grandparents, who are more lenient).’ (conversation 16-08-11)

Apart from *ndza*, the relator nouns *u-t^hurzi* ‘mercy’ and *u-xɕɣt* ‘strength’ can also be used to indicate cause on both noun phrases (§8.3.6.2) and subordinate clauses.

The noun *u-t^hurzi* ‘mercy’ is specifically used to indicate beneficial actions thanks to which a desirable result is obtained (92).

- (92) [*<guojia> ku ta-nuismɣn*] *u-t^hurzi tce tce (...)* *t^ham tce*

¹⁰The locution *X u-xɕɣt ku* is reminds of French *à force de X*.

25.5.3 Prerequisite

Prerequisite constructions do not express the direct cause of the action/situation in the main clause, but simply the basic conditions for that action or situation to be possible, like 既然 <jìrán> ‘since’ in Chinese. This meaning is expressed by a clause in the Aorist as in (94), formally similar to a temporal clause (§21.5.1.4, §25.3.4.1).

25.5.4 Purposive clauses

Five main constructions are available in Japhug to express purpose.¹¹

First, the purposive converb (§16.6.2) is a non-finite verb form dedicated to expressing the purpose of the action in the main clause. It is built by combining the prefix *sɣ(z)-* with a B-type preverb (§15.1.1.1), the reduplicated verb stem and a possessive prefix coreferent with one of the core arguments of the purposive clause (and almost always in negative form). Purposive converbs are productive: even denominal verbs of Tibetan origin such as *nutç^homba* ‘catch a cold’ (96) can

¹¹This section does not include the participial clauses (§16.1.1.6) used as supine purposive clauses of motion verbs (§24.4.2.1).

25 Other types of multiclausal constructions

derive this type of converbs. However, they are barely attested in the Japhug corpus, and simpler constructions are preferred to express purpose.

- (96) *a-tɕu* *u-mx-tu-syz-nwtɕ^hombu~mba tu-ŋga*

 SBJ:PCP-be.thick AOR-CAUS-wear-PST:TR-1SG
 ‘In order to prevent my son from catching a cold, I made him wear heavy clothes.’ (elicited)

Second, the the verb *numga* ‘want from’ can be combined with an infinitival clause to express purpose, as in (97) to express the aim of the action in the main clause.

- (97) *tce* [*kuɸyz nuu muu-ɲu-kɣ-βzu kɣ-numga*], *izɣra*,

 ‘In order to prevent *kuɸyz* bugs from growing (in the meat), we buy refrigerators and put our meat in it.’ (28-kWpAz) {0003714#S45}

The verb *numga* in this function is generally a velar infinitive *kɣ-numga* in converbial function (§16.2.1.7) as in (97) and (98a), but a finite verb is also possible (98b). The infinitival clause can be focalized, serving as the predicate of a copular construction in *ŋu* (98c).

kɣ-nuɯmga ɲu
 INF-want.from be:FACT
 ‘(The reason why) I come to Mbarkham is to learn the Gyalrong language.’ (elicited)

Third, the relator noun *u-spa* ‘material’ (§16.1.3.10, §23.2.4) can take object (99) and subject (100) participial clauses with a purposive meaning. These constructions are to be analyzed as essive participial clauses (§24.4.2.2).

- (99) *turme ra kuu u-<shipin> jo-lyt-nuu tce [nuunuu*

 ‘(In former times), hunters would take [dogs] (on a hunt). They would take dogs to help them (i.e., as their helpers).’ (05-khWna) {0003398#S33}

Fourth, a biclausal construction comprising a clause containing a similitive verb (*fse* ‘be like’ or *stu* ‘do like’) in finite form with the interrogative pronoun (§6.5.1), and another finite clause *Y* linked by *tce*, specifically means ‘what should *X* do in order to *Y*’ as in (102a) and (102b).

25 Other types of multiclausal constructions

- (102) a. *izora yuw tɕ^{hi} tu-fse-j tɕe ji-tuw-ci*

 ‘What should they do in order to have water?’ (divination 2005)

The clause in *fse* can be embedded within the clause *Y*, as shown by example (5) (§25.1.4).

Fifth, purposive meaning can be expressed by a clause in the Irrealis (§21.4.1 with the adverb *tɕet^ha* ‘later’ as in (103). This type of construction resembles precautioning clauses (§25.5.6), but with opposite polarity.

- (103) *lu-zyut cunɣuw tɕe nutɕu ku-yɣrat-a tɕet^ha*
 IPFV:UPSTREAM-arrive before LNK DEM:LOC IPFV-throw-1SG later
a-mɣ-lɣ-zyut
 IRR-NEG-PFV:UPSTREAM-arrive
 ‘Before it arrives, I will throw [the enchanted white stone], so that it
 does not arrive.’ (25-kAmYW-XpAltCin) {0003642#S57}

Finally, clauses with the relator *uw-ndza* ‘cause’ can also have a purposive interpretation (example 214, §24.6.3.5, which resembles causal clauses §25.5.2).

25.5.5 Justification clauses

Justification clauses (Lopes 2009) differ from strictly clausal clauses in that there is no direct causal relationship between the main clause and the justification clause. Rather, the truth value of the latter allows to make an inference concerning the truth value of the latter.

In Japhug, there is no dedicated construction to express such meaning, and as in many languages, the clausal linkers *ma* and *matɕi* (§25.5.2) can be used (104).

- (104) *c^ha tci ko-ts^hi matci lo-βzi cti ri*
 alcohol also IFR-drink LNK IFR-be.drunk be.AFF:FACT LNK
 ‘He had also drunk alcohol, since he was drunk.’ (140506 loBzi)
 {0003923#S13}

The justification meaning is clearest when the verb of the main clause takes the Probabilitative *umx-* (§21.7.2.1) or the Rhetorical Interrogative *uβrx-* (§21.7.3.3) prefixes with *peg* circumfix, and that in the clause following *ma* is in the Sensory, as in (105) and (106).

- (105) *εyxco pɣnmawombɣr jo-nuu-yi umx-kuu-ŋu-ci ma, k^ha*

 ‘Maybe Padma ‘Od’bar came back in the last few days, since there is
 smoke coming out from their house.’ (2012 Norbzang) {0003768#S193}

- (106) *jufɕuɕɣr uβrx-pu-tuu-nuɰuβ-ci ma nɣ-mɾaβ ɲu-yurni*
 last.night RH.Q-PST.IPFV-2-sleep-PEG LNK 2SG.POSS-eye SENS-be.red
 ‘It seems that you did not sleep (well) last night, since your eyes are red.’
 (elicited)

The use of *ma* as a sentence final particle with the modal tenses (§10.4.4) possibly originate from constructions as in (105) and (106) with elided justification clauses.

25.5.6 Precautioning clauses

Precautioning constructions comprise a clause describing an undesirable result, and another clause referring to a measure that can be taken to prevent this result. The precautioning meaning can be expressed with a negative purposive clause (§25.5.4); in particular, purposive converbs, which are almost always in negative forms (§16.6.2), could be described as a type of precautioning clauses.

However, the most common way of expressing precautioning meaning in Ja-phug is by coordinating a clause in the Irrealis (§21.4.1), the Imperative (§21.4.2) or the Prohibitive (§21.4.3) indicating the preventive measure, with a clause in the Factual Non-Past (§21.3.1) referring to the undesired event. The two clauses are coordinated by the linker *ma* (107) and/or the adverb *t^ha* ‘later’ or *tɕet^ha*, as illustrated by (108) and (109), a crosslinguistically common strategy to express precautioning meaning (Angelo & Schultze-Berndt 2016).

25 Other types of multiclausal constructions

- (107) *ma-jɣ-tu-ce ma tu-ndzaβ*
 NEG-IMP-2-go LNK 2-ACAUS:cause.to.roll.down:FACT
 ‘Don’t go (to the temple on the mountain to do circumambulations), you might fall down.’ (conversation, conversation 15-12-05)

- (109) *a-mɣ-t^hu-sta ma tce^ha ju-nɯ-ce cti*
 IRR-NEG-PFV-wake LNK later IPFV-VERT-go be.AFF:FACT
 ‘May she not wake up (Don’t wake her up), otherwise she will go away.’ (150818 muzhi guniang-zh) {0006334#S103}

There is no categorical requirement for the first clause to contain a modal TAME category. In (110), we find instead the negative form *mɣ-pe* ‘it is not good’ with a non-finite clause that can either be interpreted as a stative infinitive (‘it is not good (if) they are thin’) or a subject participle (‘the thin ones are not good’).

- (110) *roβre nɯ kuɣɣ [wuma zo ku-xts^hum] mɣ-pe ma*

25.6 Other constructions

25.6.1 Adversative

25.6.1.1 Concession

The most common way of expressing concession is the linker *tce^heri* ‘but, however’, which can occur in sentence-initial position, after a pause as in (111).

- (111) *u-βri nura qapri u-βri wuma zo ɲu-fse,*
 3SG.POSS-body DEM:PL snake 3SG.POSS-body really EMPH SENS-be.like
u-rme ri ku-tu mane. tceri u-mɣlvjaβ

 exist:SENS
 ‘[The gecko’s] body looks a little bit like the body of a snake, and it too
 has no hair. However, it has limbs.’ (28-tshAwAre) {0003722#S7}

The shorter variant *ri*¹² is also used to indicate concession (112) when used between coordinated clauses. When *ri* follows noun phrases or complement clauses, it is a different marker, either that of additive focus ‘also’ as in (111) above (§9.1.6.2, §25.6.2) or a locative postposition (§8.2.4.1).

- (112) *kuwu nuw izo kutcu ji-zimk^hym tce tu*

ri mɣ-dɣn
 LNK NEG-be.many:FACT
 ‘Bearded vultures are found here in our region, but not many.’
 (2011-08-kuwu)

The linker *ma* also has a concessive meaning in some contexts, as in (113). This function possibly derives from its use as an exceptive postposition meaning ‘apart from’ (§8.2.8, §25.6.3).

- (113) *qaliav nuw to-z-nuɣmaz ma kɣ-sat nuw muw-pjɣ-c^ha*

 ‘He wounded the eagle, but could not kill it.’ (150902 hailibu-zh)
 {0006316#S19}

The topic marker *ndɣre* (§9.1.5.3) can also indicate adversative meaning, with scope overt one constituent of the sentence, in (114) over an infinitival clause.

¹²The form *tceri* is a combination of the linker *tce* with *ri*; the concessive meaning of *ri* itself possibly derives from its function as a locative postposition, used with a finite clause as a temporal subordinator as in (59) (§25.3.4.1).

25 Other types of multiclausal constructions

- (114) *paβ kuw tci ndze, nuŋa kuw tci ndze. tce [turme*

 INF-eat CONTRAST:FOC NEG-be.good:FACT
 ‘Pigs eat it, cows eat it, but it is not good for people to eat.’
 (17-ndZWnW) {0003524#S118}

In the register of traditional stories, the locution *jinbala zuu* is also employed to mark adversative clauses as in (115). The linker *jinbala* is borrowed from Tibetan ཇིན་པ་ལ། *jin.pa.la*, a non-finite form of the copula ཇིན་ *jin* ‘be’ which also has adversative meaning in the classical language.

- (115) *tce rɣɣlpu nuw nuw-rga jinbala zuu “e, a-tcuw*

 DEM.PROX contest INDEF NEG-APPREHENSIVE-can SFP IFR-think LNK
 ‘Although the king was happy (about that), he thought ‘I am worried that my son will not win the contest.’ (2003 sras)

Finally, velar infinitive converbs (§16.2.1.7) with the ergative can have an adversative interpretation, as in (116), where the converbial clause is better translated by ‘although ...’ than ‘without...’.¹³

- (116) “jɣ-yi” *kunɣ mɣ-kɣ-ti kuw, “nɣ-rzαβ ɣu-ku-βze-a”*
 IMP-come also NEG-INF-say ERG 2SG.POSS-wife CISL-IPFV-make[III]-1SG

25.6.1.2 Rectification

The negative copula *maβ* ‘not be’ followed by the ergative *kuw* negates the first clause (*A*), and indicates that the events described by following clause(s) *B* instead are true. The meaning of this construction can be glossed ‘not *A*, but rather *B*’ as in (117).

¹³In the Chinese original, ...便主动要求嫁给国王 <biàn zhǔdòng yāoqiú jiàgěi guówáng> ‘... and she asked to marry the king of her own initiative’, what corresponds to the converbial clause is the adverb 主动 <zhǔdòng> ‘of ...’s own initiative’. This construction cannot be a calque.

- (117) *kujka nunu sunɣu c^hiz e-ku-rɣloβ ju-maβ*
 chough DEM forest APPROX:LOC TRAL-IPFV-make.nest SENS-not.be
ku, (...) kuxtɕo u-mbe u-ɣɣu ri ku-rɣloβ

 ‘The chough does not go in the forest and makes a nest there, but rather makes a nest (...) in old baskets, (...)’ (22-CAGpGa) {0003586#S45}

The adversative additive adverb *mýɣɣɣz* ‘instead’, ‘on the contrary’ (and its variant *mýɣɣɣz nɣ*), semantically similar to Chinese 反而 <fǎn’ér> ‘instead’, specifically indicates an undesirable result that occurs contrary to expectation instead of the intended result.

The clause expressing the intended result can take the comparative postposition (standard marker) *sɣz* ‘compared with’ (§8.2.7), as in (114).

- (118) *pjɣ-ku-nuβlu-a tɕe, nunu ku-p^hɣn sɣznɣ, mýɣɣɣz*

 (29-mWBZi) {0003728#S98}

25.6.1.3 Evidential rectification

The Aorist *ɣ-mda* (§21.5.1) of the verb *mda* ‘be the time’, without complement clause, and following a clause with the adversative linker *ri*, has the special meaning ‘actually’, ‘it turns out that...’, ‘but in fact ...’. It is specifically used when a

referent realizes that that the reality (the rectification clause) was different from his/her/its original belief or expectation.

This construction is common in stories translated from Chinese, as in (120) and (121), where *tx-mda* corresponds to the Chinese linkers 结果 <jiéguǒ> ‘in the end’ or 原来 <yuánlái> ‘it turns out that’.¹⁴

- (120) <huangshang> *nwu kuw ko-mja tce to-rtoɓ ri, nɣkinu,*
 emperor DEM ERG IFR-catch LNK IFR-look LNK FILLER

 AOR-OBJ:PCP-make IFR.IPFV-be.AFF

‘[Wang Taichang_i was accused of holding an imperial robe, a crime punishable by death] The emperor_j [had] him_i arrested, but when he_j examined [the so-called imperial robe]_k it turned out that it_k was [just] made of yellow paper.’ (150909 xiaocui-zh) {0006386#S86}

The rectification clause is always in the Inferential (§21.5.2), not only in narration as in (120), but also when reflecting the point of view of the speaker as in (121). It can be used with the mistaken expectation construction (§21.7.5.1).

- (121) *azo “nwu ɕu tu-ɲu kuw” nuw-suɔso-t-a ri, tx-mda*

‘I was wondering who you were, but it turns out that you are my nephew!’ (150907 yingning-zh) {0006264#S68}

The adverb *təmdánə* ‘actually’ in Tshobdun (Sun & Blogros 2019: 44;802) is probably grammaticalized from a cognate construction.

25.6.2 Addition

25.6.2.1 Neutral addition

Neutral additive constructions describe events that are related but for which neither a temporal sequence, a causal nor a hierarchical relationship can be assumed. This type of meaning can be expressed by coordinated clauses (§25.1.6) with the linkers *tce* or *q^{he}* as in (122) or parataxis (123).

¹⁴For instance, the original of (121) is 原来是我的外甥来了 <yuánlái shì wǒ de wàishēng lái> ‘it turns out that (the one who came, you) is my nephew’.

- (122) *zara χsum ma pjɣ-me-nu tce tɛendɣre nu-nuŋa*

ci pjɣ-tu.
 INDEF IFR.IPFV-exist
 ‘There were only the three of them, and they had a cow.’ (07-deluge)
 {0003426#S3}
- (123) *u-p^hoŋbu ra juu-wxti, juu-ts^hu zo.*
 3SG.POSS-body PL SENS-big SENS-fat EMPH
 ‘Its body is big and fat.’ (26-GZo) {0003668#S12}

A more specific way to indicate neutral addition is the comitative *c^ho* ‘and, with’ and its variants *c^hondɣre* and *c^honɣ* (§8.2.5), which are used as a clause linkers in addition to its function as noun phrase coordinator.

- (124) *mbro sɣznɣ juu-wxti. juu-mbro c^ho juu-wxti.*
 horse comp SENS-be.big SENS-be.high COMIT SENS-be.big
 ‘It is larger than a horse. Higher and larger.’ (19-rNameN) {0003552#S12}

The comitative *c^ho* can follow the linkers *q^he* and *tce* when used to link clauses as in (125), but notice that the emphatic marker (§26.1.1.5) and the linker *zo q^he* are repeated in both the clause preceding *c^ho* and the one following it.

- (125) *tce nu u-ryi a-mɣ-pu-ɕe ra ma*
 LNK DEM 3SG.POSS-grain IRR-NEG-PFV:DOWN-go be.needed:FACT LNK
pju-tsyi mɣ-c^ha tce tɛendɣre a-nu-ɣci zo q^he

 be.AFF:FACT
 ‘One should not let its grains go into [the ground], because they cannot rot, and when they get wet and the spring comes, they grow again.’
 (08-qaJAGi) {0003458#S46}

The coordinated clauses do not need to have a completely parallel syntactic structure: in (126), the clause preceding *c^ho* has an adjectival stative predicate, while the second one contains an existential verb with the nominal *k^hatob* ‘variegated’ (§5.2.2).

25 Other types of multiclausal constructions

- (126) *u-ku nuura rcanu, wuma zo ju-mpeɣr c^ho*
 3SG.POSS-head DEM:PL UNEXP:DEG really EMPH SENS-be.beautiful COMIT
k^hatoɓ zo yɣzu
 variegated EMPH exist:SENS
 ‘Its head, it is very beautiful, and variegated.’ (24-qro) {0003626#S76}

25.6.2.2 Correlative addition

The correlative (§25.1.2) additive focus markers *tci* and *ri* (§9.1.6.2) follow noun phrases in a series of two or more clauses in parataxis. The main verbs of these clauses are often identical and redundant, but are not always necessarily so, as in (127), where a clause with *ts^hi* ‘drink’ is conjoined with clauses with *ndza* ‘eat’ as main verb.

- (127) [*ca*] *tci ju-ndze, [exci] tci ju-ts^hi, [tɣ-lu*

 INDEF.POSS-butter also SENS-eat[III]
 ‘[Pigs] eat meat, slurp meat stew, and also eat butter and have milk.’
 (05-paR) {0003400#S29}

These markers can also have scope over verbs, in the existential construction as in (128) or with a modal auxiliary verb as main predicate as (129). The meaning of this construction is ‘both *X* and *Y*’ when used with positive copulas or modal verbs, and ‘neither *X* nor *Y*’ with negative ones.

- (128) *kuroz ku-mum ri maɲe, kuroz*

 ‘She became unable to speak and to sing.’ (150819 haidenver-zh)
 {0006314#S285}

25.6.2.3 Incremental addition

Four constructions meaning ‘not only ... but also ...’ (called in Chinese 递进复句 <di jìn fù jù> ‘incremental complex clause’) are found in Japhug.

First, the locutions *bo alala ri* or *bo alala ma*, comprising the adversative topic marker *bo* (§9.1.5.3) and the adversative *ri* (§25.6.1.1), can express incremental addition as in (130).

- (130) *uwo* [*pjɣ-mpɕɣr*] *bo* *alala* *ri*, *ryɣo* *ri*
 3SG IPFV.IFR-be.beautiful ADVERS not.only LNK song also

 ‘Not only was he good-looking, he was also very talented at singing and dancing.’ (160702 luocha-zh) {0006135#S4}

Second, the relator noun *u-tɣju* ‘addition’,¹⁵ from which the denominal verb *ɣɣju* ‘add’ was originally derived, has the grammaticalized meaning ‘in addition to X’, ‘not only X, but also Y’ when used as clausal linker as in (131).

- (131) [*cɯ-mɣɣm*] *u-tɣju* *tce* *ɲu-sɣoŋzoŋ*

 FILLER DEM 3SG.POSS-wife PL IFR-search
 ‘The king (...) treated him well as a guest, and in addition found a wife for him.’ (140511 xinbada-zh) {0003961#S34}

¹⁵This form originates from an alienabilized abstract noun in *tr-* (§16.4.2).

25 Other types of multiclausal constructions

Third, the locution *mɿra ma*, which is possibly grammaticalized form the negative form of the modal verb *ra* ‘be needed’, ‘be necessary’ (§24.5.3.1) with the adversative linker *ma* (§25.6.1.1), also has the same meaning as the constructions described above.

- (133) *tutsye u-ku-βzu nu ku paχci mu-ɣ-ɓbi mɿra ma*
commerce 3SG.POSS-make DEM ERG apple NEG-IFR-give not.only LNK
nu svznɿ to-ɳymqe tce jo-swɿx-ce.

DEM COMP IFR-scold LNK IFR-CAUS-go

‘The merchant not only did not give him an apple, but scolded him and sent him away.’ (150904 zhongli-zh) {0006348#S16}

Fourth, the form *mɿkujɿɿ ku*, from the negative participle or infinitive of either the modal auxiliary *ɿɿ* ‘be allowed’ (§24.5.3.1) or the phasal verb *ɿɿ* ‘finish’ (§24.5.6.2), also means ‘not only X, but’ as in (134).

- (134) *tx-mt^hum nura tu-ndze mɿkujɿɿ ku, u-di*
INDEF.POSS-meat DEM:PL IPFV-eat[III] not.only ERG 3SG.POSS-smell
ɣu-cu-mɿɿm

SENS-CAUS-smell

‘Not only does [the mouse] eat meat, it also stinks it up.’ (27-spjaNkW) {0003704#S187}

When the first clause is in negative form as in (133), the meaning of incremental additive construction is similar to the adversative additive construction with *mɿɿɿɿɿ* ‘instead’ ‘not only $\neg X$, but on the contrary Y ’ (§25.6.1.2). The locution *nu svz(mɿ)* ‘rather than that, instead’ can be added in the second clause.

These first three additive markers also found on noun phrases, instead of subordinate clauses (§9.1.6.3).

25.6.3 Exceptive

25.6.3.1 *laβma* ‘apart from the fact that’

The postposition *laβma* ‘apart from the fact that’, which derives from the exceptive postposition *ma* ‘apart from’ (§8.2.8), cannot take a noun phrase, and requires a finite clause instead, as in (135)

- (135) *tce* [*u-rq^hu* *nɯ* *ɣurni*] *laβma* *u-ŋɣu* *nɯ*
 LNK 3SG.POSS-skin DEM be.red:FACT apart.from 3SG.POSS-inside DEM

 everything else).’ (19-GzW) {0003536#S11}

25.6.3.2 *tɕ^himaβnɣ* ‘at least’

The linker *tɕ^himaβnɣ* or *tɕ^himaβ*, optionally combined with *tsaβ* ‘just, only’, occurs
 in imperative or hortative sentences with the meaning ‘at least’. As illustrated
 by (137) (where *tsaβ* occurs in one version of the story, and does not occur in
 the other) and (138), *tɕ^himaβnɣ* is placed at the beginning of the clause, while *tsaβ*
 either follows the verb or a constituent overt which it has scope.

- (137) *wortɕ^hi* *wojɣr zo* *tɕ^himaβnɣ a-ɣi* *ra nɯ-p^he*

 at.least PST.IPFV-2-be.strong just IPFV-say-1SG LNK
 ‘I [should] at least say ‘thank you.’ (2014-kWLAG)

25 Other types of multiclausal constructions

The linker *tɕ^{hi}imabɲɣ* is built from the interrogative pronoun *tɕ^{hi}* ‘what’ (§6.5.1), the negative copula *maɣ* ‘not be’ (§13.1.2) and the postposition *ɲɣ* (§8.2.6). The original meaning of this locution was probably ‘whatever it is not’, with the free-choice indefinite function of *tɕ^{hi}* (§6.6.6).

25.6.4 Disjunction

Exclusive disjunction is expressed by the linker *numabɲɣ*, either between the two alternative clauses as in (139) or in a correlative construction (§25.1.2), repeated before each clause (140).

- (139) *tɕe c^hu-βde-nu numabɲɣ fsapav ɲu-mbi-nu*
 LNK IPFV-throw-PL otherwise animal IPFV-give-PL
ɲgrɣl ma
 be.usually.the.case:FACT LNK

- (140) *numabɲɣ tú-wɣ-nu-xsur, numabɲɣ <ban> tú-wɣ-βzu tɕe.*
 otherwise IPFV-INV-AUTO-fry otherwise mix IPFV-INV-make LNK
 ‘People either fry it, or mix it in salad.’ (conversation 14-05-10)

The linker *numabɲɣ* ‘otherwise’ has stress on the second syllable (*numáɲɣ*), and transparently comes from the demonstrative *nu* (§6.9.1), the copula *maɣ* ‘not be’ (§13.1.2) and the adposition *ɲɣ*, probably from what originally was the protasis of a conditional construction ‘if it is not’, with initial reduplication †*nu nu~maɣ ɲɣ* or Interrogative †*nu ú-maɣ ɲɣ* (§25.2.1, §12.4.1.2).

In questions, disjunction between several clauses can be express by adding the interrogative particle *ɕi* after each clause except the last, as in (141).

- (141) *χsvr rɣskɣt u-tav tu-nu-ɕe ɕi, ɲuul rɣskɣt u-tav*
 gold stairs 3SG.POSS-on 2-AUTO-go:FACT SFP silver stairs 3SG.POSS-on

 stairs 3SG.POSS-on 2-AUTO-go:FACT

‘Will you go on the golden stairs, the silver stairs, the iron stairs, or the wooden stairs?’ (2005 Kunbzang)

Both *numabɲɣ* ‘otherwise’ and *ɕi* are only very rarely used with noun phrases instead of clauses (§9.2.3).

26 Degree and comparison

26.1 Absolute degree and intensifiers

This section describes the constructions available to express the absolute degree of a property of a referent, without standard of comparison.

All degree constructions can be used with the emphatic marker *zo*, either following a degree adverb, or in sentence-final position (§22.2.7).

26.1.1 Degree adverbs

Degree adverbs in Japhug are intensifiers meaning ‘really, much, very, a lot’. There is also a comparative degree adverb *myzu* ‘even more’ (treated in §26.2.3 below) and a superlative adverb *stu* ‘most’ (§26.4.1). There are no adverbs indicating a degree above or under a limit such as ‘too much’ or ‘not enough’; the degree nominal construction must be used instead to express this meaning (§26.1.2.1).

26.1.1.1 *wuma* ‘real, really’

The most common intensifier in Japhug is *wuma* ‘really’, from Tibetan རྩོམ་ *ŋo.ma* ‘real, true’. While marginally attested as a postnominal attribute meaning ‘real’ (§9.1.8.1), its most widespread function is to serve as clausal intensifier, with (1a) or without (1b) the emphatic marker *zo*.

- (1) a. *nura ɲu-fse tce wuma zo ɲu-ŋgu-tci*
DEM:PL SENS-be.like LNK really EMPH SENS-be.poor-1DU
‘We are very poor like that.’ (divination)
- b. *a-mu c^{ho} wuma ɲu-ŋgu-tci*
1SG.POSS-mother COMIT REALLY SENS-be.poor-1DU
‘My mother and I are very poor.’ (divination)

The intensifier is not necessarily adjacent to the verb, and some constituents can be inserted, for instance absolutive nouns in essive function (§8.1.7) such as *turme* ‘as a person’ in (2).

26 Degree and comparison

- (2) *u-χti nuu wuma zo turme pe ma*
 3SG.POSS-companion DEM really EMPH person be.good:FACT LNK
 ‘Her husband is a very nice person.’ (‘he is very nice as a person.’)
 (14-siblings) {0003508#S315}

The flexibility in the position of *wuma* can be useful to distinguish head-internal relatives from postnominal ones (§9.1.8.3, §23.4.3, §23.5.1.1).

The intensifier *wuma* is not restricted to adjectival stative verbs. It can be used with tropative verbs (§17.5) as in (3), but also modal verbs such as *c^ha* ‘can’ (§24.5.3.2) and action verbs that do not have an intrinsic degree parameter such as *ndza* ‘eat’ (4).

- (3) *tce nuu tʻ-wy-tcɛt tce nuŋa nuu ku wuma juu-nɣ-mɣɣm*
 LNK DEM AOR-INV-take.out LNK COW DEM ERG really SENS-TROP-hurt

The intensifier *wuma* can be combined with *st^huci* ‘so much’ (§5.8.4).

- (7) *nu fsapav ra ku ndza-nu ri, wuma st^huci mɣ-rga-nu.*
 DEM animal PL ERG eat:FACT-PL LNK really so.much NEG-like:FACT-PL
 ‘The animals eat it, but don’t like it so much.’ (12-Zmbroko) {0003490#S97}

26.1.1.2 *k^hro* ‘much’

The adverbs *k^hro* ‘much’ and *zimk^hɣm* ‘much’ can serve as intensifiers of noun phrases (§9.1.3.4) but can also have scope over the whole clause, in pre-verbal position. Unlike *wuma* and *must^huci/kuust^huci* (§26.1.1.3), they are more often used with action verbs, and can both refer to the quantity and intensity of actions (‘much’, ‘a lot’) or to the time taken by the action (‘for a long time’), as in (8) and (9), respectively.

- (8) *k^hro zo pɣ-ŋke pɣ-ra tcendɣre, pɣ-nuɣuɣ.*
 much EMPH IFR.IPFV-walk IFR.IPFV-be.needed LNK IFR-sleep
 ‘He had had to walk a lot (on that day, was very tired), and fell asleep.’

- (9) *k^hro zo pɣ-ɕar ri mu-pɣ-mto*
 much EMPH IFR-search LNK NEG-IFR-see
 ‘[The prince] looked for her for a long time, but could not find her.’
 (140504 huiguniang-zh) {0003909#S181}

Both intensifiers can be reduplicated as *k^hu~k^hro* and *zuu~zimk^hɣm* as in (10).

- (10) *zuu~zimk^hɣm zo aɣɣnduɣɣt zo pɣ-nɣt^hut^hu*
 EMPH~much EMPH everywhere EMPH IFR-DISTR:ask
 ‘[The bear] asked around [about the rabbit] everywhere for a long time.’
 (2011-13-qala)

The adverb *zimk^hɣm* comes from *zɪŋ.k^hams* ‘country, universe’ (also borrowed as the noun *zɪŋk^hɣm* ‘country, realm’, sometimes also pronounced *zimk^hɣm*), and its grammaticalization as an intensifier perhaps went through a semantic change ‘universe’ ⇒ ‘in the whole universe, universally’ ⇒ ‘everywhere’ ⇒ ‘for a long time; much’.

26.1.1.3 Demonstrative+*st^huci* ‘so much’

The combination of anaphoric demonstratives (§6.9) with the adverbs *st^huci* ‘so much’ and *st^hamtɕɣt* ‘so much’ (§5.8.4) expresses the meaning ‘so (much)’.

The demonstratives can be in free form, but can also merge with *st^huci* and *st^hamtɕɤt* into the degree adverbs *kuust^huci* ‘this much’ (11), *nust^huci* ‘that much’, *kuust^hamtɕɤt* ‘this much’ and *nust^hamtɕɤt* ‘that much’ (12).

- (11) *a-rzaβ ri kuust^huci ɲu-mɕɤɣ,* *a-mbro ri*
 1SG.POSS-wife also so.much SENS-be.beautiful 1SG.POSS-horse also

 that.much EMPH the.mentioned 3SG.POSS-flute DEM
ɲjɣ-mɕɤɣ.
 IFR.IPFV-be.beautiful
 ‘(The rich man_i started dancing under the influence of the music and fell
 down). The one_i who had fallen down stood up and danced again. This
 was the extent to which [the shepherd boy’s] flute [music] was beautiful.’
 (‘his flute music was *that* beautiful’) (140513 mutong de disheng-zh)
 {0003977#S149}

The demonstrative can anaphorically refer to a previous entity or a previous clause, as in (12), where it is focalized.¹

26.1.1.4 Unexpected degree

The unexpected/high degree marker *rcanu* or *rca* indicates that the situation or action described by the predicate that follows is unexpected (13), intensifies to a noticeable (and not foreseeable) extent (14) or occurs with a remarkably high degree or intensity, with (15) or without (16) surprise.

¹Although from a text translated from Chinese, this sentence was added by Tshendzin and is not in the original.

- (13) *wo nyzo rcanuu tɕ^{hi} ɲu-tu-nɣme ɲu ma, azo*

ɲu-nu,
 SENS-be
 ‘The horse neighed with all his strength.’ (2003 qachGa) {0003372#S57}

The adverb *rcanuu* is particularly common in the degree construction with a *tu-* degree nominal (§16.3), as in (16). In this particular construction, *rcanuu* does not necessarily express unexpectedness.

- (16) *tce numu lulu a-pu-me rcanuu, βzu*
 LNK DEM cat IRR-IPFV-not.exist UNEXP:DEG mouse
u-tu-ɲn saχaβ.
 3SG.POSS-NMLZ:DEG-be.evil be.extremely:FACT
 ‘If there are no cats, the mice are extremely fierce (cause a lot of damages).’ (21-IWlu) {0003576#S32}

In addition to its function as a degree adverb, *rcanuu* also contributes to information structure: it marks the constituent preceding it as a topic, and the part of the sentence following it as a focus.

26.1.1.5 Emphatic

The emphatic marker *zo* is one of the most common words in Japhug. It is never obligatory, but frequently occurs after all the intensifiers described above.

It is one of the few adverbs that can follow the main verb (§22.2.7, §23.3.6), in particular with the stative verb *saχaβ* ‘be extremely’ as in (§17).

26 Degree and comparison

- (17) *tx̣ne u-rkuw tx̣-armbat q^he u-tu-ṣ-cke*
sun 3SG.POSS-side AOR:UP-be.near LNK 3SG.POSS-NMLZ:DEG-PROP-burn
pj̣s-sax̣ab zo ri
IFR.IPFV-be.extremely EMPH LNK
'When he approached the sun, it was extremely hot.' (31-deluge)
{0004077#S110}

It also occurs after ideophones (§10.1.7) and deideophonic verbs (§20.9).

With personal pronouns, the emphatic *zo* can mean 'by oneself', as in (18) (§6.4).

- (18) *azo zo numu c-pjuw-sat-a ra*
1SG EMPH DEM TRAL-IPFV-kill-1SG be.needed:FACT
'I have to kill her myself.' (140504 baixuegongzhu) {0003907#S113}

It also appears on various types of subordinate clauses, in particular manner (including serial verb constructions §25.4.1.4 and converbial clauses §25.4.2, §16.6.1.3), temporal (§16.6.3, §25.3.1), conditional (§25.2.3.3) and neutral addition clauses (§25.6.2.1).

The emphatic marker may be historically related to the *-zo* stem of personal pronouns (§6.1) or, alternatively, be a cognate to the Tibetan particle ལཱ་ *jaŋ* 'also, even'.

26.1.2 Degree nominals

26.1.2.1 Monoclausal degree nominal construction

An alternative way to indicate the degree of a stative predicate is to use degree nominals (§16.3, §16.3.4) as intransitive subjects of degree verbs like *sax̣ab* 'be extremely', *ṣyre* 'be ridiculous', 'be extremely' (19), *te^hom* 'be too much' (21) or *rtab* 'be enough' (20). The TAME is expressed on the degree verb, which is always in 3SG (§14.2.7). Degree nominals can also serve as possessors of the subject *u-gṛyl* 'order, rule' in the collocation *u-gṛyl + me* 'be extremely' (example 112 in §22.4.1.3).

- (19) *azo ḳuṇs a-xtu u-tu-ṃj̣sm juw-ṣyre*
1SG also 1SG.POSS-belly 3SG.POSS-NMLZ:DEG-hurt SENS-be.extremely
zo
EMPH
'Me too, my belly hurts a lot.' (literally: 'the degree of my hurting is
ridiculously high') (qala 2002)

- (20) *kuuki tu-ci ki u-tu-rnaʂ*
 DEM.PROX INDEF.POSS-water DEM.PROX 3SG.POSS-NMLZ:DEG-be.deep
múj-rtaʂ
 NEG:SENS-be.enough
 ‘This water is not deep enough.’ (2010-03-zh)

The use of *sɤre* as degree verbs illustrates a semantic change from ‘funny, ridiculous’ to intensifier, similar to that of French *drôlement* (*drôlement difficile*) or of English *ridiculously* (*ridiculously difficult*).

The possessive prefix is coreferent with the entity whose property is referred to by the nominalized verb, for instance 2SG in (21).

- (21) *nyzo ny-tu-xtci t^hom-o*
 2SG 2SG.POSS-NMLZ:DEG-be.small be.too.much:FACT-SFP
 ‘You are too young.’ (150828 huamulan-zh) {0006396#S28}

Causative forms of degree verbs (§17.2.6), for instance *ɣɤt^hom* ‘cause to be too much’, can also be occur with degree nominals, as in (22).

- (22) *kuuki maka u-tu-cqraʂ*
 DEM.PROX at.all 3SG.POSS-NMLZ:DEG-be.intelligent
tɤ-ɣɤ-t^hom-a uβɤɤ-ŋu ye?

 ‘I hope that I did not cause her to become too intelligent.’ (hist160709 riquet6-v2) {0006159#S11}

With *naɣtɤuɤ* ‘be the same’ as degree verb, the degree construction becomes an equative construction (§26.3.1), with the comitative postposition *c^ho* ‘and, with’ (§8.2.5).

- (23) *zmbri c^ho u-tu-wxti naɣtɤuɤ*
 willow COMIT 3SG.POSS-NMLZ:DEG-be.big be.the.same:FACT
 ‘It is as big as a willow (its degree of “bigness” is the same as that of a willow).’ (08-qaCti) {0003456#S7}

The lexicalized infinitive form *ky-ti* of the verb *ti* ‘say’ and the ergative can optionally follow the degree nominal (24).

- (24) *kytsa ni ndzi-tu-ηgw ky-ti ku*
 parent.and.child DU 3DU.POSS-NMLZ:DEG-be.poor INF-say ERG
pu-saxab zo
 PST.IPFV-be.extremely EMPH
 ‘The mother and her child were extremely poor.’ (2005 Norbzang)

Degree nouns are not the only type of nouns that can occur in this construction. Abstract nouns in *ty-* (§16.4.2) such as *tycpab* ‘thirst’ (25) or underived abstract nouns such as *ryom* ‘outrage’ can also be used, though much less commonly. This construction however differs from the previous one in that the degree verb *saxab* indexes the experiencer as intransitive subject (3PL in 25).

- (25) *ty-cpab ky-ti ku pu-saxab-nu zo*
 NMLZ:ABSTRACT-thirst INF-say ERG PST.IPFV-be.extremely-PL EMPH
pu-ryzi-nu nu-ηu
 PST.IPFV-stay-PL SENS-be
 ‘[The people there] live in extreme thirst.’ (divination 2005)

Example (25) is in addition a hybrid construction combining the abstract nominal and the degree verb with a serial verb construction of degree (§26.1.3).

Without a degree verb, degree nominals and other abstract nouns can be used as predicates to express high degree in exclamation (§16.3.3), often with the sentence final particle *nu*, as in (26).

- (26) *ny-tu-syndyt nu!*
 2SG.POSS-NMLZ:DEG-be.cute SFP
 ‘You are so cute!’ (heard in context)

26.1.2.2 Consequence degree construction

Degree nominals and abstract nouns can also occur with the ergative marker *ku* followed by a finite clause describing a consequence or a particular aspect of the high degree reached (‘so *X* that *Y*’; in the following, the clause *X* is referred to as ‘degree clause’, and *Y* as ‘consequence clause’), as in (27). This type of construction is a subtype of causality clause linking (§25.5).

- (27) *w-tu-nymbju* *ku* [*rʃylpu k^hɣxtɣndo* *ku-nuɟaŋsa*
 3SG.POSS-NMLZ:DEG-be.shiny ERG king side.of.the.roof SBJ:PCP-be.idle

 ‘It was so shiny that it dazzled the eyes of the king, who was staying idle
 on the side of the roof (of the palace).’ (2005 Norbzang)

It is possible for several degree nominals to share a consequence clause. For instance, in (28), the degree nouns *nu-tu-ɣyuzruy* and *a-tu-ɣyuzruy* are followed by only one marker *ku* and have a common consequence clause *múj-cha-a*. Here, the additional clause *ci tu-pe tce* ‘putting together’ specifies that it is the conjoined quantity (of lice) referred by the two degree nominals that is the cause of the consequence clause, and therefore implies that the absence of a consequence clause just after the first degree noun *nu-tu-ɣyuzruy* is not due to ellipsis.

- (28) *paβ ra ci nu-tu-ɣyuzruy,* *azo ci*

26.2 Comparative

Adjectival stative verbs in Japhug do not have specific comparative or superlative forms,³ and comparison is expressed by means of postpositions, adverbs or verbs marking relative degree.

26.2.1 The postpositions *svz* and *ku*

As illustrated in (34), it is possible in Japhug to mark both the standard of comparison (by the postposition *svz* ‘than’, §8.2.7), and the comparee (by the ergative *ku* (§8.2.2.7)).⁴

- (34) *w-bi svz w-pi nw ku*
 3SG.POSS-younger.sibling COMP 3SG.POSS-elder.sibling DEM ERG
 STANDARD STD.MRK COMPAREE CMP.MRK
mpeɣr
 be.beautiful:FACT
 PARAMETER
 ‘The elder sibling is more beautiful than the younger sibling.’ (elicited)

The comparee marker is optional when the standard phrase is overt, as shown by (35), where the comparee *w-rzaβ* ‘his wife’ is in absolutive form.

- (35) *w-rzaβ azo svz wxti*
 3SG.POSS-wife 1SG COMP be.big:FACT
 ‘His wife is older than me.’ (14-siblings) {0003508#S179}

This construction is exclusively used for comparisons of superiority. To express comparison of inferiority, one either has to select the antonym of the parameter, or to reformulate with another construction such as that with egressive postpositions (§26.2.4).

³There is one potential example of a comparative derivation in Japhug between *sna* ‘be good, be worthy’ and *mna* ‘be better’ (§19.7.10), but in the additional examples, this remains speculative.

⁴In this section, the term “standard marker” (STD.MRK) corresponds to Dixon’s (2008) MARK. The “comparee marker” (CMP.MRK) could be equated with Dixon’s INDEX.

26 Degree and comparison

The standard marker can follow a genitive postpositional phrase, when the entities being compared are possessors, and the second one is elided, as in (36). The genitive is however optional in this context, as shown by (37), when we find *mbro syz* instead of expected *mbro yu syz*.

- (36) *u-rna nu [mbro yu] syz juu-wxti.*

 ‘It is better that he dies.’ (150909 xiaocui-zh) {0006386#S108}

26.2.2 Intensifier *tsa* ‘a little’

The degree adverb *tsa* ‘a little’, one of the very rare adverbs to occur postverbally (§22.2.7), can by itself express comparison of superiority as in (44).

- (44) *ku-myku c^hu-ku-tut nu ju-tɕur tsa*
 SBJ:PCP-be.first IPFV-SBJ:PCP-ripen DEM SENS-be.sour a.little
 ‘The [variety of apple] that ripens earlier is a bit sourer.’ (07-paXCi)
 {0003430#S42}

It can be combined with an overt standard marked by either *sɣz* ‘than’ (45) or *st^huci* ‘so much’ (example 91, §22.2.7).

- (45) *ʋtuɾɕu sɣz ju-wxti tsa*
 Garrulax COMP SENS-be.big a.little
 ‘It is a bit bigger than the Garrulax sp.’ (23-qapGAmtWmtW)
 {0003608#S12}

⁵The original Chinese is 还不如死了算了 <háibùrú sǐ le suànle> ‘It is better if he dies’. The use of the ergative in rectification subordinate clauses (§25.6.1.2) is historically related to this construction (Jacques 2016b).

26.2.3 The negative verb **NEG+*zui*** ‘(not) just be’

The verb *NEG + zui* ‘not just be’, which requires a negative prefix (§13.1.3) serves to build another comparative construction. It takes as semi-object the standard, and can be followed by the adverb *jamar* ‘about’ and a verb in parataxis specifying the parameter of comparison as in (46).

- (46) *tʃei u-rdoʃ múj-zui jamar ɲu-wxti*
 barley 3SG.POSS-grain NEG:SENS-just.be about SENS-be.big
 ‘It is a little bigger than a grain of barley.’ (28-kWpAz,104) {0003714#S97}

The infinitive form *mɣ-kui-zui* of *NEG + zui* ‘not just be’ is attested in manner converb function (§16.2.1.7, §25.4.2) as in (47).

- (47) *u-ru nuwa tuu-jaɛndzu mɣ-kui-zui zo*
 3SG.POSS-stalk DEM:PL INDEF.POSS-finger NEG-INF:STAT-just.be EMPH
ɲu-jpum c^ha
 IPFV-be.thick can:FACT
 ‘Its stalk can grow thicker than a finger.’ (12-ndZiNgri) {0003488#S5}

The stative verb expressing the parameter can be combined with modal verbs as in (47). Without an overt parameter, the default interpretation of the verb *mɣ-zui* means ‘not just like that’ or ‘bigger than’. In (48) for instance, *mɣ-zui* is redundantly followed by a comparative construction in *sɣz* (§26.2.1), and the two clauses *βzui ndɣre mɣ-zui* and *βzui sɣz ndɣre wxti ɲu* have the same meaning.

- (48) *nuɲu kui-xtɕu~xtɕi ci tɕe, βzui ndɣre*

mɣ-zui. βzui sɣz ndɣre wxti ɲu
 NEG-just.be:FACT mouse COMP ADVERS be.big:FACT be:FACT
 ‘[The weasel] is a small [animal], but bigger than a mouse. It is bigger than a mouse.’ (27-spjaNkW) {0003704#S32}

In this construction, *mɣ-zui* indexes as subject the comparee, as in (49).

- (49) *ki kum ki mɣ-zui-a*
 DEM.PROX door DEM.PROX NEG-just.be:FACT-1SG
 ‘I am bigger than this door.’ (elicited)

Alternatively, *mɣ-zui* can be combined with a degree nominal (§26.1.2.1) as in (50), in which case it only occurs in the 3sg.

- (50) *a-tu-mbro* *ki* *kum ki* *mɣ-zu*.
 1SG.POSS-NMLZ:DEG-be.high DEM.PROX door DEM.PROX NEG-just.be:FACT
 ‘I am bigger than this door.’ (elicited)

The non-past form *mɣ-zu* has been further grammaticalized as a degree adverb *mɣzu* ‘even more’, which can be combined with the standard marker *sɣz*, as in (51). This construction indicates that the standard already has a very high degree relative to the parameter, and that the comparee’s degree is even higher.

- (51) *qamtɕur nu* *u-mtɕʰi* *nu nu* *βzu* *sɣzɣ mɣzu* *zo*

amtɕov
 be.pointy:FACT
 ‘The shrew’s mouth is even sharper than that of the mouse.’
 (27-spjaNkW) {0003704#S192}

26.2.4 The egressive postposition *ɕaŋtaɕ* ‘up from’

The egressive postpositions (§8.2.10), in particular *ɕaŋtaɕ* ‘up from’, can be combined with a verb (or a complex predicate) in negative form, meaning ‘no more than X’, where the standard X is the noun phrase preceding *ɕaŋtaɕ* as in (52) and (53).

- (52) [*tu-tya ɕaŋtaɕ*] *mɣ-zri*.
 one-span up.from NEG-be.long:FACT
 ‘It is not longer than one handspan.’ (28-tshAwAre) {0003722#S49}

 3SG.POSS-stalk PL GENR.POSS-finger up.from IPFV-be.thick
mɣ-ɕʰa *ma*
 NEG-can:FACT LNK
 ‘Its stalk cannot grow/become thicker than a finger.’ (15-babW)
 {0003512#S20}

The egressive *ɕaŋtaɕ* ‘up from’ also occurs in one of the superlative constructions (§26.4.3).

26.2.5 Negative existential verbs

The negative existential verb *me* (§22.5.1.2), combined with the scalar focus marker *kunɣ* ‘also, even’ (§9.1.6.1), can have the meaning ‘not even as big as X’, as in (54), where the noun *zruy* ‘louse’ is the standard of comparison.

- (54) *qajuβlama ky-ti ci tu tce, nuu rca*
 bug OBJ:PCP-say INDEF exist:FACT LNK DEM UNEXP:DEG
kuu-xtəu~xtei ci zo cti. zruy kuuɣ
 SBJ:PCP-EMPH~be.small INDEF EMPH be.AFF:FACT louse also
me.
 not.exist:FACT
 ‘There is an [insect] called *qajuβlama*, it is very small. It is not even as big as a louse.’ (28-kWpAz) {0003714#S136}

Another example of this construction is found in (71) in (§8.2.3.1).

26.3 Equative and similitive

26.3.1 Entity equative

This section discusses entity equative constructions, which express that two entities have a property in equal degree (‘X is as Y as Z’; Haspelmath & Buchholz 1998). No less that five constructions are available to express this meaning.

26.3.1.1 Nominalized equative construction

The nominalized entity equative construction is a particular case of the degree nominal construction (§26.1.2.1), with *naχtəuy* ‘be the same’ as degree predicate. It has three subvariants.

In the first variant (corresponding to Haspelmath’s (2017) type 5 – Primary reach equative unified), the comparee and the standard are included in a noun phrase, with the comitative marker *c^ho* (and its longer variant *c^hondɔre*, §8.2.5) serving as the standard marker, as in (55).

- (55) *qalekuts^hi nuuu c^hondɔre βzar ni ndzi-tu-wxti*
 bird.sp DEM COMIT buzzard DU 3DU.POSS-NMLZ:DEG-be.big
 COMPAREE STD.MRK STANDARD PARAMETER
naχtəuy.
 be.identical:FACT
 PARAM.MRK
 ‘The *qalekuts^hi* bird is as big as the buzzard.’ (literally: ‘The *qalekuts^hi* bird and the buzzard are identical in their degree of bigness.’) (23-RmWrcWftsa) {0003610#S42}

The degree noun can be in dual/plural as in (55) and (57), corresponding to the sum of the numbers of the comparee and the standard, or in the singular as in (56): even though two referents are present here, the 3SG possessive *u-* is used, coreferent with the comparee.

- (56) *gro nunuu dudut c^ho u-tu-wxti naχtcuɣ.*
 pigeon DEM dove COMIT 3SG.POSS-NMLZ:DEG-be.big be.the.same:FACT
 ‘The pigeon is as big as a dove.’ (24-qro) {0003626#S2}

These two possibilities are in free variation: example (57), from the same text as (56) and referring to the same situation, has dual marking.

- (57) *tce dudut c^ho ndzi-tu-wxti naχtcuɣ zo*
 LNK dove COMIT 3DU.POSS-NMLZ:DEG-be.big be.the.same:FACT EMPH
 ‘It is as big as a dove.’ (24-qro) {0003626#S17}

In the second variant, the nominalized parameter takes a possessive prefix only coreferent with the comparee, and the standard together with the comitative (the standard marker) *follows* the parameter, as in (58).

- (58) *qaliak nuu u-tu-wxti nuu qandzyi c^ho naχtcuɣ*
 eagle DEM 3SG.POSS-NMLZ:DEG-be.big DEM hawk COMIT
 COMPAREE PARAMETER STANDARD STD.MRK
tsa
 be.identical:FACT a.little
 PARAM.MRK PARAM.MRK
 ‘The eagle is about as big as the hawk.’ (19-qandZGi) {0003548#S36}

In the third variant, the parameter takes a third person singular possessive prefix, and the comparee and standard are marked by person indexation on the verb. In (59), the standard and the comparee are the speaker and the addressee; they are not expressed by overt pronouns, but are rather indexed on the verb by the 1DU suffix *-tci*.

- (59) *tce u-tu-muɣtaɣ nuu-naχtcuɣ-tci tce, q^he*
 LNK 3SG.POSS-NMLZ:DEG-be.cold SENS-be.identical-1DU LNK LNK

 2PL.POSS-snow SENS-be.few SFR

‘It is as cold here as it is in your place, you don’t have a lot of snow.’ (‘You and I are identical as to coldness’; conversation, 2014/11)

26.3.1.2 Serial verb constructions

Serial verb constructions with the simulative verb *fse* ‘be like’ (§25.4.1.2), or more rarely *naχtɕuɣ* ‘be the same’ and *afsuja* ‘be of the same size’ as first verb can also be used as an entity equative.⁶

The semi-transitive verb *fse* ‘be like’ (§14.2.3) takes the comparee as subject and the standard as semi-object. Since it is syntactically linked to the standard, it is analyzed here as the standard marker rather than as the parameter marker.

- (60) *nɯ* *li* *ɯ-wa* *fsufse* *zo* *pjɣ-fse*
 DEM again 3SG.POSS-father completely.like EMPH IFR.IPFV-be.like

 IFR.IPFV-be.ugly
 PARAMETER
 ‘[The frog son] was as ugly as his father.’ (150818 muzhi guniang-zh)
 {0006334#S98}

The reduplicated degree adverb *fsufse* ‘completely identical’ which derives from *fse* ‘be like’ optionally occurs in this construction as a parameter marker.

- (61) *ɯ-qa* *nura* *li* *kɯmaɓ tɣjɱɣ* *nura*
 3SG.POSS-root DEM:PL again other mushroom DEM:PL
fsufse *zo* *fse*.
 completely.identical EMPH be.like:FACT
 ‘Its root is completely identical to that of other mushrooms.’
 (23-mbrAZim) {0003604#S107}

Both *fse* ‘be like’ and the stative verb occurring with it in the serial construction (the parameter) are in participial form in (62), forming a relative clause with the comparee as the relativized element. The superlative construction studied in §26.4.3 is essentially a particular use of such relativized equative sentences.

- (62) *aɓo* *kɯ-fse* *kɯ-ɣc^hɯc^ha* *zo* *ɓzɯɯɯ* *yurza*

SENS-be.cold SENS-2-say
PARAMETER

‘You said that it was as cold in Paris as here by us.’ (conversation, 11-08-2016)

26.3.1.3 Possessed noun

The inalienably possessed noun *u-fsu* ‘of the same size’ (§5.1.1.5, §20.8.2) can be used as standard marker, as in (64) and (65). The possessive prefix is coreferent with the standard; when the standard is the generic noun *turme* ‘person’, the prefix can either be in 3SG as in (64), or with the generic possessor prefix (§6.2.2).

- (64) *tu-mbro tce, turme u-fsu jamar tu-βze*
IPFV-be.high LNK man 3SG.POSS-equal.in.size about IPFV-grow
c^ha.
can:FACT

‘When it grows, it can grow about the size of a person.’ (12-ndZiNgri)
{0003488#S4}

- (65) *u-tu-mbro nuu tu-mt^hɣy u-fsu*
3SG.POSS-NMLZ:DEG-be.high DEM GENR.POSS-waist 3SG.POSS-equal.in.size

about apart.from IPFV-be.high NEG-can:FACT

‘As for its size, it can grow only about as high as a person’s waist.’
(18-NGolo) {0003530#S169}

The parameter is optional in this construction. It can be expressed either as a coordinated clause as in (64), as a degree nominal or as the main predicate as in (65). Only *mbro* ‘be high’ and *wxti* ‘be big’ are compatible with *u-fsu*.

A similar construction is reported in Situ (Lin 1993: 377).

26.3.1.4 *st^huci* ‘so much’ and *jamar* ‘about’

The adverbs *st^huci* ‘so much’ (on its etymology, see §5.8.4) and *jamar* ‘about’ (from Tibetan ཡར་མར་ *jar.mar* ‘about’) are used as standard marker. The former one *st^huci* essentially occurs in a negative equative construction ‘not as *X* as *Y*’ (where *X* is the parameter and *Y* the standard) as in (66).

- (66) *kumcku u-jwab st^huci mɣ-rʃum*
 garlic 3SG.POSS-leaf so.much NEG-be.broad
 ‘[Its leaves] are not as broad as garlic leaves.’ (07-Cku) {0003424#S88}

The latter one *jamar* ‘about’ can be combined with either adjectival stative verbs such as *wxti* ‘be big’ (67), or with existential verbs (§22.5.1.2) as in (68).

- (67) *qajdo ɣnuɰz jamar wxti*

 (16-CWɿNgo) {0003518#S210}

26.3.2 Property equative

In property equative constructions (‘*X_i* is as *Y* as he/she/it_i is *Z*’), two parameters (comparee parameter *Y* and standard parameter *Z*), rather than two entities, are compared. No example of such constructions is found in the Japhug corpus. In Jacques (2018c), I used Perrault’s fairy tale *Riquet à la Houppe*, whose whole plot is based on property equative sentences, as a way to conduct elicitation on this topic.

Property equatives, e.g. ‘*X_i* is as stupid as s/he_i is beautiful’ (a sentence occurring several times in the story), can be expressed in Japhug in three different ways.

- (72) *nunu pri nuu ku, nʌki, turme juu-fse tce, nʌkinu icq^ha nu,*
 DEM bear DEM ERG FILLER man SENS-be.like LNK FILLER FILLER DEM
ty-ryku tci tu-ndze, ca tci tu-ndze, (...)
 INDEF.POSS-crops also IPFV-eat meat also IPFV-eat
juu-ŋgrɔl.
 SENS-be.usually.the.case
 ‘The bear, like a man, eats grains and meat.’ (21-pri) {0003580#S17}

Alternatively, the infinitive *ku-fse* of *fse* ‘be like’ as a manner converb (§16.2.1.7, §25.4.2) can convey similitive meaning, either with a noun phrase or an infinitive clause (73).

- (73) [*kɣ-ɣnuɣro*] *ku-fse tɔ-wy-ndza cti ma*
 INF-play INF:STAT-be.like IPFV-INV-eat be.AFF:FACT LNK
 ‘People eat it for fun (as if to play, not as part of a real meal).’ (08-rasti)
 {0003460#S53}

26.3.3.2 Similitive denominal stative verbs

The denominal prefix *aru-/ɣru-* derives stative verbs meaning ‘be X-like’ out of nouns (§20.2.2), as in (74), an example in degree nominal form (§16.3.3) spontaneously produced by Tshendzin as a side comment on a story that we were transcribing.

- (74) *u-tu-ɣru-sujno nu!*
 3SG.POSS-NMLZ:DEG-DENOM:SIMILATIVE-grass SFP
 ‘[The princess cuts their head as easily/casually] as if it were grass.’
 (heard in context)

The more elaborated sentence (75) was given as an explanation for (74).

- (75) *kɣ-p^hut u-tu-mbat ku*
 INF-cut 3SG.POSS-NMLZ:DEG-DENOM:SIMILATIVE-easy ERG
juu-ɣru-sujno zo
 SENS-be.like.grass EMPH
 ‘It is as easy to cut as if it were grass.’ (elicited)

In this construction, the standard is the verbalized noun, the comparee is the intransitive subject, and the denominal prefix *aru-/ɣru-* is the standard marker. The parameter can be optionally indicated as a degree nominal as in (75).

This unusual similitive construction is productive, since it can be applied to nouns from Tibetan or Chinese. It does not fit in any of Haspelmath’s (2017) six types of equative constructions, but bears some resemblance to the “similitive adjective” derivation in *-lágan* in Saami (Ylikovski 2017: 5.1).

26.4 Superlative

26.4.1 Degree adverb

The superlative adverb *stu* ‘most’ is generally located before the verb, and optionally takes the emphatic *zo*. It most commonly expresses absolute superlative as in (76).

- (76) *nyzo stu zo tuu-mk^hyz tce, tce nyzo c-tx-nyme*
 2SG most EMPH 2-be.expert:FACT LNK LNK 2SG TRAL-IMP-do[III]
 ‘You are the best, do it!’ (150822 laoye zuoshi zongshi duide-zh)
 {0006298#S37}

When the subject has a certain property in the highest degree only relative to a certain class (relative superlative), this class can be specified with the relator noun *u-ŋguuz* ‘inside, among’ (§8.3.4.5), as in (77).

- (77) *nu pyxtcu nu-ŋguuz stu xtei low.*
 DEM bird 3PL.POSS-among most be.small:FACT SFP
 ‘It is the smallest of all birds.’ (24-ZmbrWpGa) {0003628#S116}

Most examples of this construction appear with subject participle (§16.1.1) of adjectival stative verbs as in (78), and object participles (§16.1.2) with transitive experiencer verbs as in (79).

- (78) *kuucungu tce <aizheng> ky-ti pu-me tce,*

 ‘The place where it is most numerous is the grasslands.’ (19-qachGa
 mWntoR) {0003546#S23}

26.4.2 Possessed participle

Another possibility to express superlative meaning is with a stative verb in subject participial form with a third plural possessive marker (§16.1.1.1), as in (82), where the headless participial relative in square brackets, literally meaning ‘the beautiful one (among/of) all birds’ is to be understood as ‘the most beautiful of all birds.’

- (82) *tce [pya t^hamtcyt yw nu-ku-mpeyt] nu rmxβja*
 LNK bird all GEN 3PL.POSS-SBJ:PCP-be.beautiful DEM peacock
nu-ŋu.
 SENS-be
 ‘The peacock is the most beautiful of all birds.’ (24-ZmbrWpGa)
 {0003628#S79}

⁷The phrase *tx-rme ku-fse* ‘like hair’ is incomplete; the correct way to express the meaning ‘clothes made of animal hair’ is the head-internal relative clause *tx-rme ku tu-ŋga t^hu-ky-βzu* (see 40, §23.4.3).

This construction is only attested with *mpɕʎr* ‘be beautiful’ and *mma* ‘be better’.

26.4.3 Negative existential

Another way of expressing superlative meaning in Japhug is by means of a negative existential verb (§13.1.2, §22.5.4) combined with a participial relative of *fse* ‘be like’, as in (83). This construction is a particular use of the equative construction described in §26.3.1.2.

- (83) *ama, a-pi k^hu nuw tɕ^hindzɑ ku-tu-w-nɣp^huɣp^hyo tɕe*
 SURPRISE 1SG.POSS-elder.sibling tiger DEM why PRS-2-DISTR:flee LNK
[nɣzɔ ku-fse] ku-sɣy-mu me
 2SG SBJ:PCP-be.like SBJ:PCP-PROP-fear not.exist:FACT
 ‘Brother tiger, why are you running away like that, you are the most
 dreadful [animal].’ (literally: ‘There is no one dreadful like you.’) (2005
 khu)

This construction is potentially ambiguous: the clause *X ku-fse ku-sɣy-mu me* can be interpreted as meaning either ‘*X* is the most dreadful thing’ or ‘there is nothing dreadful that is like *X*’.

It is possible in some cases to use orientation preverbs to disambiguate between these two meanings. In example (84),⁸ the verbs *tso* ‘know, understand’ and *suuz* ‘know’ in the superlative construction take the *upwards* prefix *tu-* instead of the expected *eastwards* (*ku-tso-a* IPFV-understand-1SG) and *downwards* (*pju-suuz-a* IPFV-know-1SG) prefixes that they normally select.

- (84) *azo [nuw ku-fse] zɔ maka tu-tso-a*
 1SG DEM SBJ:PCP-be.like EMPH at.all IPFV:UP-understand-1SG
me, tu-suuz-a me
 not.exist:FACT IPFV:UP-know-1SG not.exist:FACT
 ‘This is what I know best.’ (literally: ‘There is nothing that I understand,
 that I know like that.’ 140519 yeying-zh) {0004040#S59}

With the *UPWARDS* prefix *tu-* as in (84), only the superlative interpretation is possible, while with the *DOWNWARDS* prefix *pju-* as in (85) the superlative interpretation is excluded, and only the negative existential one is found.

⁸Example (84) is translated from 夜莺, 我再熟悉不过了 <yèyīng, wǒ zài shúxī bùguòle> ‘The nightingale, I am quite familiar with it’, with the with the construction 再……不过 zài … bùguò involving a negated surpass comparative, and the negative existential verb here is possibly a case of calque. However, Chinese influence cannot be a factor in the use of orientation preverbs in (84) and (85).

- (85) *azo [nu ku-fse pju-suz-a] me*
 1SG DEM SBJ:PCP-be.like IPFV:DOWN-know-1SG not.exist:FACT
 ‘I know of no such thing.’ (elicited)

I interpret this difference as a matter of semantic scope. In (84), the clause *nu ku-fse* ‘like that’ is outside of the scope of the negation, and the negation applies to the minimal relative clauses *tu-tso-a* ‘(that) I understand’ (§23.5.4.1) and *tu-suz-a* ‘(that) I know’ (§23.5.3.1) exclusively.

With the DOWNWARDS prefix *pju-* on *suz* ‘know’ as in (85), the scope of the negation is different: it applies to the whole constituent indicated between square brackets (‘there is nothing like that that I know’).

This contrast cannot however be generalized to all verbs; more research is necessary to ascertain the extent and the functional explanation for this puzzling phenomenon.

Instead of *ku-fse*, egressive postpositions such as *caŋtaʁ* ‘up from’ (§8.2.10, §26.2.4) can also be used in a superlative construction as in (86).

- (86) *azo caŋtaʁ ku-c^ha ku-rkaŋ me*

27 Kinship

27.1 Introduction

Kinship terms (§5.1.2.4) in Japhug are all inalienably possessed nouns (§5.1.2), and are presented in this section in their indefinite possessor form (§5.1.3), which generally also serves as the citation form.

This section is not concerned with the morphosyntactic properties of these nouns (which is treated in §5.1.3), but rather with the semantic structure of the system.

The meanings of the terms are described using the abbreviations presented in Table 27.1, which, combined with each other (for instance MB and eZ represent ‘mother’s brother’ and ‘elder sister’, respectively), offer a concise way to represent the possible parameters relevant to the description of kinship terms (Kroeber 1909).

Table 27.1: Standard abbreviations used to describe kinship terms

F	Father	M	Mother		
B	Brother	Z	Sister		
S	Son	D	Daughter	Ch	Child
H	Husband	W	Wife		
♂	Male possessor	♀	Female possessor		
e/+	Elder	y/-	Younger		

The term “male/female possessor” corresponds to what Kroeber (1909: 78–79) calls ‘sex of the person through whom the relationship exists’ or ‘sex of the connecting relative’, encoded as inalienable possessor in Japhug. For instance, *tr-snom* ‘sister’ ([♂]Z) is only used with reference to the sister of a male (§27.2.2.1).

Kinship terms can be divided into self-reciprocal terms, in which both members of the relationship use the same term to refer to each other (from instance *tr-mrtsa* ‘mother’s sister’s child’ MZCh, §27.2.3.1), and non-self-reciprocal ones, which usually have to be described in reciprocal pairs.

To determine the reciprocal term, one applies to each symbol in the formula the equivalences in Table 27.2, starting from the end. Special care should be given to the sex of the connecting relative.

For instance, the reciprocal of MB is obtained by combining ($\sigma B|\sigma Z$) with ($\varphi S|\varphi D$): of the two options of ($\sigma B|\sigma Z$), the second one σZ is selected because the following element $\varphi(S|D)$ has a female connecting relative, hence $\sigma Z(S|D)$, equivalent to σZCh .

Table 27.2: Reciprocal terms

	Reciprocal		
	neutral	σ	φ
F	σCh	σS	σD
M	φCh	φS	φD
B		σB	σZ
Z		φB	φZ
S		σF	σM
D		φF	φM
Ch		F	M
W	φH		
H	σW		

This procedure is useful to calculate the reciprocal of more complex configurations. For instance, the reciprocal of FFBDS can be obtained in the following way:

- ($\sigma F|\sigma M$)+($\varphi F|\varphi M$)+($\sigma B|\sigma Z$)+($\sigma S|\sigma D$)+($\sigma S|\sigma D$)
- $\sigma(F|M)\varphi+(F|M)\sigma+(B|Z)\sigma+(S|D)\sigma+(S|D)$
- $\sigma MFBS(S|D)$
- $\sigma MFBSCh$

It makes it possible to easily recheck which configurations are intrinsically self-reciprocal, for instance maternal parallel cousins MZCh:

- $(F|M)+(\varphi B|\varphi Z)+(\varphi Ch)$

- (F|M)[♀]+(B|Z)[♀]+Ch
- MZCh

Japhug lacks a specific vocative form of kinship terms (§5.3.1), unlike Tshobdun, Sun (1998: 133) for instance, and there are only a few different terms of address and terms of reference.

Given the important changes in Gyalrong society since the 1950s, and in particular the fact that all speakers of Japhug are now bilingual in Chinese, it is not surprising that the kinship system is undergoing considerable reshaping. The aim of this chapter is to document use of the kinship terms both by contemporary younger speakers, and the system as it used to be in the traditional society, before massive Chinese influence.

The data in this chapter are mainly based on Tshendzin's explanations of the use of the system in a text from the corpus (140425 kWmdza), but are also drawn from observations of the actual use of kinship terms in conversations.

27.2 Kinship terms by generations

This section is an overview of the uses of all kinship terms, first EGO's parents, their siblings and their parents (§27.2.1), EGO's siblings (§27.2.2), EGO's cousins (§27.2.3) and finally EGO, EGO's siblings and EGO's cousins' children and grandchildren (§27.2.4). It also includes information on affines, though the terminology is considerably poorer than for consanguines.

27.2.1 Ascending generations

27.2.1.1 EGO's parents

Two series of terms are in use for EGO's parents, the common terms *tx-mu* 'mother' and *tx-wa* 'father', and the honorific ones, borrowed from Tibetan *tx-pa* 'father' and *tx-ma* 'mother'. The terms for 'mother' and 'father' can be combined without any linker with a collective meaning 'parent', but the order is rigidly 'mother' followed by 'father' (1)¹ in the case of the native terms, and the opposite in the case of the honorific ones (*a-pa a-ma* 'my parents'), as is discussed in more detail in §9.2.2.2.

¹The opposite order †*tx-wa tx-mu* is agrammatical.

27 Kinship

- (1) *ny-mu ny-wa ni*
 2SG.POSS-mother 2SG.POSS-father DU
 ‘Your parents.’ (many occurrences)

The native terms *tx-mu* and *tx-wa* can be alienabilized (§5.1.2.9) and become terms of reference for elder people as in (2).

pjy-ηu
 IFR.IPFV-be
 ‘The old women who were resting in front of the house were burning a fire to keep themselves warm.’ (2002 qaCpa)

27.2.1.2 EGO’s parent’s siblings

There are different terms for parallel and cross-uncles and aunts (Table 27.3), which are all native terms with cognates in Tangut (Jacques 2012e) except possibly for *tx-ni* ‘father’s sister’, which is borrowed from Tibetan བཞེ་ལཱ་ལཱ་ *la.ne* ‘paternal aunt’.

Table 27.3: Terms for EGO’s parents’s siblings and their spouses

Uncle/Aunt	Spouse
MB (cross-uncle) <i>tx-rpu</i>	MBW <i>tx-ɬaβ</i>
MZ (parallel aunt) <i>tx-ɬaβ</i>	MZH <i>tx-βyo</i>
FB (parallel uncle) <i>tx-βyo</i>	FBW <i>tx-ɬaβ</i>
FZ (cross-aunt) <i>tx-ni</i>	FZH <i>tx-βyo</i>

The terms for parallel aunts and uncles also serve to designate parent’s siblings’s spouses, as described in (3). Note in this excerpt the use of the autive *nu-* on *tu-ku-nu-ti* ‘one calls (them)’ reflecting the ‘casual’ spontaneous function (§19.1.4), emphasizing the fact that no specific term exists (compare with 30 in §19.1.4).

 ‘One calls one’s father’s sister’s and one’s mother’s sister’s husbands
a-βɣo ‘my father’s brother’. Apart from that they don’t have their own
 term. One calls one’s mother’s brother’s and one’s father’s brother’s
 wives *a-ɬaβ* ‘my mother’s sister.’ (140425 kWmdza05) {0003789}

They can be used as polite address terms for elder people (§5.3.3). In addition, *tu-βɣo* is also a term of address for lamas, expressing respect.

The mother’s siblings term *tu-rpu* ‘mother’s brother’ and *tu-ɬaβ* ‘mother’s sister’ can also designate their children (the maternal cross-cousins, §27.2.3.2) and their grandchildren (§27.5).

Conversely, the reciprocal of *tu-rpu* ‘mother’s brother’, the term *tu-ftsa* ‘sister’s child’ (§27.2.4.2), can be applied to EGO’s paternal grandfather’s sisters’ children (FFZCh), who belong to EGO’s parent’s generation, due to the same generational skewing rule (§27.5).

27.2.1.3 G⁺²

The terms *tu-wu* ‘grandfather’ and *tu-wi* ‘grandmother’ are used to refer to EGO’s grandparents and their siblings, and also as an affectionate for (unrelated) elders who are two generations above EGO. This term is also applied to great-grandparents and all generations above.

As an effect of the Omaha skewing rules (§27.5), the children of EGO’s paternal great-grandfather’s sisters (FFFZCh), who belong to EGO’s grandparents’ generation, are downgraded three generations, and called by the term *tu-ftsa* ‘sis-

ter's child' (§27.2.4.2) by EGO, and they answer back using the G⁺¹ terms *tr-rpu* 'mother's brother' and *tr-tax* 'mother's sister' (§27.2.4.5).

27.2.2 Siblings

There are two competing systems for designating siblings in Japhug, one encoding the gender of the sibling and that of the possessor and the other relative age.

27.2.2.1 Gender-based system

The gender-based sibling terminological system comprises four terms (Table 27.4), which all have cognates in Tangut with identical functions (Jacques 2012e). The δ B and φ Z terms (in grey shading) are self-reciprocal: for instance, anyone EGO addresses as *a-xtry* 'my brother' replies back with the same word. The groups of same-sex siblings calling each other *a-xtry* 'my brother' or *a-sq^haj* 'my sister' can be referred to by the social relation collective nouns *kɣndzixtry* 'brothers' and *kɣndzisiq^haj* 'sisters' derived from *tr-xtry* and *tr-sq^haj*, respectively (§5.7.8.1).

Table 27.4: Sibling terms in Japhug

Sex of connecting relative (possessor)	Brother	Sister
Male	<i>tr-xtry</i> δ B	<i>tr-snom</i> δ Z
Female	<i>tr-wɣmu</i> φ B	<i>tr-sq^haj</i> φ Z

By contrast, *tr-snom* δ Z and *tr-wɣmu* φ B are non-self-reciprocal, and are used as reciprocal pairs of each other. If EGO is male, he refers to his sister(s) as *a-snom*, and they/she refers to him as *a-wɣmu*, and reciprocally if EGO is female. The compound collective noun *kɣndziwɣmusnom* 'brother and sisters' built from these two nouns (§5.7.8.1) is used to designate groups of siblings of different sex.

In addition to siblings sharing the same parents, these terms can also be applied to paternal parallel cousins (FBCh, §27.2.3.1) and siblings of spouses (WB, WZ, HB, HZ, §27.2.5).

27.2.2.2 Relative age-based system

The relative age-based system only comprises two terms, *tr-pi* 'elder sibling' and *ta-bi* 'younger sibling'. It distinguishes the relative age of the kin and his/her connecting relative (possessor).

Like the terms of the first system, *tx-pi* and *ta-bi* can be used for paternal parallel cousins (§27.2.3.1) and spouses of siblings (§27.2.5), and also as affectionate address terms for non-kins of the same generation. The paternal cross-aunt (FZ) also uses *ta-bi* to call her cross-nephews (⁹BCh §27.2.4.2); the gender-based sibling terminology cannot be used to refer to cross-nephews.

Both systems are possible for address and reference, but the former (Table 27.4) is more frequently used for reference, and the latter for address.

In addition, it is possible to add *tɕ^heme* ‘girl’ or *tx-tɕu* ‘son’, ‘male’ as postnominal modifiers (9.1.8.1) to *tx-pi* ‘elder sibling’ and *ta-bi* ‘younger sibling’ to specify the gender of the sibling, as in (4).

 1SG.POSS-younger.sibling INDEF.POSS-son five exist:FACT LNK
 ‘I have five younger brothers.’ (14-siblings) {0003508#S270}

27.2.3 Cousins

Parallel and cross-cousins (children of parent’s siblings) are designated by different terms in Japhug.

27.2.3.1 Parallel cousins

There is no dedicated term for paternal parallel cousins (FBCh). They are terminologically identified with siblings (§27.2.2), and both the gender-based terms (§27.2.2.1) and the relative age-base terms (§27.2.2.2) can be applied to them (5).

Maternal parallel cousins have a dedicated term *tx-mɣtsa*, probably a lexicalized compound from *tx-mu* ‘mother’ (in bound state *mɣ-*, §5.4.1) and *tx-ftsa* ‘sister’s child’, literally ‘mother’s nephew’. A cognate compound is also found in

Situ (Zhang & Fan 2020). This term is self-reciprocal, as shown in (6) (see also 92 §18.4.2.1 for a description of the same rule with a different wording).

27.2.3.2 Cross-cousins

By contrast, the cross-cousins are referred to by unequal terms. As explained in (8), the paternal cross-cousins (father’s sister’s children FZCh) are called using the term *tɣ-ftsa*, the same as sister’s children (§27.2.4), and they reply back by calling their maternal parallel cousins (mother’s brother’s children MBCh) with *tɣ-rpu* and *tɣ-ɬaɓ*, terms that also refer to the parallel cousins’s parents (mother’s brother MB and his wife MBW, §27.2.1).

 ‘my maternal aunt’, but one calls them *a-ftsa* ‘my sister’s son.’ (140425
 kWmdza03) {0003787}

While parallel cross-cousins are given an equal status to siblings in terms of generation, cross-cousins are associated to either the lower generation (paternal cross-cousins) or the higher generation (maternal cross-cousins). This generational *skewing* rule is characteristic of Omaha kinship systems, and is discussed in more detail in §27.1 (see Figure 27.5).

27.2.4 Descending generations

27.2.4.1 EGO’s children

The term for EGO’s children *tx-tɕuu* ‘son’ and *tu-me* ‘daughter’ cannot be used for nephews and children of cousins, but can also designate one’s children’s spouses. The noun *tx-tɕuu* is also alienabilized (§5.1.2.9) in the sense of ‘boy, man, member of the male gender’ (as opposed to *tɕ^heme* ‘girl’).

27.2.4.2 EGO’s sibling’s children

Sister’s children are called *tx-ftsa*, regardless of whether ego is a man or a woman (9). This term is also applied to one’s paternal cross-cousins (§27.2.3.2), and reflects an Omaha-type generational skewing rule (§27.5).

- (9) *tx-rpuu nuu kuuɣ “a-ftsa” tu-ti, tx-ɬaɣ nuu*

 also 1SG.POSS-ZCh IPFV-say

‘Both the maternal uncle and the maternal aunt call [their sister’s children] *a-ftsa*.’ (140425 kWmdza04) {0003788}

The brothers' children are called differently depending on whether EGO is male or female. If EGO is female (10), one calls one's cross-nephews with the term *ta-bi* used for younger siblings (§27.2.2.2) and male parallel cousins (§27.2.3.1), though in this case they do not reply back with *tr-pi* 'elder sibling' as could have been expected, but with the dedicated term *tr-ni* 'father's sister' (§27.2.1), infringing the reciprocity rule between *ta-bi* and *tr-pi* (§27.2.2.2).

 'My children (...) call my sister's children; a-mrṣa, and also called their; children a-mrṣa.' (140425 kWmdza01) {0003785}

There is some evidence that this rule was applied to all descending generations (§27.5) in traditional society. However, Tshendzin also indicates that children of MZCh can be alternatively called *tr-ftsā* like sister's children (§27.2.4.2), and reciprocate (to their MMZCh or FMZCh) using the term for MB (§27.2.1.2). More data are necessary to confirm or disprove this possibility.

27.2.4.4 EGO's cross-cousins's children

The children of EGO's maternal cross-cousins (EGO's mother's brother's grandchildren, MBChCh) are referred to by the same terms as their father and grandfather, *tr-rpu* if male (15) and *tr-lax* if female: they are uplifted by two generations.

 'You have to say *a-ftsa* 'my sister's child' to the child of the child of your paternal cross-aunt.' (elicitation, 2019-11-30)

27.2.4.5 G⁻²

For the generation of EGO's grandchildren, the term *tr-ye* 'grandchild' is used for EGO's own grandchildren as well of the grandchildren of EGO's siblings (17) and paternal parallel cousins.

- (17) *nuu ur-pa* *pu-ari* *tce tce, a-wymu*

‘To the [generation] below (that of one’s nephews, see §15.1.4.1), I say *a-ye* ‘my grandchild’ [to all grandnephews], whether they are my brother’s grandchildren or my sister’s grandchildren.’ (140425 kWmdza02) {0003786}

In the case of the maternal cross-cousins however, the Omaha skewing rule still applies (§27.5), and the term *tr-rpu* ‘mother’s brother’ is used to refer to their grandchildren, who conversely call EGO *tr-ftsā* ‘sister’s child’ (§27.2.1.3).

27.2.5 Spouses and affines

The terminology for affines in Japhug is poor. The only dedicated terms are *tr-rzaβ* ‘wife’ and *tr-nmaβ* ‘husband’; for all other affines, terms that also refer to consanguines are used.

Both EGO’s spouse’s parents and parent’s sibling and spouses of EGO’s parent’s sibling are called using the terms for parallel aunts and uncles (§27.2.1).

Affines of EGO’s generation, including those of EGO’s siblings, are called using the age-based sibling terms *ta-bi* ‘younger sibling’ or *tr-pi* ‘elder sibling’ (§27.2.2.2). In the case of EGO’s spouse’s siblings, both the age-based and the gender-based (§27.2.2.1) sibling terms can be used (18).

27.3 Marriage rules

Marriage is prohibited between siblings and across generations between EGO and EGO's parents siblings (whether parallel or cross-uncles and aunts).

Marriage is allowed between maternal parallel cousins (19), who call each other *tx-mxtsa* (§27.2.3.1).

27.4 Lineages

Most speakers of Gyalrong languages lack a patrilineal family name in the Chinese fashion, unless they are of partial Chinese ancestry.

Family relatedness across generation can nevertheless be expressed by the term *rjitpa* ‘lineage’, borrowed from རྒྱུད་པ། *rg’ud.pa* ‘lineage’, which parents transfer to their children (22).

- (22) *azo nuu praxwuu rjitpa ηu-a tce, a-rjit ni praxwuu*

Lineage is preserved across many generations; even relatives who have moved to other places and become members of another household are still considered to belong to the same lineage (24). There are no rules against marriage between two persons from the same lineage, if no other rule applies (§27.3).

27.5 Omaha skewing

27.5.1 Skewing rules and merging rules

A prominent specificity of the Japhug kinship system is the fact that the maternal cross-cousins (MBCh) and their children (MBSCh) are referred to by the same term as their parents (MB, MBW) as explained in (25), and conversely that the maternal cross-cousins (FZCh) are identified with the sisters’s children (ZCh) (26).

These two rules, also detailed in §27.2.3.1 and §27.2.4.2 above with a different but semantically equivalent wording, are summarized in Figure 27.1. This chart represents the terms used to call siblings, cross-uncles and aunts, cross-cousins and their offspring for a male EGO. The system is similar for a female EGO, except for siblings (§27.2.2.1) and brother’s children (§27.2.4.2).

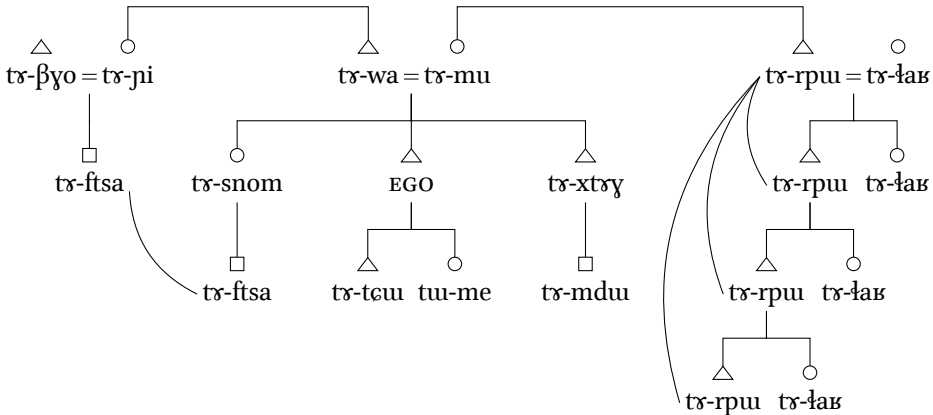

Figure 27.1: The Omaha Skewing system in Japhug (male EGO)

These *skewing* rules² are reciprocal of each other. They can be formally written as (27a) and (27b) in Lounsbury’s (1964) fashion.³

²Lounsbury (1964: 357) defines this term as a ‘formal equivalence, in specific contexts, between kins of different generations’.

³The rules (27a) and (27b) are close to Lounsbury’s (1964: 359) ‘Omaha type I’, but slightly less general.

- (27) a. **Skewing rule 1:** FZCh → ZCh
 b. Corollaries: MBS → MB; MBD → MZ

Moreover, the fact that the children of one paternal aunt's children are also identified with the sister's children (§27.2.4.4) implies the rule in (29a) and its reciprocal (29b), explicitly stated by Tshendzin in (28).

 1SG.POSS-MB IPFV-say INF:STAT-be.needed be.AFF:FACT
 ‘Your father’s sister’s grandchildren have to call you ‘my mother’s
 brother.’ (elicitation 2019-11-30)

- (29) a. **Skewing rule 2:** FZChCh → FZCh → ZCh
 b. Corollaries: (F|M)MBS → MB; (F|M)MBD → MZ

The rules (27a), (27b), (29a), (29b) are described by Tshendzin as being recursive, implying the theoretical equivalences in (30). Although a considerable amount of genealogies would be needed to confirm whether the system indeed works in the way predicted in (30), an anecdote discussed in §27.5.2 confirms the reality of the equivalence MMBSSSS = MB.

- (30) a. ZCh = (F)*ZCh(Ch)*
 b. MB = (F|M)*MB(S)*S
 c. MZ = (F|M)*MB(S)*D

Another skewing rule is observed in the case of female EGO: ^oBS are called with the relative age sibling terms (§27.2.4.2), though this skewing is only partial, since they respond using the dedicated term *ny-ni* for FZ (§27.2.1.2).

Finally, another skewing rule (31a) appears with maternal parallel cousins (§27.2.4.3).

- (31) a. **Skewing rule 3:** MZChCh → MZCh
 b. Corollary: (F|M)MZCh → MZCh

If the rules (31a) and (31b) are also recursive, the formal equivalence (32) is implied. Data is lacking to ascertain whether this theoretical possibility is verified,

but §27.5.3 discusses a case in these lines. In this system, unlike in that described by Lounsbury (1964: 361), the MMZCh are not equated with the MB and MZ (due to absence of the merging rules $MZS \rightarrow B$ and $MZD \rightarrow Z$), but rather with the MZCh.

$$(32) \quad MZCh = (F|M)^*MZCh(Ch)^*$$

However, it appears to be possible to alternatively use the term *tr-fts* ‘ZS’ for MZChCh. The implication of this rule for the whole system are not considered here until further data are available.

The terminological identification of paternal parallel cousins with siblings (§27.2.3.1) defines the following merging rule (33).

$$(33) \quad \text{Merging rules: } FBS \rightarrow B; FBD \rightarrow Z$$

Unlike the Omaha systems described in Lounsbury (1964: 360), the merging rule (33) does not concern maternal parallel cousins (§27.2.3.1). It implies the equivalences $MFBS = MB$, $MFBD = MZ$, $FFBS = FB$ and $FFBD = FZ$, and more generally (34), in combination with the skewing rules in (30) above.

$$(34) \quad \begin{array}{l} \text{a. } MB = (F|M)^*MFB(S)^*S \\ \text{b. } MZ = (F|M)^*MFB(S)^*D \\ \text{c. } FB = (F)^nFB(S)_{n \geq 1}^n \\ \text{d. } FZ = (F)^nFB(S)^{n-1}D_{n \geq 1} \end{array}$$

Some uncertainty remains in parts of the system. In particular, the status of the MBDCh (and its reciprocal MFZCh) is unclear. In theory, given the $MBD \rightarrow MZ$ rule (29b), one would expect that $MBDCh = MZCh$ (*tr-mvtsa*), and likewise that the $MFZCh = MZCh$ (due to the reciprocal rule 30a). However, at the moment of writing I could not confirm whether this is true or not.

The Japhug system shows prototypical Omaha characteristics, in particular the basic skewing rules (27a) and (27b), and the identification of paternal parallel cousins with siblings (33). It differs from prototypical Omaha systems described in the literature in lacking an Iroquois pattern identifying parallel uncles and aunts with parents ($FB \rightarrow F$, $MZ \rightarrow M$, Trautmann 2012: 34), maternal parallel cousins with siblings ($MZS \rightarrow B$, $MZD \rightarrow Z$), and the fact that preferred marriage is with maternal parallel cousins (§27.3) rather than with cross-cousins (Trautmann 2012: 41).

27.5.2 Cross-cousin lineages

A logical consequence of the recursivity of the skewing rule (30, §27.5.1), as they are described by Tshendzin (§27.2.4.4) is that a considerable divergence between biological age and age rank will occur in some cases. While a full investigation of genealogies is necessary to verify this implication (an endeavour that goes beyond the scope of this grammar), an anecdote reported by two witnesses suggests that this indeed used to be the case in the traditional society.

In (35), a man born in the 1950s reports his experience with the skewing rule: one of his great-grandmother (either MMM or MMMM, I could not ascertain) came from the village of Tshapa (with irregular orientation WESTWARDS, opposite of the geographical reality, §15.1.5.3), where most inhabitants are from the lineage of her brother.

[even] small children called me ‘my sister’s son’, and I had to call them ‘my mother’s brother, my mother’s sister’. Although this was what I had to say, I found it unfair.’ (2010-06)

children)'. (...) Now no one says this any more, the young ones are ashamed of calling [elders] 'my sister's child' and instead say 'my father's brother' or 'my elder sibling'. Now it is all mixed up, but in former times, one had to speak like that.' (140425 kWmdza07) {0003791}

27.5.3 Maternal parallel cousin lineages

The reliability of the skewing rule (31a) concerning maternal parallel cousins is confirmed by one particular case, in which a lady addressed her mother-in-law by the term *tr-mʏtsa* 'MZCh' (who answered using the same term, §27.2.3.1). When I asked her whether they were actual maternal parallel cousins (children of two sisters, MZCh), she answered that she used this term because her father himself called her mother-in-law (and her mother-in-law's mother) *tr-mʏtsa*, though they were not themselves true first cousins, the eventual consanguine relationship going back several generations. She also specified that she called her husband *tr-mʏtsa* before marrying him (§27.3).

This case suggests that the reciprocal *tr-mʏtsa* 'maternal parallel cousin' relationship remains regardless of the number of generations in each lineage (as formalized in 32 above).

27.5.4 Application

As an illustration of the rules established in the previous sections, Table 27.6 summarizes the theoretical possibilities for first and second cousins *once removed*, including the main points of uncertainty in grey shading. The equivalences are given below each term in brackets, referring to the equivalent focal kin (Table 27.5); for instance (=ZCh) should be read 'called like the ZCh' (*tr-ftsə*, §27.2.4.2).

The reciprocal terms can be rechecked using the inversion table 27.2 above.

It is difficult to be fully certain of the reliability of these extrapolations without an in-depth study of genealogies. This Table provides a framework for future research on kinship systems in Japhug and Gyalrong-speaking areas.

A grammar of Japhug

Japhug is a vulnerable Gyalrongic language, which belongs to the Trans-Himalayan (Sino-Tibetan) family. It is spoken by several thousand speakers in Mbarkham county, Rngaba district, Sichuan province, China. This grammar is the result of nearly 20 years of fieldwork on one variety of Japhug, based on a corpus of narratives and conversations, a large part of which is available from the Pangloss Collection. It covers the whole grammar of the language, and the text examples provide a unique insight into Gyalrong culture. It was written with a general linguistics audience in mind, and should prove useful not only to specialists of Trans-Himalayan historical linguistics and typologists, but also to anthropologists doing research in Gyalrong areas. It is also hoped that some readers will use it to learn Japhug and pursue research on this fascinating language in the future.
